The Rainbow is published every month of the year by FALSOFT, INC., 9529 U.S. Highway 42. P.O. Box 209. Prospect, KY, 40059. Phone (502) 228-4492. The RAINBOW and the Rainbow logotypes are @Trademarks of FALSOFT, Inc.
Entire contents by FALSOFT, Inc., 1983. The RAINBOW is intended for the private use and pleasure of its subscribers ánd purchasers and reproduction by any means is prohibited. Use of information herein is for the single end use of purchasers and any other use is expressly prohibited. All programs herein are distributed in an "as is" basis, without warranty of any kind whatsoever:

TRS-80, Color Basic, Extended Color Basic, Scripsit and
trademarks of the Tandy Corp. CompuServe is a Trademark of CompuServe Inc.
Subscriptions to the RAINBOW are $\$ 22$
year in the United States. Canadian and Mexican rates are U.S. \$29. Surface mail to other countries is U.S. \$39, air mail U.S. \$57. All, subscriptions begin with the next available issue.

Limited back issues are available. Please see notice for issues which are in print and costs. Payment accepted by VISA, MasterCard, American Express. Cash, Check or Money Order in United States currency only.

NEXT MONTH: It is time to start thinking about entering our simulation contest-and we'll have a bang-up simulation for you to play... and from which you can get some ideas. Contest details, too.

Also, a really in-depth look at hex, a fine utility and a new column on your legal rights as a software buyer and/ or author. And, another great game.

PLUS . . A new edition of the Scoreboard, more programs, mpre tutorials, more information and more reviews on CoCo than anywhere else in the world! Don't miss April's Rainbow!
R

AINB

## BECOMING A MUNK?

## Editor:

In response to Jarrod Hollinghead's high score of 112,500 on Dunkey Munkey; I've got a 16 year old member (Kevin Hammerschmidt) of my congregation who scored 172,500 and quit because it was boring! I'm lucky if I break 70,000 ! Well, back to writing sermons on Telewriter..

Rev. Mike Jackson
Dardenne Prairie, MO
Editor's Note: We've gotten a lot of letters about scores-so, we've initiated a new feature this month, Rainbow Scoreboard! We invite your contributions to it for your scores in all the games a vailable for CoCo.

## KUDOS

## Editor:

Having very recently purchased a Dragon-32, and surrounded myself with many magazines, I came across an advertisement for the Rainbow which is now available here in England. On reading the Rainbow I must admit that I went from a mildly interested computerist to a very keen trier and have subscribed for a regular supply.

I am adamant about "getting on top" of programming, but unfortunately at the moment I cannot carry out the minor adjustments necessary to make some of the TRS-80 programs run on my Dragon. Do you think you could include the minor adjustments in your future issues?
I.C. Hawksworth

Derby, England
Editor's Note: The English Edition, as opposed to the Edition in English, now carries adjustments for the Dragon. We felt this was necessary in order to take care of the minor changes.

## WANTS A POSTER

## Editor:

As I have said before, in my opinion, there is no other magazine comparable to yours. I receive several magazines each month, including Science Digest, Peterson's Photographic, and others of a technical nature. Of all of them, I look forward to receiving yours most of all. I enjoy the articles and the format is very well done.

In addition to being a high school science teacher, I am also a semi-professional photographer and framer. Needless to say, I had the poster in the January issue matted and framed and hung within 24 hours of receiving the issue in the mail. I think it was
great. Mr. Crawford is truly talented as an artist and January's cover readily confirms this.

Please poll your readers as to the interest in a poster of the January cover and any future poster quality covers. I'm sure there are many others like me who would love to collect images of this fast growing way of life.

I would also like to brag on one of your advertisers. Recently I ordered 24 tapes with boxes from Micro 80. In only a few short days, I received them. Due to no fault of theirs, eight of the boxes were broken during shipment. I called them and they told me to send them back for replacement. Not only did they replace the eight broken ones, they sent four more with them. Now, that's what I call service. It's nice to know there are still companies that believe in satisfying the customer.

Thank you again for the wonderful job you and your staff do each month.

> Jimmie Bond
> Minden, $L A$

Editor's Note: We've been thinking about offering the January cover as a poster, but the problem is we need some sort of minimum order. If others are interested in a poster at a cost of about $\$ 5$, please drop us a line.

## TOM'S A WINNER, TOO

## Editor:

I was very pleased to learn when I arrived home from vacation that my program Escape From Sparta was selected as a winner in your First Annual Adventure Contest. The following day I bought a copy of January's issue and was excited to see that it had won Best Science Fiction Trophy. I was, however, extremely disappointed to see that the name of Thomas Hollerback, cowriter of this adventure did not appear with my own. Without his help I could not have written Escape From Sparta. Escape From Sparta was a joint effort and intended to be a joint entry. Apparently, I may have mislead you when I enclosed a separate letter in reference to the game signed only by myself. Tom's name appears along with my own in the program heading. Please give Tom the credit which he also deserves.

## SIR GREGORY OF NEW YORK

## Editor:

Thank you very much for the honor of having my program, Sir Randolf of the Moors, chosen to win first place in your recent non-graphics contest.

Until recently, I have been going it alone with my CoCo. Now I have a couple of friends interested, and I can talk "shop" with someone else besides my mirror.

I entered the contest not having any idea that I would even come close to a mention after the judging was completed. Thank you for giving me a large boost of incentive.

Gregory Clark
Syracuse, NY

## OBJECTION

## Editor:

These comments are to clarify statements made in the January 1983 review of UP-I. $U P-1$ is designed as an aid to program development and not a peeker and poker. It allows programs to be stacked in memory until the memory is filled and has features for correcting defective programs.

The review stated that $U P-I$ was written for a 4 K machine. This is not true. Obviously more programs can be stacked in computers with larger memory. Programs can also be stacked in ROM Packs. It is true that the memory maps differ slightly for BASIC, Extended BASIC, and color disk systems. Before program stacking can be accomplished, the available free memory must be determined. Although Extended BASIC normally starts at 7681 , programs can be stacked starting at 1537 if the extra graphic pages are not required. Programs can be stacked in disk systems starting around 4 K . UP-I can be stacked with a defective disk program and $U P-1$ used to correct the program.
$U P-1$ is not intended to replace the EB Editor. Suppose statement 20 appears as 8223 between statements 10 and 30 in a program. The Extended BASIC Editor cannot correct this, but by using the memory scan feature of $U P-1$, this error can be spotted and corrected by poking the correct values into the erroneous statement number's vector location.

A machine language subroutine was added to UP-1 which allows the operator to switch and run another program by entering EXEC M where M is the starting location of the subroutine. This updated program was sent to the Rainbow the first week in January.

Dynamic Electronics, Inc.
Hartselle, AL

## CLUBS, CLUBS, CLUBS

## Editor:

I would like to introduce you and your readers to the Phoenix Color Computer Club. Our club is open to anyone and
everyone who expresses an interest in the Color Computer. Our meetings are held twice monthly on the first Tuesday and third Wednesday at the American Legion Post \#1 located at 364 N . 7th Avenue, Phoenix. Interested persons may contact Mike Huffman, Secretary/Treasurer, at (602) 939-5666 or Tim Bremser, President, at (602) 939-2047 or Don Hendry, VicePresident, at (602) 386-5126.

Mike Huffman
Glendale, AZ
Editor:
I'm interested in forming a CoCo group in the Fitchburg, Leomonster, Lunenburg, Massachusetts area. If anyone is interested please write me, Jason Rahaim, Spring Street, Lunenburg, MA 01462.

Jason Rahaim

Lunenburg, MA
Editor:
Please let it be known that the $\mathrm{DC}^{3}$ (Dade County Color Computer Users Group) has started. Would you believe the only one in Dade County? For info call George McVay, (305) 274-8727.

George McVay
Miami, FL

## Editor:

The Medley Computer and Electronics Club has recently expanded to include representation by Color Computer owners. If interested please contact me (594-2755) or the President, Jamie Marriott, c/o MCEC, Canadian Forces Base, Cold Lake, Medley, AB, T0A 2M0.

John Plaxton
Medley, Alberta, Canada

## Editor:

We are a Color Computer club in north Broward County(Fort Lauderdale) Florida, with a sister club in Dade County. Address: 1040 S.W. 61st Avenue, Margate, FL 33068.

Ernie Johnston
Margate, FL

## Editor:

We are forming a Color Computer club in Memphis, and would like very much to hear from anyone interested in joining us. For futher information, please contact me at 4903 Warrington Road, Memphis, TN 38118. Thanks.

Ben Barton
Memphis, TN
Editor:
I would like to announce the formation of the Rockford Color Computer Club. For information write to me at 724 Irving, Rockford, IL 61103, or call 963-9187.

John Picot
Rockford, IL

## Editor:

I bought my Color Computer in June and discovered the Rainbow in August. It's difficult to say which I'm happier with. My wife-the computer widow-has another opinion, but she may become a convert yet.
I would like to either join, or start, a Color Computer User's group in the Utica-Mount Clemens-New Baltimore, MI area. Anyone
intersted, please call me at 949-4842.
John Herbert New Baltimore, MI

## Editor:

I would like to let you know that we have formed a club for Color Computer enthusiasts in Midland, MI. The club meets between 7 and 10 p.m. on the second Thursday of each month. Meetings are held in the lounge of the Grace A. Dow Library in Midland.
Further information may be obtained from:

Midland Color Computer Club
c/o Neil Drake
709 Coolidge
Midland, MI 48640
(517) 631-2939

We in the club enjoy reading Rainbow monthly. You and your staff are doing an excellent job. Please keep your quality publication coming our way.

Neil Drake
Midland, MI

## Editor:

There is a new club in the South Bay area of Los Angeles County. The address is:
South Bay Color Computer Club
c/o Karen Schlotzhauer
2545 W. 225th Place
Torrence, CA 90505
(213) 539-2539

I have been enjoying Rainbow for nearly a year. It keeps getting better and better. Keep it up.

## Karen Schlotzhauer <br> Torrence, CA

Editor:
You are invited to the next meeting of the Sea-Tac CoCo Club-the first Sunday of each month, from I p.m. to 3 p.m. Meetings are held at the offices of:

Couriseling and Preventive Services
Oakhurst Office Park-Suite 121
1851 S. Central Place
Kent, WA 98031
854-7072
At the meetings, you can get acquainted with other owners, discuss software and hardware experiences, and see demonstrations of programs and equipment. A 32 K Color Computer, cassette recorder, disk drive, printer, and TV will be provided by Dr. Nugent, the director of CAPS.

Michael Nugent
Kent, $W A$

## Editor:

I am trying to start a CoCo club in the Twin Lakes, Lake Geneva area here in Wisconsin. People can contact me (Dave Buehn) at 829 Hickory Road, Twin Lakes, WI 53181, or by calling me at (414) 8772989.

Dave Buehn
Twin Lakes, WI

## COCO COOKING

## Editor:

When I'm finished with my computer in the evenings I drape a towel across it to keep out the dust. Wouldn't you know it, I left it on until the next day and when I removed the towel, it was cooking. But it still works like a champ. And they say need a fan in it...?

How about someone inventing a device that reads programs out of magazines and types them in your computer. My fingers are tired.

## Chris Barnak <br> Suffolk, VA

Editor's Note: For aid to tired fingers, check page 174.

## INFORMATION, PLEASE

## Editor:

I am new to your magazine, and from purchasing just one issue I am already set on being a loyal reader from now on. I am the owner of a TRS-80 Color Computer and I have found more information in one issue of yours than I have seen in all my previous years as a TRS-80 owner. Your magazine has truly expanded my views on the capabilities of the CoCo. I recently upgraded my 16 K computer to 32 K and I would like to know if my computer is now capable of playing all 32 K games and software. I thought perhaps I may have some RAM limitations being that it was originally a 16 K computer. Keep up the excellent work, you're truly a remarkable magazine.

Charles Mastrandrea
Ann Arbor, MI
Editor's Note: No problem. You can use it for all 32 K programs.

## Editor:

I have an Okidata 80 Printer using a Micro Works P180C parallel printer interface. What I want to know is what are the printer control characters and program for a screen dump for graphics to the Okidata 80 Printer.

Please write me at 4026 Danube Circle if you can help me with this.

Willie Bethay
Valdosta, GA

## RECOMMENDED READING

## Editor:

My thanks to Eugene Bouley of RI for his recommendation (in the November Rainbow) of Programming the 6809 by Rodney Zaks and William Labiak. It's everything he claimed!
Let me recommend another great book for those who are really serious about assembly language on the CoCo. The Facts by Spectral Associates shows you where just about everything is in the CoCo and how to use it.

Al Kalar
Sumner, WA

## HELPFUL HINTS

## Editor:

I think these letter to the editor sections are great. I thought I would put mytwo cents worth in.

If you own the Chess ROM Pack and a black and white TV, you p̀robably have noticed that both sets of pieces appear the same shade. Changing original memory location \$C0DI to a \$F0 or \$F8 will remedy the problem.

I would like to see more information on disk drives.

Keep up the good work!
David Sweet
Carmel, IN

## Editor:

Playing Dungeon Adventure into the wee hours of the night, I was rapidly gaining confidence and had reached the 17 th level. I had defeated spiders, demons, wizards and the like when I was surprised and destroyed by a tiny bug. In my fatigued state, during a battle I hit the "fight" key instead of the "move" key. There being no one to fight I was hopelessly trapped in an endless loop.

Undaunted, I resolved to rest and try again. The next night, I was rapidly jumping levels and apparently jumped past level 20. After continuing for some time, I was attacked by 68 demons. That was when I gave up and checked the listing for the winning level and found it to be " $=20$."

Both of the above require only minor fixes. To avoid the entry error in the fight sequence, add this line:

## 1395 IFK $=$ CHR \$(32)THENGOSUB 1440:GOTO1270

That will allow you to press the space bar if you have hit the "fight" key instead of the "move key" during the fighting sequence, and return to the options.

By changing line 1910 to read:

## $1910 \operatorname{IFAL}(1)=20$ THEN2280

the program will not continue endlessly if level 20 is passed. Nevertheless, congratulations to Gregory Ricketts for an excellent program and to Rainbow for their choice.

Pat Moss
Corydon, IN

## Editor:

In Joseph Kolar's article "Let's Take BASIC Training," he asked "Do you find that your manual flops around and is unwieldy and awkward to use, etc., etc.?" His solution was to purchase another manual to cut out the pages you are working on, and save your original manual for reference. Well, I came up with what I think is a better solution. I purchased a music stand to hold my books when I need to program from them. It has worked out super! I can adjust the height, and place the stand at just the right angle so as to eliminate that terrible neck pain you get from keeping your head and neck bent down looking at your work on the computer table.

Your Rainbow is F-a-n-t-a-s-t-i-c! Keep up the good work, and please keep those articles for us apprentices coming.

## PRINT \#-2,

I am beginning to get really excited about RAINBOWfest-which is, after all, "CoCo's Very First Show!" As you will be able to see from information and registration material in the Rainbow, it is to be in Chicago, April 22-24, at the Regency-Hyatt Woodfield.

RAINBOWfest is going to be an all-purpose show-not just a trade exhibition. Yes, there will be a lot of displays with people and products. And most of the biggest names in the CoCo world will be on hand. You will see new products, learn some new things and have a chance to talk with other CoCoists from all over the country. We know of several groups planning to charter buses for the trip.

But there is to be more to RAINBOWfest! One of the biggest things will be a series of seminars and a breakfast talk. We have tentatively scheduled Don Inman to be the breakfast speaker. And, as you know, Don is the acknowledged master of computer graphics for the CoCo. This breakfast is open to everyone, so we hope you'll make plans to attend.

Then, too, the seminars will be run most of
 the day Saturday, and on Sunday as well. All the speakers and topics are not firm yet, but we will be covering everything from Basic hints to machine language animation, from the legal rights you have as a buyer of software to setting up and communicating with bulletin boards. Also: A special session is planned for officers of Color Computer clubs.

All in all, we hope RAINBOWfest will be a great weekend for anyone and everyone interested in CoCo-on all levels, from beginner to advanced programmer. If you can possibly make it, we hope to see you there.

I would like to thank everyone who has taken the time to write in about the changes we have been making to the Rainbow. The one which has, obviously, received the most attention is the "slick" paper. At this point, the positive comments are running well ahead of the negative ones-but there are a number of you who have expressed unhappiness with the new paper.

Those of you who are pleased with the "crisp," "neat," "professional" new look of our magazine will be pleased to know that, at least for now, we are keeping the "slick" paper. But, for those of you who have expressed unhappiness, you, too, will be pleased to learn that we are making a slight change soon that we hope will solve the most-mentioned problem-that of glare. We've found another "slick" paper which has a slight bluish cast to it (it is hard to tell unless the two papers are held up side-to-side). This paper will still give us the same "slick" look, but should be a little easier on the eyes. As always, we will appreciate your comments.

And, I suppose while commenting on the magazine in general, this is as good a place as any to welcome Jerry McKiernan to our staff. Sally Nichols, our art director, needed some help and Jerry is providing that as Assistant Art Director. Incidentally, Jerry's a whiz at what I call "dot art"-and I'm sure you'll be able to pick out some of his illustrations in this month's issue.

1 would also like to welcome Patty King as our first advertising and special events manager. In addition to getting the advertising section in shape, Patty will be responsible for RAINBOWfest planning-and working with Dave Hooper, who is the local arrangements chairman in Chicago. Patty is very qualified to work on a project like this-she was responsible for all the planning of the U.S. Conference of Mayors in Louisville a couple of years ago.

One of the things which has happened this past month is a couple of letters flying back and forth from various people concerning a letter which appeared in the Bouquets And Brickbats section of last month's Rainbow about a product.

One of the letters was from Thomas Cassidy of Ozone Park, N. Y., in defense

## Pat Thompson

 Union, $O R$
## Editor:

When anyone starts to learn/use Assembly Lanugage for the 80 Che /she will soon run up against the terrible lack of instructions on how to enter a line of Assembly code. This is a simple stage, almost a simple-minded one, but it is essential and the lack of it can stop a learner of Machine Language cold. In the book Assembly Language Graphics for the TRS80 Color Computer by Don Inman and Kurt Inman, the very simple first stages of data entry are spelled out, explained, and illustrated starting on page 49. Working through this book would be a good idea whether or not one wants to use Machine Language / Assembly Language graphics on the 80 C computer.

## Paulette Granthan

Palo Alto, CA

## Editor:

In reply to Doug Tooms' letter (January), Ghost Gobbler produces its sound by storing data at location \$FF20 very quickly, as most machine language games do. The printer port also uses this location as an output to the printer. So, when sound is produced, data (which comes out as garbage) goes to the printer. The reason that this garbage is only printed every once in a while, is that the printer's buffer buffers the garbage.
Here's something else that is not in the documentation. When Ghost Gobbler asks for your name, pressing SHIFT@ causes the computer to go into high speed (providing, of course, that your CoCo works with the "high-speed $P O K E$ ").

To Jorge Mir who wanted to move his string space to the extra 8 K of his 64 K system: Try POKEing the highest address of your extra memory (which I believe is \$FEFF) into the low memory locations $\$ 27 / 28$. Be careful not to use more than 8 K of strings or you might run over Disk BASIC.

POKE \& $\mathrm{H} 27, \& \mathrm{HFE}: ~ P O K E \& H 28$, \& HFF

Now, I have a question. How is SLENB* (on the cartridge connector) utilized?

Kyle Rogers
Knoxville, TN

## JUMPING DOWN

## Editor:

We have just become acquainted with your magazine-having the November and December issues. Find them great!
I keyed in Parachute Jump from the December issue and now have a battle on my hands. Our son ( 11 years old) has beaten his father's score and, of course, that can't go unchallenged. I think they play it just to see the lightning bolt and to hear the tune being played as the poor chutist drops to ground after the bomb gets him. But then I could be wrong.

Betty Cutler
Clifford, Ontario, Canada

## RAINBOW SCOREBOARD

Do you recall Jarrod Hollinghead's letter to the Editor a few months ago referring to his Dunkey Munkey score, asking if anyone had done better?

Well, we've gotten a number of letters from readers as a result of Jarrod's initial inquiry, and thought we might develop this interest into a regular

feature devoted to listing the high scores of readers for any game for the 80C that registers players scores.

So, let us hear from you. Whatever the game-send us your high score along with your name, city and state and well publish it right here in our Rainbow Scoreboard column.

## PLAYER

Andrew Herron, High Point, NC Wendy Johnson, San Jose, CA Sara Hennessey, Golden Vally, MN Mike Wells (11), Pittsburgh, PA Cameron Amick, Reisterstown, MD Kim Cook, High Point, NC Todd Bernhard, Rochester, NY Dave Roper, Lambertville, MI Mike Jackson, Dardenne Prairie, MO Aaron Findley, Sierra Madre, CA Michelle Thompson, Milpitas, MS Randy Gerber, Wilmette, IL

Cameron Amick obviously spends a great deal of his computer time as a gamer. and since he has gone to the additional trouble of logging his scores and mailing them to us, we thought we would print them. His Dunkey Munkey score of 300,000 points lands him in fifth place on this month's Scoreboard for that game. As his other scores are uncontested, we suppose that gives him
at least a temporary first place in those game catcgories. This is a distinction shared by Michelle Thompson and Randy Gerber, whose uncontested scores for Scarfman and Ghost Gobbler, respectively, make them gamers without peer.

Here is the summation of Cameron's considerable efforts.

| Astro Blast (Mark Data) | 63,000 |
| :--- | ---: |
| Avenger (Cornsoft Group) | 5,000 |
| Colorpede (Intracolor) | 245,723 |
| Color Haywire (Mark Data) | 9,150 |
| Color Meteoroids (Spectral Associates) | 149,000 |

# Roll Those Bones (And Other Characteristics) 

By Bob Albrecht and George Firedrake Rainbow Contributing Editors

Last time, we showed you three short programs to "roll" the seven basic characteristics for a fantasy role playing character. Here is one of the programs.

```
1gø REM ** CREATE A CHARACTER
199:
30ø REM ** CLEAR THE SCREEN
310 CLS
32ø RESTORE
399 :
5øø REM ** ROLL & PRINT CHARACTE
RISTICS
51\varnothing READ CHAR$
52ø IF CHAR$ = "ZZZ" THEN 71\varnothing
5 3 0 ~ G O S U B ~ 9 1 0 ~
54ø PRINT CHAR$, DICE
55g GOTO 51ø
56ø DATA STR, CON, SIZ, INT
57ø DATA POW, DEX, CHA, ZZZ
599 :
7øø REM ** TELL HOW TO DO AGAIN
710 PRINT
72ø PRINT "TO DO AGAIN, PRESS AN
Y KEY"
730 IF INKEY$ = "" THEN 730 ELSE
    310
799:
9øø REM ** DICE SUBROUTINE
910 D1 = RND(6)
920 D2 = RND(6)
930 D3 = RND(6)
94ø DICE = D1 + D2 + D3
95Ø RETURN
```

Our program rolls a number from three to 18 for each and every characteristic. Alas, a character with SIZ 15, STR 3, and DEX 5 will never make it in the GameMaster's world. So, we suggest some alternative DICE subroutines.

Our first variation. Roll 3D6. If DICE is less than 6, assign 6 as the value.

```
90ø REM ** DICE SUBROUTINE
910 D1 = RND (6)
920 D2 = RND (6)
930 D3 = RND(6)
940 DICE = D1 + D2 + D3
95ø IF DICE<6 THEN DICE=6
96ø RETURN
```

Our second variation: A more generous GM says, "If DICE is less than 6, add 3 to the value of DICE."

We hear some GMs allow players to roll 4D6 and take the best three. If you roll

you can discard

for a total of 13
Hmmm...we get the same result if we add all four dice and subtract the smallest. Here is our first attempt.

```
9ø\emptyset REM ** DICE SUBROUTINE
910 D1 = RND(6)
920 D2 = RND (6)
930 D3 = RND (6)
940 D4 = RND (6)
950 SMALL = 7
96\emptyset IF D1<SMALL THEN SMALL=D1
970 IF D2<SMALL THEN SMALL=D2
98\emptyset IF D3<SMALL THEN SMALL=D3
99ø IF D4<SMALL THEN SMALL=D4
1000 DICE=D1+D2+D3+D4-SMALL
101ø RETURN
```

Here is another way, using subscripted variables.

```
9\emptyset\emptyset REM ** DICE SUBROUTINE
910 FOR KK=1 TO 4
920 : D(KK) = RND(6)
93\emptyset NEXT KK
940 SMALL = 7
95\emptyset FOR KK=1 TO 4
```

```
96\varnothing : IF D(KK)<SMALL THEN SMALL=
D(KK)
97g NEXT KK
98\emptyset DICE=D(1)+D(2)+D(3)+D(4)-SMA
LL
990 RETURN
```

We suggest a third way for you to try. Write lines 910 through 930 as we did above, putting the four dice values in $\mathrm{D}(1), \mathrm{D}(2), \mathrm{D}(3)$, and $\mathrm{D}(4)$. Next, sort these values so the smallest value is in $\mathrm{D}(4)$ and the other three values are in $D(1), D(2)$, and $D(3)$. Finally, compute: $D I C E=D(!)+D(2)$ $+\mathrm{D}(3)$.

Our program rolls seven basic characteristics for a Worlds of Wonder or Runequest character. For a Dungeons \& Dragons or Tunnels \& Trolls character, change only lines 560 and 570.

D\&D Character: 560 DATA STR, INT, WIS
570 DATA DEX, CON, CHR, ZZZ
T\&T Character: 560 DATA STR, CON, IQ
570 DATA LK, DEX, CHR, ZZZ
A SMALL CAST OF CHARACTERS
We have begun a cast of characters. Below are their names and characteristiçs.

|  | STR | CON | SIZ | INT | POW | DEX | CHA |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Aloysious | 10 | 11 | 10 | 12 | 10 | 12 | 9 |
| Barostan | 17 | 17 | 13 | 8 | 7 | 15 | 6 |
| Bridla | 11 | 12 | 10 | 15 | 6 | 11 | 16 |
| Dernfara | 13 | 13 | 8 | 13 | 4 | 17 | 6 |
| Joleen | 13 | 11 | 7 | 13 | 8 | 17 | 13 |
| Rokana | 9 | 9 | 9 | 17 | 18 | 9 | 10 |

Here is a simple information retrieval program Information about our characters is stored in DATA statements. If you type in the name of one of these characters, the computer will find the information and display it on the sreen.

```
1ø\emptyset REM ** CHARACTER FINDER
199:
2øø REM ** WHO$ IS CHARACTER
21ø CLS
229 INPUT "NAME DF CHARACTER"; W
H0$

    8, 17, 13
1060 DATA ROKANA, 9, 9, 9, 17, 1
8, 9, 10
1ø7ø DATA ENDFILE, }\varnothing,\varnothing,\varnothing,\varnothing,
, \varnothing, Ø
```

Lines 1010 through 1070 are a data file. This file consists of seven records. Each record consists of a character's name followed by seven numbers. For instance:

The last record, which begins with ENDFILE, is not an actual character record. Instead, it is an end-of-file (EOF) record. If you enter a name that is not in the file, the CoCo will search in vain and arrive at EN DFI LE. It will then print 1 DON'T K NOW followed by the name you entered. This will also happen if you misspell a name that is in the file, or even if you ask it for ENDFILE.
$E N T E R$ the program and type $R U N$. It begins like this:

NAME OF CH^R^C"IER"
Type BRIDLA and press the ENTER key.
NAME OF CHARACTER"' BRIDI.^
STR
CON
II
SIZ
INT
IN
POW
DEX
CHA
CHA
15 16

TO DO AGAIN. PRESS ANY KEY OO
You can change these records to records for your characters. Remember to put ENDFILE in the last $D A T A$ statement.

Your turn. Write a program to display the entire file, one record at a time, beginning with the first record. To get the next record, press the space bar.

What happens when you tell the computer to compute a random number of a random number? For instance, suppose you tell the CoCo to compute:

## RND(RND(2))

Hieronymus Heuristicus wrote a program to find out. His program counts how many ones and how many twos occurred in a sample of $\mathrm{RND}(\mathrm{R} N D(2)$ ) numbers.
"Well, an R ND number is an R ND number," thought H . H. as he typed RUN. "I'll get about the same number of ones and twos." But here is what actually happened.

```
HOW MANY RANDOM NUMBERS? }10
POSSIBLE VALUE
                                    NUMBER OF TIMES
    1
    2
    2 7
TO I)O A(;AIN. PRESS ANY KEY
```

Surprised, he tried again.

HOW MANY RANDOM NUMBERS? 1000
POSSIBI.E VALUE NUMBER OF TIMES
1 75K

242
TO IDO AGAIN, PRESS ANY KEY

Perplexed by this strange behavior of usually predictable unpredictable numbers, H. H. called his friend, Annalee Analyticus. After hearing what happened, A. A., chuckled, then told her friend why it happened.

## COLOR COMPUTER/TDP-100

## COLOR

 ALIEN DEFENSEby Doug Schwartz

One of the fastest action arcade games! Written in Machine Language. 16K Cassette \$19.95

A larger-than-screen maze game. Arcade style, fast-action. Written in Machine Language. Requires Joystick.

16K Cassette \$19.95

## COLOR CATERPILLAR ${ }^{\text {® }}$

Don't settle for less. Be sure to ask if the program was produced by Soft Sector Marketing so you don't get the wrong version.

16K Cassette \$19.95
Machine Language

## COLOR GRAPHIC EDITOR

by Larry Ashmun
At last, a true Graphic Drawing program that permits the creation of graphic pictures on the screen storing them in one of 4 locations, and recalling them as needed for review.

The pictures can be saved to disk to be loaded into the micro works disk editor. The graphics are saved in Assembler format or Basic Data Statements, butdetails are provided for using the information in a BASIC program. Works on cassette or disk systems.

## Cassette \$19.95

Written in Machine Language, but requires Extended or Disk Basic.

*When the CoCo computes the value of RND(2), the probability of getting 1 is one in two; the probability of getting 2 is also one in two. For $\operatorname{RND}(\operatorname{RND}(2))$,
(a) what is the probability of getting 1 ?
(b) what is the probability of getting 2?

* Hmmm...what about $\operatorname{RND}(\operatorname{RND}(3))$ ? The possible values are 1,2 , or 3 . Modify Hieronymus's program so the computer counts how many Is, 2 s , and 3 s occur in a sample of $\mathrm{RND}(\mathrm{RND}(3))$ numbers. Can you predict what will happen before you run the program?
* Then try $\mathrm{RND}(\mathrm{RND}(4))$ or $\mathrm{RND}(\mathrm{RND}(5))$ or....

## COMING ATTRACTIONS

Surely, but slowly, we will explore the following things:

* The elusive RND
* GameMaster's Dice
* Looking up stuff in files. First, files of information in DATA statements and arrays. Next, cassette files. Eventually, disk files.
* Whatever else comes to mind, or is suggested by you.

What do you want? If it fits into the general idea of "GameMaster's Apprentice," we might do it. Send your suggestions, complaints', kudos, requests, whatever...to George \& Bob, P.O. Box 310, Menlo Park, CA 94025.

* What did A. A. tell H. H.? Why did the computer compute lots more 1 s than 2 s for $\mathrm{RND}(\mathrm{RND}(2))$ ?

ค

## AT LAST! BUSINESS SOFTWARE DESIGNED FOR THE COLOR COMPUTER <br> * MAKE YOUR COLOR COMPUTER A WORKING BUSINESS PARTNER * $\star$ ALL PROGRAMS ARE MENU DRIVEN AND USER FRIENDLY $\star$ <br> $\star$ PROFESSIONALLY WRITTEN AND FULLY TESTED $\star$ AFTER-THE-SALE SUPPORT *

#### Abstract

SMALL BUSINESS ACCOUNTING PACKAGE...Ideally suited for any small business with up to $\$ 1,000,000$ in annual sales and 400 accounts receivable and 400 accounts payable. This package provides detailed record keeping on accounts receivable and payable, sales, purchase orders, and allows input and maintenance of payroll related data. Prepares balance sheet and income statement, aging reports, and displays a check register, a listing of sales by date, and a listing of individual purchase orders. Included are printer output options. The step-by-step user's manual and the user friendly, menu driven format makes this program package fast, efficient, and easy to use. REQUIRES SINGLE DISK DRIVE (User's manual without program \$20)

DEPRECIATION...Determines depreciation values for assets based upon the new accelerated cost recovery system (ACRS) and the alternate ACRS methods in addition to the conventional methods. Adjusts for placing assets in service during the year. Screen or printer output.

LOAN ANALYSIS...Evaluate cost of borrowing for capital investments or business expansion. Prints amortization schedules and allows user to determine loan status at any point in the term of a loan. Other options allow user to determine either principle, interest, payment, or term based upon input of any three. An auto loan option includes trade-in allowance and taxes. Screen or printer output.
.$\$ 20.95$

ANNUITY...Determine future value of investments, present value of a future amount, compound interest, and amount of an individual retirement account (IRA). Screen or printer output.

EXPENSE ACCOUNT DIARY...Keeps a record of travel expenses for up to 25 trips per year. Performs file searches based upon cross-referencing of date of trip, city visited, hotel, or purpose of trip. Screen or printer output. An excellent program for the traveling businessman.
. $\$ 15.95$.

STOCK ANALYZER...Reviewed in July 1982 RAINBOW. New version provides printer output and is disk compatible. Maintains a stock portfolio data base of multiple stocks. Can be used to track performance of sales personnel or similar applications. Features graphing of data to screen or printer along with analyses that includes projection of data trends
\$21.95.

# Screen-To-Printer Color Graphics 

By Lane Lester, Ph.D.

Breathes there a CoCoNut with soul so dead, Who never in his heart of hearts has said, "Oh. how' I wish I could make color copy' Of that display on my color TV!'"?

The dim recesses of my mind which produced shreds of the poem that stimulated the couplet above just will not produce the author's name so that I can apologize to him. As tragic a blow as my efforts may be to the world of literature I am sure that the poem does indeed express a feeling that many of us have had. Imagine my delight when Francis Kalinowski published "Printer Color Art" in the September 1982 issue of 80 Micro which showed how to make beautiful multi-colored pictures on the Epson MX-80. Because you're probably not as lazy as I am you can't imagine my disappointment when I realized how much programming would be involved to produce each picture. Sadly I set aside the tools that Francis generously provided and went on to less-demanding tasks.

But now the light has dawned again! Using programs provided for us by two giants of the CoCo world it is possible for indolent folks like me to have beautiful reproductions of screen graphics. Arnold Pouch, now deceased, developed Motion Picture Programming based on a drawer program in the August 1981 issue of Chromasette. This powerful technique which Arnold described in the March and April 1982 issues of the Rainbon' makes the creation of graphic displays a pleasure. A complete set of programs and a tutorial are available from Superior Graphic Software, or you can buy the

Chromasette and use the Rainbow articles to make the changes to MPP. Making printer copies of MPP graphics is a snap with the Graphic Screen Print Program (GSPR) sold by Mel Hefter of Custom Software Engineering. Versions of this program are available for most of the popular printers. While this means that anyone can at least have black-andwhite screen prints, the availability of colored ribbons will determine whether color prints are possible. Colored ribbons for a number of printers are available from CheckMate and from B.T. Enterprises. A list of suppliers' addresses is given at the end of this article.

The illustrations that accompany this article demonstrate the results you can expect. The jack-o-lantern came from a program I wrote to run Halloween night with the TV in our bay window. It was done in PMODE1 which gave me four different graphics which could be switched and provided Jack with the ability to blink, wink, and "talk." The giraffe was done by projecting a 35 mm slide on the wall and tracing it onto a clear plastic sheet. This sheet was taped to the television screen, and then the MPP program was used to create the graphic. In PMODE3, one graphic has the eyes open and the other, closed. A formula using R ND provides a very natural blinking of the eyes. If you've had a biology course recently enough you may realize that the picture with the blue blobs represents the electron transport system. This is from an MPP animated graphic series in PMODEI that I use to illustrate one of my biology lectures. The three-color graph illustration was produced by a graphing program I published in the March 1982 issue of Color Computer News. The lettering on the graph was done with another program available form Custom Software Engineering, Alpha-Draw, which can be added to any graphic program.
"Enough," you say, "I'm sold. Now how can I make color prints of graphic screen displays?" In addition to the appropriate hardware and supplies, you first need to get and learn to use the MPP program. I'm going to assume you've done that in the following discussion. The GSPR program is in machine language and comes with instructions for editing Basic programs such as MPP so that they will load and execute GSPR. In addition to those changes I added to line 22 of MPP an "L" option which GOSUBs to " 330 X=USRI(0):RETURN", executing the screen print.

Although typical screen graphics haveseveral colors, they must be altered considerably in order to produce color
printsi This is necessary because each color requires a separate pass through the printer with a different ribbon in place. For each color in the print, that part of the screen display is changed to red (simple with MPP) which with GSPR gives the densest printing. The rest of the graphic is erased to green which is unprinted. In your original graphic program you may use the eight pages of graphic RAM for animation, but for the screen print you can use them for multiple copies of the graphic. In PMODE I you could store four different versions, one for each of four colored ribbons. If you are using more than four colors or a higher PMODE, you would make separate saves of the graphics which with MPP is rapid (at least with disk) and convenient.

In order that the different colors will be properly located on the paper, accurate re-positioning of the paper for each pass is critical. This should be quite easy with most printers. On the Epson, just to the right of the left tractor lock, is a black horizontal ridge which serves as an index. The brand of paper I use is numbered along the left perforated strip and after each run I return the paper to the same number. If your paper is not numbered or your printer does not have an index, Francis Kalinowski, in his 80 Micro article, suggests placing a piece of paper tape at the edge of the tractor. Then you can make a pencil mark across the tape and onto the paper to use as a guide. So that with each run the paper will have the same tension, I rewind past the number and then return. Francis suggests an even more precise approach, and if you run into problems you might want to consult his article. He does make two very worth while suggestions, that you use 20 -pound white bond paper and that you unlock one of the pin-feed mechanisms to prevent paper buckling. To give a greater depth of color for publication, I ran the paper through twice for each color, but generally this is not necessary.

# Wall Street Touted As Good Investment 

I suppose that in the back of the minds of many of us is the dream of someday making a killing in the stock market, or watching a handful of dollar bills multiply into hundreds of thousands of bucks, of Swiss bank accounts, and of having the problem of figuring out how we're going to spend so much money. The reality for most of us, however, is that those few extra dollars are hard to find for us to get started on the road to riches.

Part of the beauty of Wall Street is that Valhalla Enterprises has been generous enough to provide each of us with $\$ 1.000$ to get started. The rest is up to the individual and how he or she takes advantage of all the helpful information, such as stock and market histories and general trends that are part of the game. Individual hunches also are important, of course.

A couple of bars of "We're In The Money!" at the opening put us in an optimistic mood for what is a challenging, fascinating and colorful game. I would think that even those sleepy-looking elderly chaps who spend their lunch hours daily watching the big board would be caught up in this game.

Tailored for one to four players, Wall Street first asks for the names of the participants. The group is then asked for the amount of earnings that will determine the winner (if you want to play to $\$ 3.000$. enter " 3.000 "). Actually. $\$ 3.000$ is a short game for two people, taking between 10 and 20 minutes, depending upon their skill and luck. A \$10.000 game probably will take four people about an hour if they move along at a good pace.

The stock exhange screen gives you the current price for eight stocks:

> Utilities - Energetic Electric, Wishwashy Water:
> Blue Chips - Mammoth Motors, Stupendous Steel;
> Glamors - Calculating Computers, Albatross Aircraft;
> High Risk - Pinchpenny Prospecting. Risky Research.

The current month is displayed in the upper righthand corner. The condition of the overall market is also shown (up, down or even). At the bottom of the screen is a list of possible actons: Pressing "P" lets you see your account along with your holdings and disposable income: the " S " key gives you stock history graphs, and "M" displays the market history.

An individual player's screen gives you the options of buying or selling. If you press "B" you are asked "Which Stock'?" Typing the initial of the stock then gives you the history of that company's trends. A similar procedure is followed if you're selling.

After the round (or "month") of transactions is completed. be ready for some surprises because. just as in the real world. the stock market reacts to many otherevents, such as labor strikes and rumors of war. Then, of course, there arc pleasant surprises, such as bigdividends and 2 -for1 or 4 -for-1 stock splits. You can just imagine the floor of the New York Stock Exchange when such excitement occurs.

Wall Street is an excellent game for teaching the ins and outs of the stock market, as well as the patience and knowledge required to give investments the opportunity to
grow. It's also a good game to demonstrate CoCo's versatility. Warning: Like CoCo, the game also is contagious, and you should prepare yourself for hours of fun. Wall Street is a great investment!
(Valhalla Enterprises, P.O. Box 243, Sumner, WA 98390.

—Charles Springer

Hardware Review...

# This Keyboard Is A Good Quality Product 

We were a little concerned when the Professional Keyboard arrived with one page of documentation consisting of four short lines explaining how to install it. After all, something as complicated as replacing a keyboard should have all sorts of information, right?

Not to worry. Because the keyboard on the Color Computer is connected very simply, the installation was as easy as it looked. Total time was seven minutes, and some of that was due to the fact that we lost one of the screws to reattach the cover to CoCo.

Once in place, what we had, essentially, was a Model I keyboard in a Color Computer case. The fit was perfect. The touch was good and there were no real problems. As of this writing, the Professional Keyboard has been installed for the better part of three weeks with no trouble whatsoever.

It takes a bit of getting used to. But, if you are one of those people who is unhappy with the flat Color Computer keyboard, this product is a real gem.

The keys, of course, are higher than those for the Color Computer. And the ENTER key is located at a slightly different place. That took a little getting used to-but the touch-typists around have taken to the Professional Keyboard much like the proverbial duck to water.

It also has four function keys. Unfortunately, there is no documentation to tell you how to use them. We hope an addenda to the instructions will be forthcoming. And, of minor concern, it is obvious that keyboard overlays for some products such as the Platinum Worksaver, Master Control and Basic Aid will not fit this new keyboard. A small price to pay if you want to replace your keyboard.

We have heard more complaints about the Color Computer's keyboard than anything else. For those of you who do not like it, the Professional Keyboard offers an excellent alternative that is well put together and works without any problem.

You may notice that we refer to the "Color Computer" thoughout this review. The reason is that the Professional Keyboard, as of this writing, is not available for the TDP100, nor for Color Computers with an "F" revision board. We understand, however, that one is in the works.

[^0]
## Turn your color com. itter on to the power of filx

## NOW FROM THE WORLDS LARGEST SUPPLIER OF SOFTWARE FOR FLEX COMES FHL COLOR FLEX. JUST LOOK AT THESE FEATURES:

IF YOURE TIRED OF
NO DISK SOFTWARE,

## THEN FHLL Oolor FLEX IS THE ANSMERI

FLEX is the world's most popular operating system for the 6809 and with over 150 programs, we are the largest supplier of software for FLEX. These programs are NOT games but serious programs for your Color Computer. They rangeffrom word processors thru business applications to software development tools. Many Fortune 500 companies use our software. FHL Color FLEX turns your Color computer into a powerful system more capable than systems costing several times as much.

See our NEW 32 page catalog in the Jan.' 83 issue of COLOR COMPUTER NEWS featuring over 150 products for FLEX, or send $\$ 3.00$ to us and we will see that you receive a copy!!

## FLEX NOW ONLY \$99

- NEW - "Tiny Editor"
- NEW - Interactive Assembler (Tiny ASM)
- NEW - Machine Language Monitor
- NEW - Video attributes include status lines, protected lines, and inverse video
- Hi-Res screen formats
- $16 \times 32$ and $24 \times 5$ I, upper and lower case characters
- $24 \times 64$ and $32 \times 64$ upper case
- Full ASCII keyboards
- Easy start-up-just type "FLEX"
- On-line assistance-Just type HELP
- Optionally use a standard terminal and printer
- Advance disk I/O and terminal capabilities - Supporting 35, 40, and 80 track single or double sided, single or double density drives
- No additional hardware required
- We have supported FLEX with more than any one else in the world for more than two years!

## SPECIAL

1. DBASIC, RS Disk Basic under FLEX with a utility to copy RS to FLEX disk $\$ 30$.
2. ED/ASM, line and screen editor with conditional macro assembler, both more powerful than TSC's and at the same cost, only $\$ 100$.
3. COLOR UTILITIES, a set of 12 utilities especially designed for FHL COLOR FLEX $\$ 50$.

THE REGENCY TOWER
770 JAMES ST. . SYRACUSE, NY 13203 TELEX 646740 • (315) 474-7856

*FLEX is a trademark of Technical Systems Consultants Inc.

1. Here is Jeri plugging The Solution into the CoCo. Then she will move the main case up close to the CoCo. The cable is kept short to prevent noise and interference. The disk conplugs into a socket on the back of the case. All wires for the internal boards exit out the back of the case.

2. Here is The Solution at work. It makes a very nice addition modized main case both made from heavy aluminum stock

3. All that's missing from this picture is the plug in the wall power supply. You can see the $4 K$ EPROM monitor and the 4 position dip switch. At the front are four of the five expansion slots with a disk controller plugged into the fifth slot on the side. The power LED is at the lower right front of the case.

4. Here Jeri is setting the dip switches in The Solution. The hinged top makes the job easy. The switches can be set for
three different things. Up to four boards can be installed in side the case.

5. Here's The Solution all by itself. The heavy aluminum anodized case is a thing to beproud of. The bufferboard can front comes on when you turn on the power to your CoCo The Solution needs no on/off switch.

6. Here's the real guts to The Solution. We took it all apart so that you could look at the parts. The 1 amp power supply can would expect picture. All the connectors are gold as you connectors are the same as the CoCo's.

THE REGENCY TOWER• 770 JAMES ST.•SYRACUSE, NY 13203•TELEX 646740•(315) 474-7856
the solution and why we built it
When we first introduced FLEX for the CoCo in February 1982 we received hundreds of calls from software and hard. ware developers who wanted to use the CoCo because It was so inexpensive compared to everything else O.Ine CoCo to make this possible for most of these users. I know that the CoCo is viable in most cases, but for many, there that the to be is viable So that was the original reason for designing the expansion box we call "THE SOLUTION."

The motherboard has the $2 \mathrm{~K} / 4 \mathrm{~K}$ EPROM socket with a 4 K monitor EPROM in it. Also inside are 4 vertical connectors for intern ally mounted boards or ROM iype cartridges. The troller ROM is horizontal and is made for out the side the of The Solution. A four position dip switch allows for 3 options to be selected. One option will cause the CoCo to get its interrupt and reset vectors from the monitor Instead of RS Basic.
if you choose to come up in the monitor, then it is not necessary to have RS Extended Basic in the CoCo to boot FLEX because the monitor has a bullt-In boot. This saves plug-in-the-w aii cost of The Solution. The power supply is e case. The back of the case is open and it is thru this that all the cables for the different cards go. This makes for a very neat appearance

TECHNICAL SPECIFICATIONS
Bus Structure...Fully buffered Color Computer compatible bus. Priority daisy chained arrangement where each slot has a priority assigned to it. The farther out on the bus that you are, the less priority you have. The disk slot (0) has the highest priority with siot $1,2,3$, and then 4 has the lowest. The pinout and the timing is the same as the Color Computers with the exception of the sound line. This is used on the motherboard for the priority line.

Power Supply...The power supply is a tracking po wer sup. ply which means that the Color Computer itself turns The ply which means that the cond off so that there is no need for an onloff switch. A LED on the front of The Solution Indicates when the entire system is on or off. The tracking power supply means that The Solution's bus voltage will be the same as the Color Computers to within a very few minnivolts. The power supply included with The Solution is a 1 amp supply for the 5 volt line only. The +12 and -12 voltages are taken
from the Color Computer.

Dip switch options.

1) Select the 4 K ROM monitor. When this option is selected, the system will come up in the monitor and eet interrupt vectors from it rather than the Radio Shack Basic ROM. The reason you might want to do this is so you can boot FLEX from the monitor rather than Basic. This will allow running FLEX without have to have Extended Color Basic in the CoCo. This also ties in with the option on the serial card to come up on a terminal instead of the CoCoTV
set and keyboard.
2) Disable the disk slot (0). This will allow using ROM cartidges In The Soiution without unplugging the disk card. When the switch is on, the ROM is active. When It is off, whatever ROM cartridge is there is active. This infers that you could switch back and forth between a cartridge and the disk system. This is NOT necessarily true because of the need to initialize the disk software in the ROM and this may destroy what to this but it is up to the user to work it circt.
out.
3) Select either a $2 K$ or a $4 K$ EPROM. This is set for a $4 K$ EPROM which is included with The Solution. However, it can be changed if you have a need. The EPROM is addressed at \$E000.
4) User definable. This means that we didn't use this switch for anything, but you can if you want, or we couid ca it reserved

The Solution I/O cards are addressed at elther the SFF60SFFBF area OR the \$FE00-SFEFF area.

These prices and specs are subject to change wlthout notice. Call for confirmation.

THE SOLUTION
CARDS FOR THE SOLUTION
OUAL SERIAL PORT $\$ 130.00$ (110-19,200), full RS-232, DB-25 conn.
CLOCK and PARALLEL PRINTER CARD $\$ 110.00$ OKi clock w/battery backup and 1 parallel outpu port
PROTOTVPE Cards
$31 / 2$ by 9 inch card
EPROM/RAM Card $\$ 90.00$
Up to 16K ROM (2732) or 8K statlc RAM (6116) Each device individually addressed anywhere in memory
EPROM programmer
$\$ 185.00$
Program 2K, 4 K or 8 K EPROMS. Software included elther on disk or on board ROM.

TRIPLE PARALLEL I/O Card Two 6821's and one 6522 for parallel I/O.

Note: We are considering several other cards for The Solu ton. Please let us know what you want, If there is enough in erest, we will make it

# FRANK HOGG LABORATORY, INC., IS PROUD TO ANNOUNCE THE <br> ADDITION OF SEVERAL NEW PROGRAMS TO OUR PRODUCT LIST!! 

From Windrush, in England:

## MACE - A 6809 Assembler and Coresident editor.

A co-resident EDITOR/ASSEMBLER written by Graham Trott, which takes most of the pain out of assembly language program development. Allows programs to be written, edited, assembled, and de-bugged without ever entering the disk operating system. Includes XMACE, a coresident 6800/1/3 EDITOR/CROSS/ASSEMBLER.

6809 FLEX only
$\$ 98.00$

PL/9 - A 6809 compiler with co-resident editor and coresident trace-debugger.

A co-resident EDITOR/COMPILER/DEBUGGER written by Graham Trott. A single pass compiler that produces position independent machine code output. Supports many BASIC, SPL/M and PASCAL structures. Supports 8 bit and 16 bit signed AND 32 bit floating point variables. FLEX I/O, floating point, and scientific functions library (w/source) included.

6809 FLEX
$\$ 198.00$

## From Computerware:

## INVENTORY CONTROL FOR RETAILERS \& DITRIBUTORS:

Designed to help you keep control of this important aspect of your business, this program allows you to store your cost and quantity information, updates it immediately, and offers key management reports with useful summaries at any time upon your request.

CC FLEX version
$\$ 195.00$

## CHBCK LEDGER SYSTEMz

A single entry bookkeeping system which allows the user to define multiple income and expense accounts. Deposits are assigned to income accounts while cash disbursements by check are assigned to expense accounts. Multiple expense assignments may be made for a single check, allowing easy recording of petty cash, credit card payments, etc.

CC FLEX version:
$\$ 195.00$

## GENERAL ACCOUNTS RECEIVABLE SYSTEM:

Provides reliable and timely information regarding the status of all customers accounts. You can know instantly which acccounts are past due, forecast how much money to expect to receive for cash flow planning, and keep on top of your customer credit position.

CC FLEX version:
$\$ 149.00$
(These business programs are also available for FLEX and OS-9. Please contact us for prices. All of these require Computerware's Random Basic.)

## ACCOUNTS PAYABLE SYSTEM:

Can give you the tools to plan your business growth by controlling expenditures and forecasting cash requirements. This system helps a small business manage and track its cash liabilities by collecting vendor invoice information and reporting the business cash committments and payment history.

CC FLEX version:
$\$ 195.00$

## PAYROLL PROCESSING SYSTEM:

Records key information on all employees. Allows for entry of pay rates for standard hours, overtime hours, and salary. Handles hourly, salary, and commissioned employees, as well as, weekly, bi-weekly, semi-monthly, and monthly pay periods. Once all pertinent information is keyed in, processing takes seconds.

CC FLEX version:
\$295.00

## CORRESPONDENCE SYSTEM:

The system collects name and address information and then provides mailing labels or reports of the entire list or subgroups within the list upon your request. You can add names, delete names, or change information for a given name at any time, keeping your list accurate at all times.

CC FLEX version:
$\$ 149.00$

## EDUCATION

# The Forgotten Aspect Of the Classroom Computer 

By Dr. Paul Kimmelman<br>Assistant Superintendent Norton (Ohịo) City Schools

Educators are being inundated daily with advertisements from a whole host of computer dealers. These dealers include: computer hardware specialists, software specialists, and many resource book companies. Unfortunately, while educational computer purchasers are seriously reviewing computer hardware, software, and resource materials, an important aspect of future computer implementation is being forgotten-that is, what will the computers and peripheral equipment be placed on? Where will programs be stored'? It should be noted that thịs may not be a major problem for schools at this time; however, individual classroom computers will more than likely eventually become part of a computer lab and furniture will be an important aspect of the design in the lab.

One company, Gusdorf Electronics Furniture, has designed a line of furniture that will more than meet the needs of public schools. In addition, Gusdorf has priced its equipment very reasonably considering some of the major advantages that it offers over several other comparably priced companies' products.

There is little doubt that computer furniture has not been given much thought while educators have been pressing to expand their hardware and software inventories. With equipment prices falling, however, we must begin to look at furniture as part of the plan to implement computer classes in school districts. The Gusdorf line will meet those needs through its carefully planned expandability options for a variety of classroom designs.

First, Gusdorf furniture is carefully packaged in order to prevent damage while being shipped. Once uncrated, the directions for assembly are written so that even the novice mechanic could put it together. What is even better is that assembly takes less than thirty minutes.

For schools, the design and appearance of the furniture are a major advantage. All of the furniture has a Paradise Hickory veneer which is very attractive. The wood panels which are primarily Appalachian Poplar will resist warping, splitting or cracking and are veneered with a heavy-gauge vinyl grain finish.

Table tops are made of formica which will also prevent scratches and marring. This is extremely critical for school use since sțudents will of ten use the desks for writing as well.

Self-adhesive rubber accessories are packaged with Gusdorf furniture to combine wires and attach them to the back of the furniture. This is a convenience accessory in that it prevents many wires from merely dangling in the back of the furniture.

Storage is an exceptional component of the computer furniture line. For example, under the hutch desk unit is a shelf which can house the many notebooks, disks, cassettes, and manuals that the user wants to keep out of the way but easily accessible.

The hutch desk is spacious and designed to handle a complete computer set-up. For the Color Computer user, the hutch desk would enable the user to house the keyboard, monitor, and a cassette or two disk drives on it. In addition, a modem could be easily added on the top shelf next to the monitor.

For those desiring expanded furniture options, Gusdorf includes a credenza unit, printer stand, corner pieces, and expanders-all which can be attached to each other. These accessories all provide more work space and storage.

Now for one of the highlights of the Gusdorf line-prices. A computer hutch desk sells for approximately $\$ 170$. The expanding units such as the credenza sells for $\$ 270$. A printer stand is $\$ 140$, and expanding table units run from $\$ 40$ to $\$ 80$. These prices are more than likely discounted by local dealers.

All of the Gusdorf furniture is sturdy and designed to support the equipment placed on it. One of the brochures from Gusdorf shows a monitor and printer on the top portion of the hutch while a keyboard and two disk drives are stored on the desk unit. Each of the assembly holes is reinforced to prevent excessive wear and tear.
Computer purchasers for schools will have to begin looking at computer labs for the future of computers in the curriculum. The Gusdorf line is certainly, at this time, the best answer to an attractive computer lab.

There are two suggestions for the Gusdorf designers that would help computer users. One would be to put a drawer in the desk unit, and two, allow for an option of wheels on all of the furniture instead of flat gliders.

In conclusion the main criteria for computer furniture, design, appearance, storage, expandability, and pricing have all been addressed by Gusdorf. There is no question but that furniture has become the forgotten portion of a computer plan, but through the new Gusdorf line we can all begin planning for when all of our Color Computers in the schools will be moved to a laboratory environment. In addition, home Color users will find that the Gusdorf Compu-Table can house almost all of the necessary equipment in a very small space and in a convenient manner.

## Submitting Material To the Rainbow

Contributions to the RAINBOW are welcome from everyone. We like to run a variety of programs which will be useful/helpful/fun for other CoCo owners.

Program submissions must be on tape or disk and it is best to make several saves, at least one of them in ASCII format. We're sorry, but we do not have time to key in programs. All programs should be supported by some editorial commentary, explaining how the program works. We're much more interested in how your submission works and runs than how you developed it. Programs should be learning experiences.

We do pay for submissions, based on a number of criteria. Those wishing remuneration should so state when making submissions.

For the benefit of those who wish more detailed information on making submissions, please send a SASE to: Submissions Editor, the RAINBOW, P.O. Box 209, Prospect, KY 40059. We will send you some more comprehensive guidelines.

Please do not submit programs or articles currently submitted to a nother publication.

## "WANNA FIND OUT WHAT FUN REALLY IS?’"

THE KIND OF EXCITEMENT YOU GET OUT OF YOUR SYSTEM DEPENDS ON WHAT GAMES YOU PUT INTO IT.
If You Want to Find Out What it's Like to Use your Computer to its Fullest....Then These are the Games You'll Need! fOR YOUR TRS-80 COLOR COMPUTER

# TWO ILLUSIONS <br> <br> Optical 2 

 <br> <br> Optical 2}

## By Norman Latner

Optical illusions are always fascinating. First you see it one way and then another, or your eye is led to a seemingly impossible situation. Both of these effects appear in this graphics program which I call Optical 2. I'm sure you'll en joy looking at them and listening to the Mozart selection which accompanies the first illusion. P Mode 4 graphics are used to give smooth diagonals, while the black/white color set with red/blue "fringing" add to the clean, crisp visual look.

The program breaks down in the following way. Lines 10 to 80 display the title, with alternating colors and sound. Line 90 sets the mode to 4 , the screen to I,I and clears the graphics screen. The first illusion is drawn in lines 100 to 240 using the LINE instruction throughout. The music, in lines 250 to 420, is assembled in the form of strings, so that musical phrases can be easily repeated using the PLAY command. This section also contains two PAINT lines which change the background from black to white for another interesting visual effect. Finally, lines 430 to 510 draw the second illusion, again using the LINE instruction.

If you're like me, you may be a little reluctant to key in a program unless you know it's worth the effort. Although I can't give you any guarantees, the program is structured such that you can enter it in sections. The minimum entry would be lines 90 to 240 which will display the first illusion with a black background. You will have to add a temporary line: 245 GO TO 245. This prevents a return to the text screen. If you like what you see, add lines 430 to 510 for the second illusion. Line 245 should now be changed to: 245 FOR T = I TO 2500: NEXT T. This holds the first picture on the screen for a few seconds. To complete the program from this point, just add the missing lines, delete line 245 and
enjoy.

CLOCK．With the ever increasing use of digital clocks，more and more young people are unpracticed in the use of the＂ANALOG＂clocks．You teach the relationship between the two types of clocks．

REQUIRES 16K EXT．BASIC $\$ 14.95$
SPELLING TEST is designed to give a standard oral spelling test using the audio track of the computer＇stape recorder to dictate test words and sample sentences．Student responses are typed on the keyboard and checked by the computer．Results are displayed on the screen and（if connected）on a printer．REQUIRES 16K EXT．BASIC $\$ 19.95$
MATH DRILL is a program designed to help children to practice addi－ tion，subtraction，multiplication，and division skills on the COLOR COM PUTER．It has several features that make its use particularly attractive． －Up to 6 students may use the program at the same time．
Answers for addition，subtraction and multiplication are entered from right to left，just as they are written on paper．
－Partial products for the multiplication problems may be com puted on the screen．
－Division answers that have a remainder are entered as a whole number followed by the letter＂$R$＂and the remainder
－There are ten，user modifiable，skill levels．
－A＂SMILEY FACE＂is used for motivatian and reward．Its size in－ creases relative to the skill level．
－Skill levels automatically adjust to the student＇s ability．
－A timer measures the time used to answer each problem and the total time used for a series of problems．
－After a problem has been answered incorrectiy the correct answer appears under（above in division）the incorrect answer

REQUIRES 16K EXT BASIC $\$ 19.95$
WORD DRILL is designed to give a multiple choice vocabulary quiz． Words and definitions are entered into the program from the keyboard or from a tape file．The computer displays a randomly chosen definition and eight word choices．The student must enter his respohse before a built in timer reaches zero．

REQUIRES 16K EXT．，BASIC $\mathbf{S 1 9 . 9 5}$

ESTIMATE is a program designed to help children to practice estimating the answers to addition，subtraction，multiplication and division problems on the COLOR COMPUTER．It has many features that make its use particularly attractive：
－Up to 5 students may use the program at the same time．
－There are 5，user modifiable，skill levels
－The acceptable percent error may be changed as a student＇s skill improves．
－A timer measures the number of seconds used to answer each problem and the total time used for a series of problems．
If a problem has been answered incorrectly，the student is told the percent error and asked to try again．
－If a problem is answered incorrectly a second time，the student is told the correct answer and the range of acceptable answers is displayed．
－A report is given at the end of each set of problems that includes the number of problems done，the number of problems answered cor rectly on the first try and the average percent error
advertently stop the program from running．
$\begin{array}{ll}\text { advertently stop the program from running．} \\ \text { 16n EXT．BASIC } & \$ 19.95\end{array}$
TEACHERS＇DATABASE is a program designed to allow a teacher to keep a computerized file of information about his／her students．There are many features that make this program particularly attractive．
－Information on as many as 100 students（or more）may be in the computer at one time．
－Each student may have as many as 20 （or more）individual items of data in his／her record．
The program will run from cassette or disk
－Cassette and disk files are completely compatable
－Records may be easily
Records may be easily changed，deleted，combined or
－Information about students may be numerical or text．
－Records may be quickly alphabetized．
－Records may be reordered（ranked）based on test scores or other data．
－Data displayed during a sort may be printed on a printer or saved on disk or cassette as a new file．
A full statistical analysis of data may be done and sent to the printer．
－Student test scores may be weighted．

# WORD PROCESSOR for only $\$ 9.95$ ! What? 

Yes! That's right, because we want to create some excitement with an introductory offer you can't pass up - a professional quality full screen oriented word processor that would be a bargain at $\$ 50$. It's a good one too. Take a look at what you get.
WORDMASTER's FULL SCREEN-ORIENTED EDITOR allows you to move the cursor anywhere in your text using the up, down, right and left arrows. Do this one character at a time or by line or page. Insert, delete or replace text at the cursor character at a time or by line or page. Insert, delete or replace text at the cursor
watching your changes as you make them. Delete or move blocks of text from one watching your changes as you make them. Delet
place to another. Merge in text from other files.
place to another. Merge in text from other files.
AUTOMATIC CARRIAGE RETURN after last
AUTOMATIC CARRIAGE RETURN after last complete word on each line; with this and AUTOMATIC PAGE FEED you don't have to worry about where a line or page ends - just type!
WORD MASTER runs on a $\mathbf{1 6 K}, \mathbf{3 2 K}$, or $\mathbf{6 4 K}$ COLOR COMPUTER, taking advantage of all available memory. Use it with DISK OR CASSETTE based systems. EXTENDED BASIC IS NOT REQUIRED.
EASY TO UNDERSTAND MANUAL has you comfortably using WORDMASTER in minutes. It is a USER-FRIENDLY MENU-DRIVEN SYSTEM with single lettercommands. Check any command without having to refer to the manual with the HELP SCREEN.
10 PROGRAMMABLE FUNCTION KEYS allow easy insertion of frequently used words or phrases.

WORKS WITH ANY PRINTER. Take full advantage of your printer's special functions such as variable character size and emphasized characters with EASY EMBEDDING OF PRINTER CONTROL CODES.
GLOBAL SEARCH function lets you quickly locate specificstrings for replacement or deletion.
Customize form letters or standard text with WORDMASTER's EMBEDDED PAUSE feature. Just"fill in the blanks" when yourprinterpauses forapersonalized appearance.
LIMITED MULTI-TASKING feature lets you print one file while editing another.
In addition to regular text you can use WORDMASTER to CREATE BASIC PROGRAMS with the convenience of full-screen editing.
OTHER FEATURES include easy setting of left, right, top and bottom margin, printer line width, and lines per page. Also auto repeat keys, auto line centering, auto page numbering and choice of display color formats.
And, perhaps one of the best features, but one that won't last long, is WORDMASTER's SUPER LOW INTRODUCTORY PRICE OF \$9.95. At this price you can't go wrong. Buy it today!
TO ORDER send $\$ 9.95$ for cassette version or $\$ 14.95$ for disk version plus $\$ 2.50$ shipping (Calif. residents add 6\% sales tax) to: PYRAMID DISTRIBUTORS, 527 HILL ST., SANTA MONICA, CA 90405 (213) 399-2222.

> New! For Your Color Computer FROG-TREK

(the arcade game)
You may be able to guide your frog through 6 lanes of rush hour traffic, but that isn't enough! You must also cross the river by jumping on logs and turtles to get Froggie safely to his home on the other side. But watch out for the snake! And don't jump on the industrial waste.

A great $M / L$ game at a great price $\$ 14.95$. Uses hiresolution graphics and requires 16 K . Arrows on keyboard move frog- no joy-sticks required.

Send check or money order for $\$ 16.50$ (includes shipping) to:

The concept of half-life is widely taught in several fields of physical science. It is used to explain the rate at which various unstable atomic nuclei decay or change by emitting particles and energy and are thus transformed into different nuclei. For example, uranium 238 is unstable and changes through nuclear decay into lead. Not all of the original nuclei change at once, however. In fact, this is far from what actually happens. The decay of any individual unstable nuclei is a random event, and thus impossible to predict with any degree of accuracy. In the case of uranium 238 , we do know that it takes $4.5 \times 109$ years for one-half of the nuclei to decay to become lead. After another $4.5 \times 109$ years, one-half of the remaining uranium 238 nuclei decay and after a third interval of $4.5 \times 109$ years, a nother one-half of the uranium 238 nuclei decay and so on. Therefore, the time interval in which one-half of a sample of unstable atomic nuclei decays is called the half-life. Each type of radioactive substance has its own half-life which can vary from a fraction of a second to billions of years.

This program for the Color Computer illustrates the random process of nuclear decay and shows how, through a random process, the half-life comes to be. Initially, 144 blue rectangles are set on the screen, using the low resolution setreset procedure. Extended Basic's TIMER function is used as a time counter. Each blue dot (rectangle) represents an unstable atomic nuclei of a particular imaginary element. The X and Y coordinates of each dot are stored in arrays. The computer then looks at each point individually and through the RND function decides whether or not the nuclei will decay. If it does decay, then the dot is changed to red. When one-half of the nuclei have decayed, 72 in this case, then the half-life interval is displayed. When half of the remaining nuclei decay, the second half-life time is shown, and so on, up to the fourth half-life.

When the program is $R U N$, you are asked to INPUT a time factor. This can be a number from 2 to about 30 . Higher numbers may cause the TIMER to reset. A small number produces a shorter half-life period.

The first number displayed at the right of the screen is identified as the half-life and the subsequent displays are labeled second, third and fourth half-life. These are cumulative timer values and should be even multiples of the half-life (two times, three times and four times). The first half-life is displayed when 72 nuclei decay, the second when 36 more decay, the third when 18 more decay and the fourth when nine more decay.

Since 144 points do not represent a truly large sample size, the results do not always give half-life periods that are the
same. For example, if the first half-life is at 250 counts (about 25 seconds) then the second should be at 500 , the third at 750 and the fourth at 1000 . The actual results will vary but do come close enough. Actually, the variability can lead to some interesting classroom discussions on the idea of random events.

Lines 50-128 Stores point locations in arrays X and Y
Lines 140-160 Asks for time intervals
Lines 175-200 Displays all points as blue
Line 210 Sets TIMER to 0
Line 220 Displays time counts (about one-tenth seconds)
Line 230 Selects a random point to check
Line 235 Checks if point already set
Line 237 Decides if decay takes place
Lines 240-257 Checks for half-life intervals

## PRICKLY-PEAR SOFTWARE

 QUALITY PROGRAMS FOR YOUR 80CPROGRAMS REQUIRE 16K EXTENDED BASIC FOR TAPE. AND 32 K DISK UNLESS OTHERWISE NOTED.

## NEW THIS MONTH

The Disk Manager

If you use a disk drive you NEED this program! It does more than any other disk utility. You can use it to rebuild a crashed disk easily - two different ways. You can also print a SUPER DIRECTORY for a disk that contains such information as program size, which granules are used, and the start, end, and execute addresses for machine language programs. It will also print a menu on the screen for a disk in the drive, and when you indicate your choice it will load and either RUN or EXEC the program foryou as appropriate. In addition, it codes your files by DATE, and it codes your disks by NAME and NUMBER. And, it creates and maintains a file of all your disks (and the programs on them) which you can sort and print as needed. You can sort a collection of up to 300 disks. Could you use a printed list of EVERY program in your collection, in alphabetical order? This list tells you which disk has the program you need so you can find it easily, and all this is only the beginning. There are so many features we have no space to mention them all. Both the 16 K and 32 K versions are included, and we suggest you place a copy of the program on every diskette for quick access. You will wonder how yougot along without this beauty!! Full, easy to follow instructions. Requires a disk drive. \$29.95

Your Personal check is welcome - no delay. Inclucie $\$ 1.50$ shipping for each program ordered. (Shipping free on $\$ 50.00$ or larger orders). Az. residents add 6\% sales tax. Orders shipped within two days.

Stocked by Quality Dealers, or send order to:

## Software Review...

# Homebase: Complex, Versatile Data Management 

By Frank J. Esser

The purpose of a database program, or system, is to provide a means to store data in such a manner that the user of the system is not required to know where or how the data is stored. His only concern is that indeed it is stored. To this end, many database systems have been written forlarge and small computers. Some are easy to use, some are hard to use and then there are some that are downright painful to use. Homebase is a program which has been designed to serve as both a database manager and a text/word processor. Homebase is written for a 32 K Color Computer with Extended BASIC and a disk operating system. The programs are set up to handle the characteristics of either Radio Shack LPVII/LPVIII or Epson printers. I have a Radio Shack LPVII printer and experienced no trouble with it at all.
The entire Homebase system comes enclosed in a threering binder. The documentation is subdivided by functions with each of the system menus receiving its own divided section. The documentation is clearly laid out and easy to read. The diskette is enclosed in a pocket, specifically designed for this purpose, inside the front cover. Also enclosed is a separate seven-page document which gives a brief overview of the system and the best manner with which to become familiar with it. The documentation was produced on a matrix printer with free use made of the

elongated print and overstrike features. The entire package is very nicely done and is impressive in its format. There are three examples in the first chapter which are designed to help the new user become familiar with the programs. The programs are not hard to use once one becomes familiar with them. But because of the complexity of the operations and the interaction of the commands, it does require a considerable amount of experimentation before one feels comfortable enough to start serious data entry. This degree of experimentation is not unusual for a program of this type. If you are looking for a program you can setup and start entering data into the same day, this is not the one for you. But, if you want a program that will give you the option of user-defined file parameters, report formatting at the time the report is generated, searches through the data base on file defined items, by value, and do not want to worry about excessive disk accesses because you are expanding a sequential file, then this is the program for you. The examples provide à good start, but are lacking in a good explanation of the interaction of the commands used in them. Good documentation is ever so important. It is the communication link between the producer and the user and needs to be clear and to the point. I found the documentation package with Homebase to be lacking in only one aspect. On those pages where many options were described, it would have improved the readability if a black line was inserted between each of the option descriptions.
The system is broken down into two distirict sections: the text/ word processor section and the database section. I will covereach section individually. The system as a whole leaves something to be desired. It requires that, once the program is run and exited, it cannot be rerun without recycling power. I am hard pressed to determine why a program has to be designed with such constraints. I tried running several of my standard programs and routines after running Homebase and all appeared to be in order. But just the warning leaves me with an uncomfortable feeling. I have many years of experience with computer systems in the hardware/ sof tware field. One of the major causes of system failures, even in this age of integrated circuits, is unnecessary power cycling. It bothers me when a program is written in a manner that the system is left in such a state that power must be cycled to restore it to a fully usable condition.
The text processing section is menu driven, as is the whole system. The text processor builds a text file by forming a group of not more than 250 text records. Each record may consist of a maximum of 480 characters, 15 lines at 32 characters per line. Each record block is given a name. It is through this name that the blocks can be later recalled. The record block parameters are specified at the time the file is created and are stored with the file for future reference.

The processing functions available offer all the general utilities such as adding, deleting, updating and displaying the records. During the building of a record block, compressed, double width, overstrike, and emphasized printer control codes are available as imbedded characters in the text. The format codes are generated by single key commands and are very easy to use. Also available are new line, new page, stop printing and tab sets. The important point to remember here is that all processing is done at the record block level. You can put a document together in any manner you choose by simply manipulating the record blocks. Individual blocks can be selected, reordered, changed or sorted before printing. All of this can be done without affecting the data stored on disk. Suppose that you wanted to print a document that would consist of record blocks one and five. Using the "select" function, record blocks one and five are collected. Then using the PRINT

# Look What Radio Shack Has In Store for Your TRS-80 Color Disk System 

Kids love turtles-especially the kind that draws the designs in our new Color Disk LOGO program. Using our enhanced version of LOGO, children are able to experiment with logical and geometrical relationships at their own pace. They learn by doing, and have fun at the same time. Kids not only learn

## Ask "What If?" With Spectaculator

Here's an "elec tronic spreadsheet" program that's easy to set up and use, yet does the forecasting, planning and problem-solving you need. Just enter the numbers and formu-las-Disk Spectaculator will calculate and display the results on command. Enter new figures and it updates every related number. You can run totals of each column and grand total, plus save worksheets to disk for later use. (26-3256, \$59.95)

## Personafile Keeps Records Handy

No more frantic
 searching for the auto insurance, TV warranty, rabies certificate or the recipe for Aunt Tilly's chile. Put your records in Personafile and say goodbye to cluttered drawers stuffed with papers. With Personafile records are easy to find and recall in just seconds. Allows up to 540 records with up to 250 different subjects. (26-3260, \$59.95)

command, they are printed. You then have the option to discard those blocks just manipulated and start all over again. Or you can add more records to those already selected and repeat the entire process. There are some disadvantages to performing text processing in this manner. If you are familiar with a standard text/ word processor, then beware, because Homebase does not function in the same manner. Perhaps its biggest drawback is its apparent inability to properly format on the screen how an actual page will look when printed. The program handles upper/lower case in a manner identical to BASIC. That is, lower case characters are represented by reverse video. Homebase will create documents of good quality if you are willing to spend the time required to manually format the separate record blocks. There exists what 1 consider a serious flaw in the printing function. The printing process allows the user to set the right margin. The manual does spell out the rules for handling the right margin. When the right margin is encountered, a new line is started when the word being processed ends. If the word is longer than the document width, then the word is broken and the remainder is carried forward to the next line. The more expensive word processors generally handle this problem by doing a look ahead. If any part of the last word in the present line lies on the right margin it will insert enough double spaces into the line to cause the end of the preceding word to be in the last column. For those printers with proportional spacing, the word processor will adjust the spaces evenly between the words on that line to get the same effect. Some of the less expensive word processors will simply pick up the entire word and carry it forward to the next line. This leaves a more ragged edge, but the document is clearly readable. Homebase only has this problem when the right margin is specified to close to the actual form width. Another minor

PROGRAMS REQUIRE 16K EXTENDED BASIC FOR TAPE, AND 32 K DISK UNLESS OTHERWISE NOTED.

## Quality Educational Programming

We have a good selection of sound educational programs for use at home or in school. These programs have been developed by teachers to be easy to use and interesting.
Educational Programs:
PREREAD I, II, \& III: Teaches the alphabet to preschoolers PHONICS I \& II: Teach consonant blends and digraphs MATHPACI: Arithmetic drill for the elementary school student HOUSEHOLD HELPER: Complete METRIC conversions SPANISH: A complete conversational course
Educational Games:
(These were developed to be fun - the education is a happy plus.)
TOPSY TURVY: Forming words out of letters against a timer THE GREAT WORD GAME: Guess you opponent's secret word letter by letter
VIKING!: Become King or Queen by managing your Viking holding wisely, using sound economic principles. One of our most popular games!

Your Personal check is welcome no delay. Include $\$ 1.50$ shipping for each program ordered. (Shipping free on $\$ 50.00$ or larger orders). Az. residents add $6 \%$ sales tax. Orders shipped within two days.

problem occurs when the print option is exercised and the printer head is not at the home position. It seems that a carriage return (cr) is not sent to the printer prior to the printing of the first record, thus the first line is started wherever the print head was last used and that may not be the left margin. The text processor does perform as advertised and will produce good documentation if you are willing to spend the time required to do so. After years of using a word processor, I do not feel Homebase is a good substitute.

The database section of Homebase is menu driven as are all elements of the system. For those of you who are not familiar with database managers, I would like to offer a brief explanation of how they function. A database system stores data in a record/field structure, the primary data structure being the file. The secondary structure is the record/field pair. The most commonly used example to explain this relationship is a file cabinet containing sales invoices. The file cabinet is equivalent to the disk file. Each sales invoice in the file is equivalent to a record in the database file. Each separate entity on the sales invoice corresponds to a field in the database record. The customer's name and address could be a field as well as the date, the type and number of items sold. Each record in the database has a name attached to it. In the case of our file cabinet, the customer's last name could become the record name and correspond to a file folder in the cabinet. Seem confusing? Well, the first couple of times around it will be, but don't let it scare you. If I can learn it, anyone can. Now with this information in hand, let's proceed. Homebase allows for the definition of 50 fields in each record and a maximum of 250 records perfile. The type of definitions which are allowed are:
A) Amount, treated as a dollar amount
C) Code, can consist of any five characters
l) Identification, consists of nine place integer
O) Other, is a nine digit decimal with two digit decimal places
D) Date, consists of month/day/year
P) Phone, consists of area code plus seven-digit phone number
T) Time, consists of time of day in hours/minutes

The definition of data fields and the actual entry of data are easily mastered if you are familiar with the basic concepts. The real challenge to using a program of this type is to lay out the data fields in such a manner that the data can be easily obtained and used. I have maintained a list of software/hardware/games reviews pertaining to CoCo which have appeared in various publications. The list is getting quite long and hard to manage. Thus, I decided to see if I could get Homebase to handle this mass for me. It required about 30 minutes to decide just what fields I wanted to include. The creation of the data file required another 10 minutes. I was ablet o enter the data a t a pretty good clip due to the excellent screens used during this process. Once the data was in, I started processing it according to hardware, software, type of software review, and the magazine it was in. I was surprised at the ease with which I could extract the desired information from database. There is one hooker in the entire process. The "select" function is the command which does the formatting and requires a good deal of experimentation to discover its secrets. But once mastered, everything will fall into place. All the necessary functions are available to completely manage the database, such as adding, deleting, updating, searching and clearing fields and records. Also there is a calculate command which allows adding, subtracting, multiplying and dividing any of the data fields. Also included is a set of utilities which provide all
the required support functions
1 found Homebase easy to use once 1 got into it and was pleased with the results. Though it is not a full blown data base manager, it most certainly has its applications and is not nearly as costly as its big brothers. I have one suggestion. 1 found the field descriptors to be too limited and narrow. The addition of a variable length character field would be a definite asset. That, coupled with the three decimal fields, would make Homebase a much more versatile package.
I consider Homebase to be a program of good quality and design. It is apparent from the documentation and the flow of the programs themselves that a considerable amount of thought went into their design. The menus are very well designed and are laid out in a most appealing manner. As a database program 1 like Homebase. I think its applications are limited only by its user. It can be tailored to fit your requirements within the previously mentioned constraints. For example, it can be used to handle small mailing lists, club rosters, phone lists or your checking account. The point is the program is very versatile and has many good applications. Another strong point is its ability to increase the size of its output file to the maximum, or update existing records without the familiar disk thrashing caused by the expansion of sequential files. The text processing section will indeed provide the user with the ability to produce good documents. However, I found it a little hard to use, but then maybe I'm spoiled by word processors. If you want a text processor capable of generating files for a macro assembler or a basic compiler, Homebase will do it for you with ease. If you are looking for a data manager first, then Homebase may well be the answer and the text processor becomes an added feature. If you are looking for just a text/word processor only, then 1 would not recommend Homebase. Included with the documentation is a phone number you can call if you have trouble with Homebase to receive assistance.
(Homebase Computer Systems, P.O. Box 3448,
Durham, N.C., 27702, $\$ 75.00$ plus $\$ 5.00$ postage and handling)

## Corrections

In Jorge Mir's article, "The Latest Program? Here's A Dating System" (page 58, February 1983 issue), lines one through four of the listing are missing. Of these, three are REM statements, but line 3 is critical:

```
1 * *** AUTOMATIC DATING ***
2 , BY: JORGE MIR
3 DATE$=" 10/21/82"
4,
```

In his article, "Techniques For Plotting Screen Graphics" (page 186, February issue), Rainbow contributing editor Don Inman "neglected to include the line which draws the line." To correct Plotter Program \#1, readers should insert:

## 1015 LINE (X1, Y1)-(X2, Y2), PSET

Also, in the options for program \#2 (bottom of righthand column, page 191, Rainbow failed to add the "less than" and "greater than" symbols. The lines should read:

```
125 IF N<3 THEN PRINT "I NEED AT
    LEAST 3 LINES": GOTO 12ø
153 IF X(Z)>255 OR X(Z)<\emptyset THEN P
RINT "INPUT OUT OF BOUNDS-TRY AG
AIN":GOTO 150
156 IF Y(Z)>181 OR Y(Z)<\emptyset THEN P
RINT "INPUT OUT OF BOUNDS-TRY AG
AIN":GOTO 15@
```

By Dan Mickle

Dan Mickle, who wrote this month's cover article, and Steve Lipps, who wrote a number of the routines used in the listings which follow, were both active in Civil Defense during the 1960s when fallout shelters seemed to have their heyday. Dan is a self-professed survivalist, while Steve describes himself as a "hacker and science fiction buff who reads a lot of post-World War III fiction." The two, who operate Circle City Software, of Indianapolis, have written such software as Master Disk System, reviewed in last month's Rainbow.

The history of man contains one war after another. Thus, I find no reason to believe another war is unthinkable, but rather, given the nature of humans, I personally think it is inevitable. One can conclude from information coming from the Soviet Union that they find even the prospect of a nuclear war not only thinkable but winnable! They have estimated that were they to strike first against us, they would probably kill $90-95 \%$ of our population. In my opinion they must feel that our retaliatory counterstrike would only affect a small percentage of their people and perhaps 10 percent of their technology. They have several reasons for such an estimate, but a prime reason is that the Russian people have regular training and monthly scheduled practice sessions of exactly what they will do if an attack comes. Workers who labor at a certain factory would proceed directly to that factory (unless they were already at work) and begin sand-bagging their machine. They are responsible for the safety of that machine. Factories are built decentralized, with separate buildings far enough apart that if one building takes a direct hit, other buildings might suffer minimal damage.

Many Americans take a fatalistic outlook at the next big war. "When it comes, we'll all be killed anyway!" can be heard from many people. Yet, while the initial explosions would kill a lot of people, the radiation which follows would result in many times as many deaths. If our people knew how to protect themselves against the invisible killer, perhaps not as many would die.

My analogy to the fatalistic approach is walking down the middle of a highway, and stating that you don't need to watch out for traffic, because when a large truck hits you, you will be dead anyway ... ridiculous! Obviously a truck need not hit you if you know enough to get to the side of the road and to watch out for trucks and jump out of the way in time.

Fallout radiation need not kill you if you know to "jump out of the way" ( seek shelter) in time. The Fallout program and this article do not constitute a complete training course on how to live through war, but I hope this information will help a few more survive, should war come. The information is as factual as I can make it, and is based on material from the U.S. Government Printing Office at Washington, D.C. should you wish further information. The first listing is the heart of the fallout prediction program, and will run on any 16 K extended or disk-extended system. If you have a printer, the program gives you the option of using that printer for your output device. NOTE: Since this is a "high priority" program, the printer utilities patch themselves in and overwrite any other routines you may have residing in high memory. The second part of the program may be $M E R G E d$ in, if you have 32 K of memory. It is not an essential part of the program. It is only a high-res drawing of the "cigar shape" of a fallout pattern as a reminder. For those who do not have the time to punch in the program from this listing, the Fallout program is available through Rainbow On Tape.

If our country were attacked, the enemy would be trying to destroy the United States as a world power. This means that their primary targets would be our military bases, and our nation's capitol. However, many military bases exist near large cities, so those would suffer the same as the primary targets. The larger cities are targeted anyway, due to factories and plants which can be easily converted to wartime equipment production, or natural port areas for staging counterstrikes. Claiming the inaccuracy of enemy targeting computers and rocket control interfaces, it is estimated by some that their bombs may strike many miles from the intended target, through over/undershot. Important targets will get more than one bomb, but even then the unknown element of warhead "fratricide"(a theory stating that the first explosion might destroy the electronics of others in the same area) may spare millions.

YOU ARE ALIVE. The wave of missiles has gone off, and you survived the searing heat of the fireball. What's next? Shock-wave! The shock travels at the speed of sound outward from the blast, just as thunder follows lightning. It will hit like an extremely powerful earthquake causing buildings within several miles of the blast to be leveled, and lesser damage like shattered windows twenty or more miles out. The initial blast also spreads radiation outward a distance equal to the crosswind value. You will see that if you have a wind speed of zero, the upwind and crosswind values are the same and the fallout would eventually settle in
a circle no greater than the maximum width value. In reality, terrain and other features in your area will affect how large a dose you can expect. A hill sitting between you and the blast will act as a natural barrier which could save your life.

For the sake of an example, let us imagine that a nuclear bomb has just gone off 25 miles away to the north. You were asleep in your bedroom. Your curtains could have just caught fire, but you were not directly in line with the heat from the fireball. You have a choice which depends a lot upon your exact situation at the time. Pull the blankets and covers completely over you head, then you may: 1) stay where you are, 2) crawl to a closet, closing the door, 3) crawl under the bed (not likely for most adults), 4) keeping the covers over you, push up the mattress and crawl under it (not likely for children), 5) if a cellar door is near your bed, crawl there. Roughly calculating the shockwave at five seconds per mile, you figure you have two minutes before the shockwave hits, and things fall in on you. This is the main reason to crawl quickly to the closest place of relative safety. The bathtub, perhaps? If you were outside in the open, a culvert or even a ditch or shallow depression might protect you from the blast. The fireball would probably still be going on when the shocks hit. A ground shock would come first, followed by the air-shock, because a shockwave travels faster through solid objects (the Earth).

Since there would be no electricity to power your Color Computer, you should commit the tables to memory, or at least to paper. You know that the normal wind in your area blows east, going back to the example, and that you are south of the blast. You will be able to guesstimate a 10 megaton blast based on the severity of the blast at this distance (severe, but you made it) and you will know that you are probably now getting in the neighborhood of 50 roentgens per hour. A dosage of 450 roentgens will kill 50 percent of the people exposed to that much. Since radiation is cumulative, you will reach that level in nine hours of exposure, and it will be a slow painful death. However, according to goverment figures, every three inches of earth you can put between you and the radiation will cut the level in half. Let us say your house is still relatively intact. If you are going to rush going outside to shovel dirt over cellar windows, or up around the foundation, do it now. Grab a rubber raincoat or other easily brushed-off article of clothing. If you don't have a hood, you might tie a plastic trashbag over your head to keep the dust from settling directly on you. Tie a scarf of towel over your mouth. SPEED IS ESSENTIAL. You may not be able to draw any water if the pipes were damaged, so you can't wet the rag, but you may have stocked the cellar with a few plastic jugs of drinking water. Stay outside for as short a time as possible, but try to seal up any major cracks which will let the dust in directly. Inside the house, drag mattresses and furniture over the spot you will be staying or around a closet, etc. Get into your shelter, breathe through clean towels or clothing, and stay there as long as possible. Remember that the wind could have shifted, putting you into the heart of the hot ( $3000+$ roentgen) zone in which 10 to 12 minutes of exposure can be enough to kill you. Since the fallout is carried by the air (wind) after the initial blast, the radiation level which started at about 50 in this example, could be 100 within a half hour, 300 within an hour, 1000 within an hour and a half, and 3000 in two hours.

You can see that what you do in the first few minutes might save your life. Even if you are directly in the path of the hottest radiation zone, it could take a couple hours or more to build up to that level. The radiation level drops off rapidly with time. The 3000 roentgen level will only last seven to eight hours after the blast for a 10 megaton size or

24 hours for a 50 megaton bomb. For a 10 megaton blast the radiation will have dropped below 100 again in about 36 hours, but for the largest bombs this will take five days. If you were that close to a 50 megaton blast ( 25 miles) you would likely be dead from burns, or at least blinded. A 50 megaton blast can cause flash burns and blindness to 50 miles away. Several smaller bombs saturating an area could give the same effect.

You should try to stay in your shelter for two weeks at least but three would be better. If you must come out for any reason, wait as long as you can before going out, bundle up as though going into a blizzard, stay out not one second longer than you have to. Remove the outside clothes and leave them near the door (as far as you can away from you). Don't forget boots and covering your mouth.

Those victims of the initial blast still living may have broken bones, burns, or blindness. Splint broken bones using a stick, leg of a chair, etc., and tape or rags, getting them as straight as possible. Burns should be rinsed if water is available, then treat as a ny normal burn, giving aspirins or any other available medicines to cut the pain. If a victim has been blinded, especially if there are no serious burns around the eyes, keep the eyes covered for several days, checking occasionally whether sight has returned. Such blindness could be temporary if the person is given time to recuperate.

Victims of radiation will experience varying degrees of nausea, vomiting, diarrhea, cramps, and even coughing up blood. Radiation first attacks the body's immune system, so germs that already exist in your body can make you very

sick. Make the patient as comfortable as circumstances permit.
The first listing which follows is the heart of the fallout prediction program, and will run on any 16 K ECB or diskextended system. If you have a printer the program gives you the option of using that printer for your output device. NOTE: Since this is a high-priority program the printer utilities patch themselves in and overwrite any other routines you may have residing in high memory. The second listing is not an essential part of the program. It is only a high-res drawing of the "cigar-shape" of a fallout pattern as a reminder. For those who do not have the time to punch in the program from this listing, I understand the Fallout program will be available through Rainbow On Tape.
(Mr. Mickle is one the the owners of Circle City
Software and has been interested in the question of nuclear war for some years.)

## PRETTY PRINTER

This M/L utility program will allow you to write your code in as compact a form as you wish, but list it to the screen or printer in an easy to read 'PRETTY PRINT' format. Turn this: -
10 PRINT "EXAMPLE": FORX=ATO M:FORY=STO
$P: Z=X+Y: P R I N T Z: N E X T Y:$ NEXTX
Into this: - 10 PRINT "EXAMPLE":
FOR $X=A$ TO $M$ :
FOR Y $=$ S TO P:
$Z=X+Y:$ PRINT Z: NEXT Y
NEXT X
With one simple command.
CAT. NO. OMOO1 16K Ext \$12.95
P.U.F.F.

Say the magic word and P.U.F.F. your print formatting problems dissappear. The Printer Utility File Formatter turns any word Processor (that produces ASCII text files) into a super printer formatter. Embedded codes will perform the following functions: -
; Send control codes to your printer.

* Set left and right margins at any time.
* Set headers and footers.
* Left, Right and Fill Justify.
* Centre the next ' $n$ ' lines.
* Temporary indent (neg or pos).

Plus many other features
CAT. NO. DMOO2 16K Ext \$24.95

## CONVERT

Have you ever wondered how many cubits there are in a furlong? With this program you can convert units of length, volume, area or weight from or to the equivalent Imperial, Metric, Nautical or Historical systems of measurement.
CAT. NO. DMOO6 16K Ext $\$ 9.95$

## DATAMAIL

The ultimate cassette based mailing list program for home or business use. Fully customized data collection screen allows you to set your own field lengths and field titles. Fast machine language sort by any column in any field. Save all or any block of files for latter reading by DATAMAIL or your own letter program. Merge two or more lists, search by record number or key word in any column. One key commands for Input, Kill, Change. Print single records or any block of files, 1, 2, 3 or 4 across. З2K holds about 300 files.
CAT. NO. DMOO3 16K Ext \$14.95
FIRST SAMPLER
Six programs for the price of one. All have been published in popular computer magazines and are now available on one tape at this special price.

* MATH Improve your mental math skills
; WORD Make words from the supplied letters in this game for the whole family.
$\Rightarrow$ CONVOY Can you sink the computers convoy before it sinks yours?
; BAGIT Train your memory to remember the things you put in the bag.
* VECTORS Row your boat across the river without going over the falls.
: AHHA Find the treasure chest in Another Haunted House adventure. Don't get caught by the Old Miser's ghost.
CAT. NO. DMOO5 16K Ext \$9.95

## COCOCOPY

This all M/L Program will copy BASIC or M/L programs including most Auto Start Programs. It will supply the beginning, ending and offset addresses and allow you to change the load address for M/L programs. I/O errors are ignored so that bad tapes can be corrected. Programs can be renamed and the motor/audio functions are controlled from the keyboard.

## FLEXPLUS DOS..........\$69.95 A Powerful, easy-to-use disk operating system!

-FREE* COLOR COSMIC INVADERS-FREE on every FLEX+ DISK $\$ 21.95$ Value.

FLEXPLUS is a powerful, easy-to-use disk operating system. Spectral Associates has adapted TSC's FLEX to the best DOS completely compatible with Radio Shack software for use on the Color Computer. Eliminate the need for Radio Shack's TRS DOS - use FLEXPLUS with Editor/Assembler and have the options of a full range of utilities. FLEXPLUS works on the 32 K Radio Shack disk system with 64 K memory chips with a High Resolution multi-screen format that supports a 24 line by 51 character display! Also included are special enhancements to Radio Shack's Disk system when you are running FLEX with single or double sided, single or double density, 35, 40 and 80 track drives.

## Advantages of FLEXPLUS DOS

- Best price anywhere
- Wealth of existing software
- Easy start-up - just type "RUN FLEX + "
- Print Spooling - print while editing, assembling, etc.
- Allows you to save RS compatible binary disk files from FLEXPLUS
- NO HARDWARE MODIFICATIONS NEEDED
- Warranty will not be voided - no need to open computer
- All FLEX compatible software will run including INTERRUPT DRIVEN SOFTWARE
- Requires Supercharger board
- \$149.95 for FLEXPLUS, Editor/Assembler and Supercharger

## SUPERCHARGER

Allows machine language access to all 64 K RAM in a Series E PC board. No hardware mods.

## Color Computer Power!

## DATAFILE

$\$ 24.95$
A unique, multipurpose data storage system. DATAFILE is a sophisticated, non-formatted database with user-defined catagories. It performs string searches, deletes, sorts, merges and prints in various formats. With a disk drive, you can work with files larger than RAM. Ideal for mailing lists, cataloguing, file systems, etc. Help files are included along with complete documentation.

## DATAFLLE 64K

$\$ 29.95$
All the features of the above with much more memory space. Ideal for small business applications. Documentation available for $\$ 5$. and is refundable with your order.

## Draw electronic circuits with our...

## tlectronics Drafting Baard

You can design wiring diagrams easily with our Electronics Drafting Board. Create complex electronic plans, label components, erase, etc. and then have a finished schematic from your printer. Screen print routine and disk $1 / 0$ included. Comes with sample schematic file and excellant documentation. Electronics Drafting Board is fun to use and will save you hours of work.
*6 viewing windows on a $480 \times 540$ pixel work sheet*Joystick or arrow-key control*Text labels components on screen*All electronic symbols*Complete documentation with onscreen help*Prints finished schematic to any Epson MX (with Graftrax) or Radio Shack printer*Disk save/load.
Requirements: 64 K Color Computer with Extended Basic, disk drive and (optional) printer. $\$ 39.95$ includes operating manual, program on disk, postage \& handling.

Bring out the artist in you and your family! With PAINTPOT you can create fast, effortless sketches and drawings. PAINTPOT gives you joystick or keyboard control on 4 screens. ( 3 screens on 16 K ) There are 4 cans of paint to play with! A touch of a key starts animation effects flashing from screen to screen.
Your works of art can be saved or loaded from cassette or disk and, with our Screen Print Program (see below) you can have a hard copy on your printer. PAINTPOT comes with complete documentation and a help screen is available. Great fun for kids and creative adults!
$\$ 24.95$ on cassette. $\$ 29.95$ on disk. Both $16 \& 32 \mathrm{~K}$ on the same tape/disk. Extended Basic required.

## SCREEN PRINT

Foruse with Epson MX-80/100 printers. Three print formats, all versions of Basic, PMODESO,2,3\&4. Normal or negative image. Many useful features! Complete documentation.

## TTD \$14.95 DTT \$14.95

Transfer your programs to disk or tape effortlessly. Aillows you to individually select or mass copy programs.
DISKPRO
$\$ 29.95$
No more crashed disks! This program can be a lifesaver. DISKPRO creates back-ups of your disk directory and allocation tables. A valuable tool to protect your software. Comes on disk with complete documentation.
WILLIAM TELL OVERTURE $\$ 14.95$ BEETHOVEN'S FIFTH $\$ 14.95$
You really won't believe the incredible music coming from your Color Computer! 'It is without a doubt the best example of computer music l've ever heard." (Color Computer News magazine) Now you can enjoy these high quality machine language programs at an affordable price. Specify Beethoven or William Tell when ordering. Two versions, $16 \& 32 \mathrm{~K}$ available on the same tape or disk.
BLACKBOX
$\$ 69.95$ each $\$ 125.00$ for two
Transmit your programs, machine language, basic or files over the phone. And you don't need a modem! Switch on BLACKBOX and when you load or save a program, you automatically have a copy at a friend's house. Two BLACKBOX's are needed, one for each end of the connection.
SPIDER ATTACK
\$14.95
Shoot-em up action! Try to stop our invading spiders with your joy-stick controlled laser gun. Watch out you don't get eaten!
MILLBORN $\$ 14.95$

Like to play cards? From France we bring you this popular card game for COCO. Lots of fun!
COLORSHOW
$\$ 14.95$
Music, Color and your COCO! Just load in COLORSHOW, connect the small recorder plug to your stereo (or simply put a musical tape in your computer's tape recorder) and watch the fun. Having a party? Turn off the room lights and turn up the music

## STARS

Educational and entertaining. STARS creates a dome ofthe night sky on your TV. Constellations, stars and other naked eye objects are drawn using Extended Resolution graphics. Horizon views show planet positions after sunset. Detailed documentation.

Add $\$ 1.50$ postage on each software. Programs available on disk for $\$ 5$. extra. We pay high royalties to software authors. For more information on this or any of our products, write!

# $H B A$ is Home Buyer's Helper 

There are very few experiences in life that can match the complexity of buying your own home. The most difficult aspect of deciding whether or not to buy your dream house is, can 1 afford it. This decision is not easy since there are many factors involved. You have to consider the cost of the house, the prevailing interest rate, property taxes, and closing costs to name a few. After you have gathered all the information you need, you sit down with your trusty calculator and peck away for an hour or so. But what if you decide to make a larger down payment, and/ or the interest rate changes? This "what if" situation was just meant for your favorite computer. You cannot only put it to work, but you can answer the "but what can it do besides play games?" question that I'm sure you have all heard at one time or another. If you are still with me, this is where the purpose of this review comes in.

The Home Buyer's Analyzer, which I shall refer to as $H B A$ from now on, is a set of programs that will enable you to easily figure out exactly what it will cost you to buy a home. But this is only the beginning. Its many features include calculations of monthly payment, effective monthly payment after tax considerations, effects of appreciation in the value of the home, federal tax benefits, year of sale

## DOUBLE DUTY

You've spent a lot of money on your computer. Let it do double duts and protect your residence when you are away.

DOL'BLE DE'TY connects quickly to CoCo's ports and allows timed on/off control of one or more devices such as bells,sirens, lights, dialers, even sprinkler systems. Any number or combination of dry contact magnetics switches, foil, electric eyes, motion detect-m or may be connected. Series or parallel, norm. open or closed contacts. 10 foot cord allows remote location to avoid wire clutter.

Software may be user modified or write your own short simple programs in BASIC. DOURLE NUTY will work with any COLOR CORPLTER, even 4K!

Full documentation included with tips for designing an effective alarm system layout.

DOLRLE DITTY plus tape, 539.95 postage included

## BLACKJACK ROYALE

Nore than just a game, but a system to help you win at the casinos.High resolution graphics deal realistic cards(10 of diamonds has 10 diamonds) and pre. set rules duplicate $80 \%$ of the world's casinos or enter you own to match where you play.

Full realistic play includes double down, splits, surrender, insurance bet, $1-8$ decks used, burnt cards, shuffle frequency and more. A complete card counter option allows entry of any commercial blackjack winning system for evaluation. Each card can be given any count value and the computer keens track of how many of what cards have been dealt and the total remaining deck point value. Teaches the game and will train you to count cards and win.

Play your cards right and this software will make you mones at the casinos, the author did!

Requires $32 \mathrm{~K} E B$, no joysticks req'd.
Cassette and very complete documentation and Blackjack tutorial. \$34.95 postage included

figures, and many more. $H B A$ can handle a loan of up to forty years, and can calculate net proceeds from sale for any given year during the term of the mortgage. The various federal tax tables are also included to allow for your filing status. Output from $H B A$ can be directed to your screen as well as printer, and there is also a graph of payments that can be produced. As if this wasn't enough, you can also save your input data for future calculations, and the package comes with sample data so you can quickly learn to use $H B A$ properly.

Before I describe how $H B A$ operates, I want to make a very important point regarding its use. There is an acronym in data processing known as GIGO. It stands for "garbage in-garbage out." You must do your homework before relying on the output from $H B A$. If you feed it with garbage or incorrect figures, it will give you garbage results in return. If you have a printer, I recommend that you use it so that you can double check your input.
$H B A$ starts out with a cute picture of a house at night with smoke coming out of the chimney. If you wait long enough, it turns to daytime and the grass starts to grow. After a welcome screen, a reminder to read the documentation, and some last minute instructions, you are asked if you have a printer. At this point $H B A$ gets down to business. You are then asked about your federal income tax filing status, intended year of purchase, and your state and/ or local tax bite. You are then presented with a review screen with the opportunity to make changes in case you goofed up. $H B A$ is now getting ready to ask you a whole slew of questions. It is here that your previously saved figures can be recalled if you want. Some of the things you are asked at this point are purchase price, down payment, interest rate, term of mortgage, and annual income. As before you are given a review screen before proceeding. By the way $H B A$ also handles balloon (variable rate) mortgages.

So far $H B A$ has been a one-way street. Nothing but questions, questions, questions. How about some output? Here is where $H B A$ really shines, but first some more quesions. What kind of output do you want? You can get a particular year displayed, all years plus year of sale, or year of sale only. Some of the output figures are monthly payment (with and without property taxes included), mortgage balance, interest paid, and your federal income tax with and without your tax benefits from interest and property tax deductions. After reviewing your output you are asked (what, more questions!) if you would like a graph produced showing your total payment, effective (after tax) payment, and effective payment after property appreciation. This was the only feature of $H B A$ I thought could use some improvement. The three lines plotted on the graph were usually too close together due to the scale chosen. As far as I'm concerned this is a very minor problem, and in fact the graph feature is really just a frill and in no way affects the real value of $H B A$. Last but not least, your final two questions. Do you want to save your input figures and do you want another go at it.

Computers are very good at number crunching and $H B A$ will push your CoCo to its limits. The documentation included is complete and will hold your hand all the way through. Most importantly, there are definitions given for all of the input and output fields. No assumption is made that you understand all the buzz words involved in such a complex scenario. If you are in the market for a home, consider $H B A$ before you buy.
(Home Buyer's Analyzer, Silver Spring Software, 18 Silver Spring Road, West Orange, NJ 07052, \$39.95 disk, $\$ 34.95$ tape)
-Gerry Schechter

## GIVE YOUR CHILD AN UNFAIR ADVANTAGE

Don't just depend on others to provide the basic education your child needs to succeed in tomorrow's world. While test scores of others may go down, your child's scores can improve dramatically when you provide him or her with individualized MICRO SCHOOL PROGRAMS, in Reading, Math, English Usage, Spelling, and Games that Teach. Learning at home can be fun.

He or she can master basic skills, using a MICRO SCHOOL PROGRAM, in just minutes each day if you have an APPLE, ATARI, TRS-80, TRS-80 COLOR or TDP personal computer at home.

> ASK FOR MICRO SCHOOL PROGRAMS BY NAME at your local computer store.

## DOS 'Detach' Saves Wear and Tear

By Herbert Schroeder

The attached listing should be of interest to Color Computer owners with disk drives. The program allows you to "detach" the disk operating system (i.e. return control to non-disk Extended BASIC) without having to physically unplug the disk controller. The advantage of this is that now you can run machine language programs that won't work on the Radio Shack disk system without the hassle of unplugging the disk R OM Pack. This saves wear and tear on the connectors, reducing the chances of $\mathrm{I} / \mathrm{O}$ errors due to bad connections.

The program can be loaded from tape or disk. After running, it will tell you to press reset. When you do this, the computer does a cold start from Extended BASIC, ignoring the function exactly as if the disk drive were unplugged, even though the controller is in fact still in the R OM port. You can even use the high-speed poke. I can't guarantee that this procedure is fool-proof, but so far it has enabled me to run every "non-d isk" program (machine language and BASIC) that I own without unplugging the drive.

To reattach the disk operating system, type POKE 113,0 and press Reset. This does a cold start to disk Basic.

The program works by copying the RAM initialization routines gut of BASIC and Extended BASIC and into high RAM. It alters the routines to omit the check for the presence of the disk controller. (Note: the disk controller does not use pins 7 and 8 to auto start the way other ROM packs do.) The Reset vector is changed to point to the altered intialization code. The part of the initialization routine that checks for memory size must also be altered, or else it interferes with the code in RAM. This is done in lines 51 to 53 , by directly inserting the memory size for your machine. As printed here it is for a 32 K computer. For 16 K change the "\&H7F" in line 52 to "\&H3F." For a 16 K machine, you will also need to change the location in RAM where the code is copied. (I put mine starting at \& H7000.)
I hope this procedure will save other disk owners as much annoyance and frustration as it has me.

## ONLY THE BEST SOFTWARE ON TAPE AT THE BEST PRICE

(under 75 cents a program...)

Get 12 tapes a year containing over 75 colorful programs - and give your typing fingers a vacation.

A subscription to CHROMASETTE MagazIne consists of 6 to 8 ready-to-load programs on tape delivered by First Class Mail every month. Programs like Blockade, Drawer, Mansion Adventure, CK Monitor, Append, Germ, and Cataloger.

Give yourself an extended holiday - Get a subscription to CHROMASETTE MagazIne. Or just take a break and try a back issue (your fingers may never work again) . . .

The Bottom Line:

| 1 year (12 issues) | S45.00 | Calif. residents add 6\% to single copies. |
| :---: | :---: | :---: |
| 6 months (6 issues) | S25.00 | North America - First Class postage included |
| Single Copies | S 5.00 | Overseas - add $\$ 10$ to subscriptions and S1 to single copies. Sent AO rate. |

The Fine Print:
All issues from July 1981 available - ask for list.
Programs are for the Extended BASIC models and occasionally for disks.

# Power (of Attorney) At Your Fingertips 

By Glenn B. Knight

I am happiest when I can send a check to some young computer wizard and get a program that will do something l want my computer to do for me. Eventually the world will awaken and recognize what we color computer pioneers have been telling them (that we are an insatiable market), and we will have all of the software that we need. That day is not yet today-so every now and then we have to write a program to meet our particular needs.

This little gem was zapped out (if you can call two weeks' work zapping out) when I was forced to fork over thirty-five hard-earned bucks to a lawyer for a Power of Attorney. I am by no means a programmer, and the results show it - but the bottom line is that it does the job.

Our son was going to visit relatives for two weeks, and we wanted to give them permission to have a doctor glue him back together, if he were to fall off his dirt bike.

This POA looked almost exactly like the one we got last year for our daughter to visit my sister, and an awful lot like the one we had for a friend to sell our car during one of our frequent moves. They could have been mass produced by a computer. (This is when the light bulb appeared over my head.)

On closer examination I saw the POA as a series of subroutines with variable strings of information inserted. The only difference between a POA to sell a car or one to authorize medical care was a single paragraph.

Since I had just picked up a Line Printer VII on sale and was anxious to see what it could do for me, I decided to have it print a Power of Attorney.

As things turned out, I got carried away and wrote instructions that offer five different Powers of Attorney:

I - to sell an auto
2 - to register an auto
3-to get medical care for a child
4 - to rent a house to someone
5 - to sell a house
In addition to that, it will print the Notary statement at the bottom, if you want it, and it will even include the name of the Notary, if you have it. Then it will give you the option to print a duplicate copy, again, only if you want it. This
program is so user friendly that it even thanks you for allowing it to serve you.

One word of caution-these are simple Powers of Attorney; if your situation is complicated, or you are doing this as part of your business, consult a lawyer. Unless you have a simple situation, and the POA fits your needs EXACTLY, get professional help. But for 90 per cent of the times you will need a personal POA, this program will do just fine.

You will still have to get your POA notarized. Hmmmmm, I wonder how you go about having a Color Computer commissioned a Notary?

Saves a disk to tape. Reloads disk from saved tape. Also has tape verif y command! 32k Ext. BASIC Req. PRICE \$12.95 (tape)* * D

## CURSOR II

Hate that blinking cursor? Tired of seeing the computer print "OK' after your program just bombed? Cursor II changes the cursor to a solid, non-flashing red. Enter any message up to 200 characters in length. Your message will be displayed instead of "OK".
$4 \mathrm{k}, 16 \mathrm{k}$, or 32 k Reg. or Ext. BASIC.
PRICE $\$ 4.95$ (tape)*

## SUPER PEEKER

This is a BASIC program that will allow the user to explore the inside of the color computer. Explore the possibilities with Super Peeker.
16k or 32k Ext. BASIC Req.
PRICE $\$ 9.95$ (tape)* *

## -NEW PROGRAMS-

COLOR BIORHYTHM Are you up or down today, tomorrow, or years from now? Find out with COLOR BIORHYTHM. Uses high res graphics. Send the chart to printer. 16k or 32k Ext. BASIC Req.
PRICE $\$ 14.95$ (tape) D
DD CLOCK Don't forget what time it is when you are programming. The time is displayed in the upper right corner of your screen. Shows hours, minutes and seconds. Beeps every hour.
$4 \mathrm{k}, 16 \mathrm{k}$, or 32 k . (Ext. BASIC not required.)
PRICE $\$ 9.95$ (tape)* D
AUTO LOAD Auto Load will put any program or file from tape to disk! All machine language programs that load below the top of your disk system are modified so that they will operate properly with a disk system!
16 k or 32 k Ext. BASIC Req
PRICE $\$ 12.95$ (tape)*

## *Software Authors Note*

We are looking for quality software. If you have a program you think is a winner, send it to us. If it meets our standards, you will be paid TOP royalties.

## Double Densiltuy Sofluuare

BBS
Look For our Color BBS coming next month-watch this ad for the number-free programs, tips, questions answered-specials-order Programs-all this and more next month.

Use your MODEM for something other than a dust catcher-play games!
Two tapes and two sets of instructions are included with each MODEM game.
MODEM CHESS Use your Modem and your Color Computer to play chess over the phone! Has high res color graphics board and pieces. Make your move, select a message to send, press a button-seconds later your opponent's board is updated automatically. Has audio alerts, let's you know when a move is being made. 16 k or 32 k Ext. BASIC Req.
PRICE $\$ 39.95$ (tape)* * D
MODEM CHECKERS Play checkers over the phone! Program allows up to 4 jumps to be made at a time, crown pieces, etc. 16 k or 32 k Ext. BASIC Req.
PRICE $\$ 39.95$ (tape)* ${ }^{\text {D }}$
MODEM IAGO Play our version of Othello over the phone! Make your move, press a key, your opponent's board is updated seconds later! Has a takeback key if you decide you don't like the move you made. 16 k or 32k Ext. BASIC Req.
PRICE $\$ 39.95$ (tape)* * D

## FUN! CLONE ATTACK

Blast those nasties as they appear! 3 skill levels and 9 levels of difficulty. Uses $\cdot$ high res color graphics. Joysticks required. 16 k or 32 k Ext. BASIC only. PRICE $\$ 15.95$ (tape) (Disk 32 k only)

## FAST! MOON BASE INVASION

Nuclear bombs are nearing your cities! Can you stop them before they reach you? High res graphics.
16k or 32k Ext. BASIC Req.
PRICE $\$ 12.95$ (tape) D

## COLOR IAGO

Based on popular Othello game. Match wits with your comput er! Uses high res color graphics. 5 levels of difficulty. Joysticks required. 16k or 32 Ext. BASIC.
PRICE \$15.95 (tape) D

## SUPER!

## COLORPEDE

Best centipede type game available for the color computer. Uses highest resolution graphics mode with color! This game is as close to the arcade as you can get! We've seen the rest - this one's the best! 16k or 32 k Req. PRICE $\$ 29.95$ (tape only)*

* All machine code D Disk Compatible
** BASIC with machine code subroutines
Specify Disk when ordering and add $\$ 5.00$ per program. Save money and ask that all ordered programs be loaded on one disk. You pay only for the one disk! Please add $\$ 2.00$ shipping and handling on all orders. No extra charge on COD orders, Mastercard and VISA accepted. Charge orders add $3 \%$. Texas residents add $5 \%$ sales tax. Allow two weeks for personal checks. Your order will usually be shipped within two or three days. We will notify you of any problems within one week. Send 20 cent stamp for free catalog.

# Let CoCo Keep Track Of Your Utility Bills 

By Dennis H. Weide

With the rising cost of utility bills. it gets harder and harder to budget the family income. Here's a program that will help you keep track of your utility cost and usage

All you do is enter the information from your utility bills and the program arranges it, computes totals, and prints it to the screen or printer as you request. It makes it easier to spot errors in billing as well as allow you to see the average monthly cost of your utilities.

While this program is written for the Albuquerque, NM area, it can be applied to your area. too. with little or no modification.

It is not necessary to fill in all the data requested. Just fill in the information that is listed on your bill. The program uses REMark statements to show where specific sections are. Using these REMarks, you can find and change any headings necessary. It shouldn't be necessary to change any variables.

## A Sample Printout

Now. let's look at the sample data printout. You can see that the first sect ion of the printout deals with the electric bill summary. The next sections are for the gas bill and the water bill summaries. These list the data for the months you have entered. In these examples, I have used the actual data from my 1981 utility bill records. When you run this program, the computer will prompt you for the inputs in the same order as they are listed in the sample printout headers.

The final section is the summary for all utility costs. It prints out an amount foreach utility for all 12 months. even if you have not made any entries for those months. The screen printout will be similar to the hardcopy, except that it will be in an abbreviated format and will list cost. usage and totals on three separate pages. This is because of the small screen size.

| MONTH | METER PRESENT | READINGS PREVIOUS | ELECTRIC USEAGE | ELECTRIC CHARGE | FUEL ADJUST | STATE TAX | ELECTRIC TOTAL |

 UTILITV BILL SUMMARV

## Program Requirements

The program will run with 16 K of RAM if the REMarks are deleted. It requires Extended Basic only because of the PRINTUSING statements. If you change these statements, you can run without Extended Basic.
The program was written to be used with a line Printer VII. I have used printer control codes for those who wish to use this program with another type of printer. The codes are set in lines 1130 and 1140. Look at the following table for a list of the code functions:

[^2]If your printer has a form-feed function. you can change $\mathrm{C} 4 \$$ to the code for FORM FEED (CHR\$(12)). Change C6\$ to reflect the column width of your printer. You should use at least an 80 column printer if you do not wish to make major program modifications. Also, change $C 2 \$$ and $C 3 \$$ to the values required for your printer.
You must enter the bills in chronological order: enter the January electric bill before entering the February electric bill. You can enter all of the electric bills before entering either gas or water bills or yice versa. If you enter the months out of order, the data on the summary sheets will also be out of order. The program matches the name of the month to the months listed in the data statements in the program to determine if the month wasentered properly. If not, you will get a tone and a flashing warning and you will have to reenter the month.

When you enter the actual cost of the utilities, do not use dollar signs (\$). The program will automatically enter them for you.

## Editing Data

The program has no editor, but you can edit data by breaking the program and changing the incorrect variable. For example, assume that the electric charge for the March entry was incorrect. It shows that the electric charge was $\$ 39.2$. Now, if you wanted to change it to $\$ 38.29$, you would start by pressing BREAK. Look at the program listing. Entries for the electric bill start at line 1430. When you ran the program, you saw that the month of the bill is entered first followed by the base electric charge. Starting at line 1430, the first INPUT statement is El\$(E9) for the month. The second INPUT statement is E2(E9) for the electric charge. Since March is the third month, E9 will equal three. After you press $B R E A K$, type the following to change the data

## E2(3) $=38.29:$ CON 7

This will change the electric charge from $\$ 39.29$ to $\$ 38.29$ and restart the program. Press $E N T E R$ again to call the error routine, then answer the prompts. This type of data editing will work for all programs written in Basic as long as you don't have a syntax error. If you attempt to $R U N$ the program instead of CONTinuing it, or, if you have a syntax error, the program pointers will be reset and the data will be lost.

## A Final Word

The program is simple to use once you become familiar with it so give it a try after you have loaded it and saved a copy to tape. Try all combinations of inputs and check for error handling to insure that you have loaded it correctly.

When you are ready to use it for keeping your records, you will see how easy it will be to budget the utility bills. You will also have a program that your friends and neighbors might find useful. They will see that you can use your computer for much more than just playing games.

\section*{DOODLE BUG}

DOODLE BUG is a machine language high resolution graphics game for one or two players who move their Ladybugs through an everchanging maze gobbling dots and other items while avoiding Enemy bugs and Skulls. Excellent Graphics. Similar to Lock N' Chase' \({ }^{\text {' }}\). Tape. . . \$24.95 Disk. . \$29.95

\section*{PACDROIDS}

With its space theme, the Super Saucer lays destructomines and the Super Bomb that disintegrates everything in your path, right up to the wall. The maze changes every 10,000 points as the difficulty escalates. 1.4 players. 16 K extended basic.
Tape . . . . . . . . . . . . . . . . \(\$ 19.95\)

\section*{MEGAPEDE}

Could this be the best Centipede yet?
Computerwares new addition to the field, super graphics and sound.
Tape. . . \$21.95 Disk. . . \$26.95

\section*{PHANTOM SLAYER}

You must chase the phantoms and kill them with your assortment of weapons. This is a graphics type maze/adventure game with full screen three dimensional graphics. You are armed with a laser pistol, and proximity detector. 16K.
Tape.
\$19.95

\section*{SHARK TREASURE}

Dive down through the sharks and salvage the gold. Armed with special flash bombs you fight off the sharks. Excellent game.
Great graphics, sound. From Computerware.
Tape. . . \$21.95 Disk. . . \$26.95

\section*{GHOST GOBBLER}

Ghost Gobbler is an excellent version of Pac-Man". You must gobble all the food dots while avoiding the ghosts. There are four energizer dots which will make the ghosts turn blue and become scared. This is the best copy of the arcade game. 16 K . Tape .

\section*{COLORPEDE}

Colorpede has a variety of bugs ranging from a tiny bettle to the gigantic colorpede. Colorpede has better graphics than Katerpillar but the sound is not as good. Colorpede also has a more varied and complicated play routine. 16 K .
Tape .
\(\$ 29.95\)

\section*{DONKEY KING}

Using the four stages from the original acrade game, with your joystick in hand try to jump the barrels, collect the pins, manuever your way past the falling jacks, and figure out the crazy conveyor belts. Written by Tom Mix, this ones sure to become a classic! 32 K .
Tape . . \$24.95 Disk . . . \$27.95

Now you can deduct up to \(20 \%\) on the price of games: buy any 2 games deduct 10\%, buy any 3 games deduct 15\%, buy any 4 games deduct 20\% from games prices.

\section*{INVADERS REVENGE}

You, as the last remaining space Invader, must battle the human ships that prowl the space lanes, and avoid the laser station that seeks to destroy you.A great game from Med. Systems. Reverses the roll in space invaders you attack the laser bases. 16 K . Tape ...................... \(\$ 19.95\)

\section*{HAYWIRE}

This is Mark Data's version of Beserk'. Super Colors and dynamite sound effects in this fast paced arcade game for one or two players. The exciting combination of angry robots an the Indestructible Menace will provide hours of action filled fun. Tape . . . ................... \(\$ 24.95\)

\section*{COLOR DFT (Direct File Transfer) Disk or Tape}

At last a terminal program for the color computer that allows you to send and receive machine language programs without any conversion routines. Send directly from disk to disk or tape to disk. DFT will send and receive any type of program machine language, basic, text files, data files etc. from a color computer, Model I, Model Il' or a Bullet 80 system. DFT has a chat mode and has software controlled half and/or full duplex. You must have a modem in order to use DFT.
Tape Version ............ . \$24.95 Disk Version ............ . \$29.95

\section*{COLOR TAPE COPY \$15.95}

By Bob Withers
There have been few copy programs on the market for the Color computer but none can compare with Color Tape Copy. This program is designed so that you don't lose any of your vaulable programs or data bases.
It will make a backup of any Color Computer Tape; Machine language, data, or basic program.
First load color tape copy into your CC. Then it prompts you to put your original copy into the recorder. After it loads the program into memory it tells you to put a blank tape into the recorder and press the record button. It then writes the program to a new tape.
You'll never have to worry about your little kids destroying your \(\$ 20.00\) tapes. 16 K .

\section*{PROGRAMMING THE 6809}

By Rodney Zaks \& William Labiak \(\$ 14.95\)
This book explains how to program the 6809 in assembly language, covering all aspects progressively and systematically. Beginning with the basics of programming, Programming the 6809 goes on to explain registers and buses, subroutines, the 6809 instruction set, addressing modes, I/O techniques and devices, and finally, data structures. With this knowledge you will be able to give your 6809 processor 16 -bit performance with 8 -bit economy. No prior programming knowlede is required.

\section*{TRS-80 COLOR PROGRAMS}
by Tom Rugg and Phil Feldman \(\$ 19.95\)
Here are 37 fully documented programs ready to type into your color computer. These programs promise to be educational, practical, and in almost all cases, fun. 332 pages.

\section*{COLOR COMPUTER GRAPHICS}
by Ron Clark
\(\$ 9.95\)
The complete handbook on how to do color video graphics, with ready to run programs. Learn all about low, medium and highresolution graphics, and how to create each. 138 pages.

\section*{TRS-80 COLOR BASIC}
by Bob Albrecht
\(\$ 9.95\)
With this book you can teach yourself BASIC, the language of the TRS-80 and many other computers. Packed with games, experiments, programming problems and solutions, thisentertaining self-instructional book is the ideal introductory aid for kids, parents and teachers. 378 pages.

\section*{TRS-80 COLOR COMPUTER GRAPHICS}
by Don Inman \(\$ 14.95\)
Explore the creative and imaginative blending of computers and color using Color Computer Graphics. This book will enable you to explore all the graphics capabilities of Extended Basic. you will learn how to create interesting graphics to enhanceyou own computer programs. The book also provides application programs and useful subroutines. 303 pages

\section*{COLOR COMPUTER SONGBOOK}

\section*{by Ron Clark}
\(\$ 7.95\)
40 of the world's best known songs, scored for easy playing on the TRS-80 Color Computer, including many favorite popular, classical, folk and seasonal musical selections. Some of which include Dixie, Minuet, Greensleeves, Jingle Bells, Yellow Rose of Texas, etc. 96 pages

\section*{- COMPUTER SHACK -}

Computer Shack has been in the publishing business for 2 years publishing software for the TRS-80 Model I and III. We are now expanding into the COCO. If you would like a major publisher to handle your software send us a copy for evaluation. We have full color packaging, and established dealer network, foreign distributors, and have booths at major computer shows throughoutthe country, etc. We can sell more copies of your programs than any other distributor. If you are a machine language programmer we have some programs that run on the model I and III that wewould like to convert to the COCO. If you are interested in this send us a sample of your programming along with your name and address.
Our new 32 page catalog (Model I, III and COCO) is hot offthe press. It contains software, hardware, and misc. If you live in the U.S. write now for your free copy. Due to the high cost of mailing, if you live outside the U.S. please send \(\$ 1.00\) for your catalog and we will refund this on your first order.
Note our policy of giving a discountfor larger orders. We make more money on a big order and we pass the savings along to you. You can save \(\mathbf{2 0 \%}\) on all your software by buying 4 programs.

\section*{PRINTERS \& PRINT BUFFERS}

The COCO has a serial print port and to use a printeryoumust eitherbuy a serial printer (they cost more) orbuya converter. Computer Shacknow has a converter that also stores the data in its memory untol the printer is ready for it. This is an outstanding feature as most printers are fairly slow.

\title{
PRICKLY-PEAR SOFTWARE QUALITY PROGRAMS FOR YOUR COCO \& TDP-100 PROGRAMS REQUIRE 16K EXTENDED BASIC FOR TAPE, AND 32K DISK UNLESS OTHERWISE NOTED.
}

\section*{Flight}

If you'd like to fly a plane then this is what you've been waiting for. A really good graphics oriented flight simulator in high resolution. Four difficulty levels let you go from student level to a difficult instrument-only landing. In front of you on the screen are your instruments, and above them are two representations of your plane in relation to the flight path (top and side views). At the higher levels all you have to go byare the instruments. Can you put it down on the runway to hear the synthesized voice from the tower say "perfect landing"? It's tough! You use your joystick just like the control stick on a plane, and the action is realistic indeed. This program was written by a professional flyer - a pilot for a major United States air carrier, and the high standards of professionalism really show. Just CLOADM and take to the skies!! Requires 32 K extended. TAPE is \(\$ 19.95\) - DISK is \(\$ 24.95\)

\section*{Las Vegas Weekend}

Two great high-resolution games. You will really feel you've had a vacation. First, play a round of golf. It all happens in high resolution. Choose your club, decide how to swing, and go for it, but watch out for the sand traps and water hazzards! This course would challenge the pros. When you get on the green, the scene zooms in for a closeup view while you putt.
After your shower, go down to the casino and play some poker against the computer. High-resolution graphics plays just like the draw poker machines in Vegas. Win big.. maybe. Both great games are included in the Las Vegas Weekend, on separate tapes or one disk. \$24.95 tape \(\$ 29.95\) disk

\section*{The Fantasy Master's Secretary}

This program will be greatly appreciated by the many people trying to run a fantasy game! It's not easy to keep track of hit points, charges in magic items, monsters, game time, armor values, and a lot more, alt while trying to conduct a meelee and listen to 8 people talking at once. If you ever thought you needed a secretary, this is it! It keeps track of all the above and more, and even has a help file in case you forget how touse it. It also figures the experience points of monsters while keeping an electronic eye on value and weight of treasure found. You'll truly wonder how you got along without it!!! If you quit before the campaign is completed, you can save the whole thing to tape (or disk) and take up right where you left off next time you play. At the beginning it will ask you whether or not the players can see the screen, and set its displays up accordingly. Remember, this isn't a game - it's an aid to use with a fantasy game. \(\$ 19.95\) tape \(-\$ 24.95\) disk.

\section*{Eight-bit Bartender:}

This will light up your next party! Over 100 great drink recipes are stored by the bartender and called up at your command. Ask for them by drink name, main liquor used, or class of drink (highball, cocktail, etc.). These were gathered from the favorites and house specialties at famous pubs and taverns across the US. It outputs to the screen, printer, or both! At your next party let the guests browse through the Bartender. Needs 32K. TAPE \$19.95 - DISK \$24.95

\section*{Phonics I}

This classroom-tested program is the newest in our Phonics series. Written by the same elementary school teacher, it takes up where PREREAD I, II, \& III leave off. Actually two programs (on separate tapes), the TUTORIAL teaches all 22 of the consonant blends using on-screen graphics and voice (controlled by the computer and played through the TV speaker). The TEST program asks for the letters in theseblends(again using voice throught the speaker), and checks the keyboard input for the correct answer. Again, on screen graphics are used as an aid to learning, and immediate feedback to the learner is given.

\section*{Phonics II}

Similar toPhonics I in concept and execution, but Phonics II teaches consonant digraphs. Again there are two programs (on different tapes) for the TUTORIAL and TEST modes.

Both Phonics I and Phonics II are well documented, and are sold separately on TAPES for \(\$ 24.95\) each. They are also available as a package - only on DISK for \(\$ 44.95\).

\section*{A Partial List of Prickly-Pear Programs}

Astrology, Gangbusters, Household Helper, Fantasy Gamer's Package, Viking, Football, Preread I, II \& III, Mathpac I, Tarot, I Ching, Numerology, The Great Word Game, The 80C Songbook, Phonics I, Phonics 2, Flight, Las Vegas Weekend, The 8-Bit Bartender, The Fantasy Master's Secretary, Monsters \& Magic, Topsy Turvy, Galactic Patrol, Blockade, Sea Wars, Jungle, Spanish...

ALL Programs in this ad, including disk versions, carry the Rainbow certification sea!!

SEND A STAMPED, SELF-ADDRESSED LONG ENVELOPE FOR COMPLETE CATALOGUE Stocked by Quality Dealers, or

Your Personal check is welcome - no delay. Include \(\$ 1.50\) shipping for each program ordered. (Shipping free on \(\$ 50.00\) or larger orders). Az. residents add \(6 \%\) sales tax. Orders shipped within two days.

NOW THE BEST IS EVEN BETTER! MASTER CONTROLII

\section*{from Soft Sector Marketing}

The best doesn't always cost more and MASTER CONTROL is a good example. What would you be willing to pay for a program that would cut your typing time by more than \(50 \%\) and eliminate hours of debugging because you misspelled a command word? For example the command STRING\$ (requires nine strokes, with MASTER CONTROL II you only require two strokes. Just hit the down arrow key twice and it's done, and no mistakes. That is just one of the 50 pre-programmed commands available to you. If that isn't enough you also have the ability to customize your own keyto entera statement or command, correctly, automatically every time. But thats not all, how about automatic line numbering. Just enter the starting number and the increment you want and MASTER CONTROL II will do it for you. You also have direct control of MOTOR, AUDIO and TRACE plus a direct RUN key. Sounds great? Well thousand of colorcomputer owners have been enjoying these features for years. But now the new MASTER CONTROL II also has the following features:
* New plastic overlay that can be removed when you are not using MASTER
CONTROL II
* New documentation, to help you get the most from the program.
* New repeating keyboard.
* New-now loads to disk with appropriate disk commands.
Nowforthe bestpart!MASTER CONTROL II sells for the low, low price of just \(\$ 24.95\) but as an introductory offer it's yours for only...

\section*{s1895}

Plus \(\$ 2.50\) Shipping \& Handling
SAVE A BUCK...Order the NANOS Color Basic and Extend pocket card with your MASTER CONTROL II and youget this \$4.95 value for only \(\$ 3.95\) extra. (NANOS pocket card not sold separately.)

ORDER YOUR COPY TODAY
The first document to provide information that will allow the user to take advantage of all the features of the Color Computer. Aimed at the machine language user.
The FACTS attempts to explain, and describes in detail, how the user can make use of the computers internal features. Divided into two sections: Hardware and software; the primary emphasis is on hardware and soflware, the primary emphasis is on hardware
capabilities and circuits. Provides detailed explanations of all the internal large scale integrated ations
circuits.

\section*{Starship Hercules: Well Documented, Sophisticated Fun}

Although I am not an avid game player, my son Philip (age 10) and I enjoyed this space game, Starship Herculesa refreshing change from the Pac-Man and Space Assault type of games which are so popular. The lower skill levels allowed us to learn the basics of the game; the more advanced levels offered us a real challenge and a chance to develop playing strategies. While learning, we needed to refer frequently to the detailed instruction booklet ( 27 pages). It always provided the desired information. The following paragraphs describe the game and its documentation.

The game is written in BASIC and requires 21 K of RAM (hence a 32 K Color Computer). Most of the game is played viewing a screen that shows both an area map (quadrantexplained below) around the Starship Hercules and important data. The quadrant map displays the Hercules and any stars, starbases, or Zargons in that quadrant. The symbols are not generated using any of the graphics modes---they are produced using the various ASCII codes above \& H7F.

As captain of the Starship Hercules, I am commissioned to seek out and destroy the invading Zargon spaceships. I have limited amounts of energy, weapons, and time to do this. These enemy ships are hiding in an 8 quadrant by 8 quadrant matrix (the Buffer Zone), which I can search, one quadrant at a time.

To aid me, I have the Hercules' shipboard computer, which performs several functions:
1. It gives me navigation data to the Starbases (space stations) where 1 can get refueled and additional weapons. Any damaged Hercules systems can also be repaired at these Starbases.
2. It shows me what \(I\) have found in already-explored quadrants, and which quadrants I have yet to explore.
3. It calculates navigational data (speed and direction) from my present location to any other quadrant.
4. It gives me a status report-energy and time remaining, Zar gons remaining, and the status of all Hercules systems.

Once 1 find one (or more) Zargons, the Hercules computer calculates the firing angles for my photon torpedoes (if neither the computer nor my weapons systems have been damaged in a recent battle).

Each time I play the game, I am offered a choice of difficulty levels. At the more difficult levels, the Zargons move from quadrant to quadrant, they have more energy (which means they're harder to destroy), and they use a special weapon to reduce my defenses. In addition, the Hercules systems (navigation, computer, weapons, and defense) break down more frequently and take longer to repair. While these systems are damaged, I must rely on my own memory and resourcefulness to outwit the Zargons.

The number of Zargon ships (and their locations, of course) vary in each game, as does the number and location of the Starbases for refueling, rearming, and repairing the Hercules. And the Stardates (time allowed to destroy the Zargon fleet) differ in each game.

Particularly important for a game as complicated as Starship Hercules are the instructions. In this case, the 27page booklet details every aspect of the game. Philip (my 10 year old son) lacked the patience to read them-this game is
apparently intended for older (and more patient) readers of teen age or older. The only deficiency 1 noted was the rather poor quality of the illustrations (made with a printer, using symbols different from those in the game) and their placement all together at the end of the booklet; it would have been less confusing to place each diagram near the text it illustrated.

In summary, Philip and I both en joyed this game. The few points about which 1 was still confused after reading the complete instructions were quickly cleared up when we began to play. I definitely consider Starship Hercules worth the retail price.

\section*{Software Review..}

\section*{Galactic Hangman Can Get You Hooked}

Looking for a fun game? One that takes some thinking, is educational, and the whole family can enjoy? Sugar Software has come up with a fun, space-age version of the popular game of Hangman. The program Galactic Hangman comes with both a 16 K and 32 K version on the same tape. Both versions have Sugar's auto-load feature built in, which makes the tape easy to load quickly. The idea of a 16 K and 32 K version on the same tape is ideal for those of you who have 16 K now but plan to upgrade sometime in the future.

First, let's talk about the 16 K version. After loading, the computer instructs you to choose one of 14 different files of 50 words each that are part of the program. You are then instructed to choose between a word from the computer's memory and one of your own. All the letters of the alphabet appear at the top of the screen and change color as they are chosen. I won't discuss the graphics except to say that they are good, fun, and entertaining. Provision is made in the 16 K version for creating and storing as many 50 word files as you wish to recall later on.

Except for the file recall feature, the 32 K version has all the features of the 16 K version, plus many others. The graphics are more "galactic" and the computer chooses randomly from 700 everyday words that are stored in the memory. The words appear to be well chosen and of average difficulty. This is the problem with many hangman-type games - the words are either too simple or too uncommon. Also, with the 32 K version, if you load the tape and take no more action, the computer automatically begins choosing words and playing against itself giving a complete demonstration of how the game is played.

One feature which could be added to make the game more exciting would be the addition of a time clock. An additional letter would have to be chosen, say within 20 seconds or you have to move up one more step to the hangman's noose.

The documentation is good, both in the instruction booklet and on the tape. Galactic Hangman is recommended for, among others, those looking for a game that you can play with your grandparents and convince them that buying you that expensive CoCo was a wise thing to do.

\title{
Match-It Works Well With Young Learners
}

\author{
By Brian James
}

Match-It is an educational program from Micro School Programs (Bertamax Inc.) to help children learn to recognize which upper and lower case alphabet letters belong to each other. Suggested for youngsters from age four to six, Match-It comes in both cassette and disk media for the 32 K computer. Although the disk version was used for this review, it appears the cassette version is exactly the same.

In Match-It, a letter appears on the left side of the screen while letters of the opposite case appear, one at a time, on the right side of the screen. When the correct letter match finally appears on the right, the user presses the space bar to indicate a match. The computer will indicate a correct answer with a happy face and an incorrect match with a sad face. Sound is also used in conjunction with the happy/sad faces. After all 26 letters have been given and matched, a record of how many tries it took to match each letter should appear on the screen along with a "goodbye" to the user. I say "should" because in reality the screen only indicates with a " \(1+\) " which letters had one or more misses. This was the only major discrepancy l could find in an otherwise excellent documentation booklet that comes with the program.

Before the program begins in earnest, the user (or parent or teacher) is prompted to decide on a number of options. These include whether upper or lower case letters will appear on the left side of the screen, in what order the letters are to appear (alphabetical or random) and at what speed are the letters on the right side to alternate. The user may also try an example problem before beginning the 26 letter sequence. The documentation suggests that an adult should explain the object of the program to the user, and help select order, level and speed of the program. This is a very wise suggestion considering the age level of the children using the program.

How well does it work? I tested it with my seven year old daughter and although she is one year older than the suggested age level, she liked the program very much. The greatest appeal seemed to be the nicely done graphics and the immediate feedback the program gives you through sound and color. She had a little problem reading some of the characters (made with lower resolution blocks) and a big problem trying to do the program at the highest speed. I found the highest speed hard also. The space bar didn't quite respond as fast as the program wanted it to.

In summary, Match-It is a good teaching program to help children learn to recognize upper and lower case letters. Even though the program is written in BASIC, it uses a very nice upper and lower case character set to print instructions and prompts. The age levels suggested (four through six) are perfect for the activity presented. I have heard that Micro School Programs is converting most of their educational programs for use on the 80C. This program illustrates the appealing quality color graphics and sound have in the educational area and how well suited the Color Computer is as a learning tool for children. Parents and educators would do well to write the company for a list of their 80 C programs.

tape, 32K)
-Brian James

Hi again．This is Month Three in my series of short chats about various Color computer subjects in these Star－Kits ads．Hope you are finding them interesting and useful．

Quite often，after running a machine language program，I find that my CoCo doesn＇t want to accept Basic programs． The common solution，of course，is to turn the power off and then back on．This does a complete reset of the computer and fixes some of the pointers which the machine language program clobbers．

But here＇s a better way that doesn＇t put your computer through the power on／off stress：simply type POKE 113，3 and push the RESET button on the back．The POKE makes Basic forget that it has already been reset before，so pushing the RESET forces it to go through the same complete reset as if power had first been applied．

In fact，I have one Basic program which does several CLEARs and PCLEARs that leave the computer in a state where it won＇t run other programs unless everything is reset．To avoid the need to manually reset the system after this program is finished，I added one last line which reads POKE 113，3 ：EXEC 40999．The EXEC restarts Basic exactly the same as if I had pressed RESET（except for one difference－in a 64 K system you must physically press RESET to return from 64 K mode back to 32 K ，mode after running a 64 K program．）

Are you using a non－Radio Shack tape recorder with your CoCo ？If so，then it＇s quite possible that the motor control relay in your CoCo is not able to handle the recorder motor current．When that happens，the computer can＇t turn off the motor because the relay contacts have welded together．The new CoCo models have a better motor control relay to fix the problem，but what about the rest of us？

If the relay doesn＇t get to the point where the contacts are permanently stuck together，then it＇s possible to solve the problem by adding a simple circuit between the computer and the recorder．It uses just a few parts readily available at your local Radio Shack－send us a self－addressed stamped envelope for a free diagram and instructions．（Hope you don＇t mind if we enclose a Star－Kits catalog too，while we＇re at it．）

If you＇re into engineering or math，you might be interested in our new educational package．Introduction to Numerical Methods is a college sophomore level course which combines a 324 －page text with a number of Basic programs which go along with the text and illustrate each topic．Some knowledge of calculus is required，and the package covers a variety of topics in numerical analysis． This is probably the most painless way to learn a very useful topic；at \(\$ 75\) it＇s quite a bit cheaper than going to college．

Finally．．．if you have purchased a Star－Kits program， please make sure to return the user registration form from your manual along with an envelope．We periodically send out our Users＇Group Newsletter with other hints and kinks， and these forms and envelopes are our only way of keeping you up to date．

See you next month．
 STAR－KITS

1

Regardless of whose text processor you use，let SPELL＇N FIX find and fix your spelling and typing mistakes．It reads text faster than you can，and spots and corrects errors even experienced proofreaders miss．It is compatible with all Color Computer text processors，including Telewriter and Radio Shack＇s Scripsit！（See the review in 80 Micro，November 1982．）\(\$ 69.29\) in the Radio Shack disk or cassette versions；\(\$ 89.29\) in the Flex version．（ 20,000 word dictionary is standard；optional 75,000 word Super Dictionary costs

\section*{HUMBUG－THE SUPER MONITOR}

A complete monitor and debugging system which lets you input programs and data into memory，list memory contents，insert multiple breakpoints，single－step，test，checksum，and compare memory contents，find data in memory，start and stop programs， upload and download，save to tape，connect the Color Computer to a terminal，printer，or remote computer，and more．HUMBUG on disk or cassette costs just \(\$ 39.95\) ．

\section*{STAR－DOS}

A Disk Operating System specially designed for the Color Computer，STAR－DOS is fully compatible with your present Color Computer disk format－it reads disks written by Extended Disk Basic and vice versa．But with STAR－DOS you can use machine and assembly language programs to do things Basic can＇t．Just \(\$ 49.95\) ．

\section*{ALL IN ONE－Editor Etc．}

Three programs in one－a full function Editor for text or program files；a Text Processor for formatting and printing text files with centering，justification，and paging，and a Mailing List and Mailing Label program which can even generate individually adressed letters for each person（or selected persons）on your mailing list．All this for just \(\$ 50\) ．Requires STAR－DOS and 32 K ．

\section*{DBLS for Data Bases}

DBLS stands for Data Base Lookup System．A super－fast system for searching for a selected record in a sequential disk file．Supplied with SPELL＇N FIX＇s20，000 word dictionary as a sample data file－ lets you look up the spelling of any word in under FOUR seconds． Priced at \(\$ 29.95\) ．Requires STAR－DOS．

\section*{CHECK＇N TAX}

Home accounting package combines checkbook maintenance and income tax data collection．Written in Basic for either RS Disk or Flex，\(\$ 50\) ．

\section*{REMOTERM}

REMOTERM－allows full operation of the Color Computer from an external terminal．\＄19．95．

\section*{Screen Control}

\author{
By R. N. Roberts
}

Unfortunately, I'm seldom able to express myself in tidy little sentences of 32 characters or less, and frequently my print lines do runneth over to the next line on the TV screen. Nothing wrong with that, but when a word gets split in the process, 1 see Color Code 4 (to you beginners and unfortunates with other machines that's red). I hate to think of the time I've spent counting characters and inserting blanks in print statements in order to push a split word back to the start of the next line. If you feel the same, the following subroutine (named Screen Control) will provide relief.

Another equally useful feature of Screen Control is its ability to automatically stop printing when the screen is full. This feature lets you view text printed by a program one screen at a time. No longer do you have to sit with your fingers on the "shift" and "@" keys, poised like a cobra to strike in that one split second when the new lines reach the top of the screen. (It is unfortunate that there is not a similar routine in ROM for use when listing a Basic program.) Screen Control eliminates the need to count how many lines will fill a creen and then insert the familiar:

PRINT "HIT ENTER TO CONTINUE"; INPUT A\$:CI.S

\section*{Using Screen Control}

To use Screen Control, first CLEAR 500 bytes of string storage space. The extra memory is the price paid for the subroutinc. Next set the string you want to print equal to \(\mathrm{Z} \$\) and execute a GOSUB to the subroutine. (I reserve the use of the letter Z for variables used in utility programs to avoid

> "No longer do you have to sit with your fingers on the 'shift’ and ‘@’keys, poised like a cobra to strike in that one split second..."
inadvertently using a variable in a program and a utility at the same time.) That's all there is to it.

A semicolon placed at the end of a PRINT string will cause the following material to start printing at the end of the first string. The same effect is achieved in Screen Control by directing the \(G O S U B\) to line 150 . For the same effect as a PRINT without the semicolon, GOSUB to line 140.

If you enter the subroutine with a string which would normally cause the screen to scroll, Screen Control will print as much of the string as it can, print a prompt on the bottom line and then beep. Hitting the ENTER key will clear the screen and the remainder of the string will be printed at the top of the screen. If you use lowercase letters for the prompt it will readily attract the eye of the user. If you use this subroutine in a program which does not have to be very user friendly you might consider changing the prompt to "more" or even "-)".

Should you desire to disable the screen paging feature, replace lines 290 and 310 with \(R E T U R N\) statements and delete line 300 . To use the page control part of the program only, set your strings equal to \(\mathrm{ZZ} \$\) and execute a \(G O S U B\) to line 290.

As listed, statements 20 to 130 are not necessary to the operation of the program. If you \(R U N\) the program after keying it in, lines 20 to 130 illustrate the working of the subroutine. After you experiment with the program you will want to delete them.

\section*{How It Works}

All you folks who only want to copy and compute can go to work now. From here on out, it's going to be a nuts and bolts discussion of how the program works. First, the variables used are defined in Table I.

\section*{Table 1}

\section*{SCREENCL variables}
\[
\begin{aligned}
& \text { ZW-Flag for printing. } 0=\text { Print; } \mathrm{I}=\text { Print } \\
& \text { Z } \$ \text {-Text string to be processed } \\
& \text { ZZ\$-The part of } \mathrm{Z} \$ \text { to be printed } \\
& \text { ZL-Print positions between cursor location and end of } \\
& \text { line } \\
& \text { ZS-Number of characters in string } Z \$ \\
& \text { ZR - Number of unprinted characters in string. }
\end{aligned}
\]

Next a review of the \(\operatorname{POS}\) function. \(\operatorname{POS}(0)\) returns the position of the cursor on a screen line. The values returned by \(\operatorname{POS}(0)\) are " 0 " for the start of a line and " 31 " for the end of a line.

The POS function only tells where the cursor is in a line. In order to completely establish the location of the cursor on the screen, it is necessary to get the cursor address from memory locations 136 and 137. Memory addresses require two bytes of storage and are converted to a decimal value by the formula:
\(256 * P E E K(1\) st byte) \(+P E E K(2 \mathrm{nd}\) byte)

\section*{or, in this case:}

Cursor address \(=256^{*} P E E K(136)+P E E K(137)\)
The cursor address will be a number between 1024 and 1535, the beginning and end of text screen memory.

If you do not have Extended Color Basic, the POS function can be duplicated by the following code used as a subroutine:
\(1000 \mathrm{PO}=256^{*}\) PEEK(136)+PEEK(137)

\section*{COLORPEDE}

This truly outstanding engineer designed, \(100 \%\) machine language game with multicolored high resolution characters and fast action will challenge the most avid arcade buff. Can be played by 1 or 2 players controlled with joy sticks or key board. Joy stick control is fast, smooth and accurate. As COLORPEDE slithers through the toad stools, you attempt to destroy the COLORPEDE, knock out the menacing Bouncing Bug and eliminate toad stools while accumulating higher and higher scores. Demonstration mode with top 5 scores. Pause feature. For 16K Color Computer and TDP-100.

\section*{1020 Return}

Upon return from this subroutine the variable PO will have the same value as would be returned by \(\operatorname{POS}(0)\).

Statement 10 clears the required string space. Statements 140 to 280 are the string handling part of the program and statements 290-310 are the page control sections.

\section*{String Handling Subsection}

Statement 140 sets \(\mathrm{ZW}=1\) indicating that semicolon type printing is not desired. ZW is checked in statement 270 after all the string is printed. Statement 270 will return control to the calling program if \(\mathrm{ZW}=0\), leaving the cursor at the end of the string. Otherwise, line 280 resets ZW to zero and, if the cursor is not on the last line, skips to the start of the next line by executing a PRINT statement.

Statement 150 adds a blank to the end of a string on the screen if the cursor is not at the beginning of the line and the first character of the new string is not a blank.

Statement 160 deletes a leading blank from a string if the string will be printed at the beginning of a line. If you want to indent a line, use one more leading blank than you would when using a regular PRINT command. ZL is set equal to the number of print positions between the cursor and the end of the line in statement 170 . Statement 180 sets \(Z S\) equal to the number of characters in the string to be printed.

Statement 190 prints the string if it will fit between the cursor and the end of the line. Printing in this statement, as well as other statements, is done by setting the string to be printed equal to \(Z Z \$\) and executing a \(G O S U B\) to statement 290, the page control part of the program. If printing occurs at statement 190, all the string has been printed and control

goes to statement 270 which, as mentioned above, determines if semicolon printing is required.

Statements 200 through 240 are the heart of the program. If the character which would be printed at the end of the line or the next character is a blank, then a word is not split. In this case, the original string, \(\mathrm{Z} \$\), is broken in two parts. The left part is printed in the balance of the line the cursor is on, \(Z R\) is set equal to the number of unprinted characters, and control goes to statement 210 which redefines \(Z \$\) as the right part of the string and starts the process over again by transferring control to line 150 .

If the character which would print at the end of the line and the next character are not blanks, then a word is split and control goes to statement 220 which steps backward through the string starting at the end of line character until it finds a blank or reaches the start of the string. When a blank is found, the left portion of the string up to that point is printed on the line the cursor is on. ZR is then set equal to the number of unprinted characters and control goes to statement 210. If a blank is not found, it means that the word is too big for the space remaining in the line, and control passes to statement 250 which skips to the next line unless the cursor is on the last line. Issuing a PRINT command when the cursor is on the last line will cause the top line to scroll off the screen which, of course, is a no-no. If the cursor is on the last line, control goes to the page control section of the subroutine to print the prompt.

\section*{Page Control Subsection}

Statement 290 is the first line of the page control section. If the present cursor location plus the length of the string to be printed is greater than 1512 then control goes to statement 310 to print the prompt. 1512 is the text screen address a few characters before the prompt. Color Basic users can replace the LINE IN PUT instruction in statement 310 with an INPUTstatement. I used LINE INPUT to avoid printing the question mark after the prompt. After the user responds, the screen is cleared, the waiting string is printed at the top of the screen, and control returns to the main program.

That's all there is to it. Now you can have neat text displays with a minimum of programming effort.

\title{
Design a tralning program to bring you to your top speed－with RUMCALC
}

Written by Bill Brown，a former coach and 2：47 marathoner，RUNCALC is an invaluable aid to distance runners of all ages and ability levels．

\section*{RUNCALC can help you：}
－Evaluate your training quality
－Compare performances of different lengths
－Find pace per mile，per quarter－mile，per meter，etc． Find speed in miles \(/ \mathrm{hr}\) ．，meters \(/ \mathrm{sec}\) ．， \(\mathrm{ft} / \mathrm{sec}\) ． －Do metric conversions
－Generate split times for goal distances and times －Set meaningful goal times for interval training －Calculate calorie usage for a given run．

RUNCALC was designed for the Tandy Radio Shack TRS－80 Color Computer．It is an easy to use menu－driven program requiring 16K Ext．Color Basic and is supplied on cassette with guide for only \(\$ 12.95\) including postage．Indiana residents include \(\mathbf{4 \%}\) sales tax．

\title{
Super "Color" Library""
}

For the TRS-80 Color and TDP System 100 Personal Computers

No matter what kind of problem you are trying to solve with the Color Computer, there is a program in the ever-expanding integrated, Super "Color" Library that will give you the solution; Faster, Better, Smarter!

Every Library program features MEMORY-SENSE to determine your computer's memory, from 16 to 64 K , and adjusts automatically to maximize work space. All programs, except the Super "Color" Speller and Super "Color" Disk-ZAP, feature a true lowercase display with below line descenders. Each program has been written specifically for the Color Computer in fast machine code to be totally compatible for optimum performance Something a motley assortment of programs from diverse sources or a passel of overpriced, wallet-FLEXing software from a bygone era simply can not achieve.

The Super "Color" Library has all the power, speea, dependability and compatibility you will ever need so build your library a volume at a time or put the full power of the complete library of problem solvers to work right away.

The Super "Color" Writer II is for those who desire the best. It is the most powerful, fastest, most dependable and versatile word processor available for the Color Computer, from 16 to 64 K . The Super "Color" Writer II has features for the most demanding professional, yet it is easy enough for newcomers to master.
Of course the Super "Color" Writer II has all the features you would expect from the highest quality word processor, such as a clear, crisp and readable professional display with your choice of display colors, 4 display formats; standard \(32 \times 16\) \& 51-64-85×21 with real lowercase and descenders: full 4 -way cursor control, sophisticated edit commands, the ability to edit any BASIC program or ASCII textfile, seven delete functions, locate and change, wild card locate, a real block move \& copy, word wraparound, programmable tabs, display memory used and left, nonbreakable space, multiple headers and footers, dynamic text formatting, comprehensive format parameters, use with ANY printer at any baud rate from 110 to 9600 baud, automatic justification, automatic pagination, automatic centering, automatic flush right, underlining, superscripts, subscripts, pause print, single-sheet pause, optionally print comments, append text files, available in a ROMPAK cartridge for maximum work space, but that's only half of the story. No other program can even begin to compare in features with the Super "Color" Writer II.

\section*{Check These Exclusive Features}

MEMORY-SENSE adjusts to computer's memory (16-64K) for maximum work space; rYPE-AHEAD, TYPAMATIC KEY REPEAT and KEY BEEP for the pros; 3 PROGRAMMABLE FUNCTIONS: AUTO PHRASE INSERT; COLUMN CREATION; TEXT FILE LINKING; HELP MENU; A TRUE EDITING WINDOW IN ALL 4 DISPLAY MODES; TRUE FORMAT WINDOW to display line lengths up to 255 characters, with horizontal and vertical scrolling to replicate the printed page including centered lines, headers, footers, page breaks, page numbers, margins, giving a perfect printed document every time. Also makes hyphenation a snap; TRUE AUTOMATIC JUSTIFICATION for neat, even left and right hand margins; Ability to use CHARACTER CODES for printing special characters available with your printer; freedom to embed as many PRINTER CONTROL CODES as desired anywhere in the text, EVEN WITHIN JUSTIFIED TEXT; 90-plus page tutorial manual.
ADDITIONAL DISK FEATURES: Read a directory, Display free granules, Save with Automatic Verification, Load and Append ASCII files, and BASIC programs, Kill files, and Link files from disk for continuous printing. 54 K bytes of workspace available with a 64 K system. Only the best offers all of these features.

\title{
TAPE \$69.95 ROMPAK \$89.95 DISK \$99.95 \\ Tutorial only \(\$ 15.00\) (Refundable with purchase) \\ Tape \& Disk require 32 K for lowercase display \\ Previous Super "Color" Writer II owners call for upgrade policy.
}

\section*{Super "Color" Mailer" \({ }^{T M}\) \\ By Tim Nelson}

The Super "Color" Mailer is a powerful multi-purpose mailing list merging and sorting program including lowercase display that uses files created by the Super "Color" Writer II. Combine files, sort and print mailing lists, print "Boilerplate" documents, automatically insert text in standardized forms, address envelopes. the list is endless.
TAPE \$39.95
DISK \$59.95
Operators Manual only \(\$ 10.00\) (Refundable with purchase)

\section*{Super "Color" Speller" \\ By Peter A. Stark}

The Super "Color" Speller is a fast machine-code proofreading program to correct Super "Color" Writer files. Automatically proofreads your documents against a 20,000 word stock dictionary, plus your own customized dictionary and corrects typos or marks them for special attention.

AVAILABLE ON DISK ONLY \$69.95
Operators Manual only \(\$ 10.00\) (Refundable with purchase)

\title{
32x16 \& 51-64-85x21 Display With Lowercase Descenders And \\ 16 mm 64 Super "Color" Terminal" NEW Super "Color" Calc" \({ }^{\text {TM }}\) \\ \section*{THE FINEST TERMINAL PROGRAM ANYWHERE!}
}

Now you can answer those "What if?" financial projection forecasting, budgeting, engineering and calculating questions with precision, speed and power using the Super "Color" Calc, truly the finest electronic worksheet and financial modeling program available for the Color Computer, from 16 to 64 K . Now every Color Computer owner has access to a calculating and planning tool rivaling VisiCalc'", containing all its features and commands and then some. You need only change one variable and you instantly see how that change affects your assumptions. You can even use VisiCaic templates freely with Super "Color" Calcl Combine spread sheet tables with Super "Color" Writer II documents to create ledgers, projections, statistical and financial reports and budgets.
Features Include: 4 display formats; standard \(32 \times 16\) \& 51-64\(85 \times 21\) with real lowercase and descenders *MEMORY-SENSE to adjust to computer's memory (16-64K) for maximum work space; Full-size \(63 \times 256\) worksheet * Easy to use * HELP Menus to make learning faster * Machine code speed and nigh precision * Total flexibility in calculating * Up to FOUR VIDEO DISPLAY WINDOWS to compare and contrast results of changes * Sine and Cosine functions, Averaging, Exponents, Algebraic functions, and base 10 or 16 entry *Multi-layered Column and Row Ascending and Descending sorts * Locate formulas or titles in fields * Easy entry, replication and block moving of frames * Global or Local column width control up to 81 characters each * Create titles of up to 255 characters * Typamatic Key Repeat * Key beep * Type-ahead * Print up to 132 column worksheet * Prints at any baud rate from 110 to \(9600^{*}\) Print formats savable along with worksheet * Enter control codes for customized printing.
DISK FEATURES: Read a directory; Display free granules; Kill files, Save with Automatic Verification; Load files; Append disk files for complete worksheet printing. 55K bytes of worksheet space available with a 64 K system.
Tutorial and sample templates are supplied with the program.

\section*{ROMPAK \(\$ 89.95\)}

DISK \$99.95
Tutorial only \(\$ 15.00\) (Refundable with purchase)
Tape \& Disk require 32 K for lowercase display.

\section*{Super "Color" \(\underset{\text { By Tim Nelson }}{\text { Disk-ZAP }}{ }^{\text {TM }}\)}

Now the dreamed-of repair of I/0 errors is a reality. The Super "Color" Disk-ZAP" is the ultimate repair utility for simple and quick repair of all repairable disk errors. Designed with the nonprogrammer in mind, the Super "Color" Disk-ZAP" will let you retrieve all types of bashed files, including BASIC and Machine Code programs.
This high-speed machine code disk utility has a special dual cursor screen display to show HEXIDECIMAL and ASCII displays simultaneously. You are able to: Verify or modify disk sectors at will * Type right onto the disk to change unwanted program names or prompts * Send sector contents to the printer or any other RS-232 device * Search the entire disk for any grouping of characters * Copy sectors * Backup tracks or entire disks * Repair directory tracks and smashed disks * Full prompting to help you every step of the way * 50 -plus page Operators Manual which helps you simply and quickly fix the vast majority of disk errors, and teaches the rudiments of disk structure and repair.

AVAILABLE ON DISK ONLY S49.95
Operators Manual only \(\$ 10.00\) (Refundable with purchase)

\section*{Version 3.0 By Dan Nelson}

The best has become even better, with many new features including 4 aisplay formats; \(32 \times 16\) \& \(51-64-85 \times 21\) with real lowercase descenders, plus compatibility with the 64 K Color Computer. This user-friendly program makes communicating with ANY computer a breeze even for a newcomer. Communicate using your modem with all the popular information services such as Dow Jones, Compuserve, The Source, and local BBS's, clubs, friends, or the main-frame at work. You can also communicate directly with other microcomputers, such as the TRS-80 I/III, II, other Color Computers, Apples, IBM PCs, etc., via RS-232 without using a modem. Save the information or PRINT IT! FEATURES: MEMORY-SENSE to adjust to computer's memory ( \(16-64 \mathrm{~K}\) ) for maximum work space; Selectively print data at baud rates from 110 to 9600 * 60 K of data storage with 64 K disk system. 128 character ASCII keyboard * Automatic graphics mode * Word mode (word wrap) for unbroken words " Send \& receive Super "Color" Writer II, Database \& Calc files, ASCII files, Machine Language \& BASIC programs * Set communications baud rate from 110 to 9600 , Duplex: Half/Full/Echo, Word length: 567 or 8, Parity: Odd/Even or None, Stop Bits: 1-9 Local linefeeds to screen * Save and load ASCII files, Machine Code \& BASIC programs * Unique CLONE feature for copying any tape * Lower case masking * 10 Keystroke Multiplier (MACRO) buffers to perform repetitive pre-entry log-on tasks and send short messages ' Programmable prompt or delay for send next line . Selectable character trapping - Files compatible with other Library programs,
ADDITIONAL DISK FEATURES: Works with up to four Disk Drives; Call a directory, Print free space, Kill disk files, Save with Automatic Verication and Load textfiles or BASIC programs; Save and Load KSM'S to the disk.

\section*{IEW) Super \\ "Color" Database \({ }^{T w}\) By Dan Nelson}

This high speed machine language program including true lowercase displays fills all your information management needs, be they for your business or home. Inventory, accounts, mailing, lists, family histories, you name it, the Super "Color" Database will keep track of all your data.
The Super "Color" Database features MEMORY-SENSE to adjust to computer's memory (16-64K) for maximum work space. It is structured in a simple and easy to understand menu system with full prompting for easy operation. Your data is stored in records of your own design, each divided into as many fields as you need. All files are fully indexed for speed and efficieney. Full sort of records is provided for easy listing of names, figures, addresses, etc., in ascending or descending order. The math package performs arithmetic operations and updates other fields which is especially useful when used as an order entry and invoicing system. You can create reports, or lists for mailings, or whatever. Create files compatible with the Super "Color" Writer II and Terminal. Up to five different print formats are available, and control codes may be imbedded for customized printing.

AVAILABLE ON DISK ONLY \$79.95
Operators Manual only \(\$ 10.00\) (Refundable with purchase)

\title{
Final Countdown
}

\title{
Save The World-Don't Blow It
}

\author{
By Paula Giese
}

When I first started gaming, I didn't do too well. I was always trying to HUG DWARF, KISS GIANT (llike big guys), or FEED DRAGON (an endangered species, after all). And though 1 like Adventuring, the constant need to KILL, STAB, SHOOT, HIT, and so on, is wearisome. The hero-gamer always seems to be a man, of ten bent on rescuing some tedious, chunky little princess-type who's tied up someplace. Off-putting for us tall, fast-moving ladies.

In real life, I am a private detective; I do have what I suppose some would consider "adventures." In real life, these are boring, scary, cold, slow, heartbreaking. Most are best handled with a smile, fundamental respect for people, and a cool head. I don't carry a gun. I've worked to end war for a long time, so shoot 'em-ups and galactic war games hardly thrill me, though unlike the present Administration, I don't think video games are causing kids to beat up on (or shoot) their folks any more than usual. Hence, I was delighted to see a game whose purpose was for the
protagonist to prevent a war, rather than to knock out some alleged baddies with smart bombs, lasers, and what-not; or to get anti-social against ethnic minorities (dwarves, ogres) with more old-fashioned technologies.

Bill and Debbie Cook have written an interesting all-text Adventure called Final Countdown which starts you outside a missile base, where a crazed General is about to launch a nuke, targeting Moscow and starting World War Final, if you can't abort the thing.

You have to get into the base-there's automatic security at the gate. Then, find the right tools as you make your way through secret passages, mazes, adminstrative offices, and a variety of techno-rooms, to the place where you can abort the launch. That is, if you don't launch it yourself, by mistake, or get killed by making mistakes with the hi-tech gadgetry or by using the wrong tools at the wrong time. Computers, a two-way radio, and radar screens give you some scoop, if you interrogate them right. You can ask for HELP, but you won't get much.

From time to time, the crazed General pops up. If you don't get him, he'll get you, then that's all, world. Still, true to your anti-death principles, while you do shoot him (if you see him in time), it's with a Taser gun, a techno device developed out of the old electric cattle prod, once beloved of Southern sheriffs. Although cop catalogs advertise them, they're not much good. Most are sold to easy marks through ads in masculine righteous-violence fantasy mags like Soldier of Fortune. Nonetheless, your Taser causes the General to run off whimpering for a little while. But he keeps randomly popping up. You have only five shots bef ore your battery is dead.

1 typed something a bit off-color the first time my Taser quit. This didn't phase the program, which told me primly, "Your French is not impressive." There is a subroutine prepared (named \(\quad \& \% \$!’() \$ \% \$!!!\) ) for a couple of other "French" words you might happen to use. Like other subroutines, or modules, it's introduced with a nameREM, so unravelling the BASIC spaghetti into components of the program is fairly easy, if you want to analyze it later.

In Final Count down you're racing against a countdown, a given number of turns before there's a rumble, the earth opens, the missile launches, and bye-bye. You can ask: SCORE" for how many turns you have remaining. "How can you worry about points at a time like this?" the program chides you-but it tells. There are three levels of difficultyNovice. Average, Expert, all menu-selected. Experts get less time and more appearances of the psycho (ieneral, so it remains playable against time and previous scores even after you've "solved" it. You can QUIT at any time, but you can't SAVE games part-way through for later resumption from where you were.
There are no graphics, in a way disappointing, but what can you "show" for the end of the world? And a modest "NICE GOING" with your score is surely all the reward you need for winning, what with your world-savior's glow and all. Trumpets, flashing screens, Presidential citations would be, ah, overkill. By the way, don't expect any help from the White House in this game. When you find and USE the Red Phone - the White House hotline-a recorded message tells you it's after working hours, call back the next day, after doomsday.

A nice feature is the fixed-screen status window, protected by a machine-language routine \(P O K E d\) into the main BASIC program. The window shows the "current scene" and direction choices, and is updated to reflect the results of each move you make, including taking objects. On the "action screen." the two-thirds lying below the window, you talk to the program and it answers you. The previous commands and replies scroll upwards till they go behind the window, so half-a-dozen previous moves and replies stay visible. This is a great help in mazes and learning the routes through the missile base. "INVentory" will tell you what you're carrying at any time, at the cost of a countdown penalty.

The (jeneral will suddenly pop up randomly in the window, while you're busy reading or typing on the action screen, below, and may not notice him. If you make your next move without Tasering him, he's gotcha, that's it.

This "pop into the status window" technique is the program's main formal novelty. Such an updating status window is common on large business and word-processing applications programs, and in the new \(\$ 50\) million Apple LISA. In Adventures, though, it permits the use of random game factors to which the player can immediately resporid, with varying results, an effect l hope to see other Adventures use, as it adds a lot of interest. The usual random game factor just knocks you out, handicaps, or (rarely) helps you in a fixed way: there's nothing you can do about it, the factor's outcome is predetermined in its effect on the game.

What the Cooks have done, in effect, is invent not a new technical, but a new literary device. They use it here in a very simple way, but later it can be developed with more complexity (random factors interacting with and altering screen-scene status; interacting with other game characters; new forms of Magic). What it does-or can do-is add a new dimension to what distinguishes computer games from little books or short films-the interactiveness of the story and you, the protagonist of that story.
The main program is in BASIC, so you can "cheat" by

\section*{HOMEBASE \({ }^{\text {w }}\) THE \\ COMPLETE TRS-80* COLOR COMPUTER DATABASE}

HOMEBASE'" PROVIDES WORD PROCESSING, DATAbase management, and spread sheet calculations, in one easy to use package. some of the MANY USEFUL APPLICATIONS OF HOMEBASE \({ }^{\text {™ }}\) INCLUDE: - Check book management - Ledgers - Grocery lists Shopping lists • Article indexing • Recipes • Disk directories - Notes • Memos • Letters • Phone lists - Customer lists Business contact lists • Appointments • Mailing lists • Home inventory • Car maintenance scheduling •Income tax preparation • Address lists • Charts • Newsletters • Athletic team records \(\bullet\) Form letters \(\bullet\)
WORD PROCESSING FEATURES INCLUDE:
- DEFINE 250 screens of text you can search, sort, display, ull lising names you assign or using any word or
- EDIT text by duplicating, moving, clearing, searching and replacing, deleting, or reordering entire records of text or any word or phirase.
- FORMAT labels, memos, letters, and other documents for printing with embeded printer controls for paging, skipping lines, and changing character fonts. Program controls provide setting; right and left margins, lines per page, page width, horizontal tabs, and line spacing.
DATA MANAGEMENT FEATURES INCLUDE:
- DEFINE 50 data fields, including a comment field, in a single record. Dates, time of day, phone numbers and dollar amounts are automatically formatted. You may also define 24 scratchpad data fields.
- REORGANIZE records by moving data fields within records or by moving records within the file. You may sort records using names you assign or data.
- MANAGE files by searching, deleting, clearing, duplicating, and displaying any data field or record. Add, subtract, multiply, divide, or summarize any data field. Use any command on any selected group of data fields and/or records.
- PRINT files using automatic formatting with options to print report titles, a report date, page numbers, record names, and data field names. Print all or selected data fields or records. Use standard or compressed print. Use a special print option to print the comment field as a mailing label.
UTILITIES FOR WORD PROCESSING AND DATA MANAGEMENT INCLUDE:
- Generating new files from old files • Merging files • Duplicating files • Moving data between files • Summarizing files
- Moving files from diskette to diskette using one drive Saving files to cassette and reloading from casette - File synchronizing • Print disk directory •
HOMEBASE'" IS EASY TO USE:
- NO PROGRAMMING REQUIRED. All options are displayed in menus. HOMEBASE \({ }^{\text {m }}\) automatically requests all required data and edits every entry.
- All commands are single key stroke.
- FULL screen editing for text entry.
- Complete cursor control for entering names, titles, notes, and comments.
- 100 pages of instructions with complete descriptions of each command, and examples.
- Requires 32 K of memory, disk basic and only one disk drive. NO equipment modifications required.
- All programs reside entirely in memory.
- Fast response to all commands including search and sort.

LLISTing it to learn verbs, objects, places, and outcomes. 1 t's for a 16 K ECB machine; on a 32 K machine you need not PCLEAR before CLOADING. A backup program is supplied on the cassette. The program is warranted against defects for 60 days after purchase. I found a couple of apparent bugs. Occasionally, the program would tell me, "WOW! LOOK WHAT YOU FOUND!" But no matter how much I LOOKed or EXAMined, I couldn't find out what. Nor did various TAKEs or MOVEs, or GOs (with different objects) produce anything but "NOT R ELEVANT." Additionally, you can OPEN certain things or EXAMine them when you're not really in their presence-a kind of ESP view of them-though you can't affect them unless you're there-a bug in the OPEN/EXAMine routines which makes it easy to cheat in certain ways, but seems unintended.

In summary, an interesting game, with a unique focus on taking risks to prevent war, rather than glorying in it. Though if you blunder (as I did), you must shoulder the responsibility for the nuclear destruction which follows, giving rise to some philosophical reflections on peace strategies, perhaps. (Although the General has it all set up to go anyway, all you do is speed up the end a bit.)

After playing it a while, by myself and with a drop-out priest who became an antiwar activist in the Vietnam era, and is now a programmer punching COBOL most nights, 1 was a byte disappointed. I expected too much, probably, of a game like this. I remembered hearing Father Daniel Berrigan speak in 1981, after he and the others of the Plowshare Eight had been convicted for entering the General Electric Plant at King of Prussia, Pennsylvania, smashing a number of Mark 12A multiple nuclear-warhead nose cones and pouring blood on them. Here's what he said:
"After much prayer and reflection, we eight decided that it was here and now for us. It was time to come down from being teachers, priests, writers, etc., and try to do something which might make a modest real difference in the world.
"Our religious tradition offers to life a slight edge over death, now. I of ten ponder what to say to be of help. It might be something as simple as this: Thou shalt not kill.
"Peace is something to be made, constructed, hammered out, not an ideology. It's very concrete, not a theory. It almost needs a hammer, tools. The government displayed a nuclear weapon nose cone in our courtroom. Looking at it was like looking at our doomsday, like looking at the end of the world."

By comparison with the real, slow-moving, of ten disheartening moral adventures of quietly courageous people, Final Countdown is, of course, trivial. But it's only a game. In my view, it's very preferable to a game in which the player plays to destroy abstract worlds of abstract people, using make-believe verbal and graphics devices not much simpler to unleash-and-destroy-with than the real worldkiller weapons that politicians play with.

Final Countdown is as realistic in its way as are the techno-war games it is a counterweight to. There are non-game-players who really do these things. For the rest of us. (Jarb Software, 1636 D Avenue, Suite C, National City,

hOME OF MOTION PICTURE PROGRAMMING
NATIONALLY ACCLAIMED PROGRAMS FOR THE
\[
\text { TRS-80 }{ }^{\circledR} \text { COLOR COMPUTER }{ }^{\circledR}
\]

\section*{TALKING GRAPHIC DEMONSTRATION}

When someone sees your CoCo and asks "Just what does this thing do?" then load TALKING GRAPHIC DEMO and let your computer do its own show and tell, complete with musical background and a running commentary. As quoted in THE RAINBOW. "This is. frankly, better than anything the people who sell the machines have.
Extended color basic. Tape only . \(\$ 24.95\)

\section*{THE DISK DOCTOR}

DISK DOCTOR.....That disk with the vital information you forgot to back up just crashed! Don't PANIC. Take 2 aspirin, count to 10 , and put in an emergency call for THE DISK DOCTOR. This program will salvage machine language, BASIC, data. ASCII, even MPP pictures. Completely menu driven for easy use. As 80 MICRO REVIEWER states "I feel safer when creating important files and programs having the DOCTOR 'on call'!" DOSonly \(\$ 49.95\)

\section*{MPP-TUTORIAL}

MPP - TUTORIAL....The programming tool of the professionals. You may not be a great artist, but you too can produce stunning, high resolution graphics. Detailed step by step instructions to create near studio quality animation. Quote CHROMASETTE, ". .if you want to see and use the full graphic potential for your CoCo, this program is required!.
Extended color basic - specify tape or disk
\$34.95

\section*{EL CASINO}

EL CASINO....Three startling, action-packed high resolution graphic games, ideal for den and rumpus room parties. Games are programed with MPP graphics, and each is over 14 k long.

DICE GAME..
This is the only craps game on the market that allows 4 players to make any or allof 12 field bets before every roll. The graphic banker automatically tracks and displays bets as they are made. True Casino action on your CoCo.

BLACK JACK..
..The famous card counter not only shows the cards remaining in the deck, but computes the odds on hitting your hand with the cards remaining. Las Vegas rules apply. All this with MPP graphics and super sound effects.

SLOT MACHINE.
..Looks and sounds like a Casino machine. The arm drops, the windows roll, and the pay off (if any) hits the tray with a nice "clunk". Adjustable odds...make it easy on yourself if you like. Extended color basic. Specify tape or disk. .\(\$ 34.95\)

\title{
Analysis of VarianceA 'Nova' for CoCo
}

\author{
By Sam Sherrill
}

Manufacturers may installpower into the computer, but it is the programmer who gives it strength. And while many have provided the games (and good ones, too) for our amusement, programmers such as Sam Sherrill have helped extend the basic capabilities of our computer by developing its quantitative nature through programs and tutorials related to statistical analysis, science and education.

The author is on the faculty of the School of Planning at the University of Cincinnati, where he teaches research and statistics courses.

The purpose of analysis of variance (ANOVA) is to reveal differences among samples that are not due to chance. The usual procedure is to test the assumption that the samples are alike. Statisticians call this assumption the null hypothesis. They also label differences that seem unlikely to occur by chance as statistically significant differences. Thus, in the language of statistics, ANOVA is used to test the null hypotheses.
If the null hypothesis is supported by the ANOVA results then we may conclude that the populations from which the samples were taken are also alike. For example, we could compare examination scores among classes of students exposed to different teaching methods to test the idea that methods affect learning. The specific classes we select are our samples. The null hypothesis would be accepted as true when no statistically significant differences are found among the exam scores for the classes. This means the variation among the class scores is not explained by variations among the methods we tested. In a more general sense, this result also means that these methods are unlikely to affect exam scores of all other similar students.

If the null hypothesis is contradicted by the ANOVA results then we may conclude that the populations are different. In our example, the null hypothesis that methods have no effect on learning would be rejected since ANOVA revealed statistically significant differences among the class scores. We can conclude that variations among teaching methods do help explain differences among class scores. We can also conclude that these methods would produce differences among other similar students.

ANOVA is an extension of the difference-of-means test (DOM). The DOM test is used to compare two samples to one another. (When just two are compared, an ANOVA and DOM tests lead to the same conclusion.) The DOM test is useful when we have specific hypotheses to test using two particular samples. For example, we would use this test if we
expected one teaching method to produce higher scores than another. Using A NOVA on all classes would tell us whether there is a difference among them but would not identify the source of the difference. In general, the ANOVA test is of ten best suited for exploratory comparisons among three or more groups while the DOM test is more appropriate for specific pair-wise comparisons.
Exploratory comparisons of ten must be made among samples of unequal size. If the classes in our example were selected from a large population of such classes then it is quite likely that they will not contain the same number of students. ANOVA tests based on arrays (such as the one offered by Bruce Douglass in the December 1982 issue of 80 MICRO ) require equal sample sizes. The only way to use this kind of program when sample sizes are not equal is to
> "In general, the ANOVA test is often best suited for exploratory comparisons among three or more groups..."

reduce all of the samples down to the size of the smallest one. However, this also reduces the capacity of the test to reveal differences. In addition, the memory demanded by this kind of program grows as the number of samples or sample sizes grow.

To avoid these problems, I wrote an ANOVA program for the Color Computer that does not use arrays. Basically, I took the ANOVA formula for unequal sample sizes apart algebraically and reassembled it in a way that uses running totals instead: thus, any number of samples of either equal or unequal size can be compared. This program requires just over 3 K of memory, regardless of the number of sizes of the samples. It will run on machines with 16 K and Extended

SINCE 1981

\section*{WORMHOLE \({ }^{\text {TM }}\)}
by John Bobst

An original all-machine-language game for the TRS8O Color Computer:
*1 to 4 players (taking turns,
"in-progress" savable)
*6 distinct sound effects (7 if counting "foosh")
*1 joystick and 16 K either BASIC required (average?)
* 8 colors on a black screen (Semigraphics 12)
"1 "pause" key, 1 exit key, and 1 reset key (handv)
-255,999,999 points possible (not @\#\%\&! likely)
*9 speeds/skill-levels (changeable during play)
4 copies on 1 cassette (disk savable/loadable)

-1 source only (at a "factory direct price")

A great description for \(\$ 29.95\), but WORMHOLE is a great game for only
\(\$ 17.95+2.50 \mathrm{~S} \& \mathrm{H}\) (\$20.45) to

Color BASIC
The program calculates the F－Value（the quotient of the variance among samples divided by the variance within samples）and the probability of that value occuring by chance．It then compares this probability to the traditional significance levels of \(.05, .0 \mathrm{I}\) ，and .00 I ．When the probability is greater than .05 ，the differences among the samples are labeled as insignificant and the null hypothesis is accepted． When the probability is less than .001 ，the differences are labeled as significant and the null hypthesis is rejected． Finally，when the probability of a particular value falls between .05 and .00 I ，the program indicates that the differences may or may not be significant and suggests that you may wish to withhold judgment on whether to accept or reject the null hypothesis．By pressing any key，the program then prints the usual results of an ANOVA：the total， among，and within results for the sum of squares and degrees of freedom；estimates of the among and within variances；the F－Value；and，the probability of the F－Value occuring by chance．

\section*{PRICKLY-PEAR SOFTWARE QUALITY PROGRAMS FOR YOUR 80C PROGRAMS REQUIRE 46K EXTENDED BASIC FOR TAPE, AND 32K DISK UNLESS OTHERWISE NOTED}

\section*{ALL PROGRAMS IN THIS AD ARE NEW THIS MONTH.}

\section*{Monsters \& Magic}

The most realistic fantasy role-playing game yet for the Color Computer. You start out by rolling up your character's basic ability scores and buying equipment. When you are ready it's into the dungeon. Your character starts at first level, but can rise in levels by garnering experience in the fray. If you have role-played fantasy games you will be amazed at the realism of the combat system. Armor class, initiative, and damage by weapon type are all included, with over 50 different monsters to fight - each with it's own abilities. As you rise in level you can win treasure and find magic weapons and spells - if you live!! You set the game length by telling how many monsters you want to fight before you reach your final battle to the death against the powerful Dungeon Lord. There are 1000+ place description combinations in this text based game, and real excitement in every one! This is a fantasy simulation, and is truly not like any adventure game you have ever seen. For 1 player; requires 32K extended BASIC. TAPE - \$19.95, DISK - \$24.95

\section*{Topsy Turvy}

Word game enthusiasts take note!! This game pits you against other players and a relentless timer while you try to see how many \(3,4,5,6\), or more letter words you can make from the 10 letters chosen at random by the computer. The more you get, the more you score, and you get bonuses if you do well. All scoring, timing, and record keeping is done by the computer. Sure the game is educational, but it's so much fun you'll never notice!! TAPE \$19.95, DISK - \$24.95

\section*{(5)G:}

Spanish We know it's been a long wait, but you can finally use your Color Computer to learn a foreign language. This series of programs is very well done and educationally sound. You can use them in either a tutorial or test mode, and in the tutorial mode you can have the word on the screen while you listen to the correct pronunciation from the tape. The tape is controlled by the computer and the sound comes out the TV speaker. The complete Spanish course consists of 6 sets of lessons, with each set composed of 4 lessons. Each set comes with three cassette tapes (or one disk and two tapes in the disk version) and is complete in itself. When you finish the course - at your own pace, in the privacy of your home - you will have a conversational Spanish vocabulary of about 1100 words. Each set builds on the ones preceding, so you can stop at any time and still make full use of what you have learned.
SPANISH LANGUAGE COURSE
Set 1 (ready now) TAPE - \$24.95, DISK - \$29.95; Set 2 (ready now) TAPE - \$24.95, DISK - \$29.95
Sets \(3,4,5 \& 6\) will be ready April 1, 1983, and each set will be \(\$ 24.95\) on Tape or \(\$ 29.95\) on Disk. The full course - all 6 sets - will be \(\$ 124.95\) on Tape or \(\$ 129.95\) on Disk, and will be ready April 1, 1983. We are already experiencing a heavy demand, so place your orders early. (Purchasers of Set 1 may order the remainder of the course within 30 days and pay the difference.) COMING SOON - The same course in reverse - English instruction for Spanish-speaking people. Available approximately May 15, 1983

Your Personal check is welcome - no delay. Include \(\$ 1.50\) shipping for each program ordered. (Shipping free on \(\$ 50.00\) or larger orders). Az. residents add \(6 \%\) sales tax. Orders shipped within two days.

\title{
64K Modification For 'D'Board Both Easy, Inexpensive
}

\author{
By B. H. Alsop
}

Until now one had to either cut traces or buy a wolfbug 64 K adapter card (\$150) to convert your 'D' series CoCo board to 64 K . Here's how to do it for \(\$ 2\) over the cost of the RAMs. Traces don't have to be cut and the modification can be easily removed.

\section*{MODIFICATION}

Purchase eight 16 pin dip sockets. Buy the type that will plug into each other. Solder a small gauge wire into each socket pin \#9. Bend R \(\wedge\) M IC pins 1,8 and 9 upward for all 64 K RAMs and insert them into the prepared dip sockets. Solder the wire from socket pin 9 to 1 C pins 8 and 1. Your completed RAM socket assembly should look like Figure 1. Insert the completed assemblies into your CoCo RAM sockets. Solder all pin 9s together with wire and connect this bus to pin 35 of the 6883 SAM (U10) with a series 33 ohm resistor. Reconfigure the jumper block near the SAM to 16 K . Remove the other jumper block. Solder a wire from pin 12 of U 4 (682. PlA) to pin 17 of \(\mathrm{U} 8(96821 \mathrm{PlA})\).

Now proceed with the F. Hogg modification as described below
1. Remove U29 and U 11 from their sockets. Bend pins 4.5 and 6 of U29 up. Bend pin 5 of U11 up.
2. Connect pin 8 to pin 6 of U29. Reinsert both ICs.
3. Connect pin 4 of U 29 to pin 5 of U11. Connect a wire from pin 5 of U29 to TP 1 . Insert version I.1 BASIC ROM.

Note that no capacitor leads are cut. In fact, the capacitors remain in the circuit to suppress power supply noise.

To remove the modification, unplug the IC assemblies, unsolder a few wires and insert new 74LSO2 and 74I.SI38 ICs into U29 and U1l respectively.

\section*{PROBIEMS}
\[
5(\operatorname{cosin} 8-83)
\]

The only problem encountered has been with very old CoCo "I)" boards (like mine). U11 and sometimes U29 are soldered into the PC board instead of being mounted in sockets. In this case. cut pin 4 of UII flush with the board with a small pair of diagonal cutters. Bend the remaining IC lead upward. Another 74LSO2 is prepared and then piggyback soldered on top of the existing U29. All pins except \(7,8,9,10\) and 14 are removed. Only pins 7,8 , and 14 are soldered to U29. Pin 9 of this added IC is soldered toTPI and pin 10 is soldered to pin 5 of U11. See Figure 2. In this case removal of the modification is only slightly more difficult.

\section*{PERFORMANCE}
l've installed fïve of these modifications on various vintage "I)" boards. Even a few "E"series boards have been altered this way to permit easy removal for their owners. When installed you don't know that you ever had a "D" board CoCo. Good luck.

NOTE: Pins 7, 8, and it of new
741.S02 soldered to U29 -
\(X\) denotes removed pin

\title{
Making and Rotating Rectangles
}

\author{
By Don Inman \\ Rainbow Contributing Editor
}

This is the sixth of a series of articles on the graphic capabilities of Extended Color Basic on the TRS-80 Color Computer. It goes beyond the material that was covered in the book TRS-80 Color Computer Graphics.
Last month, we looked at a way to modify the output to the video screen so that the display would conform to the first quadrant of the Cartesian coordinate system. A method was shown to scale the Y coordinate so that X and Y units would appear to be the same length on the screen.

This article will continue using those techniques but will restrict itself to a specific shape, the rectangle. We will develop a very general program to define the rectangle in as simple a way as possible. At the same time, provision will be made to maintain flexibility when positioning the rectangle on the screen.

\section*{PARALLEL RECTANGLES}

A rectangle can be defined by two characteristics, its height and its width. In developing the first stage of our program let's limit the rectangle to one whose sides are parallel to the \(\mathrm{X}, \mathrm{Y}\) axes. We can remove that restriction after the basic program has been developed. If the length and width of the rectangle are known, the \(\mathrm{X}, \mathrm{Y}\) coordinates of one vertex (corner) determine where the rectangle appears on the screen.

One input, the \(\mathrm{X}, \mathrm{Y}\) corner position, can be used to move the rectangle left or right and up or down (called a translation). Four pieces of information completely define the placement of the rectangle. The following variables are used:
\[
\begin{aligned}
\mathrm{X} 0 & =\mathrm{X} \text { coordinate of one corner position } \\
\mathrm{Y} 0 & =\mathrm{Y} \text { coordinate of same corner } \\
\mathrm{H} & =\text { height of rectangle } \\
\mathrm{W} & =\text { width of rectangle }
\end{aligned}
\]

The length and width parameters can be used in the program to calculate the end-points of lines that make up the rectangle in the following way.

The following subroutine will define the corners of the rectangle. The lower left corner is PSET by DRAWSUBI, and the four lines are drawn by DR AWSUB2. Subroutines are used so that you may use them with any main program.

\title{
COLORSOFT \({ }^{\text {TM }}\)
}

\section*{ESCAPE}

\section*{A 3-D GRAPHICS ADVENTURE WITH SOUND (Machine Language for Fast Action)}

This is NOT the usual "find the treasure" adventure. In ESCAPE, you are trapped on the top floor of a skyscraper and the only way out is by using a very unusual elevator. You must give the elevator the correct code or else the ride down is a real killer. The maze-like halls seem to come to life due to the fantastic \(3-\mathrm{D}\) graphics. Search the halls for rooms which contain clues to the correct code. Clues must be deciphered to learn the elevator's secret code. Game times depends on the skill of the player, but it is typically \(8-10\) hours. ESCAPE is suitable for group play. A mentally stimulating experience.
16K BASIC
\(\$ 18.95\)

\section*{RECIPE FILE \\ A CASSETTE BASED STORAGE AND RETRIEVAL SYSTEM}

This program permits storage of your favorite recipes for retrieval by your computer. Once a recipe has been recalled, then the computer can adjust the ingredient measure for serving the desired number of persons. Each recipe can contain special comments on preparation as well as the full instructions for using the recipe. Included is a line oriented text editor for creating and editing the variable length files. Completely menu driven and very user friendly. Easily modified by the user for use in keeping track of record, coin or stamp collections or whatever your interest. Screen or printer output.
16K Ext. BASIC
\(\$ 21.95\)
SPECIAL: A collection of 30 recipies covering main meals to snacks. Only \(\$ 3.95\) with program.

\section*{SQUIRE}

SQUIRE is a challenging game of asset management. The player must manage a country estate and contend with crop failure, investment losses, taxes and other such headaches. The object of the game is to increase the estate's value while providing for the peasant workers. The starting assets are computer selected so that each game offers different challenges. Great experience for the kids or aspiring executives.

16K Ext. BASIC
\$14.95

\section*{HOUSEHOLD EXPENSE MANAGER}

This menu driven program package is designed for creating and maintaining a data file on cassette of 30 household expense categories for a 12-month period. It also keeps cumulative totals and a separate total of tax deductable expenses. A comparative analysis program provides a graphic presentation of relative expenses between any two months during the year. The user can change categories by modifying program code. Screen or printer output.
16K Ext. BASIC \$19.95

\section*{FLIPPER}

A fun and challenging version of the Othellorm type board games. This version includes options for play solely by the computer, one player against the computer, or two players against each other. The computer can play on four skill levels. Very colorful with plenty of sound. Fun for kids and challenging for adults. Great for parties.

16K Ext. BASIC
\$16.95

INCLUDE \(\$ 2.25\) HANDLING PER ORDER WRITE FOR FREE CATALOG

The main program consists of input data (lines 100-140), the graphic screen setup (lines 210-230 and line 260). drawing the axes (lines 240-250), a call to the subroutine (line 270), and an INKEY\$ instruction (line 290) where the computer holds the screen until you press a key. Pressing a key returns you to the beginning for more inputs.

SEE YOU AT RAINBOWFEST!

Auto Run is a utility program for the TRS-80* Extended Basic Color Computer. It is used to add convenience and professionalism to your software.

Auto Run will help you create your title screen with the graphics editor. The graphics editor allows you to choose a background color and border style. Using the arrow keys and several other commands you can draw pictures, block letters and also include text.

Auto Run will generate a machine language loader program to preceed your program on the tape. Then, to start up your program, simply type CLOADM to load in the Auto Run loader program, which will then automatically start itself up, display your title screen, load your program and then RUN or EXEC it.

Also you may record a vocal or musical introduction preceding your program. The Auto Run loader will control the audio on/off.

Basic programs can be set to load anywhere in memory above \(\$ 600\) (the PCLEAR 0 page).

Software authors: The Auto Run Prefix may be appended to your software products.

Auto Run is \(\$ 14.95\) and includes complete documentation and an assembly source listing. Requires 16K Extended Basic.

\section*{Galactic Hangman}

A great new twist to the popular, educational word guessing game for the Color Computer. Large (700 words) and sophisticated vocabulary. Or enter your owrl words, your child's spelling list, foreign language vocabulary, etc.

Outstanding high resolution graphics, animation and sound effects.

For \(\$ 14.95\) you get both the 16 K and 32 K versions of Galactic Hangman.

\section*{SUGAR SOFTWARE 2153 Leah Lane Reynoldsburg, Ohio 43068 (614) 861-0565 \\ CIS orders EMAIL to 70405, 1374}
*TRS-80 is a trademark of Tandy Corp

Add \(\$ 1.00\) per tape or disk for postage and handling. Ohioans add \(5.5 \%\) sales tax. COD orders are welcome. Dealer inquiries invited

\section*{Tape Information Management System}

A user-oriented, easy to use personal database management system for the TRS-80* Color Computer with these outstanding features:
*keeps files of programs, names, addresses, birthdays, recipes, class or club rosters, anything
*variable record and field lengths
*phrase substitution editor
*up to 8 user-definable fields
*ML sort (up to 3 fields), search and delete functions *2 search modes - range and item
* user-definable printer format, for any printer
*up to 230 characters per record
For \(\$ 24.95\) you get the database management system, our full documentation which includes a reference guide and a programmer's guide, and our 1981 Bibliography of articles relating to the Color Computer. Requires 16 K Extended Basic. 32K recommended.
1982 TIMS Bibliography - \$9.95

A sensational and educational version of a popular party game for the TRS-80* Color Computer

For 1 to 10 players. Load a story into the computer. The players are asked to supply a noun, verb, part of body, celebrity, etc. which the program uses to complete the story. The story, which is displayed when all words are entered, will be hilarious. Silly Syntax requires 16 K Extended Basic ( 32 K for disk version). For \(\$ 19.95\), you get a user guide and a tape containing the Silly Syntax game and 2 stories. You can create your own stories or order story tapes from the selection below.
Silly Syntax stories - Ten stories per tape.
SS-001 - Fairy Tales SS-004 - Current Events SS-002 - Sing Along SS-006 - Adventure/Sci-Fi SS-003 - X-Rated SS-007 - Potpourri Each story tape is \(\$ 9.95\). \(10 \%\) off for 3 or more story tapes. Disk is \(\$ 24.95\) for Silly Syntax and 2 stories or \(\$ 49.95\) for Silly Syntax and all 62 stories.

\section*{ROTATING RECTANGLES}

You may want to place a rectangle on the screen in a position that is not parallel to the axes of the coordinate system. A basic knowledge of trigonometry is helpful at this point. In this discussion and the modifications to our original program that will follow it, the sine and cosine trig functions are used. These functions are merely ratios of certain sides of a right triangle in relationship to a given angle of the triangle.

TAKE THE GUESSWORK OUT OF STOCK \& FUND INVESTING
FUNDGRAF is a new computer program which not only graphs and analyzes funds or stocks, but also makes decisions on mien to buy and sell. Use your TRS - 80 Color Computer (TM Tandy Corp.) as a valuable investment tool.
- GRAPHS the progress of your funds or stocks
- SUPERIMPOSES for comparisoni
- a line of constant percent growth
- a graph of any other fund
- CALCULATES over any given time spans
- percent price change
- the moving average
- INDICATES BUY anc SEbL signals

-Sample data and detailed instructions furnished.
- Both versions require \(16 \mathrm{k} \mathrm{Fxtended} \mathrm{Basic}\).
- Fur more information send S.A.S.E.
-For your FUNDGRAF program send the price indicated above plus \(\$ 2.00\) handling to,

PARSONS SOFTWARE
11 WOODSHIRE ORIVE
IARKERSRURGI WV ZGIE

Suppose we start with a rectangle that is parallel to the \(\mathrm{X}, \mathrm{Y}\) axes and rotate the rectangle about the lower lef t corner by an angle A .

The lower left coordinates are the same as before, but the coordinates of the other corners have changed.

First, consider the point XI, Y1.

The sine and cosine relationships become:
\[
\begin{aligned}
& \operatorname{SIN}(A)=\text { opp. } / \text { hyp. }=\mathrm{Y} 1-\mathrm{Y} 0 / \mathrm{W} \\
& \operatorname{COS}(\mathrm{~A})=\text { adj. } / \text { hyp. }=\mathrm{X} 1-\mathrm{X} 0 / \mathrm{W}
\end{aligned}
\]

Multiplying both sides of each equation by W gives:
\[
\mathrm{W} * \operatorname{SIN}(\mathrm{~A})=\mathrm{Y} 1-\mathrm{Y} 0 \text { and } \mathrm{W} * \operatorname{COS}(\mathrm{~A})=\mathrm{XI}-\mathrm{X} 0
\]

Adding Y 0 to the \(\operatorname{SIN}\) equation and X 0 to the COS equation gives:
\[
* \mathrm{Y} 1=\mathrm{Y} 0+\mathrm{W} * \operatorname{SIN}(\mathrm{~A}) \text { and } \mathrm{X} 1=\mathrm{X} 0+\mathrm{W} * \operatorname{COS}(\mathrm{~A})
\]

Therefore the \(\mathrm{X}, \mathrm{Y}\) coordinates of the new point can be expressed in terms of the coordinates of the lower left corner, W, and a trigonometric function. The Color Computer can easily calculate these coordinates.
Now consider the next new corner (X2,Y2).

Hirst.
```

$\operatorname{SiN}(\mathrm{A})=\mathrm{X} 1-\mathrm{X} 2 / \mathrm{H} \operatorname{COS}(\mathrm{A})=\mathrm{Y} 2-\mathrm{Y} 1 / \mathrm{H}$ Then.
$\mathrm{H}^{*} \operatorname{SIN}(\mathrm{~A})=\mathrm{XI}-\mathrm{X} 2$ and $\mathrm{H}^{*} \operatorname{COS}(\mathrm{~A})=\mathrm{Y} 2-\mathrm{Y} \mathrm{I}$

```

And finally,
* \(\mathrm{X} 2=\mathrm{X} 1-\mathrm{H}^{*} \operatorname{SiN}(\mathrm{~A})\) and \(\mathrm{Y} 2=\mathrm{Y} 1+\mathrm{H}^{*} \operatorname{COS}(\mathrm{~A})\)

In a similar way, it can be shown that:
* \(\mathrm{X} 3=\mathrm{X} 2-\mathrm{W} * \operatorname{COS}(\mathrm{~A})\) and \(\mathrm{Y} 3=\mathrm{Y} 2-\mathrm{W} * \operatorname{SIN}(\mathrm{~A})\)
by changing only four lines of DEFRECTSUB in our previous program. we can arrive at a program that will place the rectangle at any angle and at any location on the screen.

Change lines:
\(2050 \mathrm{XI}=\mathrm{X} 0: \quad \mathrm{Y} 1=\mathrm{Y} 0: \quad \mathrm{X} 2=\mathrm{X} 0+\mathrm{W} * \operatorname{COS}(\mathrm{~A}): \quad \mathrm{Y} 2=\mathrm{Y} 0-\) \(8 * W * \operatorname{SIN}(\wedge)\)
\(2070 \mathrm{X} 2=\mathrm{X} 1-\mathrm{H}^{*} \mathrm{SIN}(\mathrm{A}): \mathrm{Y} 2=\mathrm{Y} 1-.8 * \mathrm{H}^{*} \operatorname{COS}(\mathrm{~A})\)
\(2090 \mathrm{X} 2=\mathrm{X} 1-\mathrm{W} * \operatorname{COS}(\mathrm{~A}): \mathrm{Y} 2=\mathrm{Y} 1+.8 * \mathrm{~W} * \operatorname{SiN}(\mathrm{~A})\)
\(2110 \mathrm{X} 2=\mathrm{X} 0: \mathrm{Y} 2=\mathrm{Y} 0\)
Two lines are also added to the main program to input the angle of rotation in degrees and to convert the angle to radians. The SIN and COS functions in Color Basic and Extended Color Basic require angular units to be radians rather than degrees. If you wish, you may input the angles directly in radians at line 150 and omit line 160.

Add lines:
```

150 INP!'T "ANGLE IN DEGREES":A
160 A = A/57.295779

```

The revised program follows. Use care in the placement and size of the rectangles that you draw. There are no provisions in the program that will insure that all points will be within the limits of the display. This is left as an exercise for you.

\title{
A Disjointed Tale For Assorted Wags
}

\author{
By T.\& R. Delbourgo
}

Remember that old party game some of us called "Consequences?" Each of a number (greater than two) of people, seated round a table is provided with a slip of paper on which s / he must write a short story; for example:
(1) Napoleon met (2) Josephine on (3) the Isle of Elba.
(4) It was a desolate scene.
(5) He said: It is lonely here.
(6) She said: Don't despair!
(7) The consequence was: He returned to the mainland.
(8) The moral is: Never say die.

However, the whole point of the game is that at every stage of the story the papers are passed round the table. The result can be a hilarious jumble of stories with the oddest characters and consequences!

Your CoCo can add to the fun of the proceedings by offering a whole new series of permutations that are just not possible in the pencil and paper version. To give a little spice, the computer can assign a color code to every player (up to

eight) and throw in some sound effects for good measure. The following program is self-explanatory and we think it can be used to liven up a party when spirits are starting to flag.

Type in the listing below exactly as it appears (spaces, etc.) to achieve a perfect layout. In Line 16, as each tale is presented, you have the option of being able to print out any story which has particular appeal. Even though we have reserved 4500 characters in string space (Line 4), try to keep your sentences fairly short, say one line at most.

\section*{The Listing:}

\section*{CoCo's Very First Show!}

CoCo has grown up and it's time for CoCo's very first show. Sponsored by the Rainbow, the premier magazine for the TRS-80 Color, TDP System-100 and Dragon-32 computers, RAINBOWfest will be the place to be this Spring.

Exhibits will abound. Information will flow. New products will be shown and introduced. Many of the "names" in the CoCo world will be in attendance. It all boils down to three days of fun, excitement and learning for everyone lucky enough to own a CoCo (or those who just wish they did)!

The place is the Regency-Hyatt Woodfield, located on the western outskirts of Greater Chicagoland, within easy access to highways and O'Hare International Airport.

The dates are April 22-24.
The times are 7-10 p.m. Friday; 9 a.m. -8 p.m. Saturday; and 10 a.m.-5 p.m. Sunday at the Grand Ballroom.

The cost is only \(\$ 7.50\) for a three-day ticket in advance or \(\$ 11\) for a three-day ticket at the door. One-day tickets are \(\$ 5\). in advance or \(\$ 7.50\) at the door.

A Saturday "let's make friends" breakfast is also planned. Cost of \(\$ 10\) includes breakfast and a speakersomeone well known in the world of Color Computers.

Rooms are available at the RegencyHyatt Woodfield for a special RAINBOWfest rate of \(\$ 43\) per night, single or double occupancy.

Admission tickets, breakfast tickets and reservation cards for the hotel can be secured directly from the Rainbow. Mail the form below to the Rainbow, P.O. Box 209, Prospect, KY 40059. Advance sale tickets will be sent by return mail up until April 15. After that, they will be available at the door.

Oh yes...for the "others" who (perish the thought) don't get into CoCo like you do, Woodfield Shopping Center directly adjacent to RAINBOWfest is the world's largest enclosed shopping mall. And, you are only a short drive from downtown Chicago's museums, theatres, aquarium and shops.
RAINBOWfest has it all! Don't miss CoCo's very first show!

PLUS . .

> A Noted Nationally-Known Speaker Saturday Morning Seminars Saturday and Sunday on all aspects of CoCo BASIC classes for all

Make checks payable to: the Rainbow

MAIL TO:
RAINBOWfest
P.O. Box 209

Prospect, KY 40059

YES, I'm coming to CoCo's very first show! Please send me:

\(\star \star \star \star\) The Product Line \(\star \star \star \star \star\) GRAPHICS PROGRAM
GENERATOR I.
\(\$ 11.95\)
Let your CoCo write "Syntax perfect" graphics programs for you! Boxes, circles, arcs, ellipses, paint, and lines can all be created while viewing the graphics screen using the arrow keys and a few one-key commands. Use either of four color sets in PMODE3. Extra features like "erase", "check remaining strings space" and optional grid marker pixels. When your graphics are complete, GPG I will write a unique program to tape to duplicate the picture you've created. This generated program can be edited, added to, or merged like any other! Manual details operation.

\section*{GRAPHICS PROGRAM}

GENERATOR II
\$16.95
All the features of GPG I plus characters with a self loading machine language module! Includes a binary screen save feature to reproduce your graphics with text in a later program. Manual includes Assembly Language source listing.

\section*{ELECTRICITY CONSUMPTION}

MONITOR

\section*{R.} ……............. \(\$ 10.95\) Utilize your CoCo to reduce your electric bill! Both text and graphic presentations are used to show consumption in either dollars or KWH. Extra features include bill projection anytime during month and 20 day trend analysis. If you can't measure it, you can't manage it! Sixteen page manual includes listing and forms to record data. Printer is NOT required.

\section*{HOUSEHOLD BUDGET} WORKSHEET.
\$ 6.95

Produces an up-dated monthly financial worksheet without files, yet contractual loans are automatically up-dated with new balances and months remaining. Budget categories and variable expenses user defined. Includes provisions for variable income like commissions, one time expenses and/or income. Excellent manual includes listing, examples, form to list data. Works with any printer.

LLIST-RITE \(\qquad\) \$ 5.95

Complex, non-commented programs are much easier to follow after using this listing utility! Multiple statements and IF. THEN. ELSE statements are logically separated, line numbers are set apart from text, page boundries are observed. Works with any printer; complete, easy to understand instruction sheet included.

Each program ordered must include \(75 \$\) for Shipping and Handling.

\section*{HOW TO HEAR AND THINK IN A SECOND LANGUAGE}

Skilled linguistics have developed our series of second language programs. The lessons utilize the power of programmed instruction wherein you are advanced to new material only after satisfactory learning has occurred at the current level. Our techniques teach you how to think in a language without initially using any printed text material. No mental translation to your native language is required. You learn as a child does, hearing and speaking before reading. The computer both tutors and keeps track of progress as it moves you forward (or backward when review is necessary). AUDIO plus VISUALS plus INTERACTIVE RESPONSE establish the learning process, and literally THOUSANDS ofvisuals help seal-in the sound patterns of your new language.

All of our lessons are interactive and user friendly; yet, you are unaware of the complex course structure involved. For example: Lesson SLU-1 uses the theme of PEOPLE, PERSONS \& FAMILY to teach the use of nouns to name things, to classify them into categories, and to identify members of a group. Sentence structure is developed using the verb 'be' and its relationship to nouns and adverbs, including plural forms and inversions. Noun structure using definite and indefinite articles, and regular and irregular plural forms is also presented. The other lessons are similarly designed. In addition, each VOCABULARY LESSON presents approximately 200 visuals and 200 words that are integrated into the learning process.

While the foregoing might seem complex, and it is, IT IS ALSO THE REASON OUR COURSEWARE CAN TEACH LANGIJAGES. If you have tried 'game' or 'tape' language programs you know that they are ineffective. Our programs can teach you a language because we have successfully combined expert authoring of programmed courseware with audio \& visuals \& response \& branching into a powerful tutorial package.

\footnotetext{
DEALER INQUIRIES ACCEPTED We have a broad range of Audio Visual Computer Aided Instruction under development. Some users of our courseware might include Day Care Centers, Schools (public and private). institutions in various categories individuals and language tutors.
}
ABSOLUTELY NO RISK You may examine your order for 15 days. If you decide not to take advantage of the lesson(s) simply return in good condition for a full refund or cancellation of credit card charges.

\section*{COLOR COMPUTER SOFTWARE}

\section*{* UNIVERSAL PROGRAM 1 (UP-1) *}

Known as the Program Stacker, UP-1 allows several programs to be loaded until the memory is filled. Quickly jump from one program to another or compose new programs while retaining the old ones. Programs are included for patching damaged programs. Allows data or machine language programs to be stored and retrieved from a cassette. Programs are included for writing values or characters to memory and displaying memory contents. Blocks of memory can be relocated. UP-1 can be used as a Word Processor by allowing text to be stored in memory and printed on the screen or an external printer. UP-1 Cassette \$14.95
^ DISSASSEMBLER-ASSEMBLER *
Using English mnemonics and Decimal Locations, DISASM is an easy way to learn to assemble machine language programs or subroutines. Subroutines can be used with Basic programs arid can be called by either USR or EXEC commands For CC compatability, all locations are given in decimal values, eliminating the confusion associated with using HEX. All commands are menu oriented and the user provides the particulars for the commands without having to remember command formats The Disassembler can be used to analyze machine language programs as well as the Basic and Extended Basic CC ROMs. Example programs are included. Cassette \(\$ 19.95\)
* DYNAMIC WORD PROCESSOR (DYWORD) * DYWORD is designed to handle all the word processing requirements of the Color Computer. It allows the creation of separate files for recipes, term papers, addresses, invoices, etc. Printer controls and graphic characters can be easily entered with the text. A full screen editor is included with up/down and left/right cursor position controls. The whole screen is changed as characters are added or deleted to five a realtime display. New characters can be written over old ones and, at any time, printer or graphic control values can be entered DYWORD's files consist of Basic remark statements and can be loaded, saved or modified like any other Basic program. Fast machine language subroutines allow a printer to print text at its fastest speed and control the realtime screen display. DYWORD also allows numbers to be processed. For example, the costs of items can be entered in text in DYWORD and the program will convert these characters to numbers. Special characters such as CHR\$, PRINT\#2 , or \(A \$(N)\) are not required. The Basic Control Program allows flexibility in processing text between any two statement numbers and in any order. Thus, it is easy to write the same letter addressed to different people. If yoou need a truly flexible word processor at a reasonable price then DYWORD is for you Cassette \(\$ 24.95\)

EXTENDED BASIC IS NOT REQUIRED FOR
* Put Your Programs On A PROM Pack *

Send us a PROM PACK and your Basic or ML programs in a cassette and we will put your program in the pack. We add a sprocket and switch to select the original or your program. Total cost is \(\$ 39.95\) for 4 K or \(\$ 49.95\) for 8 K . We furnish and program the chips so the pack is ready for operation with your programs when we return it to you. Additional programmed chips are \(\$ 20\) for 4 K and \(\$ 30\) for 8 K . We will reprogram the chips for \(\$ 10\). These programs are immediately available on power-up and are not lost with power failures or programming mistakes. Impress your friends with your permanent programs.

\section*{CoCo-Jot A Thinking Person's Hangman}

Computer Island has come up with an interesting version of the spelling game "Hangman." It's called CoCo-Jot. Can you figure out the hidden word (either three, four, or five letters-your choice) within 10 tries? You start with 100 points and lose 10 for each try down to your 10th try and zero points.

Since Computer Island is aiming at educational sof tware I wanted to try CoCo-Jot with my children, not only as a teacher in a classroom setting, but as a parent might use this program at home.

The well-done introduction of CoCo -Jot builds excitement. However, the game is not as exciting. CoCo-Jot requires an understanding that would take a teacher several rounds to explain. The directions are too complicated for young students alone to figure out. My children (first, fourth and sixth grade students) were able to handle it on their own after some coaching by me. My fourth grader finally said, "Oh! It's like Hangman."
The game lets you type a word and then tells you how many letters you got right. An alphabet list then lets you eliminate letters you feel you do not need. Then you switch to a "scratch pad" where you can play with the letters and try various combinations. My children, on their own, turned off the volume control as they did not like the constant "beep" of the scratch pad. By a process of elimination, you keep on guessing words until either you get it right or you get to the 10th try and the computer tells you the hidden word.

My first grader constantly referred to the word list looking for words that had, or did not have, the proper letters. This process will provide her with letter and word recognition. But it requires one-on-one help with a great deal of patience. She exclaimed "Thank goodness!" (positive) when she got two letters correct on a three letter word. She finally did get the word correct and she played two more games on her own.

My fourth and sixth graders felt that the game was difficult, but both said that they liked it and wanted to continue playing.

There are some changes that I feel would help the game. First, the lead instructions include a question for how much "time" you want. This is misleading as the game is not timed. The question is to randomize the word list. It would be better to have said "pick a number from 001 to \(9999 . "\) Second, I found the sound in the "scratch area" annoying. It should be eliminated, I feel. Also, my first grader, when looking at the screen for choosing the word, counted five periods (.....?) for a three letter word and was confused.

From my point of view, as a teacher and parent, I feel that CoCo-Jot has potential to develop word and letter recognition with students. The game comes with a word list (but must be printed larger for school use). A fine feature is that the program can be modified with your own words and therefore can be tailored to your needs. The game might be more interesting if it were programmed in specific subject areas (i.e., presidents, countries, math terms). Above all, the game requires the most coveted of all educational goalspatience and thought, and to have an adult sit down and develop a working relationship with their student or child. Well, have you spelled "hug" with your child today?
(Computer Island, Dept. R., 227 Hampton Green, Staten
Island, NY 10312, \$11.95, 16K)

\section*{SPECTRUM PROJECTS \\ 93.15 86th DRIVE WOODHAVEN, NY 11421}
all orders plus \(\$ 2 \mathrm{~S} / \mathrm{H}\), N.Y. residents add sales tax

Now that you know more about the hardware and software which is involved, you may ask, what else can I access besides large data bases which charge for the use of their systems? The answer is a growing phenomenon called the Bulletin Board Service. These are mushrooming all over the United States. What is a Bulletin Board Service you ask? A Bulletin Board Service, or BBS for short, consists of an individual with a personal computer and an auto-answer modem set up to have outside callers access their computer. (Yes, your own mini CompuServe!) Aside from the auto answer modem, one needs special BBS Software to run the system. For example, Spectrum Projects owns and operates two BBS's which totally support the Color Computer. The first system can be accessed by dialing (212) 441-3755. It is operated and run on a Model III with four double-headed disk drives. It has a disk storage capacity of 2.6 megabytes. The system is free and no passwords are needed to access the system. Some features of the system are a message retrieval section, a downloading section, a merchandise section and a Color Graphics section. Using a Smart Terminal Program, you can dial into the system and capture files from the download section. These files consist of games and utilities which you can run on your Color Computer. Also, as an added feature, color graphics can be accessed through the phone lines right onto your TV set.

In the message retrieval section you can leave or retrieve messages with other users of the system. It is a way to get info on the Color Computer that is not readily available through other channels. You can ask technical questions, get opinions on Color Computer hardware or sof tware, and place an ad. In the merchandise section is a list and description of products from the leading Color Computer.

The second BBS which is operated by Spectrum Projects can be accessed by dialing (212) 441-3766. It will also be accessed if you call BBS\#I and it is being used. It is switched over from BBS\#l to BBS\#2 via ringover. The second Bulletin Board is operated on a Color Computer.

There is one last thing you can do with your modem. Become a CoCo sysop! Sysop stands for system operator. The minimum requirements to run a BBS on a Color Computer are 64 K of RAM, two disk drives, and an auto answer modem. And of course, BBS software!

Bulletịn boards have proven to be very profitable investments, as yours truly can attest to. Just imagine sitting in front of your CoCo BBS and watching it being accessed by a complete stranger at any time of day or night from anywhere in the world! Make way for the Bulletin Board System-the wave of the future!

Software Review...

\title{
Ghostmania Puts You In This Fascinating Game
}

On no! Not another Pac-Man game. It sure seems that the Color Computer has been bombarded with enough PacMan games, but this is one of the more original ones.

This game has you in the game itself, not looking down, but in it, moving through walled corridors. Ghostmania is slightly different from the arcade version. First, there are no pellets to eat, and instead of energizers there are blue squares. While going through the maze the ghosts (there are about 30 of them) do not move until they see you, then they move at you. They gain points, which are displayed in the upper left hand corner, as they move, up to 255 points. You then run, if you have the chance, to a place where one of the blue squares is under you. The computer then displays how many more charges the pill has left, one to three: There you wait until the ghost rounds a corner and runs into you. You then get how many points he accumulated and one POSITIVE ENCOUNTER. The ghost is then eliminated. If you run into a ghost without being on a blue square you get a NEGATIVE ENCOUNTER, and the ghost disappears. After nine negative encounters the game ends. After a set number of positive encounters, determined by the level, you get a bonus game. The game has the fortunate option of stopping the action and looking down upon the maze, showing the ghosts, blue squares, you and the direction you are facing.

The game can be played for practice without ghosts or have the computer play. There are three skill levels, Beginner, Intermediate, and Competition. There are 10 speed options.

The maze is player designed. There is an 11-digit number displayed at the bottom before the game. The digits determine where passageways start and end and where turns go. For example, 99999999999 would be the easiest maze while 33333333333 would be the hardest. Three is recommended by the manual, as you would most likely be confined in a small area and unable to get to some places.

The graphics I must say are the best I have seen in a game of this sort. Fast machine code produces blue sky, green hallways, an orange floor and very believable white ghosts with blue eyes in a real-time environment. (For any of you Chromasette subscribers out there who have the game Amazing, the graphics are similar.) The program is written in machine la nguage, and, as such, is very fast. If you buy the program, buy it for the graphics.

The game even has a monthly publication called the Challenge List of high scores and competition events. You receive a six-month subscription free when you mail in your registration form.

The 11-page manual is very good. It goes over every detail of the game. No joysticks are required for this game and only 16 K . According to the manual, the disk version requires 32 K and two disk drives. A game that requires two disk drives must really be something! The eassette version is well worth the price.
(Educational Arcade Systems, 5350 So. 3600W., Salt
Lake City, UT 84118, \$29.95 for cassette)
—Jeff White

AT LAST! Help for the BASIC programmer. BASIC AID is an indespensable addition to the Color Computer. It will save you valuable time and effort. If you write or modify BASIC programs, you need BASIC AID.
You get 43 Common BASIC commands available as single Control Key inputs. Greatly speeds up program entry.
A powerful feature is the ability to redefine any or all of the keys to your own specifications PLUS you get invaluable features such as a MERGE command, Move Line command and Aułomatic Line Numbering.

All of this in a convenient ROM cartridge which is available instantly on power-up. And, it uses almost none of your valuable memory! Comes with a convenient, easy to remove, plastic keyboard overlay.

\section*{CCTHELLO：Well－Executed Board Game for CoCo}

\begin{abstract}
CCTHELLO is a 16 K Color Computer version of Othello （traditionally called Reversi）designed for the Color Computer．Othello is played on an \(8 \times 8\) board，with two－ color pieces（normally white on one side and black on the reverse）．The object is to capture as many of your opponent＇s pieces as possible．Each player alternates placing his colored piece on the board in an attempt to outflank the other player．When a single piece or group of pieces have been outflanked，they are flipped to the opposite color．This results in some dramatic changes as the game progresses． Othello offers a range of strategic planning as well as immediate tactical conflict．
\end{abstract}

The game，marketed by Spectral Associates，is well designed for the Color Computer＇s graphic capabilities．It should appeal to the beginning and intermediate Othello player．Four modes of play are offered：three skill levels of competition against the CoCo，and an additional two－player option．This pits you against another human opponent while the computer assumes the role of score keeper and rule enforcer．CCTHELLO gives almost instant response due to its machinc language programming．The joystick input is

BALTIMORE，MD． 21230
smooth and allows you to concentrate on the logic of the game．

I have had experience playing Othello against several different computers using a variety of programs．I learned to play the game on a TRS－80 Model 1 using a program written in BASIC．It was very slow making moves，but offered a good challenge to my inexperienced play．I next graduated to a near master level program written by Dr．Peter Frey from Northwestern University．His program，called OTHEI．I．O V，was almost unbeatable at its highest level of play．However，it required superhuman patience to complete a game that could take hours on the TRS－80 Model I．More recently，I have been playing Othello on a Lillith computer（a new scientific／engineering work station） programmed in a Pascal－like language called Modula－2． This version has very clever high resolution graphics as well as challenging play．It has the kinds of features that really improve your game，including options for suggesting moves when it has you in a tough situation．

Until CCTHELLO came along，my only experience playing Othello on the Color Computer was with a BASIC version．It had a poor display and played a relatively weak game．In contrast，CCTHELLO has a well－designed board display that makes good use of the Color Computer＇s high resolution color graphics capability．The game is programmed in machine language for fast response，and the levels of play are suited to both beginners and practiced players．

Joysticks are required for selecting game options and for moving the blinking cursor around the board to place game markers．You alternate first moves with the computer．A player always has light（yellow）markers while the computer takes the dark（blue）ones．The game also makes good use of sound to signal the moves．The score is continuously displayed on the screen in colors corresponding to the markers．

One feature of CCTHELLO，requiring some time to adjust，is its nearly instant response．A beginner might find it hard to visualize the consequences of his move before the computer gives its response．It would be helpful if a delay were built into the program so that a player could study the board before the computer makes its move．Most versions of Othello are slow enough that this usually isn＇t a problem．

Another problem with the game is in the two player mode． While playing another human opponent，it is sometimes hard to tell whose move it is．It would be helpful if the cursor would change colors to signal which player，light or dark， has the next move．This is particularly important when a player is blocked from making a move．In this case he must forfeit his turn．Without the cursor giving a cue，players must wiggle their joysticks to see who has control．

After playing many games with CCTHELLO，I have become familiar with its tactics at all three skill levels．I am sure that a beginner would find the first level challenging while learning the game．The third level will keep an experienced player alert at all times．It takes only one small mistake to turn the tables．Sometimes Othello can be that way．A very even scoring game can look like a complete rout when the final tally is made．

CCTHELLO is a well－executed board game for the Color Computer．It makes a fine addition to computer libraries， especially those with a tendency to become heavily populated with endless versions of space invaders and other reflex testing devices．

212.441-2807

INTERNATIONALLY, THE COCO movement is really beginning to catch on. Actually, it is partly the Color Computer and partly the Dragon-32 in England and Europe. And, we understand, there is still another lookalike coming from the Far East with the name Sampo.

An interesting aspect to the new Color Computers seems to be that they are doing very well in their "native" areas. We keep hearing that Dragon will come visiting the United States and Canada (and the same for the Sampo), but what is more interesting is that these computers seen to be carving out nice niches for themselves in their own areas.

Add to that the increasing CoCo influence overseas of Tandy itself, and you end up with a growing CoCo community that speaks many different languages. This is easily seem by a heavy increase in the number of copies of the Rainbow we are selling outside the United States and Canada. Those sales, which in the last six months were not inconsiderable, have now grown by 200 percent in the last couple of months! Well, maybe some day RAINBOWfest will have to have interpreters-but not of the hardware variety. Oh well, we'll all understand BASIC and Assembler, too.

HAVE YOU SEEN SANDS of Egypt, the new graphics Adventure game from Radio Shack. This is not a review, obviously, but we were impressed by the game. Yet, it was not the program itself which impressed us as much as something else-a something that was also spotted by reader Charles Perrin of Huntsville, AL.

Sands of Egypt instructions tell you that if you have Disk Extended Basic 1.0 you type in \(R U N\) " \(E G Y P T\) " to start the game. But, it adds, if you have version 1.1, you type in \(D O S\) first.

All this is by way of saying that there is a new DOS ROM for CoCo, and there are, we hear, a new Basic and Extended ROM as well. Its Basic 1.2, Extended 1.1.

The new Disk R OM appears to be a way to implement the OS-9 system you have seen us talk about. You can use this as an indirect call to the disk operating system, or something like that.

We hear that the new Basic ROM fixes up some of the machine language subroutines that sometimes caused problems. And, it is our understanding that the Extended ROM fixes the
problem we all had with the PCLEAR instruction.

Could that mean that CoCo is getting the final touches of its act together for a real change-or maybe a big brother sometime in the future. No, don't expect anything to come along in the next month or two along those lines, but we do hear reports of a new VDG chip that may be along soon.

Could the resolution be coming to something like 700 by 500 pixels? Could there be a 64 -character screen display on the horizon? Is it possible to cram 4000 colors (that is not a misprint) onto one chip?

Before anyone gets worried about an outdated CoCo, we would like to point out that historically, Tandy has never obsoleted a computer. Even good ol Model I software is compatible with Model III software. Or look at the Model II and the Model 16 (and now the 12). Sof tware can, more or less, shift between like systems. Sometimes there are free or low cost upgrades. And, with Tandy's new author's assistance program, we see that practice continuing.

Yes, CoCo is here to stay. Why, even Wayne Green, who predicted the total demise of the Color Computer a year ago, is trying to get into the act.

NOT ONE MISTAKE, but two to report to you. You may have inferred that the Spectrum Light Pen and the Light Pen Fun-Pak were both available from either Spectrum Projects (which markets the pen) and from Computer Island (which wrote the software). Not so, the whole package is available only from Computer Island (Dept. R, 227 Hampton Green, Staten Island, NY 10312) for \(\$ 34.95\). The Fun-Pak sells separately for \(\$ 14.95\). And, yes, it was an error in the Spectrum advertisment which showed the CoCo Cooler for \(\$ 19.95\). Correct price is \(\$ 49.95\). Both misprints are our fault, and we are sorry if they caused you problems.

NELSON SOFTWARE IS OUT with one of the nicest-looking packages we've seen for their new Super "Color" Library series of programs. They have added to the Super "Color" Writer II and Super "Color" Terminal programs called Calc, Database, Mailer, Speller and Disk-ZAP. All come in handsome brown loose-leaf bindings with gold stamping. And, by the way, Super "Color" Writer I/ is into version 3.0
now, with high resolution display screens. This is also true for the new Terminal program.

The Calc program is a "what if?" spreadsheet; Mailer is a mail merge and correspondence program; Database is an electronic file and Speller is, of course, a spelling checker with 20,000 words.

SPECTRAL ASSOCIATES TALKS TO you with a new highresolution machine language game that incorporates words. Android Attack is available now and gives a nother dimension to CoCo that, we are sure, others will be using in the future.

CORES-64 FROM CER-Comp is a new tape-based editor/assembler that can be run in any CoCo from 16 to 64 K . A total of 59 K of work space is available with the 64 K version. It does not require a disk or FLEX to run the 64 K version.

SPEAKING OF SPEECH, Speech Systems has a couple of new products out that will let you make some noise. One of them is The Voice, which lets you produce all sorts of speech sounds. The Stereo Composer will give you a four-voice music synthesizer over seven octaves that produces music in stereo! Both of these utilities are available as ROM Packs.

SCHOOL SYSTEMS IN Spring Valley, NY; New York City; Poca, WV; La Mesa, CA; San Antonio, TX; Buena Park, CA; Anacortes, WA; Elizabethtown, K Y; New Castle, IN and Abilene. TX have been awarded Educational Grants Awards by Radio Shack's Educational Division. School systems can make application for another set of awards up until March 31.

BERTAMAX HAS A NEW program called Colortext that allows use of a variety of character fonts and graphics on the screen simultaneously. It also has a non-destructive overwrite for animation and variable screen scrolling speed.

HOWARD SAMS BOOK publishers has announced a new series of books dealing with microcomputers. The first two books in the series, written by Joe Giarrantano, will examine the evolution of computer technology and modern computer concepts. Two others will deal with BASIC.

\section*{Like To Live Dangerously? Minefield's A Blast}

Those among us fortunate enough to have avoided actual combat will be able to enjoy Minefield, a game simply conceived, yet challenging enough for the most seasoned of computer war-game veterans.

The object, of course, is to cross an area that has been peppered with hidden mines by the enemy. There are 10 levels of difficulty, but, believe me, none of them is easy.

After you CLOAD the cassette, the computer requires several seconds setting up the mine field, sounding short beeps as each mine is placed. Those of you without joysticks will be glad to know that the game uses the arrow keys to negotiate the course.

You'll be even happier to know that you are provided with a mine cietect or that sounds once for each mine touching the invisible square that you occupy. It tests all four sides, including the corners, so there are eight possible locations. However, the mine detector doesn't tell you the exact positions of the mines. So, even with a warning, you are never out of danger. Step on a mine and you are blown to smithereens!

If you're lucky enough to make it through the mine field alive (I never have), your score is contingent upon how many moves are required, as well as the difficulty level. While any mention of mine fields usually brings to mind someone gingerly stepping along trying to avoid triggering the notorious and deadly "Bouncing Betty" or Claymore antipersonnel mines or maneuvering heavy equipment past antitank mines, the most destructive of all, the term mine dates back to the time when soldiers would actually mine tunnels underneath enemy trenches and forts, then pack them with gunpowder and \(B O O M\). During the Civil War, the Union forces tunneled under the Confederate entrenchment at Petersburg, Virginia, and blew such a hole that the engagement is now known as the Battle of the Crater.

As you play Minefield, you are reminded of the terrors of war and should be able to empathize with those among us who have experienced the feeling of possible extinction with the next footstep. Melodramatic'? Perhaps, but it is one of the things you experience as you enjoy the game.

\section*{Tower of Fear: Despite Death, A Fun Adventure}

Tower of Fear is a moderately difficult word adventure. It has death (l got killed at least three different ways), treasures, and several surprises. This adventure takes place in Graylockland at the castle of the late Blackheart Firethrower. That is, if you can get into the castle, ha ha. Blackheart Firethrower's castle has been inhabited by wraiths and cyclopes for the past three hundred years. No one, Sir Adventurer, has ever returned with even one of Blackheart's valuable treasures.

With excellent assistance from my wife, I was able to find all the treasures in four or five hours of playing time. I found all the treasures by using imagination, courage, skill(?), magic, and luck. I found it certainly doesn't pay to go wandering aimlessly around in a maze of corridors. It seems the unfriendly cyclopes kill first and ask questions later.

Tower of Fear has a couple of nice features I really like. One is that about six seconds after the program starts loading a graphic title page is uncovered line by line. The other feature is that during play the screen uses reverse video. This makes a much more interesting and easy to read screen. The one- and two-word commands used in the game are not dissimilar from any other word adventure.

The game is written for 16 K and is in machine code. I was somewhat disappointed in the documentation for the game. The single sheet of paper that came with the cassette provides the setting for the adventure, but gives no information on how to play the game. Therefore, I would not recommend this as a first adventure, but if you have had some experience with word adventures, then I'm sure you'll like this one. Another complaint I have with the documentation is it gives you instructions to CLOAD the tape, but since it is in machine code you have to CLOADM it.

One other problem I had was that I could not successfully save a game in progress. After making a couple of calls to Bob Little of The Programmers Guild I found out the problem. When saving a game you have to use eight characters for a file name or the program won't recognize your data file.

All in all, this is a fun adventure game. I recommend it. (The Programmer's Guild, P.O. Box 66, Peterboro, NH 03548, \$19.95)

\section*{Hard Copy Your Diskette Listings With Style By Michael Plog}

The basic idea of this program is to produce a printed copy of the directory listings of your diskettes. This task could be accomplished reather easily by POKEing \& HFE ( 254 in decimal) into location II I. This controls the output device code, as reported in the Rainbow, August 1982, page 29. The \(P O K E\) procedure, however, only prints what would appear on the screen, and does not have a very "professional" look.

The program discussed in this article prints two directory listings across the page, includes any "killed" files, tells the beginning Granule of each file, and even prints out the file allocation table, so you can visually track your files. Figure I shows what the program produces.

In the upper-left corner of Figure I is the title of the diskette. You must input the title every time you run the program. I use the Line Printer VII, so I put the title in double wide letters by printing CHR\$(31), the title, then CHR \(\$(30)\). You can dress up this part any way you want.

The double heading right below the title explains what is to be found in the table.
"Name" refers to the name of the
file, as recorded on the diskette.
Any file name starting with a number
sign (\#) indicates the file has been
killed, but not written over. (If

\(222222120010101000110120110001001222221000100 \varnothing 0102011010000122222222\)
\(55555595 ø \varnothing 9 \varnothing 9191119929 \varnothing 29922293295 \varnothing 555944494444940599595555955555555\) \(5555554596488 \emptyset 52748316 \varnothing \varnothing 877494186565555 \varnothing 125456789 \varnothing 178456789455555555\)

listings of the files. This number may be misleading. If you have erased some files, the number of free granules may not reflect this.

At the bottom of Figure 1 is the File Allocation Table. The top row of numbers is a counter, for the sixty-eight granules of the diskette, numbered from 0 to 67 . The bottom set of numbers indicates the contents of each byte of the File Allocation Table, in ASCII format (not Hex format). The numbers are to be read from top to bottom, in a single column. For example, byte 0 (the first one) of the File Allocation Table contains a "255." The meanings of the numbers contained in the File Allocation Table are:

255- The granule is not part of a file: it is a "free" granule.

0 through 67-The granule is used as part of a file. The number tells the next granule of the same file. For example, the number in byte 30 is " 31 ." This means that granule 30 is part of a file and granule 31 is the next granule of the same file.

193 through 201-This granule is the last in a file. Subtract 192 from the number to learn how many sectors of this granule are part of the file. For example, a " 195 " means that three of the nine sectors are part of the file; six sectors are unused.

In order to make use of the File Allocation Table, refer

back to the numbers listed under GRANULE, in the ST column. This number shows the first granule of each file. Now, look at the number in that corresponding byte of the File Allocation Table. For example, the first program listed in Figure I is \(A D-D I C T\). The program begins on granule 32, and uses one granule of the diskette. In the File Allocation Table, byte 32 contains a "196." That means that four of the nine sectors are used for \(A D-D I C T\). Hangman starts in granule 26. The second granule of the file is 27 (this is found from the file allocation table entry for byte 26). The last granule of the file is 24 , and the 198 means that six sectors are used and the remaining three are unused.

The File Allocation Table, as printed in Figure 1, allows you to visually track all the files (programs and data) on the diskette.

The Disk Owner's Manual gives some explanation of the File Allocation Table, and the reader is encouraged to examine the manual.
It is possible, of course, to print (to the screen or paper) each byte of any file contained on your diskette. That, however, is a subject for a future article. (Or for your experimentation.)

Get ready to start, set up variables, print headings, read in file allocation table.

\section*{The Platinum Worksaver \({ }^{\ominus}\)}

\section*{...Programming Made Easy}

\section*{FULL SCREEN EDITING OF BASIC PROGRAMS}

With the PIATINUM WORKSAVER'S editor, there's no more counting the numbers of characters to delete or change, or wondering if you deleted too many or too few. You see the whole line as it's edited. Changes, deletes and inserts are automatic and the cursor can be moved anywhere on the screen.

\section*{FULL SCREEN EDITING OF} NUMERIC AND STRING ARRAYS
But that's only the beginning! The editor (Written in machine language) also comes with a short, two line BASIC subroutine that will allow you to use the full screen editor on your numeric and string arrays. This is the springboard you need for developing your own VisiCalc \({ }^{\text {m }}\) or word processor.

\section*{SINGLE KEY ENTRIES OF \\ BASIC WORDS}

So, the PLATINUM WORKSAVER makes it easier to write useful programs and edit them, but that's not all! Entering programs is a breeze with single entry of over 80 basic words, on a beautifully designed KEYBOARD OVERLAY, color-keyed to function. No need to memorize or consult a conversion chart to find a word.

\section*{PROGRAM CHAINING AND DYNAMIC DEBUGGING}

Now you can write, enter and change programs easily, but what about debugging? This is the frustrating, time consuming aspect of programming and frankly, the Color Computer doesn't help you much . . you have to start the program over each time you make a change. But not with the PIATINUM WORKSAVER!! With it you can change, delete, add and rearrange or join lines. The special reserved key is excellent for copying or moving parts of lines to other lines... plus, you can even LOAD A WHOLE NEW PROC RAM without disturbing the data you've created.

\section*{NUMERIC KEYPAD}

We've solved another Color Computer weakness. Press a control key and letters J, K, L, U, I, O, P become number keys 1-7. Numbers \(8-0\) remain in their normal positions. The key pad numbers are cleariy labeled on the overlay.
- Over 100 programmable keys
- Loads to Disk

\section*{A COLOR COMPUTER* MACHINE LANGUAGE ENHANCEMENT PACKAGE THAT PROVIDES:}
- Dynamic full screen editing of BASIC programs.
- Dynamic full screen editing of numeric and string arrays. The advanced user will be able to write VisiCalc \({ }^{\text {™ }}\), word processor etc.!
- Single key entries for 80 commands and functions.
- Functionally laid out plastic keyboard overlay.
- Numeric Keypad conversion.

- Automatic line numbering.
- Best value per dollar than any other enhancement package available.

\section*{With the Platinum Worksavere, programming time and hassle can be cut by \(50 \%\). You'll spend less time typing, more time being creative with your Platinum Enhanced 16K Color Computer!}

\section*{LOOK WHAT JUST \$30 CAN DO FOR YOUR 16K COLOR COMPUTER:}

Platinum Enhanced 16 K Color Computer
- Relocate, join, duplicate individual and unique sets of lines at the push of a button
- Create the following using only 31 keystrokes: CLS:AS-Strings \(\$\left(15^{\prime \prime \prime}\right)+\) MID\$ (CL\$, 6, 2) To charige the symbol to \(=\) requires only 3 keystrokes!!!!
- Retain the sequence of commands in temporary memory with special reserved key
- One keypush and the right side of the keyboard converts to a numeric Keypad
- Correct bugs while your program is running, without losing data.
- Edit programs, data-and strings using the full screen editor.
vs. Regular 16K Extended Color Computer
- Retype entirely any lines to be moved or joined
- Type that line using 47 keystrokes. To change the symbol, Backspace and retype using 33 more strokes!
- Retype lost lines!
- Stretch those fingers!
- Oops! Lost data! Retype, Reload and Save data while swearing a lot.
- NO CAN DO!

\section*{THE PLATINUM WORKSAVER INCLUDES:}
- Enhancement program, including a sample array Editor, on a high-quality Agfa Cassette
- Fully labeled acetate keyboard overlay, NOT a cheap stick-on
- Complete instructions
- Loads in seconds, takes less than \(2 K\)

The PLATINUM WORKSAVER costs \(\$ 30.00\) plus \(\$ 3.00 \mathrm{~S} \& H\) (NY residents add tax). To order write:

\section*{BASIC TRAINING}

\title{
More Organization: Create A Tape Register
}

\author{
By Joseph Kolar
}

There is light at the end of the tunne!! Now that you have your cassette tapes organized, there is one final household chore to get out of the way.

You are about to create a tape register. The definition and scope of the tape register will become self-evident as you proceed. On the outside cover of the notebook you were asked to purchase, stick two strips of labeling tape (neatly centered!). With a black, felt-tipped pen, neatly letter "tape index" or "tape register."

Open the notebook, and fold it so that you can rule lines on the inside cover. Draw a horizontal line about one inch below the top, across the inside cover, using a black, felttipped pen. A half-inch below that line, rule another line. About \(11 / 2\) inches below that, rule a line. A half-inch lower, rule another line.

About one inch lower, rule a line. A half-inch lower, rule another. About an inch and a half lower, rule a third line. Count up three lines. Make a vertical line, about the width of a ruler, from the left margin and connect the three bottom lines. Make a second vertical connecting line about the width of the ruler, from the last line you drew. About \(11 / 2\) inches from the right edge of the notebook, rule a third connecting line.

About an inch below the last line you ruled, rule as many lines as space will allow, about a half-inch apart, horizontally, until you reach the bottom of the page. About a ruler's width from the left margin, draw a vertical ruled line, connecting the series of lines that you ruled horizontally.

Using a red, felt-tipped pen, neatly center and print "tape index" or "tape register" between the top two lines. Between the third and fourth lines, print "format." Drop down to the next two lines, which are broken into four segments. With a regular black pen, in the left box, print "name." In the next box, print "comments." In the third, largest box, print "description" and in the right-hand box, print "evaluation."

If you have about ten boxes in the bottom portion of the inside cover, you are in business. Into the small area to the left, copy the first part of the following list, and in the large area, copy in the explanation. Of course, you can improvise your own list that best conforms with your system.
```

JS Joysticks required
JS/K Joysticks or keyboard optional
PCLEARI Clear memory required

* Graphic hi-res display
Text Text only
Graphic Graphics lo-res
S Sound included
U Utility program
T Tutorial program
X Experimental program
T/G Graphic/Text combo
ML Machine language

```

You will notice 12 categories listed. You may choose the ones you need or add others.

With a black, felt-tipped pen, beginning at the first page, in the lower, right-hand corner, print "A." Flip the page over and in the lower left-hand corner, print "A." Print "B" on both sides of the next sheet and continue through "Z." Letter the next nine sheets " 1 " through " 9 " on both sides in a like manner.

Return to page "A." A ruler's width from the red printed line, rule a vertical line from the top blue line to the bottom blue line. A ruler's width from the right edge, rule a second
\[
\begin{aligned}
& \text { "Any program that you } \\
& \text { figure is lousy' shouldn't be } \\
& \text { CSAVED. There is no need to } \\
& \text { clutter up your personal library } \\
& \text { with junk." }
\end{aligned}
\]
line. Do the same to all the pages that you lettered or numbered. For now, you need only to rule the right-handed pages. At your option, draw a line in black ink over the top blue printed line. It doesn't cost anything and gives it a finished appearance.

Congratulations! You have just completed your personal index.

For the sake of argument, say that on side two of your "B" labeled tape, you have a program named Quadstar. It is a space war type game that has hi-res graphics with sound and you may use either joysticks or arrows on the keyboard. It is an excellent game but you have to \(P C L E A R\) to get enough memory.

Turn to right-hand page "Q." On the top line, in the box that corresponds to the "name" box under "format" on the inside cover, print in black ink Quadstar. On the line underneath it, in red ink, print the address, "B2"(tape B, 2nd side). In the next column, put a "*" because it is hi-res graphics. Next to it put "S" to designate sound. (Sometimes you forget to turn up the sound!) Underneath, in the same column, put "JS/K" to indicate that joysticks or the keyboard are optional. In the next column, write in "space war game" and some other comments of your choice that you deem necessary. At the end of the second line, print \(P C L E A R\). In the last column, print your evaluatin of the program. In this instance, it is "excellent." Finally, rule a black line over the blue printed line under the second row, to close out the entry.

You can use designations such as "super," "good," "very

\section*{Whether for reasons of feel, appearance, or reliability,} you, like most Color Computer owners, would probably prefer a better keyboard.
Now, you can have one.

The
Color Computer
Professional Keyboard, with full stroke, positive action keyswitches, provides a feel normally associated with more expensive microcomputers and terminals. The finely textured keycaps, gray and black with white lettering, nicely complement the Color Computer's sleek appearance. And, the keyboard's high quality construction assures years of reliable operation. A 90 -day limited warranty is provided. The four function keys, occupying the extra positions in the keyboard matrix, are an added bonus. Whether with your own software, or with that from vendors who have specially adapted theirs, (such as Frank Hogg Laboratories' FLEX), the function keys enhance the keyboard's utility. BASIC programming examples and assembly language driver listings are included. The keyboard is custom made for the Color Computer by Macrotron, an experienced manufacturer of computer components and peripherals. Consequently, installation is a simple plug-in operation, requiring no soldering or cutting whatsoever. The installarion procedure is detailed in an illustrated user's manual, which is included but also available separately for \(\$ 2.00\) (refundable with purchase). Two versions of the keyboard are available, one for revision E and earlier Color Computers and the other for the revision F (also known as A or ED Color and TDP-100 computers. Please specify which version you have when ordering, if possible. Otherwise, include the complete catalog number and serial number.

\section*{Micronix Systems Corporation}
\#7 Gibraltar Square
St. Charles, MO 63301
(314) 441-1694
good" to describe the rating you give to the quality of the program. Remember, this is your evaluation! Not somebody else's. Any program that you figure is "lousy" shouldn't be CSAVED. There is no need to clutter up your personal library with junk.

Go through all your tapes and enter theminto the index. You may have to CLOAD and RUN some of the programs because you have forgotten what they were about. Once you have all of your programs listed and written up, you will have saved a lot of head-scratching.

You have finished your arts and crafts workout. It was fun to do and now your system is operational. Once again, contratulations!

Henceforth, you will be doing a lot of program transcribing. Here is a hint that will help you.

When keying in a long program, put a "scratch tape"into your cassette, (temporary storage), rewind it and set it a few counter numbers after the last program on the tape. I deally, you should use a fresh tape, rewind it and reset the counter and run it (fast-f) to 003. You will be ready to transfer your work at a moment's notice if you are interrupted for whatever reason and must shut down.

Put a penciled tick mark next to the last line number that you listed before the interruption. Using a blank cassette index card, write in the starting counter number, a temporary program name and after you CSAVE what you completed, the ending counter number. S kip some counter numbers and make a second copy. You can CLOAD the program at a later time and continue. Do this as many times as necessary until you get a compelted program and CSAVE it twice elsehwere in your tape library. Finally, erase both the temporary storage tape and the penciled notations on the index card, and the temporary storage tape is ready for its next mission.

POWER LINE PROBLEMS?

Protects, organizes, controls computers \(\&\) sensitive, high tech electronic

\title{
Stinger Bee-neath Reviewer's Expectations
}

Picture yourself as a bee catcher about to enter a hive of honeybees with your mission to catch as many honeybees as possible without being attacked by the killer bees in the hive. That's the plot in this new arcade-style game, Stinger, from Spectrum Projects.

As the game starts, you look down into the hive, which is a maze of concentric circles with the head of the queen bee in the center. The principal difference between this game and all those other maze games you've been playing is that the position of the openings in the circles is constantly changing, making it appear that the hive rotates along with your beecatcher, the bees, and the killer bees.

Now to grab that joystick and start to play. Better re-read those instructions, because you start on the periphery of the hive and to move inward you must move your joystick to the left, even if the opening is to the right! Then quick, re-center that stick so that you can stay in the circle and grab some of those " \(X\) " shaped things which are the honeybees you want to catch.

What's the diamond-shaped thing about to hit me? Must have been a killer bee, because the low buzzing noises just changed as he got me. No matter, a quick check in the upper left shows I've got five catchers left-got to be more careful this time!

I'm doing great, catching bees like fury, whenannoyance! I come upon one fellow who won't let me grab him. Now I know what the directions mean when they say it may happen that I will pass over a bee and not catch him. I consider this a major flaw.

Now, what's this? Everything is speeding up like mad and I'm still on Level 1. That's right; this is one of those games where the fewer the objects on the screen, the faster everything goes. Here's where joystick control is next to impossible. More by chance than skill, I manage to get all the honeybees, and even a time bonus. No cute picture appears between screens, and the game repeats.

The very detailed instructions which come with this game say that after Level 3 the queen may have a surprise for us. Although Stinger was given a thorough weekend testing by my children, ages 11 and 13, and their friends, ages 9 to 13, I'm afraid none of us have yet been able to master the joystick after the game speeds up toward the end of each screen.

There was a great deal of "I wish..." going on. "I wish I could move backwards." "I wish there were cute bee pictures." "I wish there were more sound effects." "I wish I could move the joystick the direction I want to go."

All in all, although the circular maze and changing openings make this different, we gamesters expect more sophisticated use of graphics, sound and the joystick controls than this game provides.
> (Spectrum Projects, 93-15 86th Drive, Woodhaven, NY \(11421, \$ 24.95\) on cassette, \(\$ 29.95\) on disk, \(\$ 34.95\) for ROM Pack.)

\author{
By David A. Stewart
}

This is a game of chance. You must guess the correct code in order to deactivate the Atomic Bomb and keep everyone from being blown up. Since the computer is generating the number on a random basis, you can never memorize the winning numbers.

It's a simple game that my children love to play. I think other Color Computer users will enjoy it, too.

\section*{Line Description:}

Lines 95-135 print the instructions and set the mood for the game. I used the INKEY function throughout the printed material so that you can read it at your own speed. If you prefer to skip the instructions, just continue to press ENTER until "ENTER YOUR COMBINATION?" appears at the top of your screen.

Lines 150-175 are the GOSUB statements which send you to the random selection of numbers sub-routine. There are five of these lines, which gives you five chances to guess the combination.

Line 177 sends you to line 195. This line is only applicable if you have not guessed the combination.

Lines 180-191 are the WIN routine. It also lets you decide whether or not to play again.

Lines 195-965 are the LOSE routine.
Line 970 sends you to line 187 where you can choose whether or not to play again.

Lines 1500-1530 are the random generator of the combination.

Lines 200 and 2050 are time delays.
User Modification
If you wish to have more chances at guessing the combination, simply add more lines between lines 150 and 177 that say "GOSUB 1500." If you want less than five chances, delete some of the lines that are already there. You should also change the last part of line 135 from 'You have five chances...' to read the actual amount you are giving them.

If you wish to make it more difficult in a nother manner, you can change the amount of numbers the computer can choose from. In this listing, the computer will pick a number between I and 10 at random. For example, if you wish to
make it pick a number between I and 25, you would change line 1520 to: "If \(\mathrm{X}=\mathrm{RND}(25)\) then 180." Then you would change line 135 to read..."it is a number between I and 25. ." If you make the number span too large, you may find it very hard to win with only five chances, so you might want to increase the number of chances at this point.

TO DEACTIVATEBOMBS）HOWEVER，NO 0 NE THERE KNOWS THE CODE．＂

\section*{Revolution Rolls, Despite A Few 'Rough Spots'}

Have you ever wondered what it would be like to drive a race car? Picture this: a car built for speed, no pollution control devices, and a total disregard for the EPA mileage ratings. I don't know about you, but I have always wanted to get behind the wheel of one of these cars and let 'er rip. Most of us will probably never get the chance to live out such a fantasy, but with a little imagination you can come close.

Revolution is a game in which you race against the clock in order to record the fastest lap time. It is much like qualifying for a race, because each lap around the track is timed separately. The graphics are similar to those of the arcade games that I have seen. The track moves from side to side, has straightaways and zig-zags, and you have to keep your car on track by moving your joystick left and right. If you go off the track you do not crash, but are slowed down until you get back on course. You can also vary your speed by moving the joystick forward and backward. In addition you have your choice of four cars in which to race, as well as many different tracks on which to qualify. Revolution also keeps track of the best times on all the tracks and records them on disk so that your best times are not lost when you end the program.

Playing Revolution is easy. First you select the car you wish to drive. Then you choose the track you want to qualify on as well as the number of laps you want to run. After each race, your average lap time and your best lap time is displayed. If your best lap time is a track record, you are then asked to enter your name for the records. At this point you can change cars or try anothertrack if you like. The cars in Rerolution are a VW (do I detect laughing out there'?), a Porsche, a Ferrari and a L.otus. Each of these cars has its own speed and handling characteristics which are not only very different, but seem very realistic ( not that I would really know).

When you get tired of racing on the tracks that are provided you can design your own. To do this, you first select the difficulty level of the track. The difficulty level determines how wide the track is. This can vary from very easy to almost impossible. You then map out the track by moving your joystick from left to right to form sweeping curves, straightaways, or whatever. After your track is done, you are given a chance to race on it before you have to decide whether or not to save it to disk.

Revolution has good graphics, but I would have liked some additional things on the screen such as road signs, scenery or the like. I also feel that the sound effects could use some improvement. These drawbacks led me to tire of the game after about one hour. The documentation supplied does a good job and, in fact, is better than that supplied with most games I have seen. Without getting into a whole discussion on the issue of software piracy, I do not feel that this review would be complete without making mention of the fact that you cannot make a backup copy of the disk that is supplied. If your disk system is like mine and occasionally wipes out your directory, it will cost you \(\$ 4\) to get a replacement disk. To me this is a very serious drawback.

All things considered, Revolution is a good program. With a few improvements however, it could be an excellent program. If you have racing in your blood you should consider taking it for a spin.
(Inter Action, 113 Ward Street, New Haven, CT 06519,
\(\$ 24.95\) disk, \(\$ 21.95\) tape)

\section*{YOU NEED COLOR FORTH!}

Why?
-Forth is faster to program in than Basic
-Forth is easier to learn than Assembly Language -Forth executes in less time than Basic
Forth is a highly interactive language like Basic, with structure like Pascal and execution speed close to that of Assembly Language. The Micro Works Color Forth is a Rompack containing everything you need to run Forth on your Color Computer.
Color Forth consists of the standard FORTH Interest Group (FIG) implementation of the language plus most of FORTH-79. It has a super screen editor with split screen display. Mass storage is on cassette. Color Forth also contains a decompiler and other aids for learning the inner workings of this fascinating language. It will run on \(4 \mathrm{~K}, 16 \mathrm{~K}\). and 32 K computers. Color Forth contains 10K of ROM, leaving your RAM for your programs' There are simple words to effectively use the Hi-Res Color Computer graphics, joysticks, and sound. The 112 -page manual includes a glossary of the system-specific words, a full standard FIG glossary and complete source listing. COLOR FORTH ... THE BEST! From the leader in Forth. Talbot Microsystems. Price: \(\mathbf{\$ 1 0 9 . 9 5}\)

\section*{Corrections}

Stan Peppenhorst's "Make Authoritative Decisions With This Situational Model," (Feb., 1983, page 132), had two REM statements in Lines 10 and 20, both of which landed on our "cutting room floor" by accident. REM statements don't affect the way the program runs, right?

Wrong. Many of the subsequent lines in the program have a GOTO10 at the end of the line. Hard to do with no Line 10.

The correction is simple. Just add a line 10, such as:

\section*{10 REM VROOM}

Or, you could change the several GOTO 10 statements to read GOTO30.

Ted Blatt reports the program included in his article, "Print Those Print Statements With This ML Feature," which appeared in our last issue, has an added feature you probably do not expect-or want. While it will change the PRINT statements to PRINT\#-2, statements as advertised, it also puts a \#-2 on \(L E N\) statements.

To rectify the problem, change Lines 140 and 150 and add Lines \(142,145,148\) and 149 , as indicated below:
```

140 DATA 38,42, 252, 62,135,195,0,
1,253,62
142 DATA 137,166,159,62,137,129,
35, 39, 25, 129
145 DATA 64,39, 21, 129,40, 38, 29,2
52,62,137
148 DATA 131, D, 2, 253, 62,137,166,
159,62,137
149 DATA 129, 255, 38, 12, 220, 31, 16
,179,62,135
150 DATA 16, 39, 1, 10, 32, 185, 220, 3
1,253,62,137,252

```

With the additional \(D A T A\) lines, you will need to change the number 16308 (in lines 60 and 100) to 16350 . The program itself is in BASIC, but generates a machine language routine which should be saved to tape and used when the utility is implemented. Prior to CLOADMing the machine language version, you should CLEAR 350,15999.

Errors also appeared in the "Unidatfl" program in December, page 120 and 123. Here are those corrections:
Delete Line 140 and Lines 1800-2060 inclusive
Delete Line 5030
Line 5035 should read: PRINT@230, "o - open new file"; Line 5040 should read PRINT@262, "e - exit to basic";
These lines eliminate the sort function and clean up the screen display.
J.D. Ray writes that in his "Income Tax History" in our February 1983 issue, page 148, you might get an ?FC \(E R R O R\) message. The problem will only occur if the range of the figures in the data statements are such that the program cannot adequately decide which graph to use. The following additions and corrections should solve any difficulties.

\section*{611 IF \(A>15\) OR \(B>15\) OR C>15 OR D \(>15\) QR E>15 THEN \(G=15\) ELSE \(G=8\) \\ 630 IF G<9 THEN GOSUB 970}
M.P. Wilson, whose "Raindex" program was published in the January issue, reports that he has received several calls about an ?OM ERROR in Line 20. The program was written for 32 K ECB, not 16 K as we mistakenly noted. Even then, says Wilson, it requires a POKE25,6:NEW.

For those with 16 K , he suggests the following: Before loading "Raindex," do the POKE25,6:NEW, then reduce the size of the CLEAR15000 and change the size of the array (same line) until the error goes away.

In Burton B. Witham's "Who Knows All Those Callsigns? CoCo Knows!" (Rainbow February 1983) Lines 180 through 235 and a portion of Line 240 were inadvertently left out of the accompanying listing:
```

180 PRINT@288,STRING$(32,239)
190 K$=INKEY$:IFK$="N" THEN230
20ø IFK$="Y" THENRESTORE:CLS:SOU
ND18\emptyset, 1:SOUND2Ø\varnothing, 1:GOTO6\emptyset
210 IFK$="" THEN19\emptyset
22\emptyset GOTO170
225 ** EXIT
230 CLS:PRINTE174, "END":FORTM=1
T0999:NEXT:CLS:END
235 ** DATA LIST
24ø DATA A, USA, XX, AP,PAKISTAN, 33
, A2, BOTSWANA, 11\varnothing, A3, TONGA, 265, A4
, OMAN, ø5ø, A5, BHUTAN, 2\emptyset, A6, UNI TED
ARAB EMIRATES,5\emptyset, A7, QATAR,5\emptyset, A9
, BAHRAIN,5\emptyset, B, CHINA, 344, BV, TAIWA

TAPE TO DISK-Load the contents of any tape to disk automatically. Machine Language.
\$17.95
MAIL LIST-Maintain a complete mailing list with phone numbers etc. Ext. Basic.
\$17.95
THE FIXER•Having trouble moving those 600 Hex progams to disk? The fixer will help. Completely automatic. \(\$ 17.95\)
TAPE CAT-All new machine language program lists contents of tapes to printer. Make a catalog of your tapes.
\$17.95
PROGRAM PRINTER UTILITY-This program will list basic programs to your printer in two column format. Saves paper and makes your listing look professional. Disk based.
- LOOKING FOR NEW SOFTWARE

\section*{Software Review..}

\section*{As Arcade Battle Game, Defense Is Strikingly Good}

Perhaps in keeping up with the times, Spectral Associates should have named their new program "Dense Pack" instead of Defense. This game is very similar to the popular arcade game in which you must defend the friendly cities from a nuclear attack.

In Defense, instead of defending cities, you defend outposts. The game instructions claim that you are defending them from a laser attack, but everyone knows that lasers travel at the speed of light and those are really warheads streaking across the screen trying to annihilate your ammo supply and the outposts which you are attempting to defend.

There are three outposts on each side of your main defense base where your ammo is stored. In addition, there are two extra ammo dumps which you can call upon if you run out. The play starts with the enemy "lasers" beaming slowly down onto these targets. Your defense is to fire your laser, which you direct with a joystick controlled cross hair, in front of the downwardly plummeting beam. Your laser blast causes an explosion at the location of the cross hairs which destroys the incoming beam if you are lucky enough to have engulfed it in the blast. This blast lingers on the screen long enough so that if you place it in a strategic location you can destroy several incoming beams. In the early stages of the game you have a luxurious supply of ammo but good gamesmanship dictates that you use it

conservatively because part of the scoring comes from how much ammo is left in reserve after an attack is over.

In any realistic depiction of a battle of this nature, the object is to see how many of the enemy you can take with you before you are destroyed. The attacks occur in waves. After a wave, if any of your outposts have survived you are resupplied with ammo. After every other wave, the level of intensity of the attack increases in both the number and the speed of the incoming "laser beams." At the higher levels, you are subjected to not only the beams streaking across your defense screen but to "flip charges" and "buzz bombs." These weapons are very difficult to defend against because they apparently have some type of radar built into them that senses your laser blast and attempts to outmaneuver your defenses. It requires a very accurate shot to destroy these devices.

Points are scored based on the number of beams, charges, and bombs that you stop on each wave as well as the number of outposts and amount of ammo that is left. For each 10,000 points you receive a bonus outpost.

Defense is a very fast machine language program that requires 15 K and joysticks. With few exceptions, this game plays like the "missile" arcade game. The graphics display, in multi-color high resolution, is good. The author has built in the ability to toggle between color sets during play by pressing a key. Sound, except as noted below, is integrated very well into the play of the game. The progression of play in terms of difficulty is excellent and will not frustrate first time users. Joystick response is quick and accurate.

I believe that Defense is a good piece of software, and would make an excellent addition to any Color Computer game players library. The author has thought about the little things that are often overlooked but make the difference between a good and a great game. It has easy to read onscreen scoring, and the ten highest scores are recorded arcade style with the player's initials. After your impending defeat, you can see if you made the list. The only criticism I have is very minor and is related to the lack of an explosive sound when the "beam" hits an outpost or your ammo dump. It is hard to notice this slight deficiency until you run out of ammo and have to sit back and watch your outposts destroyed by the incoming beams - in silence.

Instructions for the game are complete. Spectral Associates very nicely includes a disk version of the program on the tape, and instructions on how to load it onto a disk. They also give you a number to call if you have problems with their products. And, there is more; if you should accidentally erase the tape, for only \(\$ 1.50\) and the original tape, they will replace the program. Now, that is what I call "product support."
(Spectral Associates, 141 Harvard A venue, Tacoma, WA 98466, \$21.95)

\section*{Rise Through the Ranks With Sub Hunt}

"Two points abaft the starboard beam, mates! She steams at forty fathoms! All hands on deck." Bleeep...bleeep...bleeep...

Sub Hunt is a very easy game to learn, but hard enough to master so you won't get bored. I loaded it into a CoCo at a local Radio Shack store a few weeks ago, and the kids were still playing it several hours later when I returned. (Kids? The store manager was right in there with them!)

Instructions are included in the program and move you readily into action. You are the captain of a roving Destroyer, firing depth charges at the enemy submarine fleet in the murky waters beneath your hull. There are 10 subs to a fleet and each one is worth 10 points. If you wipe out an entire fleet, you receive an additional 50 points, and another fleet of 10 subs appears on the screen.

You have 500 units of time to rack up points, which you use to climb in rank to Fleet Commander, to Admiral of the Navy and all the way to Commander in Chief.

While playing Sub Hunt, you only have three keys to use to accomplish all the action: the "F" key fires the depth charges, the " \(G\) " key moves your Destroyer to the left, and the "H" key moves it to the right.

I hope you enjoy the sound effects and color I've put into the program; some of my friends who own other computers can't believe the CoCo can create the sounds it does in BASIC.

\section*{SOLUTION ON CARTRIDGE}

The cartridge version of THE SOLUTION has all of the features of the tape version and more. It works with all of the graphic modes (including 4 colors). It includes a 51 characters per line feature and the ability to define a text window on the screen. All of this and much more at the low price of - \(\$ 34.95\)
ROM-PAKS \(\quad \$ 9.95\)
This is an empty Rom-Pak with a PC board. It will hold either a 2716, 2732 or a 2764 . The case looks very similar to Radio Shack's Rom-Pak. Comes complete with instructions.

\section*{CUSTOM PROGRAMING}

We will put your program in a Rom-Pak for you for a very reasonable fee. The program can be either Basic or machine language. Prices start at \(\$ 19.95\) for programs up to 4 K in length. \(\$ 29.95\) for programs up to 8 K . Volume discounts are available. Send for a free submittal form.

SCRIPTFX \(\quad \$ 9.95\)
Are you tired of the upper case display of Color Scripsit? Well then SCRIPTFX is for you. This is a program which converts the display of Color Scripsit over to a real display of upper and lower case letters with descenders. The program allows all of the features of Scripsit to function and comes with a money back guarantee if it does not work. Please specify machine type when ordering. Extended Basic is not required.

\section*{SUPER PILOT \$12.95}

An enhanced version of Pilot for use with Extended Basic. Includes features for math, graphics, and sound. Has a feature that makes it easy to create flash card type drill programs. Programs are pseudo compiled for faster execution. Comes with as 24 page tutorial manual and demo programs. Sample program included on tape to get you started.

All programs for \(16 \mathrm{~K}, 32 \mathrm{~K}\) Extended Basic machines unless otherwise noted. All programs on cassette. Add \(\$ 4.00\) per order for disk.
DISCOUNT - order 10 or more programs (you may mix types) and you will receive a \(30 \%\) discount on the order. Dealer discounts are also available.

\section*{SNAKE MOUNTAIN SOFTWARE P.O. BOX 5722 RALEIGH, NC 27650 919-828-6669}

Phone COD orders accepted.
Reach a real person between 3:00-6:00 P.M. EST.

\section*{\(\mathfrak{C}\) dagratulations}
you made the right choice when you purchased a Color Computer. It is a very powerful machine.
However the standard display format does not do the machine justice. The machine is capable of much more than 16 lines of 32 all capital characters. Now you can give your Color Computer the display it deserves. THE SOLUTION gives the Color Computer a much better display than it normally has, and really makes the machine shine. Its features include:
- provides a screen of \(\mathbf{4 2}\) characters by \(\mathbf{2 1}\) lines displayed
- linked directly to basic - program is transparent to the user
- prints all 96 ASCII characters, lowercase characters have descenders, has a slashed zero to avoid confusion when programing
- prints characters on any two-color graphic screen
- graphics and text may be intermixed on the same screen
- special mode with 4 lines of text at the bottom of the screen (just like some other famous color machines) great for working with graphics
- large character mode for small children or the visually impaired
- character set may be reversed
- written in machine language, program is relocatable
- fast - prints at over 600 characters per second
- works with both cassette and disk
- includes a 20 page manual with demo programs (a lunar lander program is included)
SOLUTION \$14.95

EXTENDER \$ 7.95
Still want more than 42 characters per line from your computer. Then the EXTENDER is for you. This program when used with THE SOLUTION will give a display of 51 characters per line by 21 lines displayed. Please include your program serial number when ordering.

\section*{GRAPH LABEL \$8.95}

Have you ever wanted to place characters on a graphic screen but couldn't find an easy way to do it. Well then GRAPH LABEL is for you. This program will enable you to place characters anywhere on a graphic screen. It will place any of 96 ASCII characters on the screen or you may create your own characters. It features a cursor that may be moved anywhere around the screen with out rubbing out what it goes over. Superscripts and subscripts may be used since the cursor may be moved vertically and horizontally in steps as small as one pixel. Lowercase characters have descenders. GRAPH LABEL is written in Basic and is therefore easy to modify. It may be used by itself or as a subroutine.

\section*{SCREEN PRINT PACKAGE \(\$ 4.95\)}

A package of 2 programs for use with the LPVII, LPVIII, DMP100, DMP200, DMP400, DMP500. The programs will print an image of what is on a graphic screen to the printer Both programs work with all the standard PMODEs. The programs are written in machine language and may be moved anywhere in memory. The two programs are:
1) SCREEN PRINT - will produce a regular size print. The image may be located anywhere on a page.
2) DOUBLE SIZE SCREEN PRINT - this program will produce a full size image that will fill up a sheet of paper. The finished product is 8 by 6.5 inches in size. Your computer graphics look really good when they are printed out with this program.

SHIPPING - add \(\$ 2.00\) for orders less than \(\$ 20.00\). Shipping is free on orders of more than \(\$ 20.00\).
Canadians - please send money orders only.
All orders shipped within 5 working days.

\section*{Micro-Doc: An Aid To Organization and Access}

Have you ever forgotten which of your disks or tapes held that favorite program? Did you ever forget exactly when the warranty ran out on your recently broken printer? Did you ever forget just where that little bit of crucial inf ormation is found? Well, all of the above, and then some, have happened to me. That is, until I received Micro-Doc.
"What is Micro-Doc?" you ask. Micro-Doc is an \(81 / 2 \times 11\), 29-page, stapled documentation manual which offers easy documentation to keep all of your information about hardware and software.

A general introduction to the use of the manual is followed by some organizational tips, and then three sections on control of your equipment, data files and programs. It also contains a summary, a glossary and a very handy master set of eight forms to aid you in the control and documentaton of your efforts.

You don't have to be a technical genius to understand these simple documentation procedures. Micro-Doc comes with eight easy to use forms, which you can photocopy or order from Micro-Doc. These sheets help you organize and easily access all usefulinformation. After a few tries I started filling out these forms without giving them much thought. They re that easy to use! Many friends found them easy to use also. And the instructions are easily followed and understood.
(Micro-Doc, 97 Montowese Trail, Wallingford, CT

\section*{Software Review..}

\section*{Clock Gives Reviewer Hard Time - Vice Versa}

Clock is a program that teaches children to read a clock and teaches the relationship between analog and digital formats. Apparently not a well thought-out educational program, Clock starts by asking you if you want just the a nalog clock or analog and digital. You are then asked how many questions you want to answer before receiving a score. Unfortunately, you are never again allowed to set these parameters, and are stuck with whatever you start with.

You are shown a clock face with a random time. This is always in multiples of five minutes. There is no provision for learning the hours alone or for learning times that aren't multiples of five like 12:33.

The best feature of this program is its ability to accept different forms of time telling. Word inputs like "After, Till, Quarter, and O'clock" can be used. You can say 110, 0110 , or 10 After 1 and the program will understand them all. However, you cannot use " 50 Till 2" even though it is correct. By the same token, " 50 After " the hour is considered wrong even when it is correct.

A big problem is correcting mistakes when keying in an answer. There is no ability to backspace. Instead, the clear key in this 16 K Extended BASIC program is used to erase the bottom of the screen where the answer is entered. This is slow and forces the child to start their answer over again completely.

A wrong answer is erased and a sound is heard. A correct answer is erased, the word "GOOD" appears for a moment and a different sound is heard. My daughter, who is learning to tell time but cannot read yet, has trouble telling if an answer is correct or not. In fact, the wrong answer sound is more interesting.

At the end of a round, a score is printed that indicates how well a child has done but not where that child is having trouble. You are then asked if you want to continue. If you say "yes" you are returned to the game you previously set-up with no possibility for changing, (switching to digital for example or changing the length of a round). If you say "no" to the question of contin uing, the entire program is erased. There is no way for the program to switch from one type game to the other.

The digital game is just like the analog except that after entering the analog clock time, you must enter the time again in a digital form. This merely consists of learning to put a leading 7ero in front of single digit hours. For example, 1: 10 becomes 01:10.

This program does not work well with children, particularly those who cannot yet read. It does not have interesting graphics, rewards, or goals. In short, there is very little to motivate or to hold the interest of a child. It is not particularly child friendly. It relies on reading ability or the close supervision of an adult. The wrong answer response is at least as much fun as the correct one if not more so, and sometimes correct answers are counted as wrong.

If you plan to teach your child to tell time yourself, and are looking for something to supplement your instruction, then this program may suit you. However, this is not a program that children will choose to play and it does not lend itself well to unsupervised play. I feel that this is not a true educational program and that it fails as a game. I cannot recommend this program.

\section*{But, What Did I Get Wrong?}

\author{
By Steve Blyn
}

Rainbow Contributing Editor

You've got this great educational game going on your computer. It asks the child some questions in a particular category and everything appears fine. Let's check-the questions are coming up randomly. They are not repeating. You have appropriate reinforcers. Your counters and scorers are giving a correct final tally or score. What more could any kid want?

He may very well want to know which questions he got wrong. Many children cannot remember which questions they got right or wrong or maybe even which questions were asked in the first place. Sometimes children (and adults, too) get so caught up in the excitement of the program that they forget the questions and answers they have already gone through.
It's a good idea, often, to let the computer keep track of the incorrect answers and their accompanying questions. This is a good opportunity for the adult and child, or the child alone, to go over the incorrect answers and see where he went wrong. We don't want the child to merely keep playing the game until he memorizes all of the answers. We always hope for true understanding of the correct answer. A quick review of the wrong responses before proceeding to the next set of questions also acts as an extra incentive for the child to pay close attention to his answers.

Here is a short program to review the symbols for some of the most important of the chemical elements. The point of this program is that it demonstrates one easy way to use the computer to keep track of incorrect responses. If the child makes any mistakes, they are immediately saved by the program by the small array set up at lines 270-290. They are printed out at the end of each round by line 330 .

This program will work on any of the CoCo models. The amount of data that you enter can be as large or as small as your needs and your computer's memory will allow. Be careful to have the "L" value on line 50 agree with the total number of your DATA pairs. Twenty-five chemical
elements were used in our program merely as an example for you to key in.

This topic may or may not be suitable for yourchild. Feel free to enter any data that pertains to what he is currently studying that he wishes to review. If he is having difficulty, stay with him and go over the incorrect responses as they appear on the screen. As he gains confidence, let him work on his own. When he has mastered the set of questions, enter new data in the same subject area for additional review.

> (Mr. Blun, who teaches both exceptional and gifted children, holds two Master's degrees in the field of education and has won an award for the design of a computer program to aid handicapped children. He and his wife, Cheryl, own Computer Island.)

\title{
Homing In On A Guided Missile System
}

\author{
By John W. Fraysse, Jr.
}

\section*{FEATURES}
* High resolution four color graphics with random scenes
* Five levels of difficulty (three with maneuvering targets)
* Action graphics with joystick control
* Self explaining instructions
* All BASIC programming

Cadet Trainer is an attempt (l hope a successful one) to simulate the two phases of a command guided weapon system. That is, lock-on (or target discrimination) and terminal homing. In this game, your weapon is a "photon torpedo." Playing Cadet Trainer may develop one's peripheral vision and eye-hand coordination.

The graphics are programmed to simulate the apparent growth of the target as the photon torpedo closes. Note that the player is guiding the torpedo from his fighter craft. The player is not the torpedo but is seeing the target through the "eyes" of the torpedo itself.

\section*{PROGRAMMING TECHNIQUES}

Cadet Trainer is written in BASIC. The only so-called tricks are a BREAK key disable and the familiar speed up POKE 65495,0 to achieve the speed I believe necessary to give good response to joystick inputs.

\section*{PROGRAM FUNCTION}

Cadet Trainer's initial display identifies itself and its author while playing the Air Force theme song. Optional instructions follow if needed. One must then select the difficulty level (1-5) which will be discussed later. The program will then draw the various perspectives of the target and display a flashing cross on the largest perspective pin pointing your "aim point"on the target. Press the fire button to erase the screen and draw the sector of space in which the smallest image of the target will appear at random for only an extremely short period of time.

You are now in the lock-on phase of your mission. You must position your small orange cross-hair (with the right joystick) to within eight pixels of the target's last position and press the fire button to begin the homing phase. If you achieve this, your booster motor will fire, propelling your torpedo into space where the approaching target will appear first small then progressively larger. Remember you must now position your cross-hair on the correct part of the target - your aim point. After the largest image appears, you have approximately one second before you reach the target. This time gets reduced with the higher difficulty levels. After you have reached the target your simulated warhead explodes and your miss distance for that particular mission and aim point is displayed briefly. The program then displays the aim point for the next mission. A mission consists of one lock-on phase and one homing phase. Five
missions complete one play cycle where your score is totalled. You may then replay and/ or change the difficulty level or \(B R E A K\) to exit. Your score for the entire play cycle is the sum of all your lock-on times plus your five "miss distances." Obviously, the lower the score the better. It should also be noted that the lock-on timer does not start until the first target image appears.

\section*{DIFFICULTY LEVELS}
1) Targets appear every time a random number between \(\mathbf{1 - 2 0}\) equals 2 . Targets do not maneuver and final homing time is \(\mathbf{1 . 8}\) seconds.
2) Targets appear every.time a random number between \(\mathbf{1 - 1 0}\) equals 2 . Targets do not maneuver and final homing time is 1.6 seconds.
3) Targets appear every time a random number between 1-7 equals 2. Targets maneuver plus/minus 50 pixels in a predictable fashion. Final homing time is 1.4 seconds.
4) Targets appear every time a random number between \(\mathbf{1 - 5}\) equals 2 . Targets maneuver plus/minus 100 pixels in a predictable fashion. Final homing time is 1.2 seconds.
5) Targets appear every time a random number between 1-4 equals 2 (FAST!). Targets maneuver as much as plus/minus 100 pixels in a random fashion. Final homing time is \(\mathbf{1 . 0}\) seconds.

\section*{HINTS}

You may hold your button during the lock-on phase while trying to find the target. During homing the button is not used.

Try to keep the cross-hair slightly off the aim point to keep it from being lost in the target or background as your torpedo closes. Remember the target image grows. Try to anticipate your aim point's next position. Make your move to the aim point after the final (largest) image has appeared.

Telewriter-64 the Color Computer Word Processor
}
- 3 display formats: 51/64/85 columns \(\times 24\) lines
- True lower case characters

User-friendly full-screen editor
- Right justification
- Easy hyphenation

■
Drives any printer
- Embedded format and control codes
- Runs in \(16 \mathrm{~K}, \mathbf{3 2 K}\), or \(\mathbf{6 4 K}\)
- Menu-driven disk and cassette I/O
- No hardware modifications required

\section*{THE ORIGINAL}

Simply stated, Telewriter is the most powerful word processor you can buy for the TRS-80 Color Computer. The original Telewriter has received rave reviews in every major Color Computer and TRS-80 magazine, as well as enthusiastic praise from thousands of satisfied owners. And rightly so.
The standard Color Computer display of 32 characters by 16 lines without lower case is simply inadequate for serious word processing. The checkerboard letters and tiny lines give you no feel for how your writing looks or reads. Telewriter gives the Color Computer a 51 column by 24 line screen display with true lower case characters. So a Telewriter screen looks like a printed page, with a good chunk of text on screen at one time. In fact, more on screen text than you'd get with Apple II, Atari, TI, Vic or TRS-80 Model III.
On top of that, the sophisticated Telewriter full-screen editor is so simple to use, it makes writing fun. With single-letter mnemonic commands, and menu-driven I/O and formatting, Telewriter surpasses all others for user friendliness and pure power.
Telewriter's chain printing feature means that the size of your text is never limited by the amount of memory you have, and Telewriter's advanced cassette handler gives you a powerful word processor without the major additional cost of a disk.
. .one of the best programs for the Color
Computer I have seen..
- Color Computer News, Jan. 1982

\section*{TELEWRITER-64}

But now we've added more power to
Telewriter. Not just bells and whistles, but major features that give you total control over your writing. We call this new supercharged version Telewriter-64. For two reasons.

\section*{64K COMPATIBLE}

Telewriter-64 runs fully in any Color Computer - \(16 \mathrm{~K}, 32 \mathrm{~K}\), or 64 K , with or without Extended Basic, with disk or cassette or both. It automatically configures itself to take optimum advantage of all available memory. That means that when you upgrade your memory, the Telewriter-64 text buffer grows accordingly. In a 64 K cassette based system, for example, you get about 40 K of memory to store text. So you don't need disk or FLEX to put all your 64 K to work immediately.

\section*{64 COLUMNS (AND 85!}

Besides the original 51 column screen,
Telewriter-64 now gives you 2 additional highdensity displays: \(64 \times 24\) and \(85 \times 24\) !! Both high density modes provide all the standard Telewriter editing capabilities, and you can switch instantly to any of the 3 formats with a single control key command.
The \(51 \times 24\) display is clear and crisp on the screen. The two high density modes are more crowded and less easily readable, but they are perfect for showing you the exact layout of your printed page, all on the screen at one time. Compare this with cumbersome
"windows" that show you only fragments at a time and don't even allow editing.

\section*{RIGHT JUSTIFICATION \&}

\section*{HYPHENATION}

One outstanding advantage of the full-width screen display is that you can now set the screen width to match the width of your printed page, so that "what you see is what you get." Thiş makes exact alignment of columns possible and it makes hyphenation simple.
Since short lines are the reason for the large spaces of ten found in standard right justified text, and since hyphenation is the most effective way to eliminate short lines, Telewriter-64 can now promise you some of the best looking right justification you can get on the Color Computer.

\section*{FEATURES \& SPECIFICATIONS:}

Printing and formatting: Drives any printer (LPVII/ VIII, DMP-I00/200, Epson, Okidata, Centronics, NEC, C. Itoh, Smith-Corona, Terminet, etc).
Embedded control codes give full dynamic access to intelligent printer features like: underlining, subscript, superscript, variable font and type size, dotgraphics, etc.
Dynamic (embedded) format controls for: top, bottom, and left margins; line length, lines per page, line spacing, new page, change page numbering, conditional new page, enable/disable justification. Menu-driven control of these parameters, as well as: pause at page bottom, page numbering, baud rate (so you can run your printer at top speed), and Epson font. "Typewriter" feature sends typed lines directly to your printer, and Direct mode sends control codes right from the keyboard. Special Epson driver simplifies use with MX-80.
Supports single and multi-line headers and automatic centering. Print or save all or any section of the text buffer. Chain print any number of files from cassette or disk.

File and I/O Features: ASCII format files create and edit BASIC, Assembly, Pascal, and C programs, Smart Terminal files (for uploading or downloading), even text files from other word processors. Compatible with spelling checkers (like Spell 'n Fix).
Cassette verify command for sure saves. Cassette autoretry means you type a load command only once no matter where you are in the tape.
Read in, save, partial save, and append files with disk and/or cassette. For disk: print directory with free space to screen or printer, kill and rename files, set default drive. Easily customized to the number of drives in the system.
Editing features: Fast, full-screen editor with wordwrap, block copy, block move, block delete, line delete, global search and replace (or delete), wild card search, fast auto-repeat cursor, fast scrolling, cursor up, down, right, left, begin line, end line, top of text, bottom of text; page forward, page backward, align text, tabs, choice of buff or green background, complete error protection, line counter, word counter, space left, current file name, default drive in effect, set line length on screen.
Insert or delete text anywhere on the screen without changing "modes." This fast 'free-form'' editor provides maximum ease of use. Everything you do appears immediately on the screen in front of you. Commands require only a single key or a single key plus CLEAR.
.truly a state of the art word processor..
outstanding in every respect.
- The RAINBOW, Jan. 1982

\section*{PROFESSIONAL}

\section*{WORD PROCESSING}

You can no longer afford to be without the power and efficiency word processing brings to everything you write. The TRS-80 Color Computer is the lowest priced micro with the capability for serious word processing. And only Telewriter-64 fully unleashes that capability.
Telewriter-64 costs \(\$ 49.95\) on cassette, \(\$ 59.95\) on disk, and comes complete with over 70 pages of well-written documentation. (The step-by-step tutorial will have your writing with Telewriter-64 in a matter of minutes.) To order, send check or money order to

\section*{Cognitec}

704 Nob Street
Del Mar, CA 92014
Or check your local software store. If you have questions, or would like to order by Visa or Mastercard, call us at (619) 755-1258 (weekdays, 8AM-4PM PST). Dealer inquiries invited.
(Add \(\$ 2\) for shipping. Californians add \(6 \%\) state tax. Allow 2 weeks for personal checks. Send self-addressed stamped envelope for Telewriter reviews from CCN, RAINBOW, 80-Micro, 80-U.S. Telewriter owners: send SASE or call for information on upgrading to Telewriter-64. Telewritercompatible spelling checker (Spell 'n Fix) and Smart Terminal program (Colorcom/E) also available. Call or write for more information.)
Apple II is a trademark of Apple Computer, Inc.; Atari is a trademark of Atari, Inc.; TRS-80 is a trademark of Tandy Corp; MX-80 is a trademark of Epson America, Inc.

\title{
Dumb Terminal Routine Is Pretty Smart Program
}

\author{
By Dan Downard
}

This month we will be discussing how the CoCo outputs a character on the screen. For the sake of using the existing BASIC subroutine for Machine Language programs, we will see how it operates. We will then develop our own character output routine for use with other computers. This routine is called \(\operatorname{DMBTRM}\), a shortened name for dumb terminal. What is a dumb terminal? A dumb terminal is simply a keyboard a nd display device that sends and receives (display) characters over a serial/RS-232 interface.

\section*{ROM Character Output Routine}

If you were to disassemble the BASIC R OM from \$A30A to \$A35D and \$A92D to \$A936, you would get a listing similar to Listing I. Comments have been added to explain the operation. As you can see, this routine is called with the character to be output in the A register. All registers are saved. This routine is called using direct addressing at \(\$ \mathrm{~A} 30 \mathrm{~A}\) or by indirect addressing at \(\$ \mathrm{~A} 002\), assuming \(\$ 6 \mathrm{~F}\) is set to 0 . As you can see, any character less than \(\$ 20\) is ignored with two exceptions, \$0D and \$08, the ASCII symbols for carriage return and backspace, respectively. Three routines contained in this listing may be of some use:

\section*{\$A30A output char. in a reg. to screen \\ \$A34B scroll screen \\ \$A92D}

Any call to \$A34B must be preceded with a PSHS A,B,X instruction to keep the stack organized. By this time, you should have figured out that the text screen starts at \(\$ 400\) and ends at \(\$ 5 \mathrm{FF}\). The position of the cursor is stored at location \(\$ 88\) and can be called the screen pointer of SCNPTR. This routine is fine for the majority of Machine Language programs and very convenient to use.

\section*{DMBTRM}

While trying to use my Color Computer as a dumb terminal for another computer, the need arose to have full cursor control of the screen. The particular system I was dealing with used the following ASCII codes:
```

\$0A (LF) line feed
\$0D (CR) carriage return
\$08 (BS) backspace

```
\begin{tabular}{ll}
\(\$ 07\) (BEL) & bell \\
\(\$ 1 \mathrm{~A}(\mathrm{SUB})\) & clear screen \\
\$0C (FF) & cursor forward \\
\(\$ 0 \mathrm{~B}\) (VT) & cursor up
\end{tabular}

The program in Listing 2 is the result of this need. A similar program written for a 6801 processor in Motorola application note AN-798 was used as a guideline for this terminal. More elaborate programs are available on the marketplace that will do the same and much more but there is some satisfaction in writing and debugging your own program.

\section*{Description Of DMBTRM}

Lines 140-190
Lines 190-450
Lines 460-740
Lines 750-770
Lines 780-1130
Lines 1140-2140

ROM locations
Main timing loop/cursor blinking
Serial output
Scroll decision
Serial input
Display char on screen
DMBTRM uses a non-destructive cursor, that is, the cursor does not erase the character as it moves. It operates at 300 baud and has proved to provide reliable operation with another 68 XX computer using the Color Computer as a terminal. The listing is commented so you can pick out any of the major subroutines for use on your own customized terminal.

\section*{How To Input Your System}

I realize that many readers are not familiar with machine code programming, so a short explanation of Listing 2 is in order. This program was written using the Radio Shack EDTASM+ ROM Pac. The listing can be explained for a typical line as follows:

\author{
3000 8E \(0600 \quad 00190\) START LDX \#\$600 \\ CLEAR LINE
}

Memory add ress: 3000
Machine code: 8E 0600
Line number: 00190
Symbol: START

Nemonic operator: LDX
Operand: \#\$600
Comments: CLEAR LINE
These different locations are called fields and fully explained in the EDTASM+ manual. The reason lam describing the fields is to point out the different ways of inputting a Machine Language program.

\section*{Method \#1—Put Machine Code In Memory}

Using a Machine Language monitor such as \(C-B U G\), SIGMON, HUMBUG, Z-BUG, etc., you would input this program by using the \(M E M O R Y\) EXAMINE command. Start at memory location \(\$ 3000\) and input column 2 until you reach memory location \(\$ 3196\).

\section*{Method \#2-Use An Assembler}

Using an Editor/ Assembler such as EDTASM+ or SDS80 C , input columns 3 through 6 as a file. For the SDS-80C, line numbers are optional so omit column 3. Column 7 is optional on all assemblers. After inputting the text file use the proper command to assemble the file and the assembler will put the program in memory for you.

\section*{Method \#3-Poke Using BASIC}

As in method \#I, start at memory location \(\$ 3000\) and using POKE or DATA statements transfer the machine code into memory.

After you have put the code into memory be sure to save a copy to tape before running. It's a lot easier to find a mistake than to retype the entire code or file. The entry address is \(\$ 3000\) or EXEC\& H 3000 and ENTER.

\section*{Conclusion}

As I mentioned before, there are many commercial software programs that perform this task (and probably do a better job). Refinements consist of buffers, variable baud rates and character formats, save and load buffers from tape or disk. They are very reasonable and well worth the investment. At the same time, much can be learned by doing it yourself.
The listing:

\title{
INTERNATIONAL COLOR COMPUTER CLUB \\ Main Office \\ 2101 E. Main St., Henderson, Texas 75652 \\ Canadian Branch \\ 96 Carleton Dr. Saskatoon, Saskatchewan 57H-3N6
}

WORLD'S LARGEST COLOR COMPUTER CLUB

HERE ARE SOME GOOD REASONS FOR JOINING
1). FREE PROGRAMS. Good programs written by our members are contained in the library, in the newsletter, and on the new member tape.
2). NEWSLETTER. A "magazine" sized newsletter (last issue 80 pages), with programs, tips data, reviews, articles and much more.
3). NEWSLETTER Tape A tape of all the programs appearing in the newsletter is available from the library for \(\$ 2.00\) (to members)
4). CLUB LIBRARY. The club maintains a library of programs, books and Radio Shack ROMpacks. The programs are member written and are yours to keep, there is a small fee to cover postage and tape (\$2.). The books and ROMpacks may be c' acked out for 3 weeks at a time. (extencions possible)
5). DISCOUNTS. get large discounts on many software and hardware items for CoCo from some of the MAJOR companies. Also discounts on subscriptions to the RAINBOW, CCN and Chromasette magazines.
6). ADVERTISE FREE Members may place ads of up to \(1 / 4\) page per issue in the newsletter FREE. (The ad must be computer related)
7). BORROW PARTS. Don't wait weeks for the parts to come in from Radio Shack! Just check them out of the Clubs Parts library and return when yours arrive.
8). SURPRISE. You receive a "New member" package containing many useful items.
9). GET HELP. This is the worlds largest Color Computer Club. With members in almost every field of expertise. So if you have a problem with the Color Computer, we can almost always get you the answer. Put your problem on the Clubs Bulletin Board, write, or call.
10). FIND FRIENDS As a new member, you will receive a list of the members in your area whom you may contact for CoCo talk.

\section*{HOW TO BECOME A MEMBER:}

Write to the club for an application, there are no conditions for membership other than agreeing to obey the rules, being interested and paying the dues. The membership dues are \(\$ 30.00\) per year and we believe you get more than your moneys worth. You can save more than the \(\$ 30.00\) in discounts the club offers you. Example: Subscription to the RAINBOW, \(25 \%\) off of regular subscription rates. Some members have told me that the new member tape alone is worth the \(\$ 30\). it contains 10 , very good programs. Some of the programs contained in the library are, Accounts Receiveable, General ledger, Inventory, Sales file and ticket program with automatic Inventory update (for 32 K with 2 disc.)

\section*{GRAPHICS}

\section*{Son Of Graphic Traffic}

One of our favorite program quickies is the five-liner sent in to us by John Dana of Hamden, Connecticut. It appeared in our December 1982, issue under the title of Graphic Traffic. Now John has created Graphic Traffic II: Color Craziness. It's a great simulation of a CoCo that's blown its cool.

John added color by adding just two lines to his December version-lines 8 and 15-and by changing line 5 from CLEAR 100 to CLEAR 600. If you missed the earlier version, just key in the lines below and \(R U N\) it. then hit \(E N T E R\) twice and then a few keys, for instance, your name, for the old verson. Hit the space barseveral times and watch what happens.

For the color madness, \(R U N\) the program again, but this time enter a number ( 96 or above for full color-color only), and then hit ENTER. Now, each key on the keyboard, including the shift/zero mode, becomes a color key.

What happens is that the value you input is added to the ASCII value of the key you hit, and the character on the screen has the new ASCll number (the sum of the two values).

Careful: if the sum is greater than 255 . you'll get an error code.

The effects are seemingly endless and, when you find a combination you like, you can preserve it in string or data statements-if you can remember what you did. At Rainhow, we find it's fun just in itself. but you could add it as a subroutine in a game program you're working on, too.

If things get a bit diztying, part icularly in the December version, add in a line somewhere, say line 35 . that reads:35 FOR X=1 TO 8: NEXT X (a FOR-NEXT loop lor time delay). Increase " 8 " to a larger number for a longer pause.

Here's the listing:
```

    `COLOR CRAZINESS
    CLEAR 6\emptyset\emptyset
8 INPUT N
1\varnothing A$=INKEY$
15 IF A$<>""THEN A$=CHR\$ (ASC (A$)
2\emptyset B$=B$+A$
3\varnothing PRINT B\$;
4Ø GOTO 1ø

```
\(+N\) )

\section*{LISTEN UP}

So, you've got an IO error on the first save of your favorite program, and you can't remember how far in the second save is. What to do? Just keep typing CLOAD until the second save finally comes up? Steve Lipps of Circle City Software has a better idea. If you put a little space between your saves, as many of us do, then you can listen for the second save. Says Steve, "Just use \(A U D I O O N\) and MOTOR ON and listen for the silent space. Then you can use MOTOR OFF. Even faster than MOTOR OFF is to hit any key and then \(E N T E R\), creating a syntax error which will stop the recorder." Then CLOAD the second save.
- ROML - ROM PAK Loader
Save your ROM PAKs (or ANY machine language program) on disk then load and execute with ROML
You no longer need to remove your disk controller to execute your ROM PAK software!
Also allows you to load from disk or tape and execute all machine language programs which are incompatible with the disk system!
Includes a utility to copy non-protected tapes to disk
Note-ROM PAK execution requires good 64K RAM system.
Copy of article included describing how to access 64K RAM
Tape: \(\$ 25.00\)
Disk: \$29.00
- PLUS32
Unleash the hidden 32 K RAM in your 64 K system.
Runs ROM BASIC from RAM where you can modify it!
Will not crash system if upper 32 K is defective or not available.
- Note-Requires good 64K RAM system.
Tape: \(\$ 15.00\) Disk: \(\$ 19.00\)
```

- ROMKIL - BASIC ROM disable routine

Your choice:

- Disables DISK BASIC ROM - returning your system to EXTENDED BASIC, or
- Disables EXTENDED BASIC ROM-returning your system COLOR BASIC

Frees up extra RAM.
System stays in the level of BASIC you select even if you press the Reset switch.
Turning power off and on returns system to original configuration.
Allows disk-incompatible machine language programs to be loaded and executed from tape without removing the disk controller.
Tape: $\$ 15.00$ Disk: $\$ 19.00$

## - BANNER

Make your TV a moving Marquee with Color BANNER!
Enter any message and have it move across the screen in GIANT letters in the colors of your choice. Control speed, delay and pause from within your message!
Great for parties and exhibitions!
Tape: $\$ 19.00$ Disk: $\$ 23.00$

- PAC ATTACK - from Computerware

The most popular game for the Color Computer!
Fast action and brilliant colors!

- All the fun of the Arcade without the quarters!

Tape: \$24.95
BEST! - Nelson's SUPER "COLOR" WRITER II
By far the BEST word processor available for the Color Computer!
More Features than any other.
Supports ANY line printer!

- Excellent quality documentation!

## ROM PAK: $\$ 74.95$ Disk: $\$ 99.95$

- LCA. 47 - Lower Case Adapter

## WOW! <br> Provides real lowercase letters with true descenders!

Compatible with ALL Color Computer Software!
Provides bright characters on a dark background!
Superb User's Manual included.
Easy 5 minute installation!
Uses NO system memory!
1 year warranty.

- Hundreds of owners, all happy!

Assembled and Tested: $\$ 75.00$

```
SAVE!
```

SPECIAL - Save $\$ 25.00$ when you purchase Super "Color" Writer II and an LCA. 47 at the same time! Order NOW!

- PP. 16 - EPROM Programmer

Programs single supply 2516, 2716, and 2758 EPROMs.
Program-entire or partial. Auto verify after programming.
Transfer contents to RAM for modifying or duplicating
-Select Documentation for: Interface to:

Comprehensive documentation booklet contains schematic, instructions for construction, check-out and use, and a well commented assembly listing for the specified MPU.
Note-User must supply the specified parallel interface.
Specify MPU and computer system when ordering.
Complete Kit (includes ZIF socket): $\$ 45.00$
PC board only (with documentation): $\$ 25.00$

# From Way Up And Way Over Here＇s $J / K$ Draw 

Program by Aaron Franksen

As you might expect，when we get mail from Cleveland， we don＇t rush to the road atlas to see if it＇s the largest city in Ohio．On the other hand，when we get a cute little program sent to us from Revelstoke，British Columbia，it＇s reach for the World Book time．

Aaron Fransen lives in this westernmost province of Canada and we like to think he uses his CoCo in the seclusion of a small cabin in the Monashee Mountains near Glacier National Park．There＇s probably a deer grazing in the meadow just outside his window，and maybe he uses his CoCo to plot the migratory patterns of wild geese．He＇s probably snowed in for the winter and will have his next issue of the Rainbow delivered by dogsled．
Yeah，that＇s what we like to think．Aaron，if you＇re the manager of the local McDonald＇s and drive a Dodge，just don＇t tell us，okay？

More than a nything else，what does set Aaron apart from most of our contributors is that he＇s developed a program in non－Extended BASIC．We agree with him that more programs are needed that do not require ECB．
$J / K$ Draw uses both the right joystick and the a rrow keys to draw block graphics pictures on the low resolution screen． Once you＇ve completed a masterpiece，you can save it to tape，too．

Writes Aaron，＂I have found that young children enjoy this program a lot when theyget the hang of it．＂Some of us who aren＇t children，but who treasure and cling to those childlike qualities we still manage to possess，like J／K Draw， too．The colors are brilliant and clean．Doodling with $J / K$ Draw is sort of like playing around with Magic Markers， those felt pens with the wide tips．We tried our hand at drawing a little cabin in the woods．

## Back Issue Availability

#### Abstract

Back copies of many issues of the RAINBOW are still available．

Nll back issues sell for the single issue cover price－which is $\$ 2$ for copies of Volume I，Numbers 1－8（through February，1982），$\$ 2.50$ for Volume I，Numbers 9， 10 and 12 （through June except May，1982）and $\$ 2.95$ for those issues thereafter．In addition，there is a $\$ 3.50$ charge per order for postage and hand ling if sent by United Parcel Service and $\$ 6$ for orders sent U．S．Mail．UPS will not deliver to a post office box or to another country．This charge applies whether you want one back issue or all of them．

Most back issues are available on white paper in a reprint form．Issues out of print include May，July，August， September，October，November，and December， 1982 and January，February，1983．VISA，MasterCard and American Express accepted．Kentucky residents please add 5 percent state sales tax．

Due to heavy demand，we suggest you order back issues you want now while supplies last．

In addition，copies of the cover only of the July，1982， Anniversary Issue are available separately for $\$ 1$ each，plus 50 cents shipping and handling．These are suitable for framing．

## JUST GOOD SOFTWARE

DISK DOUBLE ENTRY－If you have spent hours trying to balance your Debits and Credits，this program is for you！Designed for small business，club，and personal use．Enter transactions in a journal type format． Program will maintain current account balances，produce Trial Balance，Income，and Balance Sheet re－ ports and complete Account Ledgers．Will handle up to 300 accounts including report headings and totals．Up to 1400 average transactions on a diskette．Summary reports and four levels of subtotals available．REQUIRES 32 K and a user understanding of standard double entry accounting con－ cepts．－$\$ 44.95$ in BASIC with Machine Language subroutines．
DISK DATA HANDLER－Will allow you to design disk data files for your specific applications．Provides a power－ ful facility for on－screen input and update，fast selection and sorting，user defined output of reports to screen or printer，and output to disk files which may be read by your BASIC programs for any computa－ tional or special formatting requirements．You define a basic record of up to 14 fields and 246 characters． Sort or select records based on any field or combination of fields in this record．Maximum number of records you may work with at one time will depend on record size（500－23 char records，50－246 char records）．An optional Extended record linked to the basic record may also be defined．The size of the Extended record is not a factor in determining maximum number of records．Disk Data Handler is the type of tool which will provide the growth capability needed foryour increasingly sophisticated applica－ tions．REQUIRES 32K．－$\$ 44.95$ in BASIC with Machine Language subroutines．
NOW－Also available in a $\mathbf{6 4 K}$ version．More than three times the number of records shown above plus enhanced performance and report formatting capabilities．Uses standard ROM＇s－No special operating system required！ DISK DATA HANDLER－ 64 K －$\$ 54.95$
DATE－O－BASE CALENDAR－Puts you in charge of your schedule！Graphically displays any monthly calendar between 1700 and 2099．You put in up to twelve 28 character memos per day－calendar shows where the memos are－call up of day shows details．Use for appointments and a log of past activity．Study the chronology of the American Revolution or note the day your mortgage will be paid off．Search capability allows you to list or print all memos between two specified dates or only ones meeting key word criteria． Date computation shows elapsed time between two dates in days，weeks，months，and years．REQUIRES 32 K in BASIC．

TAPE DATE－O－BASE CALENDAR－$\$ 16.95$
（max． 400 memos／tape file）

DISK DATE－O－BASE CALENDAR－\＄19．95
（over 4，000 memos／disk－max． 300 memos／month）
MATH TUTOR－Five programs that go from math fact（ $+,-, \mathrm{X}, /$ ）drill to full addition，subtraction，multiplication， and division at four levels of difficulty．Provides a step by step approach with error correction and re－ wards for good performance．－\＄13．95 in BASIC．

SPELLING TEACHER－Up to 200 of their spelling words stored on tape or disk are presented in four lively study modes including a scrambled word game．－\＄12．95 in BASIC．

ALPHA－DRAW－A subroutine designed to let you easily add characters to your graphic displays．You define $X$ and $Y$ coordinates and a string variable of one or more characters and Alpha－Draw will do the rest． Includes all keyboard characters．Comes with instructions for a true line numbered merge of tape files． Works great with the Screen Print program！－－$\$ 8.95$ in BASIC．
GRAPHIC SCREEN PRINT PROGRAM－Works in ALL PMODES and lets you shift screen image anywhere on the printed page．Relocatable code lets you use all of your 16 K or 32 K machine．Available for both Color Basic 1.0 and 1．1．Use EXEC 41175 to see which you have and SPECIFY with order．In Machine Language．
$\$ 7.95$－For TRS $80^{\circ}$ LP－VII／VIII \＆DMP 100／200／400
$\$ 9.95$－For Epson GRAFTRAX®，PROWRITER ${ }^{\oplus}$ ，NEC ${ }^{\ominus}$ PC 8023A－C（specify printer type） Microtine ${ }^{\oplus}$ 82A／83A（with OKIGRAPH ${ }^{\oplus}$ I），Microline 84 IDS－440／445，Paper Tiger ${ }^{\oplus}$ 460／560，Prism ${ }^{\oplus}$ 80／132（with dot plotting） （Trademarks of Tandy Corp．，Epson America，Inc．，C－Itoh，NEC America，Okidata Corp．，Integral Data Systems，Inc．）

ALL PROGRAMS require Extended Color Basic and are delivered on cassette．All，except Tape Date－O－Base Calendar，are DISK System compatible．

# Remote Interest Quickens with Remoterm 

#### Abstract

What do you do on your lunch hour'? Well, depending on how much time you have, or maybe depending on whether you have a terminal at your disposal, you can talk to your CoCo at home. Star-Kits has come up with another gem of a program in Remoterm. This program allows you to control and run your TRS-80C from a remote terminal or a modem.

Remoterm comes on cassette or disk. More than adequate information on its proper operation is given in the 10-page manual. To summarize, after loading the program at the memory location of your choice, it's in position independent code-the TRS-80C is controlled by both the keyboard and the RS-232 port. At the same time all output goes to the screen and the RS- 232 port. The program is written in machinc code and will run in 4 K , although 16 K is recommended. Operation is at 300 baud; higher baud rates are mentioned but not recommended.

Well, I guess you're thinking along the same lines as I was: this is great, but there are limitations. As the manual explains, during remote operation there is no way to hit the reset key for a hung-up program. A control-C from the remote terminal will simulate the break key. Maybe the modem you are using has this facility but be carcful. The

other problem was discovered quite by accident. I was using a terminal in the same room and tried to load a machine language program from tape. It just so happened that the program was at the same address as Remoterm and completely wiped it out, hanging-up the computer. My mistake, but something to remember.

There are several other uses for this program besides remote operation of the computer. Those of you who prefer a professional keyboard while using a word processor will find Remoterm the answer. For the same reasons, you may want a screen display different than $32 \times 16$, even though some other soft ware is a vailable for this purpose. Obviously, no graphic screens are available on the remote terminal and care must be exercised with program selection as various graphic commands will not work through a serial interface.

In summary, I recommend Remoterm to anyone interested in remote operation of the CoCo, for whatever purpose. The program does exactly what it is supposed to do. The documentation is excellent, complete with a commented listing of the source code. I would recommend that if remote operation is contemplated, a disk system is almost a necessity due to the mechanics of tape files. I found the program both interesting and valuable.
(Star-Kits, P.O. Box 290-R, Mt. Kisco, NY 10549, \$19.95 on tape or disk)
-Dan Downard

## TALK IS CHEAP.

You want your color computer to talk, but how much will it cost?
\$50? \$100? \$200? No.
Voice Synthesizer program for your TRS80 Color Computer. ${ }^{*}$ It is $100 \%$ software. Nothing else to buy. Best of all, YOU CAN MAKE BASIC PROGRAMS TALK! It's easy to use, and will say virtually anything.

SPEAK UP! For \$29.95.
Talk really is cheap!

## WICO COMMAND CONTROL JOYSTICKS. . .ALL 10\% OFF!

## WICO COMMAND CONTROL Joystick

The ultimate in one-hand control. The bat handle grip fits comfortably in your hand and offers smooth, quick 8 theother on the base, make this a most versatile unit. And the rugged, compact base gives you a feeling of total control, while the 4 rubber grip pads make it ideal for table-top. Yet it's lightweight enough for hours of comfortable handeld signt 6 leaf switch held action. Most important, there's WiCO's 6 -leaf switch assembly - the key to a new dimension of arcade response and control.
With appropriate WICO adaptor, will interface with Radio Shack TRS80 Color Computer.
$\$ 29.95$ (on sale now through April 30 for $\$ 26.95$ )

WICO COMMAND CONTROL
ADAPTORS are available for each joystick hook-up to Radio Shack Color Computer.

Radio Shack TRS80 Color Computer Adaptor

$\$ 17.95$ each (on sale now through April 30 for $\$ 16.15$ )

## WICO COMMAND CONTROL JOYSTICK EXTENSION CORDS

For use with all Command Control joysticks and adaptors. allow you to move freely about as you play your favorite games.
Six Foot Length, $\$ 4.95$ (on sale now through April 30 for $\$ 4.45$ )
Twelve Foot Length, $\$ 7.95$ (on sale now through April 30 for $\$ 7.15$ )

## WICO COMMAND CONTROL NEW FOR 1983 ANALOG JOYSTICK

Analog style joystick with two fire
buttons now available for direct use with TRS80 Color Computers.
$\$ 49.95$ (now on sale through April 30 for $\$ 44.95$ )

## WICO COMMAND CONTROL TRACKBALL

Increase the response. the challenge . the fun of home video games. A phenolic ball offers the magic of 360 degree movement to an infinite number of positions, and controls the speed of the objects on the screen. as well. It's the same design that WICO sells to the computer connection cord. For direct use with Radio Shack TRS80 Coior Computers. $\$ 69.96$ (now on sale through April 30
for \$62.95)

## Preread Series is Good Head Start Program

If you have a young child you would like to see receive a head start in reading, Preread by Prickly-Pear Software is an excellent tool with which to begin. Three programs are contained in the Preread package. They can teach the young child from three years up important letter recognition.

Preread 1 presents the names of the letters of the alphabet auditorially (by voice on tape) and asks the learner to press the letter on the keyboard which corresponds with the letter name. The voice is pleasant and nonthreatening.

Preread 2 presents the sounds of the letters of the alphabet in the context of words and asks the learner to press the key which corresponds to the sound which that letter makes. Vowel sounds are short and those letters (such as c and g) which have two sounds are prompted with the "hard" sounds. The letter" X " is presented as the " K " sound at the end of the word "box." The Q sound is presented as the first of the two letters at the beginning of the word "quiet." The sounds are presented out of sequence.

Preread 3 flashes random letters visually at the rate of one-fourth, one-half, or one full second. This rate is preselected. The learner is then to respond by pressing the correct key which corresponds to the letter he or she has just viewed on the screen. You select the number of letters you want the learner to view.

If the learner presses the correct key in any program, a Happy Face appears on the screen. Next the correct letter is graphically presented in both upper and lower case.
In Preread 1 and 2, an incorrect key press brings a Sad Face to the screen. Next, the correct letter is graphically presented on the screen. This flashes three times while the sound which accompanies a correct response is repeated. Another sound is used when an incorrect response is given; this allows the parent or teacher to auditorially monitor the learner's progress.
In Preread 3, an incorrect response is followed by the same Sad Face, but the letter is repeated until the learner makes the correct response.
The Preread package is an excellent group of programs, which a child of three years up to age six would benefit from. It is well documented, with the exception of loading procedures, which should be separated from the text. My son, a kindergartner, thoroughly enjoyed all three programs. They keep the child's interest and are viewed as a game, not a test, although a percentage score is given at the end of each program.

All programs give the learner unlimited time to find the letter asked for, but the original question is not repeated, thus encouraging the child to develop good listening and attention spans.

One addtional comment-several of the letter shapes, V and W especially, were confusing to the young learner.
(Prickly-Pear Software, 9822 E. Stella Road, Tucson,
AZ 85701, \$24.95)

# VOICE RECOGNITION 

For your 16K TRS-80 Extended Basic Color Computer

```
Using your cassette recorder's condenser microphone, the COLOR TALK TO ME software package can let you use your own voice as an alternate means of input for any of your BASIC programs. Over 200 words can be stored in 16 K RAM. With a little practice, you can attain from 80\% to over 90\% accuracy for most applications.
The COLOR TALK TO ME Software Package includes: -COLOR TALK TO ME machine language subroutine
-The BASIC subroutine which can merge COLOR TALK TO ME with your programs
-Complete instructions on how to use and incorporate COLOR TALK TO ME n BASIC programs
-Two application programs:
1. VOICE CALC- Use your voice to enter arithmetic problems and VOICE CALC will display the solution.
2. SCREEN PAINTER-Say a color and the screen will be painted that color.
ALL OF THIS ON TWO CASSETTES FOR ONLY \$49.95!!!
ColorSoft Software will soon be releasing voice recognition programs which can be used once you buy COLOR TALK TO ME. Coming soon: Connect More, Crosswords \& more!
ATTENTION PROGRAMMERS: ColorSoft Software will market original voice recognition programs using COLOR TALK TO ME with excellent royalties in return.

# Inspector Clueseau Is Not Elementary, Sherlock 

Inspector Clueseau is a mystery game that would tax the deductive reasoning power of Sherlock Holmes. Mr. Goodbody has been murdered and you must solve the mystery. You must discover who committed the murder, the weapon used and in what room the crime occurred. Solving the mystery will not be easy because there are six suspects, eight possible weapons and nine rooms in the mansion.

You will have seventy-five game turns to solve the mystery. Each game turn will randomly place you in a room of the mansion with one randomly selected suspect. A hi-res graphic display will show your location in the mansion. You will have a choice of questioning the suspect, searching for a secret passage, or making an accusation.

Most of the information used to solve the mystery will be derived from questioning the six suspects. You can't trust all of the suspects! Miss Violet might lie or change her mind and Mr. Denton lies all the time.

Each game will have one randomly selected room with a secret passage. Upon entering a new room, search for the secret passage. If you are in the correct room, a secret door will open allowing you to enter a hidden chamber. You will
be given a four letter code to solve. If you successfully solve the code within the allotted ten tries you will receive a CLUE or the message "Clues are getting scarce-try again." You will be returned to the game board after ten unsuccessful tries. One game turn is used each time you search for the secret passage.

You only have one chance to make a correct accusation. If you are wrong you will be given the correct suspect, weapon and room.

The instructions are clearly written and accurate. Inspector Clueseau is easy to play, but not necessarily easy to win. Hi-res graphics are used throughout most of the game. I especially liked the use of the hi-res alphanumerics. My wife enjoyed the secret door graphic and sound routines.

Inspector Clueseau uses the Auto Run program (copyright Sugar Sof tware). There are some POKE65495,0 and POKE 65494,0 commands used in the program to speed up and slow down computer operation. The speed up command can't be handled by some CoCo's. The Auto Run program prohibits the editing of the $P O K E 65495,0$ statements. A version of Inspector Clueseau could be sold without the speed up $P O K E$ statements.

Anyone who en joys adventure or mystery games will have lots of fun playing Inspector Clueseau. This game will fine tune your deductive reasoning skills.

# Monitor <br> What is It? Who Needs It? 

By Sue Searby

A "monitor" is not always just the kid in charge of checking the balls out and in for recess! In "computerese" the word "monitor" has taken several new meanings.

First, monitor can mean a video screen that hooks to a computer much like a TV on which the computer displays its information. This use of "monitor" could be replaced by the term, "CRT," or screen. The other use of "monitor" in computer jargon is less concrete and we will concentrate on it.

A monitor is a program, software, that communicates directly between you (the user) and the computer (CPU and memory). Like the elementary school's ball monitor, it has the responsibility of "go-between."

When the user types in one of the monitor's commands, the monitor will go to the computer's CPU or memory, fetch the information, and display it on the screen for the user to see. The monitor also has commands to tell the CPU to do something to change values in the memory.

In summary, the monitor is a "low level" communicator program between the user and the computer. Below are some example monitor commands and functions.

A - Examine and change A register
F - Find a byte string
G - Go to user's program
I - Initialize memory
J - Jump (subroutine) to address
K - Set breakpoint
M - Memory examine and change

L - Binary load from cassette
S - Binary save to cassette
T-Text input to memory
V - Set breakpoint and begin execution
W - Warm start into BASIC
Z - Display formatted memory dump
Who needs or uses a monitor program? A programmer who does machine language or assembly language programming uses the monitor to test his programs and learn about the internal operations of the CPU chip and the memory. Most users or even BASIC programmers do not have a need for a monitor program. Some companies who sell monitor programs use the rule, "If you don't know what a monitor is, you do not need one." Of course, even though you know what a monitor is, you need not assume you need one. And conversely, just because you don't need one does not imply you do not WANT one! A monitor is a very powerful and useful tool for those who are serious about learning the "nitty gritty" about computers and assembly language programming. And isn't this what it is all aboutlearning about this new technology'? So do not be afraid to venture out, make mistakes, and learn new things either with a monitor program or with some other new concept you encounter.
(Ms. Searby is a principle in Computerware, which publishes a number of monitor programsfor the Color Computer.)

5 soundsational,colorful, graphio gates for your Color Computer including: Briokout, B-17 Bomber, Blackjack, Jackpot and Computration - all for the price you might expect to pay for just one of these gareoll!
Plus added bonua - Compumind: guess the computor's socrot oode from clues provided - a game of logic for the whole family. At this price can your library afford to be without them?

## TURN OF THE SCREW

# Green On Black Video: 'Eye Friendly' Conversion 

By Tony DiStefano

It's two o'clock in the morning and you are typing away on your TRS-80 Color Computer. Your eyes are burning because you've been staring at that bright green screen trying to create your "Do everything program" for hours. So you turn down the color, contrast and brightness of the display but that doesn't help too much. It's still a big square of light. Well...what can you do? Follow these simple instructions and when you are finished you will have a reversed screen like mine.

Though these instructions are simple, only those with soldering experience should attempt this project. You will need a Phillips screwdriver, a grounded soldering iron, solder, an IC extractor, two pieces of thin wire, flux cleaner, and a little patience. And, if you haven't received the warning before, opening your computer may void your warranty.

Before you start tearing into your computer, a bit of background on the VDG (Video Display Generator) is in order. The VDG is a large scale integrated circuit (LSI) chip

that takes care of all the video you see on the screen, be it Alphanumeric or full graphic. The VDG continually scans memory (Via the SAM) and displays what it sees. In the Alphanumeric mode it converts the ASCII code of a byte of memory into a graphic block that looks like the letter it represents. Normally an upper case letter or number is black with a green background. Lower case letters are the opposite, green with a black background. What my circuit modification does is reverse the order so that upper case letters are green with black background and lower case letters are black with green background. This does not change anything in memory nor does it interfere with BASIC. It also does not change any graphic modes or color. Everything stays the same except the letters, numbers and symbols. The diagrams in this article pertain to most versions of the computer. Version $1.1,1.0,4 \mathrm{~K}, 16 \mathrm{~K}, 32 \mathrm{~K}$, $64 \mathrm{~K}, \mathrm{BASIC}$, Extended BASIC, and even Disk BASIC are OK. The only version of which I cannot say "it works" is the newest version, the one with the power supply in the bottom left hand corner. It should be the version "F" but it is not written anywhere on the board.

Before you start into this, make sure that you have a large clean work space. Make sure the computer is not plugged in.

Put the computer upside down on a soft surface. Unscrew the seven screws that hold the cover on. If you haven't opened it before, the seventh screw is under the black sticker that warns you not to open this thing. Turn the unit over again (top side up) and pick up all the screws that fall out. Put them aside in a safe place. Remove the top cover and put that away, too. Lean forward slightly and gently pull up on the keyboard. Unplug the connector that ties the keyboard to the main board. Put the keyboard aside. Now cut the two tie wraps that hold the RF shield in place. That's the big square piece of metal with holes in it. Remove the RF shield and put it with the other parts. You are now readyfor part two.

Before you start part two, let me tell you that the board is very sensitive to static electricity. Try to avoid dry areas and avoid touching the contacts on the board whenever possible. OK, let's get going. Locate and pull out the 74LS02 IC marked U29 on the PC board. Carefully bend pins 1, 2 a nd 3 so they stand straight up in the air upside down. The dot denotes pin \#1. If you are facing the computer it is the top left hand corner. See Figure 1. Now solder one end of a fourinch piece of wire to pin \#I of the IC. The best wire to use is a \#28 or \#30 Wire Wrap wire. Solder a nother piece of six-inch wire to pins 2 and 3 . Yes, both pins together. Now put the IC back in the socket. Make sure it is in the right orientation. The dot should be in the upper left hand corner. Also make sure that the wires and the pins do not touch the side of the R F shield. Now carefully remove the MC6847 IC marked U7 on the PC board. Bend pin \#32 outwards just enough so that when you replace it, it does not go into the socket. Replace the MC6847. Again, make sure of the orientation. The dot should be in the upper right hand corner. Take the other end of wire that connects to pin I of the 74LS02 and solder it to pin 32 of the MC6847. Take the other end of wire that connects to pins 2 and 3 of the 74LS02 and solder that to

## MICRO-SCRIPT ${ }^{\text {m }}$

A professional word processor at an affordable price! Features enhancements found in programs three times its cost.
Speed typists will appreciate its tracking capability. Novices will enjoy quick familiarity. Regardless of your application, the versitility of MICRO-SCRIPT ${ }^{\text {TM }}$ is makes it the logical choice for saving time and money for both home and office environments.
Bells and whistles? You bet! MICROSCRIPT ${ }^{\text {TM }}$ is line-oriented, offers expanded cursor control, user-defined printer and video options; provides character, word and line insertion, correction, mobility, replace and deletion; global search and replace; headers and footers, auto pagination, true justification line and title centering, name and address merging for multiple letters; prints up to four selectable character sizes on command and much more!
MICRO-SCRIPT ${ }^{\text {mu }}$ has unlimited applications. It s a serious masterpiece which fills the void in any program library. It is compatible with all major printers on the market today.

## TOLL-FREE

MICRO-80 ${ }^{\text {TM }}$ INC. 2665 Busby Rural Road Oak Harbor. WA 98277 - Distributors Wanted -
pin 2 on the MC6847. Be careful not to solder the pin to the socket. You won't be able to get the IC out if you do. Check the wiring and make sure that there are no shorts. Your wiring should look like the wiring in Figure 2. Now turn the power on. You should see the normal SIGN ON and copyright notice. Adjust the contrast, brightness and color

on your TV so that you get crisp green letters with no background shading.

The closing up of the unit is the same as the opening, but in reverse. Turn the power off and replace the RF shield.

Again, make sure that there are no wires hanging out, and that there are no small pieces of wire or solder left in the closed area. Replace the keyboard and connector and put the lid back on. One thing to note when you are putting the bottom screws on is that there are two short screws. They go under the keyboard. If you put the long ones there you'll pierce a hole in the top cover. Do not overtighten them. After the computer is all back together again check all the functions just to make sure that all is running properly.

The whole operation should go off without a hitch, but if you do have problems retrace all of the above steps. The circuit does work, and if yours doesn't work you may have made a mistake somewhere. Some of you might want to add a switch to be able to change back and forth between normal and reversed screen. To do so, follow the wiring diagram in Figure 3. Make the wires long enough to be able to mount the switch on the outside cover or somewhere accessible when the cover is on. Warning! Wires that run outside of the RF shield can cause interference with your TV. Using a shielded wire will help. Ground the switch cover with a separate wire. This should take care of most of the RF problems.

Good luck.

(619) 274-2202

The program listed here is sort of a natural follow up to my Logsheet (December ' 82 Rainhow') and Duper (January '8.3 Raintow'). It is the fourth in my series of Hamplication programs and contains many leatures of the previous programs. plus some new ones. There seemed to be a need for a specialized contest log that could go beyond a plain log and a separate Duper program in providing rapid logging input during the heat of a contest. Most contests have a set of rules that specify purpose, hours of operation, point scoring and the like. (jetting all the various rules and scoring details into one program was my aim. The problem is that the differing requirements made it impossible to match all the contest rules. However. most of the factors can be included and the printout can be user modified, if needed. Even the scoring scheme can be changed to fit a particular contest. At least this program will provide a basis for ham operators to use their imagination in modifications.

Prior to running the program. I execute an M/L. clock routine to use as a time input to the log. Any clock routine can be used as long as it places the current time in the upper right corner, where the screen addresses are PEEKed and relocated into the correct place of the log format. I did not include it as part of the program, because the ones I haveare adequately available (Chromasette "CoCo-Coocoo". Sugust 82) and (CCNews"Time Clock." December 82), and they are copyrighted. Choose your own. Anyway, the time of contact and then the outgoing contact number are automatically entered into the log format and memory.

Alter the timer is started. the parameters of the contest are entered into memory to use in scoring and printout. $\Lambda$ "()" is entered for "not applicable" or "no score" items.

During entry of the scoring scheme, some contest rules specify only adding the total number of scoring points. while others multiply the number of contacts by the scoring points. For instance: prefices-if the score is just I point for each prefix worked, then enter "prefix pts:"-I and a"l"under $(+)$ and 'enter' under (X). On the other hand, if the rules state to multiply the QSO's by wo for each different prefic, then enter "prefix pts:"-2. under (+) "enter" and under (X) - 1 ". The scoring computations in lines 180-230 are adjusted accordingly

The log format guides the operator through each QSO. keeping a record of those items needed for score and record. In the log form an " $\mathrm{N} \wedge$ " is entered of the item is not a requirement of the particular contest. Upon entry of the call sign and frequency, the dupe routine chechs to see if the station has been worked on that frequency before. If not, the program returns to the logging format for continued entry of data. If it is a dupe, this is reported and the program returns to input another call. On completion of each contact the record is dumped to disk. This is somewhat a waste of disk space, but it is quick, and avoids the problem of a full
buffer and loss of data with variable length records. Since the program is written for two disk drives. I use drive $\# 1$ for my data storage. If a single drive is used, then change lines 80 and 98 by dropping the $\because: 1$ after the extension. If a cassette system is used, then make the following changes

Line 80 change \#1 to \#-1. delete $/ \mathrm{LOC}$ : 1
Lines 82. 84, and 86 change \#1 to \#-1
Line 98 change \#1 to \#-1. delete LO(i:1
Lines 98. 100), 102, 104, 100, and 108 change \#1 to \#-1
After the contest completion, the whole file can be reloaded and reviewed and or printed out. The scoring factors and score are computed and are part of the print out. Of course, change the call sign in line 144. Niso, if your computer will not take the speed-up $P O K E$. delete these from lines 66. 70, 72. 174, and 214.

If any of you have lazy or tired fingers, these programs are available on tape cassettes. You may send a self-addressed. stamped envelope to B.B. Witham. Jr., 350) Sca Gull Road. Virginia Beach. V $\wedge$ 23452. Also this, as well as most other programs published in the Raintow are available on Raintow on Tape.

Editor's Note: The March issue of A5 Amateur Television Magazine is a special computer issue, with much emphasis on CoCo. For a free sample of $A 5$ ATV, write Mike Stone, Editor, BDOQCD, P.O. Box H, I.owden. IA 52255-0408. See A5 ATV's ad for subscription information.

#### Abstract

GAME WRITER is a programming language with all the features you need to write great VIDEO GAMES. It includes a built-in screen oriented text editor, high resolution color graphics support, any number of player-shapes (SPRITES), a shape pattern editor, full TURTLE GRAPHICS, sound effects, support for joy sticks and much, much more. Each playershape can be given a program to run which tells it what to do. All the player programs run simultaneously to create fantastic game effects. GAME WRITER IS GUARANTEED EASY TO USE. Even if you have never written a program of any kind you will amaze your family, your friends and yourself with the fantastic things you can do with it. The package includes a GAME WRITER rom pak, a complete easy to read manual and a set of sample programs ready to run. GAME WRITER is a great programming language for a child or an adult. GAME WRITER requires a minimum of 16 K . Extended BASIC is not required.

PRICE \$129 .

## **PEEKS AND POKES**

Two of the most fascinating commands in the Basic, language are PEEK and POKE. While we can't claim to be experts on the subject we can offer a few ways to use PEEK ard POKE to help you get more out of your CcCo.

The most famous. POKE is probably the high-speed, or vitamin-E poke. There are actually two of these-... the well known POKE 65495,0 , and the less common PORE 65497,0, which is actue:lly faster. You lose control of the screen, but it c $n$ be used for searches, sorts, or calculations where screen control is not necessary.

It should be noted that these speeciup techniques do not work on all computers. The forlowing progr $m$ will let you know if the pokes work on your computer, nd will give you an idea of the speed difference ct each.

$$

We went to this type of ad this month because we thought that you like us, get tired of seeing endless lists of software. And, frankly we're too small to compete with the. folks taking out full-page ads and offering glossy catalogs. But we can offer you one thing-total dedication to the color Computer and Coco owner.

And we do have a fine list of CoCo products to choose from, including DONKEY KING, TELEWRITER PLATINNUM WORRSAVER, and the only under $\$ 200.00$ HARDWARE speech synthesizer available anywhere. We also stock most back-issues: of RAINBOW.

So order from our Eeb. ad or send $\$ .50$ for our full catal.cg (refundable with order). And look for our ad next month for some more PEERS and POKES.

## VISA PCLFAR 80 SOFTWARE 494 Cline Avenue Mansfield, OH 44907 (419) 756-4873

Note: We also carry the RAINBOW

Add $\$ 2$ shipping on orders less than $\$ 50$ Please add $\$ 2$ for COD. Ohio residents add $5 \%$ state sales tax

# Quality Software Is The Number One Priority At 

POLARIS - You are under the ocean in a submarine, attacking planes and enemy destroyers dropping depth charges attempting to destroy your sub. Can you destroy them before they destroy you? This is an extremely fasl action machine language program with high resolution graphics. Only \$1495

SUPER ZAP - Enemy spaceships are attacking from all sides and your mission, should you choose to accept it is to defend your starbase from the deadly Armada of Pyruss. This will be a dangerous mission since the Pyruss Armada has never been defeated by any humanoid. Action increases as the game progresses. Only \$1495

HOME HELPERS - Have problems balancing your checkbook, remembering important dates or phone numbers, and your mailing lists. Let K \& K and your color computer help you. Only \$1495

BOWLING SCORED FOR DOLLARS - Do your leagues bowling averages This program will keep individual scores, team totals, individual averages, team standings, and print all this information to your line printer. Minimum 16K disk required (on cassette tool). Only \$1495
INVENTORY CONTROL - This program contains all the necessary features required for all types of inventories, such as sorting of inventory by stock number. This program will list stock number, description, amount in stock, cost, wholesale, profits. Minimum 16 K disk required. Only \$3995

PROPERTY INVENTORY - This program lists inventory by department, date purchased, and property numbers. Minimum 16K disk required Only $\$ 2995$

ACCOUNTS PAYABLE AND RECEIVABLE - These two programs will control the incoming and outgoing money flows for all your business accounts. Only $\$ 5995$ Same rules as any Las Vegas casino. High resolution graphics. Only $\$ 12^{95}$
ALL GAME PROGRAMS - require 16 K extended (prices are set for cassette, add $\$ 400$ for disk, except business)
PROGRAMMERS!!! - K \& K pays the highest royalties for your programs. If your program is good, send it to $K$ \& $K$ and receive the best possible coverage!
TRS-80 COLOR COMPUTER USERS - New programs are added each week. Send \$100 for our complete catalog.

# Four smart ways to make your Atari 400/800, TRS-80 COLOR, VIC-20 and Commodore 64 much more intelligent. 

 sonal financial package is designed to make your money easier to manage. Included are:

1. Checkbook Maintenance
2. Chart of Accounts
3. Check Search
4. Income/Expense Statement
5. Net Worth Statement
6. Color Graph Design Package
7. Home Budget Analysis
8. Color Payments Calendar
9. Mailing List
10. Decision Maker

This unique menu-driven package requires less than one hour data input per month. The Color Accountant has over 60 pages of documentation including examples and step-by-step instructions. TRS-80 COLOR requires Ext. Basic and 16 K for cassette, 32K for diskette; Atari $400 / 800$ requires 24 K for cassette, 32K for diskette; VIC-20 requires 16 K Expander. Now available for Commodore 64.
\$74.95 cassette; $\$ 79.95$ diskette

The Tax Handler makes April 15th just another day. This is the perfect complement to our Color Accountant. The Tax Handler will help prepare your tax returns and probably save you money. Included are:

1. Form 1040 (Long Form)-filing status, exemptions, income. income adjustments, computation of tax, tax credits and payments or balance/ refund due.
2. Schedule A (Itemized Deduc-tions)-medical and dental deductions, taxes, interest expenses, contributions, casualty/theft losses, miscellaneous deductions and summary.
3. Schedule G IIncome Averag-ing)-base period income and adjustments, computation of averageable income and computation of tax.
Additional schedules or alterations to the tax codes will be available separately in our monthly magnetic magazines. Atari 400/800 requires 24 K for cassette, 32 K for diskette. VIC-20 requires 16 K Expander. Now available for Commodore 64.

## \$34.95 cassette;

 \$39.95 diskette

You'll love your computer with The Magnetic Magazine. Our magnetic magazines will entertain, inform, educate, challenge and delight you. Each issue contains 4 to 7 ready-touse quality programs, all fully listable. Every issue includes a newsletter containing instructions, tips on programming techniques and a line-by-line examination of the feature program. And starting with issue number 8 , the first in a series of tutorials on machine language programming. Database I with a new application every following issue and a new utility in our Utility-of-The-Month section. And word processing is coming soon!
A full year's subscription consists of 10 issues-over 50 programs a year at a mere fraction of their cost. Available for TRS-80 COLOR Ext. Basic, Atari $400 / 800$; all require 16 K . Back issues available.

## One year subscription:

 $\mathbf{\$ 5 0 . 0 0}$ cassette; $\$ 75.00$ diskette Half year subscription: $\$ 30.00$ cassette; $\mathbf{\$ 4 5 . 0 0}$ diskette Sample issue: $\$ 10.00$ cassette; $\$ 15.00$ diskette VK VIDEO issue 1 available for VIC-20; $\mathbf{\$ 1 2 . 9 5}$ cassetteThe Learning Center teaches and enlightens children. Our exceptional educational programs are classroom designed and tested. These unique packages have been invented to introduce 3 to 9 year olds to the ease of computer learning. Through the use of basic concepts such as colors, shapes, numbers and letters, children understand counting, math and language skills. Each program is designed to develop a specific skill, rewarding each correct answer with music and a happy face. Most are compatible with our new Edumate Light Pen $\$ 34.95$.
Available for Atari 400/800, VIC-20 and Commodore 64; all require 8 K for cassette, 16 K for diskette. Also available for Timex / Sinclair 1000 and TI-99.

Please ask about programs available and their prices for Pre-School, Kindergarten and Grades $1 \& 2$. Prices range from $\$ 8.95$ for a single cassette to $\mathbf{\$ 7 9 . 9 5}$ for a complete set on diskette.

Order now! See your local dealer or order direct. New catalog \$2.00. Visa and MasterCard acceptedplease add $\$ 2.00$ for postage and handling.

## SCORE-EZ

From 1 to 6 people can play this excellent adaptation of a popular board game. The computer keeps score for all players, and rolls dice. You can roll again just like the original game. Properly position the results of each turn for maximum score. The only thing you will need besides your computer is players. Color graphics and sound will entertain you for hours, and it's EZ to play.

## JOYSTICKS

The Radio Shack joysticks are ok but there are a lot of better ones on the market. Atari has the most joysticks on the market but even their joystick leaves a lot to be desired. Many companies have started making Premıum joysticks. We feel that the WICO is the best of the Premium joysticks The Wico stick will not plug in to the COCO though. you need an adapter. The adapter will work with any Atarı type loystick You could buy one Wico for yourself and use an old Atari stick for your friends (you'll never losel Or splurge and get two Wicos.

PRINT \#-2,
of Spectrum Projects and takıng issue with a letter we printed in which the writer expressed dissatisfaction with the Spectrum Stick joystick.

Mr. Cassidy's letter reads in part:
"Over the past twelve months I have had several dealings with Spectrum Projects and purchased many products, including the Spectrum Stick. I agree with your reviewer that it is an excellent joystick. Indeed, I have been satisfied with everything I have purchased from Spectrum Projects.
"However, the satisfaction with a specific product is not the point at hand. I was particularly concerned with the inference that 'Spectrum gets a way with taking people.' In my many contacts with Spectrum Projects, I have always found Mr. (Bob) Rosen and his staff extremely friendly, courteous and, more importantly, fair and honest.
"It concerns me that (the writer of the original letter) gets away with a slur on a completely reputable company...l find it completely irresponsible on your part to publish such a potentially damaging letter without having fully researched the matter."

We are glad that this issue came up and that we have an opportunity to explain how we at the Rainbow deal with letters of complaint and, finally, how they find their way into our letters column. I want to explain it here, primarily because I think it will help everyone to know about the procedures we are supposed to follow.

But, let me emphasize, we are not a consumer watch-dog agency. In that regard, we certainly will try to help you solve any problem you may have-with an advertiser or, for that matter, with a non-advertiser. The only place we draw the line is with other publications. And there is a simple reason for that. To ultimately carry a letter about a nother publication failing to honor a subscription, being consistantly late or the like only sounds - at least to uslike the Rainbow trying to knock a competitor, no matter how "friendly" that competitor might be. So, generally speaking, you won't see much here about any other publication.

Aside from that, we have a procedure that we are supposed to follow in every case. Letters of complaint are forwarded to the firm in question, as a matter of information for the firm. We work on the assumption that you would like to have the problem resolved and, frankly, many times a letter to a third party is enough to resolve the issue. Firms are asked to let us know what has been done, or whether they would like to make a response if we print the letter in question.

I am beginning to get really excited about RAINBOWfest-which is, after all, "CoCo's Very First Usually, most of the problems our readers experience are resolved in this way: Oftentimes it is only a lack of understanding on the part of one party or another, sometimes a problem with either the Postal Service or another carrier such as UPS.

We have two concerns in issues such as this. The first is for our readers, in terms of assisting them in any way possible. Since the Rainbow has been founded, I suspect several hundred disputes have been easily resolved when the two parties talked it out, either by mail or telephone.

The second concern is for the firm in question. We are fully aware of the "power of the press" and we intentionally set up procedures so that the firm has an opportunity to respond. To do otherwise would allow anyone with a "bone to pick" against someone else to simply fire of a letter and do considerable damage to someone's reputation.

In the case of the letter about which Mr. Cassidy wrote, this system did break down and the letter was printed before we offered Spectrum Projects an opportunity to respond. It was a serious error on our part and for that error, we wish to apologize to Mr. Bob Rosen and to Spectrum Projects. As a footnote, we understand the question has been fully resolved.

We do not wish to set ourselves up as an arbiter of disputes. That isn't our job. At the same time, we want to help settle any disputes which may arise in any way we can. And. we will publish "Brickbats" when the situation warrants-hopefully, at least, with a response from the other side. In short, we want to protect you, the reader's, right to complain. But, we also have the responsibility to protect firms from damaging comments which may not be their fault.

We feel. at least I do, that we have a responsibility to all concerned.

Finally, on a less weighty topic, I want to formally announce the beginning of the Rainbow Simulation Contest.

We expect the Simulation Contest, in terms of prizes, to be even bigger than the Adventure Contest for which the winners were announced in January. We are aiming for a special "Simulation Issue" this summer and we encourage your entries. To that end, we plan to publish a couple of Simulations to help you in the months ahead. But don't wait for them! Get going. We expect to set a May 30 deadline for entries. And, the sooner you get working the better.
-Lonnie Falk

## Stress Evaluator: Coping Techniques Called Helpful

Tension. Pain. Pound. Thump. Sounds like an old familiar commercial for a popular headache remedy. While an analgesic may indeed cover up pain, it does nothing to ameliorate the cause of the pain. Taking a pain medication is rather like cutting the wires to a fire alarm-it gets a lot quieter for a while, but watch out, the fire is still burning!

Today, the scientific community recognizes the powerful role that stress can play in bodily discomforts and illnesses. Headache, high blood pressure, lowered resistance to infections, nervous breakdowns, stroke and even cancer are some examples of conditions that may be caused or aggravated by excessive stress. Like any delicate piece of machinery, when the body is over stressed, bits and pieces begin to break down. Inevitably, there are innumerable prescription and non-prescription nostrums whose primary effect is to suppress the symptoms of an over stressed body and mind. It is all too easy to pop a pill or plop a couple of dissolving tablets into a glass of water; in fact, the drug industry heartily encourages you to do this with its high budget advertising. The message seems to be: It doesn't matter if you abuse your body, somewhere there is a pill, tablet or capsule that will take care of your symptoms.

If a philosophy of pill popping does not agree with you, there is an alternative: learn ways to evaluate your stress level and learn techniques for successfully coping with stress.

Petrocci Freelance Associates has recently released Stress Evaluator, a cassette based program for the Color Computer. The program incorporates questionnaires for evaluating your stress level, evaluating your ability to cope and assessing your comfort level. Also included are instructions for reducing stress through a meditative technique and a graphics screen to aid the process.

Stress can be physical or mental. Stress can be generated from unpleasant situations. But did you know that stress can also be produced by pleasant phenomena? The actual causative agent in the production of stress is simply a change from the status quo. Death of a spouse, divorce or getting fired from your job could all produce stress; so could marital reconciliation, retirement or an outstanding personal achievement.
Stress in and of itself is neither good nor bad. A moderate amount of stress is necessary for any achievement or increased productivity. Stress has a negative effect only when your ability to cope is exceeded. Stress Evaluator helps you determine your coping ability with a separate questionnaire. The program queries you on your virtues and your vices. Are you stubborn'? Are you tolerant'? Do you get upset easily? Your inmost secrets will be laid bare! Naturally, the CoCo will keep strict confidentiality.

After evaluating your ability to cope. Stress Evaluator will help determine your comfort or discomfort levels. You will be able to know whether to balance your level of comfort/discomfort for increased productivity or perhaps you need greater relaxation. For example, a boxer in the 15 th round is likely to be experiencing great discomfort but high productivity in going the distance. If your coping ability is high, you, too, may wish to increase your discomfort level on the job thereby increasing your

productivity. If your coping ability is low, it may be wise to decrease discomfort to avoid possible health problems.

Finally, the simple meditation technique (rhythmic breathing) provided with Stress Evaluator may be useful to those who wish to increase their coping ability. A sinusoidal wave form is presented on the graphics screen. You inhale on the rising portion of the curve and exhale on the falling portion of the curve. Very simple indeed! But relaxing.

I found the Stress Evaluator relatively easy to use. The colorful graphics output added much to the stress evaluation session. Another useful feature was the printer output of the various stress and coping factors. The software is self-documenting to the point that some users may find the extra written instructions superfluous. For the uninitiated. however, here is a hint: the software is loaded in three separate Extended BASIC programs. Each section must be started by typing the $R U N$ command. The main program will tell you that another section is loading. When the load is complete, the Color Computer will print out its familiar OK That is when you type $R U / N$ again

Extended BASIC is required with at least 16 K of memory. (Petrocci Freelance Associates, 651 N. Houghton Road, Tucson, AZ 85748, \$24.95 on cassette)
-Dr. Laurence D. Preble

## Hackers Helper.

## This Routine Draws Circles Around The Rest, Randomly

This month's Hackers Helper comes all the way from Humboldt, Saskatchewan, Canada-which, being north of

Moose Jaw and east of Saskatoon, is farther from more places than most places.

Karl Germann, of Humboldt, writes,"This program is designed to shorten time and save memory by inputting all circle positions in a data statement... Use this method and I guarantee you that it will be worth the effort."

The secret to the beautiful patterns generated by the routine is the random coloring. The main purpose of the program is the READ, DATA statements. These are easy to execute and run at impressive speed.

Karl is 15 and reports he has just begun experimenting with CoCo. Keep on keeping on, Karl!

The listing:

# Let's Look At <br> Keyboard Input 

By Richard A. White

Virtually all but the simplest programs are going to have to get some information from the user. This information can come from the keyboard, the joystick, a tape file, a disk file, or some combination of these. First, let's look at input from the keyboard. It is the first input source the new programmer encounters. There are actually two consideratons, how to input data and how to test and use data immediately after it is input. Test'? You've never hit the wrong key"? Or, if you have and nothing happened, the program tested your response, didn't like it and gave you another chance. How data is input may be determined by how we are going to test and respond to the input.

Color Basic provides INPUT and INKEYS commands for keyboard input. Extended Basic adds LINE INPUT. Let's dissect them. Following are a number of INPUT examples:

INPUT IS
INPUT I
IN PUT "A CHA RACTER STRING";IS
INPUT "ENTER NAME, AGE, WEIGHT AND TELEPHONE";NAS, $A, W, T L S$

INPUT will accept either a character string or a numeric variable. In accepting a string, it will take up to the number of characters the keyboard buffer will accept. Any number up to I. 70 E 38 may be entered. Numbers larger than this will cause an OV ERROR (overflow) message as the program crashes. A string can be used with INPUT to print a message, generally a description of the data to be entered. When the program encounters an INPUT statement, it prints whatever character string it is given and a "!". It then waits for a keyboard response. Note that a number of variables may be strung out after an INPUT. In the fourth example, the user could have responded;
? Jones,29, 182,900-6782(ENTER).
Each time INPUT sees a comma or an ENTER it considers it the end of data for the variable it is working on. An alternate user response is to hit $E N T E R$ af ter each data item. In this case, INPUT prompts with a double question mark (??) for the next item it needs. Here is an example.

NAME, AGE, WEIGHT, TELEPHONE ? Jones
?? 26
?? 182
?? 900-6782
INPUT is not for all occasions because of a few characteristics that can be problems. It will not accept commas or colons in a string entry and is of mixed mind about dealing with quotation marks. It also forgets leading blanks. Finally, when the $E N T E R$ is pressed, the rest of the line is blanked and the cursor goes to the beginning of the next line. This can be a hair pulling event when you have spent time making an input menu super neat with color background and borders and the INPUT wipes part of it out. For the beginning programmer, pretty menus are off in the future. My advice is to learn, and use, INPUT though you will probably want to use LINEINPUT or INKEY\& for most future keyboard entry. You will need it for tape and disk file handling.

We said that commas, quotes and colons give string input problems. Let's look at a few quirks when inputting numbers. One nice one is that $I N P U T$ overlooks spaces in : numerical entry. You can answer the "?" with 100247 89: and INPUT will make I $=100247892$ as if you had typed $;$ that way. Entering a number with spaces can be easier an improve entry accuracy. However if your finger slips so th: what you enter is 10024 U 892 INPUT will quit when comes to the " U " and return a stern ?REDO. Now this okay if you're entering screen format. But if you have two three variables after an INPUT and the error is in the th one, INPUT throws out all and starts over with? REDO. ! natural inclination would be to re-ENTER the offending entry, but INPUT wants all of them over again.

How does one find things like this out? With simple experimentation. You can learn most of what you need to know about how INPUT works by playing with the one line program below. It is listed along with a sample session of inputs and results. So, fire up CoCo and push keys with me.

```
10 INPUT I&,J: PRINT I&,J: GOTO10
OH
RUN
? "TEST",9 &ENTER.
TEST { {INPUT stripfied off the quotes)
? "TEST"-2,9 ENTER`
? REDO (INPUT must not like material in and out
    of quotes mi`ied.)
? З-"TEST",9 <ENTER.
3-"TEST" \Put, it took: this and kept the quotes as
    well.)
? 4-"TEST":9 ENTER`
4--"TEST" 9 (Commas and colons act the same.)
? 5-"TEST:9:SMMETHING ENTER`
? EXTRA IGNORED
5-"TEST" 9 {INPUT wanted data for two variables, and
? 6-"TEST" <ENTER`
?? (Data for only one variable was entered.)
?? 9 <ENTER>
6-"TEST" (Now all is in.)
? 7-"TEST",10000E34 <ENTER`
7-"TEST" 1E38 (Basic has its own styles for numbers-)
? 8-"TEST",1E40
? OV ERROR IN 10 ias long as the numbers are not out of
    limits.)
```

There is no way to keep the userfrom typing a n umber that is larger than l.7E38 mentioned above and bombing the
program. There are ways through character input and testing to avoid damage and we will get to these later.

## TRS-80 ${ }^{\circledR}$ COLOR COMPUTER ${ }^{\circledR}$ SWIVEL ORGANIZER

## A REAL VALUE!

ATTRACTIVE AND SOLIDLY BUILT THIS ALL-IN-ONE ORGANIZER IS THE PERFECT WAY TO LEND A PROFESSIONAL INTEGRATED LOOK TO YOUR CC

## CHECK THESE FEATURES!

- Water/stain resistant woodgrain Iaminate over 1/2" plywood
- Metal ball bearing swivel base permits sharing of the computer while still seated. Great for game playing and multi-use work stations
- Allows TV monitor mounting directly over computer to conserve space
- Storage area in rear with clamps for dressing cables neatly
- Comes fully assembled

LINE INPUT accepts only string inputs, one only at a time. Any keyboard character can be typed and LINE INPUT will take it. Since the characters are stored in the keyboard buffer before ENTERing, the back space acts to erase typed characters and will not be stored, nor will the erased characters. If you are writing a word processing or data mangagement program in BASIC, LINE INPUT is mandatory for keyboard input. Try writing English without commas. For these applications, you most likely would find a "?" printed before each entry a pain, so LINE INPUT
omits printing the "!". If you want a question mark, you have to put it into your character string. Only the following two forms for LINE INPUT are allowed. Note that a space between LINE and INPUT is optional.

## LINEINPUT I\$ <br> LINE INPUT"A CHARACTER STRING":IS

LINEINPUT I will cause a TM ERROR when data is entered and does not cause a SN ERROR. To see what LINEPUT can do experiment with the following program.

```
10 LINEINPUT"DATA";I$
ZOPRINT I$, :PRINT VAL(I$) :GOTOIO
OK
RUN
DATA <ENTER`
            0 (If contains only a carriage
                                return which VAL calls a (|)
DATA "TEST",,:"TEST"
                ENTER:
"TEST",,:"TEST" \ \Val calls any non-numeral a }0
                        The text, commas, colons and all
                                was stored and printed as
                        entered.)
DATA 1123R456 ENTER.
1123R456 1123.iVAL stops converting to a number
        when it sees a non numeral.
        We need error trapping.)
DATA 1123E2Z
    ENTER:
1123E2% 1.123E25 (VAL treats an "E" as scientific
DATA 1123E40 ENTER*
OV ERROR IN LINE ZO
    (We need error trapping.)
```

MOSES ENGINEERING COMPANY
P. O. Box 11038 • Ardmore Hwy. Station Huntsville, Alabama 35805
(205) 837-3356

Our experiments above have shown how we can enter nearly any keyboard character into a string using LINE INPUT. I leave it to the reader to experiment further and try to prove otherwise. We also built some conversion to numbers into the demonstration. We can do the same thing with converting an $I N P U T$ produced string to a number with identical results. The program bombs only when we try to convert a string to a number larger than 1.7E38. A keying error like " 234 U " will not be detected without added code. We would need to take a string apart and test it piece by piece for crrors and ask for re-entry if all is not right. You need to make a decision on how important error trapping and user proofing of inputs are. There are two levels. One is catching data errors. The other is catching errors that will break the program and which are much more important to find.

Generally, input testing is best done on a character by character basis, though each need must be evaluated individually. Where user proofing or testing a short sequence of characters is the objective, INKEYS is a convenient tool. Its syntax is $\mathrm{Z} \$=I N K E Y \$$. INKEY\$ checks to see what if any key has been pressed since the last INKEY\$ and program execution procecds. If there has been a keystroke, $\mathrm{Z} \$$ will contain the character, otherwise $\mathrm{Z} \$=\times "$. Since program execution proceeds, it is generally necessary to put INKEYS in a loop that is exited only when a key is pressed. In other cases, generally games, the loop will contain code causing continuing actions on the screen as well as the $I N K E Y$ sampling so that the program does not wait for a player's response, but checks frequently to see if there is one. Below is a typical data input INKEY loop.
$10 \mathrm{Z} \$=1 \mathrm{NKEY}$ : $1 \mathrm{IF} Z \$=\times "$ THEN 10 ELSE RETURN

QUEST - A NEW IDEA IN ADVENTURE GAMESI Different from all the others. Quest is played on a computer generated map of Alesia. Your job is to gather men and supplies by combat, bargaining, exploration of ruins and temples and outright banditry. When your force is strong enough, you attack the Citadel of Moorlock in a life or death battle to the finish. Playable in 2 to 5 hours, this one is different every time. 16k TI99, TRS-80 Color, and Sinclair, 13 K VIC-20. $\$ 14.95$ each.

32K TRS 80 COLOR Version $\$ 24.95$.
Adds a second level with dungeons and more Questing.

## CATERPILLAR

O.K., the Caterpillar does look a lot like a Centipede. We have spiders, falling fleas, monsters traipsing across the screen, poison mushrooms, and a lot of other familiar stuff. COLOR 80 requires 16 k and Joysticks. This is Edson's best game to date. \$19.95 for TRS 80 COLOR.

The Adventures below are written in BASIC are full featured, fast action, full plotted adventures that take 30-50 hours to play. (Adventures are interactive fantasies. It's like reading a book except that you are the main character as you give the computer, commands like "Look in the Coffin" and""Light the torch.")

Adventuring requires 16 k on Sinclair, TRS-80, and TRS-80 Color. They require 8k on OSI and 13 k on VIC-20. Sinclair requires extended BASIC. Now available for TI99. Any Commodore 64.
\$14.95 Tape - \$19.95 Disk.

## ESCAPE FROM MARS

(by Rodger Olsen)
This ADVENTURE takes place on the RED PLANET. You'll have to explore a Martian city and deal with possibly hostile aliens to survive this one. A good first adventure.

PYRAMID (by Rodger Olsen)
This is our most challenging ADVENTURE. It is a treasure hunt in a pyramid full of problems. Exciting and tough!

## DERELICT

(by Rodger Olsen \& Bob Anderson)
New winner in the toughest adventure from Aardvark sweepstakes. This one takes place on an alien ship that has been deserted for a thousand years - and is still dangerous!

Dungeons of Death - Just for the 16k TRS80 COLOR, this is the first D\&D type game good enough to qualify at Aardvark. This is serious D\&D that allows 1 to 6 players to go on a Dragon Hunting, Monster Killing, Dungeon Exploring Quest. Played on an onscreen map, you get a choice of race and character (Human, Dwarf, Soldier, Wizard, etc.), a chance to grow from game to game, and a 15 page manual. At the normal price for an Adventure (\$14.95 tape, \$19.95 disk), this is a giveaway.
WIZARDS TOWER - This is very similar to Quest (see above). We added wizards, magic, dragons, and dungeons to come up with a Quest with a D\&D flavor. It requires 16 k extended color BASIC. \$14.95 Tape, \$19.95 Disk. VIC 20 Commodore 64.

NEN
PLANET RAIDERS - Not just another defenders copy, this is an original program good in its own right. You pilot a one man ship across a planetary surface dogfighting with alien ships and blasting ground installations while you rescue stranded troopers. Rescue all the troopers and be transported to another harder, faster battle. Joysticks required. ALL MACHINE CODE! EDSONS BEST! 16K Tape TRS80COLOR \$19.95 32K Disk \$21.95.

## BASIC THAT ZOOOMMS!!

AT LAST AN AFFORDABLE COMPILER! The compiler allows you to write your programs in easy BASIC and then automatically generates a machine code equivalent that runs 50 to 150 times faster.
It does have some limitations. It takes at least 8 k of RAM to run the compiler and it does only support a subset of BASICabout 20 commands including FOR, NEXT, END, GOSUB, GOTO, IF, THEN, RETURN, END, PRINT, STOP, USR (X), PEEK, POKE * $1+{ }^{+},>$< $=$VARIABLE NAMES A-Z, SUBSCRIPTED VARIABLES, and INTEGER NUMBERS FORM 0-64K.
TINY COMPILER is written in BASIC. It generates native, relocatable 6502 or 6809 code. It comes with a 20 -page manual and can be modified or augmented by the user. $\$ 24.95$ on tape or disk for OSI, TRS-80 Color, VIC 20, or Commodore 64.

SEAWOLFE - ALL MACHINE CODE In this high speed arcade game, you lay out patterns of torpedoes ahead of the attacking PT boats. Requires Joysticks, at least 13 k RAM, and fast reflexes. Lots of Color and Sound. A fun game. Tape or Disk for Vic20, Commodore 64, and TRS-80 Color.
\$14.95 Tape - \$19.95 Disk.
Dealers - We have the best deal going for you. Good discounts, exchange programs, and factory support. Send for Dealer Information.

Authors - Aardvark pays the highest commissions in the industry and gives programs the widest possible advertising coverage. Send a Self Addressed Stamped Envelope for our Authors Information Package.
Adventures and Quest now available for TI99

## Please specify system on all orders

ALSO FROM AAR DVARK - This is only a partial list of what we carry. We have a lot of other games (particularly for the TRS-80 Color and OSI), business programs, blank tapes and disks and hardware. Send $\$ 1.00$ for our complete catalog.

## AARDVARK

INKEY\$ may be used frequently in a program for a variety of purposes and is profitably placed in a low numbered subroutine for speed and memory saving. The code should also be kept to its simplest form with most data manipulations done by the calling routine. One exception is to convert $\mathrm{Z} \$$ to the number Z since numbers are frequently used as responses to menus and then decoded using $O N Z$ GOTO frequently used as responses to menus and then decoded using $O N$ Z GOSUB statements. The following modification fills the bill.
$10 \mathrm{Z} \$=I N K E Y \$: I F Z \$=" \times$ THEN 10 ELSE $Z=V A L(Z \$)$ :RETURN

Now that we have a single character input, how can we use it. The simplest application is to get and act on a single keystroke response to a menu.

## MAIN MENU

1. INPUT
2. PRINT
3. LOAD
4. SAVE
5. QUIT

If line 1000 printed the menu, the next lines might be as follows.

1010 GOSUBI0 :ON Z GOTO 100, 200, 300, 400, 500 1020 GOTOIOI0

If Z is greater than five, or Z equals zero, the program goes to 1020, which goes back to 1010 to get a new entry.

The use of a command line at the top or bottom of a working screen is a user-friendly device to remind the user what control options are available and the keystrokes required to invoke one. In an example from an information management program, the user has just finished entering a record, in either upper or lower case mode, and needs to tell the program what to do next. Options are to continue data entry, modify the record just entered or return to the main menu. This command line is presented:

## cONTINUE mODIFY rETURN

The lower case (reverse video) signals the key to press for each function. Now we need to convert one of the letters "c, C, m, M, r, R"to an action. A neat way to do this that avoids a bunch of IFTHEN statements is to use INSTR as follows:

```
250 GOSUB10:Z = INSTR(1, "cCmMrR",Z$) :
    ON Z GOTO 200, 200, 500, 500, 1000, 1000
255 GOTO250
```

If ZS is not one of the control letters, $I N S T R$ returns a 0 and the program tries again (Line 255). If a valid letter is returned, INSTR returns its count up the string and this number can be used directly in an ON Z GOTO or GOSU/B. The Syntax of INSTR is fairly straightforward, the "l" tells INSTR to start at the first character of the string. Sorry Color BASIC people, INSTR is one of those Extended BASIC jewels, but you can write a short subroutine using MID\$ to do the same thing. Our Apple friends have to do that all the time.

Another testing task might be to see that only numerals or a period are entered into an accounting routine and recognize the carriage return to end the input. Here is code to do this:

250 GOSUB10 :Z = 1 NSTR(1,"234567890.", Z\$) :IF Z 0 THEN

PRINT $\mathrm{Z} \$$; :A $\$=\mathrm{A} \$+\mathrm{ZS}:$ GOTO250 ELSE
IF $\mathrm{Z}=0$ AND $\mathrm{Z} \$() \mathrm{CHR} \$(13)$ THEN 250
Here if $Z \$$ is a number or a period, $Z \$$ is added to $A \$$ and $Z \$$ is printed to the screen with a semicolon to hold the cursor. If $\mathrm{Z} \$$ is not anumber and it is not a carriage return, the program disregards the input and goes back for another character. The only other possible case is that $Z \mathbb{Z}$ is a carriage return and the program goes to the next step.

Routines like this which are continually getting a character and adding it to a string generate a lot of garbage in string space. The program must stop occasionally for the computer to clean things up and make room for new strings. This is a major reason not to use INKEY\$ for extensive string entry such as in a word processor or data file program.

Now for the homework assignment. Suppose you have written a Bulletin Board program and some jerk at the other end of the phone line has discovered he can crash your program by answering IE40 when the program asks for the number of the message to be read. Write an input and error trapping routine to recognize and discard an out of limits number. Assume that your Bulletin Board is so good that you expect 10E30 messages over the next ten years. (If you believe that, I have a bridge for sale!) The best routine(s) sent to the Rainbow will be published in a later BITS AND BYTES OF BASIC. ค

## Frog Trek Hops Over High And Low Ground

Frog Trek is a program based on the arcade game Frogger. The object of Frog Trek is to guide your frog (using the keyboard) from the left side of the screen to the right side, without getting killed in the process. Sound easy? It really isn't, since you must shift your way through six lanes of rush hour traffic, dodge a threatening snake and hop from logs to turtles to the frog's home. Once four frogs reach their destinations, a new screen is drawn with faster traffic and a faster river current. After many hours of playing, I was only able to accomplish this screen once.
As is the case in most computer programs, Frog Trek, which requires 16 K , has its good and bad qualities. Here are a few features and disappointments contained within this machine language program.

Graphics-The Graphics in Frog Trek are one of the program's attributes. The shapes are very clear and distinct: the frog looks like a frog, the turtles look like turtles, etc. Despite the many objects moving on the screen at once, there is no flicker. The program's author did a good job with the graphics in this game.
Sound-Sound is a vital part of any arcade program. Unfortunately, Frog Trek falls short in this area - nothing but short beeps and long beeps of different pitches. The documentations says that "if you succeed in bringing froggie home he will reward you with a friendly RIBB-IT." To me, this "RIBB-IT" seemed more like an alarm clock sounding off. I personally feel that the sounds should have been developed more thoroughly.

Documentation-The instructions included with this game are adequate. They tell how to play the game in an
understandable manner. There were a couple of things I found missing from the documentation. There was no mention of scoring. I had to figure this out myself. Also, there wasn't any statement regarding the purpose of the timer. I believe the directions can be improved.

Bugs In The Program - To be honest, Frog Trek needs some major debugging. The bugs aren't that major in the game play, but at times are quite distracting. There are three problems worth noting. First, a few words of instructions are displayed before each game. This is fine, but the problem is the way it is written on the screen. It is shown like this:

## USE ARROWKEYS TO CONTROL THE FRO G HIT ANY KEY TO START GAME

I feel a quality computer program shouldn't have this program. A few more programming instructions would have cured this silly mistake. Second, once the timer runs down from sixty to zero, the computer thinks that the frog has reached its home. You are awarded 90 points, the frog goes back to the start, and best of all, yourfrog doesn't die. I don't mind this, but I would have found the game more challenging played against time. Finally, the problem 1 found most distracting was something that prohibits your frog from getting across sometimes. Once your frog reaches the middle island, it must jump from log to turtle. Well, sometimes the frog lands directly on top of the log or turtle and dies. Other times, the frog is not quite on the object and lives. This became more frustrating the more 1 played.

Despite these problems, 1 found Frog Trek to be enough of a challenge for the price. It seems to me that the author rushed his product out onto the market a little too quickly. If he were to work on his program a bit, and take some time debugging it, Frog Trek could be turned from a good program into a great one.

## EDUCATION

## 4K oame

## 4K，Non－Extended Tutor Spells＇Help＇

By Ronald Pesha
Here is a program I developed to help my 10－year－old son practice his spelling．It is unusual，as 1 see it，in that the words are spoken to the child．It also scores the child and prints out the scoring at the end．
An important aspect of this program is that it requires only regular，not Extended，Color BASIC，and 4 K is more than adequate．A cassette recorder is required，and two cassettes．Load the program on one cassette，using your own list of words．I have put a sample list of 20 spelling words in the program beginning with Line 100；just use IJATA at Lines 100 to 119 at the rate of five words per line．If your list of spelling words has more or fewer words than 20，you will also need to change Line 130 and Line 220 as explained by the $R E M A R K$ after each．

Now place a fresh cassette in the recorder and ENTER RUN 1000．Just follow the instructions．Speak the list of spelling words，in exactly the same order，into the microphone，following the instructions which will appear on the screen．You＇ll find that it is easy to change this cassette and the I）ATA lines in the program each week for the child to practice．

Type the program listing with spaces exactly as shown for the best appearance on the screen． The listing：

1 REM USE SEPARATE CASSETTES FOR RECORDING PROGRAM AND AURAL WORD LIST

# Atari Joystick Adapters Endorsed 

What is your high score at Donker King? What? Well, there goes that theory. I was assured that after using an Atari joystick with the CoCo, my game scores would show a remarkable improvement. The only problem is that l no longer have the dexterity of a 10-year-old, semi-professional game player. At the same time, I am strong enough to tear the stick right out of its socket in frustration. I would recommend to anyone who enjoys games on his CoCo, that he invest in an adapter for converting the Atari joystick to the CoCo

Many different manufacturers are now producing plugcompatible interface units for the true game addicts who spend hours trying to squeeze another 100 points out of their computers. As I happened to have more invested in Atari cartridges than in my computer-well, almost-I was very interested in the operation of these units. Two similar units were reviewed. The first was a single stick interface termed Top Stix by International Software. The second was the Double Stick Interface by Spectrum Projects, featuring two joystick ports. The Double, as I call it, comes with optional Atari joysticks. Both units performed as they are advertised.

The Ioouble is housed as a 4 " $\times 22^{\prime \prime} \times 1^{\prime \prime}$ heavy plastic box that contains the Atari jacks. This unit is connected by two $36-$ inch cables to the joystick ports in the rear of the CoCo.

To say the least, this unit is "quality" contstructed. Unfortunately the Top Stix unit I reviewed is a demo, so I cannot comment on the final product.

Both units performed equally, but l picked up some extra noise on my TV screen with the Double in the line. After moving cables all over the place 1 gave up trying to completely eliminate the problem. I feel the extra lead length invites problems

Now, for the problems. As you may have guessed, there are certain disadvantages to the use of an Atari joystick for certain games. The Atari units have switches instead of potentiometers inside the black box. What this means is that you don't have a linear or continuous output when you move the handle from right to left or top to bottom. Another way to look at it is to plug in your diagnostic program and look at the position of the joystick is either going to be in the middle of the screen or on one of the edges. There are no positions in between. What does this mean?

Well, for certain games, such as Donkey King or one of the Pac Man derivatives, where you just have to move to the right, left or up and down, it is insignificant, but what about Polaris or Foothall? These types of games require continuous (linear) motion.

In summary, I say again that 1 recommend these units to anyone interested in action games. After revicwing my software library 1 found very few games that would not be compatible with the Atari joystick. Also, in my opinion, the ruggedness of these joysticks is a consideration when compared to some other products on the market.
Now if I could only get to the second screen!
(Double Stick Interface, Spectrum Projects, 93-15 86th Drive, Woodhaven, NY 11421, \$19.95

Top Stix, International Software Inc., 771 Hockley Ave., Victoria, B.C., Canada V9B 2V5, \$29.95)

## ${ }^{\text {wTMS }}$ TRO color

From the January 1981 issue of the CSRA Computer Club newsletter

There was some amusement at the November meeting when the Radio Shack representatives stated that the software in the ROM cartridges could not be copied. This month s 68 Micro Journal reported they had disassembled the programs on ROM by covering some of the connector pins with tape. They promise details next month. Never teil a hobbyist something can't be done! This nagazine seems to be the only source so far of technical infornations on the TRS-80 color computer *. Devoted to SS-50 6800 and 6809 machines up to now. 68 Micro Journal plans to include the TRS-80 6809 unit in future issues.

NOTE. This and other interesting and needed articles for the Radio Shack TRS-80 cotor computer " are being included monthly in 68 Micro Journal - The Largest specialty computer magazine in the worid!

## 68 MICRO JOURNAL <br> 5900 Cassandra Smith Road <br> Hixson, Tennessee 37343 <br> 615 842-4600

68 Micro Journal" was established with one objective in mind; †o provide a Magazine FOR $68 \times x$ Users Br 68xx Users. Because of a strict advertiser policy, 68 Micr Journalm has gained a strong following WORLDWIDE because the reader KNOWS what he is getting when purchasing fran a 68 Micro Journalm Advertiser. It has gained a strong user following because most of the material published is contributed BY USERS, and therefore, is relevant to the Users needs.

Currently, and even before the Color Computerm hit the stores, 68 Micro Journalm was devoting more space to the TRS-80C Color Computerm and information concerning the Motorola 6809 (which is the CPU in the Color Computer") than ANY OTHER Computer Magazine. Examples include:

REVIEWS of the three major Disk Control Systems for the Color Computerm, most of the Monitors, Assemblers, and Disassemblers, Word Processors and Editors, "Terminal" Programs (for use with Modems, Communications with other Computers, etc.), and of course, Games.
HINTS for Expanding Memory, Power Supply Cooling, repairing sticky keyboards, disabling the ROM PAK "Take Over"', hooking up to Printers, etc. DISCUSSIONS of the 6883 Synchronous Address Multiplexer, using the Color Computeri' with 64 K and 96 K menory (which it is ALREADY capable of handling), thoughts on Programming, etc.

I suggest that you subscribe to 68 Micro Journalm, SODN as many back issues are sold-out.

We still, and will continue to, lead in the type information you need to FULLY UTILIZE the POWER of trie 6809 in the Radio Shack TRS-80 Color Computer".

Subscription Rates
USA: 1-year \$24.50; 2-year \$42.50; 3-year $\$ 64.50$ CANADA and MEXICO: Add $\$ 5.50$ per year to USA Price Foreign Surface: Add $\$ 12.00$ per year to USA Price Foreign AIRMAIL: Add $\$ 36.00$ per year to USA Price

## Bigfoot: More Board Game Than Adventure

"Deep in a dark and twisting maze, hiding in his lair, Bigfoot waits to ambush careless hunters who enter his domain."
So begins the documentation for the Bigfoot adventure. The object of this game is to find your way through a maze of rooms and passages to Bigfoot's hiding place and kill the monster. Along the way, you must avoid rooms filled with quicksand which immediately swallow you up into oblivion if you make the mistake of entering the room. Another potential hazard is a room with a giant bat. The bat may or may not be disturbed by your entering the room. If it is, it will pick you up and drop you randomly in another room. When you locate Bigfoot using the clues the game provides you get one shot to shoot into his lair and kill him. If you miss, the noise irritates him and he stomps on you-score one for the Sasquatch.
If you accidentally stumble into his lair, he stomps you before you can even think about shooting him. The game plays fairly quickly, usually taking less than five minutes to either kill or be killed. At the end of each round a three entry-score is displayed-"Hunter" (that's you), "Bigfoot," and "Quicksand."
Although the game is presented as a graphic adventure, it plays more like a video board game. The graphics do not display large rooms or dark passages. The rooms are small squares just large enough to hold the figure of the hunter.

The entire maze, which could consist of up to 42 rooms, will fit on one screen. The "dark and twisting passages" are connectors between these rooms. There are three levels of difficulty for the mazes and four types of "mapping" for the hunter's movement through the maze. In normal mapping, when you begin a new maze you are randomly placed into one of the rooms and that room and its position are the only things displayed on an otherwise blank screen. As you move by use of the a rrow keys to other rooms, each new room you enter is added to the display. In blind mapping, only the room you are in is displayed-all others are blanked as soon as you leave them. The blind mapping is certainly more challenging, trying to remember the relative locations of the rooms you have explored and their clues to Bigfoot's location.

Besides myself, our fa mily has three expert game critics-16-, 14-, and 12-year-old sons. When I polled the boys for their opinions, the 16 -year-old said, "It's OK." The 14 - and 12-year-olds agreed that it was "pretty good."

They, of course, have many friends to assist them in their game playing. The greatest interest in Bigfoot came from the 12- to 14-year-old group. If you are a true adventurer along the lines of Colossal Cave or the Scott Adams adventures, Bigfoot is not what you are looking for. If you are a board game enthusiast and appreciate the extra dimension that a computer can offer through its graphics and ability to dynamically control the board, you may enjoy Bigfoot.

Bigfoot is written in Extended Basic and requires 32 K .
(Genesis Software, P.O. Box 936, Manchester, MO 63011, \$21.95 on tape)

## New:

## fromp

Now for only $\$ 5$ you can have an on/off light for your CoCo, without voiding your warranty!! If you own a joystick, can drill ONE hole, and make TWO connections, then you are ready for this simple Do-It-Yourself Kit!!

This simple kit comes with the parts to modify 2 joysticks, and clearly written instructions on the procedure, which takes only 10 minutes on the average.

Note: This modification Does NOT impede joystick performance. This kit works with any joystick, and is equally easy to install in each.

ORDER NOW! ! No Extra Shipping Charges!!
Florida residents add $5 \%$ sales tax. Note: Custom joysticks still available.

# Here's One For You, Roy 

Here's a short, no nonsense program that we're quite sure Roy G. Biv, wherever under the sun he may be, will heartily endorse. Thus, the editors of the Rainbow, after due deliberation and reflection, have tapped out David A. Cromley, of Cheyenne, Wyoming, as the first recipient of the Roy G. Biv Award.

While David is the very first to be recognized with this special citation, the editorial staff of the Rainhow fully intends to confer this acknowledgement of meritorious service to others who make significant contributions to the Color Computer community (or who send in nice little programs that we like and think would be helpful to our readers). We believe it is a fitting tribute to Roy G. Biv, whose legendary and colorful name is known by heart, associated with happiness and recalled with fondness by friendly people in all walks of life, most anywhere the sun shines and the rain falls.
In offering to share his short listing with Rainbow readers, David A. Cromley writes, "Here is a little utility I frequently use to check the adjustment of the TV set. It also helps when I can't remember what magenta and cyan look like. Hitting the keys ' 0 ' through ' 8 ' changes the background color."

Here at the Rainbow, we enjoy "program quickies" such as David's ColorCk, and we hope to receive and print a lot more of them.
The listing:

Welcome to the March column．I wish I could say that I finally did this early，but the fact is that as I sit here at my computer，word－processing away in an effort to spruce up this final draft，the people at Federal Express are only two hours away．Yes，the editor of this most respected magazine said＂it absolutely，positively had to be there overnight．＂ That＇s what l get for waiting until the last minute．

As you know，we have been developing a plan for our major record keeping program over the last two months， and the＂finished＂program is below．I put finished in quotes because I know that no program is ever really finished．The programmer may think it is．．．

## YOU＇LL BE SORRYIF YOU DON＇T READ THISNEXT PART：

The program runs on a 16 K Extended BASIC machine－

## ロト Nロロロロロ－－－－

Someone said as I demo＇d C．C．Calc at the last meeting of the Northern lllinois Computer Club，＂l just spent twice as much for half as much．＂He bought a copy anyway．．．．． Save，Load，and Merge files－Yes！User specified Decimal Foints？－Yes！Can you calculate $3 \%$ of $\$ X X, X X X$ but not exceed \＄150？（Sound like the IRS？）－Yes！Stuck with Row and Column formulas？Not with C．C．Calc！Every cell on the spreadsheet can have its own formula．

C．C．Calc is the full featured，Electronic Spreadsheet that＇s designed for maximum，user controlled，flexibility on the Color Computer．The Command Summary fills three pages of the documentation but in short you have all the arithmetic operators，summation，replication，calculation order，selected column prints，screen prints and more．

Now the Color Computer has Smarts to match its muscle． C．C．Calc is available on cassette or disk for a ridiculously low $\$ 25.00$ ．Requires 32 K ．

# Create Character Files With This＇Finished＇Program 

By Bill Nolan<br>Rainbow Contributing Editor

barely！Before you type it in type POKE 25，6：NEW and $E N T E R$ to get the most memory，and then type this again every time before you load the program or you will get an OM ERROR．If you only have a 16 K machine 1 recommend the following：Leave all REM lines out of the program （except line 11000 －we jump to that one），and when it is all typed in and working，renumber it by typing R ENUM $0.0,1$ and pressing enter．This will make more memory available． Of course you saved it to tape first in case the computer crashed while renumbering．You can then change the CLEAR in line 5 to be CLEAR 1200，16344：GOSUB．
If you have 32 K ，change line 5 to read CLEAR 2000，32344：GOSUB．．．Also change line 20 to read $F O R$ $X=32345$ TO 32383：READ．．．and change the number 16345 in line 11032 to 32345 ．This will get you all kinds of memory for those changes you＇ll want to make．
If you have disk，you will have to have 32 K to use this program（unless you unplug your disk controller）．Make the changes listed above for 32 K machines，and in addition make the following changes in several lines between 1000 and 2000．Every time you find a CLOSE \＃－1，OPEN \＃－1， PRINT \＃－1，or INPLT \＃－1，delete the minus sign in front of the one．Also，you will want to change the PRINT in line 1030 to something more appropriate such as＂MAKE SURE THE PROPER DISK ISIN DRIVE I，AND THEN HIT ANY KEY TO GO ON．＂
Now．on to using the program．This program will create and update character records for fantasy games．The operation will be fairly obvious when you run it，but a couple of notes are in order．It allows you to enter up to 60 spells and non－magical possessions，and up to 20 magic items．It sorts the magic spells by level，and it allows you to make changes or deletions easily before saving a character record to tape or disk，or printing it on the screen or printer．

It does not store thieving ability scores since you don＇t enter them．It computes them when you select＂ 8 ＂on the main menu，so if you print out the information before selecting number 8 ，all thief scores will still be 0 ．Just make sure that you go to number 8 before printing out the character information．

This program $P O K E s$ a short machine language routine into memory．All of the $D A T A$ for this routine is in line 12050．This little routine puts a nice border around the screen whenever you call it，and it does it instantly！The border can be changed by poking a value other than 169 into memory location 346．The program does this $P O K E$ in line 20，so just edit that line to get a different border design． Values above 128 are best，but values about 255 will result in an error message．This routine is 37 bytes long and is in position independent code，so if you use it in another program you can put it wherever you want it．

## YOUR COLOR COMPUTER JUST GOT WHEELS!

You accelerate hard down a long straightaway, braking heavily at the end for a hard corner. You slice smoothly through the esses, and then boldly keep the power on for a fast sweeper. The Ferrari drifts dangerously near the edge, but you make a tiny correction in the steering, and you are through.
The finish line flashes by, and suddenly you are in the pits. The car falls silent. You see your lap times being held up. Your final lap was a new lap record! At last, you permit yourself a small smile.
You have mastered this powerful car on a difficult track, driving with the assurance and precision that comes only from long hours of practice.
You are driving an authentic race car. You are playing Revolution!

## FANTASTIC ACTION

Revolution uses high resolution, machine language graphics for action that is smooth and fast. The emphasis is on authenticity in the control and motion of your car. As in driving a realrace car, accuracy and precision in your driving are what counts. Frills and non-essentials have been left out.

## PURE COMPETITION

Like a real race driver in practice and qualif ying sessions, you compete against the clock and against the existing lap record for that track. Revolution records the lap records and the name of the person who set the record, so you always know who reigns supreme on your favorite track!

## DESIGNED WITH YOU IN MIND

Revolution is menu-driven, and self explanatory. Information screens tell you what you need to know. When you're ready to play, a menu of the names of all your tracks is displayed, along with the lap record for each track and the name of the person who set that lap record. You select a track with a single keystroke, and Revolution takes you there.

## A NEW CONCEPT

Revolution is a unique game, because it allows you to create the most important part of any race game: the track itself.
The first time you run Revolution, you will be able to choose from several tracks and cars which are included with the game.
But, with Revolution, this is only the beginning! You can create as many tracks as you like. You can make each new track as difficult or as easy as you wish. You can make easy ones to begin with, and tougher ones as you become more skilled. You may find creating tracks to be almost as much fun as driving on them!
You can save your favorite tracks to run on again whenever you wish. Revolution will automatically add these new tracks to the menu. And you can exchange your favorite tracks with other Revolution owners.
Be careful, though, about letting your friends play this game. They may not want to let you have your computer back!

## THE EARLY REVOLUTION

A prototype version of Revolution was published in the September, 1982 issue of Rainbow magazine, under the name The Track. The response to The Track has been terrific.
Revolution has all the features that have made The Track a favorite, and Revolution's fast, high-resolution machine language graphics are dramatically improved over the prototype's.

## REVOLUTION NOW!

The original Revolution for the TRS-80 ${ }^{\mathrm{TM}}$ Color Computer requires 32 K and one disk drive. A new cassette version has action just like the disk version, and similar track-saving features excluding a menu of available tracks. The cassette version will run on a 16 K Color Computer or TDP-100. You can upgrade to the disk version later, too, for a nominal fee.

Connecticut residents add $71 / 2 \%$ sales tax. TRS-80 is a trademark of Tandy Corporation.

The print routine located at lines 2000 to 3000 takes advantage of a feature of the Color Computer which isn＇t mentioned anywhere I have seen．All of the accessories are addressed by the computer by referring to their device number．The disk drive is device number 1 ，the cassette is number－ 1 ，and the printer is number -2 ．Well，it happens that the television screen is device number 0 ，so you can print on the screen by doing a PRINT \＃ 0 ，just as you would print on a printer by doing a PRINT \＃－2．You can also use a variable as the argument，as in PRINT \＃DV，and the output will go to the screen or printer depending on the value of the variable．By using this，the program will print on either the screen or printer and yet needs only one print routine．It just asks where you want it printed and sets the variable accordingly

In the print routine I didn＇t use any control codes to make the print－out fancy．This was on purpose．（Really！）The control codes vary from machine to machine，and if your printer was a different brand from mine they wouldn＇t work， so if you want to get fancy on your own．have at it！

There is a two line section at 7300 and 7310 that sorts the magic spells by spell level．This routine is a very simple and short example of a bubble sort（a slow kind of sort．but easy to do）that would be practical for a list up to 100 or so entries long．The same general form could sort most anything．

I hope you will have as much fun using this program as I did writing it．It stores the files under the character name，so you should be able to put more than 50 files on a disk．If you have more than one on a tape，it will search the tape until it finds the correct one．I guess that wraps up this project，so we＇ll see what next month brings．If you have any suggestions write to me in care of Prickly－Pear Software， 9822 E．Stella Road，Tucson，AZ 85730.

（Mr．Nolan．an experienced Dungeonmaster in a popular fantass role plaving game on a weetil hasis，is the president of Prickli－Pear Sofmare．）

The STEREO COMPOSER music synthesizer was developed for the true music lover. All the features available for the COMPOSER described below are also available for the STEREO COMPOSER. However instead of using the single 6 bit digital to analog converter built into the computer and the speaker built into your TV. the STEREO COMPOSER uses two 8 bit digital to analog converters which drive two audio power amplifiers. These amplifiers supply enough audio powe to easily drive your own external speakers. If you like. the output may be connected to your home stereo system to further increase fidelity. Connection is provided by two phono connectors. If the music is too loud. two built-in volume controls are provided to allow you to control the volume of each of the channels separately. The advantage of being able to use external high quality speakers is obvious. The use of higher quality digital to analog converters serves to further increase music fidelity.
The STERE O COMPOSER produces music in stereo. Of the 4 voices produced. 2 are directed to each charinel This ability alone increases the realism of the music. You can even move the voices between speakers as the music plays.
The STEREO COMPOSER comes assembled. tested. burned in, with all the software and hardware to allow you to immediately start enjoying your music. A complete manual and examples are provided to give you everything you need to know

The STEREO COMPOSER is completely memory decoded so it does not conflict with the Radio Shack disk controller. In this way disk owners with an expansion interface such as the BT-1000 by Basic Technology can produce music from disk with the STEREO COMPOSER in one slot and the disk controller in another in fact you can even have THE VOICE in another slot without any fears that there will be memory conflicts

Requires Extended BASIC and Minimum of 16 K
Specify Cassette or Disk
STEREO COP!POSER (Hardware and Software)

The COMPOSER is a 4 voice music compiler which easily allows one to develop high quality music. Each voice is programmed separately. In addition each voice uses its own wave shape table which means a unique sound for each of the 4 voices
The COMPOSER features a 7 octave range. It supports dotted and double dotted notes as well as eighth. quarter, and standard triplet notes. Sixteenth and thirty second notes are also supported
The COMPOSER allows the music to be played at any tempo and in any key. And believe it or not. the tempo and key can be modified as the music plays. This gives the user tremendous versatility in developing music. Key modification also allows the user to move the music up or down one or more octaves
The COMPOSER displays a constantly changing random kaleidoscope pattern as the music plays. In addition, the number of the note being played is displayed which aids one in finding sour notes during music development. Both of these displays can be disabled to allow any screen to be displayed while the music is playing. In this way, one can show the words to a song or display a picture as the music plays.
The COMPOSER develops a machine language position independent subroutine that can be Saved. Loaded, and Executed independent of all other software. This means that you can share your music with friends. In fact. you can write your own BASIC programs that call and play the music. Software vendors may include the music in their own product.
The COMPOSER is menu driven making it extremely easy and friendly to use and operate. A thick operating manual is also provided. Many examples are given to aid the user in getting started. All you need is provided, no additional hardware is necessary. Don't let the price fool you, the COMPOSER has got to be heard to be appreciated.

Requires Extended BASIC and Minimum of 16K

SPEECH SYSTEMS got its start providing high quality speech synthesizers for SS-50 bus computers. We are now proud to announce the same high quality product for the Color Computer and TDP-100
THE VOICE should not be mistaken with software speech synthesizers which require the computer to do all the work in producing speech
THE VOICE uses a special large scale integrated circuit, the SC-01 by VOTRAX. to reproduce any one of 64 phonemes at 4 inflections. Phonemes are basic units of speech which allow one to reproduce any word in English as well as many other languages.
THE VOICE has two outputs. Speech may be heard through the user's TV speaker. or the built-in audio power amplifier may be connected to your own external speaker A phono connector is provided for this purpose and if the volume is too high. a built-in volume control may be used to adjust it to the proper level
THE VOICE comes assembled tested burned in. with all the necessary hardware and software. A complete manual with many examples are provided to get you started in developing your own BASIC or machine language programs to use speech.
THE VOICE is completely memory decoded so it does not conflict with the Radio Shack disk controller. In this way. disk owners with an expansion interface such as the BT-1000 by Basic Technology can produce speech from disk with THE VOICE in one slot and the disk controller in another. In fact. you can even have the STEREO COMPOSER in another slot without any fears that there will be memory conflicts
We are trying to develop a library of software for THE VOICE. Toward this end we will be offering substantial royalties to software authors for their work.

Requires Extended BASIC and Minımum of 16K Specify Cassette or Disk

THE VOICE (Hardware and Software)
$\$ 179.95$

## HOW TO ORDER

We accept CASH. CHECK. COD. VISA, and MASTER CARD orders.
Shipping and handling for all products in the continental US and Canada
Shipping and handling for all products outside the continental US and Canada
COD charge (requires cash, certified check, or money order)

Illinois residents purchasing the STEREO COMPOSER or THE VOICE please add $51 / 4 \%$ sales tax.

RAINBOW REVIEWED OCT. 1982

Tired of broken joysticks? We offer an affordable joystick based on proven components. Each unit is hand assembled and checked to ensure reliability. The handles and internal mechanism have proven to be extremely rugged and reliable under extensive use with arcade-type games. The pots function smoothly to provide excellent cursor/character control. Get your joystick programs working the way they should! Our joysticks are backed by a 90 day warranty on material and labor (physical abuse excluded).

## YOUR COLOR COMPUTER JUST EARNED A MATH DEGREE!

## MATHMENU

Developed by an engineer, Mathmenu is a powerful menu-driven system to turn your Color Computer into an intelligent, flexible tool for mathematics and engineering. Mathmenu takes the tedium out of math, leaving your full brain power to attack the "meat"' of your problems. By rapidly manipulating matrices and vectors, performing integration and differentiation, solving quadratic equations, plotting user defined functions and much more, Mathmenu can help simplify the most complex problems. Whether you are a student or a professional, if you use math, you need Mathmenu.

## FEATURING:

- 3D SURFACE PLOTTING - Plots a user defined equation on an $\mathrm{X}, \mathrm{Y}, \mathrm{Z}$ coordinate system in the High-Res graphics mode. Planes, surfaces of revolution, statistical surfaces, etc. can be easily plotted Surfaces may be saved to disk or tape. We believe this is the only program of its kind commercially available for the Color Computer.

PLUS:

- Complete MATRIX Operations
(up to $8 \times 8$ )
- Complete VECTOR Operations
- Numerical Differentiation
- Numerical Integration
- Least Squares Curve Fitting
- Binomial Expansion
- Prime Number Expansion

Complete documentation of all functions is included.

## NOW THERE ARE TWO TOOLKITS FOR THE COLOR COMPUTER

The software development tools that let you put even more power into the already powerful Color Computer. They're full of tools, aids, bells and whistles useful to the BASIC or MACHINE LANGUAGE programmer, in friendly, easy-to-use software packages.

## BOTH TOOLKITS CONTAIN . . .

- Light characters on dark background with Current Line Highlighting; or normal characters
- Full Screen Editor with Arrow Key controlled cursor; open up space/delete and close up space
- Enabling selective Line Renumber/copy/move/merge; or normal Extended Basic line editor
- Protect the current BASIC program from being wiped out with a CLOAD, NEW etc.; or from being LISTed
- Restore a protected BASIC program/Append any number of BASIC programs together easily
- Tone on keypress or normal silent keys (Tone modifiable by use of Sound n,n Command)
- Global Search of command or text strings in BASIC programs with wildcard character and next "."
- 9 Screen Print Delays with keyboard override (for slow, readable LISTings and DISK DIRectories)
- Variable Name List/String-Byte memory usage/Range of FREE MEM/Top of memory address display
- Fast Machine Code to BASIC DATA converter for storing machine code visibly in BASIC
- (C)SAVEM address/Backup Tool (Last file name, start, end and execute address)
- Recovery of Lost BASIC programs after NEW, BACKUP, DSKINI, etc.
- Break Key Disable/Enable (Pause keys still available)
- Modified TRON display (.LN replaces (LN)

THE FULL TOOLKIT ALSO CONTAINS $\qquad$
$\square$ Merge BASIC with Machine Code routines so machine code is "invisible" and (C)SAVE/(C)LOADable 9 BASIC RUN delays with keyboard override; Single Step(s) mode with current line number display Memory Examine/Modify with HEX/ASCII/DEC/Double Decimal output and HEX/ASCll input
Memory Block Move for relocating machine code programs, DATA blocks, etc.; or the Kit itself
Ten User Defined Function Keys accessable with @/number (BASIC Macros/Block storage)
Aułomatic linefeed for printers that don't/double space LISTings; or normal PRINT
Delete all spaces (not in PRINT strings, DATA or REMARK lines)
ASCII/HEX memory Dumps to screen or printer
Delete all REMarks (either REM or ' type)
$\square$ Parallel ECHO of screen output to printer

## THESE FEATURES ARE FOUND ON BOTH VERSIONS . . .

- Transparent to the user, Install it and forget it until you need it
- BASIC runs up to one-third faster through the Toolkit (5-10\% typical)
- HELP command lists all Kit commands and current Kit address
- Same program works with tape or disk and in 16 or 32 K
- Entire system totally removable at any time
- Compatible with other utility programs
- Green/Orange text screen capability
- Easily modifiable command syntax

The Kits are relocatable programs that load any time without bothering your BASIC program or variables or top of memory address. All tools may be turned on or off at will, including the Kit itself.
The tools are available with simple three or four letter commands entered in the direct mode, with the entire instruction set viewable through the HELP command.

The Colorkit is 5 K bytes for $\$ 29.95$
Available on disk with handy BASIC Kit loader for additional $\$ 5$
 shtificatio
sede

The Microkit is 2.5 K bytes for $\$ 27.95$ Manual available separately for $\$ 5$

## THE GOOD LIFE

The Classic Game of Life With:

- $64 \times 64$ color symmetrical display
- 3 Selectable birth and old age colors
- 15 modifiable pre-programmed pattems
- Save/Load life screens to tape/disk
- Speeds from 8 gen/sec to 1 a second
- Joystick or arrow key input
- Written in user-modifiable BASIC
- With machine code LIFE processor
- Help screen command list
- Tape/Disk compatible
- Selectable color sets
- Y\&X axis wraparound

THE DISK COMMANDER
$\$ 19.95$
Disk File Utility with:

- One key view/copy/load (m) of files
- Two key kill/rename of files
- Sort directory on name/extension
- Pack directory so new files put at end
- Directory keyword search offilename
- Print DIR with machine code address
- Recover killed files

DEER HUNT
\$15.95

- Arcade shoot-em-up skill game
- Aim only for the deer
- Avoid hitting people, cars, train
- Will not cause tension headache
- BASIC/machine code hybrid
- Tape/Disk compatible

## Software Review..

## Wormhole Is High-Energy Graphics Game

Now youcan tour the depths of space through the miracle of Wormhole, a game combining natural curiosity with the color and imagination of the new technology to give you an inside look at what goes on in one of those "black holes." Just climb aboard your spaceship with FTL (faster than light) speed for an adventure.

Wormhole is a space game which derives its title from the space-time surrounding the ship, which, in theory, is formed in a "tube." similar to that inhabited by Eart hbound worms. As you room into the meandering tube, you start collecting points because your ship collects "gold dust" that is formed when the FII drive compresses space-time into the vacuum. As you attempt to negotiate the course, you are subject to a barrage of gold nodules. which appear when you least expect them. Blasting them into bits transforms them into valued objects. giving you one to nine poin ts for each piece captured in the handy "jaws" attached to the nose of your spaceship. If you are careless and collide with one of them, however. your ship will suddenly drop below light-speed and sustain major damage, costing up to 50,000 points.

The ship is controlled by the right joystick. and easily so, l would add. The problem is when youtake your eyes off of it for a second to check your score in the upper right part of the screen: Crash! Blinding lights! The ship blinks off and on, hangs for a second and the screen echoes disaster, displaying a daz/ling array of color that is rivaled only by $20(0): A$ Space Odisser:

There's really no problem, because as the screen says, you can press any key to continue. You only lose 50.000 points when you're knocked out of the hole. You start with three million and it's easy to recapture lost ground with a feature that enables you to gain speed during the game. Simply pressing " $S$ " allows you to slow down if you feel you're losing control.

If the telephone rings and you're forced to leave the game for a few minutes, pushing the BREAK key allows you to frecze the game and retain your points until you return. It's also useful if you feel youre losing your concentration. The game does proceed rather rapidly and you are on constant alert.

You are able to move your ship faster by moving it up and down with your joystick - up or down and backward and forward. The "bursts" of speed gained via this method are recorded in the lower left part of the screen.

Another feature you'll like, and which may explain why you may need to use the $B R E A K$ key occasionally, is that there is no real end to the game-unless you get a minus score. Scores above 10 million are possible for the expert, but if you go over that figure. the scoreboard will display characters whose codes are 58 and higher (inverse colon ":". etc.). The window can hold only eight characters.

The creators of this fascinating game have been thoughtful enough to see to it that as many of us as possible can enjoy Wormhole providing different commands for 16 K Color BASIC, for 16 K Extended BASIC. and, for those fortunate enough to have 32 K . The man himself. John Bobst, explains that the set-up differences are needed because the game uses the area from 7168 to 16383 for program and Hi-Res screen. For 16 K either BASIC or Extended BASIC, the hardware stack would be wiped out if the stack moved up. For 32 K systems, the stack is initialized much higher up in memory and is safe from being overwritten.

Showing a strong trust in CoCo owners. Bobst graciously provides details on how to CSAVEM (cassette) or SAVEM (disk) a game in progress or to make a backup copy, insuring that his creation will have a long life.

Wormhole is well-conceived playing wise. has great graphics. strong sound effects. and will keep you transfixed for hours that pass by quickly.
(Zeta Software, P.O. Box 3522, Greenville, SC 29608.

## "TRS-80 COLOR COMPUTER PRODUCTS" "THE 1248-EP EPROM PROGRAMMER"

The 1248-EP EPROM PROGRAMMER is a full. function unit that is compatible with virtually all popular $1 \mathrm{~K}, 2 \mathrm{~K}, 4 \mathrm{~K}$ \& 8 K -by $-8,24$ pin, 5 volt EPROMS. Compatible devices are 2508 's, $2758-0 / 1$ 's, 2516's, 2716's, 2532's, 68732-0/1's, 68764's, and 68766's. Components 2732, 2732A, 2564, and 2764 are compatible via adapters (not supplied). The programmer is totally menu driven by resident position independent firmware in EPROM, which makes it suitable for experienced computer operators and novices alike

Select the device type to be programmed from the device menu Next, select the function to be performed from the function menu. On your command the 1248-EP will verify EPROM erasure, compare EPROM contents to specified contents of RAM or ROM, program blocks or individual bytes of EPROM memory or copy an EPROM's contents to user specified RAM.

The 1248-EP plugs into the cartridge slot of the Color Computer and is invoked by the user with the "EXEC \& HCOOO" BASIC command. The 1248-EP contains its own on-board programming power supply, and has a quality "Zero Insertion Force" socket.

The combination of the TRS-80 Color Computer, an editor/assembler/monitor such as the Micro Works SDS80C츤․․ and the 1248-EP EPROM programmer, makes a high performance, cost effective software development station for MC-6800/6809 microprocessor based systems. Use the system to store your own games or utility programs in EPROM's for execution from the cartridge slot using the CK4 PROM/RAM card described below.

The cost of the 1248-EP EPROM PROGRAMMER, instructions and adapter diagrams is just $\$ 99.95$.

## "THE CK4 PROM / ROM CARD"

TheCK4 works with2K, 4 K or 8K-by-8 ROM's or EPROM's ofthe5 volt only variety in 24 pin packages. In addition, the CK4 may be used with 4 static RAM's such as 6116's to expand the computers memory work space by 8192 bytes. Each of the four on-board sockets can be decoded to any 2 K block of the memory map from $\$ \mathrm{COOO}$ through $\$ \mathrm{~F} 800$ of the Color Computer. In addition, each socket can be configured to respond to address blocks from 2 K to 8 K bytes in length, thus accommodating $2 \mathrm{~K}, 4 \mathrm{~K}$ or 8 K -by- 8 ROM's, EPROM's or RAM's. ROM and RAM can be mixed on the card as well. RAM, on the card, can be written to and then "write protected" via dip switches on the CK4 to emulate ROM.

The instructions include information on how to set up the socket decoding circuitry and how to provide battery backup for programs stored in CMOS static RAM on the CK4 with the computer off or the cartridge removed.

The popular CK4 PROM/RAM card is now available in three versions.

1) The full featured CK4 remains the standard of cartridge board flexibility with the added capability of providing battery backup for CMOS static RAM's such as 6116's. Cost of the CK4 is still just $\$ 29.95$.
2) The CK4-1 is a ROM only version of the CK4 card for use with CoCo's with later than "E series" circuit boards. These later versions of CoCo are not able to write to cartridge based RAM without modification. Cost is $\$ 27.95$ for the CK4-1
3) The CK4-2 is the unpopulated CK4 series circuit boardonly. Buy this version of the CK4 and configure them to meet your specific requirements at a price designed to stretch your dollars value. Cost is $\$ 15.95$ each

## "MORSE ENCODER/DECODER KIJ"

The MEDK80 Morse En/Decoder Kit consists of a machine code software driver on tape, a schematic diagram of the interface circuitry, component parts, a printed circuit board (PCB), packaging suggestions and complete instructions for building a Morse code transmission and reception system that is compatible with 4 K RAM and up models of the TRS-80 Color Computer

The transmitter/receiver interface circuitry is totally optically isolated and is, therefore, compatible with all receivers and transmitters. Transmitter and receiver both connect to the interface unit and to the Color Computer via the RS-232 port.

The MEDK80 Morse En/Decoder kit operates at speeds up to 70 words per minute and automatically adapts to speed variations of the sender. When transmitting, words are transmitted only when fully formed, i.e., followed by a space, and the transmit text buffer gives visual notification to the operator of what word/character is currently being sent. In addition, the text buffer is 512 characters deep, which is sufficiently large to keep up with the best of "ragchewers

Potential purchasers of this product should have previous kit building experience. However, this is not a kit of great complexity, arid is well within the abilities of those actively involved in amateur radio or electronic hobbies to construct. To reduce the chance of wiring errors, component placement is indicated on the PCB and detailed assembly instructions are included

The cost of the MEDK80 software, parts, and instructions is $\$ 39.95$

## "COCO" GETS A BREADBOARD

TheCOCO BREADBOARD is a circuit board that plugs directly into the cartridge slot of the Color Computer and provides the user with 16 square inches of predrilled breadboarding area for circuit development, interfacing experiments, motherboard implementation, or whatever your imagination conjures up. The plated thru holes in the breadboard are wirewrap pin compatible and on 0.10 inch centers.

The COCO BREAD BOARD brings all of the data, address, and control signals available at the cartridge slot outside of the body of the computer and the signal lines are appropriately labeled to facilitate error free wiring of breadboards. A ground plane is provided on the top side of the board and solder pads are provided on the bottom of the board, thus facilitating circuit grounding and point-to-point wiring. In short, the COCO BREADBOARD was designed with the experimenter in mind.

The COCO BREADBOARD is attractively priced to justify its use for even the lowest budget projects. It is an ideal vehicle for learning interfacing techniques. Buy extras to have on hand for those rainy weekends.

The COCO BREADBOARD costs just $\$ 19.95$. Price for two (2) or more is $\$ 16.95$ each.

## ASSEMBLY CORNER <br> Beyond <br> The＇Vaders＇ <br> By Dennis S．Lewandowski

Rainbow Contributing Editor
This month we are going to add a couple of rows to our Invaders，and give them the ability to move to the bottom of the screen（and beyond if we let them）．This is also the place where we are going to leave them．Starting next month we are going to switch the format around a little bit．We will take a sliort BASIC program，and convert it to Machine Language．The reason，it seems，is that we have left many possible programmers out of Machine Language due to the increasing complexity of this game program．This format will be easier to follow as each article will not depend upon the information contained in previous issues．You still will need to know how to use an Editor／Assembler，or a monitor program to enter the programs into the computer．Rather than explaining how an $\mathrm{E} / \mathrm{A}$ or monitor works each couple of articles，a pamphlet will be made available，with a notice of how to obtain it contained at the end of each article．The pamphlet is still in the works and will be available by April （which is also the month of the RAINBOWfest，what a coincidence！），

Now，about the program．As I said，this is where I shall leave it．However，if someone wishes to finish it，the Rainbow and I would be more than happy to publish the listing．The items still needed are：Invaders firing down， Sound，and Scoring．Fairly simple＇？Good；let＇s see your version．I＇m sure we could arrange some sort of prize or something for anyone who wishes to try their hand at it．The listing itself is rather lengthy and if you have been following the series you know that lines ending in asterisks are additions to the previous listing．So have fun－after all， that＇s what this computer is for．
The listing：

# "Pac" Up <br> Your Scuba Gear 

Nibbler and Ms. Nibbler, by Thomas Czarnecki, are a matched pair of maze games in which the scene of the action is an undersea pearl bed and you are a hungry oyster merrily eating sand to make your pearls. But, all is not well in "oyster-dom," for lurking in a cave in the center of your pearl bed are three Sand Monsters who just love raw oysters. Your only hope for survival is to evade your pursuers until you can get to one of the four Magic Catalyzer pellets which lie in the four corners of the maze. Then you become not only immune to the Monsters, but also suddenly hungry for them! Well, if this scenario doesn't seem vaguely familiar, then you obviously haven't been inside an arcade in quite a while.

Both of these Machine Language games are basically the same except that Nibbler uses color-set one while $M s$. Nibbler offers color-set two, a different maze and $M$ s. Nibbler wearing pink lipstick. The programs are autoexecuting with very good title graphics that really show what can be done with Color BASIC's CHRS graphics. The animation is smooth with very little flicker and the game
graphics are good, especially the Sand Monsters, which are slightly "space invaderish." The joystick action is quite good and won't "hang up" on those quick corners (unlike some "Pac" games I've seen) even with "Shack" joysticks.

The scoring is well explained in the documentation which is identical for both games. You get 15 points foreach pile of sand (dot) turned into a pearl and there is a starfish worth 500 points that randomly appears for short lengths of time just below the Monster Cave. The catalyzers are worth 30 points, and while "catalyzed," the value for eating Sand Monsters is 100 for the first one and then doubles for each additional one you get before the effect wears off (you can tell when your time is running out because your shell "clatters" audibly). There is on-screen scoring and a "Top Ten" roster at the end of the game where up to three initials may be entered.

Due to the similarity of these two games I would really recommend buying only one or the other (unless you have the $\$ \$ \$ \ldots$ but, they are different). As to which one, it all depends. Nibbler, due to its color set, is a better choice if you are limited to a B/W TV, but I found the Ms.-Maze to be a little tighter and more of a challenge. All in all, they are both good renditions of the arcade game and would make a nice addition to the game shelf of anyone looking for an enjoyable "Pac" type game.

## Happy Nibbling!

(Nelson Software System, 9072 Lyndale Ave. So., Minneapolis, MN 55420, $\$ 24.95$ tape, $\$ 29.95$ disk plus $\$ 3.00 \mathrm{p} / \mathrm{h}$ )

#### Abstract

COLORFORTH ${ }^{\text {TM }}$ IS THERE LIFE AFTER BASIC? Yes! with COLORFORTH, a new, high level language for the color computer. COLORFORTH, a figFORTH compiler, has an execution time as much as 10 to 20 times faster than Basic, and can be programmed faster than Basic. COLORFORTH is highly modular for easy testing and debugging. COLORFORTH has been specially customized for the color computer and requires only 16K. It does not require Extended Basic. When you purchase COLORFORTH, you receive both cassette and RS/DISK versions, the figEDITOR and an extensive instruction manual. Both versions and 75 page manual, all for only $\$ 49.95$

## PCFORTH

FORTH for the IBM PC ${ }^{\circledR}$ and Zenith Z-1OO. All the features of COLORFORTH, but customized for the IBM ${ }^{\oplus}$ and Zenith Z-1OO ${ }^{\oplus}$ personal computers. Requires 32 K and MS/DOS or IBM/PCDOS. On 5-1/4" SSDD diskette. Complete with 75 page manual, just . . 59.95

MASTER MIXOLOGIST ${ }^{\text {TM }}$
The Bartenders' Guide
This disk based program contains recipes for over 150 of your favorite bar drinks-both alcoholic and non-alcoholic. MASTER MIXOLOGIST is menu driven for ease of use. Requires 16 K and one RS/DOS drive. Get this one today, it will be great for your next party
\$ 19.95

## ARMADILLO BUG ${ }^{\text {TM }}$ MACHINE LANGUAGE MONITOR

More and more programs are appearing in magazines written in Machine Language. Now with ARMADILLO BUG, you can easily enter Machine Language programs without a lot of time consuming "pokes". ARMADILLO BUG is an excellent system for beginners to learn to write and debug their own Machine Language programs as well. This package includes: Memory examine and change; Move; Punch and Load; Fill commands; and more! Runs in 16K, and DOES NOT require Extended Basic. Complete on cassette with printed manual. Just
\$ 14.95

## OTHER ITEMS OF INTEREST

"STARTING FORTH", a book by Leo Brodie. The best introductory Forth text available. 384 pages. Soft cover

## DEALER and AUTHOR INQUIRES INVITED

Please add $\$ 2 . O O$ shipping in U.S.
Texas residents add $5 \%$ Foreign orders must be in U.S. funds drawn on U.S. banks, or Mastercard and VISA

## Release the potential of your Color Computer. .

Use up to 5 compatible Color Computer cartridges at the same time with the BT-1000 Expansion Interface Unit.

- The BT-1000 is limitless combinations. Plug in your disk controller, memory boards, Real Time Clock/Calendar, printer interface, experimental boards-all at one time.
- The BT-1000 is adaptable. Up to five functional peripheral cartridges, in your choice of combinations, will run with any configuration, any size memory of the Color Computer.
- The BT-1000 is flexible. Four 24 -pin sockets hold up to 8 K static RAM or EPROM (can be supplied with an extra 8K RAM).
- The BT-1000 is safe. It will not overload, overheat or damage your Color Computer in any way.

1. Has own built-in power supply.
2. Effectively isolated by a buffered cable.

## That's not all Basic Technology has to offer. .

Record date and time on all programs, files, letters, with the accurate, programmable BT-1020 Real Time Clock/Calendar.

- Plugs into your BT-1000 or directly into the Color Computer expansion slot.
- Adds day, date, month, year, hours, minutes, seconds (12/24 hr.)
- Includes internal NiCad battery, crystal controlled to $0.001 \%$ accuracy (charges when your computer is on)
- Has 50 bytes of battery backed general purpose memory

## All Basic Technology components are first-line quality.

- gold board-edge connectors
- glass epoxy PC boards
- 180-day full parts and labor warranty on all components

Your Basic Technology components arrive assembled, tested, ready to plug in and turn on. A comprehensive User/Service Manual is included with complete schematics, PC component layouts, parts lists and hints on mapping your peripheral addons anywhere in the CPU addressable memory. Write for free brochure.

BT-1000 incl. cable $\$ 270$ BT-1020 Clock/Calendar \$109 BT-1000 w/8K RAM $\$ 300$
Add $\$ 5.00$ shipping \& handling for BT-1000, $\$ 2.50$ for BT-1020. Michigan residents add $4 \%$ sales tax. Shipping \& handling for residents of Canada, Hawaii, Alaska is $\$ 10.00$. Overseas orders add $15 \%$. Check, money order, VISA, MC (give account no., expiration date, phone no.). Personal checks allow 2.3 weeks to clear. COD charge $\$ 2.00$ (requires certified check or money order).
"Watch for more peripherals from Basic Technology."

## THESE FINE STORES CARRY THE RAINBOW

The retail stores listed below carry the RAINBOW on a regular basis and may have other products of interest to Color Computer users. We suggest you patronize those in your area.

## ADVERTISER'S INDEX

## We encourage you to patronize our advertisers-all of whom support the TRS-80 Color and IDP System-100 computers. We will appreciate your mentioning the RAINBOW when you contact these firms.
