## ARTS AND LETTERS

## INFORMATION, PLEASE

## Editor:

Thanks for printing a good magazine like the Rainbow. I've been learning a lot from it for my CoCo and for my job.

I wrote to a company called Cybertech in Toronto, Canada, that makes TDDs for the deaf and hard of hearing. They returned information about an amplifier that can be connected to a home computer that provides a telephone communications device that can talk to other TDDs and TTYs and other computers and computer centers with ASCII.

Has anyone who is reading this article ever used their CoCo for anything such as this? I would like to know if it works well or not, plus, the advantages and disadvantages.

Also does anyone have a program they would like to share with the rest of us (or sell) to make CoCo do this? In Canada and U.S. there are a lot of people who are deaf and hard of hearing who have CoCos or other computers who would benefit from this. Write me at 682 Elgin St., L3Y 4B3.

Ron Aitken
Newmarket, Ontario
Editor's Note: The coupler (modem) used with TDD/TTY systems is a different type than the modems used for normal computer communication. Also, TDD and TTY units use a different character code (called Baudot), so the terminal programs normally used with the CoCo will not work.

## IN SEARCH OF CAD

## Editor:

I am trying to write a CAD program for PC board design and drafting, which is also my profession. What would be ideal for my program is to have an INTERACTIVE system consisting of: X-Pad, Disk. Ink printer, OS-9/bASIC09. If anyone knows of an alternative, such as using an $1 / O$ port (besides ROM) or direct connections to motherboard, for the X-Pad, please write me at: 1618 Scott St., 41014.

Mark W. Smith
Covington, KY

## Editor:

I have been following Mr. Dale L. Puckett's articles regarding OS-9 and BASIC09 with great interest. These articles have encouraged me to purchase both packages.

My problem is this: after reading through both the instruction manuals I have not been able to find any instructions which tell me how to get BASIC09 to load on OS-9. It seems that somewhere this information would have been presented by Tandy. I would appreciate any directions on clearing up this problem that you could give me. I would assume that many of your readers that purchase this combination will have the same problem. My address is 17 Laurel Ave., 08857.

> Martin Reback Old Bridge, NJ

## DISK DRIVE DILEMMA

## Editor:

I need help!
I have two disk drives and when I try to backup I get "I/O ERROR."

However, when I use drive 0 , only, it will back up without any problem.

Jack Thompson
Gaithersburg, MD
Editor's Note: Sounds like you have problems with one of your disk drives. Try calibrating the speed as shown in the November Rainbow. If this doesn't work try a head alignment kit.

## Editor:

I tried your "remote" driver in my CoCo and hooked it up as specified to my Model III, (2 DR, 48K, with RS-232) via the RS232 ports.

I used R/S's Com Package (26-1149) in the Model III, in the TERM mode. I tried it at all settings of WOR D length, STOP bits, etc. (all at 300 Baud ), and the same on permutations of pins 4,5,6,8, and 20 .

The input from the Model III terminal didn't register the same alphanumeric as the CoCo .
Any assistance would be greatly appreciated.

Bill R. Orr
U.S. Embassy, $N Y$

Editor's Note: The Baud rate needs to be changed. After loading the program, before executing, POKE \& H3FO1,\&HB8.

## SMALL BUSINESS ENCOUNTERS

## Edilor:

I have a 64 K CoCo with one disk and a daisy wheel printer. These items coupled
with Elite*Calc and Telewriter-64 pretty much give me what I need to run my small business. Considering my investment of under $\$ 1200$, it is easy to see how I have become a real fan of the CoCo.
I do not program nor do I understand programmers. The language they use is from another world and 1 am sure that some day they are going to invade us from outer space.

I would like to hear from those readers who would be dealing with programs that are related to the operation of a small business and use the word "input" when plugging in a lamp. They may correspond with me at 448 S. Robson, 85202.

Jim Micheau
Mesa, AZ

## KUDOS

## Editor:

Thanks for an excellent magazine. It has helped me to understand and realize that my machine can do a lot more things than just play games and write letters. It sure has been helpful to learn the CoCo and what it can do, especially as I'm a middle aged lady with no background in computers.

Donna Schmidt
Hays, KS

## Editor:

I have very much enjoyed your mix of material for both the novice and professional. We are all a mix of both, novice and professional. Your magazine has helped me to better understand all of the things that I wanted to know about my CoCo that Tandy didn't bother to tell me.

I work as a software engineer for a large aerospace firm and appreciate your professionalism and dedication to quality. It is good to see a magazine so eager to keep up with developments and so willing to print corrections.

Thanks again for an outstanding product in a sea of mediocrity.

Lee W. Benjamin
Macon, GA

## Editor:

As others have stated, I feel your magazine is and must be the envy of the industry especially at your price. I heartily recommend Rainbow On Tape which is one of the few true bargains still left in America today. You can be sure I will re-subscribe. Keep up the good work.

James K. McLynch
Bronx, NY

## Editor:

I would like to congratulate you on your greater emphasis toward educational soft-
ware. This was my primary reason for buying the CoCo and my three children are benefitting. Keep up the thrust to educational articles and software reviews.

Gary W. Liddell
Houston, TX

## BULLETIN BOARD SYSTEMS

## Editor:

It is with great pride that I announce the start of a new bulletin board service [Westchester BBS]. The board is geared towards the Radio Shack computer, but all are welcome and we try to answer everyone's questions from the E-mail section of the board.

By the time you read this letter we should be on line 24 hours, seven days a week. We are also trying to form a club for the a reas of the Bronx. Westchester, Putnam and Rockland counties for TRS-80 users that will have a special place on our board for such things as meetings and events of the club.

Downloads, uploads as well as graphics are supported on the board for those that have the right software (Colorcom/E or $V$ ideotex) for the graphics part of the board. We have 950 never before published programs that will be put on the download section as time goes by. They range from simple 4 K CoCo to full blown 64 K , two disk drive business programs with lots in between (including many utilities for CoCo ). All are for free!

Call in and try us out and give your fingers
a break. We may just have the program you have been looking for. Our number is (914) 632-1840.

> Bill Graspo (sysop)
> New Rochelle, $N Y$

## Editor:

The Department of Aviation Technology at Purdue University, West Lafayette, Ind., is operating an aviation bulletin board system on weekends and holidays. The system will operate from 5 p.m. Friday until 8 á.m. on Monday, and all day on holidays. The system is operating on a 64 K Radio Shack Color Computer, and will be restricted to aviation topics only. It can be accessed by calling (317) 743-3897.

Michael S. Nolan
West Lafayette, IN

## CHARACTER GENERATORS NEEDED

## Editor:

This is an open letter to all you programmers for the Color Computer who are looking for new avenues for your talents. I work in community cable television and there is a need for low-cost character generators which communities could use for their announcements and messages. Such programs are available for competitors to CoCo but 1 would like to see one available for the Color Computer. A character generator is nothing but a computer programmed for a specific purpose (for those who may wonder),
good ones for community use typically go for about $\$ 3,000$. A Color Computer goes for a lot less than that! If you have questions, please write: 2330 Lakeland Ave., 53704.

Paul Whiting
Madison, WI

## BOUQUETS AND BRICKBATS

## Editor:

1 am a CoCo lover and Rainbow lover as well! I have a problem and since you have the best magazine, l'm bringing my problem to you.
It seems that one your advertisers, Snake Mountain Software, is unreachable. I ordered a program from them last spring and have not received anything but the canceled check. I have written a few letters and tried calling the company so many times that I give up! What do I do? Is this company still in business? If you can help me out, I'll be grateful.

Rick Rahim
Falls Church, VA
Editor's Note: The Rainbow has discontinued running ads for Snake Mountain Software as of our October 1983 issue.

## Editor:

I would like to add words of praise for one of your advertisers. Selected Software advertises a 64 K solderless upgrade. I ordered one and not only did it arrive within 10 days but the kit was exactly as advertised. The docu-

## The Best Selling Program for Young Children Mow Available for: TRS-80 Color Computer16K disk or cassette and TRS-80 Models I/III-32K disk or 16K cassette

## Mine fun educational games for children ages $21 / 2$ to 6

Phone Orders: 800-328-1223
Minnesota: 612-926-7888
Educators Endorse: "Early Games can help children learn new concepts, information and skills, and also introduces them to the joys and benefits of home computers."

Peter Clark, Faculty
Institute of Child Development University of Minnesota
No adult supervision required. The Picture Menu gives children control. They can:

- Match Numbers
- Match Letters $\begin{array}{ll}\text { - Count Colorful } & \text { - Learn the Alphabet } \\ \text { Blocks } & \text { - Spell their Mames }\end{array}$ - Add Stacks of - Compare Shapes Blocks - Subtract Stacks of Blocks - Draw and Save Colorful Pictures

mentation was excellent and all of the instructions were extremely easy to follow. The kit came well packed without any damage. Without any previous knowledge of computer electronics I was able to install my own 64 K upgrade. Many thanks to Selected Software for an excellent product and superior service. Being able to order a product from outside Canada with such reliable, efficient service should put a little trust back in all of us and proves not all mail order houses operate questionably.

Also, many thanks to Spectral Associates for the same attention as mentioned above. They also filled a software order quickly and the products were again every bit as good if not better than advertised.

Thank you again for a superlative magazine, I look forward to each and every issue with great anticipation.

Stan A. Kucera
Winnepeg, Manitoba

## Editor:

One of the Rainbow's departments that I enjoy the most is Letters to Rainbow. I particularly pay attention to the writers' (your readers') comments on their hardware and software purchases.

I would like to pass a favorable experience to your readers.
I purchased direct some months ago from one of your advertisers - EVS Engineering - their DBM Letter Writer (LW) and LWP (merger) program. I was very pleased with the cassette-based $D B M$ program but not entirely satisfied with the printing format (personal preference) of the $L W P$ program. Since the programs are written in BASIC. I was able to change the printing format to a satisfactory layout.

However, I wanted to take maximum advantage of my Gemini-10X printer to generate a more attractive business letterhead. I wrote to EVS Engineering sending them my changes and requesting their assistance for the additional capability I was seeking.

I received a response within two weeks, the information I needed to complete the modification and refinement of the $L W P$. I'm elated with the results and with EVS.

1 find your Rainbow December, 83 review on EVS CC-DBM/LW accurate.

Scott J. Elkes
Toledo, OH

## COUNSEL COMMENTS

## Editor:

I had to write to express my opinions on the January 1984 column by Tom Nelson in "CoCo Counsel." When I finished the article I was quite confused and upset, not so much by what he said, but rather by the way he said it. I felt I was insulted by someone who talked down to me as if I were some ignorant being receiving guidance from the Almighty.

Mr. Nelson claims that "sophisticated" programs like VisiCalc and dBase II are not available for the CoCo because CoCo users won't pay for quality programs. His second claim is that we expect our $\$ 40-\$ 60$ programs to not just equal those "quality" programs, but to outperform them. He also
insinuates that half the programs CoCo owners have are pirated.

I find his attitude rather condescending. I use my CoCo to equate my purchasing of software to the purchasing of any other product I need. When 1 bought my home, I just couldn't afford a $\$ 2$ million home in Pebble Beach. I was able to buy a home at a much smaller cost in Rhode Island. Both homes, however, have several things in common. Both protect the owner from the elements; both have indoor plumbing; both have kitchens, bedrooms and living rooms. True, the Pebble Beach home has many extras not found in my home, but those extras are what the other owner received for the extra cost.
I think the same is true of software. When I bought Elite*Calc, I did not expect VisiCalc. I did expect it to perform basic spreadsheet functions. For the price I paid, I expected to receive less than VisiCalc. Likewise, I expected Telewriter-64 to performall the basic word processing functions, but I did not expect WordStar. I think I could go on with all the "quality" CoCo software I have purchased. Needless to say, I am very satisfied with both these programs.
It is true that I don't know all that goes into developing and marketing an automobile. True, I don't know all about VisiCalc, and my CoCo is my first computer. I am, however, learning. As an educated person, I can read, so 1 research magazines and software reviews before I buy. There are several reviewers whose opinions I respect; some are from the Rainbow' and others are from other computer magazines. I also learn of quality programs from members of my Color Computer Club.

As far as piracy is concerned, 1 doubt that CoCo users pirate any more than Apple or IBM users. Therefore, it is unlikely that piracy affects the CoCo any more than any other brand computer. Piracy is a fact of life and all of us must work to eradicate it.

I hope that Mr. Nelson recognizes that CoCo users are ordinary people who work hard for their money. We want the most for our money when we spend it because most of us buy only what we can afford. That, however, does not mean we are trying to avoid compensating the author for developing the software.

Eugene E. Bouley, Jr.
West Warwick, RI

## PIRACY

## Editor:

The recent articles and commentaries on software piracy have prompted this letter. I am a service technician on the arcade games and was under the impression that when one of the makers of an arcade game decided to release the game to the home market that they sold exclusive rights to the game.

I will use the game Donkey Kong as an example. The rights to this game were sold to Coleco for the home market, yet there are at least four different versions out for the Color Computer. My question is: are the producers of the games for the Color Computer paying any royalties or copyright fees to the manufacturer or to the owner of the home rights?

If the answer is no, then aren't the software producers doing the same thing that they are complaining about? Piracy is piracy, whether from the development end to the consumer end, and if they aren't paying these fees then aren't they depriving the designer of the original system his just rewards?

I am not condoning software piracy but I am tired of getting only one side of the story. If I am mistaken about the fees and they are being paid then I stand corrected, but if not then let's explore the other side of the issue.

In federal courts it has been ruled that the basic system in an arcade game is under copyright and that enhancements that are not designed to defeat the maker are illegal unless authorized by the maker.

You have a great magazine. Keep up the good work.

Mike Ashworth
Lavergne, TN

## GAMES, GAMES, GAMES

## Editor:

Help! 1 consider myself pretty good at Pyramid. I can get past the bottomless pit, the serpent, the west pit in the two-pit room, and I can even navigate the maze of twisty passages. I never need any batteries. But I can only find 10 treasures for a total of 200 points. The maximum is 220 . Something is missing! If anyone can help, write me at Rt. 3, Box $120-\mathrm{A}, 29630$. I have a hunch that there's a chest in the maze of twisty passages.

Chris Cope

## A THIRSTY ADVENTURER

## Editor:

I just got the game The Sands Of Egypt and 1 can't find the scene with the camel, pool of water, or pyramid. I usually die of thirst. Anyone who knows how to get to water, please send a letter to 114 Cherry Hill Drive, 04901.

David Samuel
Waterville, ME

## Editor:

I've been having trouble with green serpents! You guessed it! I've been playing Pyramid! Any hints 'n' tricks would be appreciated. My address is Box 34, VOE 2 T 0 .

Shayne Cameron
Salmon Arm, British Columbia

## Editor:

This is how to get past the serpent in Radio Shack's Pyramid: 1) Get the box, the food, the water, the lamp, the scepter. 2) You have to have the bird. First, drop the scepter, second, get the bird. Third, get scepter. 3) Go to serpent's chambers. Throw bird.
Did you know that there was a panel in the first room?

Dooley Nelson
Athabasca, Alta, Canada

CASSETTE. . . $\$ 49.95$

Colorware researched the word processors available for the Color Computer. This is the best. Tele-writer-64 is a truly sophisticated sys. tem that is marvelously easy to use. It works with any $16 \mathrm{~K}, 32 \mathrm{~K}$ or 64 K system and any CoCo compatible printer.

## TOP-RATED COCO WORD PROCESSOR

# 'REAL TALKER' HARDWARE Voice Synthesizer 

# NEW from COLORWARE.. only... \$59.95 

## THINKING OF BUYING A COCO VOICE SYNTHESIZER? READ THIS....

Making your computer talk couldn't be any easier! 'Real Talker' is a full featured, ready to use, HARDWARE voice synthesizer system in a cartridge pak. It uses the Votrax SC-01 phoneme synthesizer chip to produce a clear, crisp voice.

## FREE TEXT-TO-SPEECH

Included free with 'Real Talker' is Colorware's remarkable Text-to-Speech program. This is a truly powerful machine language utility. What it does is automatically convert plain English to speech. And it has an unlimited vocabulary! For example, use it in the direct mode: Type in a sentence or a paragraph, even mix in numbers, dollar signs, etc., then press enter. The text is spoken. At the same time a phoneme string is generated which can be saved to cassette or disk, modified or used in a Basic program.
We originally planned to sell this major piece of programming for about $\$ 40.00$ but decided it was so useful that no 'Real Talker' user should be without it. Besides, it really shows off the capability of 'Real Talker'.

Also included with 'Real Talker' is our unique Phoneme Editor program. It allows you to explore and create artificial speech at the phoneme level. Phenomes are the fundimental sounds or building blocks of word pronunciation. There are 64 different phenomes, as well as 4 inflection levels at your disposal. Creating and modifying speech at the phenome level is both fascinating and educational. The Phenome Editor may also be used to customize the pronunciation of speech produced by the Text-to-Speech program.

You don't have to use any of our utility programs though. If you write your own Basic Programs, you will find the pocket sized Votrax Dictionary (included free) is all you need to make your own Basic programs talk. This dictionary gives you quick access to the phenome sequences used to create approximately 1400 of the most used words in the English language.

How about compatibility? 'Real Talker' is compatible with any $16 \mathrm{~K}, 32 \mathrm{~K}, 64 \mathrm{~K}$, Extended or non-extended Color Computer. It works with any cassette or disk based system, with or without the Radio Shack Multi-slot expander. No other synthesizer under $\$ 100$ can make this claim. Most other CoCo voice synthesizers require an expensive Multi-slot expander in order to work with the disk system. 'Real Talker' requires only an inexpensive Y adapter. This is an important consideration if you plan on adding a disk or have one already.
'Real Talker' comes completely assembled, tested and ready to use. It is powered by the CoCo and talks through your T.V. speaker so there is nothing else to add. Price includes Text-to-Speech and other programs on cassette (may be transferred to disk), User Manual and Votrax Dictionary. ONLY . .
. $\$ 59.95$
'Y-BRANCHING CABLE' For disk systems. This 40-pin, 3 connector cable allows 'Real Talker' to be used with any disk system
\$29.95

## YOU DECIDE....

Order yours today on our Toll-Free Order Line. If you are not delighted with your 'Real Talker' system, simply return it within 30 days for a prompt, courteous refund.

## HINTS AND TIPS

## Editor:

For readers that have Radio Shack's Graphic Pak there is a small problem of drawing a circle in the EDIT mode. If you draw a circle for a logo or the like, you will end up with the radius line in the finished circle. This is not very useful if you are printing for a finished product. I found if you draw a circle and then draw a seperate line over the radius line, and change the color to EX.(3) the background color, you now have a circle to use without unwanted lines.

> Michael Hoyt

Apple Valley, CA

## Editor:

When using the high speed POKE65495,0 it is very bothersome to have to go back to the regular speed just to print something to the line printer. I have found that it is possible to stay in the high speed mode while printing by doing a POKE 150,191 . When the program is finished and you are ready to go back to regular speed, do a $P O K E$ 65494,0:POKE 150,87 . Everything should then be back to normal. If you are using a printer speed other than 600 Baud, $P O K E$ 150.INT (PEEK (150)*2.2).

> Dale Wheeler
> Merkel, TX

## A TURN-ON

## Editor:

Something I've never seen mentioned in your Letters section or anywhere else is a simple way of dealing with the on-off problem. Why bother installing a LED on your CoCo, or worry about in what order you turn your peripherals on or off? Just plug everything into a fused power bar and turn it all on from the wall switch. I attached a lamp to the whole system so there's no way I'll leave it on all night!

I've been doing it this way for over three years now, and have had no problems. Everything goes on and off at the same instant.

Terry Barker
Nepean, Ontario

## Editor:

I purchased a rigid plastic cassette carrying case which measures $41 / 2^{\prime \prime} \times 111 / 2^{\prime \prime}$ and has a removable top (no hinges). Placing the two halves side by side provides storage for cassettes in the bottom and space for ROM packs in the top. (ROM packs normally will not fit in a cassette rack.)
L. Jackson

Forest Park, OH

## DRAWING DIRECTIONS

## Editor:

Here is a hint for the $D R A W$ statement. When using the $D R A W$ command, you can use variables instead of absolute numbers when telling the computer how far to go in a certain direction or in the color. All you have to do is take the direction or color ( $\mathrm{U}, \mathrm{D}, \mathrm{L},-$ R,E,F,G,H, or C), put an equal sign, and then the variable (i.e., $\mathrm{U}=\mathrm{A}$, where A is the variable). As far as I can tell, you can use the
direction as a variable (i.e., $\mathrm{C}=\mathrm{C}$ or $\mathrm{U}=\mathrm{U}$, where the second C or U is the variable), but you have to put a semicolon at the end of the statement or you'll get an?FC Error.

Michael Kim
Lexington, KY

## A TUNE TIP

## Editor:

I wish to thank Larry Konecky for his program CoCo Composer. This is something I have been waiting for since I got my computer over three years ago! I have transferred many popular songs and classical pieces to play on the computer. If you want to hook up your computer to play them on your stereo, simply connect a patch cord from the mic jack (or aux) from the tape recorder to the stereo. Has anyone been able to make a repeat function (in other words, to copy a section of notes to another part of the piece)? Also, if anyone wants to trade music, send a blank cassette and a S.A.S.E. to: 2 Poe Place, 07726. Once again, thanks, Larry!

## Mark Raphael <br> Englishtown, NJ

## Editor:

I have a 64 K Extended with disk and have been writing a few programs that have "USR" statements. For some reason, the drive motor will stay on sometimes after the disk has been accessed. If you insert a POKE\&HFF40,0 into the program right after you have finished disk access, it will shut off the drive motor.

> Barry Pottinger
> Crowley, $T X$

## Editor:

Congratulations on your first issue of ' 84 ! It was something to bark about. The worse thing about it was getting my human to unleash it to me. Now its best friend is no longer me.

## Doggedly,

Frankie

## RIBBON REJUVENATION

## Editor:

I have a R.S. Line Printer VII which is fine for my needs except the cost of ribbons and their short life is a concern.

To remedy this problem I have done some experimenting. I find that opening the spool cartridge (left-hand end) carefully and using ink pad ink (water soluble) to moisten the little foam roller sponge, being careful not to overdo it, works great for me. This more than doubles the life of my ribbons.

Thanks to Rainbow for all the hints, programs, and other goodies.

Raymond Dixon
Kansasville, WI

## Editor:

As a reader of the Rainbow, as well as other computer publications, I would like to make a suggestion to all who copy programs for their CoCo. Enter a REM statement or two that will identify the publication and issue date. This comes in very handy when you wish to make reference to the original article which generated the program.

Harold L. Laroff
Monsey, NY

## EASY UPGRADE

## Editor:

Judging by the number of letters you publish each month about the problems, real or imagined, of upgrading the CoCo to 64 K , I felt a word of encouragement to your readers might be in order. I took the plunge recently and was amazed at how easy the conversion was. I used the solderless kit from Selected Software and it took me no more than 30 minutes to do the job. The instructions were clear and concise and easily followed by a novice like me.

Any reader who might be contemplating a DIY upgrade can take it from me-it really is not difficult!

Thomas A. Pearson
Omaha, NE

## CLUBS, CLUBS, CLUBS

## Editor:

I would like to announce to all your readers the formation of the Greater Toledo Color Computer Club. The club meets the first Thursday of the month at the Wernert Civic Building, on Douglas north of Laskey, in Toledo. The meeting time is $7: 30 \mathrm{p} . \mathrm{m}$. For more information call 478-6961 or 537-1432. John Nyitray Sylvania, OH

## Editor:

I am trying to form a CoCo Users Club in east central Florida, a club to exchange ideas, information, and programs [non copyrighted] - either machine or BASIC programs, especially the games, and Adventure programs. Anyone in the United States interested in joining please contact me at 985 36th Avenue, 32960.

## Robert Wharran

Vero Beach. FL

## Editor:

I would like to know of the existence of a CoCoclub in or around the Fairfield, Conn., area. Anyone knowing of such a club, please contact me at 570 Reid Street, (203) 333-7301.

Gregory Satir
Fairfield, CT

Before I get down to the "heart" of this month's column, I'd like to make a special mention of the two RAINBOWfests we have coming up in the very near future.
 You've read quite a bit about them in past months, so I do not ant to belabor any of my points.
$B u t, I$ do want to be sure that no one misses either the show in ong Beach in February or the one coming up just six weeks ter in New Brunswick. Information on these shows is elsehere in this month's issue, so I won't go into dates, times, speakers and the like here. All I will say is that, of the thousands and thousands of people who have attended RAINBOWfests we have had before, all but one or two have enjoyed themselves immensely. I hope you won't miss these two opportunities to do the same - one of the best times $I$ have is at RAINBOWfest and, when you attend one, you'll see why.

I look forward to seeing you in either Long Beach, California, or New Brunswick, New Jersey. And, by the way, with the designation of TW A as our "official" airline for the Long Beach show and United Air Lines as our "official" flyer for the New Brunswick festivities, it will be even less expensive if you have to come from farther away.
I apologize, first of all, for failing to take note of our newest column last month and, secondly, failing to give the debut of "School Is In The Heart Of A Child" the attention it deserves.

This new column, by the well-known (and RAINBOWfest-Long Beach CoCo Community Breakfast keynoter) Bob Albrecht and Fran Saito, addresses a subject about which I wrote late last year; namely, that I believe children, especially young children, get much of their knowledge in an informal way. This, of course, is the theme of our new column and one which I believe will become increasingly important as computers begin to make a greater impact in American education.

It may interest you to know that a significantly large number of schools and school districts are regular subscribers to the Rainbow and, I suspect, that the number of teachers who subscribe number in the thousands. We're certainly interested in formal education - as represented by the educational establishment - but I believe computers present an opportunity for learning in an informal setting, as well. Bob and Fran believe the same, and their series may be a very interesting benchmark in the eyolving area of computers and learning, especially as it relates to the very young.

From time to time we have received some very interesting envelopes with rainbows and the like decorating them, We'd like to encourage you - especially some of you youngsters - to liven things up for the fine people who open the mail around here. We've decided to designate an "envelope of the month" and to print a picture of same in the magazine each issue. So, while this may not be the most important thing in the world to you - if you do have occasion to write us, please think about making your envelope eligible for designation as "envelope of the month."

From all indication, the CoCo was one of (if not the) top-selling computers at Christmastime, and there are a whole host of new CoCo owners and Rainbow readers out there. First of all, our congratulations to the marketing people at Radio Shack for another banner year of reading the low-end (in price) computer market. There is no question in our minds that the people in One Tandy Center read the market just right, planned what needed to be done and saw that through.

I hope that you "old-timers" who are reading this will welcome our newcomers into the CoCo Community. Make sure that your local Radio Shack people know about your clubs and user's groups -so they can pass along information. Be sure your own group's listing in the Rainbow is up to date, to make it easier for people to contact you when they buy the magazine. And, too, I hope you will be kind enough to pass along information about the Rainbow to those who have not heard of it. It helps us grow and it helps us help you better.

By way of finally for this month, subscribers in both the United States and Canada may notice a slight improvement in both time of delivery and condition of the Rainbow beginning this month. This is because we will be mailing the magazine by second class mail for the first time this March - after using third class almost from the beginning (we did use first class, once upon a time).

Second class gets a little better handling in the postal service of both countries and that should have an effect in terms of time as well as the condition of the magazine.

See you at RAINBOWfest!

# Telewriter-64 the Color Computer Word Processor 

- 3 display formats: 51/64/85 columns $\times 24$ lines
- True lower case characters
- User-friendly full-screen editor
- Right justificationEasy hyphenation
Drives any printer
- Embedded format and control codes
. Runs in $16 \mathrm{~K}, 32 \mathrm{~K}$, or 64 K
- Menu-driven disk and cassette I/O

## - No hardware modifications required

## THE ORIGINAL

Simply stated, Telewriter is the most powerful word processor you can buy for the TRS-80 Color Computer. The original Telewriter has received rave reviews in every major Color Computer and TRS-80 magazine, as well as enthusiastic praise from thousands of satisfied owners. And rightly so.
The standard Color Computer display of 32 characters by 16 lines without lower case is simply inadequate for serious word processing. The checkerboard letters and tiny lines give you no feel for how your writing looks or reads. Telewriter gives the Color Computer a 51 column by 24 line screen display with true lower case characters. So a Telewriter screen looks like a printed page, with a good chunk of text on screen at one time. In fact, more on screen text than you'd get with Apple II, Atari, TI, Vic or TRS-80 Model $1 I I$.
On top of that, the sophisticated Telewriter full-screen editor is so simple to use, it makes writing fun. With single-letter mnemonic commands, and menu-driven I/O and formatting, Telewriter surpasses all others for user friendliness and pure power.
Telewriter's chain printing feature means that the size of your text is never limited by the amount of memory you have, and Telewriter's advanced cassette handler gives you a powerful word processor without the major additional cost of a disk.
...one of the best programs for the Color Computer I have seen..

- Color Computer News, Jan. 1982

## TELEWRITER-64

But now we've added more power to Telewriter. Not just bells and whistles, but major features that give you total control over your writing. We call this new supercharged version Telewriter-64. For two reasons.

## 64K COMPATIBLE

Telewriter -64 runs fully in any Color Computer $-16 \mathrm{~K}, 32 \mathrm{~K}$, or 64 K , with or without Extended Basic, with disk or cassette or both. It automatically configures itself to take optimum advantage of all available memory. That means that when you upgrade your memory, the Telewriter-64 text buffer grows accordingly. In a 64 K cassette based system, for example, you get about 40 K of memory to store text. So you don't need disk or FLEX to put all your 64 K to work immediately.

## 64 COLUMNS (AND 85!)

Besides the original 51 column screen, Telewriter- 64 now gives you 2 additional highdensity displays: $64 \times 24$ and $85 \times 24$ !! Both high density modes provide all the standard Telewriter editing capabilities, and you can switch instantly to any of the 3 formats with a single control key command.
The $51 \times 24$ display is clear and crisp on the screen. The two high density modes are more crowded and less easily readable, but they are perfect for showing you the exact layout of your printed page, all on the screen at one time. Compare this with cumbersome
"windows" that show you only fragments at a time and don't even allow editing.

## RIGHT JUSTIFICATION \& HYPHENATION

One outstanding advantage of the full-width screen display is that you can now set the screen width to match the width of your printed page, so that 'what you see is what you get." This makes exact alignment of columns possible and it makes hyphenation simple.
Since short lines are the reason for the large spaces often found in standard right justified text, and since hyphenation is the most effective way to eliminate short lines, Telewriter-64 can now promise you some of the best looking right justification you can get on the Color Computer.

## FEATURES \& SPECIFICATIONS:

Printing and formatting: Drives any printer (LPVII/VIII, DMP-100/200, Epson, Okidata, Centronics, NEC, C. Itoh, Smith-Corona, Terminet, etc).
Embedded control codes give full dynamic access to intelligent printer features like: underlining, subscript, superscript, variable font and type size, dotgraphics, etc.
Dynamic (embedded) format controls for: top, bottom, and left margins; line length, lines per page, line spacing, new page, change page numbering, conditional new page, enable/disable justification. Menu-driven control of these parameters, as well as pause at page bottom, page numbering, baud rate (so you can run your printer at top speed), and Epson font. "Typewriter"' feature sends typed lines directly to your printer, and Direct mode sends control codes right from the keyboard. Special Epson driver simplifies use with MX-80.
Supports single and multi-line headers and automatic centering. Print or save all or any section of the text buffer. Chain print any number of files from cassette or disk.

File and I/O Features: ASCII format files create and edit BASIC, Assembly, Pascal, and C programs, Smart Terminal files (for uploading or downloading), even text files from other word processors. Compatible with spelling checkers (like Spell 'n Fix).
Cassette verify command for sure saves. Cassette autoretry means you type a load command only once no matter where you are in the tape.
Read in, save, partial save, and append files with disk and/or cassette. For disk: print directory with free space to screen or printer, kill and rename files, se default drive. Easily customized to the number of drives in the system.
Editing features: Fast, full-screen editor with wordwrap, block copy, block move, block delete, line delete, global search and replace (or delete), wild card search, fast auto-repeat cursor, fast scrolling, cursor up, down, right, left, begin line, end line, top of text, bottom of text; page forward, page backward, align text, tabs, choice of buff or green background, complete error protection, line counter, word counter space left, current file name, default drive in effect, set line length on screen.
Insert or delete text anywhere on the screen without changing 'modes." This fast "free-form"' editor provides maximum ease of use. Everything you do appears immediately on the screen in front of you. Commands require only a single key or a single key plus CLEAR.
.truly a state of the art word processor outstanding in every respect.

- The RAINBOW, Jan. 1982

## PROFESSIONAL <br> WORD PROCESSING

You can no longer afford to be without the power and efficiency word processing brings to everything you write. The TRS-80 Color Computer is the lowest priced micro with the capability for serious word processing. And only Telewriter-64 fully unleashes that capability
Telewriter-64 costs $\$ 49.95$ on cassette, $\$ 59.95$ on disk, and comes complete with over 70 pages of well-written documentation. (The step-by-step tutorial will have your writing with Telewriter-64 in a matter of minutes.) To order, send check or money order to:

# Our Business/Financial Issue . . . <br> Graphic Advice for Adventure Authors . . . And, Introducing the Rainbow Wishing Well . . . 

Dr. Doom rolled his eyes back in his head and sort of collapsed into a chair when 1 typed SCORE and read, " 1079 moves used." I pressed onward. We were Adventuring with Mark Data's Shenanigans and knew we were close. After all, how many wrong turns could one 32 K program throw at you? We had played around at Shenanigans on other occasions, but, at 4:30 a.m. on this particular morning, things had become strictly business. We were desperate men, out for blood.

We had long since thrown out the rule book and had prepared a complete sector-by-sector printout as well as the usual yellow pad full of maps. I mean, if He hadn't meant for us to peek, we wouldn't have disk zap programs.

If you haven't yet sampled the new breed of graphic Adventure programs, such as Shenanigans, the new Calixto Island and Sea Quest, as well as Radio Shack's own Sands of Egypt, you have a treat in store. Others can have the arcade shoot-'em-ups; I'll go Adventuring.

In this issue, Eric Tilenius shows us the rudiments in "Creating Your Own Graphic Adventure," so, if you're ready to explore this forefront of Adventure writing, turn to his tutorial. On the other hand, if you're in a "strictly business" mood, this month we center on "money" -- how to estimate it, make it, count it, invest it, project it and manage it.

Among our money-minded authors, Ed Carson offers us a program to analyze a company's financial strength. John Steiner puts Elite*Calc to work in the businessplace. J.D. Ray provides a program to show us what inflation has done to us, and will be doing to us. And, Eddie Hill has Cost Calc, which is a business program to figure total cost and cost per unit in production.

One of our specials this month is Finance by our "KISSable OS-9" columnist, Dale Puckett. Dale's multipurpose program is, we believe, the first major CoCo OS-9 program to be published anywhere! Along with Dale's prolific writings on OS-9, we have a very useful utility by Melvin Hefter for combining your OS-9 boot and systems disks into one. Also in our RainbowTech section, check out "hogg_wash" for some SAGE commentary.

New this month is Fred Scerbo's "Wishing Well." Fred, a consummate Basic author and frequent Rainbow contributor, wants you to toss only your wishes down his well, and Rainbow will supply the coin. That is, if you have an idea for a great program, or need one to solve a problem of general interest, just make out your software wish list and Fred says he'll try to make your wish a reality. Fred's first offering, Playbook, is just what the coach drew up.

Our March issue has the usual full mix of subject matter, from youth-oriented programs that veteran contributors like Education writer Steve Blyn keep hammering out month after month to the hardware projects of Tony DiStefano, to action graphics games like Little Runner and Stunt Pilot. Just start your reading Adventure on the first page of the magazine and keep traveling east; you won't get far before something grabs you!

And, if you're still grabbing at the local newsstand for your copy of the Rainbow, heed this advice from the world's first gonzo computerist: Dr. Doom's prescription for CoCo Fever is a year's subscription to the Rainbow - a clear path to a pot of gold every month, without any shenanigans.

- Jim Reed

## G24 KBYTE SYSTEM!

## (Including 2 Diskettes)

## AMEIEK YOUR 

Get 312 Kbytes* of on-line, formatted storage capacity for your Color Computer with the Amdisk-III. The Amdisk-III is a disk drive system that combines the capacity and compatibility of $5 \frac{1}{4}$ " floppies with the convenient size and ruggedness of the state-of-the-art in technology - the $3^{\prime \prime}$ microfloppy cartridge.
Join the move to maximize your Color Computer's power and "Amdisk" it. Many software vendors have joined, and will be providing software on Amdek's 3" cartridge upon request. These software suppliers are: Cognitec; Computerware; Frank Hogg Laboratories; The MicroWorks; Tom Mix Software; Moreton Bay Software; Nelson Software Systems; Petrocci Freelance Associates; Prickly Pear Software; Saguaro Software; Skyline Marketing; The Software Station; Spectrum Projects; Star-Kits and Sugar Software.

* An additional 312 Kbytes may be accessed by manually flipping the media over,
${ }^{\circledR}$ Color Computer is a registered trademark of Tandy Corporation

## Single Drive Version Available - ${ }^{57379}$

You can purchase the Amdisk-III from any of these fine dealers:
Computerware: (619) 436-3512
DATAMAN: (416) 529.1319
Delker Electronics: (615) 459-2636 Emerald Computer: (800) 468-4606 Saguaro Software: (602) $885-6508$ Skyline Marketing: (312) 286.0762 The Software Station: (313) 532.2550 Spectrum Projects: (212) 441-2807 or ask for the Amdisk-III at your local computer dealer.

## The affordable step up in home computing.

 Radio Shack's Best Is Now

Expand Your Programming Power! Our new 64K Extended BASIC Color Computer 2 gives superb features to serious programmers-at a very low price. It attaches easily to any television, and has an electric typewriterquality keyboard in a compact, white case. Using the built-in Extended BASIC language, you can write sophisticated programs and easily create high-resolution graphics. Produce drawings, charts, diagrams and animation with simple, one-line commands. "Draw" with eight different colors, create musical tones, analyze data and much more. Or select from our large library of in-stant-loading Program Pak ${ }^{\text {min }}$ cartridges for games, education and budgeting.

# TRS-80 Color Computer Even Better. 

The Heart of a Professional Disk-Based System. Add a Color Computer disk drive for an extra 156,000 characters of storage and quicker access to your data. You can add up to four disk drives for a vast 626,000 characters of total storage. For advanced programmers, our new OS-9 operating system (26-3030, \$69.95) allows you to utilize the full 64,000 -character memory for assembly language programs. OS-9 includes a text editor, assembler and debugger. You can develop and edit your own assembly language programs, convert them into machine language for execution, then test them for errors.

Easily Expandable. Best of all, your 64 K Color Computer 2 will grow with your future needs. Add our Deluxe Joysticks for more accurate cursor control and faster response with your favorite games. Or choose our Multi-Pak Interface, which lets you connect up to four Program Paks to your Color Computer at once. When you're ready to change programs, just move the selector switch. Go on-line with the world with our deluxe RS-232 Program Pak (26-2226, \$79.95). You can communicate with national information services and local bulletin boards by telephone-just add a modem. You can also add a printer, a Color Mouse cursor controller and more! See It Today. The 64 K Extended BASIC Color Computer 2 is available today at over 1000 Radio Shack Computer Centers and at participating Radio Shack stores and dealers nationwide.

# Markup And Profit Two For The Money <br> By Harvey Dettmann 

## Markup

TWhis program can be used by small businesses to take their cost prices and add any percent they wish to mark it up and it will tell them the selling price per dozen and the selling price each. You have the option of answers to the screen or to the printer. (You will find an attached printout of the results.)

The screen version looks like this:
The input prompts look like this:
ITEM: ?
COST/PER/DOZ: ?
\% OF MARKUP: ?

## SELLING PRICE IS: $\$ 0.00 \mathrm{DZ}$. <br> $$
-\mathrm{OR}
$$

SELLING PRICE IS: \$ 0.00 EA . PRINTER OR SCREEN (P/S) ?
Once you use the print option it is best to stay in it if you want a hard copy of all further results. The reason is the first item printed has a heading and column headings and all other entries line up under it.
Percentages are put in as whole numbers.

$$
\begin{array}{r}
\text { EXAMPLE: } \\
5=5 \% \\
10=10 \% \\
11.5=111 / 2 \% \\
28=28 \% \\
200=200 \%
\end{array}
$$

(Harvey Dettmann, a retired senior citizen on disability, has enjoyed the Color Compuyter for a year and a half. He says it has given his life a new direction.)

## Profit

This program is similar to Markup in that it prints either to the screen or the printer.
The only difference is it gives you the percent of profit you will make, knowing the cost and selling prices.
The example below shows the screen prompts and the answers.

PERCENT OF PROFIT
ITEM ? APPLES
COST ? . 67
SELLING PRICE ? 1.49
PERCENT OF PROFIT 122.39 \%
ANOTHER TRY?
PRINTER OR SCREEN(P/S) ?
If you use the screen option you don't have to enter an item, just press [ENTER] and go on to the cost and selling price. The reason for the "ITEM" prompt is in case you use the printer option. That way you can print many successive items and know what calculation is for what item.

Below are examples of the printout for Markup and \% Profit programs. Each item on each list is printed singly. That is, each entry is put in the computer and printed before the next item is put in. If you want another entry you must answer (Y)ES to the prompt to print another.

STPER SCREEN

- A big 51 character by 24 line screen.
- Full upper and lower case characters
- Easily combine text with hi-res graphics.
- PRINT@ is completely functional on the big screen.
- The powertul ON ERROR GOTO is fully implemented
- Auto-key repeat for greater keyboard convenience.
- Control codes for additional functions.
- Works with $16 \mathrm{~K}, 32 \mathrm{~K}$ or 64 K computers.
- Available on disc or cassette
- Works with extended and/or disc BASIC.

## 51 CHARACTERS BY 24 LINE DISPLAY

Super Screen is a powerful, machine language program that significantly upgrades the performance and usefulness of 16 K or greater, Extended and Disc Basic Color Computers. The standard Color Computer display screen is totally inadequate for serjous, personal or business applications so Super Screen replaces it with a brand new, 51 character wide by 24 line screen including full upper and tower case characters. instead of a confusing checkerboard appearance, you now have true lower case letters along with a screen that is capable of displaying 1224 characters. The difference is startling! Your computer takes on new dimensions and can easily handle lines of text that were simply too long and complex to display on the old screen.

## COMBINE TEXT WITH HI-RES GRAPHICS

You can now write truly professional looking programs that combine text with hires graphics. Super Screen allows you to create graphics displays with the Basic LINE. DRAW and CIRCLE statements and then notate the graphics with descriptive text. You can even use PRINT (O) if you wish for greater programming convenience. Super Screer's versatility will amaze you.

## PRINT @ IS FULLY IMPLEMENTED

The PRINT @ statement is a valuable asset to the programmer when formatting text on the screen. The standard Color Computer will report an error if you specify a on the screen. The standard Color Computer will report an error if you specify a
location higher than 511 but Super Screen allows locations all the way to 1223 ! You get a big screen and a powerful formatting tool as well. Of course, Super Screen also supports the CLS command allowing you to ciear the big screen using standard Basic syntax

## ON ERROR GOTO

That's right Super Screen gives you a full implementation of ON ERROR GOTO including the ERR and ERL functions. Now you can trap errors and take corrective action to prevent crashed programs and lost data using the same standard syntax as other computers. The ON ERROR GOTO capability overcomes a serious deficiency of Color Computer Basic and greatly improves your capability to handle sophisticated tasks. All well written, 'user friendly' programs use error trapping techniques and yours can too! Now that's power!

## AUTO KEY REPEAT

No more frustration as you edit a long line in your Basic program: just hold the space bar down and automatically step to the desired position in the line. Need a line of asterisks? Hold the key down and auto repeat will give them to you. Those of you who spend many hours at your keyboard will appreciate this outstanding addition to Super Screen's tong list of impressive capabilities.

## CONTROL CODES FOR ADDITIONAL FUNCTIONS

Super Screen recognizes several special control code characters that allow selection of block or underline, solid or blinking cursor and other functions. You can 'Home Up' the curspr or you may erase from the cursor to the end of a line or to the end of the screen just like many other computers. These special codes give you an extra dimension of versatility and convenience that put Super Screen in a class by itself.

## AND MORE GOOD NEWS..

Super Screen comes with complete, well detailed instructions and is available on cassette or disc. It adjusts automatically to any 16 K or greater, Extended or Disc Basic Color Computer or TDP-100 and uses only $2 K$ of memory in addition to the screen memory reserved during power up. Guaranteed to be the most frequently used program in your software library... once you use it, you won't be without it! Super Screen's low price will really please you; only $\$ 29.95$ on cassette or $\$ 32.95$ on discl

## ACCOUNTING SYSTEM

The Mark Data Products accounting system is ideal for the smali businessman needing a fast, efficient means to process income and expenses, prepare detailed reports and maintain most of the informațion required at tax time. The system is a family of programs which operate by means of a menu" selection scheme. When the operator selects a task to perform, the computer loads a program designed to handle that task from the system disc. The system disc contains all of the programs required to create, update and maintain data files and prepare the necessary accounting reports including a transaction journal, a P\&L or income report, an interim or tria balance and a balance sheet
Up to 255 separate accounts may be defined and a single disc system can hold ove 1,400 transactions. This system automatically enhances the monitor screen to a 51 character by 24 line display 32 K of memory is required along with an 80 -column printer and one or more disc drives.

The MDP system

- Is accurate, user friendly and simple to use
- Is easy to customize for specific user requirements
- Immediately updates the chart of accounts
- Provides an audit trail.
- Includes end of period procedures
- Is capable of future expandability.

This accounting software equals or exceeds higher priced packages for other computers and includes a detailed operating manual

Requires 32 K and a Single Disc Drive
PRICE: $\$ 99.95$

## ORDER ENTRY SYSTEM

The Mark Data Products sales order processing system provides a fast, efficient means to enter orders, print shipping papers and invoices, prepare sales reports, and monitor receivables. The system automatically enhances the monitor screen to a 51 character by 24 line display. 32 K of memory is required along with an 80 -column printer, and one or more disc drives.

The MDP order entry system is a family or programs which operate interactively by means of a"menu" selection scheme. Up to 900 products may be defined and a single disc system can hold over 600 transactions. When the operator selects a task to be performed. the computer loads a program designed to handle that task from the system disc. The system disc contains all of the programs required to create, update and maintain data files and prepare the necessary paperwork including shipping and invoice torms, daily sales reports. a monthly (or other period) sales report and a receivables report

The MDP system

- Is accurate, user friendly and simple to use
- Is easy to customize for specific user requirements
- Produces a traceable invoice.
- Handles receivables as well as closed orders
- Is capable of future expandability

This order entry software equals or exceeds higher priced packages for other computers and includes a detailed operating manual.

Requires 32 K and á Single Disc Drive
PRICE: $\$ 99.95$

## COMMENTARY

and the Colop Computer By D.E.Mitchell

TThe stock answer to the question "What kind of computer should I buy?" is "What do you want to do with it?" Then you are supposed to find the software that will do what you want and buy a machine that will run that software. About two years ago, I asked that question of a Radio Shack salesman and told him that I was interested in financial and business software. His response was that any computer in the store except the Color Computer would be a good choice, since there was no "business software" available for the game machine.

Never having been much good at taking advice, and not wanting to put up the price of a Model 111, I bought a 16 K Color Computer anyway ( $\$ 700$ back then). But surprisingly enough, the salesman was right; there was no business software for the Color Computer.
But that was two years ago, and the same answer is no longer true. While Radio Shack still produces no serious business software for the Color Computer, third party software producers have been steadily grinding out increasingly sophisticated packages; and all indications are that more is on the way. Certainly the availability, complexity, and timeproven features of the larger computers are still not being challenged, but the Color Computer is a serious contender for the owner of a small business who wants an inexpensive, general purpose machine that will fill his accounting needs as well as provide personal enjoyment.

With that in mind, this article is intended to describe the components and features of "typical" business software so that the Color Computer owner can more readily evaluate current and future offerings. I won't go into any specific products now being offered, since I could be suspected of moderate bias if I did, but will instead stick to a description of concepts, terms, and buzzwords.
"Business Software" can be roughly classified into two major categories: management tools and special purpose programs. Management tools are packages that allow a person to perform the major functions of computerized data processing without having to actually write programs, but
(Dennis Mitchell is head of the business sofiware group of Color Software Services, a division of Brantex, Inc.)

he is still responsible for system definition and overall design of the job performed. Special purpose programs are written to perform a specific task, and the user will normally conform generally to the program that he has purchased. Each method has its advantages and disadvantages. The management tools provide much greater flexibility but require more time and effort from the user, while the special purpose programs require much less start-up effort but take away from the user's flexibility.

Management tools will typically consist of three major packages: an electronic spreadsheet, a data manager, and a word processor. Enhancemants to the system may include a graphics package, a communications package, possibly a spelling checker, etc., but the three central programs allow the user to file, manipulate, retrieve, and display his data in almost any fashion he desires, subject only to the limits of his imagination and capabilities.

Although bells and whistles on each of the three types vary, typical functions performed by each include:

Electronic Spreadsheet - A matrix of data in row/column format that allows formatting and mathematical calculation of data in the traditional across/down method. They allow a user to enter data and operate on it with specified formulas, all without actually having to do any programming.
Data Managers - These systems, often called file managers or database managers, allow the user to define his data structure and entry procedures, design input "masks," and define reports and outputs to display the data in the required format.
Word Processors - These act as a sophisticated typewriter that holds and remembers what it has done, thus providing a filing system at the same time.

With these three packages, and perhaps some of the above-mentioned enhancements, there's really not much processing a user can't do, provided he is willing to spend the time and effort to learn them all and to design his own system. For the user who prefers to purchase specialized programs that are designed to perform a certain function, special purpose programs are the more logical choice. The most common and most extensive special purpose business programs are accounting software, and that is what I will describe to illustrate this type.

Typical accounting software consists of the "Big Five":

General Ledger, Accounts Receivable, Accounts Payable, Payroll, and Inventory Control packages. As with the management tools, enhancements can be added, such as order entry, sales analysis and/or forecasting, purchase order accounting, etc., but the "Big Five" are the most common.

The functions of each of the five include:
General Ledger - The "heart" of any accounting system. In its barest form, it must keep track of the total flow of income and expenses of a business during a period of time, and the status of the firm's assets and liabilities at a given point in time. From the data that it maintains, it will generally produce standard financial reports, including at least an Income Statement (sometimes called a Profit and Loss [P\&L] statement), which is a summary of income and expenses during an accounting period, and a Balance Sheet, which summarizes a point-in-time status of a company's assets and liabilities. Several other reports may be generated from this date, but these two are the primary outputs of the General Ledger.

In a stand-alone configuration, a General Ledger will normally receive data input from sales or other income modules, maintain the status of Accounts Payable (a liability) and Accounts Receivable (an asset), and monitor expenses and other assets and liabilities of the firm. Provisions must be included to status and maintain the data files, and varying levels of user control/modification may be included. General Ledger files will not typically include extensive information or history on vendors, customers, payroll, etc., only the minimum amount required to get information for the reports. If more extensive data is required, one of the following modules should be added.
Accounts Receivable - This program is used to keep more extensive records and prepare better reports on the customers of a firm. It may be purchased as a stand-alone system for this purpose or used to feed summary information to the General Ledger that is required for its reports. Full records of a customer's name, address, phone number, status, history, etc. are typically maintained, and this information can be used to generate invoices, statements, mailing lists, or aging reports (a report showing the current or overdue status of an account), all in much greater detail than available from the Accounts Receivable module of the General Ledger.
Accounts Payable - Almost a mirror image of the Accounts

Receivable program, except that it shows who the company owes rather than vice versa. Although no invoices or statements are required, a check register and possibly a check writer module are sometimes included as well as reports similar to those of the Accounts Receivable program. Again, much greater detail is maintained than in the equivalent General Ledger module.
Payroll - Data maintained by a payroll system generally includes a personnel file on the company's employees as well as all of the data required to calculate pay, maintain tax records, and possibly print checks and tax forms. Since tax tables change frequently, a provision is either made for the user to update required tax tables, or this service is provided by the vendor for an additional charge. Federal tax tables are common and relatively easily provided; however, state tables vary dramatically for each state and are not as easily maintained by a vendor.

A payroll system may also be used as a stand-alone program, or its output may be used as input to a General Ledger (payroll expense and payroll owed as a liability).
Inventory Control - The largest and most difficult to control asset of a firm is frequently its inventory, and some method may be required to keep accurate figures on its current status. Two different kinds of inventory controls may be used; a periodic inventory or a perpetual inventory system. In a periodic inventory system, a physical count or estimate of items is made at the end of a period, and the period's beginning amount plus items purchased during the period less the current amount yields the amount consumed /issued/sold during the period. In a perpetual inventory system, the amount on hand is constantly updated by purchases and items sold or issued, thus giving a current status at any point in time. This status should then be periodically verified and adjusted as required. Only the latter system may be used to satisfy on-line inquiry and update requirements.

Regardless of the method chosen - management tools or special purpose programs - the current trend in today's software market is integration, which means that data generated from one system should be able to be readily transferred to another.

With management tools, this means that data from a file manager should be acceptable to a spreadsheet and vice versa, and a word processor should be able to integrate data from either one into its text files. In accounting packages, it normally means that the General-Ledger should be able to access and accept data from the other accounting modules (A/R, A/P, Payroll, etc.), and in some cases that lateral transfer of data between modules be accomplished (e.g. accrued payroll from the payroll system to accounts payable). To carry this even further, data from special purpose programs can be accessible from management tools for a truly integrated system. Without integration, output from each stand-alone package must be extracted, reformatted; and manually reentered into another package as appropriate. This redundancy of data entry should be avoided whenever possible.

All of the above-described programs are currently available for the Color Computer from at least one, and sometimes several, vendors. Hopefully, the brief descriptions I have sketched will help somewhat in understanding what is encompassed by the term "Business Software" and will help some of you in determining what category of user you belong to and what might best suit your requirements.

# EDTASM Minus？ 

By Pete Eichstaedt

Before I got EDTASM＋I used the short program in the＂Rainbow Info＂column to enter machine lan－ guage programs．Since my typing skills are lacking，I found I had to re－enter most programs several times before they would work．After a few frustrating nights behind the keyboard with no success，I decided to improve the Rain－ bow＇s ML entry program．The program that follows will display memory contents and allow you to change it，or leave it alone．As well，it will increment and decrement the address．

The instructions that come up on the screen are simple． The only special instruction for its use is to $C L E A R$ 200，\＆$H X X X X$ before loading Memcheck（ $\& H X X X X=$ the start address of your ML program）．If you find an improve～ ment for the program，drop me a line．

My program will never replace an Editor／Assembler，but it＇ll keep you going while you＇re saving for it．

# Creating The Graphic Adventure 

By Eric W. Tilenius

Are you tired of writing a terrific Adventure, only to be greeted by a cold, unfriendly, boring plain screen of text? Put a little life into your Adventure - with Graphics.

This article will show you how you can make your own graphic Adventures. It is designed to be used as a follow up to my article on writing Adventure programs in February's Rainbow. As an example, a small graphics Adventure will be created step by step and, while the graphic artistry may not be that great (l'm just not much of an artist), all the techniques used in a large, beautifully pictured graphic Adventure will be shown.
With a little imagination, you can elevate your Adventures from boring text status to the elite class of . . graphic Adventures!

The first problem that arises with a graphic Adventure is how to get the text onto the graphics screen. After all, an Adventure with just graphics and no words just inn't much of an Adventure. Probably the easiest way of doing this is through the use of "draw strings." In case you are a little rusty with your DRAW command, draw out your Going Ahead with Extended Color BASIC manual and review chapter 7 (pp. 52-65).

The letters A-Z, along with any other characters which you want to print on the screen, will be put into an array (let's use $\mathrm{W} \$(\mathrm{X})$ ) and can then be drawn on the screen. Thus, the draw string for letter A would be kept in W\$(1), letter B in W\$(2), etc. First, however, you must design the characters by telling the computer what pattern to draw on the Hi-Res

[^2]screen. For example, the letter A can be represented by the following:
$$
65 \mathrm{WS}(\mathrm{I})=\text { "BR3;U4;E2;F2;D2;L4;R4;D2;" }
$$

The other letters are done similarly. The completed set of letters is in program listing 1 in lines 65-95. The letters are adapted from a program by Peter Stumpf in the November 1983 issue of Color Micro Journal. My thanks to the editors for letting me use the program. You can just copy them from lines 65-95 of my program for use in your Adventure, but if you are an ambitious programmer, you might want to change them to suit your style. Now that the letters are safely tucked in their strings, how do we draw the text? The easiest way, by far, is with a subroutine that prints out each character in a string. One such subroutine is listed below. Whatever you say $\mathrm{N} \$$ is, it prints on the screen.

```
10020 FOR C=1 TO LEN(N$)
10030 N1$=MID$(N$,C,1)
10040 N1=ASC(N1$)
10045 IF N = =32 THEN DRAW"BM+6,0;"
10050 IF NI>=65 AND N l<=90 THEN GOTO 10060
        ELSE NEXT C
10060 Nl=N1-64
10070 DRAW W$(N1)
10080 NEXT C
10090 RETURN
```

Line 10020 sets up a loop to go through $\mathrm{N} \$$ one letter at a time. Line 10030 takes the current character in NS that the program is using and calls it N1S. Line 10040 gets the ASCII value of N1\$. Each symbol, or character, that the computer can print is given a code. This is the ASCII value. An "A," for example, has an ASCII code of 65 , and a " $Z$ " has a value of 90 . All the other letters of the alphabet come in between 65 and 90 in alphabetical order. Thus, a " B " will have an ASCII value of 66 , etc. If the ASCII value is 32 , which signifies a space, line 10045 moves the invisible Hi-Res "cursor" over six pixels (dots) on the high resolution screen, thus spacing things out a bit. Line 10050 then checks if the character is between A and Z (inclusive) and, if it is, the

# INTERCEPT 4 

By J. Weaver, Jr.

Your ship and the planet are under attack. Hostile alien craft whip around the ship, releasing flamming bolts of energy upon the hull of the INTERCEPT. Immediately your own guns come alive, warding off the sudden attackers, but will it be enough? Already many of the fighters have escaped past your ship toward the defenseless colonies below. Once the air battle is over, you must transport down to the planet, try to find the alien foe, and destroy them. Then, the hardest task awaits: Using the full power of the INTERCEPT, you must battle and destroy the mother ship!! Three separate
 screens or levels of play. Each screen scrolls in all four directions. A fantastic new game by the author of Outhouse. Requires two joysticks. 32K.
. \$27.95/29.95

## GRAPHICOM

The hit of the Pasadena Color Expo. The greatest graphics program to ever be written for the COCO. Graphicom was over two years in the making! Graphicom uses two joysticks or one joystick and one kola pad. The program uses rubberband graphics and unique method of making stamps and using colors. Each screen is saved on a special disk. When you call up a directory it comes up in pictures to show you what is on the disk.

Graphicom can screen dump graphics to over 20 different printers! Graphicom can send pictures over the modem! Graphicom can reverse the video, rotate pictures, and make mirror images. Graphicom can do more than any other graphics program and its only $\$ 29.95$.

## TOP TEN EOR THE M \#1 TIME BANDIT MichTron

A great game written for the COCO this is an original game. The closest arcade game is Tutenkham to which it has a very loose resemblance. Great color and super fun to play. $\qquad$

## \#2 CASHMAN

CASHMAN Michtron original game for the COCOI A combination of Jumpman and Bagman with many totally original concepts specially designed for the COCO. Excellent one player game. Unbelievably fun to play with. 2 players simultaneously. TAPE/DISK.
$\$ 27.95 / 29.95$
\# 3 DEMON SEED R
Somewhat like the game Phoenix 3 different waves of demons and bats attack you. Plus you have challenge rounds! Great graphics and fast action.
TAPE/DISK.

## \# 4 GALAGON

. \$27.95/29. 95 Patrol. Excellent color and Graphics. A very very good copy of the arcade game Galaga.
\$24.95/28.95
\#5 Poovan
Datasoft
With their first game since Zaxxon, Datasoft has again paid for the license to bring the arcade game Pooyan to the COCO. This is a very realistic copy of the arcade game.
TAPEIDISK
$\$ 29.95$
\# 6 LUNAR pathol
Spectral
This is an exact copy of the arcade game Moon Patrol Excellent graphics.
TAPEIDISK. . . . . . . . . . . . . $\$ 24.95 / 28.95$
 A very oose copy of the arcade ga me Time Pilot. $V$ xcellent color, very fast.
TAPEDISK: . .............. $\$ 27.85 / 29.95$ \# 8 in lices
This is a copy of the arcade gan e Joust. Excell nt graphics and playability.
TAPE/DISK
\$24.95/28.95

A copy of me arcade game Donkey Kong. Very good graphics.
TAPE/DISK. \$26.95/29.95
\# 10 OUTHOUSE
MichTron
A totally new outrageously funny game only available on the COCO.
TAPE/DISK.
\$27.95/29.95
program proceeds; otherwise, it skips the character and takes the next one. Line 10060 reduces N1 so that it will represent the number of one of the character arrays (W\$(126)) and line 10070 draws the character

Now, anytime you want to PRINT something on the Hi-Res screen, all you have to do is say: $\mathrm{N} \$=$ "WHAT YOU WANT TO SAY":DRAW"BM 10,150":GOSUB 10020. The "BM 10,150 " is just the position on the Hi-Res screen at which the text is to be printed. You can replace the " 10,150 " with any position on the Hi-Res screen. (Consult the Graphics Screen Worksheet in the back of Going Ahead. . . to determine the position.) You can use this in the same fashion as a PRINT@command in Color BASIC.

At last! You can print text all over the screen to your heart's desire, but since this is an article about Adventuring - not text printing - it is time to . .

## Draw The Line

In a graphic Adventure, the text usually goes on the bottom of the screen and the graphics go on the top. No matter what you put where, however, you must "draw the line" between the part of the screen to be used for text and the part used for graphics. You don't have to do this literally - you can just decide what point will be your divider between the text and the graphics - but, if you wish, you can literally draw a line to separate them. I find that using 150 on the $y$-axis (remember that the $y$-axis is "labeled" from 0 at the top of the screen to 191 at the bottom) works quite well. When you are drawing your pictures (we'll get to that in a moment), just remember not to draw any graphics below that point. If you wish to draw an actual line to help you remember this, just type:

## $97 \operatorname{LINE}(0,150)-(255,150)$, PSET

If you choose to divide the screen at a point other than 150 , simply substitute that point for the 150 in line 97 above.

Now that we have successfully divided the screen, we can begin the actual printing of the text on the graphics screen.

The Adventure program prints out a description of each room upon entering it or at the player's command (via the game's LOOK command). Before, we had accomplished this with the following lines:

```
1000 PRINT:PRINT"YOU ARE AT THE ";L$(L)
1010 PRINT"YOU SEE:";
1020 FOR C=1 TO Y:IF O(C)=L THEN PRINT
    LO$(C);" ";
1 0 3 0 \text { NEXT C}
1035 PRINT
1040 PRINT"OBVIOUS EXITS LEAD:";
1050 FOR C=1 TO 4:IF T(C,L)>0 THEN PRINT
    T$(C);" ";
1060 NEXT C
```

Now, however, a few changes have to be made to print that information on the graphics screen. First of all, the graphics screen won't scroll upward to make room for new text. Thus, we have to clear the text portion before printing on it. This is done easily enough by typing the following:
$1000 \operatorname{LINE}(0,151)-(255,191)$, PRESET,BF
That will clear out all the text area while leaving the graphics intact. As for the rest of the routine, a few simple changes will convert it to print in Hi -Res.

[^3]```
1010 N \(\$=\) "YOU SEE "
1020 FOR \(\mathrm{C}=1\) TO Y:IF \(\mathrm{O}(\mathrm{C})=\mathrm{L}\) THEN \(\mathrm{N} \$=\mathrm{N} \$+\)
        LO\$(C)+" "
1030 NEXT C
1035 DRAW"BM 10,165;":GOSUB 10200
1040 N \(\$=\) "EXITS LEAD "
1050 FOR C=1 TO 4:IF T(C,L) \(>0\) THEN N \(\$=\mathrm{N} \$+\mathrm{T} \$(\mathrm{C})\)
1060 NEXT C
1065 DRAW"BM 10,176;":GOSUB 10020
```

Notice that in lines 1020 and 1050 that the computer "adds on" any additional information it needs to add to $\mathrm{N} \$$ before going to the subroutine.

Converting the rest of the PRINT statements in your text Adventure should be fairly easy. Just remember to clear the text area (via a LINE(X1,Y1)-(X2,Y2),PRESET,BF command) before printing any large (or even medium) amount of text. If you are a little uncertain äbout what numbers to use in the BM X,Y command, try what you think will be good, and, if it isn't, try other numbers. You'll get the hang of it after a few tries.

There is only one other routine in an Adventure program that might give the author a slight headache in converting. This is the inventory routine. The reason for the possible trouble is that the player usually has more objects to INVENTORY than will fit on one line on the screen, and as the text printing subroutine has no option for wraparound, this might present a problem. Fortunately, all you have to do to correct this problem is to replace the old inventory routine with the one given below.

```
8 9 9 9 ~ ' I N V E N T O R Y ~ R O U T I N E ~
9000 LINE(0,145)-(255,191),PRESET,BF:N$="YOU
    ARE CARRYING "
9010 HORIZONTAL=10:VERTICAL}=
9020 DRAW"BM10,147":GOSUB 10020:DRAW"BM
        10,164"
9025 N$=" "
9030 FOR V=1 TO Y
9040 IF O(V)=1000 THEN N$=N$+LO$(V)+" "
9050 HORIZONTAL=HORIZONTAL+6*LEN(N$):IF
        HORIZONTAL>245 THEN 9070
9055 GOTO 9078
9070 VERTICAL=VERTICAL+1:HORIZONTAL=10
9072 IF VERTICAL=2 THEN DRAW"BM 10,174;"
9074 IF VERTICAL=3 THEN DRAW"BM 10,184;"
9076 IF VERTICAL=4 THEN DRAW"BM 10,191;"
9078 GOSUB 10020:N$=""
9080 NEXT V:GOTO 1100
```

What that seemingly long routine does is to keep track of the horizontal position where the next character is to be drawn, and if it is more than 245 ( 10 away from the end of the screen), it advances the vertical position where the next character is to be drawn. You don't have to type out the whole word "HORIZONTAL" or "VERTICAL." The computer only recognizes a variable by the first two letters, anyway.

Congratulate yourself! You now know how to put all of your PRINTing to the graphic screen. You are almost ready to begin drawing up all the scenic pictures for your Adventure. But first . . .

## What Did You Say???

We need some way of asking the player what he wants to do. An INPUT statement will bring up the plain old text screen and spoil the effect - so what do you do? The
subroutine listed below will take care of any INPUT woes you may have. Just type it in and say GOSUB 20000. The player's response will be returned nicely bundled up as A\$.

20000 ' INPUT SUBROUTINE
20005 LINE $(0,184)-(255,191)$,PRESET,BF:DRAW"BM 10,184;"
20006 A $\$=$ " "'CLEAR ANY PREvIOUS InPUT
20010 I\$=INKEY\$
20020 IF I\$=" "THEN 20010
20025 SOUND 1,1
20030 IF I $\$=$ CHR $\$(13)$ THEN RETURN : ${ }^{\prime}$ CHRS(13) IS [ENTER]
$20040 \mathrm{Nl}=\mathrm{ASC}(\mathrm{I} \$)$
20045 IF NI=32 THEN A $\$=A \$+"$ " :DRAW"BM $+6,0 ;$ " :GOTO 20010
20047 IF NI=8 AND LEN(A\$)>0 THEN A $\$=$ LEFTS (AS,LEN (A\$)-1): DRAW "BM -6,0 ;XW\$(24);": GOTO 20010
20050 IF $\mathrm{Nl}>=65$ AND $\mathrm{Nl}<=90$ THEN A $\$=A \$+$ I $\$$ ELSE 20010
$20060 \mathrm{~N}=\mathrm{N} 1-64:$ DRAW W $\$(\mathrm{~N} 1)$
20070 IF LEN(AS) $>30$ THEN RETURN:' DON'T LET INPUT GET TOO LONG
20080 GOTO 20010

Voila! The INPUT routine. If the player presses the backspace key (CHR\$ (8)) and the player has already typed something, line 20047 gets rid of the last character in $\mathrm{A} \$$, then backs up and X 's out the last character on the screen. If $A \$$ gets too long (and is in danger of running off the screen), line 20070 automatically RETURNS A \& without the player pressing [ENTER]. Otherwise, the player must press [ENTER] to end the input. The routine does not supply a cursor, but line 20025 makes a beeping sound when a key is pressed so that the player knows he is typing. If you want, you could have it print a message such as "WHAT NOW" by having $\mathrm{N} \$=$ "WHAT NOW" and telling the computer to GOSUB 10020.

After converting all of your PRINT statements and using the above subroutine for INPUT statements, your Adventure will function just like a regular text Adventure, except it will be on the Hi-

The battle takes place in the air! The enemy attacks with everything they've got, airplanes, helicopters, hot air balloons, paratroopers and magnetic air mines. 16K or 32 K . (Tape/Disk)
\$27.95/\$29.95

## TIME BANDIT

This month is the first month that the entire top ten panel had copies of Time Bandit and they overwhelmingly voted it into first place. Never before has a game received so many first place votes. At the Dallas Rainbowfest and at the Pasadena Color Expo, arcade players were unanimous in the praise of Time Bandit. "The best original game ever written for the COCO"'.."My dad said I could buy only one game and this is the best game here"..."Best game at the show"..."Best game l've ever seen on a home computer" ... "Great Game" .. Only game I bought at the show"... These are comments we heard about Time Bandit at these two shows... I can say without a doubt that TIME BANDIT is the best game on the market for the COCO.

WESTERN WORLD: Visit the Lost Maverick Mine, Dead Man's Pass, (Visit? Escape!) Tombstone Jail, and many more! A variety of screens. SPACE WORLD: Explore Hy-perspace, the bizarre Light Barriers, the Insidious Grid, Gamma Station the Enterprise and others! Bright, Clear graphics!

FANTASY WORLD: COnquer the halls of Doom, the Mystic Maze, the Underworld Arena, and other medieval places. Pictured are the three different time gates.

FANTASTIC ADVENTURES AND UNLIMITED RICHES ABOUND WHEN ONE TRAVELS THROUGH TIME - YOU ARE THE TIME BANDIT!
Thanks, to Bill Dunlevy and Harry Lafnear, you can transform your Color Computer into the ultimate arcade experience. 32 K has never looked or played better!
Tired of games that have only a few screens or force you to follow a strict order of levels? In TIME BANDIT, you virtually create your own game! You can shoose from more than TWENTY places during the entire game, and each place has more than 15 distinct variations and levels of difficulty; this means over 300 variations in all!
You can use the TIMEGATES to travel to three different Worlds of Time, each one containing a multitude of colorful and unique adventuring areas. Visit FANTASY WORLD, WESTERN WORLD, or SPACE WORLD. Avoid or destroy the Evil Guardians: the Watching Lurker, Angry Elmo, Killer Smurphs, and lots more! Find the keys which remove various locks preventing your escape. But hurry Bandit-your power is dwindling and time is fleeting! This new machine language game is so exciting, challenging, and fun that you need never leave your home to find an arcade again! Ultra crisp Supergraphics that include colorful scrolling landscapes and full animation of a multitude of characters, amazing sound, and literally HUNDREDS of screens - it's all here! The conquest of time and space awaits you ..

Res screen instead of the text screen. But the whole idea of this article is graphic Adventures, not text Adventures on the graphic screen so .

## Picture This

You are now ready to sketch out your drawings to be used in your graphic Adventure. I would suggest that you make yourself a few copies of the "Graphics Screen Worksheet" and sketch your drawings on that. Only draw the background settings that remain constant. Do not draw in anything that the player can TAKE, yet. We will discuss how to do those objects later.

Once your sketch is complete, make up a program to put it on the screen (using commands such as LINE, CIRCLE, $D R A W, P S E T, P A I N T$, etc.). If you are a little uncertain of how to do this, take out your Extended BASIC manual and review the first several chapters. They will tell you all you need to know to do this. Here is a sample of what a picture to draw mountains might look like:

```
30040 LINE( 20, 62)-( 10, 52),PSET
30050 LINE-( 0, 55),PSET
30060 LINE( 21, 62)-( 4I, 42),PSET
30070 LINE-( 61, 63),PSET
30080 LINE-( 101, 23),PSET
30090 LINE-( 151, 93),PSET
300100 LINE-( 181, 63),PSET
300110 LINE-( 211, 83),PSET
300120 LINE-( 231, 63),PSET
300130 LINE-( 255, 93),PSET
300140 LINE( 123, 53)-( 149, 33),PSET
300150 LINE-( 179, 64),PSET
300160 LINE( I39, 54)-( I43, 49),PSET
300170 LINE-( 147, 54),PSET
300180 LINE( 193, 71)-( 204, 61),PSET
300190 LINE-( 220, 71),PSET
300200 LINE( 22, 91)-(40, 77),PSET
300210 LINE-( 54, 87),PSET
300220 LINE( 0, 86)-( 20, 69),PSET
300230 LINE-( 32, 81),PSET
300240 LINE( 81, 62)-( 91, 52);PSET
300250 LINE-( 101, 62),PSET
300300 RETURN
```

Don't try too hard to read between the LINEs in the above program. Once you have penciled out your graphics masterpiece, play around and try to figure out a program that will draw it on the screen. Half the fun in a graphics Adventure can be trying to figure out your pictures. Place your routines up in the high line numbers where they can be called by the main program. Put the graphics for room number 1 before those for room number 2 , etc.. Now, with one program line we can easily and quickly draw the picture for the current room.

```
1005 LINE \((0,0)-(255,149)\), PRESET,BF: ON L GOSUB 29000, 30040, 31000, 32000 . .
```

Add on as many lines to GOTO as you have rooms. If the above line were in your program, it would GOSUB 29000 for room 1, 30040 for room 2, etc. Thus, when putting in this line in your graphic Adventure, the first number after the $O N L G O S U B$ should be the line where you have the graphic background for room 1, etc. ...

## OBJECTion!

Now that you have all your pictures for your rooms in your Adventure, what about the objects? I mentioned before
that the objects should not be put in the routines for drawing the graphics of each room. This is because objects can be taken by the player. It would look very strange if a player took an object only to find it still there on the screen the next time he LOOKed around. Thus, we have to have a way to draw the objects on the screen if, and only if, they are in the same room as the player and have not been taken.

In February's Rainbow, we had let $\mathrm{O}(\mathrm{C})$ be the room number which object \#C was in. If $O(C)=L$, that is if object \#C was in room L (the room the player is in) we PRINTed LO\$(C), which was a description of object number C. This time, we will add an array, $\mathrm{G} \$(\mathrm{C})$, which will hold a graphic representation of object \#C (in a string to be $D R A W n$ ). If object C is in the current room (room L ), we will $D R A W$ $\mathrm{G} \$(\mathrm{C})$, and if it is not, we won't. This requires that you first come up with a draw string to represent each TAKEable object in the Adventure. Chapter 7 in Going Ahead with Extended Color BASIC will help refresh your memory about the $D R A W$ command, if necessary. Put these strings at the beginning of your Adventure (near the $D A T A$ statements). For example:

$$
500 \text { G\$(1)="BM 100,80;U9;R6;D9;L6;" }
$$

would create object number 1 as a rectangle. Always specify the starting coordinates of the object with a "BM X,Y" command at the beginning of the string and give each object a different starting point so that there will be no overlapping of objects if the player DROPs several objects in one room. You already have the routine listed above to print the names of objects on the screen if they are in the room. To make it $D R A W$ the pictures of the objects, just add the following line.

## 1025 IF $\mathrm{O}(\mathrm{C})=\mathrm{L}$ THEN DRAW G\$(C)

Simple enough? You might even want to stick in the following line to make the INVENTORY routine $D R A W$ the objects you are carrying.

## 9035 IF $\mathrm{O}(\mathrm{V})=1000$ THEN DRAW G\$(V)

## You Now Know Everything

If you are a little uncertain about how some of the things "mesh together," take a look at my program listing. It is a sample graphics Adventure (with comments). The listing will clear up any questions you may have about the final product. My graphics are not by any means spectacular - I'm sure you could easily surpass my artwork -- but all the techniques are there. 16 K users might have to leave out the REMarks when typing it in. The map to the Adventure is found in Figure 1. It will help you get a better feel of what the program is doing.

Diagram 1: A map of the graphics mini-Adventure. The name of the room is in the top half of the box, the objects found in that "room" are in the bottom half. The room number is in the top left-hand corner, and paths that the player may take are indicated by $a+$.

## CASHMAN

By Doug Frayer and Bill Dunlevy

The screen is exploding with colorful fast moving animation like you've never seen. The speaker is alive with every kind of sound imaginable! Best of all, the players eyes are glowing with fascination and wonder of this classic creation. THE GAME??? CASHMAN! So colorful, so imaginative, so all out fun, that you'll wonder why you ever settled for anything less!

Dozens of levels and screens (more than FORTY!) let anyone from beginner to expert have as much excitement, challenge, and good clean fun as they can stand! Even the least adept player can have the time of their life with CASHMAN, yet with the increased excitement of special Mystery Pieces and Expert Puzzle Screens, the most experienced arcade addict is guaranteed to never stop playing!!

Play by yourself or invite the ultimate challenge of simultaneous two player competition! Run along the colorful girders, jump across the tremendous girders, jump across the tremendous
chasms, climb the wobbly ladders, or grab a BYRD and fly to get the loot before your opponent does! Be careful though, KATS are on the prowl and wrestling with them can be a challenge.

CASHMAN's classical play is so original and so much fun that no arcader whether a veteran or a rookie can afford to pass up.

So run, jump, climb, or fly to the nearest color computer and play the ultimate . . . CASHMAN! (P.S. CASHMAN lets you play against the computer or play 2 players simultaneously.

## MUDPIES

\$27.95 DISK......

Mudpies is a rare game, it is not a copy of an arcade game! Mudpies shows you that excellent games are possible on the COCO that are not copied from an arcade game. It has clear bright color and graphics, excellent sound and best of all, it is a lot of fun to play.

A reviewer in Hot Coco who plays a lot of games says that "Mudpies is my favorite game." I think this says it all. Mudpies is one of our favorite games here at Michtron. It is simply a lot of fun to play. It has many different screens and by constantly moving from one room to the next you never get bored with the game as you do with many games that only have one screen.
The object of the game is to run from room to room in the circus tent picking up mudpies and throwing them at numerous clowns that are chasing you.
32K TAPE

# ANNOUNCING The VIP Library ${ }^{\text {TM }}$ With a Terrific Sale! 

Nelson Software Systems is now Softlaw Corporation, under new management. Our Super "Color" Library programs have also undergone a name change. All programs are the same unbeatable Super "Color" Library programs you've heard so much about, but with new VIP names. To introduce our VIP Library we are having a special sale on the following pages. Our low prices for such high quality can't be beat so get started today!

# Official Library of Software for the TANO Dragon <br> (Sold tor the TANO Dragon only by 1 ANO Microcomputer Produsts. Corp, and its distributors) 

## The Library Concept

State of the Art, Qudity, Integrity, Compatibility and Affordability. Five things good software must possess. Five things that epitomize the VIP Library's. Each program is the diamond of its class, true excellence. These programs are first in features, first in power, first in memory, and all are affordably priced. And for your convenience all disk programs (an be hacked up).

## State Of The Art

All Library programs ate writlen in mashine code specifically for the Color Computer, 10 work without the interference of a separate operating system such ds FLEX. From this comes speed and more workspace for you. Unlike other programs tor the Color Computer which are said to be 64 K compatible, VIP Library'm programs are not limited to between 24 and 30 K of workspace in 64K. Library programs have Memory Sense with BANK SWIFCHING 10 fully use all 64 K , hus giving up to 51 k with a disk version and up to 53 K with a lape version.

## Easy To Use

Each Library program was sarefully designed to be extremely easy to use, Builsin on-screen help tables are at your fingertips, as are menus of all kinds. Every effort is made to use logical, intuitive and easy=10remember commands. The manuals have been thoughifully prepared to cover every aspect of the program. and they have complete tutorials to get you going right away, We set the standard!

## Lowercase Displays

State-of-the-Art graphics allow instant use of four display colors, and eight lowercase displays featuring descending lowercase letters. You can select from 51,64 or 85 columns by 21 or 24 lines per screen, with wide or narrow characters in the 64 display. These screens provide a pleasant and relaxing way to perform your tasks, with as much text on the
"... PICTURE getting your instantaneous investment report over the phone, using it in your spreadsheel calculation, generating a report, and writing a memo including that report and data from your database with your word processor, and all this with VIP Library ${ }^{\text {TM }}$ programs . . ."
screen as is possible. Each program is easy to learn and a joy to use. We take pride in the stringent testing done to make these programs perform flawlessly. Every feature, every convenience, sleek, simple and elegant.

## Total Compatibility

All Library programs are compatible. Transfer and use of files between programs is easy and carefree. What's belter, when you have learned one program the others will come easy. And every program is the best of its kind available.

## The Library Programs

For your writing needs is the VIP Writer ${ }^{\text {m }}$, and its spelling checker, the VIP Speller ${ }^{\text {T}}$, For financial planning and mathematical calculations you can use the VIP Calc*. To manage your information and send multiple ,mailings there is the VIP Database ${ }^{\text {™ }}$, For sending all these files to and from home or the office and for talking to your friends you can have the VIP Terminal", Finally, to fix disks to keep all your Library files in good repair we offer the VIP DiskZAP'M.

## Mini Disk Operating System

The Disk versions each have a Mini Disk Operating System which will masterfully handle from 1 to 4 drives. It offers smooth operation for such features as the ability to read a directory, display free space on the disk, kill files, save and automatically verify files, and load, rename and append files, Library programs simply do not have the limitations of BASIC.

## Professionalism

The Library comes handsomely bound in gold-embossed, padded leatherette binders to grace your work area with the professionalism it deserves. Welcome the VIP Library ${ }^{\text {™ }}$ into your home and office.

A description of each of the Library programs, with the special sale price, is contained in the following pages. Please indulge!

## VIP Writer ${ }^{\text {TM }}$ <br> (Isminuly super "Eolor" Writer II) <br> By Tim Nelson

HATHIS TOMS IN KAINBOW HOR COCO. AND COSIOR COMIUTER MAGAZINE

## The Official Dragon Microcomputer Word Processort

The most powerful and easy-to-use word processor is available in the showpiece and workhorse of the Library: The VIP Writer'm. Because of its undisputed superiority over all Color Computer word processors, it was selected by Dragon Data L.td, of England and TANO in the U.S., to be the Official Word Processor for their line of Dragon microcomputers.

The result of two years of research, the VIP Writer" offers every leature you could desire from a word processor. It is the most powerful, fastest, most dependable and most versatile. With the hi-res display, workspace and compatibilify features built into the Library the Writer is also the most usable.

Nearly cvery feature and option possible to implement on the Color Computer, The design of the prosram is excellent, the prosratmoning is thawless, features for the professional, ye is is easy enough for noweomers to master.

Cetainly one of the best word processors available for any computer October 1983 "Rainbow"
Word processing wilh VIP Writer is like driving a high-performance veholo, This Ferari of a package has more fealures than Telewriter. Easywriter (for the 1BM PC), or Applewriter." October 1983 "Hot CoCo"

The Writer will work with you and your printer to do things you always wanted to do. Every leature of your printer can be put to use. every character set, every graphiss capability at any baud rate, EVEN PROPORTIONAL SPACING. All this with simplicity and elegance. You van even automatically print multiple copies.

Although all versions feature tape save and load, the disk version provides the Mini Disk Operating System common to the whole Library, plus disk iile linking for continous printing.

## Professional features of particular note:

- Memory-Sense with BANK SWITCHING to fully utilize 64 K , giving not just 24 or 30 K , but up to 67 K of workspace with the rompak version and 50 K with the disk version.
- TRUE IORMAT WINDOW allowing you to preview ihe printed page ON THF SCREEN BEFOREPRINTING, showing centered lines, headers, FOOTNOTES, page breaks, page numbers, \& margins in line lengths of up io 240 characters, It makes HYPHENATION a snap.
- A TRUE EDIIING WINDOW in all 9 display modes for those extra wide reports and graphs (up to 240 columns!),
- FREEDOM io imbed any number of PRINTER CONTROL CODES anywhere, EVEN WITHIN JUSTIFIED TEXT,
- Full 4-way cursor control, sophisticated edit commands, the ability to edit any BASIC program or ASCII lextfile, SEVEN DFLETE FUNCIIONS, LINE INSERT, LOCATE AND CHANGE, wild card locale. up Io TEN SIMULT ANEOUS block manipulations, word wrap around, programmable tabs. display memory used and left, non-breakable space, and headers, footers and FOOTNOTES.
- Automatic justification, aulomatic pagination, automatic centering. automatic flush right, underlining, superscripts, subscripts, pause print, single-sheet pause, and print comments.
- Type-ahead, Iypamatic key repeat and key beep for the pros, ERROR DETECTION and UNDO MIST AKE features, 3 PROGRAMMABLE funclions, auto column creation, and an instant on-screen HELP TABLE,

32K (Comes with tape \& disk) $\$ 59.95$
thold as the Dragon Writer" ONLY by Dragon Data Lid, and its distributors,

# VIP Speller" 

A BRANDZ NEW SMFIING CHECKER! By Bill Argyros
Speiling checkers are an invaluable aid to every writer. Habitual misspellings and typos can be found without the eyestrain, boredom and fatigue associated with endless proofreading. The VIP Speller ${ }^{\text {TM }}$ is a fast, machine-code proofreading program to correct any VIP Library" tile. It automatically proofreads your documents against a 30,000 word stock dictionary, plus a dictionary you can create, and corrects typos or marks them for special attention. Unlike other spelling checkers, the new VIP Speller distinguishes between upper and lowercase letters, and it shows the misspelled word in context so you can be sure of your correction. Compatible with all CoCo word processors.

## VIP Calc ${ }^{\text {TM }}$ <br> (Formerly Super "Color" Cale)

 TRUE VISICALCM POWERIBy Kevin Herrboldt

* UP TO 5 TIMES THE SCREEN DISPLAY AREA OF OTHER SPREADSHEETS!
* STATE OF THE ART LOWERCASE DISPLAYS
* MEMORY SENSE WITH BANK SWITCHING FOR UP TO $40+\mathrm{K}$ in 64 K !
* EXCLUSIVE VIDEO DISPLAY WINDOWS - EVEN UP TO 16!
* USER-DEFINABLE WORKSHEET - UP TO 512 COLUMNS BY 1024 ROWS
* WORKS WITH ANY PRINTER, EVEN LETIER QUALITY!
* LOCATE COMMAND TO FIND SPECIFIC NUMBERS, LABELS OR FORMULAS
* SORT COMMAND FOR EASY RANKING OF RESULTS
* ALMOST UNIIMITED PROGRAMMABLE FUNCTIONS
* ALMOST UNLIMITED PROGRAMMABLE FUNCTIONS

VIP Calc'" is truly the finest and easily the most powerful electronic worksheet and finankial modeling program available for the Color Computer. Now every Color Computer owner has access to a calculating and planning tool better than VisiCalew, containing all its features and commands and then some, WITH USABLE DISPLAYS. Use Visicalc templates with VIP Calc ${ }^{\text {m }}$ !

There's nothing lelt out of VIP Calc'". Fivery feature you've come to rely on with VisiCaler" is there, and then some. You gel up to 5 TIMES the screen display area of other spreadsheets for the Color Computer and Memory-Sense with BANK SWITCHING to give not just 24, or 30 , but UP TO 61K OF WORKSPACE IN 64K!!! This display and memory allow you the FULL SIZE, USABLE WORKSHEETS you require, You also get: User definable worksheet size, up to 512 columns by 1024 rows! * Up to SIXTEEN VIDEO DISPL.AY WINDOWS to compare and contrast resulis of changes * 15 DIGIT PRECISION * Sine, Cosine and other trigonometric functions, Averaging, Exponents, Algebraic functions, and BASE 2, 8, 10 or 16 entry * Column and Row, Ascending and Descending SORTS for comparison of resulis * LOCATE FORMULAS OR TITLES IN CELLS * Easy entry, replication and block moving of frames * Global or Local column width control up 1078 characters width per cell * Create titles of up to 255 characters per cell * Limitless programmable functions * Typamatic Key Repeat * Key Beep * Typeahead * Print up to 255 column worksheet * Prints at any baud rate from 110 to 9600 * Print formats savable along with worksheet * Enter PRINTER CONTROL CODES for customized printing withletter quality or dot matrix printer * Combine spreadsheet tables with VIP Writer ${ }^{1 m}$ documents to create ledgers, projections, statisical and financial reports and budgets.

Both versions feature Tape save and load, but the disk version also has the Mini Disk Operating System of the entire Library.

Lowercase displays not available with this program.

# VIP Terminal <br> Formerly Super "Color" Terminal) 

 RAIFIS BEST IN IANUATYY gard "RAINBGW'? By Dan NelsonFrom your home or office you can join the communication revolution. The VIP Terminal'm opens the world to you. You can monitor your investments with the Dow lones Information Service, or broaden your horizons with The Source or Compuserve, bulletin boards, other computers, even the mainframe at work.

For your important communication needs you've got to go beyond software that only lets you chat. You need a smart terminal so that you can send and receive programs, messages, even other VIP Library files. VIP Terminal, the official Dragon microcomputer terminal, does much more than any other terminal and does it refiably. None can compare in features.
FEATURES: Choice of 8 hi-res lowercase diplays * Memory-Sense with BANK SWITCHING for full use of workspace * Selectively print data at baud rates from 110 to 9600 * Full 128 character ASCII keyboard * Automatic graphic mode * Word mode (word wrap) for unbroken words * Send and receive Library files. Machine Language \& BASIC programs * Set communications baud rate from 110 to 9600 , Duplex: Half/Full/Echo, Word lengih: 7 or 8, Parity: Odd/Even or None, Stop Bits: 1-9* Local linefeeds to screen * Save and load ASCII files, Machine Code \& BASIC programs * Lowercase masking * 10 Keystroke Multiplier (MACRO) buffers to perform repetitive pre-entry log-on tasks and send short messages * Programmable prompt or delay for send next line * Selectable character trapping * Send up to ten short messages (KSMs), each up to 255 characters long, automatically, to save money when calling long distance,

All versions allow tape load and save of files and $K$ SMs, but the disk version also has the Mini Disk Operating System common to the Library.

> 32K (Comes with tape \& disk) $\$ 49.95$
> 16 K Rompak (While they last) $\$ 49.95$
> (Tape doos not allow hi-res displays in 16 K )

9072 Lyndale Avenue So. 612/881-2777
Minneapolls, Minnesota 55420 U. S. A.
(tormerly super "Color" Database)

## IN(ILIISS MAII MFRCE A ARABILIIIES.ICOI

 By Iim NelsonThis high speed MACHINE LANGUAGE program lills all your information management needs, be they for your business or home And it dous so better than any other database program for the Colot Computer, leaturing machine code, lowerease screens and mailmerge capabilities. Inventory, accouns, mailing lists, tamily histories you name it, the VIP Database" will keep track of all your data, and it will merge VIP Writer" ${ }^{\prime \prime}$ files.

The VIP Database'" leatures the Library Memory Sense with BANK SWITCIIING and selectable lowerease displays for maximum utility, if will handle as many records as fit on your disk or disks. It is structured in a simple and easy to understand menu system with full pronypting for casy operation Your data is stored in records of your own design. All files are fully indexed for speed and efficiency. Full sorl of records is provided tor easy listing of names, figures, addresses, etc., in ascending or descending alphabetic or numeric order. Records can be searched for specific entries, using multiple search criteria. With database form merge you may also combine files, sort and print mailing lists, print "boiler plate" documents, address envelopes - the list is endless, The math parkoge even performs arithmetic operations and updates othen (ields. Create files companible with the VIP Writer"and VIP Terminal" Unlimited print formal and report generation with the ability to imbed control codes for use with all primters.

As with , ill other Library programs, the Database features the powerful Mini Disk Operating System.

## 32K DISK \$59.95

## VIP Disk-ZAPTM <br> (Formerly Super "Color" Disk-ZAP) <br> HAVED AROUT IN THE APRIL IQBA "RAINIIOWI"

By Tim Nelson
Your database file disk, form letter disk, or BASIC program disk goes bad. An I/O error stops loading, or even backing up of the disk. Weeks, even months of work sit on the disk, irretrievable. Now catastrophic disk errors are repairable, quickly and with confidence, using the VIP Disk-ZAP*. It is the ultimate repair utility, or simple and quick repair of all disk errors. Designed with the non-programmer in mind, the VIP Disk-ZAP"* will let you retrieve all types of bashed files, BASIC and Machine Code programs.

This high-speed machine code disk utility has a special dual cursor screen display to look at the data on your disk. You are able to: Verify or modity disk sectors at will * Type right onto the disk to change unwanted program names or prompts * Send sector contents to the printer * Search the entire disk for any grouping of characters * 60 py sectors * Backup tracks or entire disks * Repair directory tracks and smashed disks * Full prompting to help you every step of the way * 50 plus page Operators Manual which teaches disk structure and repair.

# The Financial Analyst 

Program By Edward Carson

This program was designed to aid in the evaluation of a company's financial strength. The information is obtained from the company's financial statement.
This information can be useful in many ways. If you own a company, it will show you the areas of strength and areas where improvement is needed. If you are thinking of investing in a company, this program will help you analyze its stability.

Following is a list of the computations it will make, along with a brief definition of each:

## PROFITABILITY

Return on equity ..................... . . Net income / owners equity
Return on assets. . . . . . . . . . . . . . . . . . . . . . . Net income /total assets Gross profit margin ......................... Gross profit / net sales Operating expense margin ............... Operating exp / net sales Profit margin ............................... . Net income / net sales

## ASSET MANAGEMENT

| A | ets |
| :---: | :---: |
| Fixed asset turnover | Net sales / fixed assets |
|  |  |

## INVENTORY MANAGEMENT

Inventory turnover (sales)................ Net sales / ending inventory Inventory turnover (cost) .... Cost of goods sold / ending inventory Days of inventory .................. 365 /inventory turnover (cost)

## FINANCIAL MANAGEMENT

| Debt Ratio | s |
| :---: | :---: |
| Financial leverage multiplier | Total assets / owners equity |
| Debt to equity | Total debt / owners equity |
| Current debt to equity | Current debt / owners equity |
| Long term debt to equity | .L.t. debt / owners equity |
| Equity turnover | Net sales / owners equity |
| Interest expense margin | Interest expense / net sales |
| Times interest ea | me before interest and taxes est expense |

## LIQUIDITY MANAGEMENT

Following are some abbreviations used on the screen display:

> G/P MARGIN $=$ GROSS PROFIT MARGIN
> O $/$ E MARGIN $=$ OPERATING EXPENSE MARGIN

[^5]F.L.M. $=$ FINANCIAL LEVERAGE MULTIPLIER<br>C. DEBT/EQUITY = CURRENT DEBT TO EQUITY<br>L.T. DEBT/EQUITY $=$ LONG TERM DEBT TO EQUITY<br>INT. EXP. MARGIN = INTEREST EXPENSE MARGIN<br>X INT EARNED $=$ TIMES INTEREST EARNED<br>W.C. TURNOVER = WORKING CAPITAL TURNOVER

This program is best when used with a printer, since a printout is much easier to look at and analyze. However, a printer is not required. If a printer is not going to be used, you may delete the following lines: $220-250,1210-1300$, 1420-1480, 1620-1660, 1850-1940, 2080-2150. If you do not want to delete the lines you still have a choice as to whether or not you receive a printout.

The Financial Analyst has the capacity for up to two years of accounting data. The computations for each year are then compared, on the screen and on the printout, side by side.

After entering all the data you can review what you have typed in and make any necessary changes. You can change the data by entering the line number of the corresponding account title. After entering the line number, type in the correct data.

FINE PRODUCTS FOR THE COLOR COMPUTER, DRAGON AND MC-10

## Education Corner.....

## Mi Coco Halle Expand! Mon Coco Pare Francis!

Four delightful new educational programs will help your youngsters learn Spanish and French! Each 16 K program contains more than 550 basic vocabulary words built into an entertaining game format that encourages children to think as well as memorize Colorful graphics and music make learning a joy. Three levels of difficulty with choice of translation from English to foreign language or foreign language to English. Ext. Basic required. French 1, French 2, Spanish 1 or Spanish 2, $\mathbf{\$ 1 8 . 9 5}$ each on tape, $\mathbf{\$ 2 1 . 9 5}$ on disk. Any two programs only $\$ 33.95$ tape or disk. All four programs only $\$ 49.95$.

## Fun With Math!

Are your kids bored by dull educational programs? Let our math software make arithmetic fun again. Colorful graphics and music, plus sound educational principles, make these kid-tested winners.
KOKOMATH-Koko The Math Clown is suspended over a tub of water. Get 10 problems right and give him a bath! Add, subtract, multiply or divide at three difficulty levels. Extended Basic NOT require!

ROBOMATH—Robo the Robot is stranded on a strange planet. Get 10 problems right and send him back to the mother ship. But watch out for your fuel! Ext. Basic is required.
KOKO or ROBO, \$16.95 on tape. Both programs only \$29.95.

## Play Blackjaq!

This is as close as you can come to the real thing without losing your shirt! A full casino simulation, with up to 5 players and 9 decks. Play with friends, play all five hands yourself, or let the computer play the vacant hands. But watch out! It plays by card counting rules! There's even a joystick option for two players. Blackjaq keeps track of winrings and losings, displays two card-counting algorithms and prints out the results of every hand if a printer is on line! Nothing else like this available in 16 K . Great for the beginner or experienced player. Re quires 16K Ext. Bes. Only $\mathbf{\$ 2 4 . 9 5}$ on tape, $\mathbf{\$ 2 7 . 9 5}$ on disk.

## Programmer's Helper

Every programmer can use a little help, and this unbelievable utility provides lots of it! There are 34 useful subroutines, ready to access from your Basic program. Input subroutines, output subroutines, centeed titles, flashing messages, rotating cursors, screen protects, sound prompts, screen borders, speedups, slowdowns, break and list disables, timed inputs, graphics and PRINT @ charts, reverse video and more! You'll wonder how you ever got along without it. Requires 16 K Ext. Bes. Only $\mathbf{\$ 2 1 . 9 5}$ on tape, $\mathbf{\$ 2 4 . 9 5}$ on disk.

# $x$ The Handicapper 

NEW! Now available for the MC-10 and Model 100. Use the power of your computer to improve your performance at the track! Separate programs for thoroughbred and harness tracks apply sound handicapping techniques to produce rankings for the horses in each race. Includes speed, distance, track condition, post position, past performance, jockey or driver's record and other attributes. Handicap a race in a few minutes and a whole card in less than an hour! Easy enough for the beginner, sophisticated enough for the veteran horseplayer. Versions available for all CoCo's, MC-10's and Model 100's. State compurer type and memory size when ordering. Thoroughghred or Harness Handicapper, $\mathbf{\$ 2 4 . 9 5}$ each on tape. $\mathbf{\$ 2 9 . 9 5}$ disk. Both programs only $\$ 39.95$ tape or disk.

## 64K Breakthrough!

Did you feel gypped when you found out your " 64 K " computer still had the same old 32K in Basic? We sure did. So we've developed HID 'N RAM, a program that will access that "hidden" 32K from Basic and use it for data storage. Write a $\mathbf{2 8 K}$ data handling program and still having 32K left for the names, numbers and addresses you're crunching! HID 'N RAM is a brief ML driver embedded in a Basic demonstration program-a mailing list that puts 500 entries in RAM! This shows you how it works. Then you can delete our program and write your own. The ML driver stays with the program! Complete documentation and programming guide. Only $\mathbf{\$ 2 4 . 9 5}$ on tape, $\mathbf{\$ 2 7 . 9 5}$ on disk.

## New From

Just off the press! Learn BASIC09 from the inside out with this official Microware introduction to BASIC09 programming. Unleash the power of your OS-9 operating system with the language that was created for it. Only \$18.95.

## OS-9 Utilities!

## Dissasembler-9

A new machine code disassembler for the OS-9 system! Includes decoding of OS -9 system calls as well as normal 6909 assembly. A must for the serious programmer. Only \$27.95

## Transfer-9

Use any standard word processor to edit files and transfer to OS-9. Transfer from any OS-9 disk or memory to RS Basic. Uses low memory in OS-9. Does not need a startup of OS-9 to transfer to RS Basic. \$22.95.

Send check or money order to FEDERAL HILL SOFTWARE, 825 William St., Baltimore, MD 21230. Your personal check is welcome-no delays. Add $\$ 1.50$ per order for postage and handling.

## -Nobody Doss It Better In Speech or Music

THE VOICE
You get CoCo's best hardware speech synthesizer using the VOTRAX SC-01, THE VOICE (was \$119.95).
Included is a text to speech ML program FREE to allow any BASIC program to speak in minutes (was \$29.95).
You also get 6 education and fun programs FREE (a $\$ 34.95$ value).
You will have access to an ever growing library of software.
Disk owners don't despair, THE VOICE works in all multi-pac units including our own Y-CABLE.
You can find speech units for less and a lot for more, but you won't find any better.
All hardware and software (tape or disk)
$\$ 79.95$

(Actual
(Actual
Photo)

## MUSIC

4 Notes produced simultaneously. Input notes from keyboard or joystick.
Develop your own unique sounding instruments.
Vary tempo as music plays.
Save or load music from tape or disk.
Call music from your own BASIC program.
Music produced in stereo when used with the STEREO COMPOSER.
All features are fast because it's all machine language. It doesn't get any better than this.
Tape $\$ 34.95$ (16K)
(32K) Disk \$39.95

## MUSIC LIBRARY

Play these 4 part music selections without any additional software, or use as source for Musica. Over 100 tunes. Comes on tape, may be copied to disk. Ten or more tunes on each tape.
32K Ext

- Music from Stage, Screen and

Television

- Pop Songs of the 70's
- Pop Songs of the 60 's
- Pop Songs of the 50's

Each \$9.95

- Old Time Favorites
- Classical!
- Christmas Music (Sacred)
- Christmas Music (Popular)
- Patriotic

## STEREO COMPOSER

CoCo's one and only stereo music synthesizer. Plug it into the cartridge slot, connect to external speakers or your home stereo and you're ready for music realism. Comes with the COMPOSER 4 voice software. Separate left and right channel volume controls. Two 8 bit D to A's - for perfect reproduction. May be used with our best software "MUSICA." Disk owners may use any expansion unit or our Y-CABLE.
Tape or Disk $\$ 69.95$

Don't forget the contest.

## THE Y-CABLE

Disk owners why pay $\$ 100$ to $\$ 300$ for a multi-pac unit. With our Y-CABLE you can connect your disk in one connector and the VOICE or STEREO COMPOSER in the other. All gold connectors.
$\$ 29.95$

## MASTER DIRECTORY V2

Can you find that program you saved last month？ Do you have many diskettes with multiple copies and need to organize your life？MASTER DIRECTORY V2 to the rescue！In only seconds add each diskette to MASTER DIRECTORY V2． Now ask MASTER DIRECTORY to find that lost program．Can＇t remember the filename？Ask for all the files that begin with the letter＂C＂or ask for all files with an extension of BAS．

What！Two files with the name CATS？Drats！Wait！ The file on disk \＃5 was added on Oct． 5 and the file on disk \＃9 was added on Nov．10．Hey fantastic！

Now let＇s get back to work．Let＇s see DIR．Hey！ How did the filenames get in sequence？Yes， MASTER DIRECTORY V2 will sort the directory and remove the null directory entries．It also saves a copy of the allocator and the directory to protect against those nasty disk errors．Listing may be directed to the TV or the printer．Over 100 diskettes and 3000 filenames can be contained in one master directory．

Buy MASTER DIRECTORY V2 for only $\$ 29 \mathrm{pp}$ ． Requires 32 K DOS（ 1.0 or 1.1 ）

## DUAL CASSETTE COPY SYSTEM

Allows the use of two cassette recorders．Only $\$ 49 \mathrm{pp}$ ．

## DISPLAY NOISE ELIMINATOR

Easy to install．Does not violate COCO warranty．$\$ 14 \mathrm{pp}$ ．

## SCRUNCH

Removes spaces from basic programs．Saves memory and inproves speed．Only $\$ 3.00 \mathrm{pp}$ or FREE with any order．

FREE CATALOG with order or send self addressed stamped envelope．

Send check or money－order to：

> COCOPRO
> P.O. BOX 37022 ST. LOUIS, MO 63141

# RAINBOW 

By Fran Saito \& Bob Albrecht Rainbow Contributing Editors

#### Abstract

         pene prownes and cerling divertions

Ne will exphers (we hopro, wich powe hulp) ihe lieflowing
 dilary avis

 wier gradiatien, herwvels asc.

 daintien
 tod une rifle five.

Copyright ${ }^{\circledR} 1983$ by Dragon Quest, P.O. Box 310, Menlo Park, CA 94026

People, working together, make things happen. Let's be open to possibilities, and use this new tool in creative wonderful ways. Remember, the computer is only a catalyst and repository of patiently given instruction, information, and amusement.

- Laran Stardrake

Back issues of the Rainbow contain numerous nuggets waiting to be discovered by persistent prospectors. We will prospect for you and point out glitters that catch our eyes. We begin by browsing five issues of 1983 (no May issue) from January to June for reviews of educational software designed for kids three to eight years old. We include a short quotation from each review. We encourage you to read the entire review.

## January, 1983

Pages 148-152 "Moptown: Logical Structures From Abstract ldeas." In-depth review by Don Inman.

Don says, "Although these games may seem to be on the expensive side, they have much more value than typical game software. The educational features of the games have been very carefully planned, offering challenges for a wide range of age levels.
"The simple graphics used are quite effective, and do not detract from the thought processes taking place during the
(Fran Saito holds a degree in education from the University of Hawaii and has taught preschool and elementary students. She feels her inspiration comes from Mariko, her five-year-old daughter. Well-known author Bob Albrecht also writes the "GameMaster's Apprentice" feature for the Rainbow each month.)
game. If you have young children, I highly recommend Moptown for your computer library."
Page 154. "Education and the Color Computer." Article by Dr. Paul Kimmelman and David Macali. The authors propose a network for educational use of the CoCo. They also say, "Another note of praise needs to be directed toward Follett Library Publishing Co. Currently Follett is preparing Bumble Game and Moptown for 16 K cassette computer use. Our preliminary reviews of these two programs are also excellent. Moptown will become an extremely popular program for elementary school use. What is especially interesting about Moptown is that it requires logical thinking and motivates children to identify patterns, strategies and differences between objects."
Bumble Games is designed for ages four to 10 and Moptown for ages six to 13. Both available from Follett Library Book Company, 4506 NW Highway, Crystal Lake, Ill., 60014. We will playtest both games and report on them in a future issue. As Don says, they are expensive.
Page 154. "Money Is a Cute, Cents-able Program for Children." Review by Courtney Noe.
"Money is a simple, straightforward educational program for those little folk just beginning to reach out for practical applications of their meager store of worldly knowledge. They have learned to count by fives and tens, and with a little help and added incentive -- both of which are contained in this program - they will be able to make the leap from digital abstraction to concrete achievement of the most practical order."
Money is from BS Software, 1024 Bainbridge Place, Columbus, Ohio, 43228.

## February, 1983

Page 77. "Addition Concepts Has Some Minuses As Well As Pluses." Review by Chuck Pilipauskas.
"Addition Concepts is an educational program to teach younger children simple addition facts for the numbers zero to nine. The program is menu driven to pick three items: number of correct answers before progressing to the next level, which of four sets of numbers to use, and whether or not verbal instructions are wanted.
"Having had the experience of helping three kids in school learn their addition facts, I feel Mr. Bob's approach is valid and useful. The major flaw with the program is his failure to adequately user test it with his intended audience (whichever that might be). Correcting the 'mechanical' problems would make this a much better program."

From: Programs By Mr. Bob, P.O. Box 94, Moutrose, Calif., 91020 .
Page 192. "Alphabet Soup: Educationally Nutritious." Review by Stephen Tchudi. Alphabet Soup is a spelling/ work play game. The reviewer says, "All in all, my family and I found the game a real delight, and because the game calls on the player to be imaginative in finding words, it is several cuts above some of the 'skill and drill' spelling programs I've seen on the market. Although the instruction manual for Alphabet Soup makes no substantial educational claims, any youngsters or adults playing the game regularly would, 1 ' m convinced, sharpen their awareness of spelling and vocabulary, especially if it is played with several players. The program is a hearty stock to add to any school or home CoCo program library.
"Alphabet Soup requires 16K with Extended basic. A version of 16 K without Extended Basic is also available."

From: Creative Technical Consultants, P.O. 652, Cedar Crest, N.M., 87008 .

## March, 1983

Page 81. "Galactic Hangman Can Get You Hooked." Review by Tom Johnson. Space age version of the game of Hangman. Comes with both 16 K and 32 K versions on the same tape. CoCo has 700 words to choose from.
"The documentation is good, both in the instruction booklet and on the tape. Galactic Hangman is recommended for, among others, those looking for a game that you can play with your grandparents and convince them that buying you that expensive CoCo was a wise thing to do."
From: Sugar Software, 2153 Leah Lane, Reynoldsburg, Ohio 43068.
Page 82. "Match-It Works Well With Young Learners." Review by Brian James. Game to help children ages four through six learn to match upper- and lowercase letters.
"In summary, Match-It is a good teaching program to help children learn to recognize upper- and lowercase letters. The age levels suggested (four through six) are perfect for the activity presented. I have heard that Micro School Programs is converting most of their educational programs for use on the 80 C . This program illustrates the appeal quality color graphics and sound have in the educational area and how well suited the Color Computer is as a learning tool for children. Parents and educators would do well to write the company for a list of their 80 C programs."
From: Micro School Programs - Bertamax, Inc., 101 Nickerson Street, Suite 202, Seattle, Wash., 98109.

Page 114. "CoCo-Jot, A Thinking Person's Hangman." Review by Michael F. Garozzo. CoCo-Jot is a version of Hangman with interesting new twists.
"From my point of view, as a teacher and parent, I feel that CoCo-Jot has potential to develop word and letter recognition with students. The game comes with a word list (but must be printed larger for school use). A fine feature is that the program can be modified with your own words and therefore can be tailored to your needs. The game might be more interesting if it were programmed in specific subject areas (i.e., presidents, countries, math terms). Above all, the game requires the most coveted of all educational goals -patience and thought, and to have an adult sit down and develop a working relationship with their student or child. Well, have you spelled 'hug' with your child today?"
From Computer Island, Dept. R, 227 Hampton Green, Staten Island, N.Y., 10312.
Page 150. "Clock Gives Reviewer Hard Time - Vice Versa." Review by James Ventling. The reviewer did not consider this to be a timely game.
"This program does not work well with children, particularly those who cannot yet read. It does not have interesting graphics, rewards, or goals. In short, there is very little to motivate or to hold the interest of a child. It is not particularly child friendly. It relies on reading ability or the close supervision of an adult. The wrong answer response is at least as much fun as the correct one if not more so, and sometimes correct answers are counted as wrong."

From Prickly-Pear Software, 9234 E. 30th Street, Tucson, Ariz. 85710 (new address)

## April, 1983

Page 192. "Preschool Packs: Simple, Solid, Successful." Review by James Ventling. Packages 1 and 2 are designed to help kids learn number recognition and counting skills and simple addition. Package 3 covers letter recognition.
"All the programs in these three packages are easy for small children to play on their own without adult help.
"Of the three packages, pack 2 is definitely the best. It is the most interesting for small children to play and has the
most appealing graphics. All are in 16 K ECB.
"These games lack the 'extras,' but are perhaps more suitable for preschoolers because of it. They are all simple and unsophisticated games at a good price."

From: Computer Island, Dept. R, 227 Hampton Green, Staten Island, N.Y., 10312.

## June, 1983

Page 162. "Kid Tested: Radio Shack Tutors are A-OK." Review by Stephanie Snyder of Words That Act and Words About Things for children ages eight to 10. "This teacher gives Radio Shack an 'A-' on this report card; there's always room for improvement, but these two are near the top of the class." These programs run on any CoCo. Get them from your local Radio Shack store.

Page 195. "Adding With Carry Gets Positive Response." Review by David Finkel. He concludes, "The program is very carefully and professionally done. Graphics and sound are used effectively throughout, and help hold the child's interest. The program comes with a well-prepared, 12-page booklet, which describes the operation of the program, and gives some useful tips on helping your child learn addition."

From: B5 Software, 1024 Bainbridge Place, Columbus, Ohio, 43228.

Page 224. "Only Kind Words For 'The Shack's' Crosswords." Review by Charles Springer. According to Charles, "Crosswords provides an infinite number of challenges, including some good educational experiences for children, and some lively competition for the gamesman."

Available as a ROM Pak from Radio Shack.
Software is expensive, perhaps too expensive. We would like to see a single cassette or diskette with many educational
programs, priced to sell lots of copies. We would like to see a good progression of things to be learned by a child. We would like to see software designed by people who believe parent and child can work and play together to learn whatever is to be learned. The primitive stuff, the easy to do stuff, has been done. Time to move on to CoCo software that is really useful and has staying power.

## Kids Can Control Computers

The CoCo is a great machine for teaching kids how to use, program, and enjoy computers. In this section of "School Is In The Heart Of A Child," we suggest ways in which you and your children can learn together how to tell the CoCo to do what you want it to do.

So, grab a kid and help her or him enjoy - and learn to understand - simple commands and short programs in Color BASIC. We suggest things to do. You explain what is happening, answer questions, modify our ideas, and enrich the learning experience with your ideas. But don't do the typing. Let the kids do the hands-on stuff. Be patient - let them make mistakes, correct their own mistakes and, especially, encourage them to experiment!

## EXPERIMENT!

The CoCo can blink a name on and off. Use the following program to blink a name on and off.

## FILMASTR

The Color Computer has a powerful ally in FILMASTR. This is a DATA MANAGEMENT SYSTEM that you can trust. FILMASTR combines the best features of the big systems to provide a combination of speed, power, and ease of operation that can't be beat.
YOU are in complete control of this friendly program with no programming knowledge required. You design the data screen with up to 20 fields by moving the cursor on screen with the arrow keys and typing in the field names. FILMASTR takes care of all of the rest.
Enter data by just filling in the blanks. This form fill-in is easy and natural to use. You can even copy data from the previous record with one key-stroke. Add records, delete records, change records without fuss.
Tell FILMASTR to sort your file on any field that you want or to retrieve a particular record and the job is done with super-human machine language speed. FILMASTR will find a single record or a group of records that meet your request and will save those records as a separate file if you want to.
Controlled printing formats? Of course! Tell FILMASTR which records to use, which fields to print and in what order. You can control the print location to any position on the page. Mailing labels? You bet! All commands are given to FILMASTR with single key strokes. Press the HELP key (BREAK), and the available commands are displayed. Make your choice from the menu and let FILMASTR do the work.
FILMASTR can store up to 255 characters in each record and up to 24,000 characters in each file. ( 9000 with 16K).

## THE <br> computer Hous

Box 1051 - DuBois, PA - 15801 Phone (814) 371-4658

100 REM**NAME BLINKER, SCH 2-1
200 REM**GET A NAME
210 CLS
220 INPUT "YOUR NAME": N*
300 REM**BLINK N* ON
310 CLS
320 PRINT N
330 gasub 910
400 REM**BLINK N* OFF
410 CLS
420 GOSUB 910
500 REM**BLINK AGAIN OR RESTART
510 KY $\$=$ INKEY
520 IF KY $\$="$ " THEN 310
530 IF KY\$=" " THEN 210 ELSE 310
900 REM**TIME DELAY SUBROUTINE
$910 \mathrm{ZZ}=500$
920 FOR TT=1 TO ZZ: NEXT: RETURN

$R U N$ this program. Type a name, or anything you want, and press [ENTER]. Blink, blink, blink ... Press the [SPACE] key to enter a new message.

From now on, we will write our programs in a certain style which we hope will help you read and understand our little programs.
Every program begins with a REM statement containing the name of the program and a code that tells what "episode" it appeared in and which program it was, within that episode.

We use "SCH 2-1" as the filename when we store this program on cassette or disk.

Our programs are blocked. Each block does one thing and begins with a REM statement that says something about what the block does. Each block begins with a line number that is a multiple of 100 . Each block is short. We will keep each block to, at most, 10 line numbers.

The REM statements that begin each block comprise an outline of the program. For example:

```
100 REM**NAME BLINKER, SCH 2-1
200 REM**GET A NAME
```

```
300 REM**BLINK N$ ON
400 REM**BLINK N* OFF
500 REM**BLINK AGAIN OR RESTART
900 REM**TIME DELAY SUBROUTINE
```

In fact, that's how we write our programs. We first write an outline in REMs and fiddle with it until it seems right. Then we fill in underneath the REMs (or give the outline to a kid . . . heh, heh!)

Our program listings in the Rainbow include a line space between blocks. We do this to make programs more readable by you. If you enter and list a program, you will not see these line spaces, unless you do something special to preserve them. Here is how we store our programs on cassette or diskette.

As we continue in this series, we will use other elements of style to help you understand our programs. We want to make our programs easy for people to read and understand. When we work with kids, we encourage them to write their programs in "good style"so people can read and understand them. Perhaps this is another facet of "computer literacy." We think that kids who write programs that people can read will more easily learn to write English (or another language) that people can read, and understand.

REMEMBER: BASIC is a language. In any language, you can be clear or obscure.

## Moving Around The Screen

Our NAME BLINKER program blinks a name, or whatever message someone enters, in the upper-left corner of the screen. Well, let's not wear out that corner! Change blocks 100 and 300 as follows to get NAME BLINKER, SCH 2-2.

100 REM**NAME BLINKER, SCH 2-2
300 REM**BLINK N ${ }^{3}$ ON
310 LN $=$ LEN(Ns)
$320 \mathrm{SF}=271$ - INT (LN/2)
330 CLS
340 PRINT ESP, N
350 GOSUB 910
Make this change and run the program. The name entered by a child will blink near the middle of the screen. See how easy it is to modify a program?
Try some variations.
Blink faster: $\quad 910 \mathrm{ZZ}=250$
Blink slower: $\quad 910 \mathrm{ZZ}=1000$

Blink on orange：$\quad 310$ CLS 8 410 CLS 8

Or choose your own colors．They can be different in lines 310 and 410.

Always EXPERIMENT！Encourage kids to experiment． Let them play with variations of programs．They can do nothing wrong！Let them make mistakes and learn from their mistakes．The CoCo is patient forever，responding to the learner as she or he explores．Please be patient with kids as they explore and learn．

## Color Organ

Including black，there are nine colors available to light up the screen of your CoCo．Your child will quickly learn the numbers of the colors by using this simple color organ program．Here is the outline of the program．

```
100 REM**COLOR ORGAN, SCH 2-3
200 REM**WAIT FDR A KEYPRESS
300 REM**GO BACK IF NOT O TO B
400 REM**OK, CONVERT TO NUMERIC
500 REM**COLOR THE SCREEN
600 REM**GO BACK FOR ANDTHER
```

Okay，let＇s go with the outline and write the program．

```
100 REM**COLOR OREAN, SCH 2-3
110 CLS
```

200 REM**WAIT FDR A KEYPRESS
$210 \mathrm{KY} \$=$ INKEY\$
220 IF KY $\ddagger=" "$ THEN 210 ELSE 310
300 REM**ED BACK IF NOT O TO 日
310 IF KY\$く"O" THEN 210
320 IF KY象>"日" THEN 210
400 REM**DK, CONVERT TO NUMERIC
410 KOLOR $=$ VAL (KY ${ }^{(1)}$

500 REM＊＊COLOR THE SCREEN 510 CLS KOLDR

## 600 REM＊＊BD BACK FDR ANDTHER <br> 610 GOTO 210

Hmmm ．．．there is always another way．Here is another way．

```
100 REM**COLOR ORGAN, SCH 2-4
110 KY* = "O"
```

200 REM＊＊COLOR THE SCREEN
$210 \mathrm{KOLOR}=\mathrm{VAL}(\mathrm{KY} ⿻ \mathrm{H})$
220 CLS KOLOR
300 REM＊＊WAIT FOR A KEYPRESS
$310 \mathrm{KY}=$ INKEY
320 IF KY $\$="$＂THEN 310

400 REM＊＊IF OK，GD ARDUND AGAIN
410 IF KY\＄く＂O＂THEN 310
420 IF KY\＆＂8＂THEN 310 ELSE 210
We prefer program SCH 2－4 over program SCH 2－3． Which do you prefer？

YOUR TURN．Add music．We suggest the scale of C for numbers 1 to 8 ．You choose what to do with the number zero （0）．
Beginners：Are we explaining enough for you？If not， please let us know．If you want a reply，enclose a self－ addressed，stamped envelope．
ComputerKid，USA
ComputerKid，USA puts computers in the hands of kids in youth organizations，alternative schools，and at home in order to playtest and evaluate educational software in places that are learner－centered instead of teacher－centered．

We encourage you，the parents of ComputerKids，or you who are ComputerKids to correspond with us．Software is very expensive，too expensive，we think．We will playtest CoCo software and begin reporting on what we learn soon， in the Rainbow．
Help！Please help．Share your experiences in playing and learning with your child．Send us little programs that worked for you－let others use them as you did．
FuturePlay－How about a Bulletin Board System to share software？Please write to us about this and other ways to open new worlds of learning for all children：Fran \＆Bob， P．O．Box 310，Menlo Park，Calif．，94026．If you want a reply，please enclose a self－addressed，stamped envelope．

And always，encourage your kids to EXPERIMENT！

# YOUR COLOR COMPUTER JUST GOT WHEELS! 

You accelerate hard down a long straightaway, braking heavily at the end for a hard corner. You slice smoothly through the esses, and then boldly keep the power on for a fast sweeper. The Ferrari drifts dangerously near the edge, but you make a tiny correction in the steering, and you are through.
The finish line flashes by, and suddenly you are in the pits. The car falls silent. You see your lap times being held up. Your final lap was a new lap record! At last, you permit yourself a small smile.

## You have mastered this powerful car on a

 difficult track, driving with the assurance and precision that comes only from long hours of practice.You are driving an authentic race car. You are playing Revolution!

## FANTASTIC ACTION

Revolution uses high resolution, machine language graphics for action that is smooth and fast. The emphasis is on authenticity in the control and motion of your car. As in driving a real race car, accuracy and precision in your driving are what counts. Frills and non-essentials have been left out.

## PURE COMPETITION

Like a real race driver in practice and qualifying sessions, you compete against the clock and against the existing lap record for that track. Revolution records the lap records and the name of the person who set the record, so you always know who reigns supreme on your favorite track!

## DESIGNED WITH YOU IN MIND

Revolution is menu-driven, and self explanatory. Information screens tell you what you need to know. When you're ready to play, a menu of the names of all your tracks is displayed, along with the lap record for each track and the name of the person who set that lap record. You select a track with a single keystroke, and Revolution takes you there.

## A NEW CONCEPT

Revolution is a unique game, because it allows you to create the most important part of any race game: the track itself.
The first time you run Revolution, you will be able to choose from several tracks and cars which are included with the game.
But, with Revolution, this is only the beginning! You can create as many tracks as you like. You can make each new track as difficult or as easy as you wish. You can make easy ones to begin with, and tougher ones as you become more skilled. You may find creating tracks to be almost as much fun as driving on them!
You can save your favorite tracks to run on again whenever you wish. Revolution will automatically add these new tracks to the menu. And you can exchange your favorite tracks with other Revolution owners.
Be careful, though, about letting your friends play this game. They may not want to let you have your computer back!

## THE EARLY REVOLUTION

A prototype version of Revolution was published in the September, 1982 issue of Rainbow magazine, under the name The Track. The response to The Track has been terrific.
Revolution has all the features that have made The Track a favorite, and Revolution's fast, high-resolution machine language graphics are dramatically improved over the prototype's.

## REVOLUTION NOW!

The original Revolution for the TRS-80 ${ }^{\mathrm{TM}}$ Color Computer requires 32 K and one disk drive. A new cassette version has action just like the disk version, and similar track-saving features excluding a menu of available tracks. The cassette version will run on a 32 K Color Computer or TDP-100. You can upgrade to the disk version later, too, for a nominal fee.

| REVOLUTION |  |  |
| :--- | :---: | :---: |
| For 32K Disk . . . . | $\$ 24.95$ | Requires Joysticks |
| For 32K Cassette $\ldots$. | $\$ 21.95$ | \& Extended BASIC |

New York residents add $7 \%$ sales tax TRS-80 is a trademark of Tandy Corporation.

Inter $\stackrel{\text { Action }}{\text { an }}$
background scene, with a stunt plane standing in a hangar with the engine running. At this point, make sure the left joystick (the throttle) is pulled all the way back, and the right joystick (the control stick), is dead center. Press the right joystick button and the plane will move out to the end of the runway. Push the throttle forward and the plane will begin to move down the runway. Pull the control stick back and the plane will begin to move down the runway. Pull the control stick back and the plane will climb, push it forward and the plane will dive.

Don't be disappointed if you don't make a successful landing the first time, but when you do, and the plane is standing on the last two sections of the runway, press the right joystick button.

Those who enjoy changing programs to see what can be done with them, Stunt Pilot is for you. It was written to be rewritten.

The technique used in this program to move an object in front of a background, will work in any of the four color modes, as long as the moving object is the fourth color of the color set and is drawn on a background which is the first color of the set. The $O R$ option must be used in the PUT command. If you draw the object in the first color on a background of the fourth color, use the $A N D$ option in the PUT command.
I hope this will be of some help to some of you in your programming the way so many of you have helped me.

CREATIVE TECHNICAL CONSULTANTS P.O. Box 652 Cedar Crest, NM 87008
FLEX • OS-9 • RSDOS

The same system software on FLEX, OS-9, RSDOS offers portability and easier learning.

## RANDOM BASIC

- All OS-9 commands are directly accessible, making it easy to write very powerful utilities with Ran dom BASIC (OS-9 version). *
- Random BASIC has 9 or 11 digits of precision using BCD arithmetic.
- Extraordinary file handling capabilities include ISAM, random, and sequential file structures. File access is fast and file design is very efficient.
- Existing programs are transportable between operating systems using Random BASIC. This not only saves time and money but also dramatically increases the products available to the user.
- Tested in 5 years of use, Random BASIC is a proven product!
- A complete line of business applications is available today!
- Flexible user input commands make "conversational' programming a snap.
- Output formatting is made easy with Print Using, automatic pagination, left \& right justification, easy columnization, and decimal point alignment.
- Programming is fast. The interpreter provides fast program development and debugging. It is self-documenting with extended variable names.
- Supports graphics, sound, and joystick functions! *
(*Available on OS-9 and FLEX only.)

## ADVANCED EDITOR

- Edit files larger than memory.
- Many easy line edit commands including character insert, change, delete, skip over words, break a line, \& more.
- Merge files from disk to create programs or manuscripts.
- Interfaces with popular text processors for word processing.
- Fast change, search, insert, delete, move and copy of individual lines or entire blocks.
- Great with Macro Assembler!

## MACRO ASSEMBLER

- All standard 6809 mneumonics \& directives supported.
- Macros allow you to create often-used routines only once!
- Conditional Assembly allows you to build one multi-purpose source code to generate several versions, reducing maintenance significantly!
- Repeat Sequences eliminate redundant coding.
- Any size source file - assembles from disk.
- XREF program included for easy crossreference listings.
- All Addressing Modes: inherent, immediate, relative, direct, extended, \& indexed.

## THE SOURCERER

The Sourcerer is a menu driven symbolic 6809 disassembler that produces symbolic source code that can be assembled. It is compatible with most editor/assemblers including Tandy's
EDITASM + , Micro Works Macro 80C, and Computerware ${ }^{(\sqrt{3})}$ s Macro Assembler. (Requires 16K on RSDOS)

- Symbolic mode provides three modes of operation: Zap, Extended, and Full Symbolic.
- Automatic equate generation for labels and symbols outside of disassembly range.
- FCC, FCB, and FDB generation (multiple or single FCB and FDB).
- Add or change your FCC, or FDB table entries between passes.
- Written entirely in 6809 machine language for extreme speed. Disassembles any size program in seconds.
- Position independent code is relocatable to any area of memory. Leaves room for object program. Can be located in memory above $\$ 8000$ if 64 K available.
- User defined symbol/label buffer area for maximum flexibility.
- Produces files with or without line numbers.
- Can produce symbolic labels for all extended addresses.
- Included "APPRENTICE" program finds start and end of machine language programs. Disk version also includes FIND and binary COMPARE utilities.
- Disassemble to disk or cassette, printer, or screen.

## GET WTHA THE PROGRAM

## RAINBOW SCREEN MACHINE

The Rolls Royce of graphics/text screen enhancers - more features than all others combined!

- Add these features to your computer/program: ML extension of Basic loads on top of 16,32 , or 64 K machines to enable easy mixture of hi-res graphics and text in your programs. Dense text or large lettering for children, visually impaired or VCR title screens with no programming!
- User definable 224 character set featuring lower case descenders, Greek, cars, tanks, planes, etc., completely interfaced with all keys, commands, and PMODES. 12 sizes (most colored) from $16 \times 8$ to $64 \times 24$.
- 2 distinct character sets automatically switch for sharpest lettering featuring underline, subscript, superscript, reverse video, top and bottom scroll protect, double width, colored characters in PMODE 4, and help screen.
- Includes demo program, character generator program and manual. 16 K Ext. Basic required 32K recommended, \$29.95 Tape, \$32.95 Disk.
- Super Screen Machine adds SMOOTH Scroll, Key Click, Break Disable, Screen Dump command and more. \$4495 Cass - \$47.95 Disk.

At last! A hi-res graphics tutorial that teaches the fundamental concepts of binary and hexadecimal math so essential to assembly language programming on the Co Co.

Sections include:
Decimal to binary
Binary to decimal
Binary addition
Binary subtraction
Binary to hexadecimal Hexadecimal to decimal
Decimal to hexadecimal
Includes demo and extensive manual
32K Extended Basic - \$24.95 Cass - \$27.95 Disk

Dungeons, wizards, treasure chests, hidden trap doors and more. If you enjoy challenge and complexity, these adventur games are for you. Featuring real-time graphics with arcade sound for your color computer. "Scepter" requires 16K Extended Basic, \$16.95 Cass \$19.95 Disk. Hi-res sequel "Conquest" 16K Extended Basic Cass \$21.95; 32K Disk \$24.95.

Discover the Rainbow in your Color Computer!

The Roils Royce of graphics/text screen enhancers - miore features than all others combined!

- Add these features to your computer/program: ML extension of Basic loads on top of 16,32, or 64 K machines to enable easy mixture of hi-res graphics and text in your programs. Dense text or large lettering for children, visually impaired or VCR title screens with no programming!
- User definable 224 character set featuring lower case descenders, Greek, cars, tanks, planes, etc., completely interfaced with all keys, commands, and PMODES. 12 sizes (most colored) from $16 \times 8$ to $64 \times 24$.
- 2 distinct character sets automatically switch for sharpest lettering featuring underline, subscript, superscript, reverse video, top and bottom scroll protect, double width, colored characters in PMODE 4, and help screen.
- Simple 2-letter abbreviated commands inside your program or control key entry from keyboard, even during program execution!
- Includes demo program, character generator program and manual. 16K Ext. Basic required 32K recommended, \$29.95 Tape, \$32.95 Disk.

Revolutionary - heralded as the most useful, powerful and versatile state-of-the-art utility ever developed for the Color Computer!

- All of the features of Screen Machine and more:
- Variable SMOOTH Scroll for professional displays, listings, business use.
- Variable volume Key Click (tactile feedback).
- EDTASM+ command for instant compatibility with R.S. editor-assembler cartridge, providing $64 \times 24$ display.
- Superpatch+ command for instant compatibility with disk EDTASM.
- True Break key disable and recognition.
- 10 User Definable commands used to activate your special drivers or subroutine.
- Dynamic Screen Dump command for use with Custom Software, Engineering's Graphic Screen Print program for simple printer "Snapshots" of your screen even during program execution!
- The new standard - Upgradeable at any time from previous Rainbow-Writer or Screen Machine purchase. Return old program, manual, plus cost difference and $\$ 7.00$ shipping and handling.
- Super Screen Machine \$44.95 Cass - \$47.95 Disk

## By J. D. Ray

TThe annual inflation rate has become a part of our American society that we have come to expect Regrettably, it is something that we all have to deal with, as no one is able to escape its effect. Inflation is related to a number that the government gives on a monthly basis that reflects the increase or decrease in the cost of certain goods and services. These goods usually include food prices, gasoline prices, housing costs, etc. The changes in the cost of these goods are added together and averaged out over the year to give us what we call "the annual inflation rate." Between the years of 1973 to 1983, the annual inflation rate has averaged 8.26 percent. The highest year of inflation during this period was in 1981 at 13.5 percent and the lowest year during the same period was in 1973 at 3.3 percent.

1 was interested in the relationship between my earnings and the effect of inflation on those earned dollars. Suppose you made $\$ 12,000$ in 1972. What would you need to make in 1983 in order to have the same buying power? The answer: $\$ 28,627.29$. (Maybe this program wasn't such a good idea anyway!)

- (James Ray is an ordained minister and currently on staff at the Cooper River Baptist Church in North Charleston. S.C.)

The inflation rate is a summary of the change of cost of certain goods and services. These changes do not affect everyone in the same manner. For example, suppose in a given year, housing costs increase a whopping is percent. This 15 percent would bereflected in the annual inflation rate; however, for a person not buying a house, it would have no direct effect on their buying ability. Likewise, if food costs increase dramatically, it would affect a household of seven more than a household of two.

The program also gives you the option of adding increases in addition to the inflation increase. This would be helpful for those who work on a bonus system, or regularly scheduled merit increases. Also, there is an option to project future effects of inflation. You choose the year span and the estimated average annual inflation rate.

## To Use

Loading Instructions: For 16 K systems, POKE25:6: $N E W$, for the program uses about 12000 bytes of memory. CLOAD "INFLATION" and RUN.

The menu will give you five options. The first option is a straight inflation application, which is used for the period between the years of 1972 and 1984. You will be asked to input the year to begin the application and the amount to be

YEAF：INFLATION：CHANGE ADJ．AMOUNT

| 1972 | $0.00 \%$ | $\$$ | 0.00 | $\$ 15,000.00$ |
| :--- | ---: | ---: | ---: | ---: |
| 1973 | $3.30 \%$ | $\$$ | 495.00 | $\$ 15,495.00$ |

| 1974 | 6.20 | $+$ | 5.00 | $\%$ | 事 | 1，735．44 | \＄17，230．44 |
| 1975 | 11.00 | $+$ | 0.00 | \％ | \＄ | 1，895．35 | \＄19，125．79 |
| 1976 | 9.10 | $+$ | 0.00 | \％ | 中 | 1，740．45 | \＄20，866． 24 |
| 1977 | 5.80 | $+$ | 0.00 | \％ | \＄ | 1，210．24 | \＄22，076．48 |
| 1978 | 6.50 | $+$ | 0.00 | \％ | \＄ | 1，434．97 | \＄23，511．45 |
| 1979 | 7.70 | $+$ | 5.00 | \％ | \＄ | 2，985．95 | \＄26，497．40 |
| 1980 | 11.30 | $+$ | 0.00 | \％ | \＄ | 2，994．21 | \＄29，491．61 |
| 1981 | 13.50 | $+$ | 0.00 | $\%$ | 患 | 3，981．37 | \＄33，472．98 |
| 1982 | 10.40 | $+$ | 0.00 | $\%$ | \＄ | 3，481．19 | \＄36，954．16 |
| 1983 | 6.10 | $+$ | 0.00 | \％ | \＄ | 2，254．20 | \＄39，208．37 |
| 1984 | 5.00 | $+$ | 5.00 | \％ | \＄ | 3，920．84 | \＄43， 129.21 |

compared．For example，if you made $\$ 15,000$ in 1972 ，you would need to make $\$ 35,784.12$ in 1984 to have kept up with inflation（see Table 1）．The application estimates a live per－ cent inflation rate for 1983．When the exact rate is known， you may place it in line 1950．Then you will be given the option to print this chart on a printer．Select＂Y＂or＂N＂as prompted．The printed version will give you the yearly change（increase），whereas the screen will not．
The second option on the menu is a modified application， which was designed for use of bonus raises or merit
increases．Suppose in your job，you are given a five percent merit raise for every five years of employment．Thus，in 1974， 1979 and in 1984 you will be given a five percent merit raise in addition to inflation adjustment．Beginning with $\$ 15,000$ in 1972，you will need $\$ 43,129.21$ in 1984 （see Table 2）．In using option 2 ，you may input as many as 10 different years of modification．The years must be given in numerical sequence（i．e．，1974，1979，1984）．This option automatically uses the information used in option I unless option I wasnot used，then it asks you to input the beginning year and
amount to begin modified application．You have a printer option for this application．

The third option is a projection application and you are not required to stay in the 1972－1984 year range．With this application，you can begin with any year，end with any year and select any inflation rate you choose．For example，sup－ pose you want to estimate what you will need to earn in the year 2000．Suppose you make $\$ 25,000$ in 1984 and you are estimating that the inflation rate between years 1984－2000 will average five percent．You will need to make $\$ 54,571.86$ in the year 2000 （see Table 3）．Note that this is just an estimate．You also have a printer option with this ap－ plication．

| Table 3 |  |
| :--- | :--- |
| Projected Inflation |  |
| BEGINNING YEAR： |  |
| AMOUNT | 1984 |
| EST．INFLATION | $\$ 25,000$ |
| PROJECTED AMOUNT NEEDED | 5.0 percent／yr． |
| IN YEAR 2000： | $\$ 54,571.86$ |

The fourth option is a tutorial and is designed to give you basic information on inflation and how to use the program．I like this kind of information built into a program so you do not have to refer to the magazine or instructions every time you want to use the program．

The fifth option is the end option．In selecting this option， you will be given a second chance to decide．This is because， when chosen，the＂END＂option will erase the program from memory and give you the＂COLD START＂display．If you do not want this option，adjust line 2980.

The printer subroutine is found in lines 2710－2890．The only codes used are for underlining in lines 2780,2810 ，and 2860．The codes used are $C H R \$(15)$ for underline on and $C H R \$(14)$ for underline off．

This program is available on Rainbow On Tape or can be purchased directly from me for $\$ 5$ if you require any special changes in the program for your use．

## Animate basketball drills and plays with . . .

# The Coaches' 

By Fred B. Scerbo
Rainbow Contributing Editor

# Animated Playbook 

I have stored away over the last three years. Since most of them are not long enough or general enough to be released on the software market. I decided that what better showcase was there for them than the Rainbow in a column which will hereafter be known as The Rainbow Wishing Well.

1 must be honest with you. Quite often, these requests will come from people who really don't understand how a computer works. These requests will often be in the nature of "I want a program where 1 can throw all this information into my computer every month and then just call it back as I need it." (Sorry folks. Don't expect me to write a minidatabase with random disk access. The only other thing 1 have told friends that is off bounds is a chess game written in basic. I'm not very good at chess and any chess program I were to write would only be as good as, or as bad as my game.)

Recently, Frank Zoltek, the coach for our hasketball team at Drury High came to me with an interesting problem. Frank has had a long career in basketball and his team has been reigning Western Massachusetts Champions for the last two years. The pressure is on to take the crown for a third consecutive year and Frank has come up with a massive collection of plays that he has to share with his newer players. Consequently, Frank said, "I wish there were some way that I could store these plays in my Color Computer instead of carrying around this book of plays."

Well, I did Frank one better. I suggested, "What if I were to come up with a program that would not only store your plays, but also display them on the screen in such a way that your players could actually see their positions moving on the screen?" It didn't take long for word to spread to our Girls' Basketball team coach, Christopher Wondo-
lowski that I had something new cooking on my CoCo. (The girls were also Western Massachusetts champs last year so Chris wouldn't mind a repeat crown, either. He also just bought a 64 K CoCo and was looking for new ways to use it.)

This put me in a solid position for designing the program. I knew that the hardest task I would have was making the program "user-friendly" enough so that even the most "computer-hostile" coach could add his own plays.

Here was the task: 1) Set up five players represented by something other than Xs and Os and move them around the screen in "flicker-free" motion. We would actually be replacing the old blackboard and chalk method of drawing out plays which is not only messy, but confusing when arrows start crossing each other. 2) Arrange so that the coordinates for each player can be entered with a single number for each frame. 3) Allow for use of a cursor positioned by the joystick to either draw lines or represent the location of the ball. 4) Make all of these plays selectable from a menu without requiring the use of an additional tape or disk load of file information. In other words, all the information would have to be RAMbased.

In tackling the first task, Chris suggested that we represent each player by a letter or initial. That way, each player could zero in on his or her position at any given moment. That was simple. I had written many such graphic alphabet characters before. It was simply a matter of re-entering these $D R A W$ statements into a string array which would be read directly from memory, not from $D A T A$ statements. If we were to put this information into $D A T A$ statements it would interfere with our menu routine which would use the RESTORE statement.

Therefore, I dimensioned an alpha-
numeric array called PL\$ which would stand for "player letter" string. PL\$(1) would be the letter "A." PLS(2) would be "B" and so on. Not only could these letters be used for the players, but they could also be used for placing the title of the play on the screen.

The second part of this first task would be the flicker-free movement. Here I decided to draw upon my techniques that I used in Snail's Revenge and the original Star*Trench Warfare which appeared in previous issues of the Rainbow. In those programs, I would $D R A W$ my graphics on a graphic page not shown on the screen and then $P C O P Y$ the finished page to the viewer's screen. This can result in machine language action since the $P C O P Y$ command in Extended Color BASIC is actually a machine language routine in the ROM. In order to get maximum flexibility out of the graphics, they are drawn in PMODE 0 which only displays one graphic page on the screen at a time. This will also give us maximum speed for our animation without sacrificing sharpness. The resolution in PMODE 0 is more than sufficient for our needs anyway. To accomplish this task, then, the program draws the outline of a basketball court as one would expect to see it displayed on a blackboard. This court is drawn on graphics Page 3.

The court drawn on Page 3 will serve as our "clean" court, so we do not have to take the time to redraw it for each frame of action. Page 3 is then PCOPYed to Page 2, where the players are drawn in their position. During all of this, the viewer sees only graphics Page 1. When all the positioning is finished, Page 2 is PCOPYed to Page 1 where the viewer gets to see it. When it is time for the next frame to be shown, the "clean" court is PCOPYed to Page 2 and the process is repeated.

| B | $L$ | $A$ | $C$ | $K$ | $J$ | $A$ | $C$ | $K$ | $P$ | $R$ | $O$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## S K I L L W A R E

The result is a "flicker-free" movement of our lettered players, provided, of course, that the coordinates for the players have been properly input into the program.
In order to meet our second goal, it was necessary to divide the screen into a number of equally spaced locations for the players to be positioned at. This is accomplished by DIMensioning an array of 150 positions so our screen is set up as a grid of 15 locations across and 10 positions deep. The DRA W coordinates for each of these locations are thus stored in the array for L\$. Since our DIMension statement gives us an $\mathrm{L} \$(0)$, we use it as our first position in the upper left hand corner of the screen with location L\$ (149) being in the lower right hand corner. Lines 41 through 53 create these DRA $W$ coordinates using nested loops. Thus, $\mathrm{L}(0)$ would $D R A W$ the player using the string coordinates " 16,10 " while $\mathrm{L}(149)$ would use the coordinates "242,I54," Later, I will discuss how the actual coordinates are determined for the plays. Let it suffice to say that the strings developed are adequate to serve our needs.

The third task was probably the easiest. Simply by reading the joystick coordinates, a small cursor is drawn on gra-
phics Page 1 as we look at it. Until the next frame is drawn, Page 2 is continually being PCOPYed to Page 1, thus erasing the last cursor position. This causes our cursor to blink, yet move rapidly across the screen depending on the joystick coordinates.

In order to draw lines, an INKEYS routine is written into the program which will store the joystick coordinates if the letter " $L$ " is pressed. The next time that L is pressed, the screen will draw a line on Page 2 between the two selected locations. This will keep the lines on the screen for the duration of the frame since Page 2 is PCOPYed to Page I until we move to the next frame. This allows the coach to draw arrows or map out a triangle play between players as a play is explained to the team. Task accomplished.

The fourth task is also relatively easy. As we store information in our DATA statements, we included titles and flags to indicate the end of plays or frames. The beginning of the program READs all the titles and prints out a menu based on the names we have selected for our plays. We then RESTORE all the DATA and only read the information up to the DATA location indicated by the title selected. Thus, we have no files to load
from tape or disk. All our information is stored in one load.

The resulting program, shown in Listing 1 , is the actual playbook with four sample plays included. When the program is loaded and run, an attractive title card is displayed. The title card remains on the screen until all the DATA is READ into the menu. If you add plays of your own, the card may stay on the screen even longer. Pressing [ENTER] will change the screen to the menu which will display the title you have given to each play. Pressing the letter corresponding to the desired play will reREAD the DATA up to the end of that play, and start running the LOOP which animates the play.

To simply explain how we see our animation, think if you will to the days when you might have drawn pictures on the pages of one of your school books only to flip the pages so that the pictures you had drawn would move like a cartoon. This is what our program is doing. Every time you see movement, the computer has flipped to the next page or frame of the play.
In order to have the computer flip from one frame of the play to the next, press the right joystick button. Holding down the button will result in the play being progressed through all its frames or steps. By holding down the button, we see the play executed in cartoon-like animation. When all the steps have been completed, the screen will turn white and a tone will sound. Holding down the joystick button will repeat the play through all of its steps. As mentioned earlier, lines can be drawn by pressing the letter L , moving the cursor to another position and pressing L. again. You may return to the menu at any time by pressing the [CLEAR] key.

Once I had shown the finished product to both Chris and Frank, they both agreed on suggesting one more modification. Since we would want the players to review these plays without the coach, it would be helpful to have a screen appear which would list some coach's comments before the play began. This was simple enough to add. After the title would be listed as DATA, I would allow two additional strings to be READ which would include comments. If no comments were desired, we would simply have to remember to add two strings of NO COMMENT or EMPTY or some other information to be READ into those slots.
Now that the program was complete, it was necessary to arrange a format which would allow each coach to enter his plays with ease. We did not want a
format which would be more difficult to execute by computer than it was to demonstrate by hand．The result seemed to lie in creating printed sheets which displayed the screen－court locations． Then all each coach had to do was take one page for the first step of a play and draw the letters $A, B, C, D$ ，and $E$ in the locations they were to be at on the court． By drawing the letters on top of the numbers，it would be easy to read the information from the sheets and then type them into a DATA statement．For the next move in a play，a nother sheet would be used and kept in sequence as needed．The more sheets and steps used， the more fluid would be the animation． Using just a few frames or steps would result in a more＂jerky＂motion．

To accomplish this task，you will find two different programs in Listings 2 and 3．Listing 2 will dump a text printout of the court to your line printer．Since the text is being used，we will not get an accurate representation of the circle on the court，but the sheet will suffice for our purposes．Once one sheet has been printed，additional copies could be pho－ tocopied so as to save the print head on our printer．

Listing 3 is designed to give us a high－ resolution graphic display of our court with all the numbers displayed in their

Diagram 1：Graphic Screen Locations From Program Listing \＃3
locations．For this we must use $P$－ MODE4 since our graphics in PMODE 0 from the playbook program do not
give us enough resolution for the dis－ play of 150 numbers．

This listing can be used for two pur－

## 

poses. If you do not have a line printer available with your CoCo , you can determine the court locations directly from the screen while writing them on paper to be later input into $D A T A$ statements. If you do have a line printer, however, you may wish to use this program to get a graphic printout using a graphic screen dump routine. Several have been printed in the Rainbow or are available from other software vendors. This will give a much more accurate worksheet than the text version in Listing 2. The copy 1 have shown here in Diagram 1 was done with Listing 3 using an Okidata Microline 82A in the graphics mode.

## Adapting The Playbook For Your Own Plays

If you have taken the time to key in the playbook by hand rather than use Rainbow On Tape, you will find that the $D A T A$ statements and placement of commas is critical for the running of the program. If you have made any errors in typing in the program you will get an ?OD Error somewhere in the READ sections of the program.
The input of this $D A T A$ is set up in a certain pattern. Let us assume that you are typing in a play of your own made up of five frames or steps. You decide to start your own DATA at line 2000. Your first line of $D A T A$ should thus be the title of the play, not to exceed 18 characters.

## 2000 DATA YOUR TITLE

You may, if you wish, place the title in quotes. The next two lines should include your own comments, such as:

## 2010 DATA "YOUR REMARKS, ETC." <br> 2020 "DATA CONTINUATION OF YOUR REMARKS"

Keep in mind that if you are only going to have one line of REMarks, you must have a second line, even if it is only the string NO COMMENT. It is wise to place each of these REMark lines in quotes since you may accidentally use a comma in your punctuation and throw off all of the following $D A T A$. The next line should start with the word GO. (STOP will tell the program that there are no more steps and the play is over.) Following that will be the letter A followed by the number of the screen location followed by a B and so on as shown below.

## 2030 DATA GO,A, $0, \mathrm{~B}, 0, \mathrm{C}, 0, \mathrm{D}, 0, \mathrm{E}, 0$

For ease of viewing, I have used zero for
each location here. You will have arrived at your own locations from the sheets. Since we have five frames to our play, the next four lines should read something like this:

> 2040 DATA GO,A,0,B,0,C,0,D,0,E,(
> 2050 DATA GO,A,0,B,0,C,0,D,0,E,C 2060 DATA GO,A,0,B,0,C,0,D,0,E,0 2070 DATA GO,A,0,B,0,C,0,D,0,E,0

Our play is ended with the word STOP, so the last line of our DATA for this section should read:

## 2080 DATA STOP

If you look at lines 109-123, lines $170-$ 182 and lines 206-210 in the playbook program you will notice that two of the variables $R E A D$ are IG $\$$ and LO\$. These stand for IGNORE STRING and LOCATION STRING. They are, in fact, ignored by the program at specific points. Some of the $D A T A$ is ignored when $R E A D$ for the menu. Also, the letters $A, B, C, D$, and $E$ are ignored when $R E A D$ from the DATA. They are included in the listing so that when the locations are entered, it is easier to see which coordinate goes with player A and which goes with player $B$ and so on. While they will slightly slow down the program when the $D A T A$ is being $R E A D$, they make debugging the pro gram much easier if you have made : mistake in a coordinate.

However you have entered your $D A T A$, the very last $D A T A$ statement in the entire program should be:

10000 DATA END,END,END,END
This flag tells the program that there
are no more plays in the program. Therefore, make sure that you do not place END in any other DATA statement before you have finished entering DATA.

There is one additional change you may wish to make to this program. I have designed the plays so that each player is displayed by the letters A through E. Since we have saved all 26 available letters as PL $\$(n)$ in the beginning of the program, you could use any of these 26 letters instead. (You may wish to use the initial of a certain player.) To make this change, you must change the string subnumber for PL\$(n) in line 262 through 270 . They are presently set to display PL\$(1) through PLS(5), which is A through E. Change these numbers in PL\$( ) to the number of the alphabet letter you wish to use. The letter you use will be used for the entire program so do not change them unless you want the change to be permanent.

## Conclusion

While this program is designed to do a specific task for a very limited population (basketball coaches only), you may wish to play around with it to get a better idea as to how BASIC graphic animation works. Rainbow has suggested that I rework this program for the fall so it can be used for football or some other sport. Until then, I will be waiting for some of you to submit your wishes for a future issue. Next month's wish granted will give all of you one of the most valuable educational programs designed for your CoCo. Until then, get those cards and letters coming.

## INTEGRATED BUSINESS SOFTWARE DESIGNED FOR THE COLOR COMPUTER WRITTEN FOR USE BY THE NON-ACCOUNTING ORIENTED BUSINESSMAN CONCISE USERS MANUAL WITH SAMPLE TRANSACTIONS TUTORIAL PROFESSIONALLY WRITTEN AND FULLY TESTED HIGHLY USER FRIENDLY AND MENU DRIVEN AFTER THE SALE SUPPORT

#### Abstract

SMAALL BUSINESS ACCOUNTHNC (Version 2.0) this sales-based accounting package is designed for the non-accounting oriented businessman. It also contains the flexibility for the accounting oriented user to set up a double entry journal with an almost unlimited chart of accounts. This package includes Sales Entry, transaction driven Accounts Receivable and Accounts Payable, Journal Entry, Payroll Disbursement, and Record Maintenance programs. Screen and hardcopy system outputs include Balance Sheet, Income Statement, Customer and Vendor Status Reports, Accounts Receivable and Payable Aging Reports, Check Register, Sales Reports, Account Status Lists, and a Journal Posting List. The number of accounts is limited only by the number of disk drives. $\$ 89.95$

#### Abstract

 the requirements of most small business users. The system includes detalled audit trails and history reports for each customer, prepares invoices and monthly statements, mailing labels, aging lists, and an alphabetized customer listing. The user can define net terms for commercial accounts or finance charges for revolving accounts. This package functions as a standalone A/R system or integrates with the Small Business Accounting package to build a complete accounting/receivables system. $\$ 59.95$

PAYROLL (Version 2.0) This integratable package is designed for maintaining personnel and payroll data for up to 200 hourly and salaried employees with 8 deductions each. This system calculates payroll and tax amounts, prints checks and maintains year-to-date totals. These amounts can be automatically transferred to the SBA package for financial reporting. It computes each pay period's totals for straight time, overtime, and bonus pay and determines taxes to be withheld. Additional outputs include mailing list, listing of employees, year-to-date federal and/or state tax listing, and a listing of current misc. deductions. This system is suited for use in all states except Oklahoma and Delaware.
\$69.95

All programs require a minimum of 32 K and 1 disk drive but will take advantage of 64 K and multiple drives. Each package features a hi-res $51 \times 24$ black on green screen. 16K versions available without hi-res screen. Specify 16 K or 32 K versions when ordering. Future integrated packages will include: Inventory Control, Sales Analysis, Accounts Payable.

COD/VISA/MASTERCARD

The fun and excitement of RAINBOWfest is coming your way . . . and now there will be a RAINBOWfest near you!

For the 1983-84 season, we scheduled four RAINBOWfests in four parts of the country. If you missed the RAINBOWfests in Fort Worth on Oct. 14-16 and at Long Beach on Feb. 17-19, you still have time to make plans now to attend our New Brunswick and Chicago shows! Each one will offer fun, excitement, new products, seminars and information for your $\mathrm{CoCo!}$ And for those who (perish the thought) don't
like CoCo as much as you, we've scheduled each RAINBOW fest in an area that will provide fun and enjoyment for the whole family.

Both shows will be held at Hyatt Regency Hotels which offer special rates for RAIN-
BOWfest. Every show will oper at 7-10 p.m. Friday, run 10 a.m. -6 p.m. Saturday and close with an 11 a.m.-4 p.m. session Sunday. Each will have a CoCo Community Breakfast featuring an outstanding national speaker from the Color Computer World. And each exhibition will be interspaced with a number of seminar sessions
on all aspects of CoCo - from writing in machine language to making your BASIC work better.

But most of all, there will be exhibitors. Lots of them. All ready to demonstrate products of every kind. Some with special programs and hardware items to introduce. Others with show specials.

Tickets can be secured directly from the Rainbow. We'll also send you a special reservation form so you can get your special room rate.

Come to RAINBOWiest . . . help us all celebrate CoCo Community at its finest.

## New Brunswick, New Jersey March 30-April 1

RAINBOW fest comes to the populous northeast! It's a close drive from New York, Boston, Philadelphia, Washington, Baltimore and Long Island.
RAINBOWfest-New Brunswick, N.J. DATES: March 30-April 1 HOTEL: Hyatt Regency New Brunswick ROOMS: $\$ 59$ per night single/double KEYNOTE: To Be Announced

Advance Ticket Deadline:
March 23, 1984

## Chicago - June 22-24

Come to RAINBOWiest - the site of CoCo's very first show this spring. And right next to the world's largest indoor shopping mall.
RAINBOWfest-Chicago
DATES: June 22-24
HOTEL: Hyatt Regency Woodfield
ROOMS: $\$ 46$ per night single/double
KEYNOTE: To Be Announced
Advance Ticket Deadline:
June 18, 1984

## Discount Air Fares

United Airlines and the Rainbow have joined together to offer a special discounted fare to attendees of RAINBOWfest, New Brunswick. Simply by calling United at the toll free number listed below and identifying our meeting, with account number 2425, you will be eligible for a special "super saver" fare. This could mean as much as a 50 percent discount off that regular coach fare.

# RAINBOWfest New Brunswick Seminar Program And Speakers 

## Frank Hogg Advanced Operating Systems Frank is the president of Frank Hogg Laboratory and a forerunner in Flex and OS-9 systems.

## Steve Blyn <br> New Trends In Education <br> Steve, an award-winning Rainbow columnist and teacher, has written many educational programs for Computer Island.

## Susan Davis <br> Women And Computers <br> Susan, co-owner of Sugar Software, will lead a panel discussion on women's involvement in the world of the Color Computer.

## Gary Davis <br> Peripherals - Printers, Disk Drives And Modems

Co-owner of Sugar Software, Gary has been programming for 15 years and specializes in assembly language.

## Bob Rosen <br> Bulletin Boards <br> Bob, president of Spectrum Projects, has been running a successful CoCo mail-order business and a bulletin board system for two years.

## Dale Puckett

## Beginners Tour Of

 BASIC09/OS-9A free-lance writer and programmer, Dale has worked with microprocessors since 1976 and has just completed his first book, The Official BASIC09 Tour Guide.

## Gordon Monnier <br> Demonstration On Graphicom

Gordon is the owner of MichTron (formerly Computer Shack) and has been publishing programs for Radio Shack computers for four years.

Bruce M. Cook Bringing High Performance Software To The CoCo

Bruce, an associate with Elite Software, is the author of Elite*Calc and Elite*File.

Frank Thompson and Structured
Dan Eastham Programming In PASCAL
Frank and Dan, owners and developers of the Colour Software Workbench, will discuss software development tools and PASCAL language its program structure and relationship in the school environment.
Peter Stark
Introduction To Machine
Language Programming
For The Beginner

## What Makes The CoCo Different <br> From Other Computers

Peter is a professor of electrical and computer engineering technology in the City University of New York and is president of Star-Kits Software Systems Corp.
Richard R. Parry
Speech Synthesis
Richard is the founder and owner of Speech Systems and is the designer of music and speech synthesizers.

Fred Scerbo
BASIC Programming And Coaches' Playbook
Fred has published some of the first software available for the CoCo through his software firm, Illustrated Memory Banks. Particularly, he will be discussing The Coaches' Playbook program for "The Rainbook Wishing Well." See Page 82, March 1984.

PLUS . . . RAINBOWfest's "CoCo Community Breakfast" - Speaker to be announced COME TO RAINBOWfest NEW BRUNSWICK

Additional seminars are planned as well. Admission to all seminars is at no charge. See registration form for admission prices to exhibit area and breakfast.

# Upgrade Your Color Computer With A Key Tronic Keyboard. 

Simple to install in your TRS-80 Color Computer*. A high-quality Replacement Keyboard from Key Tronic . . . the world's leading keyboard manufacturer for computer terminals.

FEATURES

- 15-20\% higher data input rate compared to standard color computer keyboard.
- User programmable function key
- Familiar typewriter layout.
- Complete legend description.
- High reliability-keys do not stick or jam.

Additional features include - high spring force on "clear" and "break" keys to prevent entry errors, full sculptured keytop array with low profile keytops, and locating "pips" on home row keys.

ORDERING INFO:
Suggested Retail Price: $\$ 89.95$, includes plug adapter, part \#500c, for models produced after Oct. ' 82 (Rev F and later). To order Model KB-500 call Toll Free: 1-800-262-6006 for the retailer closest to you ( 7 am - 3 pm Pacific Time). Warranty information may be obtained free of charge by writing to the address below.

## SALE

 PRICED Z-PAK ${ }_{\text {cartilide }}^{\text {TM }} \$ 29.95$ If You Order Two of the Following Packages with it. If Ordered Separately $\$ 79.95$Z-Pak is an $8^{\prime \prime} \mathrm{x} 4^{\prime \prime}$ cartridge that plugs into the expansion port of the CC. Z-Pak is capable of holding up to 80 k of EPROM (must be factory installed). THAT"S RIGHT as firmware packages become available and are ordered, they become part of random access memory. All on line at the same time!
Now lets do a little addition, if you have 64 k of ram and X-Basic then Z.Pak gives you the potential of having a 160 k system someday... That's approximately what a disk holds!
lmagine... having a $C$ compiler, a hi-res screen editor, an assembler, and two debuggers all on line at the same time!... and there's more to come!

## INTERACTIVE-ETM PACKACE $\$ 39.95$

$\mathbf{I E}^{\mathrm{TM}}$ is a high resolution screen oriented editor, just a few of the features are:
$\star$ cursor commands $\quad \star$ block moves $\quad \star$ search \& replace

* auto insert
$\star 64$ character lines
$\star$ and more.

Option \#4 Reference Card For OS9 $\$ 5.95$
Option \#5 Screen Driver For OS9 $\$ 9.95$
Option \#6 OS9 / CC Disk Xfer Utility $\$ 9.95$
Option \#7 IE Reference Card

## INTERACTIVE-CTw ${ }^{m}$ PACKAGE <br> $\$ 44.95$

Interactive-C is the next generation in compiler technology. Imagine... you only recompile the functions that you're working on. Everything else is AUTOMATIC and done in one pass.
$\star$ preprocessing
$\star$ parsing
$\star$ lexical analysis

* expression evaluation
$\star$ code generation (no assembler needed... IC compiles to an extremely efficient Z-Code ${ }^{\text {TM }}$
$\star$ dynamic cross checking (ever redefine a variable but missed recompiling a function referencing it?)
$\star$ dynamic linking $\quad \star$ dynamic loading (for testing)
$\star$ automatically loads library modules from your library directory.
Aren't you tired of typing (and waiting for) assembler and linker commands (and the three extra passes they require!!? We haven't found a 'professional' level, C development system that is better than this.

Quite simply, with the exception of floats \& doubles, $\mathbf{I C}^{\mathbf{T M}}$ supports the entine C programming language as described by $K \& R$. The FULL macros, initializers \& multi-dimensional arrays really make the language... Don't settle for less!
Interactive C Debug ${ }^{\text {TM }}$
(Included)
Are you debugging a higher level language at àssembler level... with ICD ${ }^{\text {TM }}$ you can see the variable names and watch their values change as you single step. Function trace and much, much, more...
Two Resident Libraries
(Included)
IC includes a RESIDENT standard i/o library \& a RESIDENT standard function library.
Option \# 8 Tool Kit A Useful utilities and filters $\mathbf{\$ 1 4 . 9 5}$
Option \# 9 Resident Extended Library $\mathbf{\$ 9 . 9 5}$
Option \#10 IC \& ICD Reference Card $\$ 4.95$
Option \# 3. C Programming Book K \& R \$19.95

## INTERACTIVE-A ${ }^{\text {m" }}$ PACKACE $\$ 39.95$

Interactive-A is an assembler... but we must WARN you. It is NOT an ordinary assembler, there are dozens of ordinary assemblers available for the 6809, and if you don't want to change the way you program, buy one of them... However, if you'ne tined of performing surgery with a butterknife... then read on...

We took a look at the programming process and decided it was inefficient to wait for a program to re-assemble after every change, and that it was even more inefficient to patch a program, only to find out 15 minutes later that the patch was wrong.

IA ${ }^{\text {TM }}$ is a very fast one pass assembler, and it ONLY reassembles and auto links the subroutine or variable that has just been changed.

We've added a few NEW features that allow the building of libraries of subroutines without the OLD PROBLEM of symbol and register conflicts, these features also facilitate recursive subroutines.

Interactive A Debug ${ }^{\text {TM }}$
(Included)
This is a screen oriented debugger that eliminates WAITING FOR A LISTING SO THAT YOU CAN DEBUG. Just a few of the features are:
$\star$ single step with disassembly
$\star$ dynamic reg. display
$\star$ trap, dump, blk moves
$\star$ load map

* crash eliminator
* byte/word search
$\star$ command table hook
$\star$ examine modify memory
$\star$ cref refs to variables
$\star$ trap on variable reference
AS IAD ${ }^{\text {TM }}$ has access to the assemblers tables, variables may be referenced symbolically. You should see IAD in single step mode. It looks like a logic analyzer!
Option \#11 Resident Misc. Subr. \& I/O Libary $\$ 9.95$
Option \#12 Programming the 6809 book Z \& L $\$ 19.95$
Option \#13 IA \& IAD Reference Card $\$ 4.95$
Option \#14 Disassembler (output assemblable) $\mathbf{\$ 9 . 9 5}$

## NEW: DISK BASED STARTER KIT FOR 059 \$39.95

We think that the serious programmers are already sold on Z-Pak... especially at this month's sale price. However, if you're just getting into programming and OS9, and would like to move a bit slower..

The starter kit for OS9 is disk based (NO Z-Pak) and includes:
$\star$ Interactive E screen editor $\quad \star$ OS9 / CC disk xfer utility
$\star$ OS9 screen driver
If you don't have OS9 we'll be happy to place the editor on tape or RS disk for $\mathbf{\$ 3 5 . 9 5}$.

Color Computer is a trademark of Tandy Corporation. MX-70 is a trademark of EPSON. OS9 is a trademark of Microware \& Motorola. Z-Pak, Interactive-C, IC, Interactive-E, IE, Interactive A, IA, Z-Code, Interactive C Debug, ICD, Interactive A Debug \& IAD are trademarks of Micro Tools Inc

# THE ADVENTURE GENERATOR 

by Bill Cook

## HERE IT IS - THE FIRST COMMERCIALLY AVAILABLE ADVENTURE GENERATOR FOR THE COLOR COMPUTER.

Now you can create your own exciting ADVENTURES without the hassle and bother of hours of tedious programming. Each ADVENTURE will be a stand-alone, ready to run program with up to 100 different and distinct rooms or locations and as many of 60 objects to be picked up, examined, or used by the player. Your devious mind can use up to 30 command words and 9 conditional flags in creating your mind boggling ADVENTURE. When finished, the ADVENTURE GENERATOR will output your ADVENTURE to either disk or cassette, as you desire.
With the ADVENTURE GENERATOR you can create and exchange ADVENTURES with your friends, or even sell them if you want without any fear of royalty requirements or other obligations. Start a club to exchange ADVENTURES, or make a few dollars by sending your best ones to a magazine for publication!
While you do not need to be an expert programmer to use the ADVENTURE GENERATOR, you should have a working knowledge of program syntax and format to use it most effectively. The ADVENTURE GENERATOR is fully compatible with all models of the Color Computer with the exception of the MC-10.

## FEATURES

Creates stand-alone programs
Up to 100 rooms, 60 objects, 30 command words, and 9 conditional flags
Supports tape and disk output
Optional printer output of important sections during creation of ADVENTURE
Complete documentation
includes sample ADVENTURE
Works with all models of the CoCo except MC-10
Requires 32 K Extended Color BASIC
Cassette...... \$34.95
Disk/Amdisk..... $\$ 39.95$

COD orders accepted, no charge cards please.
Shipping and haridling \$3.00
California residents please add $6 \%$ sales tax

## DOUBLE

INTERFACE
(Moreton Bay)
Alfows the compenite video signal to be interfaced directly to a B/W or color monitor. IV and monitor can be used simultaneously. Complete with comprehensite instructions and all parts, including an crose mal sound output.
Only . . . . . . . . . . . . . . . . . . . . . . . . . . $\$ 24.95$

1636 D Avenue, Suite C
National City, CA 92050
BBS (619) 474-8981

## WHERE'S-IT

## by C.E. Laidlaw

What programs are on this disk? Which disk is my WIDGET program? WHERE'S-IT will answer these questions for you and maintain disk directory index files with up to 948 programs in each. Complotely userfriendly. just run WHERE'S-IT and follow the prompts to:

Create index files holding up to 848 programs Load or save existing index files

Add, delete or update index files for a specific disk Sort index files alphabetically with a machine language sort

Print index out with 162 programs to the pege
Disk/Amdisk .... $\$ 19.95$
(32K Extended Color BASIC)

# Costcalc: The Manufacturer's Cost Accountant 

## By Eodlto Hin

1Oostcale is an Extended Color BASIC (ECB) program written for a 16 K Color Computer ( CoCo ). It has an optional print routine based around a Radio Shack DMP 100 printer. Costcalc computes the total cost and cost per unit for a specific production quantity based on specific input data relative to labor, supplies, and other cost categories. In its present form, Costcalc calculates total dollar cost in thousands (M\$). Cosicale is hased on a business model which I developed for a large scale IBM mainframe. An attempt has been made to maintain efficiency and simplicity in construction of Costcalc. Although the program is based on the cost parameters from the business model in use by my company, a computer hobbyist of average programming ability should he able to make modifications to adapt Costcalc for their use and application.

Costcale is designed around the standard $16 \times 32$ line and character display of the CoCo . The input screens allow for a 16 -character cost element description and 14 lines of input. Output screens consist of two heading lines divided into two 16 character segments. The first segment of heading line one contains the type of cost description and the second segment contains the name of the cost calculation session such as "cost run I." The first segment of heading line two is reserved for control of movement to the next screen while the second segment contains column headings. The remaining 14 screen lines are used for display of descriptive and calculation data for each type of cost.

Costcale begins with the usual program oredits and proceeds to the first input sereen which asks you for a 16 character name for your cost calculation session. If you enter more than 16 characters, Costcalc will alert and give you a second chance to input your session name. This concept of a second chance for input of data prevails throughout Cosicalc. After you have entered the name for the particular session, a screen will appear and ask for the type of cost data you wish to enter. You may choose between production data, labor and salary data, payroll tax data, supply cost data, other cost data, or inputting all of the cost data, After making your selection, Costcale will guide you through data input. Each screen will appear and allow for a line by line entry of data. When all the data for a screen has

[^6]been completed, it will be displayed for visual editing. At this point you will be asked if the data is correct. You may respond "Y" (yes) or " N "(no). A " Y " response takes you to the next input or menu screen while a " N " will ask for the line number to be corrected. The line number occupies the rightmost three positions of each line. A response of " 99 " allows for re-input of all cost data for the particular screen. Entries of " $1-14$ " permit change to the appropriate line only. After the corrections have been made, the data is again displayed for visual checking. If the data needs further correction the process described above may be repeated again and again until the data is correct.

After all cost data bas been entered, the cost display selection screen will appear. Your display options are labor, supplies, other, total cost, production statistics, or all of the above. Once the choice is made, the appropriate cost calculation screen(s) appear. You will notice the blinking cursor on the left side of line two. This is the field used to control movement to the next screen. When you have completed viewing the screen, enter a "C" and press [ENTER]. This moves you to the next cost or menu screen.

When the last cost screen has been viewed, the final menu sereen appears. The selections on this screen permit printing or changing cost calculation data, performing a new cost calculation, or ending the session. If you choose to print your cost calculations, they will be on the first two pages of the listing. The third page of the primtout will contain a listing of the cost input data (see sample printout exhibits). The print routine is designed for the DMP 100 printer using $91 / 2 \times 11$-inch paper. The first line should print on the plane of the second tractor feed hole of the paper. Keep this in mind when lining up your paper. Although the print routine is optional, its use is highly recommended as it will aid greatly in comparative analysis between scenarios.

As you look through Costcale you will notice substantial use of data statements and arrays. This has been done in my attempt to achieve efficiency and simplicity. Data statements have been used for all line description data. Using this approach in combination with the edit function of Extended Color BASIC, line description changes can be quickly and simply made. Therefore, easy adaption to your application. These data statements are read into arrays where the line descriptions are stored for further program use. The line descriptions that appear on the screen as input or output data come from these arrays, (Please refer to the description for the variable and array names and their use included in this article.) Each numeric value or descriptive data you
input goes into an array of the same name (allowing for the normal $\$$ denotation for character arrays).

The program uses individual routines for loading of arrays and subsequent calculation of data within the arrays. However, with the exception of the production statistics routine which has its own separate display and print routines, the display and print routines are common to all arrays. Prior to displaying or printing, each set of arrays (descriptive data and numeric values) is loaded into a set of arrays used for all display and print purposes. This approach conserves memory and reduces the number of program statements required for the program.

## Program Breakdown And Explanation

Statements 10-55:
Display of Program Name and Credits
Statements 60-65:
Dimensioning of Work Arrays
Output:
B\&B\$ - Labor Cost
C\&C\$ - Supply Cost
D\&D\$ - Other Cost
E\&E\$ - Total Cost
H\&H\$ - Production Statistics
Z\&Z\$ - Display and Printing
Input:
P\&P\$ - Other Cost (Overhead)
Q\&Q\$ - Supply Cost
R\&R\$ - Payroll Cost
S\&S\$ - Operations Data
T\&T\$ - Wage and Salary Data
Statements 67-68
Description of Session
Line Description (Output):

| Type | Statements |
| :--- | ---: |
| Labor Cost | $201-214$ |
| Supply Cost | $301-314$ |
| Other Cost | $401-414$ |
| Total Cost | $501-514$ |
| Operations Data | $801-814$ |

Line Descriptions (Input)

| Type | Statements |
| :--- | :---: |
| Other Cost | $1601-1614$ |
| Supply Cost | $1701-1714$ |
| Payroll Tax Data | $1801-1814$ |
| Operations Data | $1901-1914$ |
| Wage \& Salary | $2001-2014$ |

Statements 10030-10120:
Reading of Line Descriptions
Input of Data:

| Type | Statements |
| :--- | :---: |
| Operations | $15100-15106$ |
| Labor \& Salary | $15200-15206$ |
| Payroll Tax | $15300-15306$ |
| Supply | $15400-15406$ |
| Other | $15500-15506$ |

Set Up Data For Output:

| Type | Statements |
| :--- | ---: |
| Labor | 15850 |
| Supply | 15900 |
| Other | 15950 |
| Total | 16000 |

Display of Input Data:
Statements 15110-15120
Cost Display and Print Routine:
Statements 15805-15815
Production Stats Display and Print Routine:
Statements 16050-16065
Print Input Data:
Statements 16100-16210
Calculation Routines:

Type
Labor Cost
Supply Cost
Other Cost
Production Stats
otal Cost
(Part of each routine)
Variable Description:
AA - Routine Control (Primary)
CO\$ - Data Correction Control
DA\$ - Character Type Checking
DL - Data Length Checking
E2\$ - Cost/Unit Edit Mask
E3\$ - Thousand \$ Edit Mask
E4\$ - Production Stats Edit Mask
FC - Correction Field Number
Il - Loop Control (Primary)
IL - Loop Control (Secondary)
NN - Display Spacing
PR\$ -- Session Description
SL - Final Selection Control
TL - Print Line Counter
V1 - Max Tax Percent - FICA
V2 - Max Tax Amount -- FICA
V3 - Max Tax Percent - FUI
V4 - Max Tax Amount - FUI
W1 - Max Tax Percent - SUI
W2 - Max Tax Amount - SUl
Each array consists of 14 elements that correspond to the data denoted by the appropriate line descriptions of the specific data statements. All manipulation of the data contained in the arrays is performed by referencing the array name and element number (e.g., $\mathrm{B}[1]$ or $\mathrm{Z}[1]=\mathrm{A}[1]$ ). Therefore, any change to the program must consider all the possibilities where the array element(s) are utilized. This includes data statements, input of data, calculation of data, displaying of data, and printing of data. A few moments reviewing the program routine descriptions and associated program statements will reduce the possibility of error when modifying the program.

Before loading Costcalc, you must do a PCLEA R1, then hit [ENTER]. This will free enough memory to load the program, otherwise you will get an OM Error.

Costcalc is a good example of a practical business use for the CoCo .

ARK ROYAL provides three types of game: The Strategy Wargame, Strategy Arcade and Arcade games.

ACROSS THE RUBICON 16K EXT or NON EXT - The popular WWII wargame. Break thru the Huertgen Forrest using infantry, tanks, paratroops, air and artillery strikes and destroy Hitler's plans for the Battle of the Bulge, CASSETTE ...\$19.95.

ACROSS THE RUBICON 32K (formerly Rubicon II) EXT The wargamer's choice! Everything ATR has and mortar units, patrols, German artillery, platoon movement, supply, intelligence, spotting rounds, unit merge, game save and much more! CASSETTE.. \$24.95.
WATERLOO! 32K - Player tries to do what Napolean couldn't: defeat Wellington and move into Waterloo. French forces include cavalry, artillery, guards, infantry and squirmishers. CASSETTE \$24.95.
MISSION EMPIRE 32 K EXT cass or disk. Starting with one planet, incomplete intelligence and limited resources, you must form alliances, build armies and conquer the galaxy. Game save. Cass or Disk version on Cassette...\$24.95.

BOMBER COMMAND 16K EXT The air war over Germany, 1941-45. Player must destroy German industry while fighting off flak, the Luftwaffe and bad navigation. CASSETTE... \$22.95.

STARBLAZER 32K EXT During your absence, the SPECTRUM galaxy has been overrun by the draconic xyclons. Now you command the only Starship left to retaliate. CASSETTE...\$24.95.

GALACTIC TAIPAN 32K EXT Battle storms, pirates and high taxes in hopes of making a profit in the galaxy. CASSETTE...\$24.95.

KAMIKAZE 32K - Based on historical reports of the savage Kamikaze attacks at the end of WWII. Hi-res graphics include search, radar, air vs air, air vs ship, and the Kamikaze attack. Player may use joysticks or not. CASSETTE...\$24.95.

LASER SUBS 16K (Suited for kids, 12 and under). Hi-res graphics. Lots of fun - kids love it! Your destroyer discovers a fleet of enemy's laser-firing subs heading towards the surface. Destroy them with depth charges before they blast you apart. Joysticks. CASSETTE...\$15.95.

CRYSLON - 32K 3-D graphics, joysticks. Player commands the remote-controlled defense missiles of the planet Cryslon. Your mission - defend the planet's cities from invading aliens with powerful lasers. CASSETTE...\$19.95.

P-COPY 32K disk only. \$19.95. Arrange or rearrange a single disk or four at a time with this menu-fed program. Copy, backup, kill, direct, rename, print, read or whatever you need to do with disk files. Uses single key commands. A must for the disk owner who wants to organize.
ROMPAC BACKUP 64K $\$ 15.95$. Cassette only. Can't run your rompacs with your disk in or just want backup? Rompac Backup makes it easy.

ALL GAMES ARE GRAPHICALLY PORTRAYED. None are word games. We guarantee that if you've ever dreamed of commanding an army then what we offer will please you.
Orders are shipped the day they are received regardless of check or money order. Send no cash, please. We pay shipping on all prepaid orders. On C.O.D.'s, customer pays charges No bankcard sales. We have enough paperwork already.

All games strategy oriented, graphically portrayed and guaranteed from defect and boredom. For DISK version add $\$ 3.00$. No mail delays with personal checks. State system with order.

# B5 Software 

## EDUCATIONAL PROGRAMS for

## CLOCK ${ }^{\dagger}$

Grades 7 -4. Helps children practice telting ime. 4 skill levels: hour, quarter hour, 5 minute ond 1 minute intervals. Options include reading hours and minutes separately on the large graphic clock with synchronized hands. After 10 correct onswers o small mouse ascends to the tune of Hickory, Dickary, Dock.
16K Cass $\$ 24.95 \quad 32 \mathrm{~K}$ Disk $\$ 26.95$

## MONEY ${ }^{\dagger}$

Grode 2-4. Provides an opportunity to count coins. 5 skili levels ronge from counting only dimes, nickels and pennies to counting various combinations of all gram uses graphic coins. If a series of 3 problems ore answered correctly o rocket ascends to the moon. If I ar more are incorrect, the rocket crashes instead. 16K Coss $\$ 19.95$ 16K Disk $\$ 21.95$

## BORROW ${ }^{\dagger}$

Grades 2-4. Allows the student to reinforce subtraction skills. Problems appear in large graphic numer. als. Small boxes above the numerals allow for regrou ping procodures, 7 skill levels. A happy face oppears on the screan for each correct onswer. After 10 come pleted problems, a Par-Man-type creature munches a numeral down.
16 K Cass $\$ 19.95 \quad 32 \mathrm{~K}$ Disk $\$ 21.95$
CARRY ${ }^{\dagger}$

Grodes 2-4. A program designed to help students to practice addition. Uses same formot as Borrow, 4 skill 16K Coss $\$ 19.95 \quad$ 32K Disk $\$ 23.95$

## QUESTION

? ?

Grodes 1-8. Asks questions with multiple choice or true and false answers. Fits ony curriculum because you con input the questions and answers. Grophic reward is a blinking robot. Also designed for use with dato topes. Printer use optional.
16 K Coss $\$ 19.95 \quad 32 \mathrm{~K}$ Disk $\$ 21.95$

## MATHFACT ${ }^{\dagger}$

Grade 1-5. Motivates students to learn their facts. All 4 math operations are in the program. Student selects the desired operation then the desired addend, subtrahend, factor or divisor, or then con request a mixed presentation within each operation. 2 skill levels, all drills timed and scared. If all facts are answered corr ectly, students con play a quick number game as a re ward.

## HANGWORD \& SCRAMBLE

grades 1-8. Presents 2 word games. Hangword is simt lar to the old favorite, Hangman. Blanks appear and students guess letters for the blonks. Wrong guesses build the graphic display of the word 'Sorry'. Scramble displays the word with the letters scrambled. Students guess the word and spell it carrectly. Input own words with this program or purchase data tapos. See dato tope listing. Printer use optional 16K Coss $\$ 14.95 \quad 32 \mathrm{~K}$ Disk $\$ 16.95$

## SPELLING

Grades 1-8. Very flexible as it allows you to input your own choice of wards and stare them an tape files You may also purchase dato topes for this program See data tape listing. Words flash on the screen from 1 to 10 seconds, then student types the word. The score is given after ach entry and the student is rewarded with o grophic dispioy of words and a song Printer use optional.
16K Cass $\$ 16.95 \quad 32 \mathrm{~K}$ Disk $\$ 18.95$

##  mivinmer <br> KEYBOARD 

Grades 1-6. Helps fomiliarize student with keyboerd A grophic keyboard enobles user to locate key 3 quick ly. Home keys are identifiod and proper fingering may be tought. Lessons ore built oround olphabet, finger is given. 32 K version has lengthier timed drills. Both 16 K and 32 K version has lengitier timed dills. Both 16 K and 32 K versions ean use data papes for further
practice. See datatape listings. practice. See data tape listings
16 K Cass $\$ 19.95$ 32K Coss

## Ask your Dealer for a Demonstration today!

BROCHURES UPON REQUEST

## ABC'S

Grades K.1. The child types the letters in the alphabet so the tune of the olphabet song. The reward is a graphie and sound display 16K Coss $\$ 9.95$ 16K Disk $\$ 11.95$

## SKIP COUNTING

Grades 1-4. Helps the child learn to count by 1's, 2's 5 's, $10^{\prime} \mathrm{s}, 100^{\prime} \mathrm{s}$, or any number desired. The user sel ects the parameters by giving the number to count by and the beginning and ending number of each sequence. The student can practice at whatever level needed, and each lesson has a graphic reword. 16K Cass $\$ 16.95$

## data Tape listings

Dato Tapes may be used with other B5 programs. Ther cannot be used alone.

## Use with Keyboard Program

KEYBOARD PHONIC DRILL - Letter, word ond sen tence finger drills using common vowel and consonan combinatians. $\$ 8.95$

Use with Keyboard, Spelling or Hangword Programs DOLCH WORDS - 273 words used most often in begin ning readers. $\$ 8.95$

GRADE LEVEL SPELLING - Over 300 words on eoch tope. Each lesson follows a phonic rule. Avalable Grades $2,3,4,5$ or 6 levels. $\$ 8.95$ per grode level

SPACE WORDS - Over 300 words to challenge and mo tivate the superior speller. Grades 4-8. \$8.95
ADULT WORDS - Most often misspelled words. Highly challenging. $\$ 8.95$

Use with Questions Program
NOUNS AND VERBS -4 lessons on nouns and 4 on
verbs. Grades $3-5$. $\$ 8.95$ verbs. Grades 3-5. $\$ 8.95$
READING COMPREHENSION - Lessons build from simple to complex. Grodes 2-4

| Moin ldeo | $\$ 10.95$ |
| :--- | ---: |

## BUSINESS SOFTWARE for OS-9 and FLEX <br> WHAT YOU SHOULD KNOW ABOUT COMPUTERWARE ${ }^{\circledR}$ BUSINESS APPLICATIONS:

- They have been in use for over 4 years on many 6809 systems. This means they are well tested.
- Complete manuais accompany the systems
- User-friendiy menus make them easy to use.
- They are not accounting tutoriais. They assume you know and use sound accounting principles.

## System Requirements

- FLEX or OS-9 operating system
- 64 K memory
- Computerware ${ }^{\oplus}$ Random BASIC
- Dual Disk Drives (Payroll requires double-sided drives)
- O-PAK for OS-9 systems

## GENERAL LEDGER

$\$ 249$
This is a comprehensive double entry accounting system with complete audit trails, closing procedures, and full reporting. The chart of accounts is flexible and the system easy to use. Reports include the General Ledger, Trial Balance, Balance Sheet, income Statement, and Transaction Register. Your financial information is at your fingertips!

## CHECK LEDGER

This is a single entry bookkeeping system which allows the users to define a chart of income and expense accounts. Year-todate totals are maintained for each account as well as complete checking account history. By just entering your checking account information, you can have always-current visibility over your income and expense ledgers. Financial statements and taxes are a snap!

## CORRESPONDENCE SYSTEM

We call this the People Manager. It is a very sophisticated people data base system. The system collects name and address information. provides mailing labels or reports of the entire list or any subset upon request. The power of the system lies in the 17 character special code field that is used to identify special characteristics of each person and then can be used to select subgroups for reports and labels used in special marketing or contracts. Tested with data Dases of 15 to 9.000 entries this system has been in use with retailers, clubs, churches and professionals for years.

Dealer Inquiries Invited
COMPUTERWARE ${ }^{\circledR}$
P.O. Box 668 - Encinitas, CA 92024 - (619) 436-3512

## PAYROLL

This is the most comprehensive payroll you'll find on a microcomputer. Besides collecting key employee information. it allows entry of pay rates for standard hours. overtime, and salary Hourly, salary, and commissioned employees may be paid weekly, bi-weekly, semi-monthly, and monthly. Two types of special monthly deductions are also accommodated. Year-to-date, quarterly, monthly and current totals are maintained. All federal reporting is done automatically and your state computations are also included.

## INVENTORY CONTROL

This system is designed to help the retaller, distributor, or businessman to keep control of this important factor. It stores your cost and quantity information, updates it immediately, and offers you key management reports with useful summaries at any time. With four costs, four locations, selling history, and vendor information for each item, you will always have the facts!

## ACCOUNTS PAYABLE

This system can give you the tools to plan your business growth by controlling expenditures and forecasting cash require ments. It helps a small business manage and track its cash liabil ities by collecting vendor invoice information and reporting the business' cash commitments and payment history Along with standard payables reports it also includes a check writer and payment forecast reports

## ACCOUNTS RECEIVABLE

All businesses need to know who owes them money! This system provides reliable and timely information regarding the status of all customer accounts. You can know instantly which accounts are past due, forecast how much money to expect to receive for cash fiow planning, and keep on top of your customers' credit positions Customer name, address, credit limit, invoice, and payment information is recorded and reports of ail information including customer statements are available upon your request.

# Memory Saving Techniques For Handling Data 

By Richard A. White<br>Rainbow Contributing Editor

Next month in the Rainbow is an article by Sam Sherrill on using CoCo to conduct surveys and to analyze the results. Because fairly large quantities of data are involved, both speed and memory conservation are important when writing programs for use in survey research. As Professor Sherrill points out, surveys are conducted by asking a sample of people a standardized set of questions and recording the results, usually on paper questionnaires. The largest survey organizations use some form of CATI, computer-assisted telephone interviewing. CATI systems allow interviewers to directly enter answer codes into a minicomputer or mainframe terminal. However, such equipment is expensive and clearly not feasible for small organizations which only occasionally conduct surveys among clients or customers.

Professor Sherrill wondered if he could use his CoCo to help with a 50 -question, 100 -person survey. He wrote a BASIC questionnaire program and then trained interviewers to conduct interviews over the telephone using CoCos he supplied. It worked! Each question and its accompanying responses appears separately on the screen for the interviewer to read to the respondent. The answers are assigned codes between 1 and 10 (not all numbers need be used for a question). After each response was obtained, the appropriate numerical code was keyed in. The next question then would be written on the screen. At the end of the interview, the interview number and the response numbers were saved to a separate disk file. This worked quite well in getting the data. What to do with the data was another matter.

Simple saving and loading data from either tape or disk is not particularly difficult. The descriptions in the Color BASIC manual give the user a good start. However, when there are other considerations, such as the most efficient storage of data in the computer, things get somewhat more difficult. The data from one interview in Professor Sherrill's survey consists of a file of 45 single-digit numbers. (These files were on disk, but could have been on tape as easily.) Since there would be over 100 interviews, a program to

[^7]calculate and display the results of the survey would have to process more than 4500 numbers. If five bytes are needed to store each number, as is the case in the CoCo , over 22,500 bytes would be needed for data alone. This is tight in a 32 K machine and allows no space for larger databases. Fortunately, there is a way to handle this much data (and more).

Numbers can be stored very efficiently in strings. This is done with the MID $\$$ function in Extended BASIC. This is one of those Extended BASIC commands that pays for the chip many times over. In the example above, storage requirements are reduced to one byte per number from five. Impressive! And not particularly difficult to do. This means that a 64 K CoCo can handle up to 500 interviews of 50 questions each (just in lower 32 K only), using either tape or disk.

Suppose we have 50 numbers per interview or record and that each is a single digit number. How are the numbers stored now? Well, they could be stored in an array like V(1), $V(2) \ldots V(50)$. You would have dimensioned the array with a statement like DIM $\mathrm{V}(50)$ early in the program before any numbers were entered. What will the final string have to look like? We need to know this before we decide to put the string together because there are a number of options. First, will there be string identification in the string itself? Good idea to have it. Next, what kind of identification will this be? It could be simply a number or something more complex like a name or other sequence of characters that could vary in lergth from string to string. Keeping things simple for now, we will use a three-digit number to identify the string, and will put it in the first three positions in the string.

Where does this string identifying number come from? It could be entered from the keyboard or it might be assigned by the program itself. In either case, BASIC code will have been written to get the identifier into a variable that is available when the data string is to be assembled. In our survey example, the interviewer entered the interview number in response to the first question in the interview: this number is the first number in the file on disk. It is a simple matter to INPUT it from the disk into a member of our array, V(1).

[^8]Now that the number is available we must convert it to a character from its numeric form. $\mathrm{A} \$=S T R \$(\mathrm{~V}(1))$ does this. $\mathrm{A} \$$ could be four characters long since $S T R \$$ always adds either a leading space or a minus sign when making the conversion. We can test this: if $\mathrm{A} \$$ is four characters long, get the right three with $\mathrm{A} \$=R I G H T \$(\mathrm{~A} \$, 3)$. On the other hand, our number could be a single digit and $A \$$ would be only two characters long. We can fix this with $A \$="$ " $+\mathbf{A} \$$, if necessary. We now have $A \$$ string that is exactly three characters long and which may contain any number from 0 to 999.

Next we need to put $A \$$ into the data string. Easily done. If we are calling our data string ST\$(X), ST\$(X)=A\$ does the job, assuming that $S T \$(X)=$ " "before the assignment. If ST\$="SOME SORT OF GARBAGE" there is trouble in River City, since our method of decoding the string will depend on a particular piece of data being at a particular location in the string.

50 FORY $=2$ TO45: INPUT\#2,V(Y): $A \$=S R T \$(A \$)$ : $\mathrm{A} \$=\mathrm{RIGHT}(\mathrm{A} \$, 1): \quad \mathrm{ST} \$(\mathrm{X})=\mathrm{ST} \$(\mathrm{X})+\mathrm{A} \$: \mathrm{NEXT}$
In the above line, a simple $F O R \ldots T O$. . . NEXT loop is run to get all the rest of the values, convert them to single character strings, and add each in turn to the the data string STS(X). For those with a fancy for large words, the string addition process is called concatenation. Note that we had to get the right character in $\mathrm{A} \$$ after the $S T R \$(\mathrm{~V}(\mathrm{Y}))$ operation to make AS one digit long.

There is a better way to put data into strings. Any time a string is redefined, the new string is written to a new location in memory and the location of its old contents is forgotten. The old string is still there wasting memory. Eventually, string space fills up with garbage strings and CoCo must stop to toss the trash. Fittingly, the process is called garbage collection. In most programs, this hesitation is no problem, since CoCo is a fast trash collector. However, when string space is tight, or there is a whole bunch of string processing going on, garbage collection can seriously delay a program. Here is a rewritten code that chucks concatenation and uses MIDS "on the left."
$25 . . . \operatorname{STS}(\mathrm{X})=\operatorname{STR} \operatorname{ING} \$(50, "$ ")
$40 \mathrm{MIDS}(\mathrm{ST}(\mathrm{X}), 1,3)=\mathrm{A} \$$
50 FORY $=2$ TO45: INPUT\#2, $\mathrm{V}(\mathrm{Y})$ : $\mathrm{A} \$=$ RIGHT\$ $(\operatorname{STR} \$(\mathrm{~V}(\mathrm{Y})), 1): \operatorname{MID} \$(\mathrm{ST} \$(\mathrm{X}), \mathrm{Y}+2,1)=\mathrm{AS}: \mathrm{NEXT}$

The last statement in line 25 defines $\operatorname{ST}(\mathrm{X})$ to be a string containing 50 spaces. We cannot now add our string identifying number to a null ST\$, but in line 40 we can insert it into the first three positions in ST\$(X) in place of the blanks. Actually, we could have filled the string initially with any character. If we had used a period to fill ST\$(X) the string would now look like the this:
"145.......................................

The 145 is a string identifying number or record number inserted by the code in line 40 . In line 50 , the process of defining and processing $\mathrm{A} \$$ is unchanged. What is different is that $M I D \$(\mathrm{ST}(\mathrm{X}), \mathrm{Y}+2,1)=\mathrm{A} \$$ inserts the character into a calculated location in the string. The string is never rewritten in string space and little garbage is collected. The same process can be used in an editing program to change data in the string.

MID \& statements are a bit tricky to deal with since you must calculate where in the string data goes and write BASIC
statements to implement these calculations. On the other hand, the technique can give you more control over your data and provide memory economy. More important, this idea of inserting data in a certain point in a record or in memory is central to data handling in assembly language, $C$, PL/I, PASCAL and BASIC09 and other applications where fixed memory space can or must be allocated. You can carry the idea over to the formation of multi-field, direct access records in Disk BASIC. The more we ask a language to manage our data the higher the price in memory usage and speed. Where neither matters, the strengths of BASIC should to be used to minimize programming time.

For Professor Sherrill's survey, a short program was written to take numbers from disks and convert them to the string format. These files of strings were then run into another short program that combined them into a single file. This final file is the survey database. To create the database, a file of numbered empty strings was generated and saved to disk. This file held more strings than we expected to need. The combining program loaded the full string file and then entered each small file and overwrote the empty strings. This allowed us to write the editing and tabulation programs and use them on a partial data base before the survey was completed.

Two types of basic data tabulations are made in survey analysis: frequency counts (often called straight runs and marginals) and cross-tabulations. Straight runs are absolute frequency distributions while marginals are frequency distributions expressed in percentages. Cross-tabulations (oneway) are the answers to one question partitioned by the answers to a second question. In a sample survey of CoCo owners, one question we would certainly ask is whether the respondents read Rainbow. A straight run on this question would yield the number who answered "yes" and the number who answered "no": the marginal would yield the percentages answering each way. We might also ask the respondents to our survey where they buy software and accessories. We wonder whether respondents who read Rainbow have different buying patterns than those who don't. For example, do they buy more by mail order and deal less with local sources, including Radio Shack? We can find out by crosstabulating the answers to the buying question by the answers to the readership question, as follows:

|  | READ RAINBOW |
| :---: | :---: |
| BUY FROM | YES NO |
| RADIO SHACK ONLY | HOW MANY HOW MANY |
| LOCAL NON-R.S. STORE | HOW MANY HOW MANY |
| MAIL FROM MULTI-LINE VENDOR | HOW MANY HOW MANY |
| MAIL FROM PUBLISHER OR MANUFACTURER | HOW MANY HOW MANY |

The data in the table above could be kept in a two dimensional array in the CoCo . The minimum array would be DIM $\mathrm{NM}(2,4)$. I visualize that as two columns of four rows each. In the cross-tabulation program, I defined an array as DIM DA $(11,11)$. This is actually a 12 by 12 array since there is a zero row and a zero column. A bit over 720 bytes of storage are needed.

Actually, this array was used in the second try at the program and there is a lesson in that story. Professor Sherrill wrote the first cross-tabulation program, and we only added the code necessary to enter the file of strings from disk and decode them. It was at that point that large, randomnumber data blocks were processed for the first time and the program was found to be slow. Professor Sherrill had worked out a way to calculate just where in a one-dimension
> "Two types of basic data tabulations are made in survey analysis: frequency counts (often called straight runs and marginals) and cross-tabulations."

array a particular number should be stored. The calculation worked, but took time. I was asked to investigate a machine language approach. In thinking about the task, I visualized a data table that felt like a BASIC two-dimensioned array. I rewrote the program first in BASIC and we found it to be over 10 times faster. The machine language program was never written.

Available only from ThunderVision, makers of JOWST

I certainly had not expected to make this type of impact. The lessons from this effort are simple and important: calculations take time and where they can be reduced or simplified, program running time is reduced. Division and raising numbers to powers are the slowest calculations. Addition and subtraction are fastest. Multiplication is in the middle. When you have the choice of making a calculation before entering a loop or inside the loop, always do it before. The heart of the cross-tabulation code is below. Note that only tests (IF . . THEN) and addition are used.

470 CLS :PRINT :PRINT"INITIALIZING ARRAY" $:$ FORX $=0$ TO $11:$ FORY $=0$ TOll $: \mathrm{DA}(\mathrm{X}, \mathrm{Y})=0:$ NEXT :NEXT
480 CLS :PRINT"ENTER THE VARIABLE NUMBER OF THE INDEPENDENT (COLUMN) VARIABLE", :INPUTI :CLS
490 PRINT"INDEPENDENT VARIABLE IS"I".","ENTER THE CODES YOU WISH TO USE FOR THE INDEPENDENT VARIABLE. AFTER ALL THE CODES HAVE BEEN ENTERED, ENTER 0 TO CONTINUE."
500 INPUTX :DA(X,0)=X :IFX=0THEN 510 ELSE 500
510 CLS :PRINT"ENTER THE VARIABLE NUMBER OF THE DEPENDENT (ROW) VARIABLE", :INPUTJ
530 CLS :PRINT"DEPENDENT VARIABLE IS"J".", "ENTER THE CODES YOU WISH TO USE FOR THE INDEPENDENT VARIABLE. AFTER ALL OF THE CODES HAVE BEEN ENTERED, ENTER 0 TO CONTINUE."

```
540 INPUTY :DA(0,Y)=Y :IFY>0THEN 540
550 CLS :PRINT@256,"THE RESULTS WILL AP-
    PEAR","MOMENTARILY."
```

In the above block, the user is asked to enter the question numbers ("variable numbers" to the pros), I and J to be cross-tabulated and which answers (represented by code numbers) are to be considered. In lines 500 and 540, the codes are obtained and simply put into their numerical positions in the array i.e. $\mathrm{DA}(\mathrm{X}, 0)$ or $\mathrm{DA}(0, \mathrm{Y})$. All other array members are still zero.

$$
\begin{aligned}
& 570 \mathrm{CT}=0: \text { FORA=NM TO NM+NR-1 :GOSUB } 110 \\
& \text { :IF V=DA(V,0)ANDV }>0 \text { GOSUB120:IF V1= DA } \\
& \text { (0,V1) ANDV>0 THEN DA(V,V1)= DA(V,V1)+1 } \\
& \text { :DA(V,11)=DA(V,11)+1:CT=CT+1 } \\
& 580 \text { NEXT }: \mathrm{CLS}
\end{aligned}
$$

Line 570 does the real work in an elegantly simple way. The FOR . . . TO . . . NEXTloops through the entire string array. Subroutine 110 gets the answer (code) for the first question in $V$. If $V=0$ there is no data in that string and no point in even checking the second question. The same is true if the code returned was not chosen for tabulation and $\mathrm{DA}(\mathrm{V}, 0)=0$. Then the test $\mathrm{V}=\mathrm{DA}(\mathrm{V}, 0)$ fails. In both cases, control falls to 580 with its $N E X T$. If $\mathrm{V}=\mathrm{DA}(\mathrm{V}, 0)$ is true, the code for second question is obtained and a second set of tests are made. If $\mathrm{VI}=\mathrm{DA}(0, \mathrm{~V} 1)$, we have a match. Array members $\operatorname{DA}(V, V 1)$ and $D A(V, 11)$ are incremented by one as is the count variable CT. DA(V,11) is a column total while CT is the number of interviews tabulated. Three simple additions and the program goes to the next pair of strings. A sample array might look like this.

| 0 | 1 | 2 | 3 | 0 | 0 | 0 | 7 | 8 | 0 | 0 | 0 |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 2 | 13 | 7 | 15 | 0 | 0 | 0 | 3 | 1 | 0 | 0 | 0 |
| 3 | 8 | 2 | 2 | 0 | 0 | 0 | 4 | 0 | 0 | 0 | 0 |
| 4 | 4 | 7 | 18 | 0 | 0 | 0 | 2 | 2 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 7 | 1 | 2 | 4 | 0 | 0 | 0 | 1 | 1 | 0 | 0 | 0 |
| 8 | 2 | 4 | 0 | 0 | 0 | 0 | 0 | 1 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 0 | 27 | 22 | 39 | 0 | 0 | 0 | 10 | 5 | 0 | 0 | 0 |

Once the data are in the array, it can be easily printed to screen and printer. The program can check $\operatorname{DA}(\mathrm{V}, 0)$ and $\mathrm{DA}(0, \mathrm{~V} 1)$ and print only rows and columns that carry values other than zero. Percentages are calculated at the time of printing, pulling data from the array, but not changing it.

The set of survey programs discussed here are limited in use to one particular survey and will need modifying before they can be broadly applied; hence, they are not published in full. In presenting code portions, I have tried to illustrate some different ways to use BASIC to meet real computing needs. Putting numerical data into strings can solve memory limitation problems, particularly for tape system owners. Disk drive owners do have the conceptually similar direct access file available. This makes much bigger jobs feasible, even when data cannot all be in memory at once. Data manipulation in arrays is very powerful and fast. In combination, we have found another practical and important application of the CoCo .

# The HJL－57 Keyboard 

## Compare it with the rest． Then，buy the best．

## If you＇ve been thinking about

 spending good money on a new keyboard for your Color Computer， why not gat a good keyboard for your money？Designed from scratch，the HJL－67 Professional Keyboard Is bulit to unlock ALL the potential performance of your Cotor Computer．Now，you can do real word processing and sall through lengthy listings．．．with maximum speed；minimum errors．
At $\$ 79.95$ ，the HJL－57 is reason－ ably priced，but you can find other CoCo keyboards for a few dollars less．So，before you buy， we suggest that you compare．

## Compare Design．

The ergonomically－superlor HJL－57 has sculptured，low profle keycaps；and the three－ color layout is identical to the original CoCo keyboard．
Compare Construction．
The HJL－ 57 has a rigidized aluminum baseplate for solid， no－flex mounting．Swith contacts are rated for 100 million cycies minimum，and covered by a spill－ proof membrane：

## Compare Performanos．

Offering more than full－travel， bounce－proof keyswitehes，the HJL－57 has RFIIEMI shielding that eliminates irritating noise on displays；and lour user－delinable function keys（one latchabie）， specially－positioned to avold Inadvertent actuation．

## Freis Function Key Program

 Your HJL 57 kit inclutes usage Instructions and decimal codes produoed by the functlon keys， plus a free sample program that deftines the function keys as follows：$F 1=$ Screen dump to printer．F2 $=$ Repeat key（latching）．F3＝Lower case upper case filp（f）you have （ower case capability）． $\mathbf{F 4}=$ Control key；subtracts 64 from the ASCII value of any key pressed．Funs on disc or tape； extended or slandard Besic．
## Compars Instaliation，

Carefuliy engineered for easy Instaliation，the HJL． 57 requites no soldering，drilling or gluing． Simply plug it in and drop it right on the original CoCo

[^10]mounling posts．Kitinciudes a new bezel for a totally finished conversion．

## Compare Warrantles．

The HJL． 57 is built so well，It carries a fulf，one－year warranty． And，it is aold with an exclusive 15－day money－back guarantee．

## Campare Value．

Vou know thet a bargain is a bargain only so long as it lasts． If you shop carelully，wo think you will agree．．．The HdL－57 is the lest keyboard your CoCo wIII ever need．And that＇s real value．

## Order Today．

Only $\$ 79.95$ ，the HJL－ 57 Is avallable for immediale shipment for elther the original Color Computer（sold prior to October， 1982）or the F－version and TDP－100 （introduced in October，1982）， and the new 84 KCOCO ．Now also avallable for CoCo 2.

## Order by Phone Anytime

# Adding Function Keys To Your Keyboard 

By Tony DiStefano<br>Rainbow Contributing Editor

I[ n the last few months, there have been many new (and better) keyboards introduced for the Color Computer by companies other than Radio Shack. Some of them are functionally the same as the original Color Computer keyboard, meaning that all the keys are all in the same place and do all the same things. There are, however, some keyboards that are different. They have extra keys. Some have one extra key, some have more. Why are these keys there? What do these keys do? How can I get these keys to work with my computer without having to buy? These and many more questions will be answered in this article.

The first thing I'll give you is a background on how the Color Computer keyboard works. The keyboard itself is nothing more than a bunch of switches. Fifty-two to be exact. The computer monitors these switches and when you press one, the computer responds in some predetermined way, most of the time by putting an ASCII character on the screen. The computer must be able to read or scan all of the 52 keys. One way to do this would be to have 52 inputs to the computer via many PIAs (peripheral interface adapters). A better method of reading these keys is to matrix the switches. This is where the switches (or keys) are arranged in rows and columns. That is how the Color Computer reads the keyboard.

Figure 1 shows us how the keyboard is wired. The PIA marked number U8 (U18 on the "F" board and U7 on the $\mathrm{CoCo}-2$ ) is the only digital circuit used. The PIA chip is a programmable interface device which functions as both an input and an output register. The eight keyboard columns are attached to the B side of the PIA. These eight lines are programmed to be outputs. The seven keyboard rows are attached to the A side of the PIA. These seven PIA lines are programmed to be inputs. To read the keyboard, only one column is enabled by writing a zero in the bit that corres-
ponds to that column and by writing ones in all the other bits. If a key has been pressed in that column, one of the input lines will be a zero and the key location will correspond to the bit that is low. By scanning each column in the keyboard, all of the keys may be checked. Eight columns by seven rows should give you access to 56 keys. The color Computer only offers you 52 . There is a difference of four locations (or keys) that are not accessible from the keyboard. There are simply no switches for those locations. Okay, if you look carefully at Figure 1 again, the row with the [ENTER], [CLEAR], [BREAK] and [SHIFT] keys has the four empty spots. That means that all we have to do is add four switches to these empty spots and then we can access all 56 locations.

Figure 2 shows how to wire up four switches. These switches can be any single pole, single throw, normally open, or momentary on switches. The Radio Shack switch \#2751547 will do fine. There are five to a package, and they're not very expensive. They are small enough that they fit almost anywhere. In Figure 2, the numbers that go to the four switches and the common are the pin numbers to the keyboard connector. That is where the keyboard connects to the main board. The connector is marked 1 and 16 on each end. It is very easy to solder to the back of the connector on all the Color Computer models. If you have a $\mathrm{CoCo}-2$, then it is easier to solder the wires to the PIA itself. You cannot get to the back of the CoCo-2 keyboard connector, it is soldered straight up. The pin numbers that correspond to the PIA are marked in brackets.
(Tony DiStefano is well known as an early specialist in Color Computer hardware projects. He is one of the acknowledged experts on the "insides" of CoCo.)

Figure 1
Keyboard Wiring Diagram. The eight keyboard columns are attached to the B side of the PIA. These eight lines are programmed to be outputs.

The seven keyboard rows are attached to the $A$ side of the PIA. These seven PIA lines are programmed to be inputs.

Figure 2
[8] 8

How to wire your four switches.

Before you solder in the wires and switches, you must decide where to put the four switches. There are many possibilities. I drilled four holes on the top cover of the Color Computer, just above the TRS-80 decal. I used a five pin connector to the wires, so that I could remove the top cover when I go in to do some experiments, which is almost every second day. Anyway, I thought of putting the four switches right into the keyboard. While this is possible, it is very tricky to solder to thin-film PCB. That is what the newer keyboards are made of. I don't recommend that anyone do it unless they have a lot of experience in soldering. As soon as you touch this stuff with a soldering iron, it melts. Maybe you can mount the buttons inside the keyboard and run separate wires out of the keyboard and to the connector. This is possible, though I haven't tried it myself. I will leave this part up to you. You're on your own. Put the switches wherever they best suit your needs.

The next part is the software. This short program will show you which key is which and what ASCII value it has.

Type it in and $R U N$ it．Then press all the keys one at a time． Try them with the shift key，too．Then you can label the four keys accordingly．Some of the ASCII values are regular ASCII characters and can be gotten from the keyboard． Also，there is one combination that does not even produce a character．That is［SHIFT］FI．In order to use these keys in your program，you must use $C H R \$$ or program it in machine language．The ASCII values I got were using Color BASIC 1．1．

If everyone could agree on some kind of standard for these keys，then the software companies would be able to include them in their software，i．e．，control codes or special functions like delete and insert in such programs as a word processor or spreadsheet．I would like to mount a campaign to standardize these function keys．I hope to hear from all of the software writers and the keyboard manufacturers so we can get started．If we generate enough interest，maybe Radio Shack will add these keys to future Color Computers．Are you listening，Radio Shack？

TThe school year is now half over. Many students have received their latest report cards. To find out just how well you are doing in your schoolwork, it is necessary to find the average of your grades.

Averages are computed by both teachers and students. Teachers generally average each child's work to determine the report card grade. Students often enjoy computing the individual average for each subject as well as computing their overall subject average.

We certainly don't need a computer to figure out averages. It is easily done by adding up the total of your scores. It is a good idea, however, to always seek new ways for children to use their computers.

Children should learn to think of their computer as a friendly tool to be used to make many tasks easier. While we don't ever want to be accused of using a shotgun to kill a fly, we do however want our children to become accustomed to turning to their computers for the answers to many everyday situations. Finding their own averages provides just such an opportunity.

The computer also allows us to add some extra features to an otherwise simple mathematical exercise. Included in this program is the ability to enter letter grades along with numerical grades. I have arbitrarily assigned a weight of 95 to an A, 85 to a B, 75 to a C, and 65 to a D. You may change these to any values which conform to the grading system in effect in your school. This feature further demonstrates the superiority of the computer over the mere calculator.

Another possible feature is to use weighting of averages with this program. Weighting is often used by teachers to

[^12]assign different degrees of importance to various scores. A midterm exam, for example, might very well count twice as heavily in a grade average as a regular test. Simply enter the midterm exam score twice in the averaging process to account for its doubled importance. While a true weighted average requires additional statistical information, this method should suffice for our purposes

Line 50 dimensions for string values rather than numerical values. This will allow you to enter either a numerical or a letter grade. Lines 130-180 convert all inputted grades to numerical values. Line 210 adds up the grades as they are entered. If you enter an X, then line 230 ends the input process.

Line 310 computes the average. Our formula is INT $(\mathrm{B} /(\mathrm{T}-1)+.5)$. The total score is B . The number of items is T-1. One is subtracted because we do not want to count in the time that you entered $X$ to end the inputs. To obtain a whole number score for the average, we use the INT function.

The $I N T$ function is not necessarily always fair to students. It rounds off to the nearest lower whole number. You may try this yourself. Here are two children's averages. One receives a 90.2 and the other a 90.8 .

| Type INT (90.2) | ENTER |
| :--- | :--- |
| Type INT (90.8) | ENTER |

The results both times will be 90 . Next try adding .5 to each.

$$
\begin{array}{ll}
\text { Type INT }(90.2+.5) & \text { ENTER } \\
\text { Type INT }(90.8+.5) & \text { ENTER }
\end{array}
$$

The child with the 90.2 still receives the final score of 90 . However, the child with the 90.8 receives the score of 91 which more accurately reflects his correct average. To obtain the true averages, we therefore add 5 to the division result before the $I N T$ function takes effect.

# Hardcopy Revisited: 

 Position IndependenceAnd A Minor
Debugging By D.S. Lewandowski
Rainbow Contributing Editor

About a year ago I wrote a short program for this column called Hardcopy. The concept behind Hardcopy is simple, a machine language routine which is invisible to BASIC, and is functional. The response to the program was unbelievable - a year later and I am still receiving requests for reprints of the source code. Since the demand for a program of this nature was so high, over 30 requests this month alone, I figure we may as well take another look at it. Only this time we'll make the program position independent, and fix one minor bug with the original.
"Position independent" is a term not normally explained. This means that the program can be located anywhere in memory of the computer and will function properly. To move the program around in memory requires a bit more study. Since we are discussing Hardcopy, we shall use it as our example. If you assemble the program as listed the program will load at Hex 3 F 90 , or decimal 16272. It will fill all the memory up to Hex 3FF7, or decimal 16375. These addresses are called the START and END addresses. These memory locations are meant for use in a 16 K Color Computer. The only other item of concern is that the program will load over an area of memory in which the CPU keeps for itself, referred to as the STACK. This is where it stores addresses when you have commands such as GOSUB in your BASIC program. So, before you load the program you must enter the BASIC command CLEAR 25,16271; this will cause BASIC to move the CPUs stack lower in memory and make room for the program.

[^13]If you have 32 K of memory, you would want to load the program at the top of memory. To do this, you first have to make room. Entering CLEAR 25, 32654 will clear the same amount of room ( 32654 is 16271 plus 16383 for the additional 16 K in a 32 K computer). Now, when you load the program you want it to go into the top of memory you just cleared, so you must use an offset. You would enter CLOADM "HARDCOPY",16383. This causes the computer to load the program at $16272+16383$, or 32655 . Now that the program is in position in either a 16 or 32 K computer we have to EXECute it. Hardcopy sets itself up, and returns the OK and cursor. Now you are back in BASIC. You can $C L O A D$, or whatever you wish and the machine language program will wait to be used. By pressing the down arrow (a key which is not normally used in BASIC) all of the text on the screen will be sent to the printer.

Now, let's take an example in which you wish to load the program lower in memory. We know that, on power up, the computer reserves four graphic pages. So, let's say we wish to have this program load at Hex E00 or decimal 3584. We know the program normally loads at Hex 3F90 or decimal 16272, so we "TRY" something like $3584-16272=-12688$. Using CLOADM "HARDCOPY",--12688 and we end up with a function call error! Don't despair, it is possible you just have to work with the computer.

The largest number the CPU can deal with is Hex FFFF or decimal 65535 , if you add one to 65535 you get 65536 in normal math. However, since the CPU can only hold Hex FFFF, adding one to it causes it to overflow and become zero. So if we want the program to load at 3584 we subtract the normal starting address from Hex FFFF to load the program at zero then add the address we want it to load at. In decimal, it would look like this $65535-16272=49263$ then add the load address $49263+3584=52847$. Now CLOADM "HARDCOPY",52835.

Bingo，the program is now loaded into the first graphic page．You may choose to do this to save the step of $C L E A R$－ ing memory，since the CPU won＇t bother the memory used for graphics unless you tell it to．Just remember where you have put the program！If you do a PCLS from your BASIC program it will wipe out the routine，and cause the computer to hang up．Well have fun，see you next month．

# DRAGON'S BYTE <br>  <br> And Now, Igor, The Envelope, Please! 

By Bill Nolan<br>Rainbow Contributing Editor

TThis is the month when we finally announce the winners of the Spell and Monster contest! If you remember, the first place winner in each category gets a $\$ 50$ gift certificate from Prickly-Pear Software and another one from Sahuaro Software. The second place winner in each category gets a $\$ 50$ gift certificate from Prickly-Pear. In addition, any entry that is used in this column will receive a Prickly-Pear four-color fantasy Tshirt. All in all, it was nearly $\$ 400$ in prizes, so on to the winners. We will also give the specifications for a spell or two and a monster of our own designing.

In the Spell division we were looking for something original and usable. For this reason, lower power level spells were favored because few games have a magic-user of high enough level to make use of the high powered "heavy artillery."

First place in this section went to Lee Aronson, from No, La., for his spell named "Ball of Force."

Name....................... Ball of Force
Power Level........................... . Third
Casting Time .................... 3 seconds
Range . . . .......... . $50^{\prime}+1$ 'per level of caster
Area of Effect................. . one creature
Damage............................. 2-24 HP
Special Effects .................... see below
Material Needed ................... a glove
Save...........................1/2 damage
When this spell is cast, a small glowing ball (the size of a golf ball) will appear in the caster's hand. The spell caster

[^14]must immediately throw the ball. If the target creature is within range, the ball will always hit, and the target is allowed a saving throw for $1 / 2$ damage. When damage is determined, the indicated amount will be subtracted from the target creature and, if the spell caster has been injured, the hit points subtracted from the target will be gained by the caster. Of course, the caster cannot exceed his original hit point maximum.

The caster must be wearing a glove when the spell is cast or he will take the damage himself, and if he doesn't throw the ball immediately it will go off in his hand. In addition, if the target creature has any kind of illness or disease, this will be transferred to the caster along with the hit points.

The second place winner in the spell category was Michael Rosenberg, from Prestonsburg, K y., for his spell "Murphy's Law."

| Name | Murphy's Law |
| :---: | :---: |
| Power Level | Fourth |
| Casting Time | 4 hours |
| Range | Infinite |
| Area of Effect. | . one creature |
| Damage. | see below |
| Material Needed | below |
| Save | negates effects |

To cast this spell, a parchment with the victim's name and background must be carefully prepared using the most expensive materials. Once the spell is completed (and if the saving throw is failed), the victim will suffer 48 hours of a special sort of bad luck. The form of the bad luck is that if any person, in conversation with the victim, mentions anything harmful, then that harmful thing will surely occur before the end of the spell period. For instance, if someone sa'ys, "Be careful climbing so you don't fall," then the victim will surely fall. If the statement was, "Put on your coat or
you'll catch your death of cold," then the hapless victim will soon contract a fatal cold.

An honorable mention goes to Chuck Wittgen, from Lemars, Iowa, for his spell Fyre-Lock.

| Name | Fyre-Lock |
| :---: | :---: |
| Power Level | .. Fourth |
| Casting Time | or 2 rounds |
| Range | 15 feet |
| Area of Effect | . one door |
| Damage | see below |
| Duration | 40 minutes |
| Save | gates effects |

This spell, which must be cast within $15^{\prime}$ of a doorway, creates a wall of magical fire in the doorway that blocks off the opening. The caster and undead monsters can pass freely and are not affected by the fire. All other creatures lose either one or two levels (depending on how much time was spent casting the spell), with a saving throw (at -2 ) negating the cffect. Non-intelligent creatures will be frightened of the flames and will not enter the doorway for any reason.

The last spell I will mention was written by my wife, Sara Nolan, so I guess she gets a T-shirt. It's called "Silent Alarm."
Name . . . . . . . . . . . . . . . . . . . . . . . . . . . . Second
Power Level . . . . . . . . . . . . . . . . . I round
Casting Time . . . . . . . a circle $100^{\prime}$ in radius
Area of Effect . . . . . . . . . . . . . . . . . 9 hours
Duration . . . . . . . . .

Sara likes to sleep a lot, and when playing fantasy games she doesn't like the bad guys sneaking up on her with dastardly intent. When the caster finishes the spell, a perimeter is set up around a camp or resting spot, and if any creature that may cause harm crosses the barrier, a silent alarm sounds in the caster's mind and the caster will become instantly alert. The caster will know where and by what the perimeter was penetrated. The perimeter does not move once the spell is cast, so it cannot be used as a "distant early warning system" by a party on the prowl.

The first prize winner in the monster contest is Chris Pruett, from Del City, Okla., with his "Membrane."

| Name | Membrane |
| :---: | :---: |
| Frequency | . . Very Rare |
| \# encoutered | one |
| Level | . fourth |
| Size | 10 cubic feet and up |
| Movement | . slow |
| \# of attacks |  |
| Intelligence | low, but cunning |
| Special Attack | Poison, Paralysis, and |
|  | Bone Disintegration |

Membranes are found only underground, and only one is ever secn at a time. They resemble a mass of rotting flesh mangled into a formless gray blob, and have three pseudopods. Two of the pseudopods are used by the membrane to drag itself from place to place. This is slow, but the membrane can traverse walls and ceilings in this manner.

The third pseudopod is used to attack. This one drips a weak poison at all times, and if it connects, the damage multiplier is .7 , with a 30 percent chance of dying from the effects of the poison. In addition to this attack, the membrane can "cause paralysis" and "disintegrate bones" as many as three times in a day (example - 2 paralysis and 1
disintegrate bones). Standard saving throws applyto negate. A membrane will attempt to attack the largest member of the party and disable him by one of the above methods. If successful, it will cover the victim and devour him, gaining 25 percent of the victim's former hit points permanently. The favored method of attack is to drop on the victim from above.

The average membrane is about 10 cubic feet in volume, but they have been reported as large as 40 cubic feet, and there is a persistent rumor of a truly gigantic individual of high intelligence dwelling in the dismal swamp.

The second place prize in monsters was awarded to David Kufner, from Oneida, Wis., for his monster "Ekomaker."

| Name | Ekomaker |
| :---: | :---: |
| Frequency | Uncommon |
| \# encountered | ne |
| Level | firs |
| Size | $5^{\prime}$ tall |
| Movement | $6^{\prime}$ per 10 seconds |
| \# of attacks | non |
| Intelligence | average |
| Special Attacks | see below |
| Special Defenses | Super hearing and |
|  | hiding ability |

The Ekomakers are solitary humanoids with enlarged mouths, oversized eyes, large ears, large clumsy feet, small noses, and pot bellies. They are hairless, and their skin gives them an amazing camouflage ability. They make no physical attacks, but will harass a party by using their ability to imitate any voice perfectly. They love to follow a group of adventurers and create havoc with such tricks as shouting a terrible insult at person one - using the voice of person two, or imitating a dragon voice. They have countless similar tricks, and they love to use them.

A monster of my own that you may like is the Swamp Demon. These nasties stand about 18 feet tall and look like creatures from the black lagoon. They are magical in nature and have several special attacks. The swamp demon lives only in dismal marshes and fetid swamps, and they usually attack by surprise, rising out of the mucky water. they can attack with their hands (1-6), their feet (1-8), their bite (1-12) or their tail (1-20) -- any four in one round. In addition, they can breathe a cloud of marsh gas 20 feet in diameter once per day, and any in the area must save or be overcome. The palm of one hand is red and the other is yellow. The red hand casts a "fireball" up to three times per day, while the yellow hand shoots "lightning bolts" up to three times per day. If you should kill one, it will fall on the ground and its life essence will discharge through the damp soil in the form of an electrical shock which does two 20 -sided dice worth of damage. Players who state that they are jumping into the air when the swamp demon falls are allowed a saving throw, and metal armor doubles the effect.

The swamp demon has 14 hit dice, is armor class -4 , and +2 or better magical weapons are needed to hit. In addition, the swamp demons have a magic resistance of 75 percent, and they regenerate at three points per round. If you have a party so tough they trash anything in their path, throw one of these at them sometime.

We want to thank all of you for your contest entries, and all of the work and imagination that went into them, and we offer our congratulations to the winners. Until next month, may all your dragons be still in the egg.

## DECISION MAKER ${ }^{m}$

IF YOU HAVE EVER HAD TROUBLE MAKING UP YOUR MIND, THEN THIS PROGRAM IS FOR YOU!!

* A step by step interactive program to help you solve your problems
* Designed to use standard analytic techniques
* Works with any problem
* A valuable tool for anyone
* Requires 32 K \& Ext. BASIC

## BIO-PSYCHOMETER"'

INVESTIGATE THE HIDDEN REALMS OF THE HUMAN MIND!!

* Authentic Bio-feedback device and software
* Machine Language, high speed graphics
* Includes:

Bio-feedback graphing, Stress Reduction, and Memory Improvement modes

* Very sensitive hardware for optimum results
* Requires 32 K \& Ext. BASIC
* With manual, only....\$ 39.95

## COLORFORTH ${ }^{\text {m }}$ Version 2.0

 FORTH LANGUAGE COMPILER* The original COLORFORTH Compiler is now even better
* COLORFORTH V2.0 can access ALL available RAM - 16 K through 64 K
* COLORFORTH is at least 10 to 25 times faster than BASIC
* 50 words are included in addition to the standard figFORTH vocabulary (commands)
* This package includes BOTH cassette and R/S DOS versions PLUS a resident figEDITOR, and 75 page manual
* Rated "BEST BUY" of Color Computer Forths reviewed by COLOR COMPUTER MAGAZINE, July 1983. (Version 2.0 is an even better buy)
* There IS life after BASIC, with COLORFORTH
* All of the above, for only............................................. 49.95

DEALER and AUTHOR INQUIRES INVITED
Please add $\$ 2.50$ shipping in U.S.
Texas residents add $5 \%$ Foreign orders must be in U.S. funds drawn on U.S. banks, or Mastercard and VISA

## PUT YOUR KEYBOARD

ON THE SCREEN

by J.D. German

As an author of educational programs, I make it a rule to put all of the instructions needed to use a program in the program itself as screen displays. That way, when the inevitable loss of the instruction booklet occurs, the program will still be usable. In applying this rule to my most recent program, Musical String\$, I found that I needed to display the full computer keyboard to demonstrate the use of musical note keys and special function keys. Since this keyboard display might be useful for other keyboardoriented programs, I thought I would share it with you.

This version of the program, called Keyboard Display, will produce a copy of the standard Color Computer keyboard on the top portion of the screen, with room at the bottom for instructions or comments of your own. The keyboard is not a perfect reproduction, since the Color Computer's text character generator cannot produce a down arrow or a right arrow, but the letter V and the mathematical symbol $>$ are good substitutes. Keyboard Display can be used as a subroutine in any program that needs on-screen instructions in keyboard use. It could easily be the core of your own typing tutor program, or it could be used to define special key functions for word processor or game programs.
> (J.D. German is a private computer consultant who has authored several educational programs which are marketed through his consulting firm, Creative Technical Consultants. He has degrees in physics and electrical engineering and is a former associate professor at the U.S. Air Force Academy.)

The program，shown in the listing，has two major parts． The first part，in lines 30 to 220，prints the Color Computer keyboard on the top six lines of the screen．The spaces between the keys are made black with looped $P O K E$ state－ ments（lines 50－70，for example），to make the keys stand out more．This part of the program also clears the bottom eight lines of the screen to green so you can print your own instructions you have in mind；simply clear these lines after a short delay and print the additional instructions．

The last part of the program，from line 250 on，makes each key flash，in turn，from normal to reverse video with an accompanying beep．This technique allows you to highlight specific keys as the instructions for those keys appear below the keyboard display．As it is written，this portion of the program would be ideal for a typing tutor program，but you could easily modify it for some other use．In my Musical String\＄program，for example，each key flashes from its normal letter to the reverse video of the musical note that it plays．

The two subroutines starting at line 1000 and line 1100 are the heart of the key flashing technique．The first of these， labeled PRINT＠FLASHER，flashes all those keyboard characters that can be displayed in reverse video with a simple［SHIFT］［0］input preceding the character key．This subroutine is entered from one of the program lines between 370 and 770，where a text screen location（ N ）and a normal and reverse character（ $\mathrm{K} \$$ and $\mathrm{RK} \$$ ）have been defined．The subroutine then flashes between the two characters three times，beeps each time，and RETURNs．

The POKE FLASHER subroutine，beginning at line 1100，is necessary to flash those keys that don＇t have reverse video available from the keyboard，like the numbers 0 through 9，for example．To get reverse video for these keys， you have to $P O K E$ the proper decimal code into the memory address corresponding to the video screen location of the character．What makes this technique a little confusing is that the decimal codes needed are not the usual ASCII set， but are instead a character code set defined in the 6847 video display generator chip．In Table 1，I have listed these charac－ ter codes for all the normal and reverse video characters available on the Color Computer，in case you need some of them for your application．POKE FLASHER works just likePRINT＠FLASHER，except the subroutine is entered with N as the screen memory address and K and RK as the normal and reverse video character codes．

So there you have it．A keyboard display with flashing keys and room for on－screen instructions of your choice． With a couple of minor changes and a little imagination，you can do a lot with this routine．

But true! There is a disk drive in your Color Computer . . . and it is faster and more efficient than any "hardware" drive you can buy, for any price. This new "disk drive" is called VDOSfor Virtual Disk Operating System-and it will absolutely revolutionize the way you operate your CoCo.
VDOS lets you use the "extra" memory inside your CoCo as a virtual disk, with programs (any programs) stored out of the way. You can "save" and "load" programs from your in-memory
disk into working memory, and then run them. When you're done, you can simply access your in-memory disk again . .. and save or load another, and another. And VDOS is fast. Because you are using memory rather than a mechanical device (like a disk drive or cassette player), programs load instantly. Yes, VDOS is faster than a disk!

VDOS works with all Color Computers-from 16 K non-extended to 64 K extended. Obviously, the
more memory you have, the greater number (and length) of programs you can store. For a 64 K system, VDOS also uses the "unused" part of memory, providing up to 50,000 bytes of storage! Now, that's some disk!

We call it VDOS because in the future there will be utilities for your VDOS UNDISK that will give even greater capabilities-such as a full one-pass memory dump to cassette. Other utilities are planned, too.

We believe VDOS is the
greatest advancement for CoCo since the introduction of the disk drive itself. And, at less than $\$ 100$, it is so inexpensive you can't afford to be without it. If you have the "cassette blues," VDOS is the answer!

Finally, VDOS is simple to operate. It is entirely selfprompting and comes with a complete manual. But you almost don't even need the instructions-it requires absolutely no technical expertise.

VDOS. The answer to your prayers.

# Converting Micropainter To Disk 

By Paul S. Hoffman

Radio Shack's Micropainter cartridge for the Color Computer and TDP-100 has never been reviewed in the Rainbow. I normally try to look over the reviews of a product before buying, but usually forego that precaution in the case of something in my area of specialization: graphics. I snarfed up the first Micropainter cartridge I could get my hands on when it first carne out - especially since I had seen ads and reviews of the original Apple version of this program. It is one of the first of Steve Bjork's programming masterpieces from Datasoft. He has adapted Bob Bishop's original Apple program for the CoCo. You can draw/ paint/texturize Hi-Res pictures in what amounts to either color set in PMODE3 or the PMODE4 "false color" (buff screen) mode. At any point you want, you can "flip-flop" the modes or colors in a fascinating number of variations. The nicest aspect is a "magnification" mode in which you can see quite clearly what you are doing on a pixel by pixel basis.
As with any ROM cartridge program, there is one major disappointment with Micropainter - all loading and saving is to/from tape. Once you've upgraded to disk, you find this a more-than-casual annoyance. Then there's the fact that the only way to "draw" using Micropainter is in the magnification mode, pixel by pixel. This is quite tedious, so I've gotten into the practice of "roughing-in" my graphics on the X-Pad (you could also use any number of other on-screen-drawing programs, such as Chromasette's Drawer) and then "clean-ing-up" with Micropainter.

As an example, I was working on an animated title for a TV show. The lettering had already been designed, so 1 traced it with the X-Pad (see Figure 1). The X-Pad's lack of precision is definitely a problem in a case like this! Micropainter to the rescue! Figure 2 is the finished logo ready for animation.

Now that I have my Multi-Pak Interface, I can save all my X-Pad drawings to disk, but am frustrated by not being able to load those disk drawings for clean-up with Micropainter
without first dumping them to tape, then loading them back in at the lower address used by non-disk BASIC, then resaving at the new address. The solution is to take a page from Roger Schrag's book ("Patching EDTASM + for Disk," the Rainbow, December 1982, April 1983 and September 1983) and patch Micropainter to run from disk. Here are the results. First I'll tell you how to do the patch for yourself, then explain how it works, including a detailed breakdown of what sections of Micropainter do that, for those who want to learn by disassembling the program and studying it.

[^16]
## How To Do The Patching

The first step is to get into standard or Extended Basic with the Micropainter cartridge attached. With a Multi-Pak Interface, this is pretty easy; it's harder (and more dangerous to the health of your computer) without an interface, but can be done. The trick is to disable the auto-start feature of the cartridge port by either taping over the proper pin on the cartridge itself or typing in $P O K E \& H F F 23,36$. Then very carefully (without wobbling from side to side) insert the Micropainter cartridge. With the interface, perform the same POKE and then select the Micropainter port with a software $P O K E$ to the location 65407 ( 0 for port 1, 17 for port 2, 34 for 3 or 51 for 4).
At this point, if you type in PRINT PEEK (\& $H C 000$ ), you should get "26." If you don't, turn the system off and start over. If everything is okay, you can type in or load in Listing 1. The program will prompt you to press a key when you're ready for it to do its thing. It will then print on the screen "MOVING . . ." while it moves Micropainter (or copies it, really) to addresses starting at $\& H 4000$. As soon as the copying is done, the program will print a series of addresses and values, ending with " \& H4666 $=\& H 45$." It does this as it patches (changes) the contents of those addresses to the values listed. Finally the program will prompt you to press any key when you're ready to save the program to tape. After the CSAVEM routine is finished, the program will end with our familiar "OK" prompt. Turn off the system. Power back up with the disk system attached. Then load in the saved program (CLOADM "MICRODSK") and save it to disk (SAVEM"MICRODSK", \& H4000, \& H498 B, \& H4000). Save on the same disk the baSIC program in Listing 2, called PAINTER. Now any time you want to play around with a graphic, whether it is already in memory or not, you can RUN PAINTER.

## How To Use The Patched Program

Unlike the ROM Pak version, Disk Micropainter does not wipe clean the graphics memory. Thus, you can work on a graphic with another program, and then simply LOADM MICRODSK and RUN "PAINTER," without having to save the picture and then reload it. If you're starting from a cold start (computer just turned on), all you have to do is RUN "PAINTER." All functions are identical to the original version of Micropainter, including the tape save and load routines. The new program will load in all old Micropainter pictures, regardless of the original loading address. This holds true for any graphic that has been saved using a CSAVEM command, whether it was saved from Extended basic or Disk basic.
To access the Disk I/O, press either "B" (for Background), "C" (for Checks) or "S"(for Stripes) and then press [BREAK] instead of a color selection. The computer will return to BASIC with a clear screen and "OK." Type RUN [ENTER] and you will be asked to choose "Save, Load, enter Micropainter or Exit." If you elect to re-enter Micropainter, you will go immediately back to the graphics screen, avoiding the opening title and tape load prompt.
One caution: After finishing work with MICRODSK, turn off the system (or execute a cold start some other way) before doing any more disk accessing. Micropainter uses some addresses that are also used by the disk controller, and the disk motor will not turn off automatically. If you want to [BREAK] the BASIC program that does the Disk $1 / \mathrm{O}$, in order to read the disk directory, for instance, you can get the directory with the standard DIR command, but will have to POKE \& $H F F 40,0$ to stop the disk drive motor. Then $R U N$ to get back to the program.

## How It Works

|  | ge Function |
| :---: | :---: |
| 4000-4014 | Checks available memory and displays message if less than 16 K - you've probably never seen this message displayed. |
| 40 |  |
| 4042-404B | Read character code from table and output to screen. |
| 40 |  |
| 405 |  |
| 4060-4062 | "JMP $\$ 406 \mathrm{~B}$ " - new instruction to bypass clearing routine. |
| (4060-406A | Original routine - not used in disk version - to wipe text and graphics memory with $\$ F F$ - all the way up to the cartridge ROM at $\$ \mathrm{C} 000$.) |
| 406B-40E9 | Disable interrupts, clear text screen, display title, and do animated border. |
| 40 | Check keyboard and go back to rotate the border if no input. |
| 40F4-40FC : | Sets the warm start [RESET] vector to $\$ 411 \mathrm{D}$ so that pressing the [RESET] button will go directly to graphic screen initialization. |
| 40FD-4102 | Sets IRQ vector to $\$ 4134$ so that SYNC command will go to graphic set-up routine. |
| 4103-41 09 | Load basic's "current statement" pointer with $\$$ FFFF so that tape I/O routines will function in the "direct command" mode. |
| 410B-411C | Sets graphic mode to PMODE 4, positions cursor pointers for mid-screen, sets the field sync interrupt, and then jumps to $\$ 4743$. |
| 411D-4133 | [RESET] routine: Turns off interrupts, turns off tape motor, then resets graphic mode and re-enters program at $\$ 4614$. |
| 4134-4168 | IRQ servicing routine: Sets SAM and VDG for display mode, using page offset at $\$ E 0$, graphics/non-graphics flag at \$E1 and mode code at \$E2. |
| 4169-418F | Subroutine to sound "click" through TV speaker. |
| 4190-419F : | Two tables used by "paint" routin |
| $41 \mathrm{~A} 0-41 \mathrm{~A} 3$ | Table used by byte/pixel-location routine that follows. |
| 41 A | Subroutine to convert line and column values from $\$$ FE and $\$$ FF into precise screen location. |
|  | Paint roun |
| 42B | Magnification mode set-up using graphic buffer areas pointed to by $\$ \mathrm{~F} 4$ and $\$ \mathrm{~F} 6$. |
| 434C-4357 | abl |
| 358-43A1 | rase |
| 43 | Display cursor, using table |
| 43E3-43EA | Table for cursor dis |
| 43EB-441F : | Cursor display routine for magnification mode. |
| 4420-44Cl | eyboard input routine. Checks for arrow eys and joysticks. |

| 44C2－44D9 | Mode setting while in magnification． |
| :---: | :---: |
| 44DA－44F1： | Table used by above routine． |
| 44F2－4515 | Adjusts line and column values in $\$ F E$ and $\$ F F$ and sets the zero flag if last input was an arrow key． |
| 4516－4521 | Table used by above routine． |
| 4522－4597 | Additional key input processing while in magnification mode－checks for spacebar， then＂$P$ ，＂then numbers 1,2 ，or 3 ． |
| 4552－4577 | Checks for＂P＂and sets a pixel to current color if appropriate． |
| 4578－457F | Checks for＂J＂key and flip－flops joystick flag． |
| 4580－4597 | Checks for 1,2 ，or 3 keys and changes mode code if appropriate． |
| 4598－45B7 | Subroutine to change colors in response to shifted number key in put． |
| 45B8－45E3 | Subroutine to replace one color with another in response to＂ R ＂input． |
| 45E4－4613 | Subroutine to get two key inputs（for＂ R ＂， ＂C＂or＂S＂commands）． |
| 45EE | Entry point for＂get one input．＂ |
| ＊＊＊＊＊＊＊＊＊＊＊ | NOTE：This routine checks for the［BREAK］ key last，at which point the disk version jumps to an added routine at $\$ 4983$（after all of the original code）． |
| 4614－462C | Set－up for graphics：set magnification buffer addresses，set IRQ interrupt，do graphic setup． |
| 462D－4660 | Main Idling Loop－four nested loops： innermost loop（\＄4633－4644）checks key－ board，\＄4645－464C checks and handles＂J＂ input，$\$ 464 \mathrm{~F}-4654$ singles out shifted 1,2 or 3 and returns to top of loop． |
| 4661－4742 | Keyboard input processing．Checks keys in this order：Spacebar，B，S，C，P，（＂error＂ sound if one of colors is same as current background－\＄46DC－470E），numbers 1－3， R，W，and finally L． |
| 4743 | Entry for＂Load from tape．＂ |
| 4744 | Entry for＂Write to tape．＂ |
| 4745－479C | Display text page＂Write＂or＂Load＂mes－ sage and get filename to cassette buffer． |
| 479D－47E2 | Cassette load routine－altered from origi－ nal so that any machine language tape will load in starting at $\$ \mathrm{E} 00$ ． |
| 47E3－4831 | Cassette write routine． |
| 4832－4854 | ＂Load error＂handling routine． |
| 4855－4867 | ASCII table for＂LOAD ERROR＂ |
| 4868－4887 | ASCII table for＂NOT A MICROPAINT－ ER FILE．＂ |
| 4888－48 D9 | ASCII table for＂WRITE（LOAD）SUB－ SYSTEM ENTER PICTURES NAME－＂ |
| 48DA－4982 | ASCII table for title page． |
| 4983－498B | New routine for exiting to BASIC：sound the ＂click，＂erase cursor，then jump to BASIC＇s warm start． |

## Post Script

There＇s an interesting surprise in store for you：Steve Bjork has a second program hidden inside the Micropainter cartridge！When you＇re set up to copy the cartridge to RAM， try this：$E X E C \& H C E 00$ ．I suspect that this utility is there as an aid to writing EPROMs or passing programs to other systems．

- Silk-smooth feel
- All of the popular features of the Professional Keyboard

Professional Keyboard-\$59.95

- No soldering, cutting, or gluing required-plug right in!
- New improved version-better layout, light touch.
- Four function keys complete the matrix
- Complete documentation included

Plus!! Free Versakey Software enhances the Keyboard Utility

- Auto repeat, n key rollover, type ahead
- May define up to 128 strings of up to 80 characters each
- Supplied on cassette, may be copied to disk

## Keyboards carry a 90 -day limited warranty

include your computer's PC board type, if known
Otherwise, include the complete catalog number and serial number.

## Micronix Systems Corporation

LABELII！（Reviewed in Nov． 83 Rainbow）
With LABELIII you can develop and maintain a mailing list．Display on screen or printer．Print lists or labels in your choice of 1,2 ，or 3 wide．Supports 3 or 4 line ad－ dresses with phone optional．Fast machine language sort on last name，first name，or zip code．
Cassette 16 K EXT－Postpaid
\＄19．95
ATLANTIS ADVENTURE
This one is tough！We challenge you to complete this in 30 days．If you can we will send you any cassette program we sell at no charge．（We will even pay the postage．）You start on a disabled sub，near the lost city of Atlantis，Your object is to get the sub and yourself safely to the surface． Cassette 16K EXT－Postpaid
$\$ 21.95$

ADVENTURE STARTER PACKAGE
Learn to play those adventures the painless way．You start with a simple adventure and then move into an intermediate We also include hints and tips on adventuring．Your 16K EXT cassette includes both＂MYHOUSE＂and＂PIRATES＂ adventures．Finish this and you are ready for＂ATLANTIS．＂ Cassette 16K EXT－Postpaid
\＄17．95
FOUR MILE ISLAND ADVENTURE
You are trapped inside a disabled nuclear Power Plant．The reactor is running away．You must bring the reactor to a cold shutdown and prevent the＂China Syndrome．＂Can you save the plant（and yourself）？It＇s not easy！ Cassette 16K EXT－Postpaid
$\$ 17.95$
ESPIONAGE ISLAND ADVENTURE
You have been dropped off on a deserted island by a sub－ marine．You must recover a top secret microfilm and signal the sub to pick you up．Problems abound in this 32 K text adventure．
Cassette 32K EXT－Postpaid
$\$ 17.95$
PROGRAM FILE（Reviewed in Oct． 83 Rainbow） Organize your cassette programs．Let your computer find that program for you．Create and maintain a four field file． You can search，sort，modify，delete and display on screen or printer．Sorting may be done by name，type or location． Cassette 16 K EXT－Postpaid
$\$ 14.95$

OWLS EYE INDICATOR LIGHT
Don＇t leave your coco on and fry your chips！The OWLS EYE plugs into either joystick port and may be mounted beside the keyboard where it is easily visible．Simple 10 second installation！We pay first class postage in the USA and Canada．
OWLS EYE－Postpaid
\＄ 8.95
SPORTS CAR ADVENTURE
An easy to intermediate text adventure that requires you to fix that＂old Junker＂in the garage．You don＇t have to be a mechanic but you are going to have to＂fine tune＂ your wits．
Cassette 16 K EXT－Postpaid
$\$ 12.95$

CASSETTE TAPES C－06 $\$ 7.50$ dozen／\＄9．50 dozen with hard boxes．Please add $\$ 1.50$ per dozen shipping and handiling．

## 1. EDUCATIONAL \#1

These even run on Non-Extended CoCos - Words (unscramble the words), SpelIIt (spelling helper), Learn Notes (with graphic piano keys), Sorts (explained and demonstrated), Base Guess Igame to learn other number bases), Morse Qulz (learn Morse Code), and Equatlons (solves systems of equations).

## 2. EDUCATIONAL \#2

Only for Extended Basic - Mathvaders (shoot the right answer), Scrambler (put lists in order), Language Drill (heip with foreign word lists), Factors (factoring game). Typing Tutor, Manybody |demostrates gravitational forces), Maximum (pick the largest number game), Chemlab (simulated experiments), and How Far (places and distances).

## 3. UTILITIES \#1

Programming is simpler when you use Lister, Listmod, Newtrace (a better TRON), Lazkey (define keys as phrases). Append (easily combine two BASIC programs), BASIC Map, Varmap, Deleter, and CK Monltor (look at and modify memory).

## 4. DISK UTILITIES \#1

Harness the hidden powers of your disk system with Dlsk Edit (change things on disk directly). Disk Ald, Offset (EXECS most tape-only programs). Track Lock, DIR Save/Get (foil I/O errors), Cataloger, Master Catalog (keep track of your program library), and Flle Copy (a better BACKUP).

## 5. GAMES \#1

Action-packed, logical, and colorful ones! Flyby |shoot ducks, planes, and faces), BlackJack. Motorcycle, Germ (stop the waves of nasties). Blockade, Life, Diggem, Robot Run, Stellar Emplre (control the heavens - 1 to 4 players), and Zero $\mathbf{G}$ for your fun and pleasurel

## 6. ADVENTURES \#1

Trips to far-off and dangerous places. On the agenda are Jerusalem Adventure, Ultimate Adventure, WIIllamsburg Adventure. House Adventure, Andrea Dorla Adventure, Blackard's Castle (1500 rooms), and Realm of Nauga (in realtime) I

## 7. PRACTICALS \#1

Our most popular package with programs for text editing, maillists, budgeting, filing, etc. including Keeptext (simple text editor), Keep Address, Keepllst (shopping list database). Keepcheck (checkbook balancer). Keep Budget (reports from Keepcheck). Flles (diskbased database), and Tape Inventory
8. GRAPHS \& CHARTS \#1 For data manipulation and display! Do it with Ple Chart Bar Chart XY Graph, Curve Fit (predict trends), and Two Dates (see monthly calendars for any two dates).

## 9. GRAPHICS \#1

Displays and text delightfully manipulatedl Watch and use First Cover, Drawer (often called the best), Graphtext (puts text on the graphics screen). Smalltext, Rotate (create and spin 3D objects in real time), World Map, 3D World, Star Map, String Art, Kaleldoscope, and Display Demo (text screen wizardry)!

## 10. NON-EXTENDED \#1

Five Standard BASIC programs including House Adventure (find twenty objects or die), Stellar Emplre (a 2 to 4 person strategy game), Tape Inventory (keep track of your tapes), Space Ace (shoot'em up), and Lazkey (define keys as words or phrases).

## 11. NON-EXTENDED \#2

Five more Standard BASIC programs including WIIlamsburg Adventure (a humorous one), Two Dates (show monthly calendars), Box Shoot (twoplayer face-off), Flyby (shoot ducks. faces, and planes), and Deleter (delete needless REM's and spaces from programs.

## (Extended BASIC required uniers noted)

- a lot of software for a Ilttle silver

# Aloysious And The Seven Characteristics 

By Bob Albrecht<br>and<br>George Firedrake<br>Rainbow Contributing Editors

Last time, we wrote a program to put character records on tape. In case you have misplaced your precious last issue of the Rainbow, or if you are a new subscriber, here is the complete program to put the name of a character and the numbers for his or her seven basic characteristics on tape.
1000 REM**CHARACTER RECORDS
1010 OPEN "0", -1; "CHARACTERS"
1020 CLS
1030 PRINT "CHARACTERS TO TAPE"
1100 REM**GET CHARACTER INFO
1110 PRINT: INPUT "NAME"; NAYM
1120 PRINT "STR"; STR
1130 INPUT "GE
1140 INPUT "CON"; CON
1150 INPUT "SIZ"; SIZ
1160 INPUT "INT"; INQ
1170 INPUT "POW"; POW
1180 INPUT "DEX"; DEX
1190 INPUT "CHA"; CHA

1200 REM**OK TO PUT ON TAPE?
1210 PRINT
1220 PRINT "OK TO PUT ON TAPE $Y$ OR N)?"
1230 K $\ddagger=$ INKEY $\%$ : IF K $\$=$ ""THEN 1230
1240 IF K\$="Y" THEN 1310
1250 IF K $\$=$ "N" THEN 1020 ELSE 12 30

1300 REM**PUT RECORD ON TAPE
1310 PRINT *-1, NAYM*, STR,CON,SI
Z, INQ, POW, DEX, CHA
1320 PRINT R416, "RECORD IS IN T
(Bob Albrecht and George Firedrake are two of the most prolific authors in the microcomputer world today. Specialists in writing for beginners, they are authors of numerous books, including TRS-80 Color BASIC.)

## APE BUFFER"

```
1400 REM**WHAT TO DO NEXT
1410 PRINT "TO ENTER A RECORD, P
RESS SPACE"
1420 PRINT "TO CLOSE THE FILE, P
RESS 'C'";
1430 K$=INKEY*:IF K$=""THEN 1430
1440 IF K$=" " THEN 1020
1450 IF K*="C" THEN 1510 ELSE 14
30
1500 REM**CLOSE THE FILE
1510 CLOSE -1
1520 CLS
1530 PRINT "THE FILE IS CLOSED"
1540 END
```

This program runs in Extended Color BASIC. For Color BASIC, change lines 1010 and 1510 , as follows:

> 1010 OPEN "O", \#-1, "CHARACTERS" 1510 CLOSE \#-1

We used the program to put the following seven records on tape.

| ALOYSIOUS, | $10,11,10,12,10,12,9$ |
| :--- | :--- |
| BAROSTAN, | $17,17,13,8,7,15,6$ |
| BRIDLA, | $11,12,10,15,6,11,6$ |
| DERNFARA, | $13,13,8,13,4,17,6$ |
| JOLEEN, | $13,11,7,13,8,17,13$ |
| ROKANA, | $9,9,9,17,18,9,10$ |
| ENDFILE, | $0,0,0,0,0,0,0$ |

Each record consists of the name of a character followed by the values for that character's STR, CON, SIZ, INT, POW, DEX and CHA. The last record (ENDFILE) is a "dummy" record that masks the end of the file. Our tape file, which we call "CHARACTERS," consists of a beginning of file mark and filename, seven records, and an end of file (EOF) mark.

Next, a program to read and display one record at a time from the file called "CHARACTERS." We begin the program at line 2000 so both programs can be in memory at the

## Chromasette VS. the other guy

We were the first people to offer you and your Color Computer a tape or disk full of quality software on a subscription basis, and we are still the best| And to prove it, we make the following offers:

Free trial - Buy a subscription to Chromasette. If you are not satisfied with the software on first tape or disk you receive, just return it for a FULL refund.

With your new subscription to Chromasette (tape or disk), we'll send you a free copy of 'the other guy' (on tape - he does not offer his on disk). Compare us to him. Even if you decide to cancel your subscription, keep his as a consolation prize.

Chromasette delivers 6 to 8 educational, fun, practical, and utilitarian programs to your mailbox every month by First Class Mail. We have supplied over 700 programs for the Radio Shack* computers, so our editors know how to select and groom programs to teach, entertain, and help you. And these programs can cost less than a dollar eachl Such a deal!
*Trademark of Tandy Corp.

|  | Tape | Disk |  |
| :--- | ---: | :--- | :--- |
| Single issues | 9.95 | 12.95 | Some of our past programs include (Practical) Keep Address, |
| 4 month subscription | 29.95 | 38.95 | Keep Budget, Files, (Educational) Spell It, Language Drill, Fac- |
| 8 month subscription | 53.95 | 69.95 | tors, (Games) Stellar Empire, Radiation Run, Blockade, |
| 1 year subscription | 74.95 | 96.95 (Save $\mathbf{\$ 5 8 !}$ | (Utilities) Disk to Disk, Deleter, and Lazkey. |

For brochures or
orders call 1-800-621-6240 or in Calif. 1-805-963-1066
Extended BASIC and occasionaily Disk BASIC required. Overseas add $\$ 2$ to single issues and $\$ 15$ dollars to subscriptions. Calif. add $6 \%$ ro single Issue orders. Money Orders, checks in U.S. Funds, MasterCard/Visa accepted. C.O.D. add $\$ 2.50$. Back issues available from July 1981 on.

Remember: If your CoCo has Color BASIC instead of Extended Color BASIC, change lines 2110 and 2510 as follows:

> 2110 OPEN "I", \#-1, "CHARACTERS" 2510 CLOSE \#-1

When you $R U N$ the program, it begins like this:
PLEASE DO THE FOLLOWING:
(1) PLACE CHARACTER FILE TAPE TO BEGINNING OF FILE
(2) SET VOLUME
(3) PRESS ‘PLAY' KEY

PRESS SPACE TO CONTINUE
This message is brought to you courtesy of lines 2020, 2030 and the subroutine in lines 10000 through 10090 . When we saw it, we inserted our "CHARACTERS" tape, rewound it, set the volume to 4 and pressed the [PLAY] key on the cassette recorder. We checked to make sure everything was okay, then pressed the [SPACE BAR] on the CoCo.

The CoCo ran the tape forward and found the beginning of file mark and filename (line 2110 ), checked for end-of-file (line 2210), read information from the tape (line 2220), and displayed the first tape record (line 2310 and the subroutines in lines 11000 through 11090). Hello Aloysious!
ALOYSIOUS
STR 10
CON 11
SIZ 10
INT 12
POW 10
DEX 12
CHA 9
FOR NEXT RECORD, PRESS SPACE
TO QUIT, PRESS 'Q'

The CoCo is now in block 2400, waiting for someone to press the [SPACE BAR] or the "Q" key. It will ignore all other keys except [BREAK]. We pressed the [SPACE BAR] and soon saw the record for BRIDLA. Keep pressing the [SPACE BAR] and eventually the ENDFILE record appears. Now you know there are no more records. The next thing on tape should be the end-of-file mark. So, press the [SPACE BAR] and you should see:

## THE FILE IS CLOSED

OK

The CoCo has closed the file (line 2510), printed the above message, and stopped. This will also happen if you press the "Q" key instead of the [SPACE BAR] after viewing a record. If you wish, rewrite the end of file procedure to provide more information to the user. For example, you might suggest the user rewinds and removes the character file tape, or ask if she or he wants to look at another file tape.

YOUR TURN. Here are suggestions for programs for you to write.
-SEARCH CHARACTER FILE. Search the "CHARACTERS" file for a record by name of character and display only that record. We recommend you match the search key (WHO\$) to the name of the character in the file (NAYM\$) like this:

> LW = LEN(WHO\$)
> IF NAYMS = LEFT\$(WHO\$, LW) THEN etc.

Now you can search for ALOYSIOUS by entering AL or even just A. Use BA for BAROSTAN and BR for BRIDLA.

We think you can use the subroutines beginning at lines 10000 and 11000 in your program. So much of the work is already done for you!

- LOAD CHARACTER ARRAYS. Load the entire character file, including the ENDFILE record, into arrays NAYM\$, STR, CON, SIZ, INQ, POW, DEX and CHA. For example, the information for Aloysious goes into NAY\$(1), STR(1), CON(1), SIZ(1), INQ(1), POW(1), DEX(1), and CHA(1); the information for Barostan goes into the NAYM\$(2), STR(2), CON(2), SIZ(2), INQ(2), POW(2), DEX(2) and CHA(2); and so on. Of course, this is limited by the amount of memory your CoCo has.
-WRITE CHARACTER ARRAYS. Create a character file tape consisting of all information in the arrays NAYM\$, STR, CON, SIZ, INQ, POW, DEX and CHA. Include ENDFILE as the last record on tape.
- EDIT CHARACTER ARRAYS. Write a program to edit
character information stored in arrays. For example, you should be able to delete a record, add a record and change individual items within a record.

Hmmmm . . . with the above three programs, you can read an entire file (if not too big for available memory) into arrays, edit the arrays, then write out the edited file to a new tape.

## EPROM / EEPROM PROGRAMMER FOR COLOR COMPUTER

.... Programs up to 4 type 48016 EEPROMs or 4 type 2716 EPROMs.
.... Functions as an 8K ROM board.
.... Same-socket operation of programming and ROM board modes.
.... On board voltage converter eliminates need for separate power supply.
.... Complete user-friendly software provides PROM transferring, programming, and verifying capabilities.
.... Reconfigurable ports allow use with many hardware peripherals, including the Radio Shack DOS.

Please specify disk or cassette and send $\$ 135.00$ Check or Money Order, or $\$ 140.00$ Visa, Mastercard or C.O.D. to:

## P \& M ELECTRONICS

1716 North 20th Ave.
Pensacola, Florida 32503
Inquiries welcome!

## Quality Software Is The Number One Priority At K \& K COMPUTORS

LASER TANK - Pit yourself in a game of strategy and excitement against the computer. You must defend your flag from attacking tanks and destroy them before they destroy your flag or you!!! Only $\$ 1595$.

FAST FIRE-for those of you that think fire spreads fast, you haven't seen anything 'til you've seen Fast Fire! Arcade games some are good, this should be one of them. This machine language game requires 32 K extended basic and sells for ONLY $\$ 19^{95}$ on cassette.

BIORHYTHM-Start your day off right with a prediction from the all knowing CoCo. With the Biorhythm charts of the ages as the CoCo's guide to telling you the secrets of how your day will turn out. This program sells for ONLY $\$ 15^{\text {®5 }}$ on cass.

SHOOT TO SPELL AND FLASH MATH - An educational package that helps kids learn to spell and educate them on elementary math. An absolute must for adults with school aged children. Only $\$ 1595$.
SPACE HARVEST - Pilot your spacecraft above the Planetoid Voltar stealing spacefruit and trying to avoid alien guards. Machine language Only $\$ 1995$

GRAVILINK-This high-strategy game may look fairly easy, but the force may be against you. Gravilink is a two player game that requires joysticks. The object of this game is to connect four squares together. ONLY \$19*5

BLACKJACK - A casino game that puts two players against the beady eyed dealer of the house. This dealer deals the cards as good or even better than intellivision. If you have any gambling blood at all this game is a must Same rules as any Las Vegas casino. Only $\$ 1595$.

All new K\&K hacker's T-SHIRTS with our famous SuperZap logo, as seen in this ad. Only $\$ 6^{9 s}$ plus $\$ 1^{\text {sa }}$ shipping and handling.

POLARIS - You are under the ocean in a submarine, attacking planes and enemy destroyers dropping depth charges attempting to destroy your sub. Can you destroy them before they destroy you? This is a fast action machine language program. Only \$1995.

SUPER ZAP - Enemy spaceships are attacking from all sides and your mission to defend your starbase from the deadly Armada of Pyruss. This will be a dangerous mission since the Pyruss Armada has never been defeated by any humanoid. Only $\$ 15^{95}$.

SKY DESTROY - Planes and helicopters are coming from all directions, they must be stopped! This game is similar to Atari's and now available to color computer users. Machine language. Only $\$ 19^{95}$.

BOWLING SCORED FOR DOLLARS - Do your leagues bowling averages. This program will keep individual scores, team totals, individual averages, team standings, and print all this information to your line printer. On cassette and disk, specify on order. Only $\$ 19^{95}$.

INVENTORY CONTROL-This program contains all the necessary features required for all types of inventories: sort inventory by stock number, list stock number, description, amount in stock, cost, wholesale, profits, and holds up to 1000 stock items. ONLY $\$ 49^{95}$.

CHECK LEDGER - This bookkeeping system allows the user to have current information on your expenses by any category you wish. Year end tax statements made easy. Disk required. Only $\$ 4995$,

ACCOUNTS PAYABLE-Small businessmen, control your business growth by keeping track of all your cash liabilities and payment history, and holds 100 accounts. ONLY $\$ 49^{95}$.

ACCOUNTS RECEIVABLE-This system keeps track on the status of all customer accounts, all payment histories included, prints billings and holds 100 accounts. ONLY $\$ 49^{95}$

DISKS AND CASSETTES-DISKS ONLY $\$ 25.00$ FOR 10. C-10 CASS. 12 FOR $\$ 12.00$ iNCL. SHIPPING
ALL GAME PROGRAMS - require 16 K extended(prices are set for cassette, add $\$ 400$ for disk, except business.)
PROGRAMMERS!!! - K \& K pays the highest royalities for your programs. If your program is good, send it to $K$ \& $K$ TRS-80 COLOR COMPUTER USERS-New programs are added each week. SEND $\$ 100$ FOR OUR COMPLETE CATALOG

## CAPTAIN EIGHTY

> This month, Captain Eighty holes up at Software Secret Headquarters, his spirits bolstered against the frigid New Hampshire weather by the warm glow of his Color Computer and the companionship of four good books.

# Four Books From Dragonland 

By Bob Liddil<br>Rainbow Contributing Editor

Here's the Software Secret Agent at home after a mission for The Chief. There's a foot of snow on the ground and the temperature is 10 below zero which means there's no way in the world I'm going to do anything today except sit in the computer lab at Software Secret Headquarters, turn up the heat and review some of the stuff on my desk.

My last secret mission took me to England where I had occasion to drop by and visit with Mr. P. Woods of The Dragon Dungeon, a very prominent force within the computer community in the United Kingdom. He pointed out to me that books, in the scheme of things, are sorely neglected by software reviewers worldwide. I took his point and brought back with me, through the rigors of customs, four of Britain's newest entries into the Dragon "you type 'em" book market.

We all know by now that the Dragon $32 / 64$ is CoCo compatible so these books are 95 percent useful to the average CoCo owner as well as the Dragon-By-Tano owners who'll be joining us shortly.

Dragon 32 Games Master is by Keith and Steven Brain, a father and son team which frequently contributes computing tidbits to a variety of British publications. Their own stated intent in this volume is "to teach you how to set about writing your own game programs for the Dragon."

The basic idea of this volume is to start the user from scratch and acquaint him, one level at a time, with the bells whistles, tricks and traps that is Dragon Microsoft BASIC. The listings, (you type 'ems) are formatted in 32-column so that the reader may see exactly what they should look like on
(Bob Liddil, Captain Eighty, is a well-known writer on Color Computer topics who has numerous columns and several books to his credit.)
the screen. At the end of each chapter is a "Now it's your turn" section which tests what has been learned.

Dragon 32 Games Master is well written, even amusing. The casual style of a learned teacher is evident in every page. Such a variety of material is covered that one would think, at first glance, that there could be no depth. Not so. The authors are thoroughly in control at all times and someone who would follow this book sequentially would emerge with a sound education in game creation.

Competence, ease of use and depth of subject are all phrases that accurately describe this volume and the swell job its authors have done. At just a shade below \$10, it is a good investment.

Anatomy Of The Dragon bills itself as an advanced BaSIC programming book. In the preface, the author very quickly dispells any notion that this is a "cookbook" of hints that can be applied without understanding. The book's stated concern is to "build up a picture of the working Dragon so that you'll never be surprised by the results of a BASIC command."
This author is no soft touch. He plunges into his material like a skinny dipper into a winter lake. He assumes that the reader is no stranger to BASIC and gets on with the task at hand based on that premise.

Although this book is less than 150 pages long, it is crammed with data useful to any CoCo hacker who would strive to greater achievement. Peeks, pokes, graphics, sound, interfacing; this fascinating look at the Dragon can provide the working programmer with valuable information and the average user with endless hours of fun just trying to see how similar or different the two computers really are.

Mike James, computer consultant, lecturer, and respected authority, has provided a guts look at the interior of the Dragon in a serious and detailed volume. It is tough, authoritative, and savant - well worth its under $\$ 10$ price.

Making The Most Of Your Dragon 32 takes us back to basics as a 293 -page tutorial featuring more than 150 individual programs that can be typed into your CoCo or Dragon.

Clive Gifford's approach to his subject is hands-on or learn-by-doing. Where the previous reviews were heavily into bells and whistles, Making The Most is into fundamentals.

There are plenty of old friends in the games listings. Space Invaders, Lunar Lander and Missile Command, just to name a few. But there is no space wasted. Every page is chock full of interesting and useful data that is easily applicable to the CoCo. Plus, as a bonus, a Dragon 32 memory map, which, when compared to a similar map of the CoCo, can be most useful to those desiring such information.

Making The Most Of The Dragon 32 is a little spoon-fed. But the inclusion of so many perky little programs makes it a value to be considered. It is well written, unintimidating and useful. And that's hard to pan.

Dragon Graphics And Sound concentrates on one particular area and does so magnificently. Author Steve Money takes us on a journey through the magical world of computer pictures as it applies to the Dragon.

His text includes drawing techniques, high and low resolution, animation, perspective, three dimensional effects and sound, all essential information for the would-be game programmer. His attention to detail and his fine, easy going approach to his subject makes this book the easiest to understand of the technically oriented volumes.

There are programs included in the text that illustrate the various points the author is making. As the reader gets more deeply involved, Money is ready for him with still more
intricate instructions and examples. Lessonwise, this book is first class all the way.
These four books are a small portion of the titles that are available for the Dragon in the UK. Dragon books can be useful to the CoCo owner if only to add to the user's program library.

Sigma Technical Press has the following titles: Language Of The Dragon, by M. James and Hot Programs To Feed To Your Dragon, by G.P.S. Robinson and M.A. Smith.

Grenada Publishing has: The Dragon 32 and How To Make The Most Of It, by Ian Sinclair, The Dragon 32 Book Of Games, by Mike James, S.M. Gee and Kay Ewbank, The Dragon Programmer, by S.M. Gee, and Introducing Dragon Machine Code, by Ian Sinclair.

You can write to the following for more information:
Sunshine Books, Hobbhouse Court, 19 Whitcomb Street, London, WC2 7 HF , England.

Interface Publications, 44-46 Earls Court Road, London, W8 6EJ, England.

Sigma Technical Press, 5 Alton Road, Wilmslow, Cheshire, UK.

Grenada Technical Books, Grenada Publishing LTD, 8 Grafton Street, London, W1X 3LA.

The winter winds continue to howl here in New Hampshire and I think wistfully of England, the fog and much milder temperatures. I brought several units of commercial Dragon 32 software from the United Kingdom, also. They sit here on my desk, patiently awaiting their turn on the review grid.

But that's another story altogether.

A touchstone is a test to determine the genuineness of something or of someone.
"The Touchstone" is a machine language game that runs on a 32K Radio Shack Color Computer, or any compatible hardware. Joysticks are required for play, 1 or 2 players.

You are one of many priests of Ra who has accepted the challenge of the touchstone. The challenge is a way for any of Ra's followers to become a favored high priest.

For the short time you will be in his temple, Ra will grant you limited use of his powers to help you on your challenge. As you will find, a ray of light shoots from your eyes that kills anything in your path. Also, Ra will give you a lamp filled with an elixor which when spilt, causes your enemies to freeze.

At daybreak, as you enter the temple, you hear Ra's voice reminding you of what you know so well: if you can get to the touchstone you will be highly favored. Further, he warns you that your now working powers are only temporary, and that you must be successful in the mazes to be granted more time. You enter, ready for anything. . . .

# What A Difference Some A's Make 

By Joseph Kolar<br>Rainbow Contributing Editor

If you tried your hand at creating more interesting A's as was suggested last month, you can compare your results with the attached listing.
Some of you will be mildly surprised that you developed an A that was not in the listing. You need not be! You just proved the point that there is no program that you cannot alter or improve. In fact, you can refine a program ad infinitum - the only limit being the time you want to spend on a project.

Look over the listing and note in lines 500-570 which components are concatenated $[+]$ to create the various letters, Note also that some of the letter A's look lousy. That is part of the game. When you create, you also dream up some monstrosities. These you discard. Retain the better ones.
Always try to read and understand the listing. Skim over any part of the listing that you can't puzzle out. You can always go back to it.

You should be able to read and understand lines 5-820 without running the program. Consult your Training Aid and you will be able to reconstruct the components of each letter. Try recreating them mentally or on a scratch pad.

You need key in only lines 5-820 if you prefer. This is the core of the program. Everything else is window-dressing. It is always a good idea to dress up your creation; to set it off and give it the promise of becoming interesting.
You may wonder, "What is going on with line 830 anyway?" It is a lazy way to quickly center the display vertically. Lazy, because there are no calculations to perform.

A good method, but not the only one, is to adjust the PRINT@ locations by moving them(consult your Training Aid) until you are pleased with the appearance. It entails changing the line locations of the three lines you want to reposition (lines $800-820$ ).

[^18]Back to the lazy way! There are just so many lines to the bottom of the screen. If you go to a location below it, it will "pop up" (scroll) the display. It is a simple matter to change 5 to 6 in line 830 to raise the display higher. Change the 5 to 4 or lower and the display will drop lower. You will find it numbingly easy to adjust the display vertically.

Now add line 830 to your program but change the 5 to 3 and $R U N$. Change it back to 5 and $R U N$. Quick and easy does it!

There is a trade-off. Laziness has its price. The cost is 26 bytes of memory required to add line 830 to the program. Changing thePRINT@ locations accomplishes the mission and makes line 830 unnecessary.

For the purpose of demonstration, please use line 830 rather than change the locations in lines 800-820.

You will note that the displayed A's don't stand out very well. It would be nice to set them off with a little color. Give the display a little pizzazz. We will skip a row above the letters to leave a border and fill in the vast empty area at the top with glorious blue.

For reasons best known only to Radio Shack, POKE is barely mentioned in either of the two manuals.
$P O K E$ allows you to store a text-graphic character from 0 to 255 into a specified memory location. There are two elements to the statement. First, where in memory do you want to put the data? Call this the address. Second, what do you want to put there? This would be a text-graphic number from 0 to 255.

We are concerned with only one number this time. We want the number that designates the color, blue. Look at your Training Aid. Blue is $143+32=175$. CHRS(175).

The text-graphic screen is located from 1024 to 1535 in memory. It is equivalent to $\operatorname{PRINT@\text {screenlocations}0\text {to}}$ 511. You could add +1024 to the PRINT@ location and get the proper memory location for poking data ( 0 to 255 ) into memory.

You are going to poke into memory the number that calls
blue，（175）．You are going to poke it into a lot of locations． From location 1024 （the upper left－hand corner）across the screen for a total of five rows，to end at location 1183 （lower right－hand corner）of the block in question．This block is the area to be colored blue．Line 830 requires that every memory location from 1024 to 1183 （top five rows）be filled in with blue squares $C H R \$(175)$ ．

Line 850 picks out the locations．Line 860 says to put the number designating blue（175）into the location．Line 870 says to keep putting blue into all of the locations until each one has blue in it．Add these lines to your program．CLEAR， $R U N$ and see what you have．Doesn＇t look bad，does it？

Now，key in lines $880-900$ to get the six bottom rows stuffed with blue．CLEAR，and RUN．

At this point，the core program is completed．Make a nice title for it．You can see that there is not enough room at the beginning of the listing to fit in the title．

There are many solutions to this problem．For instance， you could change line 5 to line 9 and starting with line 1 ， numbering by ones，squeeze the title on top of the program．

If you have Extended Color BASIC，you could renumber the program．［RENUM $100,5,10]$ would move the program to start at line 100 ，beginning with line 5 and maintaining an increment of 10 between line numbers．

You may prefer to keep the title and other text explana－ tions out of the way，so that you don＇t have to wade through the title listing portion of the program，when LISTing the program while creating or EDITing it．Put it at the end of the program．

First，key in line 990．An infinite loop is needed or the program will reach the end and run back to the title．This effectively ends the program．Leave it out and see what

## FILEBOX／16 HOME FILING SYSTEM

RID YOURSELF OF THOSE NUMEROUS PAPER FILES AROUND THE HOUSE．ENTER THE INFORMATION AGE WITH FILEBOX／16，THE HOME FILING SYSTEM FOR THE 16K COLOR COMPUTER．
Create，change，update，delete，search，sort and list files you define．You don＇t have to be a programmer to use this system． For the TRS－80 Color Computer with 16K Extended BASIC and one disk drive．
Applications are virtụally unlimited，Use for address lists，car repair records，household inventories，book and record collections，tax records，etc．You can use FILEBOX／16 to print mailing labels．This use alone is worth your purchase price．

Each file you create can contain any number of records．Each record can contain up to 10 fields and 256 characters．Print records to screen or printer．

FILEBOX／16 IS EASY TO USE．This is NOT a system which requires that you learn special keys and operations．It is completely menu－driven．Has built－in lessons to supplement the 20 page loose－leaf User Guide．

FILEBOX／16 is written in BASIC with a machine language sort． It uses efficient formatted direct access file logic contained in 8 programs you control from a menu．

## SPECIAL PRICE－Now only \＄29．90 <br> was $\$ 39.90$ <br> Plus $\$ 2.00$ shipping

SEAI

FILEBOX／16 © 1983 by Luke Watson
TRS－80 is a trademark of the Tandy Corp．
happens．Key in line 790 ．This clears the screen．Since the title is the first thing to appear on the screen，the first line number should direct the program to the title location．Key in line 1 ．

At line 1000 ，you can get a little practice and create your own title with your name and address and a small explana－ tion about what you are presenting．Hold the title on the screen by means of line 1050 ．Then the last program line will direct to the beginning of your data for the display of the letters．But first key in the rest of the listing．

You might have noticed that the centered title was pushed up the lazy way by means of line 1050．Adding PRINTS before the INPUT does the trick．If you insert one more PRINT for a total of three，it would look better because it would push the title up one more line．

Note line 1035．If you have Extended Color BASIC and key it in as it stands，you get a change of pace．You get a reddish screen that is held for a couple of seconds and then reverts to the normal green；adds the statement in line 1040 and pushes up the title to a new，vertically centered position．If you don＇t have ECB，omit the line．

You will note that if you make an $A$ ，in which only the top component is different from those already created（provided it is the same width），you can use the existing variables． There is no sense in duplicating components and wasting your time．

Notice that lines 500－570 are not part of the program． Properly，they are all REM statements．So，what do they do？

They indicate which components make up a specific $A$ ． They are helpful when they are listed in lines $800-820$ ．They show which variables and in what order they should be listed．If they were not included in the listing，referring to lines $10-110$ to figure out which components comprised each A would be a hopelessly confusing task．

Would it make any difference if line 790 was deleted and moved to line 4 and line 1060 was changed to GOTO 4？ Why？

Note that in line 800 the variables were concatenated but that in lines $810-820$ a semicolon was used to separate the variables．As in so many facets of computing，there is more than one way to solve a problem．

Okay．Now，delete lines 1000－1050 and create your own title and explanation．

You should have had a lot of fun fooling around with the concepts involved in creating letters．It just goes to prove that everything about the Color Computer can be fun．After all，who＇d figure we would have fun making a bunch of A＇s？

THE COOKIE MONSTER dreamed up the ideas and Big Bird translated them into Extended Color BASIC programs - at least that's the story we heard. The programs are Play With Language and Hands On, designed by Children's Computer Workshop, an activity of Children's Television Workshop, the creators of Sesame Sireet and employers of the aforementioned fuzzy friends of small children everywhere.

Both programs, which are offered by Radio Shack, require 32 K and a disk drive. Each contains a "learning master" which allows the teacher to tailor the program according to a child's need and makes it possible for play by single or multiple users. Also, an individual child's work can be saved on disk.

Play With Language is an early reading experience program, and Hands On introduces children to computers through two activity modules. The programs are $\$ 99$ each and you can find them at Radio Shack stores and dealers nationwide.

BULLETIN BOARD BOB, the colorful one-man CoCo club from Woodhaven, New York, has expanded his electronic stable to eight BBSs, with four new ones set up in Montreal, Canada. The addition gives an international flavor to Bob Rosen's highly successful Spectrum Projects, the Color Computer mail order business he has operated with the assistance of his bulletin boards since the computer's early days.

To reach the new Canadian connection, call (514) 845-5452. This number will patch you to a rotary grouping of four data lines, putting you through the first open one. Bob's original data lines, forming the Rainbow Connection, all share the same " 212 " New York area code. Those numbers are: 441-8355; 441-3766; 441-5719; and 441-5907.

## * * *

FIRING A BROADSIDE salvo at would-be pirates is a new company called Software Protection Devices, Inc., of Peterborough, New Hampshire, with its Copyrighter system.

The Copyrighter, they say, is the first and only unbreakable hardware-based protection system for software. At least, software you purchase with the system already incorporated into it.

The purchaser of a Copyrighter protected program telephones a toll free (800) exchange phone number and supplies the serial number of his computer and the serial number of his new program to a central data bank. In return, the customer receives a configuration code which adapts the new program to run only on the customer's computer.

We'll say this: If this system will work on the CoCo, and catches on to the point of covering most of the software market those program pirates will be a lot less jolly, Roger.

USING COMPUTER TECHnology to evaluate, buy and sell software at retail locations has recently become a fact of commercial life at a number of West Coast computer emporia.

PC Telemart, Inc. has begun installing kiosks containing dedicated microcomputers and printers to enable sales personnel and software shoppers to search among more than 30,000 packages in the database. Once a software item has been located it can be evaluated and some programs can even be demonstrated. And, if the customer wants to buy, he can order them instantly through the computer.
A.two-month pilot program in the Washington, D.C. area encouraged the company to expand the technique, so following the West Coast installations, PC Telemart will establish the concept in Chicago, the Dallas-Ft. Worth area, New York and Boston. The company will then begin evaluating other areas around the country.

This growing sophistication in the computer industry causes us to reflect on what an amazing business it is that can use its end products to promote, evaluate and market themselves: and, when a sale is madc they can perform the inventory and bookkeeping chores, and make predictions of future performance based on data they have collected and analyzed. What other product is so self-sustaining as the computer product? Except, perhaps, the hen egg.

## * * *

NOT ONLY THAT BUT Star-Kits Software Systems Corporation also seems to have found that utilizing existing technology can improve marketing
techniques for their products. They've created a Video Tape Sampler - an electronic catalog of their software available in both VHS and Beta formats.

The sampler tape explains software in a way that dealers or printed promotional material would have difficulty matching.

The video tape is priced at $\$ 20$, and after looking through the Star-Kits products, you can either erase the tape and use it for your own recording purposes, or return it for full credit toward a program purchase.

MANY A GOOD OLD HACKER on the Color Computer also has an interest in ham radio, it seems. And as wireless data communications through the use of amateur radio equipment and techniques becomes more popular, it would seem that more and more folks are going to need to know Morse code to satisfy FCC licensing requirements. Now, Cynwyn, a New York based company, is selling a new program aid for increasing copying speed of International Morse code. It's called the Morse Code Tutor. This program along with another one the company has had on the market awhile called Morse Code Teacher, ought to help you develop the required proficiency. You can call them at (212) 567-8493, or write them at 4791 Broadway (suite 2F) in New York City. The ZIP is 10034 .

```

```

THE MOVIE WARGAMES made millions of people aware of the problem; newspaper accounts, millions more. We're speaking of unauthorized access to privileged computer information.

About this, there has been mueh public breast-beating, cries of foul, and fearful remarks about something needing to be done. But generally, despite the brave display, this concern has come to littlc. Until now, that is.

February 28 and 29 in Rosslyn, Virginia, the Videotex Industry Association is sponsoring a "Forum on Unauthorized Access," two days of roundtables and plenary sessions with strong emphasis on action. An emphasis underlined by the choice of forum leaders. According to chairman George Minot, sessions will be headed by industry and legal experts, federal and state legislators, and security professionals from online systems. They appear determined to develop the consensus necessary to bring legislation and enforcement to this vexing problem. We wish them success.

## It's here!

The Rainbow Book of Adventures is in stock and ready for immediate delivery. This 112-page special edition contains top contest winners and a dozen more selected Adventures, ready for you to type in and run.
If you're just getting started in Adventures, here's a collection of 14 Adventure games ready to test your wits.

If you're considering entering your own Adventure creation in the Rainbow's Adventure contest, The Rainbow Book of Adventures is a must to see how the last year's top contestants became winners. All of the award winners in the Rainbow's first Adventure contest have their entries reproduced in their entirety in The Rainbow Book of Adventures - plus there are hints to authors and comments from the chief judge of last year's contest to help you hit the ground running in this year's Adventure writing competition.

The Rainbow Book of Adventures is just \$7.95.
$\qquad$ copies of The Rainbow Book of Adventures @ \$7.95 each.

# An FCC Fix For EDTASM + 

By Roger Schrag

In the September 1983 issue of The Rainbow I presented an article entitled "SuperPatch for EDTASM." This program provided all sorts of new features for Radio Shack's EDTASM cartridge such as disk I/O, 64 K compatibility, and a repeating keyboard.

Well, it seems that I have left something out. Have you ever assembled a program which involved a bunch of FCC instructions? If you have, then you are familiar with the poor manner in which EDTASM prints out the FCC lines during assembly. (Figure 1 shows an example.) This type of printout takes up a lot of space and wastes a lot of printer paper.
Figure One

| 0000 | 44 | 00100 | FCC | /DEMO OF | FCC/ |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 45 |  |  |  |  |
|  | 40 |  |  |  |  |
|  | 4 F |  |  |  |  |
|  | 20 |  |  |  |  |
|  | 4F |  |  |  |  |
|  | 46 |  |  |  |  |
|  | 20 |  |  |  |  |
|  | 46 |  |  |  |  |
|  | 43 |  |  |  |  |
|  | 43 |  |  |  |  |
| OOOB 12 |  | 00110 | NOP |  |  |
|  | 0000 | 00120 | END |  |  |
| 00000 T0 | AL EFi |  |  |  |  |

Figure Two

| OOOQ |  | 44 | 00100 | FCC |
| :--- | :--- | :--- | :--- | :--- |
| OGOE 12 |  | 00110 | NOF | DEMD OF FCC/ |
| OOOOO TOTAL ERRORS | 00120 | END |  |  |

Here is a very simple patch you can perform to EDTASM to improve the way FCC lines are printed. After using the patch, assembled FCC instructions will look like those in Figure 2.

[^19]First I will explain how to implement the patch if you are currently using the $E D T A S M$ cartridge (your CoCo must have 64 K ). Then I will explain how to use the patch if you are already using my SuperPatch program.

If you are using the cartridge, then enter the source code shown in the program listing and assemble it onto tape with the instruction A FCCFIX/WE. (Do not use the /IM assembly switch!) Now, whenever you are going to want to do some printouts and desire the improved FCC format, follow this procedure:

Enter $Z B U G$ and press $L$ and [ENTER]. Now load the tape you just assembled earlier. When the load is finished, type G 3CO and press [ENTER]. After a few moments, you will be returned to $Z B U G$. You may now return to the editor and continue programming as usual.

If you are already using SuperPatch, the procedure is much simpler. Just load SuperPatch as you normally would, but don't execute it. Now enter POKE 10904,57. You may now save the modified version to disk with the command SAVEM"EDTASM",\&HE00,\&H37FF, \&HE00.

So you see, by changing just one byte of code, we can get rid of the messy format EDTASM uses for showing FCC instructions. Happy neater and tidier printing!

## The listing:

## THE SPECTRUM VOICE PAK

A CoCo voice synthesizer that is a complete phoneme based voice system that uses the famous VOTRAX SC01 chip in a cartridge style pak. It provides an unlimited vocabulary with text to speech software and a Word Manager that constructs and edits custom user dictionaries. Fully assembled, and ready to plug in and talk, talk, talk! $\$ 69.95$

## TALKING SOFTWARE

Talking Final Countdown - You must stop the mad general from launching a missle at the Russians and causing WW III ! Has multiple voices for added realism. 32 K EXT $\$ 24.95$

Educational Software - Computer Island's educational programs turn your CoCo into a true teaching machine. Reinforce basic lessions with the aid of voice. Three/pak special includes Math Drill, Spelling Tester and Foreign Languages. 16K EXT $\$ 24.95$

Talking Score E-Z - An excellent adaptation of a Yahtzee type program with added speech. Up to 6 players can compete at a time, and all scoring and record keeping is done by the computer. 32 K EXT $\$ 24.95$

Term Talk - A speaking smart terminal program for your CoCo. It contains all the features of an intelligent communications package, plus it talks! (Shades of War Games) 16K EXT Tape $\$ 39.95$ Disk $\$ 49.95$

## COLORFUL UTILITIES

DOUBLE DOS - Now access 10 more granules from your 40 track drive and still be compatible with RS DOS! Also works with double-sided and 80 track drives! DISK $\mathbf{\$ 2 4 . 9 5}$

MULTI-PAK CRAK - Save ROMPAKs to your 64 K Disk system using the RS Multi-Pak Interface. Eliminate constant plugging in of ROMPAKs now by keeping all your PAK software on disk. DISK \$24.95

TAPE OMNI CLONE - Easily handles programs with auto loaders, no headers, no EOF markers, unusual size blocks and more! Now is the time to get your tape software collection protected against loss. TAPE $\$ 24.95$

DISK OMNI CLONE - Back everything up! This amazing program handles "non standard" disks with ease. We haven't found any disk yet that it can't handle. Lowest price too! 32K DISK \$29.95

DISK MANAGER - Rescue crashed disks, date files on the disk directory, print a Super directory with ML addresses, maintain and sort a catalog of up to 300 files from a collection of disks! 16K DISK $\mathbf{\$ 2 9 . 9 5}$

BASIC AID - Speed program entry by single key input of 43 common BASIC commands. Redefine any or all keys. Merge, move and renumber any part of your pragram. Comes with a plastic keyboard overlay. ROMPAK $\$ 34.95 /$ DISK $\$ 49.95$

COLOR KIT - Adds 35 commands to BASIC! Light or dark screen, key click, screen editor, echo to printer, BREAK disable, convert ML to DATA and double space printouts of program listings. TAPE $\$ 34.95$
***************************
BASIC COMPILER - Convert your BASIC programs into fast efficient machine language. Produces code more compact and up to 50 X s faster than original BASIC. Integer compiler with no Extended BASIC needed. 16K-64K versions included. TAPE $\$ 39.95$

SCHEMATIC DRAFTING - Save hours of work and design professional looking electronic diagrams using a $480 \times 540$ pixel worksheet with 6 viewing windows. Over 30 electronic symbals with 10 user definable symbols are provided. Dump hard copy to the printer and save the created schematics to disk. 64 K DISK $\$ 49.95$

CCEAD - Color Computer Editor Assembler Debugger is a cost effective machine language development tool. Ideal for learning the basics of Assembly Language. TAPE \$6.95

THE STRIPPER - A machine language utility designed to cut the size of BASIC programs for run-time efficiency. Delete REMARKs, pack statement lines and remove spaces. Get more performance for only $\$ 7.95$

## COLORFUL UTILITIES

FAST DUPE - The fastest Disk copier ever! Will format and backup a diskette in only one pass and can make up to 4 Disk copies at once! The must utility for every Disk owner. 64K DISK $\$ 19.95$

HIDDEN BASIC - A protection feature for your BASIC programs. Modify your code so CLOAD, CSAVE, LIST, EDIT, DEL and LLIST will not function. TAPE \$19.95

64 COLUMN MOD I/III EMULATOR - Give your CoCo a 64 X 16 screen. Run Model I/III BASIC graphic routines without retyping the graphics statements. 64 K DISK $\$ 19.95$

64K DISK UTILITY PACKAGE - Take advantage of an expanded 64 K machine. Make an additional 8 K of RAM available. Copy ROM cartridges to disk and create a 32 K SPOOL buffer for printing. DISK $\$ 21.95$

```
*************************
```

TAPE UTILITY - A powerful package that transfers tape to disk and disk to tape automatically. Does an automatic copy of an entire disk of programs and data to tape. TAPE/DISK \$24.95

E-X-T-E-N-D-E-D DISK BASIC - Add new powerful commands to your 64K Disk system. Inverse Video (GREAT for monitors!), Wild Card Directory, Double POKE and PEEK, NSAVE, NLOAD, LDIR, OLD and TYPE. DISK $\$ 24.95$

GRAPHICOM - The ultimate CoCo graphics development system with sophisticated graphics editing, preview animation, telecommunications and printer support. Hi-resolution graphics for only $\$ 24.95$. W/Spectrum's Menu Foot Switch $\$ 34.95$. 64K DISK

# Four Patches For Your New ROM <br> By Roger Schrag 

If you own a Color Computer with the newest revision of BASIC, you must be very careful of what machine language software you buy. Some programs simply won't be compatible. This also applies for machine language program listings that you see in such magazines as the Rainbow. Listings containing undocumented ROM calls may need some editing in order to work on your machine.

Speaking of program listings, I must warn you now that several of my program listings as published in the Rainbow to date are not compatible with the new ROMs. Tables 1 through 4 list the necessary corrections to make my programs work on Color Computers with Disk Extended Color BASIC 1.1.

If you have any questions about how to implement these

TABLE ONE
Changes to be made to Patch EDTASM+ to Disk (December, 1982) for compatibility with Disk Extended Color basic 1.1.

00094 CLOSE JSR \$CAE9 CLOSE FILES 00119 JMP \$C952 GO GET FILENAME 00142 JMP \$C48D GO OPEN FILE

TABLE TWO

corrections, feel free to drop me a line at 2054 Manning Avenue, Los Angeles, Calif., 90025 . Please include a selfaddressed, stamped envelope when you write. I'm sorry, but I can no longer supply article reprints.

By the way, if your machine doesn't have the newer ROMs, do not perform the corrections provided in these tables! It will make your programs compatible with newer machines, but not your own.

## TABLE THREE

Changes to be made to Machine Language Disk //O (July, 1983) for compatibility with Disk Extended Color BASIC 1.1.

## All orders plus $\$ 3.00 \mathrm{~S} / \mathrm{H}$

House\$ is a program intended to help young, firsttime buyers look at the total cost impact of home ownership. Parents can also use it as an aid in explaining the financial facts of life. Consideration is given to such facets as downpayment, closing costs, "moving-in" expense and available cash as well as the basic monthly payment. A final projection of monthly income vs. expenses sums up your financial position after the test for downpayment criteria has been passed.

The program evolved out of questions from my eldest son. He had started to show an interest in real estate just before he came home with a new 650 cc motorcycle. Next time I'll be ready for him.

Before going further into the workings of the program I need to explain that it is intended to be a very uncomplicated
(Richard Giovanoni is industrial engineer with 30 years experience in electronics and aerospace. He is married with five children, [two in college] and uses his Color Computer to keep himself in touch with the technology of microcomputers.)
financially conservative approach to buying. The mortgage is of the straight fixed rate type. It assumes that the buyer will have enough liquidity to make the downpayment with a reserve for closing and moving costs without any borrowing or "creative financing." The monthly budget plan assumes that savings as well as charitable giving are must items in any good plan.

This bias comes from years of watching young people dig themselves into pits of debt which end up as fiscal graves. Having been brought up in the frugal traditions of New England during the depression also contributes to my slant. With that disclaimer let's proceed to the program.
Four major sections plus an introduction and menu make up the program. You need 16 K and Extended BASIC. The format is screen oriented. Output to a printer could be a nice addition. Changing the PRINT statements to fit your printer should be relatively easy.

I have run the program through a shakedown with my children (ages 14-23) and made some changes at their suggestion.

Readers who want to adapt it for their use should review the following summary of the program structure. This way
they can substitute values that reflect local conditions and modify my conservative bias.
I have added a list of the major variables and their definition at the end.

Lines 0-8: Initializes and gives choice of going to introduction or straight to menu.
Lines 10-18: Displays menu with two choices. Accepts decision.
Lines 20-24: Starts section that calculates CASH ON HAND; also gets current date for reference.
Lines 26-28: If you already know your cash position you can use this option to move ahead without duplication of effort.
Lines 32-52: Goes through a check list of liquid assets that young buyers are likely to have. The category "cookie jar" in line 50 is for those who don't trust banks or the IRS.
Lines 54-60: Prints out to screen the date and cash on hand after summing up all the inputs. Note down these values for future comparisons. Line 56 moves program ahead for those who knew cash position.
Line 62-66: Moves to section that reviews downpayments and monthly payments.
Line 68: Gets identification of house. Use of LINE INPUT lets you use any address, a number or whatever method you like.
Lines 70-82 House price and method of downpayment are entered. A set amount or percent may be involved. The buyer can also establish a set amount to reduce the loan if he has the resources.
Lines 84-98: Prints out display that summarizes your cash position vs. the downpayment required. Line 96 says that in addition to meeting downpayment your cash available should include enough to cover $\$ 1200$ closing cost and $\$ 2000$ "moving-in" expenses (CH-3200). Line 98 says that an even better position would be an extra "bank" of 20 percent of current cash over the $\$ 3200\left(\mathrm{CH}^{*} .8-3200\right)$.
Lines 100-106: Print out advice based on the evaluations made in $94-98$. These values and comments should be noted down.
Lines 108-116: INKEY\$ sends us to the monthly payment calculations based on selection of option (2) in the menu.
Lines 118-120: Picks up for those who chose option (1) and
are using the program simply as a calculator of mortgage payments.
Lines 122-132: This is the payment calculation routine.
Lines 134-140: Prints out mortgage summary showing payment plus total cost of the loan and the total interest that will be paid. These last two figures are usually real eye openers for young people.
Lines 142-152: Directs program flow based on choice of (1) or (2). At Line 148 it moves back to the full analysis and takes you into the montly INCOME vs. EXPENSE summary.
Line 154: Enter average weekly take-home pay.
Line 156: Enter any weekly deductions that are really income (like bonds) as opposed to taxes.
Line 158: Enter current monthly installment debt such as car payments. hopefully very low or zero.
Line 160 :

Line 162 : Enter current yearly insurance premium; life, health, car. Do not include any costs already covered by payroll deductions.
Enter estimated yearly heating cost for proposed house. This can be a big item. Ask to see last year's bills.
Lines 164-168: Converts above expenses and income to monthly value.
Line 170: Deserves special attention. This calculates a monthly value for property taxes, mortgage insurance and fire/liability coverage as a percent of the purchase price. the .0015 value is good only for my location. There are so many variations that each reader would have to substitute a realistic number.

Lines 172－180：Lists other basic expenses at a convenient level for my locality．These would also need reader adjustment．
UK＝Normal upkeep allowance
$C S=15$ percent for charity and savings
$L E=$ Living expenses for one person：food， clothes，household supplies，entertainment， etc．
$\mathrm{CS}=$ Car expense other than payment：gas， oil，repair，inspection．
$U T=$ Total utilities cost．Heating cost added to $\$ 100 /$ month for light，water，telephone， etc．
Lines 182－188：Adds up the expenses then prints out a screen message giving the date and property name before switching to the INCOME vs． EXPENSE statement．Line 188 holds the screen for a count of 1000 ．
Lines 190－212：Prints out the statement of expenses．
Lines 214－220：Prints monthly income and gives a comment based on comparison of INCOME vs．EX－ PENSE．
Lines 222－250：Contains introduction and credits．

- Up to 48K of Workspace on 64 K
- 10 Programmable Tab Stops
- 7 Tab Function Commands
- Automatic Justification
- On Screen Underlining and Double Size Characters
- Change Formatting at Any Time
- Edit Files Larger Than Memory
- Compatible with All Printers
- Easily Imbed Any Number of Format and Control Codes
- Typist Friendly Line and Command Format Entry
- Automatic Key Repeat

TEXTPRO 111 is the most advanced Text Editing and Word Processing System available for the Color Computer. One of the reasons for this is, Textpro works in a totally different way than the other Color Computer Word Processing programs. It uses simple 2 character abbreviations of words or phrases for commands. These commands are used at the beginning of a line and are preceeded by a "." period. Several commands can be chained together on the same line for ease of use. Thru these commands you tell the Word Processor how you want the margins set, line length, indenting information, and so on. You can change the way you want a document formatted at any point in the document. You also have the freedom to write without worrying about how long the line is or where the margins are and so on. The Word Processor automatically takes words from one line to the next and fills out the printed line to the desired length. You can even use the command to Input Text from the Keyboard while a document is being processed, and use that information to change the formatting or enter any other valid text Processor command. With this kind of flexibility and an extensive set of commands and functions available, its no wonder that TEXTPRO III is the most advanced Word Processing System.

## Screen Formatting

Textpro III has 9 Hi-Resolution Upper/Lower case display formats available, from 28 to 255 characters per line by 24 lines. You also have advanced screen commands such as double size characters and on screen underlining. You can also use the standard 32 by 16 display for systems having lower case hardware kits installed. The display defaults to a 51 by 24 format that is easily switched to any other format available. Along with the Hi-Resolution screen we added automatic repeating keys "Typomatic." The rate is fully adjustable from ultra fast to super slow or can be turned off entirely for your convenience.

## 64K Support

Textpro III fully supports the use of 64 K on the Color Computer. It has fast automatic memory sensing and configures itself accordingly. Textpro III does not require Extended Basic or Flex to take full advantage of a 64 K RAM system. On a 64 K Disk System there is over 64 K of workspace available and files larger than memory are fully supported. Tape based systems have up to 48 K available for workspace.

## Text Editor

Textpro III has a fuil featured, line oriented screen editor. It supports single or multiple line copy and move, global or local search and replace of any character string, character insent and delete, block delete, adjustable speed automatic key repeat, single and automatic line edit, programmable underline and double width control coded, change screen background color and line lengths, automatic line numbering, line resequencer, and insert and delete line numbers.

## Disk \& Tape I/O

Textpro III uses fully compatible ASCII formatted files that do not have to be converted like some of the other Word Processing Systems. It will load, save and verify basic ASCII formatted tape files. The disk version supports Load, Save, Directory, Kill, Append, Text Process file from Disk, Roll part of file to disk and get next portion of file from disk

DISK $\$ 59.95$
TAPE $\$ 49.95$

## Standard Commands

Textpro III features a whole host of Document Formatting commands. The setup command section includes: Line Length, Top, Left, and Bottom Margins, Page Length, Page Numbering on/off and Automatic Word Fill and Justification on/off.
Some of the vertical control features include: test for number of lines left on the page, skip to next page, set page number, wait at top of page, single and multi line spacing, and skip blank lines.
Textpro III features 3 programmable header lines that can be centered, left or right justified. It also has one programmable footer line. 3 commands for continues, single and paragraph indenting, center text, underline and double width print commands.

## Footnotes and Special Commands

Some of the special features allow imbedded control codes to access intelligent printer features like; superscript, subscript, change type font and even graphics. You can even imbed control codes within justified text. There is a command that automatically places footnotes at the bottom of the page, which can be very handy for term papers, etc. Another command allows you to display a message on the screen and input text from the keyboard. This text is then printed as if it has been part of the original text, thus you can produce things like a personalized form letter. There is also a repeat command that allows you to repeat an entire document or a part of one as many times as needed up to 255 times. This can be used to produce mailing labels o combined with the previous command to produce selected number of personalized form letters.

## Tab Functions

Textpro III features an elaborate system of tab com mands for complete control over column formatting There are 10 programmable tab stops that can be defined or re-defined at any time in the text file. They can be used with the following tab commands; Center Over Tab Column, Right Justify to Tab Column, Decimal Align Over Tab Column, Left Justify to Tab Column (Normal Tab) and Horizontal Tab. Tab functions may also be used with a numeric tab column position for maximum flexibility. You can also define the Tab Fill Character to any printable character to fill in the blanks with dots, dashes, etc.

## PRINTER MYSTERY

This is the fifth installment in a continuing series of short 'Printer Mysteries' which began in November.

# A Very Important Man 

By Michael J. Himowitz and<br>Julius Nelson

Here's the latest seasonal printer mystery for those who have the Printer Artist program from the November issue of the Rainbow. To create the drawing below, run the Printer Artist program and type in the characters as you see them. For example, line 1 means to hit the spacebar 19 times and the " M " two times.

For those interested in more sophisticated art, a complete four-program Printer Artist development system is available from Federal Hill Software, 825 William St., Baltimore, Md., 21230.

(Michael Himowitz is a Washington correspondent for the Baltimore Evening Sun and proprietor of Federal Hill Software. He lives in Baltimore with his wife, two children, a Color Computer and a Gemini printer. He loves them in that order.)

Those who do not have Extended BASIC must delete lines 720 in parts 1 and 2 , and line 7020 in part 3. Add these new lines to the programs, starting part 3 at 7011. That is, for part 3, change the numbers of these additional lines from 711 to 7011 , from 712 to 7012, etc.

These new lines will enable your computer to convert the hexadecimal to decimal. You must go through the programs and add a zero to single numbers (Ex. ,1, to, 01, ). This does not have to be done to single zeros (Ex. ,0,).
(Charles Husak is a self-taught computerist who has spent several years of college studying chemistry and electronics.)

## STANDS

TS-1
\$29.50

PS-1
\$19.95

Monitor stand for $13^{\prime \prime}$ TV.
$15 \mathrm{~W} \times 11 \mathrm{D} \times 4 \mathrm{H}$ with cut-out for ROM pack and ventilation holes.

TS-5
TV stand for disk drive and color
$\$ 39.50$
To elevate TV where computer does not slide underneath. $5 \mathrm{~W} \times 11 \mathrm{D} \times 2 \frac{1}{2} \mathrm{H}$ with no cut-out. Can also be used as a Epson printer stand.

TS-4
TV stand for 19" TV.
$\$ 39.50 \quad 24 \mathrm{~W} \times 11 \mathrm{D} \times 4 \mathrm{H}$ with cut-out for ROM pack and ventilation holes.

All stands available in smoked gray, ivory, or clear.

## PRINTERS

RX-80 Buy the best Epson pin feed with $\$ 365.00$ serial board 2 K buffer and graphics board. Replaceable head.

## Call for additional Epson prices

WARRANTY
All stands warranteed for 1 year
Amdek Monitors for 2 years
Disk for 90 days
Zenith 131 for 90 days 123 for 1 year
J\&M 90 days
Epson 90 days

## GUARANTEE

Any product may be returned within 30 days for refund if not satisfied.

DD-3
\$489
\$449

PS-1 and RX-80
$\mathrm{VC}-1$
\$24.45

Howard Medical Company

Box 2, Chicago, Illinois 60690

All monitors need video interface below.

## DISKS

Dual $3^{\prime \prime}$ disk drives. 40 track double density 368 K bytes on-line. Can be used as stand alone system or with other drives. Built-in fan. Can record on both sides of diskette. Drive light changes color to indicate side. Amdek.

## CONTROLLERS

Video interface mounts inside color computer by lifting IC and piggy backing it on top of interface. No soldering and no traces to cut. Gives video on one cable/sound on second cable.

VC-2 For Color Computer 2
\$26.45 Monochrome only.
DC-1 ROM disk controller plugs \$149 into ROM slot. Can mix 35 \& 40 track disks up to 3 drives. Gives $184 \mathrm{~K} /$ side or 368 K bytes on-line when used with DD-3. Compatible with disk BASIC FLEX \& OS.9. Comes with complete manual (J\&M).

CA-1
$\$ 27.50$
\$24.75

Cable to connect disk to controller. Call or describe your configuration for correct cable.

Yes! That's right, because we want to create some excitement with an offer you can't pass up - a professional quality full screen oriented word processor that would be a bargain at $\$ 50$. It's a good one too. Take a look at what you get.
MASTER WRITER's FULL SCREEN-ORIENTED EDITOR allows you to move the cursor anywhere in your text using the up, down, right and left arrows. Do this one character at a time or by line or page. Insert, delete or replace text at the cursor watching your changes as you make them. Delete or move blocks of text from one place to another. Merge in text from other files.
AUTOMATIC CARRIAGE RETURN after last complete word on each line, with this and AUTOMATIC PAGE FEED you don't have to worry about where a line or page ends - just type!

MASTER WRITER runs on a $\mathbf{1 6 K}, 32 \mathrm{~K}$, or 64 K COLOR COMPUTER, taking advantage of all available memory. Use it with DISK OR CASSETTE based systems. EXTENDED BASIC IS NOT REQUIRED.

EASY TO UNDERSTAND MANUAL has you comfortably using MASTER WRITER in minutes. It is a USER-FRIENDLY MENUDRIVEN SYSTEM with single letter commands. Check any command without having to refer to the manual with the HELP SCREEN.
10 PROGRAMMABLE FUNCTION KEYS allow easy insertion of frequently used words or phrases

WORKS WITH ANY PRINTER. Take full advantage of your printer's special functions such as variable charcter size and emphzsized characters with EASY EMBEDDING OF PRINTER CONTROL CODES.
GLOBAL SEARCH function lets you quickly locate specific strings for replacement or deletion.
Customize form letters or standard text with MASTER WRITER'S EMBEDDED PAUSE feature. Just "fill in the blanks" when your printer pauses for a personalized appearance.

LIMITED MULTI-TASKING feature lets you print one file while editing another.
In addition to regular text you can use MASTER WRITER to CREATE BASIC PROGRAMS with the convenience of full-screen editing.
OTHER FEATURES include easy setting of left, right, top and bottom margin, printer line width, and lines per page. Also auto repeat keys, auto line centering, auto page numbering and choice of display color formats.
And, perhaps one of the best features, is MASTER WRITER's SUPER LOW PRICE OF $\$ 1$ 4.95. At this price you can't go wrong. Buy it today!
TO ORDER send $\$ 14.95$ for cassette version or $\$ 19.95$ for disk version plus $\$ 2.50$ shipping (Calif. residents add $6 \%$ sales tax) to: PYRAMID DISTRIBUTORS, 527 HILLST., SANTA MONICA, CA 90405 (213) 399-2222.

QUALITY SOFTWARE AND PERIPHERALS FOR YOUR COMPUTER

SUPER STATS - The most powerful statistics program available for the $\mathrm{CoCo} / \mathrm{TDP}$. Multiple linear regression, forecasting, mean, standard deviation, correlation coefficients, covariance, $F$ and $t$ tests. Powerful data editing and manipulation abilities. Data plotting, Student $t$ tail areas, Gaussian cumulative probability distributions, and more. Flexible 1/O (screen or printer, tape or disk). Very good documientation. 16K extended BASIC. Cassette \$29.95.

STRUCTURED MACROS - An assembly language programming tool for users of the Macro-80C assembler, by the Micro Works. Structured macros come close to transforming your assembler into a high-level language. Your programs become more understandable and debugging is simplified. Commands include IF, ELS, ENDIF, IFTST, IFCC, WHILE, ENDWH, REPEAT, and UNTIL. Disk \$19.95.

PAGE PLUS - Attention BASIC programmers! Up to 56 K available from your BASIC programs. This utility, written by Chris Hawks, does the memory management necessary to utilize the two 32 K banks of memory. Easy enough for any "intermediate" level BASIC programmer to use. Works with 64K systems. Cassett $\mathbf{\$ 2 7 . 9 5}$. Disk $\mathbf{\$ 2 9 . 9 5}$.

MYSTIC MANSION - New!! You'll be hearing lots about this incredible ALL GRAPHIC adventure. Explore the mansion and escape from the island, if you can! This one is tough to solve, but you'll have fun trying. For 32 K Disk only. Disk \$29.95.

## C.C.Three

A powerfui 'electronic spreadsheet', a full-featured word processor, and a flexible database - for an unheard of low price! This may be the ONLY SOFTWARE PACKAGE YOU'LL EVER NEED TO BUY for your computer.

BOTH DISK AND TAPE VERSIONS OF ALL THREE PROGRAMS ARE INCLUDED (on tape) for the bargain price of $\$ 49.95$ ! No need to pay for upgrades to disk later! Over 40 pages of documentation in an attractive vinyl binder. C. C. Writer and C. C. File require $16 \mathrm{~K}, \mathrm{C} . \mathrm{C}$. Calc needs 32 K . All require Extended Color BASIC. Order yours NOW!

MDISK - Hal Snyder's latest breakthrough for the 64 Color Computer! MDISK lets you use the upper 32K of memory for rapid storage and retrieval of programs and data. Whether you own an actual disk drive or not, MDISK puts the "hidden" 32 K to work for you as a "virtual disk," with capability to save and load up to 15 programs, view a directory of files stored in"page 1," kill unwanted page 1 files, execute BASIC or machine language directly from MDISK chain to a BASIC program while preserving data already created, and more. MDISK is written in position independent code, and will work on disk or tape based 64 K systems. Cassette $\mathbf{\$ 2 7 . 9 5}$. Disk $\$ 29.95$.

ROMBACK - Why pay more? The easiest to use ROM-pak dumping utility available! At the best price, too! Comes with full documentation, including detailed patching instructions to allow several popular "problem" cartridges to run from tape or disk. 64 K Extended BASIC. Cassette $\$ 16.95$.

QUICKSORT - A machine language sort routine specifically designed to be used by BASIC programmers. Written in position independent code, works on tape or disk systems. 16K required. Cassette $\$ 12.95$.

64K BOOT/PAGER - The 64K Boot allows you to modify BASIC by moving it from ROM to RAM. The PAGER is a menu-driven utility allowing you to manually page between the 32 K banks of memory. Source code for both programs is included. Both run on 64 K tape or disk systems.
Cassette \$12.95.

WIZARD 64 - If you've got 64K, then this one's for you! Uses both 32 K pages of memory for graphics and action. Challenging enough for adults, yet entertaining for younger players too. 64K Extended BASIC. Cassette \$21.95 Disk \$23.95.

SIMPLEX - Linear programming by the "simplex" method now available for the Color Computer. This powerful decision making tool finds the optimum "mix" for a given set of constraints. Disk compatible. 16 page manual included. 16K Extended BASIC. Cassett $\mathbf{\$ 2 9 . 9 5}$.

## ORDERING INFORMATION

* $\$ 10$ shipping, handling, \& insurance on printers.

Amdisk, and monitors. $\$ 5$ on modems. $\$ 2$ on ali other orders.
All prices U.S. funds.

We Love Canadian Orders! Inquire For Foreign Shipping

Dealer Inquiries Invited

Skyline Marketing Corp. 4510 W. Irving Park Rd. Chicago, IL 60641

# AN ASTRONOMICAL ARRAY OF FEATURES FOR A DOWN-TO-EARTH PRICE 

MORE QUALITY: 120 cps - thruput time of 58 Ipm - high resolution ( $120 \times 144$ ) bit image \& block $(6 \times 6)$ graphics - extra fast forms feed MORE FLEXIBILITY: super/sub script • underlining - backspacing - double strike mode - emphasized print mode • 816 character buffer - compatible with most software supporting leading printers - $10^{\prime \prime}$ carriage - $15^{\prime \prime}$ carriage Gemini-15 available

MORE RELIABILITY: 180 day warranty ( 90 days for head \& ribbon) - mtbf rate of more than 5 mitlion lines - print head life of more than 100 million characters

## SAVE \$100.00!!!

Our incredible Gemini-10 package--a PRINTING SYSTEM ready to plug in to your Color Computer. NOTHING MORE TO BUY. Includes serial to parallel converter, graphic screen print software, deluxe user manual, and 5 minute setup instructions! A $\$ 479.00$ value. Complete package

Wide carriage Gemini-15 also available:
Package ONLY \$579*
Printer only $\$ 499^{*}$
ONLY \$379*
Order yours today!
Parallel printer only, $\$ 299$

GET THE MOST FROM YOUR SYSTEM WITH AN NEC MONITOR PACKAGE!
Without a monitor, you'll never know just how good your graphics are. Word processing becomes less fatiguing, programming more enjoyable. NEC is famous for excellent color reproduction and tack-sharp resolution. We take the work out of adding the monitor to your system by including a custom plug-in monitor driver (with color, monochrome, and audio outputs), any required cables, and easy setup instructions. Buy with confidence-we've done the "homework" for you! NEC 12" Color monitor (JC1212M) package ONLY \$389* NEC 12" Green-screen (JB1260M) package ONLY \$169* NEC $12^{\prime \prime}$ Amber screen (JB1205MA) package ONLY \$219* True lower-case and inverse video-just plug in the LCA-47. Special price with monitor purchase $\$ 66$. (not available for Color Computer 2)

## GET SMART!! GREAT DEAL ON HAYES SMARTMODEMS

Hayes 300 baud Smartmodem-the amazing programmable auto-dial, auto-answer modem, now in a special package deal for your Color Computer. Buy the Hayes for list price, and at NO EXTRA CHARGE receive the Colorcom/E smart terminal program (cartridge or disk), an RS232 cable, and setup instructions! Act nowl
Hayes 300 baud Smartmodem package ONLY \$289*
Hayes modem with CC cable only, \$249*

Signalman Mark I modem, 300 baud direct connect, list $\$ 98$, our price $\$ 86^{*}$

The revolutionary $3^{\prime \prime}$ disk system! Two compatible 156K drives in a compact enclosure. Uses the rigid, protected 2 -sided cartridge that ha made others obsolete. Our package includes the Amdisk III, cable, disk controller, Disk BASIC manual, 12 cartridges, setup instructions, and a ML tape to disk program to help transfer your software! Everything you need, plus you save $\$ 50$ !

Package price ONLY \$689* Amdisk III plus cable only \$479*
Order Now!!
(available for Color Computer 2, please specify)

SALE ON AMDISK III DISK SYSTEM!!

UPS C.O.D. orders giadly accepted, $\$ 2.00$ additional.

## SKYLINE 64K Memory Upgrade Kits

8 guaranteed 200 n.s. 64 K memory chips, solderless installation instructions, Skyline's 64 K BOOT and PAGER programs (a $\$ 19.95$ value). All for the super low price of $\$ 59.00$ ! Order yours today!
(soldering required on Color Computer 2)

## TUTORIAL

## Using Elite*Calc

The Color Computer has long been scorned by business users as just another home computer. Unfortunately, the first software developers for the CoCo fulfilled that expectation by producing lots of high quality game software. I have long been waiting for a decent database, a good quality word processor, and finally a reasonable spreadsheet.

Word processing was the first to hit the market, with a couple of reasonable database packages following right behind. Last April, at the first RAINBOWfest, I was surprised and pleased to find the first high quality spreadsheet program for the standard Color Computer. Elite* Calc $^{\text {™ }}$, written by Bruce Cook, was just being introduced at the show. John Waclo, Bruce Cook, and others from Elite Software were busy giving demonstrations for the program. I bought the package immediately, and was instantly impressed with its ease of use, versatility, and power. In many ways, it is more powerful than VisiCalc ${ }^{\mathrm{rm}}$, the granddaddy of all spreadsheet software.

The purpose of this article, however, is not to extoll the merits of various spreadsheets, but to demonstrate how a spreadsheet program can be used to do useful work for both the home and business user. People who use spreadsheets have found that manipulating numbers and formulas is much easier from within a spreadsheet program than from BASIC.

For those who are unfamiliar with a spreadsheet, a background explanation is in order. When Elite*Calc is first loaded into the computer, all that is visible is part of a large, empty ledger sheet. The sheet is divided into columns, identified with the letters A through IU, and rows numbered 1 to 255. At the intersection of each column and row is a cell, for example, Al refers to the cell that is in the first column and first row.

Each cell can contain either of three types of information. Text can be placed in a cell to title and label the information in the sheet. A formula may be placed in a cell that can be used to calculate numbers that are found within the sheet. Finally, numbers may be placed in individual cells. One of the most powerful features of formulas is their ability to reference to cells, rather than numbers. For example, the formula $(\mathrm{Al}+\mathrm{A} 2) / 3$ will add the two numbers that are located in Al and A 2 and divide the result by three. If this formula were in cell A3, everytime you would replace either number in A1 or A2, A3 would recalculate and display the new answer.

In addition to any formula you can create in BASIC, you are also allowed to use BASIC functions, such as $A B S, T A N$, etc. $=\operatorname{ABS}(\mathrm{Al})$ in a cell returns the absolute value of the number AI, and displays that number in the cell where the function is stored. In addition to all the BASIC functions, there are several specialized functions that operate on a range of numbers. For example, $=$ SUM(A1:A25) stored in A26 will cause Elite*Calc to total the numbers stored in the first 25 cells in column A. In the summing process, any cell containing text and blank cells are ignored. Other functions include COUNT, AVERAGE, and several others.

I have included two spreadsheets that can be entered into Elite*Calc and used by anyone who wishes to keep track of automotive expenses. The origination of these sheets is a story in itself. I was so impressed with the power and versatility of the program, I decided to start an Elite*Calc Users Group. The purpose of the group is to assist new users in providing a source

## To Track Automobile Expenses

By John Steiner

of sheets that can be easily modified and used for the individual user. In addition, a newsletter helps users keep track of changes, hints, modifications, etc. to Elite*Calc, itself. These two sheets, Trip Planner, which I wrote, and Car Cost, written and donated to the Users Group by Kenneth Christiansen of Fargo, N.D., are part of an introductory package of sheets available to Elite*Calc Users Group members. The users group is now over 110 members strong, and memberships are coming in from all over the world. (Our most distant member is located in Australia.)

Both sheets have practical value. Trip Planner is used when you desire to estimate the cost of a trip, either business or personal. Sheet 1 contains a sample printout of the sheet. Once the sheet has been entered, all you need to do to calculate your trip costs is to enter the dates and destinations of each day of travel. This sheet sample provided an estimated cost of my trip to the RAINBOWfest in Chicago. If I had realized how much it was going to cost me, I might not have gone. Notice I had budgeted a lot of money for buying software at the show.

Enter the distances traveled, estimated cost for lodging, food and miscellaneous expenses. Modify the sheet to add any categories you might need for any business recording purposes (supplies, seminar room rent, etc.).

Elite*Calc will calculate totals, as you are entering them. Enter your average gas mileage, and what you expect to pay for gas on the trip. The sheet will total all expenses, including estimated gasoline expenses, and print out the total. Obviously this estimate will only be as reliable as the data you have installed.

All Elite*Calc Users Group sheets have instructions included with each sheet, and cell A2 will always tell the user where the first cell containing instructions is located. In this case, a [J]ump to A28 will cause Calc to display the instruction page(s).

Car Cost can be used to determine driving and owning costs of that Detroit Guzzler (or Tokyo Tin Can). Sheet 2 is a sample printout of the work sheet. Start by entering depreciation information, insurance and licensing costs, service and parking fees. Then enter your tire and fuel costs, and the number of miles you drive in an average year. Calc will calculate your cost per year, and cost per mile of the old clunker (and any new clunker you might be thinking about purchasing).

To enter and use the sheets, start with a clean spreadsheet. I have followed a few conventions in listing these sheets so that it will be easy for you to type them in. Cell references are in the left-hand column, a center column beginning with an apostrophe (shades of BASIC) denote special remarks regarding the data or formatting commands in that cell. These remarks are obviously not entered into the sheet.

Formatting commands are surrounded by curly braces to distinguish them from text, formulas and data. For example, [T] represents that you are to use the " $T$ " command to enter TEXT mode. I will use cell A6 in the trip planner listing to demonstrate a more complex formatting command. After placing the cursor in cell A6, and leaving TEXT mode (press [BREAK]), type an F. You will be presented with the format menu. Enter a 6 to format row 6 . Press the ENTER key (the tilde, $\sim$, is used to represent a carriage return). Type"TR" to format the text as right justified. Press

the enter key again (second tilde) and enter the characters "date" and press [ENTER] (final tilde).

Notice that some entries are lowercase, while others are uppercase. Shift into lowercase as you would from BASIC ([SHIFT 0]) to enter this text. It will of course be displayed as reverse video on the CRT, but your printer will display them as true lowercase. The users group has set a convention that all cells requiring user entry (data input) have text prompts that are in lowercase/reverse video and all formulas and functions to be labeled with uppercase text. This prevents a new user from accidentally replacing a formula with a number, and easily identifies which cells require entry from the keyboard, and which cells will contain calculated information.

The listings will duplicate the sample sheets exactly. To make them for your own use, use the [B]lank command to erase data undesired in each cell. Alternatively, just substitute your own data for the data in the sheet, [B]lanking only that data for which you do not have corresponding data.

If you do not wish to type these sheets in, they are available from the Users Group. Members may purchase them for $\$ 3$ if you provide your own media. Non-members can purchase these sheets for $\$ 12$ including media (specify disk or tape). Add $\$ 3$ to cover the cost of duplication, postage and handling. Non-members who would like to join the club may do so. Annual membership is $\$ 10$, and includes a subscription to a quarterly newsletter, "The Worksheet." The group provides a place to exchange Elite* Calc information and spreadsheets. Any member who submits a sheet for inclusion in the Users Group catalog will receive his choice
of ten sheets from the current catalog.
If you have trouble entering or using these sheets, you may contact me at the Elite* Calc Users Group, Box 683, West Fargo, N.D., 58078 (non-members please enclose a stamped return envelope). I can also be reached by phone at 701-281-0549, evenings or leave a message to the sysop at the Dakota Database, a free BBS (701-281-0233).

These sheets are representative of the power of a high quality spreadsheet calculator, and only use a few of the highly sophisticated functions and capabilities of this type of software. Modify them and use them to their best advantage. Let us know if you have improvements and extensions to these basic sheets.

## YOUR COLOR COMPUTER JUST EARNED A MATH DEGREE!

## MATHMENU

Developed by an engineer, Mathmenu is a powerful menu-driven system to turn your Color Computer into an intelligent, flexible tool for mathematics and engineering. Mathmenu takes the tedium out of math, leaving your full brain power to attack the 'meat" of your problems. By rapidly manipulating matrices and vectors, performing integration and differentiation, solving quadratic equations, plotting user defined functions and much more, Mathmenu can help simplify the most complex problems. Whether you are a student or a professional, if you use math, you need Mathmenu.

## FEATURING:

- 3D SURFACE PLOTTING - Plots a user defined equation on an X, Y,Z coordinate system in the High-Res graphics mode. Planes, surfaces of revolution, statistical surfaces, etc. can be easily plotted. Surfaces may be saved to disk or tape. We believe this is the only program of its kind commercially available for the Color Computer.

## PLUS:

- Complete MATRIX Operations (up to $8 \times 8$ )
- Complete VECTOR Operations
- Numerical Differentiation
- Numerical Integration
- Least Squares Curve Fitting
- Binomial Expansion
- Prime Number Verification
- Main Menu with Single-key Selection and Return (Disk Only)

Complete documentation of all functions is included.

Or write for free brochure.

## The Facts

Learn how the hardware of the color computer works. The FACTS and Color Basic Unravelled comprise a complete machine language encyclopedia of the color computer.

The FACTS is a compendium of data to explain in detail the internal workings of the hardware of the Color Computer. It will explain how to use machine language to access the following:

## 1) Kevboard <br> 2) Joysticks

3) Sound Generator 4) RS232 port
included will be a complete schematicgnd block diagram of the computer and complete technical inficrmation on the kev integrated circuits in the computer-6809E microprocessor, 6847 Video display generator, 6821 peripheral interface adapter and the 74LS833 syectifonous address multiplexer (SAM).
The FACTS's specifically written to provide the information which is needed to write programs which fully utilize the capabilities of the computer. It is the most complete description of the Color Computer, providing more information than the Color ComputerService Manual.

## COLOR BASIC UNRAVELED

Have you ever wondered how Color Basic does all of those wonderful tricks it does?

* How does it multiply \& divide so fast?
* How can it paint the screen so fast?
* How does it know where to GOTO or GOSUB?
* How does it turn all of those graphic dots on and off?
* How does it get information on and off of that little diskette?
Now you can find out for yourself.
Color Basic is a set of three books that will provide you with a COMPLETE COMMENTED SOURCE LISTING OF TRS-80 COLOR, EXTENDED and DISK BASIC.

The listing will enable you to determine exactly how Basic works. An explanation of the Color Basic Interpreter is included.

We accept VISA and MASTERCARD.
All prices U.S. Funds. No C.O.D Orders.
Add 5\% for shipping. $\$ 2.00 \mathrm{~min}$. Washington residents add $7.8 \%$ sales tax.

# camulip consilinations 

By Michase Plon, Ph.D

Acurrent "buzzword" in computer education these days is "consortium." The term means a partnership or association, such as a temporary alliance of two or more business firms in a common venture. For computer education, the most commonly accepted use of the term indicates several school districts joining together to further computer education, hiring a director (and possibly staff) from pooled funds, and sharing software and ideas.

The concept is not new to education. Vocational education has long used the concept of a centrally located establishment to provide specialized training to students. The field of special education (for handicapped students) has also long relied on the concept of local districts sharing resources to deal with students requiring unusual services.

One of the first consortia for computer education was the Minnesota Educational Computer Consortium (MECC, pronounced "meck"). This consortium served (and still serves) the entire state of Minnesota. Other consortia quickly sprang up around the country, generally serving smaller geographic regions. In my home state (Illinois), every school district is now within the boundaries of a consortium. There is no requirement for the school district to join a consortium; association is voluntary.

[^21]Most school districts, however, are happy to join such a group, and are willing to pay dues. And with good reason -there are many benefits to joining a consortium.
One of the major "selling points" of a consortium is that school districts can obtain discounts on purchases of hardware and software. For a school district just beginning to purchase computers, the price savings on hardware alone will pay for the dues required to join. The discount on software is also attractive to school districts. Most school districts quickly purchase the "big three" in computer software - word processing, database management, and a "visiclone." Schools are also eager to purchase programs for interactive instruction. (The computer is there; something must be done with it.)

In addition to price discounts for software, a consortium provides a place where school people can review software before purchase. This is very important, especially when considering the limited financial resources of schools, and the competition for funds.

Another benefit of joining a consortium is the provision of repair service. Instead of buying a service contract, school districts find that the consortium dues will provide for a technician available to work on their hardware. One consortium I know started negotiating with Radio Shack to send a person to the Tandy repair course. I do not know the results of that negotiation.

Of course, pooled knowledge about computers is very important to a consortium. When computers first hit education, there was a great deal of shared ignorance around. School administrators were intelligent enough to realize their ignorance, and welcomed the concept of a consortium. Several districts will have more computer talent than a single district. Also, many districts had no person knowledgeable in computers. By joining with districts who hap-

STORY PROBLEMS is a program that is designed to give practice in solving STORY PROBLEMS (sometimes called STATEMENT, THOUGHT or WORD PROBLEMS) on the COLOR COMPUTER. It is suitable for use in either a home or school environment. It is also a tool that will allow you to create new story problems to suit your children's needs and ability levels. It has many features that make it particularly attractive: Story problems involving addition, subtraction, multiplication, division or a combination of the four are presented to the student by slowly scrolling each letter of each problem onto the screen. Up to 5 students may use the program at the same time. There are 4, user modifiabale, skill levels. 16K Ext. Basic

TAPE $\$ 18.95$
SPELLING TEST is designed to give a standard oral spelling test using the audio track of the computer's tape recorder to dictate test words and sample sentences. Student responses are typed on the keyboard and checked by the computer. Results are displayed on the screen and (if connected) on a printer.

REQUIRES 18K EXT. BASIC $\$ 19.85$

MATH DRILL is a program designed to help children to practice addi tion, subtraction, multiplication, and division skills on the COLOR COMPUTER. It has several features that make its use particularly attractive. - Up to 6 students may use the program at the same time.

- Answers for addition, subtraction and multiplication are entered from right to left, just as they are written on paper.
- Commas may be included in the answers.
- Partial products for the multiplication problems may be com puted on the screen.
- Division answers that have a remainder are entered as a whole
number followed by the letter " $R$ " and the remainder.
- There are ten, user modifiable, skill levels.
- A "SMILEY FACE" is used for motivation and reward. Its size increases relative to the skill level.
-Skill levels automatically adjust to the student's ability.
- A timer measures the time used to answer each problem and the total time used for a series of problems.
- After a problem has been answered incorrectly the correct answer appears under (above in division) the incorrect answer REQUIRES 16K EXT BASIC $\$ 19.85$

WORD DRILL is designed to give a multiple choice vocabulary quiz Words and definitions are entered into the program from the keyboard or from a tape file. The computer displays a randomly chosen definition and eight word choices. The student must enter his response before a built in timer reaches zero.

## EDUCATIONAL PACKAGE - SPELLING TEST WORD DAILL - MATH DRILL - ESTIMATE ALL FOR - $\$ 69.95$

ESTIMATE is a program designed to help children to practice estimating the answers to addition, subtraction, multiplication and division problems on the COLOR COMPUTER. It has many features that make its use particularly attractive:
-Up to 5 students may use the program at the same time.

- There are 5, user modifiable, skill levels.

The acceptable percent error may be changed as a student's skill improves.

- A timer measures the number of seconds used to answer each problem and the total time used for a series of problems.
-If a problem has been answered incorrectly, the student is told the percent error and asked to try again.
- If a problem is answered incorrectly a second time, the student is told the correct answer and the range of acceptable answers is displayed.
- A report is given at the end of each set of problems that includes the number of problems done, the number of problems answered correctiy on the first try and the average percent error.
- The (BREAK) key has been disabled so that a child will not inadvertently stop the program from running.

18K EXT, BASIC \$18.95
TEACHERS' DATABASE is a program designed to aliow a teacher to keep a computerized file of information about his/her students. There are many features that make this program particularly attractive.

- Information on as many as 100 students (or more) may be in the computer at one time.
- Each student may have as many as 20 (or more) individual items of data in his/her record.
- The program will run from cassette or dlisk.
- Cassette and disk files are completely compatable.
- The program is menu driven.
- Records may be easily changed, deleted, combined or added.
- Information about students may be numerical or text.
- Records may be quickly alphabetized.
- Records may be sorted by various criteria.
- Records may be reordered (ranked) based on test scores or other data.
- Data displayed during a sort may be printed on a printer or saved on disk or cassette as a new flle.
- A full statistical analysis of data may be done and sent to the printer.
- Student test scores may be weighted. 32K EXT BASIC TAPE 839.95
pened to have more intormed statt, they gained a level of sophistication rather quickly.

A consortium can provide better direction for computer use in education, more consistent and worthwhile decisions. One great fear of school administrators is to implement a project, such as computers in the classroom, and have it go nowhere. In order for a project to be successful, there needs to be a clear, accepted direction.

Another benefit of consortia that is very appealing for school administrators is a built-in, established users group. Teachers (and students) can have a source of assistance on any problem about their computers. This is also a professional growth experience for teachers and administrators, which helps generate vigor in the schools.

As with anything, disadvantages are also present in the consortium concept. First, the consortium is an ideal place for piracy. Now, I classify myself as an educator, and am generally very proud of the profession and the people in it. I do not teach at present, but have a high regard and respect for teachers. To be honest, however, teachers have never really cared much for copyright laws. They are committed to the concept of sharing knowledge - indeed, that is their job and reason for working. Most teachers will think nothing of using a copy machine to prepare materials for classes. While this does not violate the new copyright laws, it is an easy transition to copying software for use in class. Teachers will make unauthorized copies for their classes with a clear conscience. Unfortunately, that is still piracy. Added to this situation are the bright students who learn how to break locked programs. In essence, they are only applying their knowledge recently learned in a computer course. Anyone selling educational software knows the problems of piracy; there are no easy answers.

Another disadvantage of consortia is that schools are locked into decisions made by others. This disadvantage is easy to live with when a school district is just starting on its path into the mysterious silicon world. In essence, they have no decisions to suggest, so those from other sources are welcome. After people in a school district have gained some degree of knowledge, however, this idea of joint decisions can be bothersome. Reading teachers, for example, may want to use computers with a particular text from publisher A. The consortium, on the other hand, has purchased software for a different curriculum, from publisher B. The reading teachers will have a difficult time getting what they want.

This is similar to another disadvantage - reduced diversity in the schools. One of the major strengths of American education is that schools are different; indeed, each school has a "climate" that is different from other schools. A computer consortium can reduce these differences in schools, and have all districts dealing with computers in the same way. Diversity, which provides a richness and color to our schools, can be reduced.

A final disadvantage of consortia is that communication at the classroom level can be reduced. Once institutionalized, a consortium will often have a small selection of teachers from all districts on some type of steering committee. Decisions may not filter to classrooms quickly, and input from teachers throughout the districts may be slow in getting to the steering committee.

The disadvantages of a consortium can be reduced, and possibly even eliminated. The key point for a strong consortium is the leadership. Most consortia hire a director, who is responsible to the superintendents of the several member districts. That director will be the focal point for the direction of the consortium, the materials selected, the uses of computers in the schools. The local superintendents will have to delegate a large responsibility to the director. An ill prepared director can generate negative attitudes toward the consortium, and actually destroy the valuable components of the concept. A strong director can create commitment to computer education and generate a learning environment that prepares the students for coping with the world of the 21 st century.

Just as computers are here to stay, so are consortia. Many school districts around the country are forming consortia on their own and providing leadership for others. In some places, schools are being helped, even encouraged, to join a consortium. One private firm, Bertamax, is even using the consortia concept to sell software for the Color Computer. As far as I know, Bertamax is the only for-profit software house using the consortium concept to sell their products. I feel certain others will follow.

If you are involved in a decision about joining a consortium, examine it carefully. Realize that the reasons important to join will not be the reasons you will want to remain a member in the future. Consider the consortium director: Does that person listen to you, and seem to want to meet your needs, or try to sell you on particular ideas not shared by people in your district? Also consider potential disadvantages of joining, and try to reduce or eliminate them.

Most of all, realize that your local district needs the input and shared experiences of other people. There is no better place to advance computer education than a consortium -if it is structured according to your needs.

Thanks to you who have written me and read these articles. Remember, you are the motivating force in your own education. May you always be a student.

# A Dungeon Master's Character Sheet 

By John J. Jaworski

No dragons, rings, or monsters in this program, sorry. This program is a Dungeon Master's or player's utility program. It produces a sheet which the DM puts the character on. (Note: 1 his program doesn't generate the character.)

Even if you aren't a DM but know someone who is, print up a sheet and show it to him. If he likes it, say you'll print them up for two to five cents apiece for him.

I'll go through the listing first:

$$
\begin{array}{cl}
10-960 & \text { Main Program } \\
965-1005 & \text { Ending } \\
1010-1180 & \text { Subroutines }
\end{array}
$$

The sound statement in the program tells you the printing is done for that side. If you want more or less lines for weapons, magical items, or spells, lines 660,750 , and 890 control the lines in that order. Don't add too many lines or it may go off the sheet.

This program was written for a Line Printer VII and takes about 2.5 K .

Most of the abbreviations you should know, but in case you don't, look in the DM book.

If you don't want to type the program in, send $\$ 5$ to me and I'll send you the program on cassette.

My address is 122 Johnson St., Pulaski, WI 54162.
(John Jaworski, currently a junior at Pulaski High, WI, has surpassed all computer courses available at his school and is presently starting a new software company known as Epix Software.)

## FOR THE INDIVIDUAL, IT ELIMINATES ANXIETY

File your taxes in confidence. The CoCo Professional Tax Preparer is accurate, thorough, and easy to use. Just answer the questions.
The CoCo Tax Preparer interviews you the way professionals in the large walk-in tax firms do. It takes you through each tax form in an organized manner. It knows which forms you need based on how you answer the questions it asks. And you can change data and make corrections - no hassle.
When you're done, the program prints your completed tax return on government-approved forms.

## FOR THE PROFESSIONAL TAX PREPARER, IT SAVES TIME

Spend your time doing what you're supposed to do. You make the important business decisions, the CoCo Tax Preparer will do the rest. And you can simplify your filing - one diskette per client.
Interview your clients in a time-saving manner and get rid of your check-off sheets.
Produce complete tax returns on government-approved forms. The CoCo Tax Preparer lets you run continuous multicopy forms in the order you need, when you need them.

## PROGRAM FEATURES

Designed by a 15 -year tax consultant, the program has built-in tax tables and tax rate schedules and supports the following forms:

1040
Schedules A, B, C, D, E, G, SE, W
Forms 2106, 2119, 3903, 4797
Office-at-Home
Installment Gain

For a limited time only. A $\$ 400$ value
Dependency Support

Credits and Other Taxes

## MORE FEATURES

- Over 170 full-screen menus displayed on command. Fully menu-driven screens - each appears only when required.
- Full reverse-screen scrolling and forward-screen block scroll.
- Calculator mode supports $+,-{ }^{*}, I,=$ on numeric data.
- Edit capability: any line at any time. Supports change, delete, hack, search, and insert commands. Eliminates the need for check-off sheets
- Runs on 32 K extended Basic (one disk drive with change of diskette during program execution) or two disk drives. (A special-order version runs on 64 K RAM units with one or two disk drives.) Comes with diskettes and operating manual that describes each screen presentation. Additional forms are available by special order,
- Full disk drive storage for all data and computations.
- Printed output on pin-fed or tractor-fed printers, for gov-ernment-approved forms.
- Its combination of machine language and Basic is fast and it minimizes memory use.

The KEX—ZEGK is here！！
DO YOU HAE A 32K SYSTEM HITH 64K MEYORY CHIPS ？？ARE YOU STILL BEING TOLD YOU CAN ONLY USE 32K FROM BASIC ？？
DON＇T BELIEVE IT ！！－KEY COLOR SOFTHARE brings you the KEY－264K．An exciting NEX SOFTHARE utility that allows any STANOARD 32K COLOR COMPUTER TO ACCESS 64K RAM FRCH EASIC，and with NO HAROHARE MDOIFICATIONS REQUIRED！！！

> tkt Horks with CASSETTE based systems! tkk
＊＊＊Horks with DISK based systems！＊＊k
The KEY－264K divides the 64K ran memory into two 32K banks or sides，each of which can be utilized independently by the BASIC interpreter，with the ability to switch instantly from one side to the other．IT＇S LIKE HNING TWW COMPUTERS IN ONE！！Have your BASIC program on one side and keep your variables on the other side，or have your main progran on one side and your subroutines on the other side，or have your progran on one side and use the other side for 4 additional HI－RES pages，or any combination you like．The possibilities are endless because the KEY－264K allows full communication between sides plus the ability to switch back and forth at will，all from within EASIC．You could also have different programs in each side and switch back and forth between them using simple keystrokes，even while the programs are running！or run them both at the same time in the FOREGROLND／EACKGROCND MLTI－TASKING mode．Don＇t buy that printer buffer yet！With the KEY－264K you can be printing in the background side while utilizing your computer normally in the for eground side AT TRE SAME TIME！！！ bebugging a program？Ose either a BASIC command or simple keystrokes to instantly duplicate your program，in it＇s present status；on the opposite side．Switch to the opposite side later and pick up exactly where you were before！
For DISK users，the KEY－264K allows you to alternate between DISK and EXTENDED BASIC on the same side with simple keystrokes．No need to pull your controller or power down．You can be in EXTENDED BASIC on one side and in DISK BASIC on the other side and still switch back and for th and have full communications between the two sides，

The KEY－264K does this and MORE thry extensions to BASIC．No need to learn a new lanquage！The KEY－264K adds 15 NEA CLITANOS and 1 function to BASIC，including powerful new BLOCK MEMORY MONE and GRAPHICS VIENING cominands．

The KEY－264K works on 32 K systems with＂E＂＂$F$＂，or even modified＂$D$＂boards and requires EXTENDED or DISK BASIC with 6000 64K MEMORY CHIPS！Systems with piggy－back 32 K or half－good 64 K memory chips WILL NOT HORK！！

ORDER YOUR KEY－264K CASSETTE TODAY by sending check or money order for $\$ 39.95$ plus $\$ 2.00$ postage U．5．A． （ $\$ 5.00$ outside U．S．A．）Mass．residents add $5 \%$ sales tax．

In an effort to conserve space with machine language listings，the design staff at the Rainbow frequently trim the FCC lines．This time，we also inadvertently cut two needed lines in Richard Smrcina＇s＂Spell Out Your Error Messages＂ （January 1984）．

In listing 1 （Page 170），line 01010 should read：

| $7 F 22$ | 00 | 01010 | $F C B$ | $\$ 00$ |
| :--- | :--- | :--- | :--- | :--- |

In listing 2 （Page 172），line 00750 should be：
$7 F 6 B \quad 00 \quad 00750 \quad$ FCB $\$ 00$

Since trimming the FCC lines by hand has become a tedious chore，we asked Roger Schrag to write a program to have the computer do the work for us．As always，he had the answer and shares his newest patch to EDTASM + in a short article elsewhere in this issue．

Dr．Lane P．Lester，author of＂Supreme SYSOP and Magnificent Modem Master＂（November 1983），writes that several users of his Rain Board BBS program，＂have report－ ed a problem to me，and even better，Ken Carpenter pro－ vided a solution．＂In order for the RainBoard to download text files and programs that have less than eight characters in their filenames，the following statement should be added to both lines 1030 and 1160 of RAINBOARD／BAS：

## FILES＋LEFT\＄（FILES＋STRING\＄（7，32），8）

＂Although there are a number of ways to solve the prob－ lem，I am indebted to Mel Hefter of Custom Software Engineering for providing the elegant approach above．＂

# Track Down Errors With This Disk Fixer 

By Mark Charney

Have you ever been annoyed by the occurrence of an 1/O Error when formatting a new disk? I have, and l decided to do something about it!
The disk is broken down into 35 circular rings. The rings are called tracks. They are numbered 0 to 34 . Within each track there are 18 sections, called sectors. Lines 49-150 test each track and each sector on the disk. When you run the program you will get an 1/O Error just before the computer gets to the damaged portion of the disk. For example, if sector 9 of track 14 is damaged, the screen will display all tracks and sectors up to track 14 , sector 8 (the last piece of data will be track 14 sector 8 ).

It is important that you mark down the error's location.
To continue checking the rest of the disk (for more errors) you must change line 100 and 120 . If we use our last example of a damaged track 14 , sector 9 , you would change line 100 to read:

FOR T=15 TO 34
And if other errors occur, repeat the process changing line 100 each time. Also, we didn't check the rest of track 14. So we make some more changes:

100 FOR T=14 TO 14
120 FOR $\mathrm{S}=10$ TO 18
And again, repeat the process.
Once you have located all the error spots, proceed as follows.

Let us assume that the only error found was track 14 , sector 9. RUN 159 to figure out that the error on track 14 , sector 9 is located in granule 28.

Now we must fix the disk. You are going to make the computer work around that granule so it will never be used.

In this case, we assign the granule number to the variable Q in line 305.

From here on the computer does the work. Now you can RUN 500. This will save 67 copies of this program (not 68

[^22]because we have killed one piece).

# The OS-9 experts have developed something new. 

## C Compiler Version 2 for color computer OS-9 DOS for color computer

 Relocatable Assembler for Flex and CoCo DOS
## C Compiler

Dugger's Growing Systems C is the original C Compiler for the 6809 and is the proven leader in the field. It is a growing subset of the C programming language. It runs in 20 K , has assembly language output, position independent code, an extensive library in assembly language source, and code optimizer.

The Color Computer and Flex (which will run on the Color Computer) are now both available with full floating point package (float, long, for, goto, etc.) in addition to the basic C commands. CoCo Dos also contains features which use the BASIC ROM functions (cls, polcat, partial floating point, etc.).

Dugger's Growing Systems has the cost effective C for OS-9. It contains all the necessary C commands (while, if, if else, int., char, etc.) which may be linked, loaded, and used in a multi-user, multi-tasking environment.

## Relocatable Assembler

The relocatable assembler package includes assembler, linker, and manager. May be used with the Color Computer or Flex.
Symbols up to 32 characters $\square$ Many special characters allowed in symbols (\$, \%, etc.) $\square$ Multiple files assembled without exiting the assembler $\square$ Direct output to printer at any time $\square$ Generates either absolute or relocatable modules which are linked together with RLINK to generate executables $\square$ Supports two types of global variables (VAR and COMN) Fortran type common $\square$ Compatible with source for most assemblers $\square$ Macros with parameters $\square$ Conditional assembly.

Linker
Use text-like files which are generated by RASMB or any other source $\square$ Allows inclusion of multiple source files, each of which can have any number of program modules $\square$ Provide for library files, whose modules are included only as required $\square$ Specify at link-time execution address and global storage area for easy generation of ROM-able code $\square$ Will link together both absolute and relocatable modules $\square$ Extensive linkage information output on request.

## Manager

Provide a tool to build a "library" of relocatables $\square$ Edit feature to list, insert, and delete modules.

# Dividing The Pie <br> - Colorfully 

By Don Inman Rainbow Contributing Editor

Last month's article demonstrated the use of menus to select appropriate subroutines for drawing, displaying and printing the results of a pie chart or circle graph. As with most programmers, I am seldom satisfied to think of a program as finished. There is always one more modification to be made. This process seems never-ending, at least until an unsolvable problem is encountered or I finally discover my modifications somehow resemble the original program.

I started this article with several modifications in mind but ran into several problems that should be discussed more completely than I have room for here. I'll hold some of them for future issues and cover just one addition this month -color.

When creating pie graphs, the use of color is questionable. The size of the sections completely define the relationships that you are trying to show. Color may actually detract from the graph, but the temptation to color sections is often irresistable.

Figure 1 - Tri-colored Pie Graph

Some subjects saved for future discussions are the desirability of labels and titles, and the use of emphasizing a section by "backing it off" from the center of the circle.

Figure 2 - Pie Graph with Off-center Section

Some of the future problems to be discussed are not easily solved due to the nature of the Color Computer. This does not mean that they have to be avoided, however. I'll get back to them in the future. The purpose of this month's article is to show how you can color pieces of the pie.

I'll use the program of my February 1984 Rainbow article "Pie on the Menu" as the basis for the changes that are necessary to color the pie. One slight change should be made to the subroutine in that program that begins at line 1000 .

[^23]Line 1100 should be changed to:

$$
1100 \mathrm{~A}(\mathrm{Z})=\mathrm{P}(\mathrm{Z}-1)^{*} 3.1416 / 50
$$

This line will put the first point on the graph at the extreme right ( 90 degrees) of the circle.

## DSKMON!

Examine and fix sector data also includes disk read write, file information display and selective disk backup.

Figure 3 - Point 1 of Graph

The first problem to be faced is coloring the pieces of the pie. PMODE 3 should be used to achieve high resolution with a four-color display. It is desirable to avoid identical colors for adjacent pieces. One color is used to draw the graph, and a second color is used for the background. The simplest solution would be to use the other two colors alternatively to paint consecutive sections of the graph. However, if there are an odd number of sections (3, 5, 7, etc.), you will find that the first and last sections will have the same color.

Figure 4 - End Pieces of Same Color

\(\mathrm{Y}=\) yellow
\(B=\) blue

This can be avoided by painting, using the background color for the first section (green in color set 0 ).

Figure 5-Background Color for First Piece

\(\mathbf{G}=\) green
\(Y=\) yellow
\(B=\) blue

The color used to draw the circle and section dividers should be avoided if the paint is applied as it is in this demonstration. However, it could be used to color the last section.

The PRELIMINARY DRAWING subroutine of last month's program has been changed. Some lines have been deleted and some renumbered. New statements have been added to provide the color. All other parts of last month's program can remain the same. Here is the revised PREL1MINARY DRAWING subroutine.
```

2000 REM ** PRELIMINARY DRAWING
**
2010 CLS
2020 INPUT "PMODE":M
2 0 3 0 ~ P M O D E ~ M ~
2040 PCLS
2050 SCREEN 1,0
2060 C=1
2070 CIRCLE(X(O),Y(O)),R
2080 FOR Z=1 TO N
2090 IF Z<N THEN XC={X(Z+1)+X(Z)
-2*X(0))/4 ELSE XC=(X(Z)+X(1)-2*

```
```

X(0))/4
2100 IF Z<N THEN YC={Y(Z+1)+Y(Z)
-2*Y(0))/4 ELSE YC={Y(Z)+Y(1)-2*
Y(0))/4-2
2110 LINE (X (0),Y(0))-{X(Z),Y(Z))
PSET
2120 PAINT (X (0) +XC,Y(O)+YC), C,4
2130 C=C+1: IF C=4 THEN C=2
2140 NEXT Z
2150 A$=INKEY$
2160 IF A卉="" THEN 2150
2170 RETURN
2180 =

```

The color (C) to be used in the first section of the graph is set to 1 in line 2060. The variable C is used in the PAINT statement in line 2120 . After the PAINT statement is executed, line 2130 increases the color value by 1 . If the new value is 4 , it is immediately changed to 2 in the same line. Thus after coloring the first section green ( \(\mathrm{C}=1\) ), the values 2 (yellow) and 3 (blue) will be alternated for the remaining sections. Color value 1 is skipped from this point on because of line 2130 .

The next problem then arises. At what points should the PAINT action for each section originate? These points will change depending on the number and size of the sections for each unique graph. If you examine a typical section, you may get some clues as to where the PAINT points might be placed.

Figure 6 - Halfway Line Divides A Section

A safe place to put the point would be somewhere on the dotted line in Figure 6. The simplest point to calculate is the average of the points \(\mathrm{X}(\mathrm{Z}+1), \mathrm{Y}(\mathrm{Z}+1)\) and \(\mathrm{X}(\mathrm{Z}), \mathrm{Y}(\mathrm{Z})\). This would be:
\[
\begin{gathered}
X A=(X(Z+1)+X(Z)) / 2 \text { and } \\
Y A=(Y(Z+1)+Y(Z)) / 2
\end{gathered}
\]

However, this would put the point dangerously close to the edge of the circle if a given section is very small. It would seem logical to move it along the dotted line closer to the center of the circle. You could choose a point halfway between the point \(\mathrm{XA}, \mathrm{YA}\) and \(\mathrm{X}(0), \mathrm{Y}(0)\). This distance could be separated into \(X\) and \(Y\) components.

Figure \(7-\mathrm{X}, \mathrm{Y}\) Components of Halfway Point

You can see from Figure 7 that the \(X\) component is:
\[
\begin{gathered}
\mathrm{XC}=(\mathrm{XA}-\mathrm{X}(0)) / 2 \text { and the } \mathrm{Y} \text { component is: } \\
\mathrm{YC}=(\mathrm{YA}-\mathrm{X}(0)) / 2 .
\end{gathered}
\]

Through miracles of algebra, you can substitute the previous expressions for XA and YA and combine the results as follows.
\[
\begin{gathered}
X C=\left(\frac{X(Z+1)+X(Z)}{2}-X(0)\right) / 2 \\
X C=(X(Z+1)+X(Z)-2 * X(0)) / 4
\end{gathered}
\]
and by similar manipulation:
\[
Y C=(Y(Z+1)+Y(Z)-2 * Y(0)) / 4
\]

Remember, the values XC and YC are the distance components that must be added to the values for the center of the circle. The PAINT statement now becomes:
\[
\text { PAINT }(\mathrm{X}(0)+\mathrm{XC}, \mathrm{Y}(0)+\mathrm{YC}), \mathrm{C}, 4 .
\]

This all sounds very logical until you try to put it into a neat \(F O R-N E X T\) loop. In the previous sections of our original program (from the February article), we calculated a specific number of points on the circle. Thus we can define all the \(P A I N T\) points up until the last one. Suppose we have a five-section graph.

Figure 8 - Five Section Graph

P5, as determined by the expressions used for other points, would be obtained from \(X(5), Y(5)\) and \(X(6), Y(6)\). But, there is no point \(\mathrm{X}(6), \mathrm{Y}(6)\). P 5 should be obtained from the points \(\mathrm{X}(5), Y(5)\) and \(\mathrm{X}(1), Y(1)\). This is accomplished by line 2090 and 2100 in the subroutine. As you can see, \(X C\) is determined by \(X(Z+1)\) and \(X(Z)\) if \(Z\) is less than \(N\) (the last value for our points), but \(X C\) is determined by \(X(Z)\) and \(X(1)\) when \(Z\) equals \(N\). The same method is used for \(Y C\) in line 2100 .

One last thing should be mentioned about the way the painting is implemented. Notice that only one line is drawn before the PAINT statement is executed. Therefore the first color will fill the graph. As each new line is added, a new section is created. A new color then re-colors the balance of the graph. This can best be seen by following the display of a typical graph as it is drawn. Suppose we want a four-section pie.
1) A circle is drawn by line 2070 .
4) Next line is drawn by line 2110 .

5) Balance of circle painted by line 2120 .
\[
(C=2, \text { yellow })
\]

6) Third line is drawn by line 2110 .
7) Balance of circle painted by line 2120 .
\[
(C=3, \text { blue })
\]

9) Balance of circle painted by line 2120 .
\[
(C=2, \text { yellow })
\]

The complete program with revisions follows.

\title{
The Programmer's Guild Means Adventure! Deadly Duology Death Dreadnaught
}

From the eerie interior of a wrecked starship comes an Adventure unlike any you have ever played. This program is so violent in its descriptions and so deadly in its playfield that caution is advised in allowing small children to play it unsupervised.
You are exploring the wrecked interior of an alien vessel that has been utterly devastated from within. Its crew has been murdered, its engines fused and destroyed. Your job is to escape. Because whatever did all this knows you are here.

Get food. Get air. Get batteries. Get what you need and get it quickly before whatever it is that lurks in the shadows gets you.

Death Dreadnaught is traumatic, dramatic, ecstatic and dynamic in a way only Text Adventures can be. Every word oozes of the danger that awaits you if you tarry too long.

Rated \(\mathbf{R}\) due to extreme descriptions of violence (may be too intense for children under 10).

Death Dreadnaught, \(\$ 19.95\), shipped postpaid to your galaxy today.

\section*{The Domes Of Kilgari}

The spine tingling sequel to Death Dreadnaught is now a reality.
You've escaped from the Death Ship only to crash land on Kilgari, the most desolate chunk of rock and sand in the universe. Your only hope for continued survival penetrate the Ion station and get enough fuel rods for liftoff.

But there's a presence here that somehow brings back memories of that nightmare aboard the Dreadnaught. Could it be that the hellspawn creature you left behind has somehow caught up with you?

Interspacial Digitron has trapped and wired the domes so that intruders are destroyed. If you can get the rods, decode the alarms and return to your ship, you just may be able to go on breathing.

Domes Of Kilgari, the ultimate space Adventure, is uncluttered by pictures or graphics of any kind. It is pure descriptive english that gives you the clues. Your wits against that of Digitron and the nameless fury that dogs your trail.

Domes of Kilgari, the ultimate escape, \(\$ 19.95\), shipped postpaid to your galaxy today.
Dreadnaught Chronicles - Both Adventures on two tapes in a handsome double package. Only \(\$ 29.95\) postpaid.

> MAIL ORDER ONLY! GET YOURS TODAY! MASTERCHARGE AND VISA ACCEPTED.

\section*{Greetings!}

I recently witnessed a certain person (who shall remain unnamed and ipsofacto incognito) eat a gallon of spaghetti. Few people have witnessed such an event. I myself have only partaken of the privilege once or twice in the last several years. I remain convinced that watching with eyes and ears fully attuned while certain rare individuals eat spaghettican be a real growth experience. I found myself profoundly moved - moved right out of the kitchen and down to my den, where I tried out the following with my Color Computer.

\author{
TO CURVERIGHT \\ MAKE :TIMES RANDOM 12 \\ REPEAT :TIMES \\ (FD 10 RT 15) \\ END
}

TO CURVELEFT
MAKE :TIMES RANDOM 12
REPEAT :TIMES
(FD 10 LT 15)
END
TO SPAGHETTI
BG O PC 3
REPEAT 90 (CURVERIGHT CURVELEFT) END
TO MEATBALL
MAKE : X RANDOM 256
MAKE:Y RANDOM 192
PC 2 SX:X SY:Y

\footnotetext{
\(\overline{\text { (W. Bert Woofensburger ["Uncle Bert"] manages a }}\) hog and corn farm near Ypsilanti, Mich. He has recently acquired a Color Computer and is learning LOGO. Woofensburger's editor and assistant, Dale Peterson, writes for a living. His recent books include "Genesis II: Creation and Recreation With Computers" and "Intelligent Schoolhouse: Readings On Computers and Learning." He is currently working on a book about Color logo with Don Inman and Ramon Zamora, to be published in 1984.)
}
```

REPEAT 24 (FD 2 RT 15) END

```

\author{
TO FULLPLATE SPAGHETTI \\ REPEAT 10 (MEATBALL) END
}

Yes indeed, you're right! I have recently discovered a new toy: RANDOM. Apparently, this little Color Computer can generate random numbers whenever it wants to. Typing in the work RANDOM makes it apply that ability. Here's a good way to begin playing with RANDOM. In the RUN room, type in FD RANDOM 80; then RT RANDOM 360; then BK RANDOM 80; LT RANDOM 300; PC RANDOM 4; and so forth. That's a good way to begin testing the computer's random number function. More specifically, what am I telling the turtle to do when I type in FD RANDOM 80? I am telling it to move forward any distance, chosen at random, from 0 to 79 (a total of 80 possible values). What am I telling the turtle to do when I type in PC RANDOM 4? I am telling it to choose randomly any of the four pencolors ( 0 to 3 ). RANDOM is beautiful; and with the MAKE statement much can be done. For example:
```

TO SPINDLE
BGO
REPEAT }8
(MAKE :COLOR RANDOM4
MAKE: LENGTH RANDOM }9
MAKE:ANGLE RANDOM }36
PC :COLOR FD:LENGTH RT :ANGLE
HOME)
END

```

For a more orderly spin around the old axis, I can combine a REPEAT 90, with a MAKE :ANGLE :ANGLE+4 command that increases the turning angle by 4 degrees for every cycle of the subroutine. Like so:
```

TO SPINDLE
MAKE:ANGLE 0
MAKE:GROUND RANDOM4
BG:GROUND
REPEAT 90
(MAKE :COLOR RANDOM4
MAKE:LENGTH RANDOM }8
MAKE :ANGLE :ANGLE+4
PC :COLOR FD:LENGTH RT :ANGLE
HOME)
SPINDLE2
END

```

Notice that this goes on forever. The second SPINDLE2 at the bottom of this procedure locks it into an impossible loop, a vicious cycle, from which there is no escape (until you press the BREAK button or turn off the computer). Notice also that this procedure clears the screen after every full cycle . the result of the BG command. (Changing background also happens to erase foreground).

I began cogitatingabout the MAKE :ANGLE:ANGLE+4 statement, which (as you must know by now) I think is very clever. The HOME command not only brings the wandering
turtle back to the center of the screen every time, but it also reorients it every time to the straight upright position - in other words, HOME always wipes out previous angles. Thus, adding a value of 4 to :ANGLE each cycle produces a very orderly sequence. Without the HOME command, what would happen? First of all, the lines would keep going outwąrd. Second, the turning angles would be increasing (relative to the home position) much more rapidly. Considering that a random cycling of colors will produce some "missing" lines (when the pencolor is the same as the background), it seemed to me that eliminating the HOME command from SPINDLE2 would produce some masterpieces of modern art. I tried it, and here is what I got:

TO KLEE
```

HT MAKE :ANGLE 0
MAKE:GROUND RANDOM4
BG:GROUND
REPEAT 70
(MAKE :COLOR RANDOM }
MAKE:LENGTH RANDOM }8
MAKE:ANGLE:ANGLE+4
PC :COLOR FD ;LENGTH RT:ANGLE)
KLEE
END

```

That was neat, and I found myself tingling with excitement about this RANDOM function. What couldn't be done with it? I tried randomizing my old star that I told you about in my last letter). Here's the star (in case you forgot):

TO STAR2 : \(\mathrm{N}: \mathrm{X}: Y\)
PC 1
SETX:X SETY:Y
REPEAT 5
(FD :N RT 120 FD :N LT 48)
END
Randomizing it wasn't so hard.
TO RANDOMSTAR
MAKE:COLOR RANDOM 4
MAKE:N RANDOM 25
MAKE:X RANDOM 240
MAKE:Y RANDOM 180
PC:COLOR
SETX :X SETY:Y
REPEAT 5
(FD :N RT 120 FD : N LT 48)
END
TO STARRYSKY
REPEAT 30 (RANDOMSTAR) END

I liked that well enough, but wanted to get rid of the form of the turtle. Also, I realized that there was a lot of wasted RANDOMSTARing every time the pencolor was the same as the background color; so I decided to reduce the numbers of choices for pencolor. Finally, I thought it would be nice to randomize the tilt of the star. Thus I did this:

\section*{TO RANDOMSTAR2}

MAKE:ANGLE RANDOM 180
MAKE:X RANDOM 256
MAKE:Y RANDOM 192
PC:COLOR
SX:X SY:Y
RT:ANGLE
REPEAT 5
(FD :N RT 120 FD :N LT 48)
END
TO STARRYSKY2

\section*{REPEAT 25 (RANDOMSTAR2) END}

By that time 1 was all starred out. I decided I would try the same principles on my circle. As you will remember (are you out there - Mare, K ris, and Deborah?), my circles have always been fake: manysideagons that I hope will look like a circle. For example:

\section*{TO CIRCLE}

\section*{REPEAT 24 (FD 10 RT 15) END}

Or, with variables:

\section*{TO CIRCLE1 :SIDE :ANGLE \\ REPEAT 360/:ANGLE (FD :SIDE RT :ANGLE) END}

Well, given those clever circles, I thought I would introduce the RANDOM function by tucking variables inside the procedure (with the help of the MAKE command), much as I had done with the stars.

TO RANDOMCIRCLE
MAKE:SIDE RANDOM 15
MAKE :ANGLE RANDOM 60
MAKE:COLOR RANDOM 3
MAKE:XRANDOM 256
MAKE:Y RANDOM 192
HT PC: COLOR
SX :X SY:Y
REPEAT 360/:ANGLE
(FD:SIDE RT:ANGLE)
END
TO BUBBLEBLOW

\section*{REPEAT 20 (RANDOMCIRCLE) END}

TO STOPTHEBUBBLEMACHINE
```

BUBBLEBLOW
STOPTHEBUBBLEMACHINE
END

```

That was stimulating. Next, l tried STOPTHEBUBBLEMACHINE in only one color and found it to be a very slow but enjoyable way to change background color. Still and all, that durn circle still bothered me. I hate to cheat, and every time I saw a "circle" ring its way around into a grinning manysideagon on the screen, I cringed with chagrin. Thus, I tried to find an entirely new and revolutionary way of drawing a circle, and finally came up with the following:

\section*{GRAPHIC MATH ADVENTURE \$21.95 FASTER \& BETTER}

Challenging Adventure! Fully player selectable up to 300 "room." Search for treasure on land, on river, and in the labyrinth of caves. Your search is blocked by many obstacles which can be overcome by correctly answering math problems. Any one or all four functions i \(t, x\) - \#) can be selected to add variety. 24 skill levels make the game challenging for all ages 32K EXT BASIC Required Version 1.2 NOW AVAILABLE

\section*{BACKUP MASTER/ GRAPHIC MONITOR}

SUPER powerful UTILITY allows backups to be made of most programs cassette, disk, even ROM based!!
- Over rides all software autostart mechanisms
- Fully relccatable - will not interfere with any program
- Capable of reading many tapes which BASIC can't

64K USERS have extra power
- Modify BASIC 10 suit your needs
- Save coples of BASIC, Ext BASIC. Disk BASIC, etc.
- Run address dependent ROMS from RAM

\section*{Also:}

Conquer spelling. Learn the words you have trouble with. User input unlimited number of words. Good for weekly spelling lists. SAMPLE list provided. 16K EXT BASIC cassette

\section*{SPELLING MASTER \$14.95 MATH MASTER \$14.95}
earn Basic Math Facts ( \(, x,-,:)\) and counting routines Math drill for speed Math tutor teaches with graphics. MATH DRILL NON-EXT BASIC \(\$ 8.95\) MATH TUTOR \(16 K\) EXT BASIC SB. 95

\section*{CONCENTRATION \(\$ 6.95\)}

40 blocks hide 20 patterns. Pit your memory skills against your frends. Two players. Non-EXT BASIC cassette.

MAKE:X 256
MAKE:Y 192
PC:COLOR SX:X SY:Y
NEWCIRCLE:RADIUS
END
TO NEWBUBBLE

\section*{REPEAT 25 (RANDOMNEWCIRCLE) END}

I enjoyed that one. Did you know that any single procedure can have a maximum of five variables in Color Logo? Well, it's true. My NEWBU BBLE only had four, and I felt I was wasting an opportunity. Meanwhile, I had gotten an ardent letter from Mr. Stephen M. of New York City telling me about the SLOW command. Apparently, if you feel the turtle is going too quickly, you can slow it down with the SLOW command, followed by any number from 0 to 127 ( 0 is normal speed, 127 is the slowest possible speed). So I decided to add a randomized SLOW to my NEWBUBBLE.

TO SLOWBUBBLE
REPEAT 25
(MAKE:S RANDOM 128
SLOW:S
RANDOMNEWCIRCLE)
END
Time passed. I had dinner and came back to my Color Computer. Five hours later, I decided not to try SLOWBUBBLE anymore. I'll write again next month. I remain,

\section*{COLOR KEY COMMAND}

COLOR KEY COMMAND is a BASIC programming aid that will speed the entry of your programs. You can increase your programming speed by as much as \(50 \%\). Instead of having to type in all of the BASIC commands, you can simply press a control key, and then press one other key - the BASIC word is entered for you automatically! You can also activate the automatic line numbering mode, then every time you press enter a new line number is entered for you. You can select the start line and the increment. Ever wanted to copy lines you have already entered? Now you can. Simply type in the line number you want to copy, then type in the new line number. The new line is immediately displayed and you are put in Extended Basic's EDIT Mode. Either edit the line, or press ENTER. (This command is not available to those with non-extended Basic users.) How about merging programs together from tape? Those with Extended Basic do not even have to worry about proper line numbering, COLOR KEY COMMAND will RENUMBER each program as it is loaded into memory! COLOR KEY COMMAND also has four custom programmable keys! Each key is capable of holding 64 characters each! How would you like one button entry of 64 characters?
16 K or 32 K Required PRICE: \(\$ 18.95\) (Tape)

\section*{DOUBLE SWITCH}

Now you can switch between two different devices AND you get an on/off indicator at the same time. Switch your Modem \& Printer or two printers, etc
PRICE: \(\$ 29.95\)

\section*{FREE PROGRAMS!!}

Get a FREE utility program when you buy a copy of COLOR KEY COMMAND! Your choice of COLOR DISK SAVER, DD CLOCK, SUPER PEEKER, TAPE NAME, AUTOLOAD, or CURSOR II. Save up to \(\$ 12.95\) ! COLOR KEY COMMAND is only \(\$ 18.95\) (Tape) - D.

\section*{DOUBLE DOS BASIC \\  364,000 BYTES!}

That's right! Using your 64 K Color Computer, and an 80 track drive, you too can have more than TWICE as much storage on your disk drive system. DOUBLE DOS BASIC allows you to use 35,40 or 80 track (double or single sided) drives all on one system, all at the same time! Your system could consist of a 35 track drive, a two drive AMDEK system, and an 80 track drive, all working, and hooked up to your system! (The AMDEK drives are 40 track drives.) ALL commands are supported in DOUBLE DOS BASIC. The DOS is totally transparent to your BASIC programs! If your system selection is 80 tracks, a PRINT FREE command will return 158 granules! Compare this to the 68 granules your system now returns! The 40 track drives would return 78 granules, 10 more than the 35 track system. EVERY command in BASIC is supported by DOUBLE DOS BASIC. If you haven't already upgraded to 64 K , now is the time! Use your system to its FULLEST! DOUBLE DOS BASIC also gives you RESET PROTECTION, unlike most of the other 64 K programs. AND, used with our ROM MOVE program, you can also get another 8000 bytes of BASIC addressable memory! DOUBLE DOS BASIC - \(\$ 24.95\) DOUBLE DOS \& ROM MOVE - \(\$ 24.95\)

\section*{Double Densiituy Sofituvore}

\section*{DOUBLE MAILER \({ }^{\text {Sen }}\)}

At last a powerful, easy to use, mailing list program for a reasonable price. Up to 200 names can be held in memory for you to change or print as you like. Plus, you can print out up to 1800 names without touching the keyboard. The machine language sort routine will sort 200 names in as little as 6 seconds! Supports single or double labels. Three and four line labels can be intermixed at will, the print out will adjust accordingly. All this and much more!
32 K Required
PRICE: Tape \(\$ 19.95\) Disk \(\$ 21.95\)

\section*{ROM MOVE}

Are you tired of having only 32 K of memory when you have a 64 K computer? ROM MOVE is just what you need! With ROM MOVE, you are given another 8000 bytes of room for your BASIC or Machine Language programs! You can switch from BASIC to EXTENDED BASIC to DISK BASIC easily.
Ask about our 48 K version; 64 K Required
PRICE: \(\$ 12.95\) (Tape)

\section*{ROM SWITCH}

Change from BASIC to EXTENDED BASIC, to DISK BASIC and back again with ROM SWITCH! You can even press the RESET button, and with one POKE, restore the system!
64 K Required (Tape)
PRICE: \(\$ 9.95\)

\section*{COLOR BIORHYTHM}

Are you up or down today, yesterday, tomorrow or years from now? Find out with COLOR BIORHYTHM! Plot your biorhythm to the screen with high res color graphics, and use the printer to make a chart. 29 days can be displayed each time.
16 K or 32 K Extended Basic Required
PRICE: \(\$ 14.95\) (Tape)

\section*{UNDERGROUND}

Tired of adventure games with limited descriptions of your surroundings? UNDERGROUND describes your surroundings in great detail just like a main frame computer adventure! How do you tame the guardian of Hell's gate? What does the mysterious machine do? Where is the famous golden apple? Find out in UNDERGROUND.
32K Extended Basic Required
PRICE: \(\$ 26.95\) (Disk Only)

\section*{GALACTIC MATH}

GALACTIC MATH is not like any other math tutor program on the market for the Color Computer! This program has been written as an arcade game! The player becomes involved in playing the game and forgets that he/she is supposed to be learning! The student must enter the answer to a math question that is shown in the body of a flying saucer moving down from the top of the screen. There are four saucers moving down from the top toward the player. The player must maneuver his base under the saucer, enter the answer to the problem, press the spacebar to fire the laser. A new saucer with a new problem replaces the one just blasted. The score, time in play, number of hits, number of misses, and number of bases left to the player are displayed at the top of the screen. All of this is in high resolution graphics using the new 4 color mode on a black screen! There are four levels of difficulty, and you may select either addition or multiplication. Don't bore your kids with smiling clowns or happy faces! They want to play arcade games - let them play GALACTIC MATH and learn at the same time!
16 K or 32 K Extended Basic Required
PRICE: \(\$ 15.95\) (Tape)

\section*{DOUBLE SPOOLER}

Tired of waiting for your listings? printouts? etc.? This is THE Spooling Program!! No need to save your programs in ASCII. You can also spool your files and you can spool ANYTHING you print on the screen while a program is running! Requires a minimum of 32 K AND the 64 K computer can spool really LARGE files!! Plus more!!
PRICE: \(\$ 19.95\) (Tape) \(\$ 21.95\) (Disk)
DD CLOCK . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 12.95
COLOR DISK SAVER . . . . . . .\$12.95

GOT A MODEM AND ALL THAT IT SEEMS TO DO IS GATHER DUST? FIND A FRIEND AND PLAY SOME GAMES OVER THE PHONE! EACH ORDER HAS TWO SETS OF INSTRUCTIONS, AND TWO TAPES. SHARE THE COST WITH A FRIEND! THREE GAMES TO CHOOSE FROM AND MORE ON THE WAY SOON.

\section*{MODEM CHECKERS}

Same fine features as the chess game. You can make multiple jumps! Crown pieces. Send messages. Everything is automatic! 16 K or 32 K Extended Basic Required PRICE: \(\$ 19.95\) (Tape)

\section*{MODEM CHESS}

You and a friend can play chess over the phone. The pieces are displayed on a high res graphics board. Move the pieces either with the joystick, or the keyboard. All moves are supported. Anything you can do on a regular chess board, you can do on this one. There is a message indicator which allows you to send messages each time you send a move. Make a move, select a message to send, press a button, and seconds later your opponent's board is updated. Has audio alerts; lets you know when a move is being made.
16 K or 32 K Extended Basic Required
PRICE: \(\$ 19.95\) (Tape)

\section*{MODEM IAGO}

We put our popular IAGO game (similar to Othello) in MODEM form. Now you can play it over the phone! Make your move, the pieces are flipped for you, select a message, press a button, and seconds later your opponents board is updated with your move. If you decide not to send the move you made, press a key and take it back. Super game!
16 K or 32 K Extended Basic Required
PRICE: \(\$ 19.95\) (Tape)
AUTOLOAD
AUTOLOAD will load any tape program or file and put it on disk for you automatically! Autoload will skip programs with errors and go on to the next program, either automatically or it will stop and wait for you to tell it to go on. Autoload will also fix all of those machine language programs that load either down in the disk system area or lower. You will no longer have to remove the disk countroller before playing a game. Autoload will do all of the hard work for you, while you watch! All machine code program. Will not load copy protected programs.
16 K or 32 K Extended Basic required.
PRICE: \(\$ 12.95\) (Tape)

\section*{DOUBLE MEM-DISK 鲜}

Use that 32 K of unused memory in your \(\mathbf{6 4 K}\) computer for something useful! Store programs in memory and recall them anytime you need them!! Here is a list of the new commands you can enter right from the keyboard:
MSAVE - Save the program in memory.
MLOAD - Load a named program.
MKILL - Kill a program stored in memory.
MDIR - List all programs stored in memory.
MFILE - Merge a program in high mem with current program in low memory.
Those of you with tape systems will have several programs in memory at once so you don't have to wait on that SLOW tape system AND those of you with disk systems will be able to use that extra space that is going to waste!!
PRICE: \(\$ 24.95\) (Tape) \(\$ 26.95\) (Disk)
DOUBLE CABLE
Tired of switching cables everytime you use your modem and printer? This is the fix!! Hook your modem and printer up at the same time! No more switching.
PRICE: \(\$ 14.95\)
\(\$ 2.00\) shipping and handling on all orders. \(\$ 3.00\) charge on C.O.D. orders, Mastercard and V'SA accepted. Texas residents add \(5 \%\) sales tax. Allow two weeks for personal checks.
Send 20 cent stamp for free catalog.

\title{
Starting Your Own Computer Business
}

\author{
By Tom Nelson \\ Rainbow Contributing Editor
}

After months, even years, of tinkering with eomputers, many of you have developed quite an expertise in several areas relating to the CoCo and probably other computers. Some of you are crack programmers; some of you are experts in the area of the qualities of various computers; still others of you are quite knowledgeable about varieties, uses and qualities of the many software packages available for different computers.

There are a lot of people who desperately need your knowledge. There are outstanding programs just waiting to be written; there are people starving for the right software and peripherals to do the job for them. So, why not just quit the old nine to five and start your own business?
Starting your own business can be very exciting. In many of us, it opens up enthusiasm, talents and abilities which have not seen the light of day for years. There's nothing like being your own person, not punching someone else's time clock.

If done right, you might even succeed! The computer area is wide open. It is a market still in its infancy. Experts predict geometrie growth with virtually no end in sight. A computer in every

\footnotetext{
(Tom Nelson was formerly a special assistant attorney general for the State of Minnesota. He currently is general counsel for Sof tlaw Corporation, makers of the VIP Library \({ }^{\text {TM }}\), and of ColorQuesT" games.)
}
home, and every computer needs peripherals, software and support. Computers will take over as the national pastime.

Do these platitudes sound familiar? Well, they're true! But, before I get into the more nitty-gritty aspects of starting your own business, let's look at some of these platitudes from a business standpoint.

Let's start by looking at a mature industry: stereo music. The stereo music industry has two elements, the artists and companies who make the music on the one hand, and the companies which make the equipment to play the music on the other. This is much like the computer industry with hardware and software folks.
Stereos are now pretty sophisticated and are, by and large, at their technological peak. There are very few significant breakthroughs now which affect how records are played. Every stereo system offers virtually the same features as every other one. The breakdown is thus in price. The cheaper the model, the fewer features. Still, there is little to differentiate stereos in the same price range.

The manufacture of stereos is also now in the hands of a few big companies, mostly Japanese. Start up stereo companies are virtually unheard of. It wasn't always so, but this was the inevitable result. In the infancy of the stereo industry, many companies produced stereos. Breakthroughs were being made to allow new companies to introduce
new and better products. As the competition increased, the established companies began to pour more money into research to develop features to improve the stereo and distinguish them from the others. The breakthroughs became harder to find and make, with immense amounts of capital required for research and development. Of course, the successful companies also had immense marketing clout, with advertising and distribution channels. When the technology had nearly reached its peak, the Japanese came in, offered all the features, and offered a low price. And the prices for the machines kept coming down as the volume of sales went up. With no chance of technological superiority, such huge expenses and marketing needs and the low sales prices, newcomers now find it impossible to enter this market.

And so goes the rest of the music industry. Music is marketed, not just sold. The tastes of the public are measured, sifted and analyzed, and artists are found to meet those tastes. Artists must think in terms of the current tastes to survive, let alone make it big. And no person can do it alone. There are other musicians, sound studios, even video production studios in the pot. Artists are facing increasingly huge costs just to stay even with the big boys.

The record business is the same. Large chains have taken over the record market. Prices are reduced to the bare minimum with volume alone producing

\section*{A Dictionary Program is Useless Unless It's Perfect. That's Why We Are Introducing \\ SPELL 'N FIX II}

A Spelling Dictionary Program is supposed to help you catch and fix mistakes in word processing text. It should be simple and convenient to use. It should be fast. And above all, it must be accurate.

SPELL 'N FIX is all of these. But now SPELL 'N FIX II is even better! Look at the comparison chart to see why.

SPELL 'N FIX II finds and fixes spelling and typing errors in a single pass. As SPELL ' N FIX II proofreads your text, you see it all (in full upper and lower case) right on the screen. When a suspect word is found, you see it in context as part of the text. You can immediately search the SPELL ' N FIX Il dictionary for the correct spelling, and put the right word into your text in a flash.

Most important of all, we take great pains to make sure that SPELL ' N FIX is accurate and complete. SPELL 'N FIX II comes with a \(20,000+\) word standard dictionary which contains many more words than the average person uses, By allowing you to add your own words, SPELL 'N FIX Il gives you the advantage of a short, fast dictionary that can contain all the words you use (including your name and address, special words from your business, and even foreign or coined words.) We don't stuff our dictionary with useless words (some with foreign spellings or downright wrong like absorbancy, accidently, accts, agcy, aix, or analyse as you find in other programs' 60,000 word dictionaries.)

\section*{COMPARISON CHART}
\begin{tabular}{|c|c|c|c|}

Saturn Electronics Inc. 62 Commerce Dr. Farmingdale, NY 11735 (516) 249-3388
profits. The small-time record shops are growing fewer all the time.

The microcomputer industry is very similar to the music industry. It is now in its infancy, but it is clear that eventually, and probably sooner rather than later, it, too will be dominated by a few large companies, This is inevitable.

Of course, microcomputers are far from their technological peak. New chips, new and better peripherals, better monitors, etc., are being developed all the time. However, these developments are beginning more and more to emanate from the really big companies, with others following along. Moreover, the cost of the micros is coming way down, with companies making very little profit per unit in the hopes of making it big with volume. And down go Texas Instruments and Mattel - and the list will grow longer. This is unavoidable, since it takes immense sums of money to research, develop and, especially, market a new microcomputer or peripheral. And the balance has to be just right or the losses can be immense, as Atari and Texas Instruments have learned. It is now just a question of time before there are only a half dozen or so microcomputer manufacturers: IBM, Apple, and you can pick the rest.

When the technology had nearly reached its peak, the Japanese came in, offered all the features, and offered a low price.

What of software? The same and then some. As software has improved, so have tastes and desires - and the size and capabilities of computers. The early programs were written by hackers for hackers. "User friendly" had absolutely no meaning. Things have changed. Less and less of the consuming public is, or ever wants to be, a hacker. The general computer public has sophisticated requirements for software. It has to be fast, feature-laden, versatile, powerful, flexible, attractive and easy to use. It may not sound like it, but these are often almost contradictory needs.

The more powerful and feature-laden
a product, the more difficult it is to use. Versatility and power require complexity. Complexity is difficult to make either attractive or easy to use. The programmer somehow has to make the complexity transparent to the casual user while giving total flexibility to the experienced, expert user. Of course, the casual user very soon develops the tastes and needs of the expert, so the software can't very well be made too simple.

User friendly has come to mean more as time goes on. In software for larger

The general computer public has sophisticated requirements for software. It has to be fast, featureladen, versatile, powerful, flexible, attractive and easy to use.
micros, those with a minimum of 64 K of memory, software developers are making more use of graphics and on-line help. More of computer memory is being used to make the program attractive, to give icons, and to explain how to use the program. As programs become more and more memory intensive, the development time in man years increases. It will soon be to the point, if it isn't already, where no one person can hope to make and market a piece of soft ware. The software just will not have the features, power, etc., to compete at all, not to mention the marketing costs.

This is even more true with games. Almost gone are the days of the lone programmer slugging out a best-seller. The prices of chips are coming down. 256 K RAM is in our near future. Video technology is also improving, allowing better, more realistic video displays. The memory requirements to service such screens begin to make the job of producing just one quality game in a reasonable period of time almost impossible for the solo programmer. In the arcades, laser disk games have started. Laser disk games require a giant production team and mucho bucks. It won't be long before all these hit the home market, and the prices come down. Soon, regular computer games will be considered primitive and undesirable. Everyone will demand the quality of the

*COCO WRITER II - an excellent word processor at an affordable price. characters per line: 32, 51, 64, 85, justify right, left, center, insert, delete, move blocks, MENU driven printing, tabs, etc. \(\$ 34.95\) Tape 16K EXB
Disk Version - menu driven, tape and diskfile management system included *\$44.95 32K EXB
*With either program you get a FREE copy of SPOOL 64 which allows you to use the upper 32K of a 64 K machine.

\section*{GRAPHICOM}

The Ultimate Graphic Utility
You must see this program to believe it! Create pictures and text on the same screen. Now you can create pictures as good as any graphic you have seen on the color computer. Write graphic adventures or educational programs. Requires 64K EXB, Disk Drive and Joy Sticks \$29.95

\section*{Ordering Information}

Add \(\$ 2.00\) shipping and handling per order. We ship within 24 hours on receipt of order. Blue Label Service available. California residents add \(6 \%\) sales tax.
laser disk games. The capital and people needed to produce just one of these laser disk games pushes the lone programmer into oblivion. Only the likes of Atari, Midway and the other big boys will ever be able to afford this.

What of selling computers and software? Large chains and distributors are growing up by the day. They will have the same effect on independent stores that B. Dalton Booksellers has had on independent book stores. I have seen a dozen local software stores come and go in just the last year. Remember that your customer can look at the computer, peripheral or software in your store, take your time to demonstrate the product, and then run out and buy the same product for considerably less at a discount store. It happens all the time.

All that fantastic growth, the promises of markets blown wide open, seem to be more for the big boys like IBM. It is inevitable because this is a high-tech market, and high-tech is not cheap or easy to develop. Is the picture bleak enough yet?

It is important to have some knowledge about the market you will be entering. You must not enter the market on dreams and promises meant for someone else. But this does not mean that you have to throw in the towel, or quit before you start. There is room out there for you, a lot of it. There is just a lot less luck and leeway. You have to be shrewd and always planning.

One element which has been left out in the comparison of the stereo industry and the computer industry is the essen-

tial element of support. A stereo manufacturer does not have to support its stereo with records and the record shop owner does not have to help the buyer understand how to use the record. Not so with the computer manufacturer, software developer and retailer. Software needs both presale and postsale support. Presale support consists in finding the right software package for the user; postsale support consists in helping the user use the package and find other compatible products.

This is important because there is a

\section*{Of course, microcompu-} ters are far from their technological peak. New chips, new and better peripherals, better monitors, etc., are being developed all the time.
growing, large support industry for computers which does not require a lot of capital, but expertise. It is unlikely that it will be controlled by large chains since the profits are too unpredictable, and depend too much on personality and experience. Just what you've always wanted to be: a computer consultant!

Just a word on consulting. There is very little money to be made in consulting for low-end computers, that is computers costing under \(\$ 1000\). The products made for these machines are generally too inexpensive to merit the time necessary to sell and service them. It is much more profitable and secure to be selling and supporting \(d\) Base II for the IBM costing \(\$ 800\) than VIP Database for the Color Computer costing \(\$ 60\). Also, there are far fewer people with such inexpensive machines who actually want the help.

With this introduction into the computer marketplace, you will be ready for next month's installment in which I will discuss the opening moves for starting a business.

The following products recently have been received by the Rainbow, examined by our magazine staff and approved for the Rainbow Seal of Certification, your assurance that we have seen the product and have ascertained that it is what it purports to be. This month the Seal of Certification has been issued to:
}

AUTOTERM, a program that makes your computer a smart terminal. Features include: on-screen editing via cursor; full prompting and crror checking; key beep and error beebop: scrolls backwards and forwards while on line, and automatic graphics. No split words on screen/printer. PXE Computing. 11 Vicksburg Lane, Richardson, TX 75080. tape \(\$ 39.95\), disk \(\$ 49.95\)

BASIC09, an interactive compiler that produces compact programs which can be executed at high speed. Includes command, edit, execution and debug modes. Requires OS-9 operating system. Cat. no. 26-3036. Radio Shack stores nationwide, \(\$ 99.95\)

Beam Rider, a 16 K non-ECB game. Clear as many boards as possible by running over blocks with your beamer before being hit three times. Dodge menaces like the Chaser and Spinner who attempt to destroy your energy. Spectral Associates, 3416 South 90 th St., Tacoma, WA \(98406, \$ 19.95\) cassette, \(\$ 23.95\) disk

Before, Between, After, a 16 K ECB number recognition drill for preschoolers through the third grade, and is best used with one or two students at a time. It loads automatically, is menu-driven and has been designed to be both student and teacher friendly. After the student makes a selection from the menu, a problem is displayed on the screen and according to the student's selection. The student must complete the correct answer before advancing to the next problem. HiRes graphics rewards are provided for each problem. A tutorial mode is also provided. The main objectives of the program are recognizing numbers and using numbers in sequence. CY-BURNET-ICS, 5705 Chesswood Dr., Knoxville, TN 37912 , tape \(\$ 24.95\)

Big Bird's Special Delivery, a "Basic Skills" game which focuses on basic pre-school skills. This program provides a playful setting in which children can practice an important skill - classification. In order to help Big Bird deliver packages to the right stores, a child must consider and compare objects according to the attributes of form, class, and on the highest level, function. Cat. no. 26-2525. Radio Shack stores nationwide, \(\$ 19.95\)

BLACKJACKPRO, a computer-aided tutorial designed to turn you into a lifelong
blackjack winner who will enjoy regular reasonable winnings as long as you play the game. BLACKJACKPRO is a tutorial which simulates actual game situations to condition you to make the right play effortlessly. By correcting your mistakes, BLACKJACKPRO teaches you the multi-level decisionmaking process that will make you a lifelong winner. Includes a slick carrying case; a guidebook to the complete winning strategy; and a guidebook to the computer-aided tutorials. Skillware Corp., 314 West 53rd St., New York, NY 10019, a disk or two cassettes \(\$ 75\)
Business Manager, a 32 K ECB, small business accounting system. Up to 28 user definable income and expense accounts, and up to 300 entries stored in memory at one time. Records printed to the screen or optional printer include account totals, income and expense totals, individual entries and a simple balance sheet. Individual entries can be listed by selected account or numerically in order of entry. 80 Custom Software, 5720 Brooke Lane. Sylvania, OH 43560, tape \$24.95, disk \(\$ 29.95\)

CCP-1 Parallel Printer Interface, connects the CoCo or MC-10 to any parallel (Cen-tronics-type) printer. Baud rate is selectable between 300 and 9600 . Includes cables and AC adapter. Botek Instruments, 4949 Hampshire, Utica. MI 48087, \(\$ 69+\$ 3\) S/H

Clone Master, a disk backup utility that checks the computer memory size, and if you have a 64 K machine, it will do a backup on a full disk in about seven minutes - including formatting the destination disk - with only three swaps. not the usual seven. It also will handle up to four double-sided drives. This program is not intended for use in the illegal copying of copyrighted software for distribution to those other than the original purchaser. Clone Master will adjust to any memory size and works with any version of the ROMs - including the JVC controller. Prickly-Pear Soltware. 9234 E. 30th St., Tucson, AZ 85710, tape \(\$ 39.95\)
Color Computer Audio/Video Interface, a device that, when used with a color composite monitor, will completely eliminate the hash and moire patterns that so commonly plague the TV screens of Color Computer owners, particularly those with disk systems. When used with a monochrome composite video monitor, it will produce razor sharp. crisp characters on the screen. Chesire Cat

Computer Creations, P.O. Box IIS, Lafayette, CA 94549, \$35

Cubix, a 32 K non-ECB game. This 3-D pyramid cube maze has 28 cubes that make up each round and Cubix must change all of them to the same color before proceeding to the next round. The color of the cube is changed by jumping on it. The game is controlled by the joystick and there are 16 skill levels. Spectral Associates, 3416 South 90th, Tacoma, W A 98406 , tape \(\$ 24.95\), disk \(\$ 28.95\)
Decision Maker, a 32 K ECB program that helps you decide the course of action to take in a problem, It utilizes standard analytical procedures in getting the user to state the problem, list and weigh the options, and presents the optimum solution based on your input. The program helps with all types of problems, whether you're a housewife or president of a corporation, and is a unique way to organize your thought. Includes a 16-page manual. Armadillo International Software, P.O. Box 7661. Austin, TX \(\$ 24.95\)
Disktype, a disk directory program which gives the user much more information tban the DIR command in Disk BASIC. The information can be directed either to the screen or to a printer so that a copy of a directory can be stored with its disk. Sunshine Software, P.O. Box 15686, Panama City, FL. 32406, \$12.95
Dungeons of Daggorath, a 16 K ECB animated color graphics Adventure game. You must explore the Dungeon, a complex, multi-level maze deep within the mountains of Daggorath and kill the evil Wizard. Fight fearsome creatures that can snuff out your fragile existence. Cat. No. 26-3093, Radio Shack nationwide, \(\$ 29.95\)
Espionage Island, a 32 K ECB Adventure. You have been dropped off on a deserted island by a submarine. You must recover a top secret microfilm and signal the sub to pick you up as you encounter many dangers. Owl's Nest Software, P.O. Box 579, Ooltewah, TN 37363, tape \$17.95
EXECCART, a 64 K ML ECB utility program which allows you to copy ROM cartridge programs to tape. Once the program is on tape, it can be loaded back into a 64 K CoCo, examined and modified. This makes it possible for you to do such things as change the Baud rate in Color Scripsit, print out VIDEOTEX displays, or simply learn

more about machine language by dissassembling the code for learning purposes. The Dataman, 420 Ferguson Ave. North, Hamilton, Ontario, L8L4Y9, in U.S., \$14.95, Canada \$17.95

Flight From Grimdar, a space Adventure. You are the only human survivor of a war against the cannibalistic Grimdarians. Make your escape in a Grimdarian spacecraft as you dodge danger. CoCo Freeware Clearinghouse, P.O. Box 1084, Morgantown, WV 26507, a freeware product - send acknowledgements and contributions

Flip Side, a "Creative Exploration" game allowing players to control and explore computer environments. The goal is to change as much of the board to your color as you can. But, the computer changes the board in response to each player's moves. The players must think ahead, plan and explore while they play. Recommended for ages 10 and older. Cat. no. 26-2529. Radio Shack stores nationwide, \(\$ 19.95\)

FUNDFILE ( 32 K ECB), a stock portfolio and account management program for investors. This enhanced version of FUNDFILE keeps track of security records (purchases, sales, dividends, interest and capital gains), allows calculations of a balance sheet with the net change calculated between two specified dates. Tax liabilities are categorized and summarized as it reports income (interest, dividends, or capital gains) between any two dates that the operator selects. It also includes a 40 -page manual. Parsons Software, Dept. F, 118 Woodshire Drive, Parkersburg, WV 26101 , disk \(\$ 37,95\) plus \(\$ 2\) S/H
Galagon, a 32 K non-ECB game. Control your horizontally moving ship while dodging and shooting diving aliens. Spectral Associates, 3416 South 90th St., Tacoma, WA \(\$ 24.95\) cassette, \(\$ 28.95\) disk

GRAFPLOT, a general graphing program that turns your CoCo into a sophisticated graphic maker, producing Hi-Res graphs of any type data. Features include: full function data editing (add, delete, change, sort); two fully labeled Y -axes with 200 data points per axis; automatically scales and draws graphs, etc. Hawkes Research Services, 1442 Sixth St., Berkeley, CA \(94710,16 \mathrm{~K}\) ECB tape \(\$ 35,32 \mathrm{~K}\) ECB tape \(\$ 40,32 \mathrm{~K}\) disk \(\$ 45\)

Grobot, a creative exploration game (for ages 10 and older) which allows players to control and explore exciting computer environments. Each new game requires the player to combine quick reflexes and fast thinking with thoughtful planning and the use of strategies. The challenge is to plant, protect and harvest an astrogarden. By choosing their own plants, players create dynamic environments in which they must act fast to pick blooms and fend off space pests. Radio

Shack stores nationwide, cat. number 26 2527, \$19.95

Grover's Number Rover, a "Basic Skills" game focusing on four important pre-school areas: working with numbers and letters, matcbing shapes and colors, and classifying objects. This game lets your child play with numbers. Each of the six activities is designed to provide increasing levels of challenge while allowing the child to explore number operations and number facts. In Grover's Number Rover, three- to six-year-olds can play with the basic operations that form the foundation of later mathematic skills. Cat. no. 26-2522, Radio Shack stores nationwide, \(\$ 19.95\)

Hands On, a two computer literacy learning modules package which is part of The Children's Computer Workshop, emphasizing in its creative process cooperation among TV specialists, educators, and psychologists who combine their skills to produce Sesame Street, Electric Companty, etc. Each learning module contains a diskette, reproducible worksheets, activity cards, a gameboard and a poster describing how to play the activity. Blackboard is a computer literacy activity which allows students to use a word processor to write and edit their work. It also enables students to set up a personal file system which can be modified as desired. This activity provides the beginning of an electric mail system in which students share their writing with others. Color It is a computer literacy activity which allows students to use an artist's tool to draw and design images and pictures. Students also use computer functions which demonstrate the unique graphic capabilities of the computer. Radio Shack stores nationwide, cat. number 26-2539, \$99

High Resolution Graphics Pad, a graphics sheet pad which is four times larger than the conventional graphics sheet and shows a grid of \(1 / 4\) of the screen at a time. It will allow for the user to draw high resolution graphics in each quadrant more easily since the overall readability is much higher. It will make the production of high resolution graphies easier overall. The pad contains 50 sheets. Tampa Instructional Center, Inc., 201 E. Linebaugh Ave., Tampa, FL 33612, \$4.95

Hi-Res Screen Print Utilities, a package containing two programs which let you print high resolution graphic displays (PMODE3 and 4) from a TRS-80 CoCo in four colors or in black and white (monochrome). CODUMP (Color Dump Program) and BWDUMP (Black and White Dump Program) require 16 K ECB. Cat. no. 26-3121, Radio Shack stores nationwide, \(\$ 9.95\)

Kingshield, a 32 K ECB fantasy/Adventure game. You are the intrepid explorer. The game is set in a labyrinth of rooms and passages which you must explore. In order to do so, you must move about, encountering and overcoming certain obstacles and beasts. On your exploration, you must find and collect all the tools and treasures and carry them back to the pump room (where your exploration began). Jade Products, 519 N. Scott, Wheaton, IL 60187, \$18.95

Lunar Rover Patrol, a 32 K ML program. You are a Moon Patrol Explorer. You feel like you're actually in a Lunar Rover as you ride along the moon's surface, following every crack and crevice in this program. Spectral Associates, 3416 South 90th St., Tacoma, WA 98409, tape \(\$ 24.95\), diskette \(\$ 28.95\)

Micro Games includes five games for the Micro Color Computer: Pong, a two-player ping pong game; Breakout, a game that pits you against the computer in which you earn points by knocking bricks out of the walls until there are none left or you run out of balls; Eggs, a one-player game in which you must catch eggs that are dropping from a crazy flying bird; Lander, a game in which you must safely maneuver and land your lunar lander under difficult circumstances; and Horse - You and your friends pick any of the five horses as they line up at the gate for a horse race. You never know who is going to win. Radio Shack stores nationwide, cat. number 26-3361, tape \(\$ 9.95\)

Mission: DESTROY, a 32 K ECB Adventure. You are a government agent and your mission is to destroy the Soviets' 18 warhead missiles being engineered by Soviet scientists. You must discover the way to enter the missile control base, decipher the self-destruct code, and, if possible, escape with your life. Creations Unlimited, 20 Tilton Lane, Andover, MA 01810, tape \(\$ 17.95\)
Play With Language, an "Early Reading Experience" package containing three language arts learning modules. Each contains a diskette, 10 reproducible worksheets, five activity cards, one gameboard and one poster describing how to play the activity. Also, an extensive teaching guide is included. Roll-A-World reinforces the educational objectives of the software. Students are provided with the opportunity to practice creating words within several different rhyme patterns. Students select pictures within a word family and spell the word for a chosen picture. In Picture Place students associate words with their picture referents. The game board is divided into four sections - each corresponding to such background scenes as stage, farm, city and water. In Bagasaurus, students practice reading comprehension

Keep in mind that this will alter the checksum if you are using the Rainbow Check typing aid．Chris adds that，for a 16 K machine．one should POKE 25，6：NEW before CLOADing．

\section*{MONEY MANAGER}

\section*{Editor:}

Thank you for your fair review of Money Manager, being offered by 80 Custom Software through Reitz Electronics [January 1984]. I understand that doing a review is not the same as using the program regularly, therefore I would like to clear up a small misunderstanding on the part of the reviewer, Mr، Napier.

Money Manager will handle irregular paychecks. The user inputs the amount of the paycheck and the program will automatically budget the pre-selected amounts to the various accounts, then allow the user to select to which account the excess (hopefully) will be credited.

The other problem was if you select to print out to a printer by mistake and don't have a printer connected, the computer will hang up. The documentation states that if you get out of the program, entering GOTO 20 will get you back into the program without loss of data (after pressing [RESET] or an error message).

The new version of Money Manager, which is current since the Rainbow received the program for review, adds a few enhancing changes. There are now 28 accounts available. When condensing transactions you can condense up to any number of transactions, leaving the remaining transactions in memory to be saved. When listing the transactions to screen or printer you can indicate how many transactions you want listed by entering the beginning and ending transaction numbers.

John Nyitray
80 Custom Sofiware

\section*{DRAGONFLY FAN}

\section*{Editor:}

What good is a review of a cooling fan if it doesn't say whether or not it cools the computer? The reviewer seemed to focus on why computers get hot, not how well the fan performed.

Granville Bonyata
Tallahassee, FL
is a bit unjust? There are many outstanding BASIC programs on the market; also just as many machine language programs that just don't quite win that cigar, either.

I am no "hacker," however I am cuirrently studying computer programming. The breakdown of lines that Pritty Printer accomplishes is much neater and easier to read than trying to study an LLIST printout. It also allows for notes, comments and corrections to be easily and prominently placed, speeding the proof reading and correcting of programs.

I have seen sample printings from machine code program and, for my money, Pritty Printer may be slower, but it's much neater on the printout.

By using the ASCII format to print the program(s) you have no problem with memory size. It also allows both the cassette and disk-based systems to be compatible with the program. Saving in ASCII may be an extra step to the finished printout, but I fail to see the clutter it causes. If your files are properly organized there should be no clutter (or perhaps I am just blind).

If you wish to look at a program in memory, \(L O A D\) it and use the monitor. Pritty Printer is for a neat, easily read hard copy look at a program.

As to the reservation on the price, that is your opinion on how to spend money, not. mine.

}

Editor's Note: While there are many sources from which to purchase the Gorilla Monitor, the Rainbow's review unit was furnished by Spectrum Projects.

\title{
Conquest Hard To See But Conquerable
}

Have you ever read the disclaimer on the software that you purchase? "No liability for any damage or alleged damage caused by customer's use of . . . program." Well, heed this warning - Planet Conquest should be handled with extreme care and used under ideal viewing conditions.

Planet Conquest is advertised as an arcade game and "uses highest resolution graphics" in Non-Extended Basic. This machine language program uses an "unlisted"semigraphic's high resolution mode (available in BASIC Color Computer), with four colors available. This game is a combination of Lunar Landing simulations and shoot-em-up/go after Space Monsters games. It is played with five spacecraft and game time is regulated by fuel load and type of game selected: continuous or kill 10 monsters. Other game features: [SHIFT] [@] keys to freeze action, [CLEAR] key to select alternate game colors, and a [BREAK] key to abort the game.

Having played this program many, many times, my reaction to it went from "this is the pits" to "this could be a successful program... if it was adjusted a little."

The program loaded without any difficulty, and is packaged with an instruction sheet. The packaging identifies the type of program and the required accessory equipment (a joystick) is required. The instruction sheet is easily read and tells you this game can be played with an Atari joystick if you have one rigged up.

Type in \(E X E C\) and you are presented immediately with a title screen that asks for prompts, and a well orchestrated melody (couldn't begin to identify the tune). The screen prompts you for game level (there are three practice levels and six game levels, 1 to 9 ), type of joystick you are using and the type of game: (C) continuous (high score is displayed on the screen) or kill monsters. You can press any key for the prompts; what the default values are I do not know.

After entering the game selection, there is a short delay, and whamo, a high-resolution picture with micro-miniaturization of the spacecraft. Would you believe its size - a little larger than the height of a regular screen letter "I" and as wide as the regular screen letter "M" as its widest point. It looks like a multi-colored fly on your TV screen. The background is jet black and as the spacecraft flies, it sparkles. Pushing the joystick fire control button causes the spacecraft to fire a "missile" about half the size of a regular screen period (.). What happens when you fire the missile is simply incredible. The instructions sort of explain some of the unusual things by saying, "In this world, gravity does not obey natural laws." In fact, none of the action obeys natural laws except the occasional random motion of the monsters.

Level 1 is supposed to be the easiest and the practice level for the "LUNAR LANDINGS." While the speed of the game is reduced and the control of the spaceship is easier at this level, a problem develops which seems to be carried

\section*{speed reading \(\$ 17.95\)}

Here's a program to help you improve your reading speed dramatically. Reading material flashes on the TV screen at the speed you select. You can even vary the speed while reading. Plus drills to improve visual span and perception. Speeding your reading takes dedicated effort. With this unique program, your effort will be more efficient, convenient and productive.

\section*{wild party \\ \(\$ 35.00 \$ 27.95\)}

A naughty, sexy computer game for 2 to 6 couples. RAINBOW: "would definitely liven up most parties."

\section*{29 monsters \\ \(\$ 14.95\)}

A text-adventure game that does not require you to guess words from its hidden collection. To escape the evil wizard's castle, you must pass through 29 rooms, each guarded by a hideous monster who will only let you pass if you can devise the correct password based on the clues it gives you.

All programs on cassette tape for 16 K Color Computer. Extended BASIC not required. Send SASE for instruction sheet for any program. Prices include postage (PA resid. add 6\%). Send check to P.O. Box 210, Jenkintown, PA 19046.
through all levels: the size of the spacecraft's two tiny feet and level ground (necessary for a soft landing) is nowhere to be seen. I was able to succeed in landing the spacecraft twice in over 100 tries at Level 1. I'd like to add that I spent many quarters at the arcades playing the Lunar Lander game at all levels and succeeded many times in landing. The landing pad displayed on the screen is about three times the width of the spacecraft and the instructions say "any level spot will do" - only you can't find any. The joystick control is so sensidive, you'd better be a Lunar Lander astronaut to attempt to land.

And for the monsters, these are animated and about the size of the regular screen letter "O." Some flap their wings, others flash their eyes, and some play coy as you try to destroy them. Occasionally the spacecraft collides with the monsters and is destroyed. The blow-up sequence has rather nice graphics.

You have the ability to "escape to space" (going off the top of the screen). When you do, this gravity increases. The gravity increases with each escape till you can't fly. You just fall to the planet's surface and crash.

You are probably wondering why I mentioned the program's disclaimer in the beginning. Well, here's your answer. First the spaceship can scroll across the screen at Warp 20 -so fast, your eyes cross. The high colors will cause your eyes to strain while trying to accurately determine the posidion and attitude of your spaceship (which is required at all times). And last, the spaceship attempting to land - you wonder why it can't and doesn't react to the joystick positions. Not to mention the buzzing drone sound as you fly the spaceship, which is modulated as you "apply thrust."

This program required a great deal of machine language skill on the part of the author, but it takes more than skill to
create a good or great game for the CoCo. I feel a few suggestions are in order to enhance this arcade game

First, let's be a little more realistic with the skill levels. The idea is to get someone acquainted with the program and let them work on improving their skill.

Second, the size of the action vehicles (monsters, spacecraft) should be large enough so they can be viewed from four to six feet from the screen, without eye strain, and easy visual orientation.

Third, use colors of moving objects sparingly.
Fourth, restrict the movement of your "vehicles" to the game area, keep them out of the scoring area if displayed on screen, and away from screen's verticle edges unless there's a wraparound feature.

Fifth, a game should be like a good book, a story or plot. Give enough screen instructions to play the game if the instruction sheet is lost. Nothing is lost if you want to display a small story.

Sixth, display the actual inputs to the screen prompts when the instructions require them; make these dedicated actions.

Seventh, if you are going to advertise or use "good sound," use it in the game-playing as well as the announcing of good scores or bad news.

In conclusion, always test this game at all age levels and listen to the criticism, good, bad, or indifferent.

\title{
The Battle Of Waterloo Is A Challenging War Game
}

The folks at the office have been looking at me strangely since I got my review copy of the game The Battle of Waterloo, from Ark Royal Games.

I'm going to leave the tricolor and sword home next week, but they are not going to get my Napoleon hat or stop me from putting my hand in the front of my shirt.

Waterloo is a clever combination of history and gamesmanship which can turn you into Bonaparte in no time flat.

There are only a couple of glitches about Waterloo, not the least of which is that early copies have misinformation in the documentation about certain lines which must be deleted by cassette operators. The correct lines to delete are lines 2580 and 2610. While I was reviewing the program, I got a rousing battle going and wanted to do a cassette save. When I did, there was a syntax error in line 2580 which blew my army out of Ligny and was quite frustrating until I spoke with the representative for Ark Royal. She apologized for the inconvenience, gave the reason for the problem and the right numbers to delete.

Ark Royal says the problem only exists in some early documentation and the proper fix is the one 1 mentioned earlier.

While on the documentation, let me say this is good-to-pretty-good documentation. You can figure out how to play the game and you can access all the goodies if you study the paperwork. Like much other documentation though, these directions presuppose that you know everything there is to know about whatever the program is supposed to do.

I think documentation writers would make a lot of new friends with an introduction which outlines what the program does and, if a game, how you score points and achieve objectives.

Waterloo consists of a BASIC program and two machine language routines. My tape version loaded quite well in about two minutes. The machine language map routine and Napolean locater cranked up quickly and I was on my way to Waterloo.

You first get a replica of the French tricolor which the instructions tell you to correct the color of using the controls on the TV. My automatic color control was just fine.

The next panel asks you if you have a disk or cassette. Then you get to see the first part of the map and the troops your Imperial Napoleanship will control. You direct the campaign to run over Waterloo with your French troops. You move your troops with the keyboard arrows - no need for joysticks.

A small historical problem makes it slightly more difficult for you to win than for the Allies to clobber you from their positions. There are five levels of play, which in my case is a function of how long it will be before the British give me a one-way ticket to Elba.

During play you are kept aware of the strength of your unit and how many moves you may make. You can aim and fire your artillery. You can conduct patrols and check intelligence. It is all a pretty concise little package.

One of the other slight problems \(l\) had was here. The command board routine is slightly slow in coming. Like any army commander, I was anxious to see what was happening, and I was jittery until the command headings appeared.

The command board gives you the option of (I)ntelligence, which tells you how the battle is going; (C)adre, which tells you what troops you have at your command and what kind of shape they are in; (T)urn, which moves you on to the next round of battle and ( \(Z\) ), which permits you to save the game for future continuance.

Once the commands are available, they work very well, but as I said, they are slow in coming.

Another handy help which Phil Keller might think about is combining all of the letter commands and the descriptions in one panel where they could be defined. I realize some are standard instructions, but many players are new.

This is no arcade game, although it has good graphics and sound. The full game is some 42 moves. That could represent a substantial amount of time, but I think it is worth the time. With the save, you can play over a couple of days.

This game is a challenge. It is quite good on the history end. It is fun to play and the documents are fairly easy to decipher.

The Battle of Waterloo joins a distinguished stable of games from Ark Royal.

Look at it this way. If you have any beef with this game, it ought to be - Beef Wellington!

\title{
Context Clues A Beneficial Exercise In Reading
}

Reading, one of the "three R's" of education, is essential to the learning growth of all elementary school children. The most important aspects of reading are the comprehension and meaning of words and how they interact with other words within a context to create an idea. Context Clues, from Computer Island, is a learning tool designed to aid elementary school students (grades four through seven) in developing these skills, which are essential to reading.

Context Clues begins by asking your name, which adds a personal touch throughout the program. On hitting [ENTER], an approximately three- to six-word concept is displayed, followed by a one- or two-sentence "story" and a sentence with a missing word. The student is then given a list of four multiple choice words. It is his or her task to determine which word best conveys the idea or context of the story by pressing the letter corresponding to the student's choice. The computer will tell them if they are correct by providing a high-toned note (a "happy" sound) and a "Correct Daniel " display. If the answer is incorrect, a lowertoned sound will be heard, followed by a "Sorry Daniel" and the correct answer will be displayed. Then by pressing [ENTER], the pupil advances to the next story.

Some of the answers are quite similar in meaning, or are opposites, which is very important in the effectiveness of this
program because the student must concentrate and comprehend what the sentences are trying to convey. It can be easy to make a mistake if the student is not comprehending the story or is giving haphazard answers. For instance, in the story, "That warrior is invincible. It seems that he can't be _., he is quite strong and brave," two of the answers provided were "conquered" and "unconquered." Hurriedly reading the sentence, without fully comprehending it (misreading "can't" for "can"), it is easy to pick "unconquered" instead of "conquered." By providing answers that can be adequately placed in sentences if they are not comprehended, it makes the exercise more difficult and the student's attention is apt to be held longer, and thus will be an effective, useful exercise.

The sound is very good and doesn't become annoying and repetitious as it does in some programs. In addition to the high and low pitched "answer" tones, a sound is provided when a new sentence is displayed. I feel this is very useful in catching the student's attention if he or she is distracted between rounds. The introduction page also has a short melody and graphics page.

Context Clues is a beneficial program to all students (whether they are having reading problems or not) in grades four through seven, because it increases their vocabulary and enables them to better comprehend ideas that are presented in stories and text material.
(Computer Island, 227 Hampton Green, Staten Island, NY 10311, \$17.95 plus \$1 S/H. Specify which grade - fourth through seventh.)

\section*{PRO-COLOR-FILE *ENHANCED*}

PRO-COLOR-FILE has become one of the most respected database programs ever developed for the Color Computer. Whether it's for home or business, PRO-COLOR-FILE lets you design your own sophisticated database tailored to your needs.

60 DATA FIELDS available for each record to store information 1020 BYTES for each record can be used if needed
1-4 DISK DRIVES can be used to maximize storage capacity 4 COLOR DATA ENTRY screens can be custom designed
28 MATH EOUATIONS can be setup to perform calculations POST ACCOUNTS routine performs calculations on an entire file DUPLICATE RECORDS or FIELDS from previous entries
SORT ENTIRE FILE on 3 fields at one time
SORT ANY SIZE FILE whether it's 200 or 2000 records
SELECT SUB-SETS of file for sorting or reporting
SCAN FILES alphabetical by any field
SUMMARIZE FILES to find totals, averages, low and hi values 8 REPORT FORMATS for obtaining hard or soft copy reports 6 LABEL FORMATS for 1 to 10 across labels \& 1 to 30 lines/labe PASSWORD PROTECTION for limited access to data and reports

PRO-COLOR-FILE was so well received that over \(70 \%\) of the owners of the original version ordered the PRO-COLOR-FILE "ENHANCED* upgrade in the first 2 weeks of its introduction. Find out for yourself why people in aimost every state, Canada, South America, and even the Far East and Europe have turned to PRO-COLOR-FILE *ENHANCED* for their information management needs.

\section*{PRO-COLOR-FORMS}
\(\$ 39.95\)
This application software allows data which is stored using PRO-COLOR-FILE to be printed anywhere on a full sheet of paper. Use it to print data on pre-printed forms or use it to design your own forms. Use PRO-COLOR-FORMS to create letters for mass mail-outs that have a personal touch by being able to insert names and addresses anywhere within the letter. Design and redesign up to 6 forms with user defined parameters such as printer width and lines per page. Supports embedded printer control codes from ASCII 0 to 31.

\section*{PRO-COLOR-DIR}

\section*{\(\$ 24.95\)}

Tired of not knowing which diskette has that program you're looking for? PRO-COLOR-DIRectory will create a data file of all your disk directories that can be used by PRO-COLOR-FILE to generate alphabetized reports for easy reference.
PRO-COLOR-DIR will store a diskette ID name, filename, extension, file type, number of grans allocated, number of sectors allocated, number of sectors used, machine language addresses and length, date it was created and date it was updated. 1000 entries are easily stored on one diskette!

\footnotetext{
All programs require a 32 k Disk with at least one disk drive. PRO-COLOR-FORMS and PRO-COLOR-DIR require PRO-COLOR-FILE to be used. All programs (c) 1983 by Derringer Software, Inc.

\title{
Talk Of A Smart Terminal Program
}

Remember the movic WarGames? There was a scene when David, the computer whiz, while showing his computer to his girlfriend, asked: "Did you ever hear a computer talk?"

Well, now you can hear another computer talk with a new program called Term Talk.

Term Talk is an ASCII-based smart communications program that will transmit and receive messages from a remote host computer, bulletin board or information service (CompuServe, The Source, etc.). In addition to printing incoming and outgoing text on the screen, Term Talk is capable of speaking the incoming text if you have the appropriate speech hardware.

Term Talk was written by Frank Delargy, the author of the text-to-speech programs used with many Votrax Voice Synthesizers. I used it with the Spectrum Projects VoicePak. Unlike many of the speaking programs which require the machine language interface program to be preloaded, Term Talk has the interface and a special dictionary modified for the needs of data communications included with the program. Just plug in the Votrax Pak, load Term Talk, turn on your modern, dial the host computer and you're having a discussion with it.

Any data sent from the host computer can be spoken out through the television speaker. What a neat way to show off the capabilities of your CoCo !

Unlike the Radio Shack Videotex program, Term Talk is a "smart" terminal program capable of doing more than just transmitting and receiving. Using control keys and commands, you can:
- Download programs and text files from a host computer into your buffer.
- Save contents of buffer to tape or disk.
- Load in files from tape or disk.
- Fill buffer from keyboard previous to logging on.
-- Edit bufier. Specify a temporary start and end of buffer.
- Control the program by means of a menu and control keys.
- Speak contents of the buffer (on-line or off-line).
- Display disk directory.
- Change default drive.
- Reverse screen display to green on black.
- Choose between split or full screen display.
- Upload messages and programs to other computers.
- Eliminate lowercase letters for a neater display.
- Ignore or enable line feeds (for special printers).
- Selectively control speech parameters (pronounce numbers, punctuation, or not).
- Turn speech on or off. While Term Talk was designed to use speech hardware, it can be used without it, but it's not as much fun.

When you run the program, you are greeted with a menu that presents most of the major functions you can use. They are:
- Communications: Used to send and receive data.
-- Print buffer to screen: To show you the current contents of the buffer.
- Speak out buffer: The "Sveedish" voice says what you have stored in memory.
- Print buffer: Baud rate is changeable by POKEing a value other than the default of 600 .
Save buffer: To tape or disk.
- Load file: Load ASCII files from tape or disk.
- Keyboard input: Input directly into the buffer for transfer later or to hear Uncle Sven speak.
Set options: Takes you to a secondary menu to control the parameters of the display and speech.
- Return to BASIC: To say Goodbye.

While in the communications mode the screen is split into two areas. The top section shows incoming data, the lower shows your input. When the computer is saying the data received from the host, it cannot keep up with the 300 Baud transmission of incoming data. As the data is received, it is put into a temporary buffer until the computer can speak it out. Between the two screens is a status line which indicates the modes selected. The split screen can be eliminated, but I don't know why anyone would want to eliminate this usable screen.

Some of the options available to the user are:
- Speech on or speech off: I leave speech off while signing on and off since the operations of the program are faster if it doesn't have to say everything. After I sign on, I turn on the speech when I get to the meat of the bulletin board or information service.
- Speak numbers or not: Speaking the numbers can be deleted if desired.
Uppercase mode only: Shows lowercase letters as uppercase letters on the screen. (No reversed letters).
- Speak punctuation or not: Transmitted punctuation can be supressed. This is very useful on a service which uses a \(\Rightarrow\) symbol to indicate it's ready to receive data. If punctuation is not supressed, the Sveedish voice with the east coast accent says, "Equals Greater Than" at the end of each page.
- Buffer opened or closed: To receive and store information or data for viewing, saving or editing.
- Screen Reversed or Normal: Green letters on black or black letters on green.

I find the program most usable with Speech on, Screen Normal, Numbers pronounced, and Punctuation off. After all, nobody actually says "Hello there Doctor Falken comma How are you period."

The 15 -page instruction manual is very well organized and leads the user step by step through the options offered by this package. An assumption is made that the user has no experience using any data communications programs.

Information is also given on how 32 K owners can change the dictionary supplied with Term Talk to meet their specific needs by adding words.

Phrases that do not contain vowels are assumed to be non-words and are spelled out to avoid mispronunciations.

In summary, this is a very versatile terminal program. The only major limitation I discovered is that it only works at 300 Baud. Since this is the rate at which most lower priced modems operate, this may not be a problem.

The big plus offered by Term Talk is the VOICE/ SPEECH capability. This is a godsend to those with sight impairment. Now the world of information offered by CompuServe, The Source, Dow Jones, etc., is available to them. For those of us blessed with eyesight, the speech capability is a lot of fun and adds to the enjoyment offered by our computer.

If you are thinking of getting a smart communications program, the addition of speech to a very complete terminal program makes this a program to consider. Who knows? Someday you may want to link up to WHOPPER, the computer at NORAD and ask it if it would like to play a game called Global Thermonuclear Warfare.
(Spectrum Projects, 93-15 86th Drive, Woodhaven, NY 11421 , tape \(\$ 39.95\), disk \(\$ 49.95\) : Speech requires Spectrum Projects Voice-Pak \$69.95)
- Bruce Rothermel

\section*{ARE YOUR WALKING FINGERS GETTING FOOTSORE?}

Tired of typing in those long, but wonderful, programs from each issue of the RAINBOW? Now, you can get RAINBOW ON TAPE and give those tired fingers a rest. With RAINBOW ON TAPE, you'll beable to spend your time enjoying programs instead of just typing...typing...typing them! All you need to do ever again is pop a RAINBOW ON TAPE cassette into your recorder, CLOAD and RUN any one you want.
RAINBOW on Tape single issue rate is: within the US, \(\$ 8\). Canadian and Mexican rate, \(\$ 10\), all other countries \(\$ 10.00\)
RAINBOW on Tape subscription rate is: within the US, \(\$ 70\) Canadian and Mexican rate, \(\$ 80\), all other countries, \(\$ 95\)
US FUNDS ONLY PLEASE
VISA, MasterCard and American Express accepted. All subscriptions begin with the current issue and back issues are available beginning with April, 1982. Tapes are sent first class mail to arrive approximately the same time as your current issue of the Rainbow.
Now . . .

Think of it! Not 10 or a dozen-but between 20 and 30 -programs every month from Rainbow On Tape. All the really good programs from the Rainbow! All the long ones ... so you don't have to type them in. Just CLOAD and RUN!

\section*{MINER by LARRY LANDWEHR}

Like his father before him, Sid is a coal miner. Working hundreds of feet below ground it is Sid's job to blast the rock so that the coal seam is exposed. See if you can direct Sid to the most productive areas. How many lumps of coal can you collect before you run out of dynamite? Young and old alike will enjoy this hi-res all machine language game from the author of "IN ASSEMBLY LANGUAGE".

CAT\# DMO18 16k \(\$ 14.95\) (CAN) \(\$ 12.95\) (US)

\section*{EXECCART BY PETER KARWOWSKI}

EXECCART is a \(M / L\) program that allows you to copy ROMPAC programs to tape. They can then be loaded back into a 64 K CoCo and examined or modified. You can run most of your ROMPAC's from disk without ever having to remove the disk controller. This saves tremendous wear and tear on the contacts. EXECCART may also be used to add a loader to your own programs to turn on 64 K and to copy your BASIC ROMs into RAM so that you can make modifications.

CAT\# DMOO9 64K \$17.95 (CAN) \(\$ 14.95\) (US)

\title{
A'Gift Box' For Those Who Have Everything
}

\author{
By Jim Reed
}

To my way of thinking, the Spectrum Control Center is a great gift idea. By that, I mean that it is not something I would ever go out and buy for myself, but if somebody else bought me one I'd use it every day.

I believe a lot of CoCo users share my attitude on this. You see, while this "interface box" has several useful features, you don't absolutely have to have any of them to use your computer - the Spectrum Control Center simply makes things more convenient. Its main function, for most people, is to provide a switch selected printer/modem port.

If you have both a printer and a modem, you know that you can't plug both into the serial I/O port at the same time. Without some device of some type, you have to unplug one and plug in the other every time you change peripherals. Of course, all you need is a Y-cable that runs from the I/O port to both! Or, you can build or purchase a simple switch box. Or, you can shell out \(\$ 150\) and get an RS-232C selector switch from Radio Shack. Or, you can get a Spectrum Control Center that does what you need, and more.

Most of us tire pretty quickly of unplugging cables, so we cruise by Radio Shack and ask about a simple switch box only to find that all Radio Shack offers is neither simple nor cheap. Then, we ask around and find out that a Y-cable or a switch box is really all we need -- and, for that matter, we can build one ourselves, if we like weekend projects. I fall into the group who decide that by the time we figure out what parts we need, find a store that has them all, and spend all weekend building the gadget, that we've saved maybe \(\$ 7.23\) over what it would have cost to buy a ready-made one by mail order.

On the other hand, if it came down to it, I probably would build one myself before I'd shell out \(\$ 100\) for a Spectrum Control Center. But, certainly, if I did build a switch box, it wouldn't have all the features of Spectrum's device, because that would take me three weekends, several trips back to the electronics store and a temper tantrum or two to build "the ultimate switch box," which appears to be constructed entirely from Radio Shack parts, right down to the project box.

The Spectrum Control Center looks impressive with its top-mounted, 0 to I mA DC ammeter. More on that later. In addition to the printer/modem switch, it also has a cassette switch for those who don't have the CTR-80 or CCR-81 cassette recorders. If you fall into that category, this is a very useful feature in that it eliminates your having to unplug tape recorder cables in order to rewind or fast forward. Since I do have an "official" recorder, I found no need for
this switch - and, if you don't have a Radio Shack computer tape recorder, you can buy one for about half the price of a Spectrum Control Center, so I can't recommend you buy the Control Center solely for this feature.

Yes, it does have a red LED that lets you know whether your computer is on or off. Lastly, the Spectrum Control Center has left and right joystick jacks which, we are told, eliminate your having to grope around behind your CoCo fumbling with cables and plugs. Initially, I considered the joystick jacks totally frivolous and hypothesized that maybe this was done more to tap into the five-volt DC circuit to power the LED than for any other purpose. After using the joystick jacks for awhile, however, I do find they make unplugging the joysticks a bit easier. In fact, I'll vote for a joystick-disabling switch, too, as long as we're going the deluxe, all-purpose route. Not only that, but why not a second set of jacks and another switch or two in order that I could use my Atari joysticks without having to unplug my standard issue Radio Shack sticks? A built-in Atari interface? Obviously, cost is why not, but if somebody gave me an interface box with all these features, yes, I'd use it with switch-selectable delight.

Now, the panel meter. Well, you see, there is also a jack for your tape recorder that routes cassette \(1 / O\) through the Spectrum Control Center. Cynical by habit, I initially made a few crude remarks about this being totally "window dressing." In practice, however, I've found this to be a very handy readout. I think it's as useful as the printer/modem switch -and I use the meter much more often.

Like many others, I imagine, I've found that tapes are most likely to load properly if my Radio Shack recorder's volume is set between 2 and 3. What I didn't know, until I hooked up the Spectrum Control Center, is that there is quite a difference bet ween volume level 2 and 3 and that very slight volume adjustments can often make the difference in a tape loading or not loading. ASCII tape files seem to be particularly sensitive to the tiniest volume adjustment.

With the Spectrum Control Center's built-in ammeter, you can discover for yourself that even a moderate setting of 5 on the tape recorder volume knob will "peak" the ammeter, suggesting that all is not well. Then, using the meter, you can "fine tune" your tape I/O with reassuring precision. While I can readily empathize with those who will maintain that they are "doing just fine without an in-line ammeter, thank you," I must report that I believe my use of the meter over the past three months has saved me a considerable amount of tape loading time, a development surprising to me!

In summation, no, you don't have to have any of the features of the Spectrum Control Center. And, taken alone, none of the features individually justifies the price. But, as a package, it helps eliminate confusion and frustration, reduces wear and tear, and does give you more control.

The Spectrum Control Center, a multipurpose "interface box" for those who have everything and want access at the flip of a switch. Yes, it's a luxury item - any CoCo owner can manage quite satisfactorily without one - and many of us would consider it an extravagance to buy one, but I can't imagine any CoCo owner who wouldn't love to get one as a gift.

\title{
Word Search Puzzles - Four Good Puzzle-Making Programs
}

\begin{abstract}
Word search puzzles are really mindless affairs. they do not teach any academic skill (except possibly sight recognition of words - but even that is undercut by the use of words spelled backwards, or in reverse diagonal, in the puzzle matrix). Still, the kids do love them - they never seem to tire of working them out, and the larger the puzzle, the better.
Given this fondness for work search exercises, why not make use of it? Instead of simply listing the words to be found at the bottom of the puzzle, make the answers to a quiz or a list of questions the words to be found in the puzzle. Making up such a puzzle is not hard, but it does take time, and time is an item never in great supply in a teacher's cupboard, right? Now if you have access to a Color Computer . . Well, I'm sure you can see where this is leading. There are several puzzle generators asvailable for the Color Computer. This review covers four such programs form Shamrock Software. Only one of these four, Puzzle Maker Definition, allows you to create a puzzle that has a set of questions that the student must answer to get the list of words to find. The other three, Puzzle Maker - Standard, Puzzle Maker - Wide and Puzzle Maker - Big Letters,
\end{abstract}

\section*{CMJ-IF} MULTI-FUNCTION PLUG-IN CARTRIDGE FOR TRS 80C \& TDP 100 COMPUTERS PROVIDES ANEXTENDER 2 PARALLEL PORTS 2 COUNTER/TIMERS 1 SERIAL COMM. LINE SPEECH SYNTHESIS 4 OR BK EPROM/ROM SPACE SPEECH FROM TEXT, BASIC, RTTY INTERFACE FOR *CMJ-TU '(CW,RTTY,SSTV,FAX) MAGNUM DISTRIBUTORS INC.

allow only the creation of standard-style word search puzzles.

The Standard program generates regular-sized letters with no spaces in between. This can get a bit cramped looking, but it does allow for big puzzles up to 56 letters wide. The user is asked how wide and how long the puzzle is to be and how many words are to be hidden. The user is then asked to enter the words one by one. A nice feature is an on-screen reminder that appears when the next-to-the-last word is entered, saying that "the next word is the last." The program pauses a moment, then begins to print out the puzzle. The words appear nicely spaced below the puzzle. The user has a choice of printing multiple copies of the same puzzle, as well as a teacher's key.
The Wide program works in the same way, except that standard letters are double-spaced and, therefore, the maximum size of the puzzle is reduced to 26 spaces.

The Big Letters program makes use of double-width (or expanded) typefaces available on many printers. Since the control codes for this feature differ from printer to printer, it may be necessary to change program lines to fit your needs. (Unfortunately, I received no documentation for this program, so I cannot say if instructions for this modification are included. I can say that the program is not set up for Radio Shack's L.P. VIII.) Puzzles made with this program would be particularly appropriate for primary grades or for sightimpaired students.

The Definitions program works somewhat differently. It uses standard size letters with no spaces, and begins as the others by asking width, length, and number of words. Here is where the difference comes in. The user is asked to write a question for each word that is input. These questions show up below the puzzle in place of a list of words to find. Just what we're looking for, right? The answers thus provide the student with the list of words to find. This feature allows the teacher to tie the puzzle in with a lesson in class, a vocabulary list, a quiz or test, or any other activity desired. The puzzle now has real educational, as well as entertainment, value.

These programs are sold separately for \(\$ 9.95\) each. They are provided on cassettes with two copies of the program on each side. The second side copies incorporate the speed-up poke. An additional copy uses the super speed-up poke, which renders the screen unusable. I did not test this version of the program. In all cases, both the [BREAK] key and the LIST command are disabled.

The documentation consists of a single sheet of paper which tells a few brief facts about the program. The user is left to discover for himself how the puzzle will look, how much space will be used on a page by the final puzzle, that the option of making a key is provided, and so on. Some printed puzzles and keys used as examples caution about using commas (in the Definitions program) and numbers of lines containing printer codes (since \(L I S T\) is disabled) would be a great help and would have made using these programs easier. Once learned however, these programs are easy to use and do their job competently. Leaving the poor documentation aside, these are good programs, worthy of inclusion in your (or your school's) software library.

T] \({ }^{\circ}{ }^{\text {w }}\) \\ Elite-Word Also Available On OS-9
}

THE SECOND GENERATION WORD PROCESSOR IS NOW ... ELITE•WORD has many new features not found in other word processors for the Color Computer. ELITE*WORD is an all machine language, high performance, Full Screen Editor
which offers an ease of use that is simply incredible. ELITE•WORD also offers a printed output flexibility that can handle your sophisticated home and business applications. ELITE•WORD is waiting to work for you.

\section*{MAJOR Features inclụde:}
- ALL Machine Language for speed
- Handsome Vinyl Binder
- Comprehensive Manual Included
- User Friendly (really)
- Top screen line reserved for command prompts, HELP messages, and status information
- Two text entry modes: Insert and Exchange
- Edit 2 files simultaneously (OS-9 Only)
- Delete character under cursor
- Backspace and delete one character
- Delete entire screen line
- Rewrite entire screen
- Page Forward through text
- Page Backward through text
- Mark present line for automatic centering on output
- Insert new text (Insert mode)
- Type over old text (Exchange mode)
- Screen Display is \(32 \times 19\) in normal text editing modes
- Screen Display is High-Res \(64 \times 19\) when used to display final text; including page breaks and justification
- Screen Display in all modes is true Upper/Lower case characters with descenders
- Over 13.5K file size in 32K machines
- Continuous memory display
- Save text file (disk or tape)
- Load text file (disk or tape)
- All I/O errors trapped and recoverable
- Jump to beginning or end of text
- Find any string of characters in text
- Global replacement of one string in text for another
- True block-text Move command
- Smooth cursor movement over text in any direction (including vertical)
- Smooth screen scroll for easier proof reading
- Auto Key-Repeat will automatically repeat any key that is held down
- Easy generation of ASCII files
- VIEW function permits high-res screen display of final text before it's printed; including right-side justification and page breaks
- VARIABLE TEXT MERGE allows for generation of standard form type letters that appear to be personally prepared for each reader
- INCLUDE feature (disk only) permits the inclusion of many other files within one large document. Total document wIII have sequentlal page numbering
- From the same minds that brough you ELITE•CALC

Where the state names or capitals are required, they must be spelled correctly. However, the state bird, flower and tree questions are multiple choice (multiple guess). The questions concerning the birds, flowers and trees are included, according to Sugar Software, to make the game more challenging for those who have mastered the state's names and capitals portion.

I have not yet mastered the first section sufficiently to advance to the birds and trees section. Nor do I think the subject of what the state tree of Utah is will surface in everyday conversation. But, if it does, I'm ready.

The birds, flowers and trees are not included in the 16 K version due to lack of memory space. I must have a 16 K brain, because this data is not in my memory either.

Players are given two chances to answer the write-in questions (1-4); however an incorrect answer on the first try followed by a correct answer receives only one-half credit. There is only one chance given in the Multiple Guess section.

Correct answers to questions are rewarded with the computer's choice of a light and sound effects display, a word of complimentary encouragement or a friendly beep tone. Incorrect answers are given a "negative" boop tone and a sympathetic statement.

The questions are asked in random order and a randomizing technique is used to assure that no two games are the same.

The 32 K version includes a two-part USA map with state abbreviations and directional symbols. The map is divided into Eastern and Western USA between Missouri and Kansas.

The map is drawn in three colors using PMODE 4. The larger states are fine, but residents of Delaware (the Diamond State) will have difficulty finding themselves on the map because of the lack of detail. Residents of Hawaii and Alaska will be disappointed to find that they are not part of the Great USA map. Only arrows point the way to where they are located.

During the course of the game the maps can be called up by typing " \(M\) " in lieu of answering a question. While it is possible, no instructions are given for printing the maps using a line printer.

While playing the Great USA, you have a choice of a 10-, 25 - or 50 -question game. At any time you can break out of a game by typing QUIT instead of answering a question.
At the end of the game, a scoreboard announces the winner or a tie score.
The program has been arranged to allow easy replacement of the data and questions should it be desired. If the question regarding the state tree does not interest you, it could be replaced with the current state governors. Instructions are given on how to change data and save the new program.

The game does not allow the user to print the game data on the screen for study prior to play; however, you can list the program and see the DATA statements. Not convenient, but at least it's there.

In summary, the game allows the user to learn the abbreviations, capitals, etc., for the 50 states in a fun, game-like atmosphere.

\section*{^ COLOR COMPUTER WORKSHEET *}

NOW ... The worksheet calculator program you've been waiting for is waiting to work for you. ELITE•CALC" is a powerful, full featured worksheet calculator designed especially for the Color Computer. Answer "what if" questions, prepare reports,
maintain records and perform other tasks that, until now, required sophisticated business computers. ELITE•CALC" is a serious tool for those who want to do more than play games with their Color Computer.

\section*{Features include:}
- Single character commands
- Help Displays
- Enter text or formulas to 255 characters long
- Repeat text entries
- 255 maximum rows
- 255 maximum columns
- Available memory always displayed
- Rapid Entry modes for text and data
- Selectable Automatic Cursor movement
- Insert, Delete, Move entire rows or columns
- Replicate one cell to fill a row or column with selectabie formula adjustment
- All machine language for speed
- Extended BASIC required for ROM routine calls
- Automatic memory size detection for \(16 \mathrm{~K}, 32 \mathrm{~K}\) or 64 K
- \(>20 \mathrm{~K}\) bytes, storage available in 32K systems
- BASIC style formulas
- Math Operators: \(+,-, \mathrm{X}, /, \mathrm{F},()=\),
- Relation Operators: \(=,>,<,<=,>=,<>\)
- Logic Operations: AND, OR, NOT
- Conditional Formula: IF . . THEN ... ELSE
- Trig Functions: SIN, COS, TAN, ATN

\section*{- EASY TO USE}
- INDIVIDUAL CELL FORMULAS
- COPY BLOCKS OF CELLS
- FULL CELL-EDIT CAPABILITY
- COMPATIBLE WITH ALL PRINTERS
- EASY 132 COLUMN PAGE WIDTH
- CHANGEABLE BAUD RATES
- GRAPH FORMAT FOR BAR CHARTS
- SORT IN ASCENDING OR DESCENDING ORDER
- COMPREHENSIVE MANUAL INCLUDED
- NATIONWIDE USER GROUP
- HANDSOME VINYL BINDER

\section*{Moptown Parade:Well Written Educational Tool}

After reading the review in the January 83 issue of Rainbow, I was seriously considering purchasing one or both of the Moptown disks. So I was delighted when my assignment, Moptown Parade, arrived and contained the first six games of Moptown. The first impression is a good one, it comes in a vinyl disk case with a \(5^{\prime \prime} \times 51 / 2^{\prime \prime} 19\)-page booklet in a pocket on the front cover of the case. Easy to find when needed. The programs, including a 90 -day warranty, instructions on ordering a backup copy, and even ideas for making your own games, using the Moptown characters.

By slipping the disk into the drive and entering \(R U N\) "MOPTOWN", you are greeted by The Learning Co. LOGO screen, and given the opportunity to adjust the color on your monitor. By answering the [SPACEBAR] prompt, the main menu is loaded from disk. From this point, any of the games can be loaded by selecting its number from the menu.

Before going on to the games, I must explain the Moppets. There are 16 of them - every one different. Each Moppet can be described by four traits: height (tall or short), girth (fat or thin), color (red or blue), and shape (Gribbit or Bibbit). Gribbits have tails, and Bibbits have big noses and big feet.

The programs use low resolution graphics to create the Moppets, which are colorful creatures created by machine language to make the programs fast. The games are very professional with one key responses and excellent error trapping that ignores all keys except those requested by the screen, or "?", to reread instructions, and [CLEAR] to escape back to the main menu. The closest thing to a bug, that I could find is in game \#2. One of the sentences is cleared from the screen a little quickly for slower readers.
Game \#1: Make My Twin requires the child to do just that. The computer displays the first Moppet, then, trait by trait, asks the child to duplicate him. Success gets rewarded

\section*{}

\title{
See you at RAINBOWfest-New Brunswick March 30 - April 1
}

\author{
For more information see Pages \(90 \& 91\).
}
by a few beeps, a flashing box around the Moppet, and the play again prompt; failure gets a low tone, and erases the Moppet for another try.

Game \#2: Who's Different? has two levels - either three Moppets the same and one different, or none the same and one extremely different. The child must select the different Moppet, then, if correct, choose the reason why. Correct responses receive a large "YOU WIN" message across the top of the screen and the play again prompt.

Game \#3: What's The Same The child must pick the one trait that all four Moppets share. A correct response receives a little computer music and the play again prompt.

Game \#4: Who Comes Next? is a pattern recognition program where the child must pick the correct traits that make a fifth Moppet fit one of three patterns.

Game \#5: Moptown Parade requires the child to design four Moppets according to an adjustable rule on how many traits must be changed from one Moppet to the next. In this game, after the child gets five Moppets lined up according to the rule, the program gives each Moppet an instrument and plays music for the parade.

Game \#6: Who's Next Door? displays a house with four rooms: top (left and right) and bottom (left and right). Three Moppets are then supplied. The top-right is different from the top-left by one trait. The child must then build a Moppet to fit in the bottom-right room patterned from the one in the bottom-left room, changing the same trait that was changed upstairs.

After a quick once-over, I put the programs to the acid test (the kids). After all, that's who they are for. I have three of my own, and a neighborhood full of anxious test pilots. My two oldest (9 and 7) are well versed on educational programs and had no problems other than a few long words dad had to read, and a couple of misunderstood instructions.

As for educational value, they each mastered the first couple of games the first or second time through and, to my surprise, both had no trouble with Who Comes Next?, the one I thought would be the hardest. After about three hours, both were running through the games with only an occasional mistake. The neighborhood kids; some with little or no computer experience also had very little trouble running the programs, although there were varying degrees of ability to build the correct Moppet in the games. One thing was clear: after seeing all the games, Game \#5,Moptown Parade was a unanimous favorite because of the motivation in the other games, and the fact that there is no scoring routine in any of the games, are the only major deficiencies I could find. Because of this the ga mes need closer supervision by an adult than most of the educational software I have at this time.

Moptown Parade proved to be a very well-written educational tool, but as I said earlier, it does take some parentchild interaction to keep the child interested, and could easily become an expensive dust catcher after a few uses without the parent to supply a little motivation and guidance. As a teacher I find that my students respond better if given a number score - it gives them something to beat the next time.

\section*{Elite.File}

THIS IS IT! ELITE•FILE is the full featured, all machine language, Data Base Manager, that Color Computer users have been waiting for. From the same author that brought you ELITE \(\bullet\) CALC, ELITE•FILE is for everyone who needs to store and recall information. You specify what to store, and what to retrieve. ELITE•FILE gives you total flexibility. ELITE•FILE is a relational Data Base Manager
with all the editing and repeat formatting features that are typically found only on much larger computer systems, but priced for Color Computer users. It's "user friendly" command structure makes it simple to use even for those who don't write computer programs. ELITE•FILE is waiting to work for you.

Features include:
- Compatible with ELITE•CALC and ELITE WORD ASCII files
- User friendly combination of Menu driven input and single key commands
- Up to 255 named fields per record
- Up to 255 characters per field
- Up to 2000 characters per record
- Up to 4000 records per file
- Supports multiple drives
- Nested subfield definitions
- Up to eight fields in primary key
- Copy record definition from file to file
- View record definition
- Input records with easy to use field name format display
- Edit records with full screen "type over" editor
- Copy records to repeat identical data
- Scan mode for quick data retrieval.
- Locate any record by field contents
- Load ELITE CALC spread sheets into random access data files
- User setable print formats
- TAB, VTAB, CR, PAGE, text, hex print controls
- Join up to four subfile records to extend data record for print
- Create "Variable Text Insert" files for ELITE WORD
- Produce repetitive reports with Retrieval Programs written on ELITE*WORD
- Refile data into new record structures
\(\star\) ALL MACHINE LANGUAGE
* FLEXIBLE, USER DEFINED DATA RECORD STRUCTURES

\section*{Software Review}

\section*{Another Great Shoot-'Em-Up}

Spectral Associates has done it again, they have brought us another great arcade game - Galagon, a clone of the arcade game Galaga. The game is a shoot-the-aliens type of game. The aliens enter in groups from different directions on the screen while moving into a formation overhead. As your skill level progresses, the aliens become more elusive by shooting missiles and making dives toward your ship. Meanwhile, your ship, which moves horizontally across the bottom of the screen, frantically tries to blast these aliens out of the sky. Beware, your ship may be captured. This is no real problem, though, because you can regain it while the Boss Galagon ship is diving at you. This can be accomplished by destroying the Boss as it dives with your captured ship in tow. Doing so will release the captured ship, allowing it to link-up with free one, giving you double the fire power.

The game keeps track of the top five scores, as well as the number of boards completed. The top five scores are displayed at the end of the game just after it displays the number of shots taken, the number of hits made, and the hit-miss ratio.

The number of boards completed is shown in the bottom right corner of the screen, in the form of military insignias. The top score is shown in the top left corner. After destroy-

- TANKS - SPIDERS •BLOCKS - CYCLES -

Battle spiders! Blast your way through the descending blocks! Defeat the enemy tanks! Trap the menacing cycles! Increasing levels of difficulty make each a real challenge! KRON is a fast ML program with multi-colors, Hi-Res, and many great sounds. It displays the top five scores plus has a pause feature and display mode.

ing several waves of allens you enter the "challenging"stage. This consists of five flying groups. You try to destroy all five groups for a super bonus of 10,000 extra points, otherwise you get 100 points for each alien destroyed. You can get an even larger bonus if you are able to destroy all of the aliens in each group. Don't expect to be able to do this too often due to the inability of your ship to fire rapidly.

The game is great fun and occasionally addicting, which happens more often than not. The response time is good, though it may seem a bit slow at times. This is because of the Hi-Res graphics that are incorporated into the game. The colors are not the same old dull ones normally seen on the CoCo, but rather the brilliant artifact colors that are available in PMODE4. These colors are displayed in the form of the five flying groups as they enter the combat area, as well as your ship which faithfully destroys the dreaded aliens.

The game instructions are slightly confusing, but, overall, sufficient. They assume you have some knowledge of the game, but this is no big hindrance. The scoring distributions are also shown in the instruction booklet. I have played the game with both models of Radio Shack's joysticks and found that the Deluxe model is more suited for this game. Also for those that are interested, you can play the cassette version of this game with your disk drive plugged in. Best of all, the game is super fun. Ah . . I think I have time for another game.
(Spectral Associates, 3416 South 90th, Tacoma, WA \(\mathbf{9 8 4 0 9}, \$ 24.95\) tape, \(\$ 28.95\) disk)

\title{
Catalyst - A Fun Way To Build Molecules
}

The instructions for this game sound more like a lesson in high school physics, but be assured that Catalyst is a fast moving arcade-style game with a novel theme.

The scenario for Catalyst puts you in control of the movement of an atom about a reaction chamber which contains several moving particles including carbon atoms, hydrogen atoms, and particles of "catalyst." Points are scored by building molecular structures, but you must be precise in the order in which they are built. First a hydrogen atom, then a carbon atom are attached to the end of the atom which you control. Having built this molecular sandwich, you steer into collision with a "catalyst" particle to cause a chain reaction which racks up the score. Sound easy? Don't bet on it. You see, there are several things that prevent you from building the molecular structures. If, in the process of capturing an atom, you are less than accurate and do not touch at the tip of your cross shaped atom, an explosion occurs. Also, don't collide with the fast moving "catalyst" particles before the time is right or you will cause the disinte-
gration of your atom. Likewise, contact with the reaction chamber wall will cause the loss of your atom -you have three to play with in each game. In addition, you are discouraged from playing too slowly or cautiously because the play is timed, points are awarded partially on the basis of time taken to build the molecules. If you are too slow, you lose your atom to decay.

There are no quarks in this game (pun intended). In fact, Catalyst is a very complete product with considerable attention to detail. Catalyst is a machine language program which will work with a 16 K Color Computer. Included are an excellent title screen, built-in animated instructions, a one or two player feature, keyboard or joystick control option and a previous high score save feature in the disk version. Both tape and disk versions are copy protected, they auto-start after loading. Although the graphics in this game are simple, the author makes excellent use of the high resolution to make the particles shimmer and explosions of the atoms are enhanced by breaking up into fine particles. In addition, sound is used very constructively to enhance the play of the game.

If you are looking for a fast moving game that requires considerable eye/hand coordination, try Catalyst. Be warned that the dexterity level required is not meant for young children. If you like a challenge, this game is for you. I'm sure that you will be as impressed as I am with the completeness of this game.

\title{
Vidtron Pilot Light Gives CoCo A Brighter Image
}

As good as the Color Computer is, there are a few things that Radio Shack left out of it. One of the oddest omissions is a light to indicate that the computer is switched on; it's strange because they did put one on the Model I (when they supposedly didn't know how to build computers), and the CoCo needs one even more than the Model I did. It's all too easy to plug in a cartridge with the power switch on, or to leave the CoCo on all night after switching off the TV set, because the power switch is hard to see and easy to forget. There have been many words said about how to install a light in the CoCo (or even in the joysticks, which does no good if you don't have them plugged in) and several pilot light kits have come on the market. Vidtron's VT-8302 is a particularly neat device, with a number of advantages over other methods.

An interesting thing about the VT-8302 is that since it is installed differently in the "old" and "new" CoCos, Vidtron includes an instruction sheet telling you how to tell which is which. The "old"board (version E and before) is the one that was used in all Color Computers that had a RAM size button on the top; this board has a large R FI shield over the major chips, the power transformer is mounted at the back of the unit and the machine has two 6821 Peripheral Interface Adapter chips. The "new" board is used in the CoCos

\section*{The ORACLE II \\ The Ultimate CoCo Monitor.}

The ORACLE II is not a rehashed monitor program adapted to the CoCo, but a state of the art monitor designed to compliment the CoCo and its unique abilities.
Compare some of our features:
- 64 K Compatible - the ORACLE II can relocate itself and its monitor screen above disk basic.
- Single Stepper - a single variabie speed stepper that allows you to step both rom and ram.
- Disassembler -
- Graphics Support - allows you to step a program while watching any graphic screen, in any graphic mode, and toggle between the monitor screen and back, with one key
- ASCII/hex search-up to a 10 byte search.
- Full screen display and editing of memory.
- Over 40 commands.

CoCo disk or tape (both versions included)

that have the nameplate centered on the top front (including the new 64 K Color Computer and in the new TDP System 100 ; it has a small RFI shield, the transformer is mounted nearer to the keyboard and it uses one 6821 PIA and one 6822 IIA chip.

The VT-8302 Pilot Light is a small light bulb (not an LED) with two 6-inch leads; one has a spade lug on the end, the other has a two-pin shunt at the end. The spade lug is screwed under a mounting screw on the board, and the shunt is placed over a pin connected to the +12 volt source. A plastic lens is inserted in a hole drilled into the case and the lamp is stuffed inside the lens. The flyer that Vidtron puts out says that five lenses of different colors are supplied, but the kit I received for evaluation had only four; in red, green, blue and amber. I personally prefer red for a pilot light, but it is very nice to have a choice available. This is the advantage of using an incandescent bulb rather than an LED.

Vidtron's instruction sheet (two different versions are furnished for old and new boards) is very clear and even tells you that the two screws under the keyboard are shorter than the other cover screws. The procedure involves drilling a hole in the case top, inserting the lens in the hole, connecting the leads and putting the unit back together. One minor problem you may have is that the hole should be \(9 / 32^{\prime \prime}\) in diameter; many drill bit sets only go up to \(1 / 4^{\prime \prime}\), so you may not have the correct bit. I got around this by drilling a \(1 / 4^{\prime \prime}\) hole and then wiggling the drill around to enlarge the hole first. (Be sure to drill a small hole first to guide the larger bit; a \(1 / 4^{\prime \prime}\) or \(9 / 32^{\prime \prime}\) bit is hard to start precisely on plastic, and you could make some ugly gouges in the case otherwise.) On the old boards, you place the lug under the screw between the cartridge slot and the RFl shield and slip the connector over a pin marked TP9 on the board. On the new board, the lug goes under a screw next to the RF modulator, and the jumper connector replaces the \(16 \mathrm{~K} / 64 \mathrm{~K}\) jumper if you have 16 K RAM chips or goes next to it if you have 64 K chips. (If you still have 16 K , save the original jumper in case you change to 64 K later.)

The only minor flaw that I noticed is that you can see some light through the vent slots on the right side (if you install the lamp near the right edge of the keyboard, as I did). You can fix this by wrapping a couple of layers of black tape around the lens inside the case.

At \(\$ 7\) for a complete kit with five colored lenses, Vidtron has a clear winner here, especially since the VT- 8302 has a lifetime warranty.
(Vidtron, 4418 Chapman Avenue, Suite 284, Orange, CA 92669, \$7)

\section*{Phonics II Only Phair}

Phonics \(I I\) is a two-part educational program (tutorial and test) to teach the concept of digraphs. Digraphs (twoletter combinations representing a single sound - such as "ph," "th," "ck," and "ch") are used to teach basic reading skills. This program, available on either disk or cassette, requires a 16 K computer and Extended BASIC. The disk version is a package which includes Phonics \(I\) and requires the cassette recorder to produce the spoken messages described below.

Phonics \(I\) is comprised of two tapes (or a single disk and two tapes for the disk version). One tape (or tape/disk pair) is a tutorial program. Approximately \(61 / 2\) minutes long, it presents each of the thirteen digraphs both visually (as large, lowercase letters) and orally (as a tape-recorded message, played through the TV speaker). The student is asked to repeat the digraph with the taped message. The digraph is then flashed on the screen three times before proceeding to the next digraph.

The test tape is also about \(61 / 2\) minutes long and requires the student to identify (via the keyboard) the two consonants which form the digraph presented orally from the cassette recorder through the TV speaker. If the student identifies the digraph correctly, he is rewarded with a "happy face" on the TV screen and a two-toned audible

\section*{STOCK \& FUND INVESTING with the TRS-80* COLOR COMPUTER USE FUNDGRAF AND FUNDFILE}

FUNDGRAF is a stock market analysis program that not only graphs and analyzes funds or stocks, but also makes decisions on when to BUY and SELL. Improve market timing using your COCO .
GRAPHS fund's progress (up to 200 weeks). SUPERIMPOSES for comparison: a line of constant percent growth or a graph of any other fund (or stock).
CALCULATES over any time span: the percent price change and the moving average (any span). INDICATES BUY and SELL signals. FUNDGRAF require 16 K ECB min.
16/32 K Tape
16/32 K 5 in. Disk .............. \(\$ \mathbf{\$ 9 . 9 5}\) ADD \(\$ 2\) handling on all orders.

FUNDFILE is a portfolio and account management program for securities. Manage single or multiple portfolios of stocks, mutual funds, bonds, money market funds, etc. FUNDFILE allows easy maintenance of all your records for accurate portfolio evaluation. NEW 32 K VERSION of FUNDFILE summarizes all transactions (dividends, interest, purchases and sales) between any two dates of your choice - weekly, yearly, etc. Categorizes interest and dividends paid as to tax liability (tax free, etc.) and capital gains as long or short term. Great for tax reports.

FUNDFILE REQUIRES 16 K ECB min. and 80 -COL PRINTER. 5 -in. Diskette only for 16 K ECB
\(\$ 27.95\)
5 -in. Diskette only for 32 K ECB
ADD \(\$ 2\) handling on all orders.
Write for free brochure for details. Dealer inquiries invited.

\section*{PARSONS SOFTWARE, DEPT. C 118 WOODSHIRE DRIVE PARKERSBURG, WV 26101}
signal. If he answers incorrectly, he receives a "sad face" and a single, shorter tone. In either case, the correct answer flashes three times on the TV screen before proceeding to the next digraph. At the conclusion of the test tape, the student is given a percentage score.

Upon finishing either tape, the student is given the choice of terminating the session or repeating the program. If he elects to repeat the tape, step-by-step instructions are given on the TV screen to reposition the tape (a procedure complicated by the combination of the program itself, data, and audio messages on the same tape).

I was disappointed with this program in two respects. First, the tutorial tape does not require any student participation - identifying the consonants via the computer keyboard, for example. (It does expect the student to repeat aloud the digraph sound with the narrator, however.)

My second disappointment is with the single sheet of instructions. The writer does not identify the age or grade level for which these programs are intended. (I estimate the programs to be useful at the second and third grade levels.) Furthermore, the instructions were confusing; the program description follows both the loading instructions and the warranty. (I prefer to know about something before 1 attempt to use it.) Finally, the instructions identify nine digraphs found at the beginning of words and four at the end. As I ran the program, I counted eight beginning and five ending digraphs.
(Prickly-Pear Software, 9234 E. 30th Street, Tucson, AZ 85710, \(\$ 24.95\) on tape)

\title{
Keyboard Beeper Cartridge It's Music To Your Fingers
}

\author{
By Ed Ellers
}

Long ago, when the Model I was all I had to play with, I came across a neat little program that gave a short beep whenever l pressed a key. l liked the feature so well that I used the program whenever I was writing in BASIC. But it wouldn't work with the Editor/Assembler, nor with anything else besides BASIC; and when I converted to lowercase a year later, I couldn't use the beeper anymore, because it wouldn't work with the lowercase driver program that I needed to use. A year or so ago, a young friend (who is now an occasional contributor to the Rainbow) gave me a program he had written that let me have the beeper and lowercase too; but I still couldn't use it with EDTASM, or when I was using the graphics utility program he had written. I still wanted something that would beep with everything; now that l'm using the Color Computer, that wish goes double. As it turns out, my hope was fulfilled (at least on the CoCo side) when I saw the Eng Systems Laboratories Keyboard Beeper Cartridge.

The Keyboard Beeper Cartridge gives you a hardware beeper that works with almost every CoCo application, regardless of whether the program is in BASIC or machine language, on tape, disk or cartridge. It works by checking a memory location that is accessed whenever the keyboard scan routine in the Color BASIC ROM detects a pressed key. This means any program that uses the ROM's keyboard scan routine will work with the beeper - including word processors like Telewriter (which I am using with the beeper at this moment). It may not work with something like FLEX or OS-9 that switches out the ROMs and does its own keyboard processing. (The location in question was changed when the I.I Color BaSic ROM was released; the new 1.2 ROM uses the same location as 1.1. The cartridge has a switch to select either 1.0 or 1.1 and 1.2.)

The cartridge contains a piezoelectric beeper (like those in alarm watches and calculators) to make the actual sounds. The beep is emitted from the cartridge, not from the TV speaker, so you hear the beeps even if you are using a monitor that doesn't have audio or if your TV sound is turned down. The cartridge does contain a switch to turn the beep off, as well as a light that flashes on keystrokes.

Since the cartridge can be used with most any program, it has a short ribbon cable with an edge connector on the end to let you plug in a cartridge or other device (disk controller, X-Pad, RS-232 pack, etc.) along with the beeper unit. The Beeper Cartridge also has a switch to disable the CART* line that tells the computer that a ROM cartridge has been inserted. This lets you plug in a cartridge and remain in BASIC, so that you can back up the ROM to tape or disk, modify it or simply look at another programmer's handiwork. You no longer need to tape over CART* on the cartridge's edge connector or use the foolhardy technique of plugging the ROM Pak in with the CoCo switched on

Which brings us to another handy feature; a power light. To be exact, three power lights. The CoCo has (had?) three different power supply lines, and the Beeper Cartridge has a light for each. When you switch the CoCo on, all three lights will seem to come on simultaneously. However, when you turn the computer off, the lights will go off in sequence; +5 V first, +12 V next (this will be the point when the TV signal disappears) and finally -12 V , spaced about half a second apart. (It reminded me of the old Thunderbird and Cougar taillights, which had three bulbs each that blinked in sequence when you signaled for a turn.)

The new Color Computer 2 does not have the two 12 V supply lines on the cartridge connector, so those lights will not work on it. (This is also why the disk controller had to be redesigned for the CoCo 2, and the X-Pad won't work without the Multi-Pak Interface.)

The cartridge also has a reset switch that performs a software reset. In most cases, this switch (which is easier to get to than the rear-mounted reset button) will perform the same function as a normal reset. It does not reset the CPU or the 6847 video generator, so you don't lose the picture when you activate the new reset. (If you have something like Sands Of Egypt where you are told to press the reset button to change colors, you will still need to use the regular reset to do so.)

The Keyboard Beeper Cartridge is not without its problems. The most obvious is that there is no way to adjust the beep tone's volume. More serious is the fact that it does not extend the two grounding clips (on either side of the edge connector) for the disk controller, so there may be RFI problems (though I was unable to check this out). If you have a cartridge selector (like the Multi-Pak Interface), the manual recommends that you plug the beeper into one of the selector's slots rather than between the CoCo and the other unit. You can then plug a cartridge into the beeper's ribbon cable.

Finally, there is the price. The list price of the Keyboard Beeper Cartridge is \(\$ 59.95\); this is for something that beeps, lights, resets and disables the CART* line. Maybe I'm spoiled rotten (I got the two Model I beeper drivers free), but the idea of paying \(\$ 60\) to make my keys beep is not appealing.

\section*{VIDEO ADVENTURES \({ }^{\text {w }}\)}

QUEST - A different kind of Graphic Adventure, it is played on a computer generated mape of Alesia. You'll have to build an army and feed them through combat, bargaining, exploration of ruins and temples, and outright banditry! Takes 2 - 5 hours to play and is different each time.
Available On: TRSBACC 16K, CMD64, VICOO 13K, MC10 16K, TI99 (EXT. BASIC), 1BMPC
TAPE \(\$ 14.95\)
DISK \(\$ 19.95\)
DUNGEONS OF MAGDARR - Serious D of D for up to 8 players. Features full 3d GRAPHICS! You get a choice of several characters that grow from game to game and are interchangeable with characters from our famous Dungeons of Death game. A real dungeon with level after level of monsters to conquer and treasures to find - all in hi-res \(3 d\) graphics.
Available On: TRSBOC, IBM PC, CMD64 TAPE \(\$ 19.95\)

DISK \(\$ 2.95\)

MARS - Your ship crashed on the Red Plane and you have to get home. You will have to explore a Martian City, repair your ship, and deal with possibly hostile aliens to get home again. This is recommended as a first Adventure. It is in no way simple - playing time normally runs from 30 to 50 hours, but it lets you try out Adventuring before you battle the really tough ones. Full Graphics Adventure. Available On: TRS80C, CMD 64, IBM PC TAPE \(\$ 19.95\)

DISK \(\$ 24.95\)

BAG-IT-MAN - The ultimate arcade game for TRS80C or CMD64. This one has three screens full of BAGS OF GOLD, CARTS \& ELEVATORS TO RIDE IN, MINE SHAFTS, and TWO NASTY GUARDS. Great sound and color and continuous excitement.

Available On: TRS80C 32K, CMD64
TAPE \(\$ 19.95\)
DISK \$24.95

STARFIRE - If you enjoyed StarRaiders or StarWars, you will love Starfire. It is not a copy, but the best shoot-em-up, see them in the window space game on the CMD64 or TRS80C. The fantastic graphics will put you right in the control room as you hyperspace from quadrant to quadrant fighting the aliens and protecting your bases.
Available On: TRS80C 16K, CMO64
TAPE \(\$ 19.95 \quad\) DISK \(\$ 24.95\)

PYRAMID - ONE OF THE TOUGHEST ADVENTURES. Average time through the pyramid is 50 70 hours. Clues are everywhere and some ingenious problems make this popular around the world. FULL GRAPHIC ADVENTURE.
Available On: TASBOC 16K, CMD64, MC10 16K, IBM PC TAPE \(\$ 19.95\)

DISK \$24.35

\section*{TUTORCODE - A Patient Teacher}

TUTORCODE is a program to teach you Morse Code. Maybe you want to apply for an amateur radio license. If so, you must be able to read code at the rate of five words per minute for a novice class license and thirteen words per minute for a general license. Or, perhaps you just want to learn this international system so that you can read the code you hear on shortwave receivers.

TUTORCODE offers several options for learning and practicing morse code. This little machine language program simulates the tones you hear on CW (continuous wave) transmissions where the length of the tone indicates a dot or a dash. You hear the tones on your TV speaker.

From the main menu you can choose to practice Letters starting with any letter, digit or punctuation mark. The program will sound out each character in sequence, printing

\section*{WANTED!}

Young men and women seeking adventure, excitement and thrill-a-minute action. No experience necessary-just you and your Color Computer. See below:

}
it on the screen. You write down the letter as you hear it, trying to avoid checking the screen. Words will "transmit"a series of words for you to copy and will not show you the words on the screen until the end or until you break. The list always seems to come up in the same order. Sentences is a step up as you are expected to read a series of 10 sentences as they are "beeped" out.

A fourth option is Flashcards which is more interactive. The program will sound out a word and you input it from the keyboard. The program then tells you whether you were right. Your Sentences gives you a chance to input up to 255 characters which is then read back to you in Morse Code. The speed of transmission can be set from the menu, from three to 25 WPM, so that you can step up the speed as you get more proficient.
TUTORCODE is an interesting example of CAI (Com-puter-Aided Instruction). CAI is a popular concept in education these days, but many of the available programs can hardly do more than present information and monitor drills. There are few programs which use the computer to do something a human teacher cannot or does not want to do. Take learning Morse Code, for example. Any interested person can find classes run by radio clubs. Or you can get tapes or records with code practice sessions. Why use a computer? Because the computer program is more interactive than a reocrd and infinitely patient. It will repeat lessons endlessly until you have reached your goal, while helping you measure your progress.

What the program cannot do is provide motivation. Now, I have not fooled with Morse Code since Boy Scout days. In all honesty, I found myself getting bored with the exercises after a few minutes. But, the fact is, I have no real desire to get a ham license or listen to shortwave broadcasts. So, I contented myself with checking out the program to see if everything worked.

A friend who is an experienced ham examined the program, but said he could not tell how helpful it would be to a beginner. He says he is used to working at about 50 WPMi and listening to this program was like "watching a teletype print." I said, "No, if someone would just write a program to read code and print it to the screen as ASCII, and vice versa
"My ham friend says there are such programs although he has never seen one for the CoCo .

From a technical standpoint, I had a couple of small problems with the program. The instructions say in numerous places that any phase of the program can be interrupted with the [BREAK] key. I found that my [BREAK] key was not enabled. Perhaps I had a defective copy, or maybe there is a bug here which needs to be corrected. Also, in the sentences which TUTORCODE transmits, there is a misspelled word. I did not check the Morse Code to see if it is similarly misspelled there. If not, it seems like a beginner could be thrown completely off track in his reading.

In summary, if you really want to learn Morse Code and are willing to put in the necessary hours of practice, practice, practice, then TUTORCODE will stick with you all the way as a patient instructor. Of course, it cannot listen to your practice at keying in code and correct your mistakes. You still need a person for that.

\section*{CU*BER: Vipers, Nurds And Four Stars}

Hop, hop, hop. As you are traveling around the pryamid, you see a big red ball coming. Your choices - hop on your super-bouncy legs and evade your foe, or stay on your cube and be smashed into a million pieces. Naturally, you jump away and make it to a nother cube. No, you're not dreaming, you're playing \(C U^{*} B E R\), a new 32 K machine language release from Tom Mix Software, written by Mark Skala.

The scenario of the game is as follows: You are an orange creature hopping around a 28 -cube pyramid. You must hop on all the cubes to change them to the "target color" which is always shown at the upper-left of your screen.
The scoring of \(C U^{*} B E R\) goes like this. Changing a cube to its intermediate color gives you 15 points. Changing a cube to its correct color gives you 25 points. Hopping on a green ball freezes the action and gives you 100 points. The "Dork" is worth 300 points. Luring the "Viper" off the side gives you 500 points. Clearing the first board earns you 1000 points. This increases by 250 points until you get to level 4 , board 4. The Dork is a green monster that starts at the top of the pyramid and hops on to its original color. The Viper is a coiled snake which comes from a purple ball. You can lure the Viper over the side by jumping on the orange disks when he is near you. When the Viper falls to his death, the board is cleared, and \(C U^{*} B E R\) is returned to the top of the screen. The "Nurd" starts at the bottom of the screen, works its way up and falls off the sides of the pyramid. It is deadly to touch the Nurd.

For each level, beginning with level 2 , you must jump on a cube more than once to change the cube to its correct color, on level two, twice, and three times on the third level. The fourth level is a little different. The cubes change color each time you jump on them. If a cube is the correct color, a jump on it will change it to its original color. There are three levels of difficulty with \(C U^{*} B E R\). Each level is faster than the last one. Watch out for the third level.

I think \(C U^{*} B E R\) is an above average game and I would give it 4 out of 5 stars. If you love the arcade game \(Q^{*}\) BERT, this is the game for you. If you don't, then make your decision carefully. I have a good strategy for \(C U^{*} B E R\) too, don't touch anything that isn't green except the disks.
> (Tom Mix Software, 3424 College N.E., Grand Rapids, MI 49505, tape \(\mathbf{\$ 2 7 . 9 5}\), disk \(\mathbf{\$ 3 0 . 9 5}\) )

\section*{Devil A ssault Is Fun Way To Risk Life}

When this game arrived, I expected to see another "Space Invader/Galaxy Attack" type of game. Wrong! Although Devil Assault is in the same category as these other games, it has features which raise it above the ordinary.

In Devil Assault, you move a gun back and forth across the bottom of the screen. Seeking to destroy you are waves of vicious Bombers, Robots and "Sproings!" Bombers appear when colored fragments zip in from the sides to form various flying creatures. Bombers move independently of each other, drop bombs on you, and (as if that weren't enough) try to ram you. When you hit a Bomber, it splits into two smaller flyers which continue the attack until destroyed. If you survive two waves of Bombers, you must face the dreaded stomping Robots. These evil machines aren't content to merely drop bombs on you. As the Robots drop bombs, they march rapidly down the screen towards you in an attempt to stomp you to dust. After the Robots, a wave of bizarre creatures called Sproings float down the screen and begin to bounce around. Sproings don't drop bombs, they try to flatten you. Avoiding this while eliminating this new menace is harder than it sounds. If this collection of perils isn't enough to wipe you out, at the higher skill levels the Devil himself appears. Joining the Bombers in their attack, the Devil glides across the top of the screen carrying a cauldron of fire. If you allow him to get to the middle of the screen, he will drop the cauldron. If you fail to blast the cauldron before it hits bottom, it will burst, covering most of the bottom with deadly flames.

The graphics in this game are excellent. The action is fast and smooth with Hi-Res detail and color. The enemy attackers move separately and unpredictably. (There are no set routines or patterns that the player can follow.) The sound is effective without being distracting.

You have a choice of starting out at different skill levels (of course, higher skill levels get progressively more difficult). You may also choose to have straight or guided missiles. The game keeps track of the high score and lets you know if you have beaten it.
This game has a lot going for it, but most importantly, it is fun to play. If you like to blast waves of attacking enemies but are tired of predictable patterns and aliens that all seem alike, then this game is for you.
(Tom Mix Software, 3424 College N.E., Grand Rapids, MI 49505, 16 K ML tape \(\mathbf{\$ 2 7 . 9 5}\), disk \(\mathbf{\$ 3 0 . 9 5}\) )

\title{
A BIG/FAST Database Management System
}

\author{
By Stuart Hawkinson
}

Database management is a natural application for personal computers. A well-designed program working with a Color Computer disk system can be a powerful combination for managing large a mounts of data. Moreton Bay Software has recently introduced a database system that takes advantage of many of the Color Computer's features.

The system is actually two separate database management systems which operate on a common disk file structure. FAST FILE keeps the data in memory for rapid editing and updates. Its capacity is limited by the amount of free memory available in the system. BIG FILE uses the same data files, but only keeps a small portion in memory at any one time. This allows you to manipulate a data file using FAST FILE until the file becomes too large to hold in memory. Then, you can switch over to \(B I G F I L E\) and continue to add and manipulate data. The programs use a common set of menu commands and formats, which make the switchover painless.

\section*{YOUR TRS-80* SPECIALISTS IN CANADA}

WRITE OR PHONE FOR A FREE CATALOGUE
CMD MICRO
COMPUTER SERVICES LTD.
10447-124 STREET
EDMONTON, ALBERTA T5N 1R7
PHONE 403-488-7109
*TRS-80 IS A TRADEMARK OF TANDY CORP.

All program files are on both sides of the tape. One side has the FAST FILE system recorded first while the other has BIG FILE at the beginning of the tape. The tape also includes a unique loader, which automatically makes a copy of the programs to disk. This feature ensures that you will start with a complete set of programs on disk. Your backup copy of the system, on tape, can be safely stored away for future use.

The 25-page manual begins with a careful description of the disk initialization procedure. Next is a short introduction to database concepts. A welcome addition, not found in most manuals, is a brief discussion of database vocabulary (buzzwords). The manual makes clear distinctions between fields, records, files and entries.

With these concepts established, the manual provides step-by-step instructions for using the system. The commands presented by each menu are described in the body of the manual. A two-page summary of the program's operation is included at the end of the text. Unfortunately, the manual has no index of key words and commands, so you must rely on the table of contents to point you in the right direction.

When starting a new file, you specify the number of fields required for the file. Then you give a name to each file. From that time forward, the structure of the file is fixed. You can only add, delete, sort or edit the data. The system assumes an average of 10 characters per field entry and computes the estimated maximum number of records your file can contain in memory. The actual entry, however, may contain up to 256 characters. A command checks the estimated number of records left, as well as the actual number of characters of memory left at any time during data processing.

Typical commands during the entry and editing phase include: adding records, sorting, changing, deleting or listing records, finding a particular string of characters in a record, and computing an average value for a field from all the records in a file. The averaging feature also provides a total for the entries in the specified field. This makes some limited forms of record keeping possible.

The sort feature allows you to sort on any field, in ascending or descending order. The program displays the fields as the file is sorted. Unfortunately, sorts using the BIG FILE program are very slow. Each pass through the data requires a complete read/write update of the disk file. A multiple-file merge sort would greatly speed up this large file sort.

After you edit or update your database, you can print reports or summaries of the data by calling up the FASTREP or BIGREP report generator programs. You can select specific items to be printed and format the output. The report generation phase includes several unique features. You can select limited arithmetic operations to be performed on fields before printing. This allows you to print some new combinations of row or column data in the field. You are limited to single operaton per printing run, however, so it's not like working with a spreadsheet program.

Another feature of the report generation process allows you to print a sample report on the screen. Thus, you may preview the finished report, without sending the file to the printer. The 32 -character format of the CoCo screen is limiting, but it's still a useful feature. Saving report formats to a disk file for future use makes repeated printouts a breeze. The formatting program does not allow you to use any special printer formats, such as emphasized or bold text, within the output stream.

The system could be improved in several areas. The filing programs are not uniform in their use of filename exten-

\section*{MASTER CONTROL II}
from Soft Sector Marketing Cut Your Programming Time 50\% - Improve Accuracy

Master Controill is a machine language program designed to increase the speed in which it takes to write basic programs by providing the most commonly used program statements with two keystrokes rather than having to type the entire command. The program is relocateable and can be placed anywhere in menory normally the top 1616 bytes of RAM, it will work on 16 K and 32 K ststems.
- 51 greprogrammed command keys of standard and extended basic corrimands.
- Drect run key, run the program as you write
- Plastic keyboard overlay for easy program use.
- Direct control of motor, trace and audio functions
- Relocatable mactine code, now works with disc systems.
- Automatic line numbering, starting point and increment are atcerable.
- Programmable custom key, you can select your own special function.
- Easy entry of commands nto
- Easy entry of comma
- New complete, easy to understand
instruction manual to understand

\section*{THE FACTS}

\section*{For The Color Computer}

A must book for the Color computer owner The first document to provide informatio that will allow the user to take advantage of all the features of the Color Computer. Aimed at the machine language user. The FACTS attempts to explain, and de scribes is detail, how the user can make use of the computers internal features. Divided into two sections: Hardware ahd software; the primary emphasis is on hardware capabilities and circuits. Provides detailed explanations of all the internal large scale integrated circuits. Includes sche
matic and spec. sheets, 166 pages. Order
your copy today!
matic and spec. sheets, 166 pages. Order
your copy today! ONLYS?295
sions. You can get by without using extensions, and allow the program to provide the default /DAT. However, in several places, you can provide an extension for reading a file. This causes an error when the newly updated information is saved to disk. The system uses a temporary file named ZYX/DAT for the new information, so all is not lost. You can simply KILL your old file and give the temporary file the original filename using the DOS command RENAME.

Another problem area is with error recovery. There is no graceful way to recover from a filename error. You must restart the program. The system does, however, give you the opportunity to see the directory before typing in the name of a file to be read. A blank filename gives an FN (bad filename) Error, as does a name with too many characters.

Another problem is in the command menu. If you are using lowercase text entry ([SHIFT][0]), you have to select the commands with uppercase letters. This seems like a minor point, but it can be very frustrating. Equally frustrating is the necessity to do a PCLEAR 0 by typing POKE2\(5,14: P O K E 3584,0: N E W\) before running the program. The system sign-on message requires you to execute a \(P C L E A R\) \(I\) before running the system. However, doing that will result in an OM (out of memory) Error later in the session. Although you can backup files from one disk drive to another, the main programs only use a single drive. Trying to give a drive designation with a filename results in a terse "EXTRA IGNORED" from the BASIC command parser.

I encountered difficulty with the system when I entered data with blanks at the beginning of the line. I included the blanks to make the display more readable. However, the change and delete functions were unable to locate items to be modified. Each of these functions search through a file to find the key specified. However, they only look at the first word in the field. The blanks were treated as a "null" word, so nothing could be located. I had to locate a specific record number, and then continue the editing process.

If your data management requires a large file, this set of programs may be for you. Despite some of the limitations mentioned above, I was able to perform all the functions necessary for maintaining a large data file system. I never lost a file as a consequence of unexpected errors.
(Moreton Bay Software, 316 Castillo St., Santa Barbara, CA 93101, 16K, 32K ECB, cassette \(\$ 59.95\) )

\section*{Excitement Aplenty In Star Blaze}

The radar screen on your ship shows approaching alien ships. As if you hadn't noticed, the word "ALIENS" flashes above the control panel while the red alert siren fills the bridge with the ominous sound of danger. You had been attacked before and the shields are in imminent need of repair. No need to question the engineer's report; the damage is too great to be done in flight. You had better find a repair station soon or face certain destruction from the enemy ships.

Suddenly, you sense an attempt to communicate with you. The message seems to have come from outside the ship, but it wasn't radio. Evading those alien ships required complete concentration and now you aren't sure. Didn't it sound like a "voice," a somehow familiar voice? Of course, it couldn't have been a voice. It's obvious that you are tired. "Am I beginning to hear voices?" you wonder. And that makes you worry; the battle is just beginning. The control panel only shows what you already know, but the warning signals still flash on the screen. You must get to that repair station and you must refuel. You had half-forgotten about the strange voice when you seem to hear it again! "Dinner's ready!"

Dinner's ready? Of course! Now you remember. Your "ship" is really your old friend CoCo, and you've been playing Star Blaze for too long!

Star Blaze is the new Star Trek-type program written by Greg Zumwalt and licensed to Radio Shack. The game comes on a convenient cartridge, as do most Color Computer games sold by Radio Shack. The opening screen shows your patrol ship and the control panel below with four bars to the left indicating your initial supply of fuel, torpedos, shield energy and radar energy. Right above the control panel the prompt "SKILL?" flashes, asking you to select a number from 1 to 8 , with 1 being the easiest.

With the right joystick, you maneuver the ship up, down, right and left on the screen. The fire button on the joystick fires torpedos. Your ship flies over the surface of a planet;

Fast Machine Code - Hi-res Color Graphics - Exciting Arcade Action and Sound

3-D GRAPHIC ADVENTURE
Shooting aliens on a flat screen is nothing like BEING THERE. In machine-code 3-D excitement, highest resolution graphics and sound, you are face to face with the Guardians: the ubiquitous Fembots, the powerful Arthroks and the omnipotent Optikon. Your lasgun blasting, you hear the explosion and the crunching metal; you feel the tension as you stalk your enemy, searching for the Destruct Button on your way to the Master Bay of the Mother Ship. Can you find the means to teleport to safety?
32K Tape \(\$ 24.95 \quad\) 32K Disk \(\$ 29.95\)

Another arcade hit! The Asteroid Belt is crashing down on Earth. You are the first-line defense. You must destroy the blazing asteroids and the homing orbs with your disruptor Machine-code speed, multi-colors on a black background - the crash and explosions of the asteroids rain on your senses!
16K Tape \$19.95 32K Disk \$24.95

\section*{NNTERCEPTOR}

Ever increasing Waves of Landers, Fighters, Air mines and Smartbombs help the enemy capture the Earthlings on the planet surface. Your phaser and photon bombs will be a solid defense. In multi-colored surroundings you do battle to maintain control of your homebase!

NEW ARCADE GAME
Fyr-Draca (Fire Dragons), from egg to the daemonic behemoth, greet you in five waves with nine colors on the screen at one time! This machine code game is going to sweep the Color Computer market. It is by far, the best game to come out for along, long time. The real arcade look is here at last!

Fire Dragons uses the nine color mode to create a screen of dazzling color with a black background and a black border. Dragons swoop from their stellar watch, singly, in groups and in squadron formation. First you face the single wyrms, then the squadron, next the twin giants, followed by the Battle Drake and its minions. Even with four star vessels and shietds you will be hard put to survive their spitting fire and diving attacks!

since your mission is to defend the 64 sectors of your galaxy, this is a bit puzzling. Does the ship belong to some gigantic federation that spans several galaxies and you are in charge of defending an entire galaxy divided into 64 sectors? Our galaxy, the Milky Way, has something like 100 billion suns. And although not every star has a system of planets around it, those that do probably have more than one planet. Is a single ship going to patrol billions of planets? And why do you travel at warp speed to another sector in the galaxy? Although these sound like minor details, it's a nice opportunity to educate your children at the same time that they are entertained. You can bet this is a booklet they are going to read several times. A little care in the setting of the game could have complemented Radio Shack's excellent series on the solar system for the Color Computer.

This, of course, does not take anything from the entertainment value of the game. Star Blaze will not bore you quickly. Not only do you have to avoid and fight alien ships, a not-so-easy task, but you also have to maneuver your ship very carefully to restock supplies. There are refueling stations and repair stations at different locations on the planet and docking takes great skill and practice. Moreover, your ship can still come under attack while you are restocking.

In summary, although l would have liked a more realistic setting for this game (but then again, 1 may be too picky on these matters), Star Blaze should provide many hours of entertainment.
(Radio Shack stores nationwide, ROM pak, \$19.95)

\title{
Owls Eye Pilot Light Helpful To Some
}

The lack of a power-on light on the Color Computer has been the subject of much discussion (and cussin'). It seems as though every day brings another new way of putting a pilot lamp on the CoCo. Some put the light inside the computer while others put lights in the joysticks. Owls Nest Software has come up with a rather unique approach to the problem - but in this case, the cure may be worse than the disease.

The Owls Eye Pilot Light is a light-emitting diode (LED) mounted in a small clip, which sticks to the left side of the CoCo's case. The LED gets its power from the computer through one of the joystick sockets. The installation takes less than a minute, does not require any changes to the computer, and does not affect the warranty (if still in effect) on your machine.

Problem Number One: The pilot light draws a fairly large current from the computer's joystick circuitry. The combined load of the Owls Eye and one joystick is a bit too much for the computer and causes erratic joystick operation. To make the joysticks work properly, you must unplug the Owls Eye - even if you are only using one joystick. You then have to remember to plug the light back in after using the joystick, which defeats the whole purpose of a light - to remind you that the computer is on in the first place. The reason that the Owls Eye draws so much power is that it uses a stronger LED than the lights used in the joystick light kits available from other suppliers.

Problem Number Two: The Owls Eye is a bit unsightly, stuck on the outside of the case next to the keyboard. It looks like something that some kid wired up in a seventh grade shop class.

Problem Number Three: When I received a sample and tried to plug it into my Color Computer, it wouldn't fit! The U -shaped cutout in the case was too small for the plastic shell of the plug. I later found that it also wouldn't fit on another CoCo (like mine, an older unit with the RAM size button on top) in the Rainbow office, but that it did fit on the TDP System 100 and the new 64 K Color Computer (with a white case). This is due solely to the type of plug that Owls Nest uses; if a different plug from another manufacturer is used, it would fit on all CoCos.

A pilot light is a useful addition to the CoCo, but I'm hesitant about recommending this one unless you never use joysticks, or are flatly unwilling to modify your machine to install a light. The Owls Eye is easier to install than any other CoColight kit, but others are neater and don't interfere with your joysticks.

- Ed Ellers

Turn your Color Computer into a graphic design center with the ease of a keystroke! MagiGraph makes it simple to create highly detailed figures up to and including an entire high-resolution screen. Designed for those with some experience in Basic and Assembly Language programming, MagiGraph includes lots of special features:
- A full set of logical and pixel manipulation functions simplifies the development of complex figures.
- An editor lets you zoom in and work on every detail of your design. Toggle between the "macro' and "micro" screens for perspective on your creations.
- Nine animation buffers allow you to preview each sequence to ensure continuity and smooth flow.
- Versatile I/O routines store a graphic screen on cassette or floppy disk; recall it later for use by another program or revise it with MagiGraph.
If you're looking for the finest graphic development utility available for your Color Computer, THIS IS IT. Maximize your machine's potential, while you push your imagination to the limit - with MagiGraph!

By Kevin Dooley. Cassette \(\$ 34.95\) (16K required); Disk \(\$ 39.95\) (32K Extended Color BASIC required); Amdisk cartridge \(\$ 44.95\).

\title{
CSPOOL Color Computer Print Spooler
}

Stop Waiting Around for the Printer! CSPOOL allows you to use your printer and computer concurrently, takes only 26 bytes of Color Basic's memory, and gives you 32 K of print buffer. It's like having two computers in one! By intercepting characters sent to the printer and storing them in the upper 32 K of RAM, CSPOOL allows you to run other programs while your printer is doing its job. CSPOOL is FREE with the purchase of a 64K RAM UPGRADE KIT from The Micro Works, or it may be purchased separately on cassette or diskette for \$19.95. Requires 64 K ; not for FLEX or 0 S 9 .

64K MEMORY UPGRADE KIT: For Rev. levels E, ET, NC, TDP-100s, and Color Computer II. Eight prime 64K RAM chips, instructions, and CSP00L: \$64.95.

\section*{SYSTEMS SOFTWARE}

MACRO-80C: DISK-BASED EDITOR, ASSEMBLER AND MONITOR-With all the features the serious programmer wants, this package includes a powerful 2-pass macro assembler with conditional assembly, local labels, include files and cross referenced symbol tables. MACRO-80C supports the complete Motorola 6809 instruction set in standard source format. Incorporating all the features of our Rompack-based assembler (SDS-80C), MACR0-80C contains many more useful instructions and pseudo-ops which aid the programmer and add power and flexibility. The screen-oriented editor is designed for efficient and easy editing of assembly language programs. MACRO-80C allows global changes and moving/ copying blocks of text. You can edit lines of assembly source which exceed 32 characters. DCBUG is a machine language monitor which allows examining and altering of memory, setting break points, etc.

Editor, assembler and monitor-along with sample programs-come on one Radio Shack compatible disk. Extensive documentation included. By Andy Phelps. \(\$ 99.95\)
SDS-80C: SOFTWARE DEVELOPMENT SYSTEM-Our famous editor, assembler and monitor in Rompack, Like MACRO-80C, it allows the user to write, assemble and debug assembly language programs with no reloading, object patching or other hassles. Supports full 6809 instruction set. Complete manual included. \(\$ 89.95\)
MICROTEXT: COMMUNICATIONS VIA YOUR MODEM! Now you can use your printer with your modem! Your computer can be an intelligent printing terminal. Talk to timeshare services or to other personal computers; print simultaneously through a second printer port; and re-display text stored in memory. Download text to Basic programs; dump to a cassette tape, or printer, or both. Microtext can be used with any printer or no printer at all. It features user-configurable duplex/parity for special applications, and can send any ASCII character. You'll find many uses for this general purpose module! ROMPACK includes additional serial port for printer. \(\$ 59.95\)

\section*{MICRO WORKS COLOR FORTH}
- Faster to program in than Basic
- Easier to learn than Assembly Language
- Executes in less time than Basic

The MICRO WORKS COLOR FORTH is a Rompack containing everything you need to run Forth on your Color Computer. COLOR FORTH consists of the standard Forth Interest Group (FIG) implementation of the language plus most of FORTH-79. It has a super screen editor with split screen display. Mass storage is on cassette. COLOR FORTH also contains a decompiler and other aids for learning the inner workings of this fascinating language. It will run on \(4 \mathrm{~K}, 16 \mathrm{~K}\), and 32 K computers. And COLOR FORTH contains 10K of ROM, leaving your RAM for your programs! There are simple words to effectively use the Hi-Res Color Computer graphics, joysticks, and sound.

Includes a 112-page manual with a glossary of the system-specific words, a full standard FIG glossary and complete source listing.

MICRO WORKS COLOR FORTH .
THE BEST! From the leader in FORTH, Talbot Microsystems. \(\$ 109.95\)

\section*{MACHINE LANGUAGE}

MONITOR TAPE: A cassette tape which allows you to directly access memory, l/0 and registers with a formatted hex display. Great for machine language programming, debugging and learning. It can also send/receive RS232 at up to 9600 baud, including host system download/upload. 19 commands in all. Relocatable and reentrant. CBUG TAPE: \$29.95

MONITOR ROM: The same program as above, supplied in 2716 EPROM. This allows you to use the entire RAM space. And you don't need to reload the monitor each time you use it. The EPROM plugs into the Extended Basic ROM Socket or the Romless Pack I. CBUG ROM: \(\$ 39.95\)

SOURCE GENERATOR: This package is a disassembler which runs on the Color Computer and generates your own source listing of the BASIC interpreter ROM. Also included is a documentation package which gives useful ROM entry points, complete memory map, l/0 hardware details and more. A 16 K system is required for the use of this cassette. 80C Disassembler: \(\$ 49.95\)

\section*{HARDWARE}

PARALLEL PRINTER INTERFACE-Serial to parallel converter allows use of all standard parallel printers. PI80C plugs into the serial output port, leaving your Rompack slot free. You supply the printer cable. PI80C: \$59.95

\title{
Keyboard - A Good Drill To Improve Typing Skills
}

Keyboard, from B5 Software, is a drill and practice educational utility to help one with typing skills. This software is also great for helping children with their motor development skills while learning proper finger placement for typing if they so desire. The Keyboard package supports itself with three different drills and has an option to use other drills if you purchase one of their Data Tape Drill packages.

You load Keyboard with a CLOADM into a 32 K Extended basic Color Computer. You will have the opportunity to see an introductory screen while the program is loading - a nice feature, especially for children. There are special loading instructions for adequate memory.

When the program is loaded, you are prompted with a menu. Special control keys feature the [SHIFT][Up Arrow] to return to menu. The key \([R]\) repeats the lesson loaded from a data tape. The menu screen displays the graphic keyboard, which is very well done. The home keys (A, S, D, \(\mathrm{F}, \mathrm{J}, \mathrm{K}, \mathrm{L}, ;\) ) are in a different color than the rest of the keyboard. Lines separate the keyboard to demonstrate which finger is used to strike a certain key.

Presentation one from the menu is an ABCs Key Location Practice. A letter of the alphabet appears on the graphic keyboard with a line blinking underneath it. When you press

IS YOUR COMPUTER IGNORING YOU ???

You've just typed in the Gettysburg Address and now you see that your computer on)y heard every other word!

THE KRICKIT CHIRPS ONLY WHEN YOUR COMPUTER HAS CAUGHT THE KEY. With the Krickit, there is no wasted effort pounding keys to make sure they contact or looking at the screen after every character. You can keep your eyes on the listing and not lose your place.

Works great with text editors and DBM's (Telewriter-64 and Homebase, to name a few) or when entering programs with just the BAGIC
line-editor in your computer. Just plugs in! Needs no software or hardware modifications. Builtin speaker! Uses no CPU time! Your computer has better things to do than sound key beeps.

The Krickit has other valuable features, too. A convenient switch controls the Cartridge Interrupt line. Instead of clumsy, messy tape on fingers 7 or \(\theta\), just flip the switch to access Basic with a game pak installed. It also has a more accessible reset switch, lighted power indicators, gold edgewingers and an extension cable.

We are sure that after you try the krickit you will never want to be without it. Take 30 days to decide you like it or return it for a full refund. 24-hour arder line. Order yours today for only \(\$ 59.95\) (plus shipping and handling). CDD, visa, and Mastercard accepted.
that letter on the computer keyboard, the next letter is presented. The computer will not accept a wrong answer. When the alphabet is completed, the length of time elapsed is displayed. When this is completed, another presentation is given using the alphabet.

The second presentation is an All Key Location drill and not only includes the alphabet, but also the punctuation keys and command keys. The keys are presented on the graphic keyboard in random order and wait for the response from the keyboard. Time is also kept for this drill.

Presentation three is a finger drill. Three different lessons are included, beginning with the home key letters. The letters appear in pairs or sets of four at the top of the screen. When you type the letters, they appear at the bottom of the screen. Lesson B works with the bottom row keys and lesson C gives drills for the top row of keys.

Presentation four requires Data Tape Files and I was sent Phonic Drills to go along with this review. The Phonic Drill Data Tape includes 11 lessons featuring various combinations of phonic sounds such as: AI AI RAIN MAIN; WE SAW A TRAIN; AY AY PAY SAY; I PLAY IN CLAY. The drills include the phonic syllable, words that include the syllable and a sentence that includes the syllable. This is a good exercise to help children with reading if they sound the syllables and words as they are presented. This is an excellent drill!

Other Data tapes available according to the documentation are "Dolch" Words (based on a list compiled by a Dr. Dolch, of the 273 most-used words in primary readers), Grade Two, Grade Three, Grade Four, Grade Five, Grade Six, Space Words, Adult/Most Misspelled.

Keyboard can be used with young children to help with letter recognition. It can be used with older children to help them develop their motor skills and learn letter placement on the typewriter. Adults can use the program as a typing drill. It is also a lot of fun.

It is good to see good educational software for all ages. If you have young children, you could not outgrow the usefulness of this software package. Keyboard is available for 16 K and 32 K systems, tape or disk.

> (B5 Software, 1024 Bainbridge Pl., Columbus, OH 43228, 16 K tape \(\$ 19.95,32 \mathrm{~K}\) tape \(\$ 24.95\), 32 K disk \(\$ 26.95\), Data tape \(\$ 8.95\) )

\section*{Shoot 'Em Up Again In HyperZone}

As soon as I loaded this auto-executing game from Computerware, I knew that writing this review was a job for my consulting team of experts: teen-age sons Ken, Tom and John, along with their friends.

HyperZone begins with some very cleverly done title graphics. The player selects a difficulty level from 0 to 9 . This controls the number of ships the player starts with and the number and frequency of ships attacking. In HyperZone you are the pilot of a spaceship and the view is forward, out the cockpit window. Attacking ships and bombs come at you from all directions. If you have ever played Project Nebula, this is very similar to the battle portion of that game with better and more colorful graphics, but without the space map, space station refueling, and damage reports.
After turning HyperZone over to my panel of experts and letting them play as much as they wanted, I asked for their evaluation.

On the positive side, they agreed that the graphics were well done. Unfortunately, the negative side got a longer list and I think, in a way, their comments show the quality of the software we as CoCo owners have come to expect for our machine. My panel admitted that if they had seen this game two years ago when CoCo was still a relative newcomer, they would have been extremely impressed. However, now that we have games like The King, Zaxxon, etc., they found HyperZone to be disappointing. For the type of game it is, they felt the action could have been faster. They also got bored rather quickly because, except for changes in the background color, there is no variety in the play. It is simply a continuous stream of enemy ships and bombs coming at you which you must either avoid or shoot. If you avoid, you survive but you must shoot to get points. One point which the "experts" found to be annoying was the redisplay of the entire title routine between every game.

To summarize our collective opinion, while HyperZone has excellent graphics, the play does not offer enough to hold one's interest for very long. This game has already been done and done better in Project Nebula.

\section*{It's Scavenge For A Good Hunt}

It's amazing when some idea, so simple you kick yourself for not doing it, can work better than the most elaborate scheme you can devise. Marshall McLuhan said, "Every new medium has a previous medium as its content." He was absolutely right in the case of Scavenge Hunt. It's a new computer Adventure game made of an old human adventure game.

In this Scavenge Hunt, you are the only one in the hunt and you have a lot to lose. The evil Hermit of Medicine Mountain has captured your niece and you must free her. To do that you must gather items on a list and take them to Hickory Ridge - which itself is not that easy to find. You begin with enough money to buy some of the things on the list. Oh, yeah - the list! You've got to find that, too.

Scavenge Hunt is logical all the way. You can even draw a geographically correct map of the principal locations. However, one of the irritating things is that some nonexistent directions are given as options. But more than once we found ourselves at the end of our list of possibilities when, with a flash of logic, we would open up a new area and find ourselves breathless with our own mental prowess and the adventures that lay ahead.

The best thing about Scavenge Hunt is its level of reality. The situations are all real life problems. Not that they are the problems we face daily, but they can be solved with common knowledge and abilities. The willingness to explore every detail is rewarded. There are no totally illogical, random ways to lose, as in some games. You must be resourceful and careful.

As a father and son review team, we really enjoy games which allow us to have equal input. This one does. If you can afford it, it is worth the money. But let us add this as an aside to the author. It's clever that the final question has several levels to it. But if you choose the wrong one, you must play the entire game over to give another possible response. Not fair! And out of character with the rest of the game.

However, the good features far outweigh the bad. The verb list is given every time you use a wrong verb. The execution is as quick as you can think. The BASIC program is never a drag. This is not a real difficult game - it takes about 12 hours - but it is an interesting challenge. And it can be done!

\section*{A Good Business Machine}

I have a 64 K CoCo with one disk and a daisy wheel printer. These items coupled with Elite*Calc and Telewriter-64 pretty much give me what I need to run my small business. Considering my investment of under \(\$ 1200\), it is easy to see how I have become a real fan of the CoCo.
- Jim Micheau

\section*{FINALLY!}

\title{
A REAL SPREAD-SHEET PROGRAM FOR THE COLOR COMPUTER DYNACALC'"
}

\begin{abstract}
Business people use spread-sheets to organize columns and rows of figures. DYNACALC simulates the operation of a spread-sheet without the mess of paper and pencil. Of course, corrections and changes are a snap. Changing any entered value causes the whole spread-sheet to be re-calculated based on the new constants. This means that you can play, 'what if?' to your heart's content.

But DYNACALC isn't just for accountants. DYNACALC can be used for just about any type of job. Not only numbers, but alphanumeric messages can be handled. Engineers and other technical users will love DYNACALC's sixteen-digit math and built-in scientific functions. There's even a built-in sort command, so you can use DYNACALC to manage small data bases - up to 256 records.
\end{abstract}

DYNACALC will let your computer do just about anything you can imagine. Ask your friends who have visicalc, or a similar program, just how useful an electronic spread-sheet program can be for all types of household, business, engineering, and scientific applications.

DYNACALC is designed to be used by non-programmers, but even a Ph.D. in Computer Science can understand it. Built-in HELP messages are provided for quick reference to operating instructions.

DYNACALC has a beautifully simple method of reading and writing FLEX data files, so you can communicate both ways with other programs on your system, such as the Text Editor, Text Processor, Sort/Merge, RMS data base system, or other programs written in BASIC, C, PASCAL, FORTRAN, and so on.

Except for a few seldom-used commands, DYNACALC is memory-resident, so there is little disk \(1 / 0\) to slow things down. The whole data array (worksheet) is in memory, so access to any point is instantaneous. DYNACALC is 100\% 6809 machine code for blistering speed.

Color Computer DYNACALC works with the FLEX operating system from Frank Hogg Laboratory ( 64 k required). If you aren't already using this powerful operating system, we have a special deal for you: order DYNACALC (regularly \(\$ 200\) ) and FHL Color FLEX (regularly \$99) together for only \(\$ 250\).

To order, see your local DYNACALC dealer, or order directly from CSC at the address below. We accept telephone orders from 10 am to 6 pm , Monday through Friday. Call us at 314-576-5020. Your VISA or MasterCard is welcome. Be sure to specify that you want the Color Computer version.

\section*{Software Review}

\section*{Stockbroker - A Great Way To Learn The Stockmarket}

Have you ever wanted to play the stockmarket, but were afraid to take the risks? Maybe you're like me and don't have the money to invest in stocks. Personally, I prefer conservative investments like savings, TDA, and money markets. But what the heck! The most you can lose is \(\$ 500,000\) and your cost for the game Stockbroker.

I've never had much interest in stocks, so my first session with Stockbroker lasted only a few minutes. It was during my second session that I learned my first lesson about the stockmarket - I just knew if I hung onto the sliding stock it would eventually bounce back and I could recover some of my losses! It didn't. It bottomed out. And since then I have found myself involved in increasingly lengthy sessions attempting to double my investments.

Stockbroker gives up to six people that chance to double their investments, to buy and sell stocks, and manipulate their investments as best they can for better or for worse. You have a choice of two programs: 16 K or 32 K . Both programs operate the same, but the 32 K program has a Hi-Res screen that monitors and graphically displays the relative value of all six stocks in relation to the original value at the beginning of the game. The 16 K version is faster playing.

Each player initially buys his choice of shares, at \(\$ 100\) a share, in the six stocks available: gold, copper, wheat,

hydro, silver, and oil. If you are running the 32 K program, the Hi-Res screen appears at this time and the stocks are now on the move. (The 16 K displays the message that it is now one of the players'turns.) The biggest flaw, perhaps the only one, in the documentation or programming is at this point. You are watching the screen and waiting for something to happen. Nothing does. You get impatient and begin hitting keys. There is no program prompt or anything in the documentation that tells you something has to be done here.

The destination of the market is in your hands and you don't even know it the first time through the program. Each player is supposed to strike any key, which then causes a display of one of the stocks and its status (up/down) or payment of a dividend earned. After all players have had a chance to influence the stockmarket, each player is shown his personal update screen. The update shows his current accumulation of stocks, prices, shares, total stock value and cash, and his total worth. You are then given time to assess the situation and given an opportunity to buy and/or sell any amount of stock. Completing this, you are given the opportunity for continuing play with another round, repeating the process by striking any key and generating the next set of stock figures. The game continues as long as you want.

Stockbroker is an easy game to play and is probably as unpredictable as the real thing. It is very time consuming and can provide some real learning experience about stockmarkets as well as entertainment.

Not much documentation is needed for this type of program, but more should have been given, or a screen prompt included as mentioned earlier. One-half sheet tells you what Stockbroker is about, how many players can play, and that you have \(\$ 500,000\) cash to start with. Nothing is said about running the program. However, it doesn't take one long to discover the flow of the game and after one pass through the program, documentation, or lack of it, is in the past.

\title{
96K Memory? Pageplus Is One Way
}

Were you ever in the middle of a BASIC program execution and wanted to check a different program listing to find a specific technique? You could save your current program, load the other, list, read, then reload your first program and continue on your way. Or . . . Pageplus.

Pageplus is a machine language utility for 64 K machines which will allow you to access two separate banks of 32 K RAM, exclusive of the upper 32 K ROM and \(\mathrm{I} / \mathrm{O}\). The author states this is accomplished through manipulation of the SAM chip, the SAM chip being capable of addressing 96 K locations. No further detail was available as to how this addressing works, suffice it to say that it does.

Now that we have it, what do we do with it? Let's look at the above example in a little more detail. You are writing or running a BASIC program with Pageplus resident at \&H7DFF. You get to a routine in YOURPROG.BAS that was done a little differently in \(M Y P R O G . B A S\) but you can't remember exactly how it was structured. You get in the direct command mode and enter \(X=\) USR9(0) to get to the other 32 K page. You know you are on the other page by the
change of the screen color. Now you can load MYPROG. \(B A S\) and LIST to examine exactly how it is formatted. You can then RUN MYPROG.BAS to make sure it is the routine you wanted to use. Now, back to the command mode to call the USR function to return to the other page and continue your work.

The program instructions use an example of playing two different games so that when you score a point in one program it will call a USR function to take you to the other game. When you score a point in the other game, you are returned to the first game. And back and forth and back and forth. . . .

The instructions also indicate the ability to use both banks of 32 K for one large BASIC program by splitting the program. The instructions were very brief and I was unable to master this application of Pageplus. Probably the best way to get an understanding of the operation of the program is to run the TEST and THIS programs which have been included to demonstrate the program switching capability of Pageplus from within the BASIC programs.

Pageplus appears to have significant potential in the hands of a skilled programmer who can take full advantage of the flexibility it offers. The author may wish to consider including a more comprehensive set of instructions or tutorial to increase the number of people who could effectively use the program.

\title{
Elite*Word Is Friendliest Yet
}

\author{
By A. Buddy Hogan
}

Elite*Word is a machine language word processing program for the 32 K Extended Basic Color Computer that is described by its distributor, Elite Software, as a second generation word processor. This means that it is built upon the features that appeared in the first generation of CoCo word processors and contains many features that expand the capabilities of these earlier programs to perform functions that users requested or are available in programs for other computers. As a user of both of the first generation CoCo word processors, I agree with the distributor's description of Elite*Word. The major advance evident in the use of the program is the degree of user friendliness that is designed to make even a first-time user of a word processor feel comfortable and able to achieve the same results as an old pro.

The program is provided in both cassette and disk form. The disk version is supplied in an attractive blue vinyl folder (approximately 9 " \(\times 61 / 2^{\prime \prime}\) ) with two vinyl pockets containing the program disk on one side and the instruction manual on the other. This makes for a sturdy and attractive package. The disk contains two basic "drivers," one for 32 K and the other for 64 K , the two corresponding machine language programs that are "called" by the driver programs, and a Test program that is used in the tutorial section of the manual. In the 32 K mode, the program will allow 13,512 bytes for input and for 64 K the input allowed is 22,392 bytes.

A word processing program is basically an editor - just like the editor you use with Extended BASIC. It allows you to enter, manipulate, store, retrieve and print text. A few bells and whistles are sometimes added to allow you to perform system utility functions. Most expensive word processing "machines" found in the workplace are just computers that are dedicated to one function - word processing. These dedicated systems use multiple terminals, hard disk storage and high speed printers to perform essentially the same functions that you can perform on you CoCo for a lot less money.

Elite*Word begins with an attractive graphics display and then places you in the command mode. The commands that are available to you in this mode are displayed at the top of the screen. A new set of commands is displayed by hitting [ENTER] until you come back to the original set. These commands are called by entering the first letter of the command. You are now ready to begin entering text. But before the manual lets you go out on your own, four and a half pages are devoted to a tutorial using the Test program that is provided on the program disk. The tutorial walks you through the main features of the program and lets you practice each feature.

The program makes good use of sound to remind you when you are trying to do something that is not allowed. All errors that you may make are forgiven. You either get a sound telling you that you have to do something else, or in the case of I/O Errors, the program recovers without losing all the text that you have input. If you select any option that will wipe out everything you have typed, you are asked if you
are sure you want to execute the command. This is what user friendliness is all about. You don't have to be a professional word processing operator or programmer to use Elite*Word with ease. The commands that are available from the main command mode follow.

\section*{INSERT}

This is one of the two main commands used for inserting text. If you try to insert text while you are in the main command mode, each key pressed returns a sharp sound alerting you to the fact that you have to hit [I] before inserting text. When you select [1], the display at the top of the screen changes to inform you that you are in the insert mode, how many characters are available for your use, how many characters into the text the current position of the cursor is and whether you are in upper- or lowercase (you use [SHIFT][0] to toggle upper- and lowercase). The screen display in this mode is 32 rows across by 19 rows down. Text typed in this mode is inserted to the left of the cursor position. If you position the cursor over a character that has already been typed, the new character is inserted to the left of the existing character (that's why this is called the insert mode).

The arrow keys function to move the cursor in all four directions; [CLEAR][P] moves the cursor one page forward and [CLEAR][O] moves it one page backwards. A neat feature is the smooth scrolling that is accomplished by depressing the down arrow and going forward in the text. The only thing 1 know of to compare with this scrolling is Colortext by Bertamax.

Errors are corrected by hitting [CLEAR][-] or [CLEAR] [D] or [CLEAR][@]. Another neat feature in this mode is called Typomatic Key Repeat. This fancy title just means that if you keep any key depressed, the character will be repeatedly entered until you release the key. The insert mode is exited by hitting [BREAK].

\section*{XCHANGE}

This is the other mode for the entry of text. In this mode, as the title suggests, any text that is printed over existing text replaces it rather than being entered to the left of the cursor as in the insert mode. This is especially useful when you are using the program to edit programs.

\section*{SAVE}

When you select this command, you are asked for the name of the file to be saved. If you have previously saved a file during the current session, its title is shown. If you want to use the the same filename again, just push [ENTER]. This facilitates the editing and saving of the same file. If you want to give the file a new name, you just enter it at the prompt. If you don't want to save the file after all, just press [BREAK]. Elite*Word supports three file formats:
1) Binary - this is the format that will be used unless you select one of the other two. It is also the normal save that is used for most files. All printer controls are saved in this format along with the file.
2) Formatted ASCII - the file is saved in ASCII, formatted exactly as it would have been sent to the printer. A comma is added to the end of the filename to save it in this format.
3) Source ASCII - this is an exceptional feature that saves the file in ASCII, but first deletes all formatting of the file. This format is useful when you want to save a source code file or a Basic program. In fact, 250 characters per "line" are permitted in this format for that

\section*{＂TRS－80 COLOR COMPUTER PRODUCTS＇}

\section*{＂ENHANCED 1248－EP EPROM PROGRAMMER＂}

The list of directly compatible EPROMs increases by one，now including：2508＇s，2758－0／1＇s，2516＇s，2716＇s，2532＇s，2732＇s， 68732－0／1＇s，68764＇s，and 68766＇s．

\section*{NEW FEATURES INCLLUDE：}

1）Intelligent algorithm that reduces programming time to as little as \(1 / 6\) that of fixed cycle programmers．
2）Diagnostic routines to isolate defective EPROMs，or locate differences．
3）A feature that guards against EPROM type entry errors．
4）Diagnostic routines that prevent keyboard entry errors from causing disastrous consequences．

\section*{FIRMWARE FEATURES}

1）EPROM ERASED！
4）BYTE PROGRAMMING！
2）COMPARE EPROM TD RAM！5］DUMP EPROM TO RAM
3）BLOCK PRDGRAMMING！
6）JUMP！
Firmware is＂stack－oriented＂，＂position independent＂，and＂menu driven＂．Supplied in an EPROM，it can also be stored on disc or tape for execution from RAM if desired．

\section*{STANDARD HARDWARE FEATURES}

1）It has its own＂on－board＂ 25 volt programming supply
2）A quality textool＂zero insertion force＂［ZIF］socket．
3）Socket for firmware on－board．
A PIA port is also available on the programmer．This 8 bit parallel 1／O port with handshake lines，can be used for many applications， such as a parallel printer port．Details on how to use this port as a printer interface are included in the instruction manual．

The instruction manual describes how to take full advantage of the power of this versatile programmer．We think you＇ll agree，that never before was an EPROM programmer so easy to use，and feature packed as is the 1248 －EP．

The enhanced 1248 －EP costs only \(\$ 129.95\).
Firmware upgrades are available to our previous 1248－EP custom－ ers，in EPROM，for just \(\$ 29.95\) ．

\section*{＂THE CK4 SERIES PROM／RAM CARDS＂}

The CK4 cards work with \(2 \mathrm{~K}, 4 \mathrm{~K}\) ，and 8 K ROMs or EPROMs of the 5 volt only variety in 24 pin packages．The CK4 can also work with static RAMs，and increase your available memory by as much as 16，128 bytes．

The CK4－1 is specifically designed for use in computers with＂F＂ series boards，or those machines that are＂write protected＂in the address range of \(\$ C O O O\) through \(\$ F E F F\) ．The CK4－1，therefore， does not incorporate features designed in the CK4 for use with RAM．

The CK4－2 is the unpopulated version of the CK4 series board．Buy this version and configure to meet your specific requirements．and stretch the value of your dollar．

\section*{FEATURES SUMMARY}

11 MIX ROM AND RAM
2）EXPAND RAM FROM 2－16k！
3）YOU WRITE PROTECT RAM：
4）EXTREMELY FLEXIBLE OECODING
5）PROVIDES FDR BATTERY BACKUP

COMPUTAR ACCESSORIES OF ARIZONA 5801 E．VOLTAIRE DRIVE SCOTTSOALE，ARIZONA 85254 （602）986－7569
reason. A semicolon is added to the end of the filename for this format.

\section*{LOAD}

The same three formats used by SAVE are used by LOAD and the procedure is very simple. The disk version, however, adds a very useful feature. The LOAD command will append any file loaded to the end of any file already in the buffer (provided that there is enough memory left). If you don't want to append, you must remember to do a NEW before you LOAD the new file. If you try to append a file and there isn't enough memory, you are informed of that fact and then the original file is restored.

\section*{QUIT}

With this command you exit Elite*Word and go back to BASIC. Since QUIT destroys the file, you are asked if you are sure you want to execute it. I must report that when I attempted to exit the 64 K version, I got a screen full of garbage - not that it mattered much.

\section*{WORD WRAP}

This feature eliminates split words at the end of a 32character line. There are times, though, when this is not a desirable feature. If you are editing a program, you want all 32 characters to remain on the line, so you would toggle WORD WRAP off by hitting the [W] key. The top line of the display informs you of the current condition - [ON] or [OFF].

\section*{JUMP}

No, this is not a time out for a little checkers. It allows you to "jump" to the beginning or the end of the text file that you

UPLOAD
\$16.95
This is the UPLOAD side of DLOAD and DLOADM in Extended Color Basic. Send a basic or machine program to another ECB Color Computer, Programs can be passed directly or by phone if both computers are hooked to modems,(not supplied), Uploaded program arrives at the receiving end ready to save, run, or execute, Patch to correct the flaw in DLOADM is supplied in public domain.

\section*{INDEXER}
\(\$ 14.95\)
Program produces a sorted list of variables and line numbers used in your basic program. Following each variable or line number will be a listing of the numbers of the basic lines which contain the variable or line number. RUNning the basic program is not required, Bonus! Global search of basic program for a variable, a text string, or a basic keyword,

\section*{Fast machine language 16K/32K EXTENDED BASIC, Tape or RS Disk Add \(\$ 2,00\) for shipping and handling}

ML-US'R SOFTWARE 115 RISING SUN, Dept R FORT MITCHELL, KY 41017
are working on.

\section*{FIND}

Every word processor worth its salt has a global search feature that allows you to find a string of characters within the body of the text and then do with them what you will. Key [F] and you will be requested to enter the string of characters you want to FIND (the limit is one screen line of characters). The program will perform a forward search in the text for the string. If it finds it, the cursor will appear under the first character of the string. You then do what you want to and if you want to find the next occurrence of the string, you just push the [A] key (for again) and the process continues. If the string is not found, the cursor advances to the end of the file and a zero appears on the top line of the display. It is important to remember when using this feature that the FIND string must be exactly the same as the string in the text. Upper-and lowercase letters and carriage returns must be observed to have a successful search. You must also remember that the search is forward only, so do a JUMP to the beginning of the file before beginning.

\section*{CHANGE}

This is a variation of the FIND command that allows you to do a global search for a string and then replace it with another string. You are prompted for both the old and the new string. Otherwise, it operates exactly as FIND.

\section*{BLOCK}

Move the cursor to the first character of the text to be blocked out and press the [B] key. A block marker that looks like a dark left parenthesis will appear to the left of the character. You will then be asked which of the three very

\section*{Co Co-Cooler}

\section*{- Brings operating temperature} to ambient, regardless of accessory load

powerful BLOCK operations you want to use:
1) Delete - you move the cursor one space past the last character to be deleted and push the [D] key. The text within the block will be deleted and the screen will be rewritten.
2) Move - same as above but this time you push the [M] key. An end-of-block marker (bold right parenthesis) will appear to the right of the last character in the block. You are then asked where you want to move the block of text. You position the cursor there and push the [T] key and the block of text is written to the left of the cursor position. Unlike most other word processors, Elite* Word deletes the moved text from its original position as it moves to its new location.
3) Copy - the same as above except that the moved text is left in its original position as well as moved to the new position.

\section*{NEW}

This command clears any text from the buffer and allows you to start entering or loading new text. You will be asked if you are sure you want to erase the contents of the buffer.

\section*{DRIVE}

This command displays the current drive that will be used for saves and loads and allows you to change it to meet your needs. It's a good idea to store all text files on a separate disk, either in drive 1 or by disk switching if you only have one drive. Elite* Word comes with a write protect tab so you won't put text files on the program disk.

\section*{?DIR}

Earlier mention was made of bells and whistles. This
command has nothing to do with word processing but is included because it makes the use of the main program much easier. This command will display a directory of the disk in the default drive and the number of free granules remaining. This is helpful if you are trying to remember the name of the file you want to load or if you want to know whether there is enough room on the disk for the file you want to save. To return to the main command mode, hit [BREAK]. If you hit this key while the directory is still scrolling, however, you will be returned to BASIC. But, remember, I said this was an extremely user friendly program. To recover from this apparently fatal mistake, just type CONT and you will be returned to the main command mode.

\section*{HIDE}

When you are editing a text file it is helpful if you know where the carriage returns are. With this command you can make them visible and invisible again by toggling the [H] key.

\section*{G/W}

Pushing the [G] key will switch the screen background color between green and white. Your personal preference in viewing and the type and condition of TV or monitor used will dictate which of these colors you choose.

\section*{PRINT}

This command displays an output format menu that allows you to set the parameters that will be used to print or view the text file. You can set the top, bottom and left margins; determine the number of characters to be printed on each line (the limit is 250 and it worked fine on a 155character IBM Selectric Printing Terminal that is interfaced

to my CoCo ); set the line spacing and page length; right justify the printout; print up to 255 duplicates of the text file; cause the printer to pause at the top of the next page (so you can use single sheets in the printer); view the text as it will be printed (screen display is \(64 \times 19\) ); if characters per line is set to more than 64 you may view the text from the right side also - but this only worked for me up to 129 characters per line); merge a variable text file (more on this later); cause pages to be numbered; and select various printing fonts depending upon the capabilities of your printer (the program requires that you enter these codes into the program in order for this feature to work - more later). You may start the printing at any page by indicating the proper number and, of course, you can also control the printer by embedding codes in the text.

There are some screen editing controls that we haven't mentioned so far:
[CLEAR][R] rewrites the screen. This is necessary if you have been doing some revising because the screen will have some blank spaces and other odd looks that need to be corrected for you to properly visualize what you are doing.
[CLEAR][C] causes the current line to be centered when printed (or viewed from the print menu).
[CLEAR][V] inserts a variable text marker into the file to be used to read in one line from the variable text file (hold on and we'll get to this shortly).
[CLEAR][S] inserts a marker in the text that causes the next line of the variable text file to be skipped.
[CLEAR][E] places an "eject" code in the text that causes a top of form feed (new page) when it is printed.
[CLEAR][.] is used to enclose codes that will allow you to set some of the print menu selections directly in the text. The key that is embedded is the same as that used to select from the print menu.

There is one print menu selection that is available only by embedding it in the text. To indent text, you embed [CLEAR][.][1][number of spaces that the text is to be indented][CLEAR][.] and then you return the text to the previously selected number of characters per line by embedding that code in the text right after your indent code. This feature allows you to have text indented within a document without manually manipulating the printout. Great news for term paper typers!

You may also send a string of Hex characters directly to the printer by embedding them in the text. This would be used by those who have printers that will do such things as backspace and underline. Disk users may print out more than one file at a time (chain printing) by embedding the filename of the other file to be printed at the proper place in the original document.

Now to the Variable Text options that we've mentioned several times. The Variable Text feature allows the user to design form letters or other documents that require the input of variables within the same text. The way it works is that you set up two files. The first one is the main file which has the text that will be used for all the variables. Embedded in this text are Variable Text Markers (VTMs) that tell the program when to include and when to exclude a line from the second file that is created.

Say you want to create a form letter that will go to a list of club members. You would create a file that contained, on separate lines, the first name, last name, street address, city, state, ZIP, telephone number, etc., for each member. Then you would create a main file that contained the salutation, then a VTM to include the first name of the first member
from the file of club members. You would continue to construct this main file so that it included all the variables you wanted at the appropriate places.

The reason you would use the Variable Text Skip feature is that you might not want to use the variables in the variable file in sequence. This allows you to pass over variable 2 and get to variable 3 , for example. This is a major feature of Elite*Word and one of the reasons it stands head and shoulders above the other two major CoCo word processors. One of them does not have this feature available and the other sells it as a separate program at about the same price as Elite*Word.

Elite*Word requires that you enter the printer control codes if your printer has the capability to print emphasized, condensed, double strike, elongated, etc. You are told which lines you must edit and are told that you must enter the codes in Hex. An example is given of how you would turn on the emphasized printer font for an Epson MX-80. That's the only example of print font that is given. Each line that must be edited contains "DATA 0,0 " and these zeros must be changed to the Hex numbers for your printer controls. You have to look in your printer manual for these codes and then convert them to Hex. You can also change the Baud rate for your printer if it is not 600 by editing in the new Baud rate in Hex in line 190. After all of these changes, you \(S A V E\) the revised program back to disk.

I mentioned that there were two BASIC "driver" programs for 32 K and 64 K . What I neglected to say is that these drivers are for the disk version only. Cassette users are given instructions on how to edit the cassette version of Elite* Word to turn on the print fonts and set the Baud rate and are also given a 64 K driver program that allows them to access the full 64 K for use with the program.

\section*{Documentation}

The program documentation consists of a 48 -page manual that is printed on both sides of \(51 / 2^{\prime \prime}\) by \(81 / 2^{\prime \prime}\) paper. The manual contains a brief tutorial and then a detailed explanation of each of the main command mode commands, output menu commands, screen editing commands, embedded format controls, a reference sheet containing all the command and control codes, an explanation of error codes that may be encountered, examples of how to edit the program for printer fonts and Baud rates and two programs - a 64 K driver program for cassette users and a carriage return driver for users with printers that require a line feed to be sent with each carriage return. The manual is written in a logical and easy to understand manner. Technical jargon is kept to a minimum. The use of the word "delimiter" without explanation is the most serious exception to this observation (it just means that it is the code that goes on both sides of something else). I found only two typographical errors and, in general, was pleased with the thought that went into the use of the documentation by everyone, pros and rookies.

I was more than satisfied with Elite* Word. Before 1 started the review, l thought that it would be just another program that would copy most of what others had done and add a few whistles and bells. After the review, I would not hesitate to compare it with the two best selling CoCo word processors. And my comparison places it at the top of the list.

\title{
Payroll Preparation Program Reaps Praise
}

\author{
By Dan Downard
}

The time has come for a confrontation with "Quillandink" Ledger, my trusty payroll clerk. After spending a few hours the previous evening filling in the initialization data for each employee, it was time to test the computer with this tedious task of payroll preparation. First, set the stopwatch.

Ready! Set! Go! I must admit I was anxious to see how long it takes. Down to the computer room. Turn on the monitor, the drives, the printer and finally the computer. Type RUN"PAY-MENU" and a menu appears. I type Option 2 for Prepare Payroll and after asking the starting and ending dates for this pay period, and whether I wanted salaried or hourly employees, the screen cleared and each employee's name appeared. After prompting for the total number of hours, 1 am asked how many hours were straight time, double time or triple time. Fine, 40 hours for Carl, 32 for Jim, etc., right from the payroll sheets.

After entering the data for all of the guys I return to the main menu and am prompted to enter " 3 " for the Payroll System. Another set of prompts assures me that if I select " 3 " the payroll will be computed. An asterisk appears every few seconds indicating that another record has been processed. Done in about 30 seconds.

Next, I asked for a payroll report. The noise of the printer is like music. Precisely, each employee's name appears with all of the data necessary to draft his paycheck along with a

}
summary of all major categories. Time! How long did it take? A little over six minutes? We'll try to improve that next week.

For the small businessman, one of the most time consuming chores is the weekly preparation of payroll. I am not exaggerating when I say that it shouldn't take over 10 minutes with Payroll from the Color Software Services division of Brantex, Inc. Payroll requires 16 K and Disk Extended BASIC with a single disk drive. An 80 -column printer is required for all reports. I suppose you could use the program without a printer, but that would seriously detract from the overall package.

The system can handle between 250 and 300 employees during any one pay period. It will handle the tax tables for 48 of the 50 states, excluding Oklahoma and Delaware. One note of caution. Get bulletins for both the federal government and your particular state before using the program. The tax tables in the manual are obsolete, and can get you into trouble fast. At the same time, the utility for setting up tax tables is very user friendly and these tables can be input with a minimum understanding of tax tables in general.

The documentation is excellent. In addition to adequate explanations of the various menus, a 19-page tutorial steps you through a typical payroll. One of the outstanding features of this manual is a list of all disk files and program variables on the last three pages. With this information, and a knowledge of BASIC programming, you can customize an already excellent program to suit your particular needs.

As I already mentioned, Payroll is actually a package of programs driven from a Main Menu. The major categories include Personnel System, Payroll Preparation, Payroll System, Reports, Tax Tables and Utilities, Miscellaneous Deductions and Year End procedures.

The Personnel System program is one of the initialization procedures necessary for the program to function. A disk file is opened for each employee with personnel information, tax status and deductions, employment date and pay rate all recorded in an organized format. Another section of this particular program allows the updating of current year-todate data for starting the program in the middle of the year. Data and totals for each employee can be edited as necessary including termination of the employee. Another category implements a constant miscellaneous deduction for each employee if necessary.

Prepare Payroll is used to enter the actual payroll data for each employee. Salaried and hourly classifications are handled separately due to the possible difference in pay periods. After prompting for the beginning and ending dates of the pay period, each employee in the current file is processed in the order of his/her employee number. You are first queried for the total number of hours for this pay period. Then, you are asked how many of these hours are straight time, 1.5 X time, 2 X time and 3 X time. The different rate totals are then checked against the period total for correctness and the gross pay is computed.

Next, up to eight miscellaneous deductions, in addition to any constant deductions, are input. After this task is completed for each employee you're ready to move back to the Main Menu.

I changed this program slightly as I had no need for the 2 X and 3 X pay rates. Instead, I prompted for a special pay rate and the number of hours at that rate. This allowed for things such as bonus pay, different pay rates, etc. I guess changes such as this depend on your particular pay structure, but, in many instances, people are paid at different rates depending on the job in question. As delivered, the program does not

* * * MORE THAN JUST A DATABASE * * *

Turn your TRS-80 Color Computer into a powerful business machine. Create and manage customized records for innumerable home and office applications. HOMEBASE \({ }^{T M}\) data management system goes beyond just storing, sorting and retrieving your business records. It allows you to use the same data records in calculations and in printing form letters and reports. The HOMEBASE \({ }^{\top M}\) text processing system is both a word processor and a complete filing system. Store 250 screens of text as data records and then use any portion of a record for searching, sorting, or for printing form letters and special reports.
HOMEBASE \({ }^{T M}\) is an invaluable tool for managing a business involving insurance sales, real estate sales, property rentals/management, mail-order sales, or any comparable business. Using HOMEBASE \({ }^{\text {TM }}\), both accounting and non-accounting applications are easily automated to save you time and provide better information about your business. Create customized ledgers or extend your payable and receivable records to include descriptive data important to the daily operation of your business as well as its continuing success.
HOMEBASE \({ }^{T M}\) is a menu driven system and does not require programming. The system documentation includes descriptions of every menu option and is uniquely designed for quick referencing. System documentation includes a tutorial and demonstration program.

\section*{DATA MANAGEMENT}
- 50 data fields - Formatted dates, time of day; phone numbers, \& dollar amounts - 24 scratchpad data fields not stored within any data record - Variable-length alpha/text data fields - Reorganize records using move or ascending/ descending sort or any data field Manage files using search/select, delete, clear, duplicate or list - Perform calculations on any numeric data using add, subtract, multiply, \& divide * Print using automatic formatting with options to print report titles, page numbers, record names and data names - File Utilities include generate, merge, duplicate, summarize, cassette backup/reload, rename, delete, directory display/print and moving data between files

\section*{\$15}

\section*{CUSTOM REPORTING}
- Merge data management files with text files - Create and store form letters and report formats - Print each data record as one letter or report - Print selected records as a single report/list - Change the print field size for any data field - Use a single report for different files - Print multiple copies

offer this feature. As mentioned, the addition of an extra rate was easy to implement, but more than two rates would require rearranging the file structure.

The real heart of the package is the Payroll System program. With this program the actual payroll computations are performed. FIT, FICA, SIT, CIT, NET PAY, SDI, FUTA and SUTA are computed from the gross pay calculated earlier. In addition, the eight miscellaneous deductions are deducted as required.

Edit features are included for special pays and changing records. After the payroll is computed, a single keystroke is all that is necessary to produce an attractive payroll report itemizing all deductions for each employee. The payroll report also includes totals for all categories for posting to your ledger. If you are using Colorsoft's Small Business Accounting System, you can automatically post the totals to their respective accounts. After you are satisfied that everything is okay, a menu prompt is included for updating the YTD (Year-To-Date) records for all employees.

Four REPORTS and mailing labels are generated by this segment of the package. In addition to an employee list and mailing labels, other reports include summaries of miscellaneous deductions, and YTD federal and state taxes. These utilities are very useful at tax preparation time. Individual subtotals are included along with a grand total.

The three remaining programs, Tax Tables \& Utilities, Miscellaneous Deductions and Year End, are not used as much as the rest of the programs. They are fairly selfexplanatory with a few exceptions. The Tax Table menu allows up to three federal and four state tables along with the standard percentage deductions including maximums, if necessary. General tax information and company data is also entered using this program. Miscellaneous Deductions defines the eight categories for anything you wish to withhold.

I am very pleased with the Payroll system and would recommend its use by any small business. It is very professionally written and presented. As you can see, the cost is very reasonable for this kind of package. To be more specific, if you would buy this same program for a Brand-X computer, it would cost you in the neighborhood of \(\$ 500\).

I found very few deficiencies in the program. One that I might mention, however, is the lack of the ability to make additions for company-paid benefits. Maybe you could consider these miscellaneous deductions and put a minus in front of them, but I didn't try it. Obviously, this program was written by a good manager, as you are just supposed to have deductions, not additions, but what about the working man? Another problem I encountered may be peculiar to Kentucky. In Kentucky, SDI is paid by the employer. Changing that was no problem. The problem was that different rates are applicable for different work classifications. The program had to be patched for every office employee to make this deduction.

Right before press time we we were informed of a new version of the program that will be released by the time you read this. It offers two important additions. The first is a 51 x 24 character screen. The second puts icing on the cake. Payroll 2.0 has a check printing subroutine using Moore 7020 forms. We tried both of the new features in a preliminary version, and true to form, they made a great program even better.

\title{
Homebase: A Powerful Data And Text Management System
}

\author{
By Gerry Schechter
}

If you are a serious CoCo user, you are probably considering the purchase of a "database" system. With such a system you can keep track of just about anything, without having to do any programming. Some of the database systems available today are designed with one purpose in mind, such as keeping track of name and address information for mailing lists and the like. Others are designed in an open-ended fashion which allow you greater flexibility in the design of your database. Naturally, the more flexible the system, the more work you will have to do in setting it up. The results, however, are generally worth the extra effort on your part, and you will find yourself using the system more.

Homebase is a complete data and text management system, designed for a 32 K system with at least one disk drive. It is written mostly in BASIC, although it does use machine language subroutines where necessary for speed. It consists of five distinct subsystems, which include text processing, data management, text utilities, data utilities, and a custom report writer. In order that you do not fall asleep while reading this review, I will only skim over the basic features of the system, and instead concentrate on the more unusual ones.

When you first start up the system you have to answer a few questions about your printer and the number of disk drives that you have. After this, the main menu is displayed, where you can choose the subsystem that you want to work with.

The text processing portion of the system is unusual in that, unlike a word processor, your text is treated more like a data file. When you create a new file, you have to tell the system how many lines of text each record should hold. Each line of text is 32 characters and the maximum number of lines is 15 per record. When you add a text record to your file, you must also give it a name. This name can be anything that you want in order to further identify the record, and duplicate names are okay. You are then presented with a blank screen to enter your text on. When doing this, the arrow keys are used to move the cursor around on the screen as well as to insert or delete characters and lines. You can also insert control codes to be sent to your printer. These include such things as line spacing, tabs, double width characters, and compressed characters. After you are through entering each record, you can either add another record or return to the menu.

Some of the other options available include changing, deleting, and listing the records. The list function is nice because if you decide that you want to change a record that you have just listed, all you have to do is to hit one key and you are put into the change mode. You can also select records for processing based upon several different criteria. You can select records based on their name (they all have one, remember), or on the basis of a word or phrase within the record. When selecting records, you also have the option of including or excluding the selected records. In fact, you can even limit your selection to a portion of the record if you

\title{
I HAVE SOMETHING TO SAY!
}

For as little as 46 cents a program you can enjoy great games like FROGJUMP, FRENZY, CATERPILLAR CAVE, SHOOTIN GALLERY, and great adventures. like. You can also move a record around in the file or move text around in a record. Sorting the file, of course, is also possible. Here, too, you can sort the records based on their names, or the text itself. As if this wasn't enough, you can even sort on any portion of the text that you like.

Of course, you can also print your text. Some of the options included here are line spacing, left and right margins, number of copies to print, and printing only a portion of each text record. The final option will enable you to copy all or part of a text record into another text record or records. Oh yes, you can also save your file to disk.

The data management portion of the system also has some unusual features, which you can read about in my upcoming book entitled "Homebase: A Software Novel/ Review"(just a little humor there, folks, to see if you are still with me). In order to create a new file you first have to define the file to the system. This is done by telling it the name of the file, the number of data fields, and the total length of the text fields. After this, you have to add each field to the file. At first this is confusing, but after you goof it up the first time, you will get the hang of it.

For each field that you add to your file you must supply a name, type, and length, if it is a text field. The types include the following: an amount field, which is meant to hold dollar amounts; a code field, which can hold up to five characters of your choice; an identification field, which is meant for numbers without decimal places; a number field, which is meant for numbers with two decimal places; a date, phone number, and time field; and finally a text field which can hold any type of data.

The calculation feature is yet another example of the power of the Homebase system. It supports addition, subtraction, multiplication, and division and is extremely flexible. For example, you can add two fields together in the same record, accumulate a field across all records, add fields from one record to fields in another record, to name just a few. You can also produce rolling (or running) totals within the records when adding or subtracting. When doing these calculations, you can also choose to have the file updated with the results or just to have them displayed on the screen. You can even decide where you want the results to be placed in the file. This can be either one of the fields involved in the calculation, or another field set aside for that purpose.

The Homebase system also includes many utility functions, which operate on both the text and data files. There are actually two separate utility programs. One is designed to work with text files while the other is designed to work with data files. Since they are almost identical, I will describe them as if they were one. Some of the utility options are very straightforward and I will just list them here for you. They are copy a file, kill a file, backup a file to tape, restore a file from tape, rename a file, and list the disk directory to the screen or printer.

The generate new file utility will create a new file from an existing one. The difference between this and the copy file utility is that you can add a new field to the file and/or increase the length of the file in the process. Think about this one for a while, it can be a real lifesaver.

The merge file utility will allow you to merge one file into another. This is done by field name and type, so that the files could be identical (perhaps two separate mailing lists), or they can be different. In either case, matching records are automatically added to the second (or receiving) file for you.

The summarize data file utility allows you to summarize /total your file based upon a key field within the file. This
key is used to summarize all like records using another field in the file.

For example, suppose you had a file containing all of the checks that you had written last year. You could then find out how much you spent at the local Radio Shack store, by using the "payee" field as the key, and the "amount paid" as the field to be totaled. These totals, by the way, can either be stored in existing records, or you can have the system create a new summary record in your file.

The custom report writer is the final feature of the system. Using the report writer, you can create almost any type of document you want by combining your text and data files. As with the other portions of the Homebase system, there are many options to choose from. You can change records, select records, and sort records, before you do any printing. Of course, you have complete control over your printer as it relates to line spacing, margins and the like.

The best part about the report writer is in the way data is merged with the text for printing. What you do is to first create your document, be it a letter, a form, or whatever. While you are doing this, you embed field names (remember them from your data file?) into the document. When all is said and done your document will be printed with the actual field values instead of their names.

I think an example is in order here to make sure that you understand just how powerful this report writer is. Suppose you had a file of members of your CoCo club. Along with their names and addresses, you also have the last date that they paid their dues. Now, you want to send a letter to all of the members who have not paid their dues for the past year. After you select the data records based upon the last date paid, you would call up your form letter, which would look something like this:

Dear / / Name//,
Our records indicate that you have not paid your dues since / / DATE PAID//. Please be kind . . .

When you print your letters, each member's name and date of last payment would be included in the letter in place of the //NAME//and //DATE PAID// in the form letter. Pretty good, huh!

I have covered most, but not all, of the features of the Homebase system. If you get the idea that I believe it is probably the most powerful system on the market today, you are right. The software, however, is not the only strong point of the system.

The documentation, which is about 150 pages, is the best that I have ever seen. As versatile as the system is, it is not overly complicated to use. This is helped along by the fact that it includes an entire disk designed to demonstrate the system, as well as a portion of the documentation being devoted to the demo. The system is also completely menudriven, and there is always some sort of prompt on the screen to let you know what is going on.

Quite honestly, I cannot say that the Homebase system is the best one around, simply because I have not seen most of the others. I can say, however, that you would be hard pressed to find a system with all of its features. Lastly, the Homebase people do not assume that you are a thief, and the system comes to you on an "unprotected" disk, so you can make a backup copy.

\footnotetext{

\title{
Timely Challenge Gathers No Dust
}

Looking for a game that is challenging, contains great graphics and sound, and holds your interest even after a couple of dozen run-throughs? Time Fighter, a new release from Mark Data Products, is such a game, a game that my eight-year-old son and I found equally entertaining and exceptional in quality. You should know that we've been playing computer games every day since we obtained our CoCo just over a year ago, that we have a lot of them, and expect much of them. If one doesn't live up to our expectations, it winds up on the proverbial shelf to gather dust.

I think one of the things that make for an exceptional game is the degree of difficulty encountered. If a program is too easy, it gets boring quickly. If not done well and there is no logical progression to improving your skills through practice, you tend to lose interest. After all, there are a lot of other games around. Why waste your time when you can enjoy such creations as Time Fighter?

Time is an important consideration in Time Fighter because, as the pilot of an MD-64 space fighter, you find yourself in a peril-fraught time tunnel with a mission to destroy the dreaded Time Guardian who threatens the natural order of the universe.

To be in a position to battle the mega-monster, you must first survive three time zones. The first is 8291 B.C. and you are pitted against flying monsters who spit flaming fireballs, which can destroy your fighter instantly.

At the same time, you must be careful to preserve the necessary amount of fuel and ammunition that it takes to survive the time zone. It is impossible, actually, to make it through any of the time zones without refueling. To get to the refueling source, however, you must first survive an invisible minefield. The process is made easier by activating your scanners as you position yourself in the center of the time tunnel. A scanner beam momentarily displays the position of any mines it passes over.

The time tunnel occupies about three-quarters of your monitor, with gauges showing your fuel, your position in the
time zone, and your remaining ammunition occupying the remainder of the screen. Your score and the previous high score are also displayed, of course.

If you make it through the first time zone, you find yourself in the year 1939 at the beginning of World War II, dodging enemy airplanes that make the earlier flying monsters seem easy by comparison. You must also avoid guided missiles, which originate from the time zone where the Time Guardian is located. The only defense against the missiles is to fly around them because they are invincible to your laser blasts.

Should you reach the time period of 2417 A.D., you will be greeted by dreaded starfighters. They are very difficult to destroy because they can fire backward as well as forward. You also are hounded by smart missiles that approach rapidly from behind; it is impossible to destroy them because they move faster than your laser fire.

Let's imagine that you have survived the first three zones. You reach infinity, an unknown time zone at the very end of the tunnel where there are many dangers, including energy stars that zero in on your tail. Scaring you out of your wits suddenly is the deadly Time Guardian, who appears as a large skull resting on a flowing column of energy. Repeatedly shooting either of the two pulsating energy cells will reduce the size of the energy column until the Guardian hits the cells and is destroyed. But don't waste a single shot, because time is precious and the Guardian is swift.

Don't expect to master Time Fighter overnight because too much professional expertise has gone into this game to enable you to do that. Do, however, expect to have a good time improving your skills during your many attempts.

The game requires the use of your right joystick for directional controls and for firing at the many enemies. You can earn 100 points for each flying monster, 200 for each enemy plane, 300 for each starfighter, 1000 for just hitting the Time Guardian, and 10,000 points and a bonus ship for destroying the Time Guardian

I cannot promise that you will ever destroy the Time Guardian, but I know that you will consider this program one of the best in your library of computer games. It is a real gem!

\title{
Baseball - A Home Run For Radio Shack
}

There's good news this month for CoCo enthusiasts and lovers of America's favorite pastime this month: Radio Shack has created, and is in the process of distributing widely, a baseball game with high resolution graphics and sound effects that compete with the best on the market. It is appropriately called Baseball.

For too long, we have had to sit on the sidelines, watching enviously as Atari and Coleco owners indulged themselves in the game of summer. For me, personally, the only opportunity to play baseball came on my mother- and father-inlaw's now obsolete Odyssey machine in a spare bedroom, making me feel somewhat guilty for taking my young son away from the family for long periods of time.

You know you have something special when, after inserting the ROM pak into CoCo's side, you are greeted to a magnificent version of our national anthem. What's a baseball game without the Star Spangled Banner, anyway? One of the thrills of going to the stadium for me is the roar of the

> CP/M FOR YOUR COLOR COMPUTER
- Now have access to the largest library of programs available
- CP/M is the recognized leader in professional and personal software
- Adds the power of a \(4 \mathrm{MHz}, \mathrm{Z80A}\)
- CP/M 2.2 included
- No modifications are necessary. Simply plug into the cartridge port and plug Radio Shack's disk controller into it.
- Maintains full Radio Shack compatibility
- Requires 64 K memory and one or more disks with controller (714) 772-5757

Radio Shack \({ }^{\text {m }}\) Tandy / Radio Shack Corp. / CPM \({ }^{\text {m }}\) Digital Research
crowd following the national anthem, which Radio Shack has included for us buffs.

As the crowd cheers, the players take to the playing field to assume their defensive positions. The pitcher receives the opening toss and we're ready for action.

We're ready, that is, if we have remembered to fill out the starting lineup cards that are a part of the game's preparation. Up to nine players per team can be entered (unfortunately, no substitutions or pinch-hitters are possible), along with their defensive positions and their batting averages.

If you're not a baseball purist or just happen to be in a hurry to get to the action, you can skip the lineup segment. But you'll miss the added element of seeing the player's name and batting average on the screen when he comes up to bat.

Back to the game: If your team is batting, just press your joystick button to send your slugger to the plate. Most batters are right-handed in this game, so if you need southpaws, just press the joystick again and they become switchhitters.

If you're aiming for the fences or just trying to get a hit, center your joystick and pull it back when the ball is pitched. Want to bunt? Just leave the handle of your joystick pushed forward.

If you're lucky (or skilled) enough to hit a home run, the nicely designed scoreboard stretching across the outfield lights up, changes color and spells "home run" in a style that would impress George Steinbrenner or Billy Martin. The effect is again heightened by the roar of the crowd as the runner circles the bases.

Stealing bases is a nother possibility with this version. You can take a lead off the bases and take off running when the pitch is thrown.

There's always the possibility that you could be thrown out, of course, because the pitcher has the capability of trying to pick you off with a pitchout. You could also be caught in a rundown between bases because infielders can throw back and forth to each other, a feat not possible in some early computer games.

The pitcher has a wide assortment of pitches available - curves, fastballs and change-ups. But be careful about whom you choose to pitch for you because you cannot change the lineup on your scorecard. (You could do it unofficially, of course, if you are keeping score on a separate sheet of paper.)

Defensively, you have the option of throwing the ball to any base. And there definitely is the possibility of double plays after you have mastered the game.

A demonstration mode is available if you want to become acquainted with the possibilities of the game. It also is recommended initially because you will be surprised with the capabilities.

You can expect some high-scoring affairs your first half dozen times through because it takes a lot of practice to master the throws from third to first base, or from the outfield to the catcher.

Like the real game, Radio Shack's version is contagious and you can expect it to occupy a lot of your leisure time if your resistance is low. My love of baseball may color my position, of course, but I would rate this as the best of Radio Shack games available.

\title{
Filebox 16 Has Potential
}

\author{
By Warren S. Napier
}

Filebox 16 is a new kid on the rapidly growing block of database management programs for CoCo . The best of such programs allows us to both store and retrieve a wide variety of information in versatile ways - mailing lists, business and financial records, property inventories, book collections, etc.

Designed for a 16 K disk system, Filebox 16 's menu controls eight BASIC programs which are called from the disk as needed. Files may contain records of up to 256 bytes with 10 fields. A "record" is a set of information, such as the full address of someone; a "field" is a particular piece of information within a record, such as the ZIP code; a "file" consists of the combined records in a particular category. The number of records is limited only by diskette space.

Setting up a file is simple. You choose "CREATE A NEW FILE" from the menu and select a filename, which the program then checks for duplicates. You determine the number of fields you want (for example, a typical address might consist of the name, street address, city, state and ZIP - five fields), their size in bytes and whether it is to be a numerical or alphabetical field. The information is then entered for each record.

Once a file has been set up, there are a number of operations which may be performed. You may examine the file to learn how many files are stored on the disk and their characteristics (field size, headings, numeric/character), and you may print out the information. You also may change, add to, delete a file.

Files can be sorted if they have no more than 200 records or if the product of the number of records and field size is within 2,000 (this restriction is due to the 16 K limitation; the author suggests resetting parameters if you have 32 K , but fails to say how). A warning is given when the latter limit is reached. The machine language sort itself is quite swift; however, set-up of a large sort will take several seconds, as the program must retrieve the information from the disk. A typical 40-record address set-up and sort (by name) took 13 seconds; sorting by ZIP took 27 seconds. Results are shown in ascending order, with an option to change to descending order. They may be shown on the screen or printed. The program will not sort numerically, meaning that ZIP codes, for instance, should be entered as an alphabetical ("character") field.

Want a list of all your addresses that have ZIP codes beginning with 999 ? Want to do mailing labels for all your relatives? Just select the SEARCH option and identify the field and pattern you want. This will be a somewhat slow process if the file is large since the information must first be retrieved, but it is a useful feature.

You say it's been three months since you used Filebox and you can't remember how part of it works? Just select HELP from the main menu; you'll get detailed information on any function. Can't remember the meaning of a term? Select [?] for vocabulary assistance. Afraid you're running out of space? Push [F] to find the free space remaining. Want to list and / or change file characteristics? Delete a whole file? List the filenames? Punch [U] for Utilities.

Filebox 16's formatted printout can be used for creating mailing labels, a feature which the author claims will pay for the price of the program many times over. The feature is indeed useful. You may select which fields you want to print, the number of spaces between records and the number of copies you want. Labels can be printed with or without the names of the fields.

Filebox 16 has limits in its formatting capabilities. Fields can be printed only in their record order, and the colon after the heading cannot be eliminated. If you enter whole names in their normal order as a single field (Mr. \& Mrs. John Doe), the program cannot sort the last names alphabetically; but if you decide to use last names as a field which can be sorted, only that field (Doe) can be printed on the first line of the label, with "Mr. \& Mrs. John" on line two. If, on the other hand you enter names in a single field with the last name first (Doe, Mr. and Mrs. John), the program can sort the last names alphabetically, but the label will come out just as you put it in; i.e., it cannot be printed as "Mr. and Mrs. John Doe."

The author warns of the possibility of a "lockup" of the program "for no particular reason." I commend him for his honesty, for I found this to be frustratingly true. The program hung up once when I tried to "print" a file to screen, once when I hit [ENTER] after "Which record?" in the DELETE sequence; and twice each on a simple search and a "Kill File" command. The only thing to do if this happens, of course, is to remove the disk, power down and start over. It's not a fatal problem, but it can get old after a few times. Something's going on that needs to be corrected.

Another problem I encountered involved getting a "Not Recognized" message while entering a choice in the sequence for adding records. The only way I could then get back to the main menu was to hit [BREAK], unload and RUN.

Some suggestions for improving Filebox 16 include: recognition of lowercase commands; improved printout formatting, especially for mailing labels; ability to put files on data disk without having to have the program on each one; ability to print file records to screen without scrolling (having to use [SHIFT][@] is awkward); provision of a way to go directly back to the main menu from "VOCABULARY"; providing a way of editing previous lines while creating a record without having to return to the main menu and then go through the whole sequence again (for now, if inputting a large amount of data, the user should keep a list of his/ her mistakes to allow changing them all at one time); and, of course, elimination of the recurring lockup problem.

The program comes in a sturdy loose-leaf binder with inside sleeves. It has excellent instructions (including a sample file setup) and a great deal of work has gone into making it user friendly. Most commands are one keystroke; there are none requiring more than two. Input of an unacceptable command results in a "Not Recognized" message.

The author allows the disk to be backed up as much as necessary, something we should appreciate. He indicates that full support will be provided in the form of a newsletter, fixes and upgrades. A 32 K version is under development.

Filebox 16 is a potentially useful addition for both personal and business use to the growing number of database programs. However, since there is already at least one program available with more features at a lower price, its pricing needs to be much more competitive even if its major "hangup" is corrected.

\section*{Software Review \\ Musica Outplays The Rest}

There are a number of four-voice music synthesizers now available for the Color Computer. As they arrive on the market there is a continuous improvement. The latest arrival is Musica. Musica is the only four-voice synthesizer for the Color Computer which uses a graphics display of musical symbols to aid with the entry of music. It is also the only one I have seen which allows you to create your own instrument timbres.

Sound output is channeled through your TV or if you have the Stereo Composer by Speech Systems, sound can be routed through your hi-fi system. A number of pre-arranged songs are included for your listening enjoyment and also as examples to help you on your way to entering your own music. Included are "The Entertainer" by Scott Joplin, "Saber Dance" by Aram Khachaturian, and a number of pieces for organ by J. S. Bach. I was surprised by the quality of the sounds produced, particularly when compared to other Color Computer four-voice synthesizers I have heard. Musica is a definite improvement and shines above all the rest.

The program comes in both a tape and disk version. If you choose the disk version you will need 32 K of memory. If you choose the tape version you can get by with 16 K of memory. Compositions can be saved or loaded, and may be played independently of Musica. This enables a composition to be merged with a BASIC program.

After the program has been loaded and executed, a grand staff is displayed on the screen. After pressing any key, a flashing cursor appears on the staff which is an indication that you are in the command mode. Notes are entered by first positioning the cursor and using either the arrow keys or the right joystick. When the cursor is positioned on the desired pitch, press [ENTER] (or the right joystick fire button) and a note will appear in that position. Time values

\section*{Heipful Hints}

\section*{Line Too Long?}

If you find that a line in a listing you're typing in is too long, the reason might be that it was "packed." When you type in a BASIC program line, the computer watches the length of the line; when the line is 240 characters in length, the computer will refuse to accept more characters.

If you need to get a few more characters on the line, press [ENTER] to place what you've already typed into memory, then type EDIT and the line number followed by [ENTER]. Press [X] to move the cursor to the end of the line. Now you can type some more characters into the line. The EDIT mode has its own length limit, so the computer will take a few more characters and stop again.

This trick does let you stretch your lines, but it often causes confusion when someone who doesn't know about it types in a program from a printed listing; if you cram too many additional characters into a line, you may also find that they will not LIST properly even though they are actually present. Because of these problems, we don't recommend using this technique in programs intended for publication.
- Ed Ellers
for notes are adjusted by pressing a number from one to nine before pressing [ENTER]. Also, sharps or flats may be entered by pressing [S] or [F] before pressing [ENTER]. Up to 12 notes horizontally and four notes vertically can appear on the screen at any one time. As you move to the left or right edges of the screen, the displayed notes will automatically shift so that notes to the right or left of those displayed can be seen.

Musica plays consecutive notes without a break between notes. This makes it easy to enter a note of almost any length. For example, two quarter notes will sound like one half note or a quarter followed by an eighth will sound like a dotted quarter note. This does create a problem when repeated notes are desired. In order to achieve spacing between repeated notes so that they do not sound like one continuous note, rests must be inserted between notes.

The program allows the sounding of up to four voices simultaneously. When the voices line up vertically as chords, each note within the chord must be of the same time value. If one voice is in long note values and another in shorter values, the voice with the long values will have to be changed so that it contains all notes of the shorter values which add up to the longer value desired. This can be quite cumbersome and can create some confusing displays, particularly if the parts are rhythmically complex.

When displayed, all notes appear on the screen with their stems up. It would have been better from a musician's point of view to be able to control placement of stem up or stem down for individual notes. When all stems are up, note pitches close together, and time values are less than a quarter, distinguishing proper time values can be difficult as the flags appear to run together. Also, distinguishing between voices can be difficult when stem directions are all the same. Musica does have a special enhancing feature which causes a specified voice to stand out above the others.

Editing music after it is entered is relatively easy. Select the voice to change, move the cursor to the note position, press [ENTER], and the old note is erased leaving a space into which a new note may be entered. Complete chords may be inserted or deleted by adjusting the cursor, then pressing either [D] or [I] for the desired change.

A good feature of this program is that timbre qualities of each voice can be set and changed throughout different parts of a composition. This gives you the feeling that you have a whole band to play with. Four tone tables provided with the program give four distinct sound qualities available for use. Through a special command these timbres can be changed and experimented with. Also, the volume level of any tone table may be adjusted. By using this feature, some limited control over dynamics can be had. This is a feature which is lacking in all other four-voice synthesizer programs I have seen.

Musica represents a definite improvement in the availability of music software for the Color Computer. It is by far the best four-voice synthesizer I have seen so far. To be able to enter notes graphically and see the notes displayed on the screen is a definite plus. All other Color Computer synthesizers I have seen use a combination of letters and numbers, or numbers only for entry of notes. Having the ability to change sound qualities within a composition and having some control over dynamic levels is also a strong feature.

\title{
Colonial Trilogy Is A Good Three In One
}

\author{
By Nevin J. Templin
}

Colonial Trilogy has wrung a wide range of emotions out of me during the preparation of this review. Anticipation, excitement, chagrin, and suspense all change and mix, often within seconds. One moment you stand exultant, having lasered one of your opponent's ships into oblivion, an instant later your strongest ship is ripped by multiple missile hits and you stare slack eyed as it turns into an expanding ball of gas.

\section*{Colonial Wars:}

Colonial Wars ( \(C W\) ) is the introduction to the trilogy and is an excellent example of a strategic war game. This is the longer playing of the two two-player games in the series (Questar is a solo graphics Adventure), and Colonial Wars also has the best graphics of the set. The game starts by choosing the color set through use of the [RESET] button, asks if this is a new game or a saved game to be loaded from tape, and then what is the maximum number of turns you will play. As the game may be ended and saved, or ended and a final score given after any turn, the turn limit serves to put pressure on players to reach a goal by a certain time.

The players control different forces. A comprehensive rule book details these in a "pre-war history" and in the description of the battlecarrier (BC) statistics. The Colonial
player starts with three planets and three battlecarriers verses the Zyron's two planets and four slightly weaker BCs. I found that the stats given for the BCs in the rules differed slightly from that gotten on checking ship's status during the game, but this did not materially affect the play. The BCs are critical, as they may not be rebuilt or repaired during the game. Only they may launch the fighter squadrons that take the weight of the battle. Colonies are founded and populations increased (through a cumbersome process) during the course of play.

A barrier is required to split the TV screen so as to allow the players secrecy in their plans, and simple instructions are given on its construction. I made mine in under five minutes from a small box and a large envelope. It sounds cumbersome, but makes the game work well.

During production, four items may be produced. Fighters (to replace battle losses), Fuel (burned by all ships), Planetary Defense Bases, and Freighters to supply the BCs. Also colonists may be picked up; but if they are not, their number is lost. Population is increased only by a freighter's picking up, then unloading colonists, a minor irritation.

Players alternate moving ships, with the opponent's ship status readouts being shielded by the barrier device. After all the ships' moves are done, each ship, fighter squadron and planet may scan its location as well as all adjacent squares. If an enemy is detected, fighting ships are given the option of attacking.

All battles are fought after the scanning phase. If a force is engaged, the low resolution map switches to a high resolution combat screen. The graphics are very nicely done, and every ship type is sharp and different from the others. The images are as clean as those in the best of the quarter-eating

\section*{SAVE BIG DOLLARS ON ALL TRS.80 \({ }^{\circ}\) HARDWARE \& SOFTWARE}

TRS-80 \({ }^{\circ}\) by Radio Shack. Brand new in cartons delivered. Save state sales tax. Texas residents, add only 5\% sales tax. Open Mon. - Fri., 9-6, Sat., 9-1. We pay freight and insurance. \(\square\) Toll free order number
Our capability to go to the giant TRS \(60^{\circ}\) Computer warehouse 5 hours away, in Ft. Worth, Texas, to keep you in stock.
arcade games．During the battle， BCs ，freighters，and squad－ rons of fighters appear as appropriate．As a unit or fleet commander，you give general orders to attack，retreat，hold， etc．，and the crew handles the rest．Beams flash，hull sections glow red from hits，fighters dissipate in puffs of color． Assaults against planets pit the attacking ships against some attractive worlds，and the continent－based Planetary Defense bases．When these are defeated，the world and its resources are yours．

Playing time has run up to 36 turns，at about 40 minutes each，much longer then the three to eight hours indicated in the ad，but each moment is tense with the possibility of a sneak attack，or that a tactical move on your part might end in disaster．

The only serious problems I had during many hours of play were a crash and being trapped in a loop．The first occurred when both players retreated at the same time from the battle board．One side＇s ships appeared at the edge of the board while a BC appeared partly off when the system went down．The second was less regular．Freighters are supposed to carry six units of fuel．Sometimes，though，you would load six units on board only to have seven show up on the status board．If you accidently try to load more than six sometimes you get a message saying it will only hold six，and other times you are trapped in a loop which requires a ［BREAK］to exit．Luckily，the instructions covered how to recover a crashed game，and we were running again in moments

Colonial Wars is recommended as an impressive game， promised to provide tension，tactics，strategy and surprise． Zyron：

Less colorful but adopting a more tactical slant is Zyron． While independent of Colonial Wars，it shares CW＇s history， and assumes a Zyron win that places the Colonial Player under siege at his home world．The Colonial Player has just made a breakout under cover of a passing dense（and deadly）meteor swarm．

Each player has six ships and a wide choice of how to equip them．Shields，beams，missiles and tractor beams are among the options，with variable strengths for each system．

Play starts with each side allotting power to the ships， systems．This is a slow process during the first few turns，buit things get hot once some ships are lost and ranges close．

The Hi－Res，two－color screen is a bit of a disappointment， as the use of false color would have made the ships stand out a bit more．As is，the Colonial fighters，freighters，and Zyron fighters are quite distinctive in shape（and visibly related to the ships in \(C W\) ），the only problem being when two or more Zyrons are stacked on each other．As these ships are round with a dark marking at the＂front，＂when stacked，it is a guess just which way a given ship is racing．The facing is given on a ship＇s status board during power allocation，but this screen is not available during movement．

As to weapons，beams first must overcome a ship＇s shields before doing damage to other ships’ systems．Missiles evi－ dently do direct damage themselves；they lock an enemy into a known position，allowing pinpoint targeting of missiles， two of which are almost always fatal．

The game allows for two scenarios；the first might be called＂Breakout，＂where three Colonial fighters escort three armed freighters through the Zyrons．The freighters have the same number of build points as the fighters，but must pay for hold spaces as well as other systems．

The second scenario could well be＂The Last Battle．＂ Freighters are free to use all points to build fighting machines equal to the fighters in ability；a more equal battle，
but not one that makes sense in light of the given history．
I had two possibly related problems with Zyron．On the first run－through，the program crashed during the missile strike－an unlisted line UL Error．It turned out that both copies had the same error．A call was made to HYCOMP （they provide their number on the eight－page instruction book）and the problem was explained．Forty－five minutes later they called back with the answer．The last two lines had somehow been dropped during production．I took down the data on the missing lines，typed it in and made a corrected copy（all programs are in Extended BASIC）．This ran well and provided almost two full days of intensive combat（this in the face of two youngsters demanding equal time for less demanding games）．

It was during this play another minor problem was found． The scoring given at the end of the game did not seem to match up with what we thought we should get based on the information in the instruction book．This made strategic planning more difficult，but detracted nothing from the game．

A last point，stay clear of the meteors！They can prove as potent an enemy as the one sitting next to you．Their small but random movements around the screen proved the death of perhaps 20 percent of all ships lost during the game．

I found Zyron to be a very nice tactical game－not quite the equal of Colonial Wars，but certainly one I will recom－ mend to my friends．

\section*{Questar：}

The last in the Trilogy is Questar，a solo graphics Adven－ ture．In Questar，you must find a secret Zyron base in a given sector and disable it to allow an already launched Colonial fleet to sneak through this newly made hole in the Zyron defenses and attack the Zyron home world．If you fail，the fleet will surely be destroyed．This preset time limit forces you to take actions you might in other cases avoid．

You start on a high resolution star map，and must make your way across this star sector，stopping at starbases to refuel and gather information．Abandoned starbases，un－ known civilizations，and the Zyron bases are neatly done in low resolution graphics．

A six－page instruction booklet includes a＂summary sheet，＂listing usable commands．This should be kept at hand at all times，as there is a sizable list of commands to master．

A fitting companion to Colonial Wars and Zyron， Questar is a good game to pull off the shelf when your regular opponent is not available．
（HYCOMP，P̀．O．Box 15331，Tulsa，OK 74158．\(\$ 19.95\) each or all three for \(\$ 49.95+\$ 1.50 \mathrm{~S} / \mathrm{H}\) ）

NANOS SYSTEMS REFERENCE CARDS - OUICK REFERENCE FOR YOUJR MICROCOMPUTER

I have been looking for to help me get beyond the poorly planned and executed manuals." T.P.C., West Palm Beach, Florida

No Shipping costs in Europe

OVER 125,000 SOLD WORLD WIDE
The most popular quick reference ever produced for microcomputers'
This is the finest, most comprehensive. complete, and most truthiul document you may ever find for your microcomputer.

It is an accordion-fold document, printed on 80 -ib. Beckett cover stock for durability. prepared by large-scale computer protessionals who have over 20 years experience. and it is made the way they need it for their own usage

Each item of information on the card is expressed in its simplest terms so that even the beginner can understand what is being said
The NANOS SYSTEMS CARD is not a tutorial, but, it is not a technical document either It simply presents nearly everything you might need to know about using, operating, and programming your microcomputer in plain words so that you can quickly grasp every concépt

NANOS SYSTEMS CARDS are used in many homes, businesses, grammar and high schools. technical schools. major colleges and universities, and, would you believe. the U.S. NAVY!

NANOS SYSTEMS CARDS are not just another quickly-produced bunch of publications for the purpose of grabbing sales while the public is still confused about the proper literature to buy. On the contrary, they are inexpensive, and, can represent information which you might otherwise spend from twenty to one hundred dollars to get. because not only do they summarize the manuals. but. NANQS researches each computer and inserts information not readily available anywhere else

For example, one very large publisher has been marketing what they call a "Ouick Reference" card. It is oversize and awkward to handle and transport. It contains 8 pages. 2 of which contain nothing about your computer at all! The other 6 pages are spread out to fill the rest of the card with as much as possible, with not much iniormation. It sells for 2.95 . The NANOS SYSTEMS CARD for the same microcomputer has 16 pages, all used and packed full of information. The entire contents of the 2.95 card above are contained in about 3 pages of the NANOS CARD. The NANOS CARD is 4.95 , and, it fits in your pocket!

Another publisher puts out a large full-sized plastic sheet which is so technical that even NANOS himself cannot understand it all!
And finally, there are some who are publishing little mini-books and calling them "Ouick References". The idea of a quick reference is to get away from the book format. It is" archaic and time -consuming.

The NANOS SYSTEMS CARD is the true QUICK REFERENCE for today's users. Not only does it make an original presentation, but, it is organized so that you can identify your subject instantly, and that's pretty fast.
'Thonk you for your high quality product. . . ."

\title{
Colorful Accounting With Accounts Receivable
}

\author{
By Frank J. Esser
}

The early world of the Color Computer did not have much to offer in the way of good business software. If you wanted to use your Color Computer in business related activities, and those activities were not word processing, you were forced to use a different operating system, such as FLEX. However, in the last six months there has been more good business related software arriving on the scene which will run on the Color Computer under the Radio Shack DOS. This review is about one of those packages, the Accounts Receivable program from Color Software Services, Inc. Color Software Services also markets a Small Business Accounting package with which the Accounts Receivable can be merged, if so desired.

Accounts receivable have been with businesses since man began these type of activities and will always be a needed part of almost any business, small or large. The need to be able to track and record sales and services rendered and not yet billed or collected are well known. Accounts Receivable from Color Software Services Inc. is a good package which can be run on a stand-alone basis or it can be integrated with the Small Business Accounting program to provide a more comprehensive package. Either way it provides all the necessary ingredients of a complete package.

The Accounts Receivable package comes on a \(51 / 4\) " floppy disk with the three-ring vinyl binder holding the documentation. The documentation is well laid out and is quite easy to follow. The disk is in standard RS format with no protection applied. Thus, backups are easy to do using RS BACKUP command. I have a strong admiration for those software developers, especially in the area of business software, who do not apply protection schemes to their products, thus making it easy for the user to provide some sort of backup for the product if problems should arise during the use of the regular disk copy. The Accounts Receivable package requires a minimum hardware system of at least 16 K memory, a disk drive, and at least an 80 -column printer. The program will run on an equally-equipped TDP-100 system.

The user manual is broken down into five chapters:
I) Introduction
2) Setup Procedures
3) General Instructions
4) Program Instructions
5) Tutorial

The Introduction section provides a brief overview of the Accounts Receivable package and the hardware requirements to run the package.

The Setup Procedures section instructs the user to make a backup copy of the master disk and to use that copy in his daily activities. The master disk should then be stored away for safe keeping. There is also a list of the files found on the master disk and the user is asked to check his disk to be sure all the necessary programs are present, before he goes any further. You are then instructed on how to start the system up by typing \(R U N\) AR-MENU. At this point, it is advised that the user put the system aside and read the rest of the manual. I strongly recommend that these instructions be
followed. It could save you a lot of trouble farther down the road. I found it helpful to make a sort of outline describing how the data should be entered, to ensure that the proper sequences are followed. They are not tricky, but if you want good comprehensive reports, etc., certain procedures need be followed. That is not a requirement of this package alone, but is a requirement of any good business package. So put the keyboard aside and read the rest of the manual.

The General Instructions chapter explains the proper manner to enter the dates and various monetary amounts. The dates must be entered in as MM/DD/YR. Thus April 4, 1983, would be entered as \(04 / 04 / 83\) and not \(4 / 4 / 83\). The monetary amounts are always entered without the dollar sign and without any commas, which are usually added to make the numbers easier to compare. Thus \(\$ 1,000\) is entered as 1000.00 . Again, this is normal mode of data entry for this type of program.

The Program Instructions chapter describes the options available and how to use them. When you type RUN AR\(M E N U\) the following menu is presented.
1) ENTER/UPDATE CUSTOMER
2) ENTER A/R SALES
3) DISPLAY AN ACCOUNT
4) SET UTILITIES
5) AUTOMATIC INVOICING
6) POST RECEIPTS
7) A/R REPORTS
8) FILE MAINTENANCE
9) RETURN TO SBAP MENU

I would like to cover each of these options in the order presented.

See Page 137

- a lot of software for a Iittle silver

The ENTER/UPDATE CUSTOMER section is used to enter new customer information or to modify customer information already in the system. Each customer entered into the system is assigned a number. It is through this number that the customer is tracked. How will I ever remember which customer is assigned what number and how they are assigned?

Those questions have been very nicely taken care of by the people at Color Software Systems. Entering a 1 from the main menu will get you to the ENTER/UPDATE CUSTOMER section. The first prompt you will see is "Customer\#:?". To update a customer's record simply type in the customer's number and the record will be presented for modification. If you cannot remember the customer's number simply reply with a "?" mark and the customer list with numbers will be displayed to help you. If you are entering a new customer, just press [ENTER] and the next available number will be assigned to him. Regardless of the action being taken the following information will be displayed or requested:

\author{
CUSTOMER NAME: \\ ADDRESS LINE 1: \\ ADDRESS LINE 2: \\ CITY: \\ STATE: \\ ZIP: \\ PHONE \#: \\ TYPE (R/T): \\ PREVIOUS AMOUNT OWED: \\ DATE PAID: \\ AMOUNT PAID: \\ CURRENT BALANCE:
}

DUE DATE:
Once the information has been entered or modified, whichever the case may be, the following responses are accepted, \(E X\) (exit), \(F I\) (file), or \(M\) (menu). Exit will abort the transaction and remain in the update mode. File will place the information on the disk and remain in the update mode. Menu will abort the entire process and return you to the main menu. You are warned that the last five items are included only to allow the user to correct erroneous data and not to enter original amounts. This data should be entered through option 2 of the main menu, ENTER A/R SALES.
The ENTER A/R SALES section is where the main work is done. It is through this section that the sales are entered and accounted for. Upon entering this section you will be asked for the customer \#:? as above. Again, if you cannot remember the customer's number, answering with a "?" will get a list of all the customers in the system and their corresponding number. Entering a valid customer number will get the customer's data. The following information is displayed: 1) Name, 2) Address, 3) Open Invoices, and 4) Current Balance. You will be prompted for the sales date, and optional reference, and the amount. Once this data has been entered you will be asked "ALL THE ABOVE OK (Y/N)?". Answering " \(Y\) " will file the data and "N" will abort the entire process.
The DISPLAY AN ACCOUNT section allows you to examine each account separately. Upon entry, you will be asked for the customer number. Again as in the other sections, answering the prompt with a "?" will get a list of all the valid customers. Upon the entry of a valid customer number the following data will be displayed: Customer name and address, phone number, previous amount (at the end of the last billing cycle), date paid (if paid), amount paid, current balance (if any), and date due (if applicable). If a current balance is present, any key entry will display the invoice information. A null entry to the customer number request will return you to the main menu.

The SET UTILITIES section gives you the ability to enter your own company's information and billing procedures. This routine creates three utility records: One with your company data; one with your billing policy; and one to establish the current year and, thus, allow the programs to adjust for leap year. The data record which will hold your company data is of the following format:
\begin{tabular}{|c|c|}
\hline Company Name & (32 characters) \\
\hline Address line 1 & (32 characters) \\
\hline Address line 2. & (32 characters) \\
\hline City & (25 characters) \\
\hline State & (2 characters) \\
\hline ZIP Code & (10 digits) \\
\hline Phone Number & (8-13 digits) \\
\hline
\end{tabular}

The second data record will control your billing procedures. Remember, back at the time a customer record was created there was an entry for type of account ( \(R / T\) ). Here is where these account types are defined. The " \(R\) " stands for revolving account of the standard variety. A minimum monthly payment is expected and a set monthly interest or finance charge is assessed on the outstanding balance. An example might be \(\$ 50\) minimum monthly payment at 1.8 percent monthly. The "T" stands for a trade account. A trade account is one in which a payment in full is expected within a given period, set by you, and offers a discount if paid within a set period after billing. An example might be 3 percent discount if paid within 10 days with a net of 30 days.

\title{
Custom Software Engineering, Inc.
}

DISK DOUBLE ENTRY - If you have sipent hours trying to balance your Debits and Credits, this program is for you! Designed for small business, club, and personal use. Enter transactions in a journal type format. Program will maintain current account balances, produce Trial Balance, Income, and Balance Sheet reports and complete Account Ledgers. Will handle up to 300 accounts including report headings and totals. Up to 1400 ave rage transactions on a diskette. Summary reports and four levels of subtotals available. REQUIRES 32 K and a user understanding of standard double entry accounting concepts. - \(\$ 44.95\) in BASIC with Machine Language subroutines.

STATEMENT WRITER - For use with (and requires) Disk Double Entry. Produces statements suitable for billing from your Receivable accounts. Provides mailing labels to use with your statements and account summaries. Designed and documented to allow you to change formats to accommodate your own special needs. \(\$ 34.95\).

DISK DATA HANDLER - 64K - Designed to use the full 64 K RAM, but may also be configured for 32 K . Uses standard ROM's - No special operating system required! Allows you to design disk data files for your specific needs. You define a basic record of up to 14 fields and 246 characters. Provides fast selection and sorting based on any field or combination of fields in this record. Powerful on screen input and update. User defined output of reports to screen, printer, or disk files which may be read by your BASIC programs for any computational or special formatting requirements. Printer reports allow headings, page breaks, and page numbering, and let you pass control codes to drive your printer's special features. Maximum number of records you may work with at one time will depend on RAM configuration and record size \(-64 \mathrm{~K}(32 \mathrm{~K})\) 1850 (500) - 21 char records, 179 (49) - 246 char records. An optional Extended record linked to the basic record may also be defined. The size of this Extended record is not a factor in determining maximum number of records. Will provide the growth capability needed for your increasingly sophisticated applications. NOW-also includes a listing of a short program to read directory information from your disks and produce a combined file index. \(\$ 54.95\) in BASIC with Machine Language subroutines.

DATE-O-BASE CALENDAR - Puts you in charge of your schedule! Graphically displays any monthly calendar between 1700 and 2099. You put in up to twelve 28 character memos per day - calendar shows where the memos are -call up of day shows details. Use for appointments and a log of past activity. Study the chronology of the American Revolution or note the day your mortgage will be paid off. Search capability allows you to list or print all memos between two specified dates or only ones meeting key word criteria. Date computation shows elapsed time between two dates in days, weeks, months, and years. REQUIRES 32 K in BASIC.
TAPE DATE-O-BASE CALENDAR - \$16.95-(max. 400 memos/tape file).
DISK DATE-O-BASE CALENDAR - \$19.95 - (over 4,000 memos/disk-max. 300 memos/month).

COMMAND STREAM PROCESSOR - Adds a new dimension to the power of your Color Computer! A program to run your other programs. Will allow you to prepackage a stream of direct system commands as well as INPUT and LINE INPUT to your BASIC program. This results in a totally automated stream of activity. If you understand your computer and the flow of activity required for your total operation, you are ready for the power of Commard Stream Programming. In completely relocatable Machine Language - \(\$ 19.95\).

That's INTEREST-ing - Time to let your computer do some real computation! This program will help you solve problems dealing with time, money, and INTEREST. Calculates present value, future value, and capital recovery for any combination of payments you specify. Rate of Return computation to predict how hard your money will be working. Special section to compute bond yields (current and to redemption). Amortization schedules about any way you want them - even allows you to change terms in mid schedule! All answers available on screen or printer. \(\$ 29.95\) in BASIC.

MATH TUTOR - Five programs that go from math fact \((+,-, X, /)\) drill to full addition, subtraction, multiplication, and division at four levels of difficulty. Provides a step by step approach with error correction and rewards for good performance. - \(\$ 13.95\) in BASIC.

SPELLING TEACHER - Up to 200 of their spelling words stored on tape or disk are presented in four lively study modes including a scrambled word game. - \(\$ 12.95\) in BASIC.

ALPHA-DRAW - A subroutine designed to let you easily add characters to yourgraphic displays. You define \(X\) and \(Y\) coordinates and a string variable of one or more characters and Alpha-Draw will do the rest. Includes all keyboard characters. Comes with instructions for a true line numbered merge of tape tiles. Works great with the Screen Print program! - \(\$ 8.95\) in BASIC.

GRAPHIC SCREEN PRINT PROGRAM Works in ALL PMODES and lets you shift screen image anywhere on the printed page. Relocatable code lets you use all of your 16 K or 32 K machine. Available for Color Basic 1.0 and 1.1/1.2. Use EXEC 41175 to see which you have and SPECIFY with order. In Machine Language.

SPECIFY PRINTER TYPE
\$7.95 - For TRS-80 \({ }^{\text {® }}\) LP-VII/VIII \& DMP 100/200/400/420.
\(\mathbf{\$ 9 . 9 5}\) - For Epson GRAFTRAX \({ }^{\oplus}\), NEC \({ }^{\circledR}\) PC 8023 A-C, IDS-440/445, Paper Tiger \({ }^{\circledR}\) 460/560, Micro Prism \({ }^{5}\) 480, Prism \({ }^{8}\) 80/132 (with dot plotting), TRS-80 \({ }^{\text {® }}\) DMP-120, TDP-1, Micro Peripherals, Inc. \(88 \mathrm{G} / 99 \mathrm{G}\), PROWRITER \({ }^{\circ}\), Centronics 739 , Mircoline \({ }^{\text {® }}\) 82A/83A (with OKIGRAPH I) /84/92/93, Star Micronics, Inc. GEMINI 10/10X/15 and Gorilla Banana. (Trademarks of Tandy Corp., Epson America, Inc., C-Itoh, NEC America, Okidata Corp., Integral Data Systems, Inc.)

ALL PROGRAMS require Extended Color Basic and are delivered on cassette. All, except Tape Date-O-Base Calendar, are DISK System compatible.

For VISA and Master Card orders: Include type, account number, expiration date, signature and phone number.
Sorry! No COD's.
U.S. and CANADA add \(\$ 1.00\) per order for shipping. Overseas \(\$ 2.50\) per order. All prices in U.S. dollars. Florida residents add 5\% sales tax. Return within two weeks if not completely satisfied.

The third data record contains the current year.
The AUTOMATIC INVOICING section automatically prepares for you all the invoices due for the accounting period just ended. It requires only that your printer be turned on and the paper properly positioned. You enter the date and the rest is automatic.

The POST RECEIPTS section will allow you to post payments received to the customer's account. As before, you will be prompted for the customer number with all the rules explained above. Uponentry of a valid customer number, it will display all of the account data. You will then have the option to enter the date and amount paid. The invoices are automatically paid in the "FIFO" method. FIFO means first in, first out. Thus, a payment recorded goes against the oldest outstanding invoice even though it may have been for a younger invoice. This section will also automatically calculate any discount and apply it if it is due. Thus, all you have to do is enter the date and amount.

The A/R REPORTS section includes a customer history report, mailing labels, customer aged report and a customer list. The customer history report provides a hard copy report on the payment history of each of the active customers. The report includes customer name and number, each invoice by date, reference number (if any), amount, date due, and current status, followed by the cumulative total for that customer, current balance and due date for the current balance. Invoice status codes of N -not invoiced, I -invoiced but not paid, B -balance open not fully paid and P -paid. Mailing labels will print customer name and address on the standard two-across, one-inch gum labels, Radio Shack No. 26-1456. The customer aged report is very useful in that it will detail by customer the range of his charges or open balances in the categories of 1-30 days, 30-60 days and over 60 days. Thus, the range of each of the customer's unpaid balances will be displayed according to their age and make it very easy to spot delinquent accounts. The customer list report is the same list that is displayed at any time you responded to the "CUSTOMER \#" prompt with a "?". Only this time, a hard copy of the list is obtained.

The FILE MAINTENANCE section consists of three maintenance routines. These routines are: one to save your account data on cassette tape, one to restore data previously saved on cassette tape, and one to delete paid-up account records. If you are using the Accounts Receivable program as a part of the Small Business Accounting Package, there is also an option to update the \(S B A P\) disk. If you choose to update, or decide to keep a disk record of the past account-

\section*{Upcoming RAINBOWfests}

RAINBOWfest - New Brunswick, N.J. DATES: March 30 - April 1
HOTEL: Hyatt Regency, New Brunswick
ROOMS: \$59 per night single/double
KEYNOTE: To Be Announced
Advance Ticket Deadline: March 23, 1984
* \(\star\) ڤ

RAINBOWfest - Chicago
DATES: June 22-24, 1984
HOTEL: Hyatt Regency, Woodfield
ROOMS: \$46 per night single/double KEYNOTE: To Be Announced
Advance Ticket Deadline: June 18, 1984
ing periods, there is a file naming method which will work very nicely and not confuse the Accounts Receivable programs.

The last chapter is the TUTORIAL chapter. This chapter walks the user through two months of transactions and the appropriate steps necessary to ensure proper data entry so that meaningful reports can be generated. This section, I think, does an excellent job of introducing the user to the package and the interrelationship of the various options and how to handle them properly.

The entire package is well done and offers all the functions necessary to allow any small businessman to accurately handle his accounts receivable. The program features the following items:
1) Keeps a customer data file
2) Maintains a file with company information
3) Maintains a complete history on each customer account
4) Has provisions for both trade and revolving accounts
5) Has provisions to correct past errors
6) Provides for both disk and tape backup
7) Will automatically prepare invoices
8) Will generate mailing labels from customer data file
9) Provides the following reports:
a) Customer history
b) Aged accounts
c) Customer list

The invoicing section of the program is very well done. The invoices generated follow the standard form and have all the necessary information where it belongs. If the account being invoiced is a trade account, the discount available, in both dollars and percent, is listed along with the cutoff date. The invoice shows all account activity since the last invoice in the forms of past balance, payments received and current balance. The customer aged report lists the history of the customer balance in terms of 1-30 days, 31-60 days and over 60 days. It will also show which invoices are past due and which are current. The customer history report lists each invoice still open, the status of that invoice, account balance, the current amount due and the current due date. The customer's list report is a dump of the customer's data file to the printer with all the information in the data file being printed. The programs are well written and I think they do a very good job of managing the accounts receivable.

1 run a bookkeeping service for several small businesses and even though I do not get into the invoicing part of the business, I see in this package all the necessary ingredients to do so.

Try as I might, I could not really find anything lacking in this package. It does what it is supposed to do, it has good documentation, the menus are well designed, it provides for both tape and disk backup - an excellent feature - and provides all the necessary reports to allow you, the small businessman, to be able to easily manage your accounts receivable.

I find Accounts Receivable to be an excellent package for the small businessman wishing to perform those services himself, and a definite asset to the world of color computing.
(Brantex, Inc., Color Software Services Div., P.O. Box 1708, Greenville, TX 75401 disk, \$59.95)

\title{
The Strength In Word Processing Programs Lies In What The User Wants
}

\(T\)here is only one question that I have about the OS-9. I got the OS-9 for Christmas and read your article. I would like to know what the difference is between the word processor that the OS-9 uses and the Telewriter-64 which I have, which one is better?

\section*{Ken Mahaffey \\ Erie, IL}

Ken, the two word processors that I have seen for OS-9, Stylograph and DynaStar, are very comparable to Telewriter-64, maybe even a little more advanced. The real strength of any word processing program, or of any program for that matter, lies in the user and what he wants in a program. I can tell you that DynaStar is very similar to WordStar, the standard word processor on several PCs. Be sure to order O-Pak if you are considering any word processing on OS-9 unless you want to do it on a \(32 \times 16\) screen.

\section*{The CoCo Connection}
- I would like to know how to connect the RS-232 of my Model I to my CoCo to interchange programs.

Bryan McPhee Brown Hills, NJ

\footnotetext{
(Dan Downard is an electrical engineer and has been involved in electronics for 24 years through ham radio [K4KWT]. His interest in computers began about five years ago and he has built several 68XX systems.)
}

Any two computers with RS-232C interfaces are capable of communications with each other, Bryan. All that is needed is communications software on both ends. Since you are talking about interfacing a Model I to your CoCo, you will be limited to BASIC programs, or data, in an ASCII format. The fact that these two computers have different microprocessors precludes the transfer of machine language programs. Several programs have been written to convert programs in other ways. C III from Computer Shack transfers programs onto a CoCo disk using a Model I or III. Your Model I must have a "doubler" and MultiDOS to use it. Another method is a program from Spectral Associates called Majic Box. It is a machine language utility for loading Model I cassettes directly into the Color Computer. Both of these programs convert the BASIC tokens in addition to transferring the files as these, too, are different for the Model I. That is why you must use ASCII if you are going the RS-232 route. One communications program that is available for both computers is DFT, or Direct File Transfer. It will suit your needs perfectly.

\footnotetext{
A Running Disability
- I can transfer files and programs from CoCo to MC-IO in ASCII, but how do you get them to run?

Ian Smith
Johnsonville, SC
}

Paul, as far as we know, the MC-10 doesn't have any facility for loading ASCLI tapes. I suppose the reason is that the MC-10 doesn't have a cassette relay. When loading ASCII files on a CoCo, the relay shuts off the recorder after each record to allow the. interpreter to have time to tokenize the data for storage in RAM. That is the reason you see the light flashing off and on as well as the cassette relay clicking during this operation. Since your programs are not in a tokenized form in the MC-10, they will not run properly.

\section*{Wipe Out}
- How do I disable the [BREA K] key? I just finished inputting a long mailing lisi and accidentally hit the [BREA K] key and wiped out the whole thing.

> Jerry Semones
> Louisville, KY

Well, Jerry, you could have entered CONT and restarted the program where you left off, but here's a program that will keep anything from happening when you hit the [BREAK] key in the future:

\footnotetext{
10 'BREAK KEY DISABLE
20 FOR X \(=\&\) H 19 A TO \&H19C
30 READ A:POKE X, A
40 NEXTX
50 FOR X=\&HF8 TO \& HFE
60 READ A: POKE X,A
70 NEXTX
80 DATA \(126,0,248\)
90 DATA \(50,98,28,175,126,173,165\)
}

\section*{OS-9 - The Tie That Binds}
- I would like to set up a second computer terminal with a monitor in another part of our house. I would like to have this second unit tied in to the main unit I am using (CoCo 64 K Extended BASIC, cassette tape. printer, modem).

I would like to be able to send the kids games and programs for them to work on while I use my unit for business. I would like to be able to monitor what they are doing from time to time, as well as be able to communicate to the other terminal. [Also, I would like to] send and receive messages and items from the printer, modem and cassette. Could you please help me with how to set up such a system? I am just a new computer owner, one month.
W.W. Reed Midway, WA

OS-9 is ideally suited for the situation you mention. Unfortunately, I haven't seen many game programs on the market since it just recently became available for the CoCo. With OS-9 you can timeshare and multitask, the two features you desire. The one limitation you may have is the present I/O scheme in the CoCo . Since the CoCo uses a software UART, communications to a remote terminal at more than 300 Baud via the serial I/O port have proven unreliable. It is possible to use the new Radio Shack Communications Pack for remote I/O and it has an ACIA so, hopefully, this problem will disappear shortly. At the same time, you will need an expansion interface to use this device with OS-9.

\section*{A basic Query}
- If I upgrade my " \(E\) "board, as described on Page 59 of the September 1982 issue (Bob Rosen's upgrade), will I still get BASIC on power-up? Does this give me control over the map types via assembler (machine language)? I don't want to be locked out of BASIC, bui I would like to use the full 64 K available in my machine (prime chips) in some machine language programs.

Joe Robbins
Sumner, WA

Joe, putting 64 K chips in your computer will not affect the operation at all unless you run a program to enable the upper 32 K . The magic address is \(\$ F F D F\). If you \(P O K E\) \(\& H F F D F, 0\) the 64 K will be enabled. Don't do it, though, it will lock up your computer unless you have BASIC in RAM also. The program 40 K , also available from Spectrum Projects, will do this for you and give you a 40 K buffer for basic programs. At no time will you lose control of basic. Just hit your [RESET] key and things will be back to normal.

\section*{A Telewriter Update}
- I am the happy recipient of one of the early versions of Telewriter given to educational institutions last summer. I have been using the program successfully on my older model 16 K Color Computer, which has been upgraded to 64 K . However, I have discovered that it will not work properly on a late version 32 K , nor on the new 16 K Color Computer II.

The problem encountered consists of a sluggishness of the keyboard. Two letters in succession will only print one of them and the [BREAK] key and arrow keys take several strikes before they register. The problem is less noticeable if the [SHIFT] key is held down, but that interferes with the proper use of the program.

Has there been a change in the later models of the CoCo to account for this, or is there a software problem with the Telewriter. Any suggestions?

Buford V. Frye, Ed. D. Sṇow Camp, NC

The problem you are referring to is caused by the 1.2 basic ROM, Buford. Here are the addresses that changed from Basic 1.1 to 1.2 that will affect programs:

\section*{A1C1-A26D POLCAT Routine \\ B3F3-B426 INTCNV Routine}

The major difference is the keyboard input routine. In the 1.1 ROM it was located at \$AICI. In the new 1.2 ROM it is located at \(\$\) AlCB. Using a monitor with a find routine, search your program for the two bytes \$A1Cl and change them to \$AICB. A letter
to Cognitec will result in a list of patches that will accomplish the same result.

\section*{Ride Easy Without A Disk Drive}
- I have a 32 K Extended basic CoCo; board type "ET," board serial \#8709285 and have the understanding that this board already has \(64 K\). Does that mean that no changes are required except that disk drive(s) must be added to utilize the full 64 K of \(m y\) machine? I plan to purchase a disk drive and \(I\) had intended on upgrading to 64 K at a local Radio Shack store.

Glen Asmonson
Glen, we have never heard of an "ET" board. Maybe that's on your modem "ET - phone home." The key to your question is in the serial No. 8709285 . This indicates that you have a " 285 " board. Most likely you have a 64 K computer already. Run the ROMRAM program that follows to find out. If it runs okay, there are several programs you can run without buying a disk drive. One of the best we know of is VDOS by Dr. Preble's Programs. It is just like having a 32 K disk. Other companies offer utilities that include Hi -Res screens, print spoolers and programs to allow you to load your ROM packs from tape.

\title{
RAINBOW Info
}

\section*{How To Read Rainbow}

Please note that all the BASIC program listings you will find in the Rainbow are formatted for a 32character screen - so they will show up just as they do on your CoCo screen. One easy way to check on the accuracy of your typing is to compare what character "goes under" what. If the characters match - and your line endings come out the same - you have a pretty good way of knowing that your typing is accurate.
We also have "key boxes" to show you the minimum system a program needs. But, do read the text before you start typing.

Finally, the little cassette symbol on listings indicates that program is available through our Rainbow On Tape service. An order form for this service is on the insert card bound in the magazine.

\section*{The Rainbow Seal}

The Rainbow Certification Seal is our way of helping you, the consumer. The purpose of the Seal is to certify to you that any product which carries the Seal has been physically seen by us and that it does, indeed, exist.
Manufacturers of products hardware, software and firmware - are encouraged by us to submit their products to the Rainbow for certification. We ascertain that their products are, in actuality, what they purport to be and, upon such determination, award a Seal. This lets you know that we have seen the product and that it does, indeed, exist.

The Seal, however, is not a "guarantee of satisfaction." The certification process is different from the review process. You are encouraged to read our reviews to determine whether the product is right for your needs.
There is absolutely no relationship between advertising in the Rainbow and the certification process. Certification is open and available to any product pertaining to CoCo. A Seal will be awarded to any commercial product, regardless of whether the firm advertises or not.

We will appreciate knowing of instances of violation of Seal use.

\section*{Using Machine Language}

Machine Language programs are one of the features of the Rainbow. There are a number of ways to "get" these programs into memory so that you can operate them.

The easiest way is by using an EditorAssembler, a program you can purchase from a number of sources.

An editor-assembler allows you to enter mnemonics into your CoCo and then have the editor-assembler assemble them into specific instructions that are understood by the 6809 chip that controls your computer.

When you use an editor-assembler, all you have to do, essentially, is copy the relevant instructions from the Rainbow's listing into CoCo.
Another method of getting an assembly language listing into CoCo is called "hand assembly." As the name implies, you do the assembly by hand. This can sometimes cause problems when you have to set up an ORIGIN statement or an EQUATE. In short, you have to know something about assembly to hand assemble some programs.

Use the following program if you wish to hand assemble machine language listings:

10 CLEAR200,8H3F00:I=\&H3F80
20 PRINT "ADDRESS:";HEX\$(1);
30 INPUT "BYTE";B\$
40 POKE I,VAL(" \(\left.\& H^{\prime \prime}+B \$\right)\)
\(50 \mathrm{I}=\mathrm{I}+1\) :GOTO 20
This program assumes you have a 16 K CoCo. If you have 32 K , change the \&H3F00 in Line 10 to \(\& H 7\) F00.

\section*{What's A CoCo}

CoCo is an affectionate name which was first given to the TRS-80 Color Computer by its many fans, users and owners. As such, it is almost a generic term for three computers, all of which are very much alike.

When we use the term CoCo, we refer to the TRS-80 Color Computer, the TDP System-100 Computer and the Dragon32 Computer. It is easier than using the three "given" names throughout the Rainbow.

In most cases, when a specific computer is mentioned, the application is for that specific computer. However, since the TDP System-100 and TRS-80 Color are, for all purposes, the same computer in a different case, these terms are almost always interchangable.

\section*{Rainbow Check PLUS}

The small boxes that you see accompanying programs in the Rainbow "Check system," which is designed to help you type in programs accurately.
Rainbow Check PLUS will count the number and values of characters you type in. You can then compare the numbers you get to those printed in the Rainbow. On longer programs, some benchmark lines are given. When you reach the end of one of those lines with your typing, simply check to see if the numbers match

To use Rainbow Check PLUS, type in the program and CSAVE it for later use, then type in the command \(R U N\) and press [ENTER]. Once the program has run, type NEW [ENTER] to remove it from the area where the program you're typing in will go.
Now, whenever you press the down arrow key, your CoCo will give you a checksum based on the length and content of the program in memory. This is to check against the numbers printed in the Rainbow. If your number is different, check the listing carefully to be sure that you typed in the correct BASIC program code. For more details on this helpful utility, refer to H . Allen Curtis' article on page 21 of the February 1984 Rainbow.

Since Rainbow Check PLUS counts spaces and punctuation, be sure to type in the listing exactly the way it's given in the magazine.

\section*{Combining Your OS-9 Boot And System Disks}

\title{
One Disk Is Better Than Two
}

\author{
By Melvin Hefter
}

TThe day finally arrived when my local Radio Shack dealer had a copy of OS-9 available. I got it home, unwrapped the package, and started to dig in. I was not surprised to find two disks in the box. Some of the early OS-9 information printed in the Rainbow warned me that we users of systems with the older 1.0 Disk Extended Color BASIC ROM would need to boot the system using that extra disk.

What did surprise me was how quickly I got tired of the procedure required to use that separate disk to boot the system. Time to review my options! I could buy one of the new 1.1 Disk Extended Color Basic ROMs. This new release has the DOS command to access the boot routine found in the ROM. The only problem with this solution was that I had not yet used up my old 1.0 ROM! The next option was to just live with the irritation of that extra disk. I figured there must be a third option and started to search for it.

I knew that the format of an OS-9 disk was different from that used by Disk BASIC. But just how different was it? The OS-9 format used 35 tracks per disk and 18 sectors per track -- just like Disk BASIC. I wondered if a track and sector meant the same thing to both OS-9 and Disk BASIC. I formatted a new disk in the OS-9 format and then started to play with it using Disk BASIC. I found that I could not use the BASIC DIR command on the OS-9 formatted disk, but I could use the \(D S K I \$\) and \(D S K O \$\) commands to bypass BASIC's file system and read or write the OS-9 formatted sectors. I started to think there was hope for finding that third option.

It became apparent that a track and sector were common to both systems, but the file systems were very different. I wondered if I could come up with a single diskette which could be read by both systems. Disk BASIC uses track 17 for its directory information. I knew I could use the \(D S K O \$\) command to make this track look like a Disk BASIC disk. Some study of the OS-9 Technical Information manual showed that OS-9 used track 0, sector 2 to show which disk sectors are available and, more importantly, which were not available for the OS-9 file system to assign. The approach to

\footnotetext{
(Mr. Hefter is president of Custom Software Engineering of Cocoa Beach, Florida)
}
that third option was now clear. All I needed to do was to take an OS-9 formatted disk, make a small part of it usable to Disk BASIC and use that part to store the boot program. Next, I needed to tell OS-9 that this small part of the disk was not available for it to use. The last step would be to make a logical copy of the OS-9 system disk in the area not used by the boot program.

Below are the steps required to carry out the plan. After each step, there is an explanation of just what that step does. This procedure is written assuming that you have two disk drives. You could change it as necessary for a one-drive system, but you will probably find it impractical to use OS-9 with only one drive anyway!

STEP 1. Follow the instructions in the Getting Started with OS-9 manual to make a backup of the OS-9 system disk. Use the normal Disk BASIC BACKUP command to make a backup of the boot disk supplied. Use the backup disks in the remainder of this procedure.

Explanation: Tandy was considerate enough to allow user backups to be made. Don't risk the unnecessary inconvenience a mistake may cause.

STEP 2. Use the normal procedure to again boot OS-9 and format a new disk using the OS-9 FORMAT command. We will call this new disk NEWSYS. Remove all diskettes from your drives and turn off your computer.

Explanation: To produce an OS-9 formatted but empty disk.

STEP 3. Turn on your computer. Place the NEWSYS diskette in drive 1 . Key in and \(R U N\) the following BASIC program:
```

10 CLEAR 2000
20 A$=STRING$(128,255)
30 DSKO\$ 1,17,2,A$,A$
40 DSKO\$ 1,17,3,A$,A$
50 DSKI\$ 1,0,2,A$,B$
60 MID$(A$,37,1,)=CHR$(128)
70 MID$(A$,39,1)=CHR$(24)
80 DSKO\$ 1,0,2,A$,B$

```

Explanation: Lines 20 to 40 will write empty directory information to track 17 so that you can store information using Disk BASIC's file system. Note that we will store only one file on the disk in the BASIC mode so we need only part of
track 17. Line 50 reads the OS-9 disk allocation map created when the disk was formatted. Lines 60 and 70 change this map to mark as unavailable the sectors we will be using in the Disk BASIC mode. Line 80 writes the modified OS- 9 disk allocation map back to the disk.

STEP 4. Place the old OS-9 (a backup copy) boot diskette in drive 0 . Load, but do not \(R U N\), the program "*". Now make the following changes to this supplied boot program:

DEL - 20
70 SAVEM"*:1", \&H5000,\&H5046,\&H5000
80 END
After making these changes, \(R U N\) the program.
Explanation: The program, as modified, will load the actual boot program from \(D A T A\) statements into RAM and then save a copy of the boot program on the NEWSYS diskette.

STEP 5. Remove both diskettes from your drives, and turn off your computer. After a short wait, turn your computer back on. Place the OS-9 system diskette (a backup copy) in drive 0. Place the NEWSYS diskette in drive 1. Enter the following command:

\section*{LOADM"*:1":EXEC}

Explanation: This will load and use the copy of the boot program you have saved on NEWSYS to boot the OS-9 system. If the system does not start up properly at this point, you have done something wrong. Go back and repeat the preceding steps!

STEP 6. After OS-9 has started and you are ready for an OS-9 command, input the following command line:

DSAVE-B-S24 /DO /D1 ! SHELL
Be patient, it will take about 15 minutes for the command to be completed.

Explanation: This command will cause OS-9 to make a logical copy of the system diskette on your NEWSYS diskette. You cannot use the OS-9 BACKUP command at this point because a physical sector by sector copy of your original system disk would be incompatible with the use of those few sectors for the boot program now stored in Disk BASIC's file format.

STEP 7. Remove both diskettes from your drives and turn off your computer. After a short wait, turn on your computer and place the NEWSYS diskette in drive 0 . You will now use your new single diskette boot procedure for the first time by keying the following command:

\section*{LOADM"*":EXEC}

Explanation: You have now completed the combining of your boot and system disks and can put your old disks away.

Don't throw out your old boot disk just yet. You will still want to use the original boot program for the disk speed check option. I didn't provide for this option in the above procedure because it is not one you will want to use very often.

Also note that even though you could not use the OS-9 \(B A C K U P\) command as part of the combining process, you can now use it to make a backup of your combined disk!

Now I've eliminated the irritation of that extra boot disk while saving my old faithful 1.0 Disk ROM. I've also learned a bit more about the OS-9 file system and am ready to start unraveling some of the other mysteries of OS-9.

\section*{Second Annual}
 of your creation and comment on any aspects that deserve the judges' attention. Put any accompanying article, cover letter or documentation on paper and put the program itself on tape or disk. This is a must; we will not type in even the shortest of entries. Lastly, put your name on everything and be sure and write-protect your disk or punch out the tabs on your cassette so nothing gets accidentally erased.

Above all, get it in by May 1, 1984, in bug-free condition complete with any necessary instructions. Keep following the Rainbow for more details and a complete list of prizes, but remember there'll be something for everybody - for example, every entrant will receive a free pass to the RAINBOWfest of his or her choice!

RULES: All programs must be original works, no "conversions." Entries must be postmarked by May 1, 1984, and become the property of Faisoft, Inc., publisher of the Rainbow. Decision of the judges is final. Duplicate prizes will be awarded in the case of ties. Winning programs to be featured in a special Rainbow Adventure issue. Mark entries "Adventure Contest Editor" and send to the Rainbow, P.O. Box 209, Prospect, KY 40059.

\title{
SAGE And CoCo Don't Mix - Yet
}

\author{
by frank hogg
}

\section*{/d0/start}

What is the best language to use for a particular application? This can cause an argument whenever more than one person is in the room where the question is asked. Many years ago, I used to have fun by going up to a group of guys at the computer store and just listening for awhile.If I found that one fellow had a Z80 computer and another had a 6502 I would say something like "The Z80 runs circles around the 6502." Then I just stood back and watched the fun. Try it sometime, computer people love to debate.

We have been looking closely at languages for purposes of future programming and we chose C because of its portability. We can write programs that run under OS-9 and port them over to a Unix system later. We are currently working on a major dental/medical package and our original intent was to use \(C\) until I ran across a new language from England called "SAGE."

\section*{/d0/enter_sage}

SAGE runs on Unix, Xenix, Uniflex, and OS-9 level II. There are attempts to get it on level I and the CoCoOS-9 but it is not available as yet. The cost is \(\$ 995\) for OS-9 and \(\$ 1290\) for Uniflex. I don't have the prices yet for the Unix/Xenix versions. The OS-9 version is from Microware and is available from dealers like us. Uniflex versions are available from England or us. I have been using the OS-9 version on a Gimix Level III for the purpose of writing our in-house business software and it is this experience that I would like to relate to you. I feel that SAGE is the most significant piece of software for application programming yet created.I love it, plain and simple. I have been able to do things with it in the last month that would have taken me six to nine months in any other language!

\section*{/d0/what_is_sage}

It is difficult to describe something that is so different from anything else. On the one hand, it is like a database manager, but much more. On the other hand, it is like an

\footnotetext{
(Frank Hogg is the president of Frank Hogg Laboratory, one of the world's largest suppliers of software for 6809 based computers. He and his wife, Linda, live in Syracuse, New York.)
}
applications package that you can easily change to suit your needs. The best way to answer the question is to show how some things are done in SAGE. A typical application might be to create the old name and address file. Most database manangers can do that so let's look at doing it in SAGE. First, you have to define the information you want to save in the disk file. To do this, you use a program called "describe" to describe the keys and the data parts of the file. SAGE uses an ISAM (Indexed Sequential Access Method) file structure which means that there are actually two files. One is the main data file that has all the information or data in it and the other is the key file. In an ISAM file structure, the key file is searched sequentially to find the record you wish, then the main file is accessed by the pointer found in the key file. In most cases this is done by looking at the key file from start to finish. Because the keyfile is shorter than the main file this is fairly fast. SAGE goes one step farther by using a "b" tree search of the key file which is faster yet. Basically, it will read the file (usually less than one second) for any record in the file. We now have about 1,000 invoices in our file and access is instant. Now, with that behind us, let's describe our simple file.

Because it is a name and address file, the obvious key would be the last name. To keep it simple for now, here is how it would look:

\section*{OS9:describe names}

\section*{Descriptors for names}

For each field enter: name, heading,type\&size,format, validation Type h for help.
```

KEY FIELDS
1:last_name,Last Name,al2,u
2:
DATA FIELDS
2:first_name,First Name,al2
3:address1,Address 1,a12
4:address2,Address 2,a12
5:city,City,a12
6:state,State,a2,u
7:zip,Zip,i2
8:

```

List, Change, Delete,Insert,Abandon,Save,Help: h Field name must be unique using \(\mathrm{A}-\mathrm{Z}\) a-z \(0-9\) _ only. Valid field types are:
\[
\begin{array}{ll}
\mathrm{a}=\text { alphanumeric } & \text { (maximum } 255 \text { bytes) } \\
\mathrm{i}=\text { integer } & \text { (size } 1,2 \text { or } 4 \text { bytes) } \\
\mathrm{r}=\text { real } & \text { (size } 8 \text { bytes) } \\
\mathrm{m}=\text { money } & \text { (size } 4 \text { or } 8 \text { bytes) } \\
\mathrm{d}=\text { date } & \text { (size } 4 \text { bytes) }
\end{array}
\]

Single byte integers are always positive. Data fields may be dimensioned. Both format and validation list are optional. The validation list may contain both single values and ranges of values. Examples:
item,Item Code,al2
Unit,,a5;each,gross,doz, box[Heading defaults to name]
description, ,a20 [No heading]
stklev,Stock Level,i4,\#\#\#\#\#\#
price,Sale Price,m4(3),\#\#\#\#,\#\#
cat,Category,il,\#\#;1-10,50,90-99
List,Change,Delete,Insert,Abandon,Save,Help: s
OS9:

The key name "last_name" and the other names will be used in the program that we are going to write just as they appear here. The words that appear next, i.e. "Last Name" are optional but, if used, they act as comments and will be used later by SAGE on the screen. The last item "al2, u" tells SAGE that this is an ASCII string of 12 characters and that we want the input from the user converted to uppercase to make it easier to search later. We did the same for the state. For the ZIP we want to use a two-byte integer. SAGE has a rich assortment of types. They are:
\(\mathrm{a}=\) alphanumeric. These are fields that contain any characters.
\(\mathrm{i}=\) integer. These are integer (whole) numbers within these ranges.
il \(=0\) to 255
\(\mathrm{i} 2=-32767\) to 32767
\(\mathrm{i} 4=-2147483647\) to 2147483647
\(r=\) real. Floating point numbers or integers outside the range specified above.
size \(=8\) (17 decimal mantissa with a dynamic range of \(10^{\wedge} 38\) )
\(\mathrm{m}=\) money. This is used for most money applications where floating point is not necessary. Our business is run with a money type of 4 which saves both disk space and is faster. SAGE takes care of the decimal point. In essence, you are dealing with pennies.
\(\mathrm{m} 4=-2 \mathrm{I}, 474,836.48\) to \(21,474,836.48\)
\(\mathrm{m} 8=10^{\wedge}-17\) to \(10^{\wedge} 17\)
\(\mathrm{d}=\) date. SAGE stores a date internally as a four-byte integer with a day number (starting from \(1 / 1 / 0001\) ) but will automatically convert to a day, month and year. SAGE also tests for correct input from the user.

Now that we have our file structure defined, we can create the actual file that we are going to put the data in. This is done with the command "newkf,"which stands for "new key file."

OS9:newkf names
names created
OS9:

We now have three files on the disk. They are "names.d" which the "describe" command created. "names.k" is the key file and "names" is the data file.

Now let's write the program to get the information from the user and write it to disk. The first line of the program will appear at the top of the terminal screen. Lines that begin with a "." are comment lines. Let's get on with it!

\section*{**** Frank Hoggs name file ****}
.define the file we are going to use.
!file I names
.Set up the screen. The first number is the line, the second is the column.
+last_name,,5,20
+first_name,,6,20
+address \(1,7,20\)
+address2,,8,20
+city,,9,20
+state,,9,40
+zip,,9,55
.You will find this hard to get at first, but "end" starts the program?
end
.get and insert a name into the file
\(*_{i}=\) insert
.bs stands for the backspace key
il input last_name-zip bs=finish
prompt "Correct" no=finish
insert 1
goto il
.find a name in the file
*f=find
find message "Input name to find"
input last_name bs=finish
find 1
display last_name-zip
end
.get next record
* \(n=n e x t\)
```

check l
next l
display last_name-zip
end

```
.edit name displayed
*e=edit
check I
input last_name-zip \(b s=\) finish
prompt "Write corrected record to disk" no =finish
write 1
end
.delete name displayed
*d=delete
check 1
prompt "Delete this name" no=finish
delete 1
end
.exit point
*ex=exit
exit
finish clear: end
.this is the end of the program
The program is saved on disk with the name "names.f" and then compiled by the program "cf" like so:

OS9:cf names
'names' compiled
OS9:
The program is then run with the command 'sage' like so:
OS9:sage names
The screen will look like this:
**** Frank Hoggs name file ****

The cursor is at the question mark waiting for your reply. This is where the program goes whenever it encounters an "end" statement. Let's imagine that you type a " \(i\) " for insert. Follow the program flow. The cursor will first go to the Last Name prompt (by the way, the heading came from the file that was described "names.d") then as you enter data it will
go from one to the other as they were laid out with the "+" at the start of the program. If you type a backspace at the beginning of a field you will go to the beginning of the previous field. This way you can catch errors. If you do not enter anything in a field, just [ENTER] - then you will go to the next field without changing what is in the field. Because the words "bs=finish" is on the input line, typing a "bs" at the name prompt will return you to the prompt at the bottom of the screen. This can be greatly modified. For instance, if you want to, you could prompt the user in case he wasn't sure, etc. At the end of input (the ZIP), the program will ask if you are sure and if you say yes, it writes it to the file. It then goes back to the name field for the next record. Typing a "bs" will bring you back to the prompt.

The "find" command asks for input of the last name which is the only key for this file. It will then search for the name input and print "no such record" if none is found. The next command is obvious. Edit will let you change fields in the record and then write the corrected file to disk. Delete will delete the record from the file. There are a lot of other things that could be done with this program but this gives you a sample of how SAGE programs are written.

Notice that in the above program the only reference to the file was by one-word commands. You can have as many as six different files and you can message the information in the files in several ways. Let me give you a blow by blow account of the invoice program that I wrote in just a few days for our business needs.

The invoice program has a screen with many more fields on it, about 60 as a matter of fact. The display looks like this:
***** Frank Hogg Laboratory - NEW-INVOICE 1/7/84 *****
Cust\# [ ]
\% [ ] [ ]

\section*{ATTENTION, CoCo OWNERS!} Cables! Our PARALLEL PRINTER INTERFACE provides SWITCH SELECTABLE PRINTER or MODEM operations. It features switchable baud rates from 300 to 9600; comes complete with power supply, modem cable \& "CENTRONICS" type printer cable.

HOUSTON, TEXAS 77055
(713) 956-0207

\section*{ORDER DIRECT FROM US OR FROM YOUR INDEPENDENT COMPUTER RETAIL STORE.}

As you can see, there is a lot of stuff on the screen, perhaps too much, but we are working with it pretty well so far. Suppose you wanted to insert a new invoice. Type an " i " and the cursor goes to the top left of the screen and asks for the customer number. If you do not know the number then just hit a [ENTER] and the cursor will go to the last name field. Type in the last name and the program will search a file called "name_file" for a name that matches the first four letters of the name you typed in. The customer number(s) and the full name of any that match will be displayed in the "scroll area" of the screen. This area of the screen is where the items of the invoice are normally displayed. If one of the

\section*{+ FIRST AID +}

TROUBLE FORMATTING PROGRAMS?
RX: reusable, double-sided PRINT @ LOCATION FINDER

> Now it's a breeze to locate any X,Y location at a glance . . without leaving your program.

Each location clearly numbered on erasable laminate. Use it and reuse it for years of accurate word processing and graphics formatting. Instructions included.

\section*{Call for low prices on drive cables.}
names matches, then you merely type that number in at the top of the screen and the program will get all the customer information from the disk file. If not, then the program will ask for the rest of the customer information. At the end, or just before the line that has the P.O. field, the program will assign a new customer number to this customer and then will write the customer information to the customer file and write the last and first name and customer number to the "name.file." Then the program will get the rest of the information starting at the P.O. field.

Something special happens when the program asks for the the part number. The program searches a file called "past_ numbers" for a match and returns the description and the unit price. It then figures the amount based on the amount times the quantity shipped. At the end of this input, the program calculates the various totals at the bottom, then assigns it an invoice number and writes it to disk.

The options "find" and "next" work like the "names" program. Display is different, because I do not save the description in the main invoice file. I elected not to display it unless the operator asked for it. It only takes about \(1 / 2\) second per entry, but if you are scanning through invoices it is a bit faster not to display the information unless asked for with the display command.
"Something special happens when the program asks for the part number . .."

\footnotetext{
Print is interesting in that it asks for the beginning and ending invoice number. (It uses the invoice number field on the screen.) Then, it calls the invoice print program as a background task to print the invoice. The program stores the two numbers in a file for the invoice print program. You can execute a shell command from a SAGE program to do this.

The pay option just gets the date the invoice was paid. Several other fields on the screen may not be clear, but they are of no matter to the description I just gave you.

It is significant to note that I wrote the first version of this program in 30 hours over a three-day period. We were able to use this program from the beginning to both input and print invoices. The last four weeks have been spent in designing the permanent file structure that I wanted to use and what goes into the file as well as ways of keeping track of money as it flows through the system. In effect, most of the time is spent in designing the bookkeeping system and very little actually programming. SAGE frees me of the drudgery of the small details of file handling and gives me an easy to read language that is easy to change. On several occasions over the last month I have made substantial changes to the program in only 10 or 15 minutes. This program that I have described (which does a lot more than you see here) is only 10 pages of source code. It has always been easy to make corrections and changes partly because the source is so small and mostly because it is easy to read.

I think that SAGE is the greatest thing ever for application and database programming. We are in the process of creating several major software packages using SAGE and I can recommend it heartily.
}

\title{
KISSABLE OS-9 \\ More Answers, New Products, And a Major BASIC09 Program
}

\author{
By Dale L. Puckett
}

Last month we answered quite a few of your technical questions. This month the mailbox was full again so we'll try to answer some more. We'll also show you a few of the powers of BASIC09's RUN statement and publish a major BASIC09 program.

The program - Finance - is a modular and structured program and should give you a good idea of how to run really large programs in CoCo's small workspace. The use of long, meaningful names for variables and procedures makes the program very easy to read and self documenting. It should really point out the beauty of this state-of-theart language.

\section*{First, An Addendum}

If you're lonely and want to get a lot of telephone calls, all you need to do is leave a key piece of information out of a procedure published in the Rainbow. We did that last month and it didn't take long for a few avid 6809 hackers to discover that I forgot one line of code in my instructions that show you how to make your non-Radio Shack disk drives step at a faster rate. The code we published
(Dale L. Puckett is a freelance writer and programmer who has worked with the Motorola family of miroprocessors since 1976. He just completed his first book, The Official Basic09 Tour Guide, this summer. It is being published by Microware and will be available this fall. He is the author of DynaSpell, Readtest, Esther and Help, which are available from Frank Hogg Laboratories. He serves on the Info World Software Review Board and is a Chief Warrant Officer in the U.S. Coast Guard.)
increased the step rate during most operations, but we accidentally left out the location of the byte that changes the step rate during the operation which restores the drive to track 0 .
Credit goes to Mark Janecki of Groton, Conn., for bringing the missing byte to our attention. He had been talking to Bud Pass, a famous 6809 programmer down in Georgia, and called up with the answer at about the same time I noticed the problem. The missing change was at an offset of IFE from the beginning of the module, CCDISK. The 13 Hex stored there should be changed to 12 Hex for a 20 millisecond step rate; 11 Hex for 12 milliseconds; or 10 Hex for 6 milliseconds. It's interesting to note that most of the drives sold by Radio Shack will step at 20 milliseconds so this change should work with them also. In fact, 1 have a few friends who have been running the Radio Shack drives at 20 milliseconds with the FLEX operating system for nearly a year. They haven't had any problems and the drives sound a whole lot better.

Since there seems to be a lot of interest in this information, here are the changes again. This time we'll print them in tabular form so they will be easier to install.

\section*{Changes To Module CCDISK For Faster Stepping Rate}
\begin{tabular}{ccc}

\section*{Finance - A Program That Runs Programs}

1 was getting ready to write this month's column. I noticed that the theme for the March Rainbow was Business and Finance. It reminded me of a program that I had been running on my SWTPC 6800 back in 1976. It was one of the most useful programs I have ever come across, so I decided to rewrite it in BASIC09 for you.

Finance consists of 22 BASIC09 procedures that let you investigate investment possibilities, study depreciation or anticipate the cost of loans. For example, you can find the value of a one-time investment over varying periods, determine the value of regular deposits or find out how much you would need to invest regularly to come up with a predetermined amount in the future. Three of the procedures let you look at different depreciation models, and five more let you study loans from a different perspective. The \(1 I\) additional procedures print menus and perform tasks common to the main procedures.

The source code for Finance is just under 14 K bytes. The maximum Basic 09 workspace available when \(O-P A K\) is installed is 7 K bytes. This raises an important question. How can you run Finance?

The answer comes from BASIC09's ability to automatically load and run procedures from a disk. This allows modular programming. In fact, we strongly encourage you to break all of
your programming programs down into smaller, more manageable tasks.

\section*{Modularity}

Let's use a real world analogy to help explain the concept of modularity. Novels are organized collections of wellwritten chapters. Chapters contain a number of paragraphs. Paragraphs are collections of carefully constructed sentences. And, sentences are just short groups of well chosen words.

The analogy between writing and programming is strong. A good writer uses short words to build short sentences. He organizes those short sentences into powerful paragraphs. In a few days, those paragraphs become a chapter. And in a few months, the chapters become a book.

However, a writer does not sit down and write a book. Rather, he breaks the subject matter down into logical chapters. That done, he attacks each chapter with vengeance. This causes another logical division, and after it is accomplished, ideas for sub-chapters are researched. When the research is complete, an outline of paragraph ideas is put on paper. Then finally sentences are composed, one word at a time.
Today, a similar approach is being used by successful programmers. It's called structured programming. Your first step as a programmer is to define the problem you are trying to solve in terms of smaller problems. These small problems can then be broken down into yet smaller problems. Eventually, you will reach the point where you can translate your problem directly into a statement the computer can understand.

After you have tackled your programming problems in this manner for a while you will begin to see a similarity in the "smaller problems." Then, you can begin to save your solutions and use them again and again. With BASIC09, you'll be saving and running "modules."

Eventually you'll have a library of modules that can be used as building blocks in hundreds of programs. This is what modularity is all about. BASIC09 calls its modules "procedures" and makes them easy to use.

\section*{Pass The Word - Use A Parameter}

If you want to succeed in business, you must pass the word to your employees. If you want to win a war, you must pass the ammunition. Likewise, if you want your BASIC09 procedures to RUN properly, you must pass parameters.

For example, if you want to multiply two numbers and print the product, you
can approach the problem several ways. You can write a procedure to multiply " 2 " times " 2 " and another to multiply "2"times "4", etc. But that would take a lot of time and memory - and besides, it would bore you to death.

It would be much easier to write one procedure that can multiply any two numbers and then pass it the numbers you want it to use when you need an answer. The numbers you are passing are called parameters.
> "The analogy between writing and programming is strong."

Remember, a parameter is a number, character or string of characters that is given or passed to another BASIC09 procedure. It may be a variable name, a string constant or a number. As you enter Finance in your OS-9 CoCo , you'll notice several procedures that use parameters to receive information from a calling procedure and several more that pass information back.

Since you only have 6 K bytes to work with, you can only enter part of Finance into your BASIC 09 workspace at any one time. I suggest that you enter the following modules and \(P A C K\) them in a file called Finance. The remainder of the procedures should be PACKed into individual files, i.e., one procedure per file.
FINANCE
CLEARSCREEN
PRINTLINE
PROMPT
YESORNO
ENTRYERROR
MAKEITPRETTY
DISPLAYVALUE

Remember to \(S A V E\) the modules in a source file in your working data directory before PACKing them into an execution file in your working execution directory. If you \(P A C K\) a BASIC09 procedure before you \(S A V E\) it, you won't be able to read your source again.

After you PACK all of the modules and store them in your current execution directory, you can run the program
by typing:

\section*{OS9: finance [ENTER]}

OS-9 will load the file named Finance and link to the first module in the file. When it does this, it will notice that the module is a BASIC09 I-code module. This will cause it to automatically load and execute the \(R U N B\) program from the current execution directory. \(R U N B\) will then run Finance which will in turn \(L O A D\) and \(R U N\) all the other modules in the program when it needs them.

Each time BASIC09 - or RUNB finds a command to RUN a procedure, it will look for that procedure in memory. If it is in memory, it will link to the procedure and execute it. If it is not in memory, it will automatically look for a file by that name in the current execution directory. If it finds one, it will load the procedure and execute it. That's why you can run Finance - all 14 K of it - in the 6 K bytes of memory available in a CoCo running OS-9 with \(O-P A K\).

If you would like to run Finance but don't feel like typing it into your CoCo, send me a formatted OS-9 disk along with a self-addressed, stamped envelope and \(\$ 15\) and I'll copy both the source and executable BASIC09 I-code files onto your disk and return it. I also plan to donate the program to the OS-9 Users Group Software Library mentioned elsewhere in this section of the Rainbow.

Translating Finance from standard BASIC to BASIC09 was easy, albeit time consuming because of the length of the program. However, I thought it would make an excellent first contribution to your BASIC09 program library as well as an excellent demonstration of BASIC09 programming constructs. Did you notice that there is not a single line number in any of Finance's 22 procedures. Enjoy! And, if you get rich because of your investments I'll be glad to help you spend the profits.

\section*{Other Basic09 Programs}

If you're just starting to build a library of BASIC09 programs here is a package you might want to look at. Microware has released Entertainment Pack I, a collection of programs written in BASIC09. The package consists of games and other interesting programs that are both entertaining and excellent examples of BASIC09 programming techniques. All programs include source files which can be edited to run on any standard alphanumeric or graphics terminals. This means that you should be able to really make them pretty on the CoCo with its BASIC09 graphics module.

\section*{S K I L L W A R E}

Programs in this package include:
BLKJAK - A Las Vegas style blackjack game.
CLK - A graphical display of a wall clock on your terminal or CoCo screen.
DOGS - A Greyhound racing program with simulated graphics.
ELIZA - A bASIC09 version of the famous artificial intelligence simulation of natural language dialogue with a psychiatrist.
HAIKU - A program that creates original "haiku," flowing Japanese prose.
QUEST - A mini-Adventure game.
RATS - A program that lets you find your way out of a computer-generated maze from a rat's point of view.
TOWERS - A graphical display of the solution to the "Tower of Hanoi" puzzle.

\section*{And, Speaking Of Programs}

CoCo OS-9 users can rejoice. Before
long there will most likely be a flood of application and systems programs available for CoCo OS-9. Why?
1 can't help but make this prediction after receiving a short news release from

Richard Don at GIMIX. It said:
We now have drivers for reading and writing CoCo disks. We will replace each GMX-OS9 disk with a new disk containing these drivers for a \(\$ 35.00\) charge.

This means that most of the programmers who have developed the many excellent OS-9 application programs will be able to make them available to you the CoCo OS-9 user. Before this breakthrough from GIMIX there was no easy way for them to transfer software back and forth between a standard OS-9 system disk and a CoCo OS-9 disk. Thank you Richard.

\section*{The Official basic09 Tour Guide}

Microware made it official in their last edition of Pipelines, a newsletter sent to all registered standard OS-9 owners. My book, The Official BASICO9 Tour Guide should be available by the time this article in published.

The tour guide was designed with educators and beginning programmers in mind. However, its encyclopedic reference section - with one BASIC09 keyword described and demonstrated per page - lets experienced programmers find anything they need to know about any BASIC09 keyword fast.

The book starts in the beginning and includes complete programming examples plus, a chapter on the BASIC09/OS9 connection. A little humor has been thrown in for good measure.

\section*{DynaStar Now Performance Matched To CoCo}

We received some exciting news from Frank Hogg recently. By the time this issue of the Rainbow hits the stands, FHL will be shipping an upgraded version of the DynaStar text processing package that has been completely performance matched to the CoCo running O-PAK.
DynaStar, if you are not familiar with it, is WordStar with all the problems removed. I have been running the original version on my GIMIX system for more than three years now and on CoCo for six months and couldn't turn out these monthly columns without it. The complete package includes DynaStar, a text editor; DynaForm, a text formatter; and DynaSpell, the friendliest and most advanced spelling checker available on a 6809 microcomputer. In fact, DynaSpell even lets you look in the dictionary for the correct spelling of a suspect word. A version of DynaSpell has also been published by Hayden Software for IBM PC owners. Hayden's version is known as "The Speller."

DynaStar upgrades include an online tutorial, keyboard macros and switchable character sets. It gives you complete access to all of \(O\)-PAK's features and even tracks the size of the screen automatically - just in case you decide to change character sets in the middle of an editing session. It also lets you use up to 250 characters on a line and does this by shifting the entire screen left eight characters at a time if you cross a screen border. The shift is instantaneous and reminds me of the Wang dedicated word processing systems I use at work.

\section*{Typos And Other Answers}

I mentioned in an earlier column that 1 thought the documentation supplied by Tandy with the CoCo version of OS9 was outstanding. I stand by that comment. The standard OS-9 manuals are no match by comparison - with typewriter copy running out to within a half inch of both sides of the paper and no headlines, they are grey and boring. Yes, Tandy did an outstanding job on their OS-9 manuals.

However, there are a few problems and we're finding them together. As you let me know of problems you discover, I'll pass them along to other Rainbow readers so they can make pen and ink corrections.

Most of the problems come in the lines containing the sample commands. It seems the typesetting machine they used just could not understand OS-9. One of the first letters we received stated a problem discovered by Duane Norton of Calgary, Alberta. Duane told us that he loved OS-9, but he was having a problem when he tried to dump a device to his terminal.

I checked the manual as soon as I read his letter and sure enough, there was a typo in the sample printed. Duane had typed:

OS9: Dump@ \(/ \mathrm{dl}>/ \mathrm{tl}\)

It seemed OS-9 refused to cooperate and insisted on dumping device / d0. I thought the command line looked strange so 1 consulted my Microware manuals and found the proper command line and everything worked fine:

OS9: Dump/dl@>/tl

\section*{Mystery Names}

Martin Jones of Jasper, Ala., made an interesting discovery and wrote us to request an explanation. When he typed [CLEAR][A] immediately after booting OS-9 the following message was printed on his screen:

OS9:
by K. Kaplan, L. Crane, R. Doggett OS9:

Martin wanted to know. "Who are these guys?"

Well Martin, I tried it on my CoCo and got the same message, so here's your answer. Ken Kaplan is the President of Microware. He along with Larry Crane, Robert Doggett and several other programmers at Microware are the authors of OS-9. Looks like they wanted to have a little fun to pass the time on a cold winter day in Des Moines.

\section*{A Complaint}

Tony Mason-Sherwood, of The Microcomputer Service in Putney, Vt., became confused because he had too much information available. He tried to modify CoCo OS-9 to use faster step rates and 40 -track drives because he had read the manuals that come with GIMIX OS-9. He writes:

With Radio Shack I had to read

extensively just to find the disk descriptor modules and how to modify them. There were errors in the instructions. The step rate modification has no effect and I have to assume that Radio Shack's CCDISK module is probably the reason. Could you address this for those of us who are excited by the potential of OS-9 in expanding CoCo into a constantly more powerful low cost business alternative.

Tony, your assumption is 100 percent correct, CCDISK is the culprit. For some reason, probably short-sightedness, Tandy chose to have Microware hard code the number of sides on a drive and the step rates in the disk driver module rather than have them read a device descriptor like the standard OS-9 systems.

Thus, with one fast edit, they killed one of the most important features of OS-9 - the ability to change system hardware by simply changing the device descriptor. What a shame.

As president of the OS-9 Users Group, I will go on record with a request that in future updates of \(\mathrm{CoCoOS}-9\), this ability be put back in the system. If our group grows as fast as we expect it to, maybe we will have the clout to get this accomplished. In the meantime, Tony, see the table at the beginning of this column to change your step rates and consult our February column to find out how to use all 40 tracks. Tandy's not the only one that can hard code.

\section*{An Assembly Language Answer}

Michael R. LeVasseur of St. Petersburg, Fla. is a brave sole who has already dived into assembly language programming with CoCo OS-9. He poses an interesting question.

My first real problems came in the technical manual describing the OS-9 calls. The manual plainly states on Page 134 that "If data is written past the present end-offile, the file is automatically expanded."

I tried it and overwrote the file each time from the beginning of the file. If I entered more code than was present before, the file was expanded, but it wasn't expanded from the end. I got it to work by creating the file in the update mode, reading the entire file and then starting to write from there. There must be an easier way.

\section*{Get the BASGCo Your Introduction to BASIC09, a
State-OfThe-Art Programming Language From Michoware \\ BAS}

The OFFICIAL BASICO9 TOUR GUIDE is skillfully written in a friendly and easy-to-read style. Just perfect for those new to computers and to BASIC09. It's also a valuable reference book for programmers, engineers, students and hobbyists, providing an in-depth look at BASIC09 plus an overview of the OS-9 operating system. Comprehensive reference sections on BASIC09 and OS-9 commands are also included.
The book "maps" out your route through the Mercedes of Basics . . . BASIC09 and puts you in the driver's seat in no time. Fasten your seatbelt, sit back and enjoy the ride to perfecting your programming skills.

\section*{MICROWARE . . .}

The OFFICIAL BASIC09 TOUR GUIDE comes from the people who wrote BASIC09. As the leader in 6809 system software, we at MICROWARE care about our users and want to help you get the most from our products.

\section*{It's Easy to Order.}

Phone orders are accepted from MasterCard or VISA cardholders or for COD shipment. You can also order by mail using the coupon below. Quantity discounts are available to educational organizations and dealers. For further information contact Microware.

Expiration

We found the answer to this problem ourselves just recently while doing an update of DynaSpell. The answer can be found in the technical manual with the description of the Get Status call on Page 99. The following code should do the trick:
* Load A-register with path number lda path
* Then, load B-register with SS.SIZ function code ldb \(\$ 02\)
* and call os9's get status routine os9 I\$getstt
bcs error
* If there was no error the most significant 16 bits of the current file size will be in the X-register and the least significant 16 bits will be in the U-register now.

Mike also asked about the devices: \(/ \mathrm{p}, / \mathrm{pl}\), / clock, /tl and disk drives / d2 and /d3. They are described on Page 55 of the OS-9 Commands Manual. "For those hardware hackers and anyone else interested, are these actually supported by the CoCo ?"

The device descriptors, with the exception of / pl , are all available on the CoCo. / \(\mathbf{P}\) is written to describe the standard Radio Shack printer and uses the device driver named PRINTER.
/Clock is the module that gives OS-9 the ability to use multitasking. /TI describes the RS-232 jack on CoCo's rear panel and uses the device driver, RS 232, to give you a way to use an external terminal with CoCo OS-9. Unfortunately, it isn't very useful at Baud rates faster than 300 .
/ P 1 is the name given to a serial printer on standard OS-9 systems. Its mention is a carry-over from the standard OS-9 manuals that was not edited out of the CoCo OS-9 manuals. However, Radio Shack has come out with its expansion interface and an RS-232 card for it. It would be a very easy matter for Tandy to supply an OS-9 device descriptor and device driver to work with it. In fact, they would need only do a small rewrite of a standard ACIA driver.

Mike also asked how he could display the name of a disk he had so carefully entered when running the Format command. This command will do the job:

\section*{OS9: free / d0 [ENTER]}

The command will also tell you how many sectors on the disk have been formatted and how many are free for you to use. Mike, I'll try to answer your questions on the error numbers in a

later column. They deal with the internal workings of OS-9 and would be too complicated at this point in the life of our column. I also hope to dig into some assembly language programming sometime soon.

\section*{And, Still More Typos}

Brian Costley of B. C. Lockshoppe, "Micro Smiths," in Goodyear, Ariz., wrote to tell us he loves OS-9 but is very upset with the manuals.

The manuals contain enough typographical errors in strategic locations to confuse any unwary reader. Also, they explain how easy it is to change device descriptors, but fail to supply the information necessary to make some of the most useful changes. Giving a Hex number as a descriptor default value which sets parity, word length, etc., is fine. Not telling us what the actual parity, word length and other values are, is an unforgivable oversight. And what Hex numbers are used to produce other output parameters.

Brian, I think the answer is hidden in the fact that the Tandy OS-9 manuals are simply a rewrite of Microware's standard OS-9 manuals. The TMODE (or \(X M O D E\) ) parameter you mention - "type" is a carry-over from standard OS-9. The definition column on Page 112 of the OS-9 Commands Manual states:
"ACIA initialization value: sets parity, word size, and so forth. Value is entered in hexadecimal. It is initialized to 00 Hex."

There are two possible answers to your question. The first, is that the inclusion of this parameter in the manuals is an oversight caused by the fact that Tandy's proofreaders forgot that the Color Computer does not have an ACIA.

The "type" byte in a standard OS-9 device descriptor does just what the paragraph above states. It tells the operating system the value of the byte to send to the ACIA so that the hardware will know how long the word is supposed to be, what type of parity is to be used, etc.

Since there is no AClA in the Color Computer, this byte has been initialized to zero. The fact that it remains may be cause for speculation that Tandy does indeed plan to supply OS-9 drivers for their RS-232 interface on their expansion box. In fact, they would be crazy not to. I know of one programmer who

watc ..... 09
is using Tandy's hardware additions to run a terminal on the new ACIA driven RS-232 port at 19.2 Kilobaud. It works great. The regular RS-232 port won't work adequately above 300 Baud.
Briefly, Brian, here are some other short answers as we wind down to the end of our space this month. Re: The OS-9 Editor. Written by Microware, it is really an excellent editor. It's just that you are used to screen editing. It is a line editor. As line editors go, it is very powerful and if you really learn its macros you can do just about anything. I, however, like you, prefer screen editing just call me lazy. I do suggest that you take a hard look at DynaStar. It's terrific. And, if you aren't going to do any fancy text formatting or mail merging, you could easily get along without the DynaForm text processor.
Re: feeding a modem. You can feed a modem through the CoCo RS-232 jack on the rear panel. You can change the Baud rate with \(X M O D E\) or TMODE but it won't do you much good at speeds higher than 300 . Yet, most affordable modems run at 300 Baud anyway. I do not know of a way to change the word lengths and parity, etc. of the output on this jack without rewriting the device driver, RS-232. That would be a good exercise considering the fact that the port is really a parallel device, ie, PIA made to look like a serial port by a "bit-banging" software routine that sends one bit out to the port, delays for a few milliseconds and then sends another, until each of the eight bits that make up a byte are transmitted.
That's about all we have room for this month. I hope we have answered some of your questions and encourage you to drop us a line if you have more. We'll do our best to keep "K ISSable OS-9" your column. I also hope you enjoy the BASIC09 program, Finance. Let us know your questions about this fantastic language and we'll tackle them also. Bye!

\section*{OS-9 Users Group President's Column}

\author{
By Dale L. Puckett
}

The OS-9 User's Group is moving into 1984 on an optimistic note. It seems like a long time since midAugust when several hundred of you elected us and gave us the mandate to make the OS-9 Users Group go. First, let me introduce your officers.
Peter Dibble, our Vice President is the Head of User Services at the University of Rochester in New York. An avid OS-9 fan, Pete writes the monthly OS-9 column for 68 Micro Journal. He knows OS-9 backwards and forwards and has even written an alternate Shell which you may see in our User Group Software Exchange Library someday soon.

Tom Murphy, our Secretary, is President of Suntel Systems Corp in Earth City, Mo. Tom uses OS-9 daily in his business which serves telephone companies nationwide. His specialized hardware and OS-9 software join forces to monitor the use rate of various equipment in telephone networks.
George Dornor, our treasurer, is an educator and veteran OS-9 User. He teaches at Harper College, a community college in Rolling Meadows, 111. George is one of the few who run OS-9 on an Apple. He uses the "Mill" and served our User's Group last year by running our Bulletin Board from a timesharing computer at the college.
lam a warrant officer in the U.S. Coast Guard and author of Microware's new book. The Official Tour Guide of \({ }^{\text {BASICOP. }} 1\) write "KISSable OS-9," Rainbow's monthly column dedicated to Color Computer OS-9 users. I use a GIMIX Levelll system and a CoCoand am the author of Esther, Readiest, Help and DymaSpell on 6809 based computers and co-author of The Speller from the Hayden Software Company on the IBM PC. An amateur radio operator since 1957, I have been using 68 XX microcomputers since 1975 when 1 cut my teeth on a SWTPC rig with MIKBUG and 12 K of memory.

\section*{Our Chairman}

Two of our members deserve special credit and recognition. Dave Kaleita, manager of the engineering and test department at the Jabil Circuit Co. in Troy, Mich., chairs our Software Exchange committee. Dave is an active member of the Southeast Michigan Computer Club. He's doing a great job with the hardest and most time consuming job in the Users Group.

Tom Westhoff of Westronics in Willmar, Minn., is the chairman of our communications committee. He is designing a bulletin board that will look and act like OS-9. In fact, \(i t\) will be OS-9. We feel that operation will be a snap for the oldtimers and a tremendous way to introduce OS-9 to new users.

\section*{Our Purpose}
"The purpose of the OS-9 Users Group is:
1. To stimulate and sustain interest in computers in general, and in OS-9 in particular.
2. To promote the cooperation and exchange of information between members.
3. To conduct programs and activities to promote fraternalism and to advance the general interest and knowledge of members.
In addition to the group's purpose, quoted above directly from our By-Laws, you gave us three additional mandates.
I. Incorporate the Users Group and if possible obtain a tax exempt status.
2. Establish a method of communication to and from our members.
3. Coordinate with overseas OS-9 users and attempt to establish a continuous flow of information across both the Atlantic and Pacific.
After the election, we met and established some secondary goals to augment the three tasks you mandated. We decided that building our membership would be the foremost goal. This would create the opportunity for local clubs to form in many cities. Through this social medium, our new members would have the chance to learn from the oldtimers. The local clubs could then communicate their desires through our bulletin board and CompuServe.

We also wanted to emphesize education. We thought that by getting the oldtimers to tell sea stories to new OS-9 users in local clubs we could serve the many newcomers brought to us by Tandy's introduction of OS-9 on the Color Computer.

Speaking of education, here's a great idea we picked up from Richard Don at GIMIX. We may put a CoCo "Help" directory on our OS-9 bulletin board. This directory would be packed full of hints for the new OS-9 user and answer those questions we all had when we first started using this outstanding operating system. Do we have any volunteers? Call George Dornor if you would like to help work something like this up.

We also hope to make the Users Group a viable voice for the OS-9 User with the management at Microware and Tandy. We will tell them which utilities you would like to see developed and the type of enhancements you would like to see in the future.

We knew that if we were to achieve the goals stated above we would need a large active membership. To get that we would need an incentive. We decided that the most effective incentive would be a Software Exchange which gave you access to a large selection of OS-9 software.

Available for Color Computer

\section*{SUPER SLEUTH}

Examine and modify or disassemble binary program files into source code format. Object code for \(6800,01,02,03,05,08\), 09 , or 6502 may be processed.
\begin{tabular}{llll} 
Object only: & & With Source: \\
CoCo OS9 & \(\mathbf{\$ 4 9 . 9 5}\) & OS9 & \(\mathbf{\$ 9 . 0 0}\) \\
CoCo FLEX & \(\mathbf{\$ 5 0 . 0 0}\) & FLEX & \(\mathbf{\$ 9 9 . 0 0}\) \\
RS DOS & \(\mathbf{\$ 4 9 . 0 0}\) & UniFLEX & \(\mathbf{\$ 1 0 0 . 0 0}\)
\end{tabular}

\section*{Z-80 SUPER SLEUTH}

Functions the same as the above SLEUTH though this analyzes Z-80, 8080, 8085 object programs.
Same prices as Super Sleuth. Not available for RS DOS.

\section*{DYNAMTTE +}

Easy to use disassembler complete with cross-reference generator, and label files maintained in text form only.
\begin{tabular}{lll} 
OS9: & \multicolumn{4}{c}{\(\quad\) FLEX: } \\
Object only: & \(\$ 150.00\) & Object only: \\
\(\$ \mathbf{1 0 0} \mathbf{0 0}\)
\end{tabular}

Available for Color Computer
6800 - 6809 and 6809 PIC/PID TRANSLATORS
Convert \(6800 / 1\) assembly language programs to 6809 assembly language programs, and 6809 Assembly code to positionindependant code and data.
\begin{tabular}{lll} 
OS9 & Object only: & \(\mathbf{\$ 7 5 . 0 0}\) \\
FLEX & Object only: & \(\$ \mathbf{5 0 . 0 0}\)
\end{tabular}

Uniflex Object only: \(\$ 75.00\)
Available for Color Computer

\section*{EDIT / ASSEMBLE for OS9}

Editor with "Screen-like" line editing capabilities and a Conditional Macro Assembler. Both much more powerful than those inclusive with the Color Computer.
CoCo OS9 Object only: \$69.95

In an attempt to accomplish this, we designed a structured approach. Four committees would form the heart of the Users Group. Each officer would work with the chairman of one of the committees.
Tom Murphy, our secretary, tackled the administrative chores with the help of Tom Westhoff, George Dorner, Brian Capouch and others.
George Dorner heads up the communications effort. He works hand in hand wiṭh Tom Westhoff, chairman of our Communications committee and Dr. Keil our point of contact with European OS-9 users.

Peter Dibble tackled the membership problem and is moving along nicely with assistance from Ken Kaplan at Microware, Richard Don at GIMIX, Frank Hogg at FHL and many others' in the industry.
Finally, I agreed to work with Dave Kaleita to help establish a viable Software Exchange program. Dave has done a tremendous job and you'll see his first efforts in the catalog printed with this column. Thanks to Frank Hogg's offer to take care of our duplication and distribution we will be delivering user written, public domain software to you for only \(\$ 3.00\) per disk. We hope to pack at least 10 programs on each disk.
As a bare minimum, everyone who joins the OS-9 Users Group will receive one disk free. Dave will select programs that he thinks are needed in everyone's "toolbox." Included will be a simple data entry program that will make it easy for you to submit your own programs and a modem program so you can get on line and use the OS-9 Users Group bulletin board.

\section*{Post Office Box}

Thanks to Ken Kaplan and the office staff at Microware, we have our own mailing address. Please send all mail to this address: OS-9 Users Group
P.O. Box 8027

Des Moines, IA 50301

\section*{Software Exchange News \\ By Dave Kaleita}

We've accomplished a lot since we left Des Moines last August. Thanks to quick decisions from out new officers and a lot of friends in the industry we will soon have a very exciting software exchange program. In fact, not too long after you read this newsletter, you should be receiving your first disk.
The first program on this disk will be a quick data entry utility that will make your future submissions to our library quite painless. You will only need to answer a few questions, copy your program onto the disk and put it in the mail.
Here's how our software exchange works. First, all current members will receive one disk containing a selection of programs. In addition to the quick data entry program mẹntioned above, we also hope to give you a modem program and eight to 10 additional utilities. Each new member will also receive this disk. When Pete receives a membership zplication and the annual membership fee ( \(\$ 25\) ), he will immediately forward a mailing label to Frank Hogg who will ship the disk.
I'll be putting together several additional disks, each containing eight to 10 programs. They'll probably be grouped by language: BASICO9, C, PASCAL, COBOL, etc. As I complete the new disks, I'll forward the master to Frank, who will keep it on file. We'll publish a list of the utilities and programs available on these disks in the Rainbow and the trade pubs.

There are two ways for you to get one of these additional disks. If you have a program you would like to donate to the Users Group, send it to us at Post Office Box 8027, Des Moines, IA 50301. You will receive your choice of one of the additional disks free.
If you don't have a program to donate but would still like to receive an additional disk, send us a letter with the name of the disk you would like and \(\$ 3\). This will cover the expense of making the disk. You may buy as many of the additional disks as you like. They will all be available for \(\$ 3\) each.

Please remember, however, if this software exchange is going to work, we are going to have a continuous input of software. That means somewhere along the line you are going to have to contribute your share.
We 'll all be ahead in the long run. It makes absolutely no sense for each of us to spend all that time re-inventing the wheel. The OS-9 Users Group Software Exchange is an exciting answer to that problem. We all stand to gain. All software will be copyrighted in the name of the original author and the OS-9 Users Group.
We will be able to ship these disks in five-inch, eightinch standard OS-9 and five-inch Color Computer OS-9

This, quite literally, is the color computer America has been waiting for. One of the best sellers in the United Kingdom, the Dragon will soon be manufactured by TANO to serve American consumers who want a serious, affordable computer; one that has proven itself at providing educational and home management applications as well as fun and games. To meet this challenge, the Dragon was born. With a standard 64 K of RAM. A professional typewriter-style keyboard guaranteed for 20 million key operations. And an impressive array of options which include disk controller and drive, a printer, audio cassette recorder, a modem (RS-232 serial I/O), joysticks, game cartridges and a free BASIC training manual.
 the colors! The Dragon features nine; with five different resolutions from 512 points of text ( \(16 \times 32\) ) to 49,152 points ( \(256 \times 192\) ) at high resolution. And you can view these amazing phenomena through either your composite video color monitor or VHF TV. So goes the Dragon's story. If you'd like to know more, just mail the coupon or call George Merchant (our Director of Marketing) toll free at 1-800-327-7671.
Software developers and dealer inquiries are welcome. The Dragon is destined to become legend as America discovers its great performance is no myth.
Using the new 6809E Microprocessor (a great advance on the original 6502 still used by our competition), the Dragon brings advanced computer functions well within your reach. And priced below \(\$ 400\), it's anything but expensive.

But these aren't the only points of difference with which our Dragon roars. Unlike most units, the Dragon gives Extended Microsoft \({ }^{\text {TM }}\) * Color BASIC as its standard language while the competition is still stuck in Microsoft \({ }^{T \mathrm{w}}\) * BASIC training. The Dragon's advanced graphics features include set, line, draw, circle, paint, print @ and print using. Of course the Dragon also features advanced sound capabilities.

\title{
PRICKLY-PEAR SOFTWARE \\ QUALITY PROGRAMS FOR YOUR COCO \& TDP-100 \\ PROGRAMS REQUIRE 16K EXTENDED BASIC FOR TAPE, AND 32K DISK UNLESS OTMERWISE NOTED.
}

SIMULATION GAMES

VIKING: Run your country well and become king or queen. This is the most complex simulation we've seen. Takes 2 or more hours, has 9 levels, and is for 1 to 4 players. B \& ML. Tape . \$19.95, Disk - \$24.95

GANGBUSTERS: Start as a punk and manage your criminal empire to become syndicate boss. Steal, make hits on the other players, go to prison, and lots more fun. 2 to 6 players. B \& ML.
Tape-\$19.95,
Disk-\$24.95

FOOTBALL: A strategy approach. Offense and defense choose their plays, and the results are calculated by past averages and some chance. Truly a football lovers simulation. B \& ML. Tape - \(\$ 19.95\), Disk - \(\$ 24.95\)

\section*{SIMULATIONS}

FIIGHT: Not a game, but a hi-res graphic landing simulator. Choose 4 levels of instrument or regular landings, with or without crosswinds. Needs 32K. B \& ML. Tape \(\mathbf{\$ 1 9 . 9 5}\), Disk-\$24.95

\section*{FANTASY GAMING APPLICATIONS \\ (These are not games)}

FANTASY GAMER'S PACKAGE: All versions have a 20 page manual and display hi-res rooms and roll complete stats for characters and monsters. 32 K version also has a dicebag for instant dice simulations in 36 ranges. Disk version has dicebag and complete dragon and ring rollers. B \& ML. Tape - \(16 \mathrm{~K} \$ 19.95\), \(32 \mathrm{~K} \$ 24.95\); Disk- \(\$ 29.95\)
FANTASY MASTER'S SECRETARY: For use during play, this will easily keep track of characters, monsters, time, treasure, magic, and more. B \& ML. Tape - \(\$ 19.95\), Disk - \(\$ 24.95\)

\section*{ADVENTURE}

ADVENTURE IN WONDERLAND: Simply the best adventure ever written for the color computer. A full Eliza intelligence so you can enter whole sentences. At least three ways out of any trap. A vocabulary of HUNDREDS of words. Needs 32K. \(100 \%\) ML. Tape \(\mathbf{\$ 2 4 . 9 5}\), Disk - \(\$ 29.95\)

\section*{WORD GAMES}

THE GREAT WORD GAME: 2 to 4 players compete using words they have chosen. Each player tries to guess the opponents' words while the opponents do the same. B \& ML. Tape-\$19.95, Disk-\$24.95

TOPSY TURVY: Race against the clock to form as many words as possible from the letters you are given. Lots of bonus scoring for longer words. BASIC. Tape - \$19.95, Disk-\$24.95

\section*{DECIPHER:}

For 1 or more players. Multiple players choose their words, while single players let the computer choose from hundreds stored in memory. You must unscramble the word or phase while the clock runs. This is the best available word game! \(100 \%\) ML. Tape \(\$ 24.95\), Disk \(\$ 29.95\)

\section*{JOYSTICK GAMES}

TEEEOFFF: The only really outstanding golf game for the color computer. All in hi-res, and you move your golfer (a little person) up to the ball and then control his backswing with the fire button. Very challenging, with water and sandeven giant cactuses. 1 to 4 players. \(100 \%\) ML. Tape \$24.95, Disk-\$29.95

SHAFT: The ultimate in "dodge the moving object" games. Really tough, with 15 screen patterns to learn and ascending difficulty. \(100 \%\) ML. Tape \(\mathbf{\$ 2 4 . 9 5}\), Disk - \(\$ 29.95\)

\section*{MISCELLANEOUS GAMES}

MONSTERS \& MAGIC: Fight your way thru up to 50 different monsters using a realistic fantasy combat system (initiative - damage by weapon type-levels - etc.), and then try to defeat the dungeon lord. 1000+ place description combinations. For 1 player, needs 32 K . BASIC. Tape \(\$ 19.95\), Disk-\$24.95

JUNGLE: Take a journey into trouble. This game gives Murphy's law new meaning, and in this magical jungle, many things are only illusions. A very nice game, and easy enough for the younger set. BASIC. Tape - \$19.95, Disk - \$24.95

\section*{ADULT GAMES}

THE NAKED GAMER: Nothing obscene - just two great games in which the losers are told to remove items of clothing. One game is a fast moving joystick type, while the other is a logic game. These games are terrific even if you keep your clothes on! B \& ML. Tape - \$21.95, Disk \(\$ 26.95\)

\section*{UTILITIES}

COLORKIT: What can we say about the absolute best state-of-the-art programmer's utility. This program adds 35 com mands to BASIC that should have been there all along and no short description will do it justice. Summary- light
 or dark screen, keyclick, screen editor, programable keys, a super memory tool, variable listing, echo to printer, BREAK disable, convert machine language to DATA, global search, single step thru program run, double space printouts of program listings- that's less than half of what it will do. It takes about \(6 K\) of space, and if you have 64 K you can put it up high and lose no BASIC space at all. \(100 \%\) ML. Fully relocatable. Tape-\$34.95, Disk-\$39.95

\section*{APPLICATIONS}

PRICKIY-PEAR MAILNNG LIST: This mailing list program will handle up to 1500 records per file and will sort by name or zip code. It searches on any field and all display is in a hires upper and lower case format. There is no better mail list program. Needs 32 K and 1 disk drive. B \& ML. \(\$ 49.95\)
mUsIC BOX: Compose your music in 4 voices and let the harmony flow. You can assign any of 4 instruments to each voice, and the program is truly easy to use. \(100 \%\) ML. Tape - \(\$ 24.95\)

EIOHT-BIT BARTENDER: Over 100 drink recipes, and you can call them up by name, category, or main liquor. The author's liver risked death to bring you this program. Needs 32K. B \& ML. Tape - \$19.95, Disk-\$24.95
HOUSEHOLD HELPER: This gem does recipe conversions, metric conversions, gasoline computations, and maintains a bills due file. A very friendly program. B \& ML. Tape \$19.95, Disk - \$24.95

\section*{SUPER}

ASTROLOGY: Everything our customers have written and asked for in an astrology program is here! This all new program by a new author gives accuracy to a few minutes of arc. Choose from tropical or sideral zodiacs, Heliocentric or Geocentric, and five different house systems. Placidus, Campanus, Regiomontanus, Koch, and Equal. Specify the orb for aspects, find any harmonic, and output the complete natal horoscope to the screen or printer. The program will handle progressed and transit charts with date manipulation. This program comes with complete and easy to follow instructions, sample chart forms, and a suggested reading list to aid in interpretation. Don't settle for a lesser program! Needs 32 K . B \& ML. Tape - \$24.95, Disk -\$29.95

\section*{EXPLANATION OF CODES}

BASIC: This program is \(100 \%\) BASIC. That means it is easy to examine and easy to modify. BASIC is the best language for some applications.
BEML This program is written mostly in BASIC, but some routines are in machine language for more speed. May be harder to examine or modify than an all BASIC program.
100\% ML This program is all machine language for fastest possible execution. Examination or modification will require a high skill level.

\footnotetext{
Programs are available on AMDEK cartridges - add \(\$ 5.00\) to the disk price.

Your personal check is welcome - no delay. Include \(\$ 1.50\) shipping for each program ordered. (Shipping free on \(\$ 50.00\) or larger orders). AZ residents add \(7 \%\) sales tax. Orders shipped within two days.
}

\section*{EDUCATIONAL PROGRAMS}

PREREAD I, II, \& III: This program uses graphics and voice from the tape to teach the alphabet three ways - by name, by sound, and by shape. B \& ML. Tape-\$24.95, Disk (with voice tapes) - \$29.95
PHONICS I: Teaches all the consonant blends phonetically, using graphics and sound from the tape. B \& ML.

\section*{Tape-\$24.95}

PHONICS II: Like Phonics I, but teaches the consonant digraphs. B \& ML. Tape - \(\$ 24.95\)
PHONICS I\& II ON DISK: A package that includes both of the above in a disk format. Still has voice on tape. B \& ML. Disk only (with voice tapes) - \(\$ 44.95\)

\section*{SPELLING:}

Six tapes provide voice testing and practice modes for the entire 220 word Dolch list which makes up \(75 \%\) of all elementary written material. Eleven lessons, and the testing is by VOICE, just like in class. The disk version can be easily modified to include new words. B \& ML. Tape - \(\$ 49.95\), Disk (with voice tapes) - \(\$ 54.95\)

MATHPAC: Provides drill and positive reinforcement of addition, subtraction, multiplication, or division. Lots of extras for repeating, setting levels, and classroom use. Tape - \$19.95, Disk - \$24.95

\section*{DISK UTILITIES}

OMNI CLONE: This program even amazes us. It backs up every color computer disk we have seen, and has even backed up disks for the Model 3 and IBM PC. Protect your valuable collection against loss with this super power backup utility. Easy to use. Needs 32 K and at least one disk drive, but works with two drives if you have them. \(100 \% \mathrm{ML} . \$ 39.95\)
DISK ZAPPER: A neat utility that lets you easily examine and change data right on the disk! Rebuild directories, format to 40 tracks, change programs, store backup directories, and more. Needs two drives and 64 K for some functions. B \& ML. \$34.95

DISK MANAGER: If you have an extensive software collection, this program will create an alphabetical listing so you can find what you want. It also prints a super directory with ML addresses and gives you three ways to recover a crashed disk! Needs 32 K and 1 disk drive. B \& ML. \$29.95
DISK MASTER: Eight functions, including drive speed check and adjust, moving DATA files to and from disk and tape, a directory which includes ML addresses, two different disk maps, and an easy mass copy utility. Needs one disk drive and \(32 \mathrm{~K} . \mathrm{B} \& \mathrm{ML} . \$ 24.95\)

\section*{PUBLICATIONS}

SONGBOOK: The PLAY statements and lyrics for over 200 songs. Type them in and just listen, or use them in your own programs. Hymns, popular songs, fold songs, college marches, holiday songs, and lots more. About 100 pages, soft cover, plastic ring binder. \(\$ 9.95 \cdot\) quantities limited.

For the ultimate in performance, the Unique GMX 6809 CPUIII, using either OS-9-GMXIII or UniFLEX GMXIII (available shortly), gives protection to the system and other users from crashes caused by defective user programs. e.g. During program development, a programmer who crashes goes back to the shell or the debugger, while the other users are not even aware anything occurred.

The intelligent serial I/O processor boards signifi-

GIMIX has 19MB or high performance 47MB Winchester Drive Systems and/or Floppy Disk Drive Systems.

For the user who appreciates the need for a bus structured system using STATIC RAM and powered by a ferro resonant constant voltage transformer.

GIMIX has single user systems that can run both FLEX and OS-9 or Multi user systems for use with UniFLEX or OS-9.

GIMIX versions of OS9 and UniFLEX include maintenance and support by Microware ( 90 days) and TSC (I year). Maintenance and support after this period are available at extra cost.
(NOTE: this support and maintenance is only for use with approved GIMIX hardware)

GIMIX 6809 systems support five predominant operating systems:
cantly reduce system overhead by handling rou-

BASIC-09 and OS-9 are trademarks of Microware Systems Corp and MOTOROLA, inc. FLEX and UniFLEX are trademarks of Technical Systems Consulitants, Inc. GIMIX, GHOST, GMX, CLASSY CHASSIS, are trademarks of GIMIX, Inc.
 tine I/O functions, thereby freeing up the host CPU for running user programs. This speeds up system performance and allows multiple terminals to be used at 19.2 K baud.

## REMEMBER.

A full line of top-quality floppies, in virtually every $514^{\prime \prime}$ and $8^{\prime \prime}$ model, for compatibility with virtually every computer on the market. Guaranteed to meet or exceed every industry standard, cenifited $100 \%$ error-free and problem-free, and to maintain its quality for at least 12 million passes (or over a lifetime of heavy-duty use).
