It might pay to put the following information somewhere close to your computer or phone:

#### REMCOM AGENTS ARE

##### NSW

ANDREW PRIDHAM  
LOT 138  
8 MAC KELLAR ST  
EMU PLAINS NSW 2750  
PHONE:(047) 356 739

##### VIC

JOHN IKIN  
43 SPRUCE DVE  
ROWVILLE VIC 3178  
PHONE:(03) 759 6253

##### WA

RENNAY BAMFORD  
23 RAEBURNE RD  
ROLEYSTONE WA 6111  
PHONE:(09) 397 5928

#### FRED'S BBS

FRED'S BBS is back up and running, the timings are from 2030 to 0500 every Fri/Sat and Sunday. The baud rates are 1200/2400/4800/9600.

The board contains OS9 files, RSDOS files, message bases, a CoCo shop and online games. FRED'S BBS just may have that OS9 file or programme that you have been looking for or just might be the place to put your for sale or wanted add.

Phone number is :- (077) 734 884

In 1993 we ran a programmers competition to encourage you all to do that little bit more with your Colour Computer. We have decided to do the same again this year but to expand on the idea a little bit more.

This time the major competition will have four (4) categories;

- (1) Educational
- (2) Applications/Utilities
- (3) Graphics, and
- (4) Games.

The prizes for the competition are as follows:

- 1st prize in each category - Choice of IN STOCK software from REMCOMS to the value of \$50,
- 2nd prize in each category - Choice of IN STOCK software from REMCOMS to the value of \$25, and
- 3rd prize in each category - 12 months free subscription to CoCo-Link.

The rules for the competition are very simple, they are;

1. entries in each category must be original and must not breach any laws of copyright,
2. by entering the competition authors give copyright to CoCo-Link and REMCOMS, and
3. the judges decision will be final.

All entries should be sent to this magazine on either tape or disk in the following manner;

1. two copies on the media each of which operate without bugs,
2. include two copies of the source code,
3. include a text file with a description of the programme in ASCII format, and
4. mark all entries "FOR COCO-LINK COMPETITION" and the category in which it is being entered.

There is no limit to the number of entries from each programmer. The programmes that do not win a prize will be printed in the magazine for the benefit of all cocoists.

This competition is open to ALL cocoists, young, old, experienced or novice and for any Colour Computer, from the grey case CoCO 1 through to the 1 Meg CoCo3. It is also open to BASIC, Assembly and OS-9 (including C, Pascal and Basic09). ALL ENTRIES MUST BE RECEIVED BY 30 JUN 95.

COMPETITION COMPETITION COMPETITION COMPETITION COMPETITION COMPETITION

Along with but separate to the major competition, we are also going to run a small ONE-LINER contest. Some of you may have seen these in the now defunct US Rainbow magazine.

The rules for this contest are the same as for the major competition, however you may send your creations in any time and it is open until OCTOBER 95.

Each issue we will print a number of these one-liners (depending on space) and all those printed will go into a draw for a final winner. The eventual winner will be announced in the Nov/Dec 95 issue.

The prize for the winner will be a choice of the IN STOCK software from REMCOMS to the value of \$25, there will also be an encouragement award of 1 years subscription to CoCo-Link for the runner up.

What is a One-Liner?

A one-liner is a programme for the Colour Computer 1, 2 or 3 which has ONLY ONE LINE NUMBER but is in itself a complete programme, for example;

```
10 CLEAR 300:INPUT"TRACK:";T:INPUT"SECTOR:";S:INPUT"DRIVE:";D:DSKI$ D,
T,S,A$,B$:PRINT A$;B$:RUN
```

The above ONE-LINE programme would allow you to examine a disk by following the prompts. Get the idea?

Well that's about it, now it is up to you, sit at your computer, have some fun, come up with either a one-liner or work on something more substantial for one of the major competition categories. Send them all in to us and GOOD LUCK!!!!

RANDOM LINES, CIRCLES BOXES.

random paint in them.

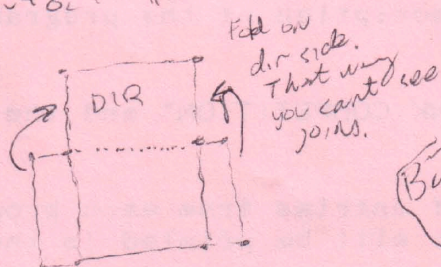

Random palette as well.

Random Border colour??

Random sound??

Disk label maker - use Poke whatever dir command.  
or Disk Number.  
Volume Number.  
DIR.  
PREF (cat) Ados  
type  
print.

Printout like this.

Backup disk via Sector to sector.

Dummy start up.  
eg standard start-up  
screen.  
IF press Break,  
it moves cursor  
down 1 line (on  
err goto). after  
input typed.  
the user says "what?"
