## the RAINBOW

## 5803 Timber Ridge Drive • Prospect, KY 40059

The Monthly Magazine for Color Computer Users

TANDY DISC SYSTEM IS NCW AVAILABLE

You read it first here. (Maybe we should gloat and add "of course".)

It was in July.

## A REAL BIG GNE!

There are a lot of goodies in the November issue of the RAINPOW! We hope you enjoy them.

There is a Videote: downloading routine (that can be used with any host computer systemi), our basketball stats program, a takeout on Tandy's new disc drive, a biortiyttim programi ... and a utiole lot more.

Nest month .. some special seasonal stuff is comitemplated. Put, too, there's a great program that will allow you to make backup copies of your RoM packs, the beginning of a series on role-flaying game aids, reviews and more tutorials, helps, hints and tips.

We're really gratified by the response to the PAINPOW. Our subscription list is really growing -- and we like to think that's because you life what you see. Thanks for your support!

We'd also appreciate your help in spreading the word about the RAINROW. And, although we know it sounds trite, please patronize our advertisers. After all, they care enough about YOU and YOUR computer to advertise in the ONLY monthly magazine devoted exclusively to the Color Computer.

Commercials for the RAINROW aside, the Tandy Disc system is a reality. We know, because there is one sitting right here nest to our Color Computer. (And we didn't pull any strings to get it, either.) Py now, you can probably see one at your local Radio Shack computer center or store.

As we wrote earlier, the Disc Operating System is based in ROM -a ROM Cart. It plugs into the CART port of the Color Computer. Drive "D" is the first step for a system. There are three more drives available. Our earlier information on prices was accurate -- but we were $\$ 4$ low on drive 0 . Drives 1, 2 and 3 were on target. Put you can get that information in the new catalog.

For your $\$ 599$, you get a drive, a drive controller (which is, actually, a large-size ROM Cart), a ribbon cable that hooks the cart up with drives 0 and 1 , and manual and a free (!) disk. Incidentally, the bo\% all this comes in says "custom mfg. in Japan."

The whole thing is packaged very well and comes in two bo:es inside the shipping bo\%. Obviously, Tandy will use the same packaging materials for the other drives. The manual is in the familiar multi-colored format of "Getting Started" and "Going Ahead." Its called "Color Computer Disc System" (Should it be "Spinning Along..."?)

DISC (Continued frompg. 1)
and features a new character to go with the drawings of the Color Computer -- a disc with arms and lezs. As usual, the documentation is excellent. It is sort of a cross between the simple (in the early going) to a little complex (when sequential and direct access formats are discussed). We do wish there were a little more detail -- sans embedded formats $=-$ near the end of the book.

As to the drive itself, it has worl:ed flawlessly since its arrival several days ago. And, because the operating systemi is ROM-based, its use is transparent to the user. In other words, its there when you want it but it doesn't interfere with you in any way. And, because your cassette port isn't involved in this new system, you can CLOAD a programi from tape and then SAVE it onto disc directly. I had two substantial tafes full of games $\rightarrow-$ and I transferred them one at a time with total ease. Now they are on disc. and totally accessable in just seconds. The longest programi I have -- which took two and one-half !!inutes to load from tape -- loaded rrom disc in 12 seconds.

We were disappointed there is AUTO command to generate automatic line numbers in the disc utilities. (If this bugs you as misch as it does us. check the review on MASTER CONTROL in this issue for ¿ 巨כlution.) Yet, one of the other big problems from the tape system tias been solved. Thirough its VERIFY cismmand, the disc will check itself : 1 be sure your programi was saved ainirately. No more triple saves and prayers.

The Dös, which is referred to in the documentation as "Disc Pasic," is pretty much the same as that available for the Model III. without the utilities. The discs are the same as those used by Model III.

PROGRAM QUICKIE...

## WHERE AM I??

You probably know you can make multiple saves to tape simply by enclosing the CSAVE command in a loop. And, its a good idea to do this because there is no way to verify a tape urite and if there is a tape problem, your copy can be lost.

Sometimes, though, those saves are long and you just sit there wondering "where ant I?"

Here's a way to figure it out: Just put a counter in your direct command. Then, you'll know what CSAVE you are on. The direct command line looks like this: FQR $X=1$ TO $3: P R I N T \quad$ "ON SAVE"X:CSAVE "filename": NEXT X

If you want to save more or less than three programs, change the thiree in the $X-100 p$. If you want to put space between the individual saves, add the following after the last colon above: MOTOR ON:FOR $Y=1$ TG) 750 :NEXT Y:MOTOR OFF:

And yes, Virginia, it was written by Microsoft.

A disc systell won't be for everyone. However, there are many applications for which a disc is the only way to 90 effectively and this system seems to have the features necessary for some pretty sophisticated programming. There are some other disc systems which will or are to become available, and we will keep you up to date on them as is possible.

PASMETPALL STATSHEEEPER WILL HAVE Fage 3

When you gather your friends together for a TV game or two this coming basketball season -- set up a second TV and keep score for them with STATSドEEFER.

STATSKEEPER, in a larger version, was used last season to keep a full set of statistics on some games for the University of Louisville Cardinals. Pecause all statistics are kept up to date as of the time things occur, the final stats can be done instantly when the game ends. That program keeps track of every possible activity -- including minutes played.

STATSKEEEPER is designed to be used at home (unless you want to take your Color Computer to the game). Pecause of that; and in an effort to get a profesional-look bo: score display, the number of statistics categories are limited to field goals attempted and made and free throws attempted and made. STATSFEEPER keeps up with total points for each player and team and computes free throw and field goal percentages.

You use the "enter" option when a player comes into the game. This controls who is displayed in the bo\% score. Pe sure to "enter" the starting five. If you forget, the statistics will still accumulate -- they just won't be displayed.

It has been our experience that other statistical categories(such as rebounds, minutes plaued and so on) are most difficult to determine watching on TV. The field goal attempts might be a little difficult, but if you can concentrate on those, your statistics should come out all right.

# .. . FOR UNDER $\mathbf{5 0 . 7 5}$ (that's SIX BITS) APIECE! 

 For the COLOR COMPUTER:You just spent your vacation money on the Extended BASIC Color Computer, and now you wạnt to buy software!!!???

Don't skip meals - get CHROMASETTE Magazine! Each month your computer will get a balanced diet of 6 or more programs on cassette (just load and run!). Alons with the tape comes some notes on the programs, along with tidbits on the Color Computer world.

## The Fine Pilnt:

Issues are sent First Class Mail.
All issues from July 81 on available - ask for list. Programs are for the Extended BASIC model only. Calif. residents add $6 \%$ to single capies. Werseas add $\$ 10$ to subscriptions, add $\$ 1$ to single copies. Sent AO rate.
MasterCard/Visa welcomel

Chromasette Magazine

- for those who relish every byte (that pun even hurt me).

## MASTERC（INTR（）L

MASTER CONTROL is the best thing that＇s tiapfened to tired fingers since molded keyboards．

One of the things that has bumaed us about the Eirtended Color Pasic cemmand set is that there is no $A \cup T i$ ）function included for ease of line numbering，especially when duing long lists of DATA statements． MASTER CONTROL $\operatorname{mives} u s$ a line numbering function that worlss with Qコミe－－and that＇s just one of some half a hundred things it does to matie life easier for anyone who is writing prograns．

This little gem（available from SOFT SECTOR MAPRETING， 5250 Middlebelt，Garden City，MI 48135 for $\$$ ごム．75）automatically enters 50 commaridן at the touch of a finger． All you tiawe to do is press the down arrow and an＇s of the keys，which are niarled with P．ASIC statemente，and thic statement you want appears on the screen．For e：iample，if you tiave the automatic numbering in effect，you can write a line number and the RATA statement by pressing thic＂ENTEP＂，down arrow and＂D＂keys －נ．

For those of us who freauently U话＂IF＂as＂OF＂and who Eeemi to alua＇ts tirt the＂\＃＂instead of the ＂安＂in ChR\＄，this is a real plus that lifills those syntai：errors．The cumnands which need them iミuct，as HII．ま）that have ofening parentheses in them liave the farentheses cifening ss part of the assigned statement．

In addition，the foror．TRACE， fllDIO and RUl comimiads enecute directly－without your having to pross the EllTER key．This really三aves a lot of time．

Finally，there is what S（IFT SECTㅂ́R de：serites as a＂custom ley＂， which $\quad$ رמou can program to be anything you want．This is a major bonus！ If，for instance，you are running thougt，a long series of IF statements whictı a couple of parameters，you can programi the
custom key for that whole list of parameters－－and save literally hours of typing．This is all excellent feature．

How do you keep track of what all the keys stand for？SOFT SECTOR supplies a template to overlay on the keyboard．That also means youl can take it off if you want．While the template itself tias a sticky backing，you can stick it on some cardboard and just cut holes for the keys．We did this and it worleed very well．

MASTER CONTROL is written in machine code，so it is very fast． It only takes up 1100 bytes and can be relocated－－especially important if you have or anticipate upgrading to 32ド．It does require 16 ド $^{\circ}$ to operate，but does not require Extended

However a number of the commands are Eirtended commands． They，obviouisly，won＇t work without： Extended．

MASTER CONTROL is a workmanlike progran that does everything well． If you are doing any amount of your own programiming，it is well wortt the moderate cost in terms of typing tiours saved alone．

## MAILING NETICE

From time to time，the RAINEOW may make its mailing list available to tifotıly qualified firms whict， produce products for the Color Computer．

While we believe this information will be tielpful to you， we respect your right to privacy and will not disclose your name or address to anyone if you will merely inform tus that this is your desire．

Thank you．

## تERIALノPARALLEL CONVERTER

## TIMES SG！UARE HEADER

O．k．，you＇re just not satisfied with either of the＇printers Radio Shack has out for the Color Computer －－either the Line Printer VII or the newest one，the Line Printer VIII．

Or，maybe，you just want to be able to switch printers at some time in the future and keep your present LP VII or VIII for now．

The choice is yours，but you can gain some real flexibility with the PIBOC EERIAL＇PARALLEL COHUERTER from THE MICRO WORKS（P．O．PO： 1110. Del Mar，CA，92014）．

For \＄69．95，the PI80C will allow you to use the serial port of your Color Computer for your Frinter，but will convert the signals for use on the many parallel printers risu on the market．That， ty the was，includes virtually every major printer manufacturer．You can purchase conversion kits for a number of printers，but the cost is much more than is this little＂black bo：：＂（which really IS a black bo：：

Ne＇ve had the PIBOC $4 F$ and running with an Epson printer for two months now．It has worked perfectly．Not a single liftch．

The PI80C comes with a four pin DIN plug which fits into the Color Computer＇s Serial port and a power cord which flugs into a standard socket．The other end is an edge card which has the＂standard＂ Centronics configuration．You plug one end of a printer ribbon cable into the PISOC and the other into your printer．That＇s all！

Since the LP UII and LP VIII bot．h have parallel connections，you can use your PIODC with one of those printers ．．．as well as with any otther printer Radio Shack sells． You can also plug into an Epson， Centronics，Okidata，etc．，etc．

So，you＇ve written a neat program but you don＇t really have a good way to introduce it ．．．and you＇re tired，anyway．

Here＇s a quick way to use some of the more interesting capabilities of the Color Computer to produce a ＂header＂for a prograni that＇s，as they say，fast and dirty．

This little gent will give you a Times Sauare－like message center on your screen．The words will just scroll along．And，from the code below，you＇ll see that it＇s easy to produce．You might even want to use it to leave messages for other members of the family！

For those without Extended Color Pasic，change the STRING末 （16，32）in line 3 to 16 blank spaces．Line 11 can be deleted，its just there to keep the display neat in this e：ample．

Here＇s the RPis（RAINPow Program Quickie）－－with thanks to Joe Pennett－－：

1 CLSO
3 Aq＝＂－－－－－－－THIS PROGRAM IS PROUGHT TO YOU THROUGH THE RAINP．OW．．．THE MONTHLY MAGAZ INE FOR COLOR COMPUTER USER S．YOU CAN PUT YOUR OUNN MES SAGE HERE．－－－－－－－＂＋STRINら\＄ （16，32）
5 FOR A＝1 TO LEN（A\＄）－15：E1＝E1 $+1:$ IF E1＞4 THEN E1＝1：E＝1125 ：$E E=1140$
7 PRINT：1328，MIn末（Aま，A，15）；
9 SCOND FIND（ご40），1：NEXT A 11 GOTO 11

This is a good buy．

Here＇s another progran from JARP．Software that will help you out in dealing with everyday life．

Its called JARPIOPHYTHM and it will generate a complete chart for you． The chart can be as short as a day，or as long as a year．And，the chart will grafhically display just how your biorhythms fluctuate over their different cycles．

You do need a printer for this progran．Put it comes out with a handsome display．We＇ve heard that programs such as this can be a big hit at flea markets！

For those of you with tired fingers，JARPIORHYTHM can be obtained on a tafe with PSYCHIC APTITUDE TEST（fromi RAINPOW Vol．I，No．3）for $\$ 14.95$ by writing JARP at 1169 Florida St．，Imperial Peach，CA 92032．Please include \＄1 for postage and handling．

Thie second programin SPECTRAL ASSOCIATES＇Space Trilogy is called COLOR METEOPOIDS，and it is－－like its brothers COLOR SPACE INVADERS and SPACE WAR－－a fast－action， machine lanquage game that will bring hours of delight to devotees．

Although you need joisticl：s to play，you do not need E\％tended Color Easic．This san be a real plus for scome，and it also shous just what tou can do with mactione language．

The эame is like the arcade version，with a number of entiancenents and plenty of action． Fasically，you are the pilot of a shif navigating though the middle of a meteor swarm．You have to fire at the meteors，breaking them apart． They blajet aifart，tut，then，you rave to lift them again（and again！） to malke them finally go away．Since there are 15 different levels of difficultut，this is a game in tulich the uhble family can compete．

Gne of the things you can do with COLOP HETEOPGIDS that ，Iou can＇t
do in the arcades is control the position of your gun．Here，youl Have full control－－as well as control of the ship itself．And for the really adept，you get a tomus ship for every 10，000 Foints． There＇s also a demonstration mode？ for cocl：tail party conversation．

Finally，there is an option that will allow your ship to move into hyperspace．Here，you just blip out of one location and into another．Put，you must e：icercise caution－－sometimes various meanies in hyperspace can destroy your shif．

The graphics of COLOR METEOROIDS are escellent and the artion is fast－paced．The sound effects，despite a disclaimer from SFECTRAL，are good，as well．

That，combined with special added effects such as difficult！g levels，hyperspace，and an alien space shif，mal：e COLOR METEOROTDS （事21．05 from SPECTRAL， 141 Haryard Ave．Tョcon：a，（NA 094 5 ）an e：icellent bul．

Editor：
I recently furchased a cofy of the fallipion（is）and uas quite pleased with the articles and especially with LASER STAR．

Just one conocnt atcut thie last issue：In line 10 of the Graphics Printer，shouldn＇t＇127＇be＇31＇？ Also，ycur choice of $x$ for the vertical and $Y$ for thie hicrizonal ceordinates is confusing．Hormally， $x$ is thie horizonal．
hathy giepel Detroit
（Ed．Hote：＇31＇vorl：5，too． Thanks for the information．is to the $X$ and $Y$ ，you＇re right．It must have teen a late night ulien that one was uritten！！

Don＇t worry about length of names in the bo\％score，as they will be chopfed off to fit．We have made provision for games in which more than 100 points are scored，however，to satisfy you NPA fans．

All pregame entries（such as players names and numbers）are done thircußh regular input statements．However，in order to speed execution of the proaram，all statistics are entered via INAEY\＄．The e\％ception to this is the＂Continus？＂input when a bo\％is being displayed．This allows you to retain the bo\％on the screen for study while things are slow．

The only restriction in the programi is that you can use only 12 playert．This is simply in an effort to retain all players on the sereen －－and we have left＂room＂in the DIM statements for 16 if you want more peofle and less heading information．It you opt for the 12 players，simply use 11 and label the 12 th＂others．＂

Tiso hints：If you hit the wrong letter or number while in the三t三tistics collecting part of the proaram，just keep hitting the RETURN leey until you get back to the＂ENTER PLAYER＇S TEAM＂prompt．Once you have initialized the program，you can get back to that prompt by PREAKing and entering Goto 210 ．

This program is written for E：itended Color Pasic，but the few things it uses from that instruction set are simple to convert．The STRINGE（32，＂ニ＂）is simply a line of 32 equals marks．LINE INPUT can be reflacミd by IffPIT，but we used it for display purposes．

GET AND PUT<br>High-Res Grapliic Movement

## P! J. E. Pennett

How would you like to be able to move an image around the screen in PASIC. Sure, there are several ways to accomplish this. one way is to draw a ficture, erase it, and then draw it in a new location.

The froblem with this method is that it is very slow and creates a flickering effect. Tand's came to our rescue with the Color Comfiter 3rafhic commands GET and PUT. These commands help you avoid the problems of sfeed and flicker, and still use just PASIC to write your programs. The manual for Ei:tended Color Piasic but deen't e::plain their use to the average programmer. This article will e::Flain how you can use these commands in your own programis.

First, there are sevral other things that must be done before you can call up GET and PUT. In order to illustrate these things, we will write a freqram to tielp us.

The first iten on our list is to define the size array we will need for cur picture. This array uill be used each time we either GET a picture or F!! 3 ficture. Its size is limited to how much memor's we wist to dedigete to the ficture. On a 1 SH RAM Color Computer, you have about 14 Nio elements of array storarge. This is because eact: element uses 5 bytes of memory. At 1400 elements, you will use 7000 bytes $\left\langle 1400\right.$ elements ${ }^{2} 5$ bytes $=$ ik). In the highest mode of resolution, this leaves little for program use. To figure out the size array needed, just draw your picture, to scale, on paper. Then count how many pi::els across it is (width) and houl many fi::els high it is (length).

As an e:omple, enter this prog̣am and run it:

```
10 FMOLE 4,1:PCIS:SCPEEN 1,1
z0 CIRCLE (12B,96),5
70 GOTO 30
```

This frogram displays a circle in the center of the screen, 10 fi\%els across. The array size needed to cover this circle is 10 uide by 10 lang. This cives us an array of 100 elements in size, and uses 5000 bytes of memort. Using this size, add the following line to the e:iample frogram yourve typed in:

5 DIM A(0.9)
The GET command has a format that you must follow to insure accurate eowerage of the picture thou wist to store. This forniat is: GET (STARITFOIHT) - (ENDFOINIT), DESTI HATION, G

The STARTPOIVIT is the upfor left corner coordinates of your display. The ENDPOINT is the lower right corner coordinates of your display. The [EETIHATIOH refers to the array name you have DIMensioned in Line 5 , in this case, array A. The "G" will tell the computer that sum wish to tiave the ariats stored with full graftics detail. This is oftional, but we'll use it tiere and yeul should, too, for best resulte.

Now back to the progran. Mat:e the following changes:

What we've done is change the center foint of the circle to be stated in terms of variables instead of $f i:: e d$ numeric points. Our circle will still be in the center of the screen, but we can now use the variables later without redefining their value.

Now, add the following line:
25 GET (A-5,P-5)-(A+5,P+5),A,G
As you can see, we have used the variatles to allow us to set our start and end points more easily. The numeric equivalents of the variables would show we are now definifig a square that is 10 pi\%els on a side. This will allow us to GET the complete circle we have previously drawn.

When the programis run, the circle will be stored in array A. Now that it is stored, what do we do with it? Well, how about drawing it in another location to prove it is stored in memory? We can do this b't using the PIUT command to place our circle anywhere we want on the screen.

The PUT command has the format: PUT (STARTPOINT) - (ENDFOINT), SOUJRCE, ACTION

The STARTFOINT and ENDPOINT are the new locations of the corners of our array. These can be any values that are within screen limits AllD that hold the array to the size that was defined earlier in the program. In our ewamifle, the size is 10:10. The SoURCE is the name of the array we have storsd earlier, array A. The ACTION is one of five options -- PSET, PRESET, AIID, NOT and OP.

FSET is the action command we will use. This will allow all points (pi::ele) that are set in the original arrat to be set in the target location.

PPESET uill reset any fixelg in the target location that were originally set.

AND will comfare the points in the original arrat with the points in the terget locetion. If both are set, the new point will remain set. If one or the other is not set, the point will be reset.

NOT will reverse the state of every point in the target location. That is, if the point is set, it will be reset; if it is reset, it uill be三et.

Op will comfare the pointe in the array with the points in the target location and if either is set, the screen will be set.

With all this in mind, add the following lines ro your frogram:
2(0) A=A+INT (JOYSTK(0)/6.3)-5
$: R=R+$ INT (JOYSTK (1)/b. 3 ) - 5
40 PUT $(A-5, P-5)-(A+5, P+5), A$
PSET
50 GOTO 30
Line 30 will now allow the right jcysticl to control movement in any direction at a ma: imum speed of up to five pi::els at a time. This movement can be stopped by bringing the joustick to the exact center. The farther you move from the center, the faster the circle will move. Line 40 will PUT the circle at the location you have defined with the joystick. Line 50 will branch the program back to Line 30 for an update of the joustick locat:ion.

Page 12 GET (Continued from pạ. 111
Run the programi and you will see that there are several problems with the operation. First, if you allow the circle to get too close to the screen edge, you will get a function call error. Let's take care of this froblem 'by limiting the screen movement of the circle. We do this by adding:

31 IF $A<=5$ THEN $A=5$
32 IF $A>=250$ THEN $A=250$
33 IF $\mathrm{B}=5$ THEN $\mathrm{P}=5$
34 IF $\mathrm{P}>=186$ THEN $\mathrm{P}=186$
After adding these lines, we can move the circle anywhere on the screen and it will stop or move along the edze if it gets close. The other froblem we have is that the circle leaves a trail as it moves. While this can be used to create some pretty fatterns, that isn't what we want to do.

We can eliminate the problem in two ways. Either we milust enlarge the array to allow for the five pǐ:el mǎimum movement of the circle, or $\quad$ me muझt decrease the size of the drawing to allow for a blank: border around the drawing.

Poth methods have drawbacks, but either can be used. If you increase the array size, you will use more memory and chance running into the nefarious oM error if your prosramis long. If you decrease the drawing size, you lose resolution, possibly affecting the effect you wanted. Since we have plenty of memory in this small program, we will use the first mettiod. Make the following changes:

Change Line 5 to:
5 DIMA 20,20$)$
Change Line 25 to:
25 GET $(A-10, P-10)-(A+10, E+10)$.
$A, \bar{\square}$
Change Lines 31-34 to:
31 IF $\hat{A}=10$ THEN $A=10$
32 . IF $A>=245$ THEN $A=245$
$33^{\prime}$ IF $\mathrm{P} \because=10$ THEH $\mathrm{B}=10$
34 IF $\mathrm{P}>=181$

Now we have a circle that will move under direction of the joystick: and does not flicker. The speed of movement can be altered by changing the values in line 30, but you must also change the size of your arra's if you wist a faster movement. otherwise, you will again leave a trail of picture parts on the screen.

E:\%periment with the other action command options. You might be fleasantly surprised with them.

Now that you have a better understanding of GET and PIJT, look: back through the last several issues of the RAINP.OW and see how I used them in LASER STAR and HELG PATTLE. Remember, you have to use the same PMODE to PUT that you used to GET, or you may not obtain the results you tried to achieve.

Have fun with these and be sure to let me know via the RAINPOW how you are doing or if you have any questions or problems with which I can help.

## CのFRRECTIGN

On Pacje $\leq$ of RAINPOM , UOL. I, 1io. 4 , in the continuation of Al Morman's UIDEO PRINT program, under the instructions, substitute the direet command porse 25,5 for the PCLEARI.

Al says this mill mate the program work correctly.

TIRED OF WAITING FOR SOFTWARE DELIVERY? WE SHIP FROM STOCK!

# SOFTWARE DEVELOPMENT SYSTEM 

The Micro Works Soltware Development System (SDS80C) is a complete 6809 editor, assembler and monitor package contained in one Color Computer program pack! Vastly superior to RAM-based assemblers/editors, the SDS80C is nonvolatile, meaning that if your application program bombs, it can't destroy your editor/assembler. Plus it leaves almost all of 16 K or 32 K RAM free for your program. Since all three programs, editor, assembler and monitor are co-resident, we eliminate tedious program loading when going back and forth Irom editing to assembly and debugging!

The powerful screen-oriented Editor leatures finds, changes, moves, copys and much more. All keys have convenient auto repeat (typamatic), and since no line numbers are required, the full width of the screen may be used to generate well commented code.

The Assembler leatures all of the following: complete 6809 instruction set; complete 6800 set supported for crossassembly; conditional assembly; local labels; assembly to cassette tape or to memory; listing to screen or printer; and mnemonic error codes instead ol numbers.

The versatile ABUG monitor is a compact version of CBUG, tailored for debugging programs generated by the Assembler and Editor. It leatures examine/change of memory or registers, cassette load and save, breakpoints and more.
SDS80C Price: $\boldsymbol{8 8 9 . 9 5}$

SOURCE GENERATOR: This package is a disassembler which runs on the color computer and enables you to generate your own source listing of the BASIC interpreter ROM. Also included is a documentation package which gives useful ROM entry points, complete memory map, l/O hardware details and more. Disassembler features include crossreferencing of variables and labels; output code which can be reassembled; output to an 80 -column printer, small printer or screen; and a data table area specilication which delaults to the table boundaries in the interpreter ROM. A 16 K system is required for the use of this cassette. 80C Disassembler Price: $\$ 49.95$

## LERRN SBOS!

6809 Assembly Language Programming, by Lance Leventhal, contains the most comprehensive reference material available for programming your Color Computer.
Price: $\mathbf{\$ 1 6 . 9 5}$

## PRRRLLEL D!

USE A PARALLEL PRINTER with your Color Computer! Adaptor box plugs into the serial port and allows use of Centronics/Radio Shack compatible printers with parallel interface. Assembled and tested.
PI80C Price: $\$ 69.95$

## CbUG IS HERE!

MONITOR TAPE: A cassette tape which allows you to:

- Examine or change memory using a formatted hex display
- Save areas ol memory to cassette in binary (a "CSAVEM")
- Download/upload data or programs to a host system
- Move the video display page throughout RAM
- Send or receive RS-232 at up to 9600 baud
- Investigate and activate features of your computer, such as hires graphics or machinelanguage music
- Use your color computer as an intelligent peripheral for another computer, a color display or a 6809 program development tool
The monitor has 19 commands in all, and is relocatable and re-entrant.
CBUG Tape Price: $\mathbf{\$ 2 9 . 9 5}$
MONITOR ROM: The same program as above, supplied in 2716 EPROM. This allows you to use the entire RAM space. And you don't need to reload the monitor each time you use it. The EPROM plugs into the Extended Basic ROM Socket or a modified ROMPACK.
CBUG ROM Price: $\$ 39.95$

## 32K RRM!

MEMORY UPGRADE KITS: Consisting of 4116 200ns. integrated circuits, with instructions for installation. $4 \mathrm{~K} \cdot 16 \mathrm{~K}$ Kit Price: $\$ 39.95$. $16 \mathrm{~K}-32 \mathrm{~K}$ Kit (requires soldering experience) Price: $\$ 39.95$
