# The Best Money Can Buy ... HDS Floppy Drive Controller Board 

SINGLESIDED DOUBLESIDED

Drive 0 Complate . .r. . ....... \$249. \$199.
Drive 1 Complete
Drive 0 \& 1 Dual Drive
. $\$ 169$.
. $\$ 399$.
$\$ 289 . \$ 229$.
$\$ 209$.
$\$ 479$

Reduce your VO errors with the Hard Drive Specialist Floppy Drive Controller for the Color Computer. Gold edge card connectors, advanced design, and the absence of potentiometers make it the best avaliable. Ournewest version coniroller aliows the use of either (two 24 pin ROMS) or (one 24 pin and one 28 pin ROM). Using this board with the standard Radio Shack ROM gives you $100 \%$ compatibility with all Fadio Shack soltware
Completed and Tested Board
with Radio Shack ROM $\$ 139$.
(includes Case, and DOS Instructions)
Completed and Tested Board without ROM ... $\$ 119$
(inciudes Case)
Eare Board with instruction manual ........... \$40,
Parts Kit For Bare Board without ROM ......... \$ $\$ 40$.
Racio Shack ROM (current version) ............ $\$ 20$.
Rado Shack ROM 1,0 .......................... $\$ 40$.

## ADOS ROM ( 24 or 28 pin PROM)

 $\$ 40$,ADOS is a product of SpectroSystems of Miami Florida and is fuliy supported by the author. The HDS version of ADOS supports 2 drives, 40 track, 6 ms trk-to-tik drives only, either Single Sided or Double Sided.

## TKBUG Monitor and DOS 1.0

on PROM (24 or 28)
$\$ 40$.
New, unique CoCo soltware monitor in AOM designed for a minimum of key strokes and fully compatible with the 1.0 verion of disk basic. Features 33 single Key commands, alowing the user to quickly display and screen edit RAM in either hex or ASCII formal. Also allows the user to dump screen or memory to printer, set break points, alter baud rate, set 64 K RAM mode, and more, TKBUG by TOMMY KEETON

# Making A Good Thing Better 

Editor:
If you haven't already reviewed Telepatch. please do so quickly. Telewriter-64 is surely one of the most popular programs available for CoCo. However, Cognitec has left oversights and shortfalls unaddressed for some years now. 1 just purchased Telepaich from Spectrum Projects and found that it ties up all the loose ends.

Before I could afford a disk drive I used Telewriter to write a term paper - some 400 pages on cassettes! I purchased a disk drive and a Telewriter upgrade immediately. The results were dramatic. Telepatch is exactly the ticket for me - my disk purrs along at six ms access time, my printer at 9600 Baud, my keyboard is buffered (my typing speed is higher than Telewriter would otherwise permit), Further, much of my programming is done by using the ASCII filing system of Telewriter, and Telepatch greatly enhances Telewriter's abilities in that regard. The keyboard clicks if I would like, and the cursor fairly races around the screen now.

I am very pleased with Telepatch. Two suggestions to the authors of Teleparch. Wia and Telewriter. First, publish a "deluxe version" soon. Second, get me Telewriter on OS-9 (then stand back!)

## Michael L. Brant Concord. CA

Editor's Note: Telepatch was reviewed in the October 1985 issue, Page 209.

## Addressing the Problem

## Editor:

May 1 submit a solution to a major problem? The problem: addressing an envelope. The CoCo word processor does a great job on the letters, but when it comes to the envelope it is a pain to remove the fan-fold paper and line up the envelope. My answer is an envelope with a window, like the envelopes bills come in each month.
The other half of the solution is to type, and save to disk or tape, a heading for your
letters, along with a format line for your printer. Mark the spot with some X's where you want to type the addresses so, when folded, it ends up in the window. This is a great opportunity to display your artistic use of the printer's different fonts and graphics displays.

Thank your for bringing in Dennis Kitsz, Im sure he will be an asset to RAINBow.

Bill Frame
Niceville, FL

## A. Tool for any Trade

## Editor:

This is in response to the fetter from William Sill in the September 1985 issue [Page 8].

Mr. Sill states that when we have grown out of games, we will see that the CoCo will shine as an appliance I play games on my CoCo, but 1 also use it for serious lasks. Why can't you see that a computer, any computer, can be used for serious things and for recreation. A computer is nothing more than it lool. A tool can be used for different things. Youl probably consider your car a tool. That car gets you to work. Yet that same car can take you on vacations. Computers are the same as cars. They can be used for many things.

## David Moulton <br> Cody, WY

## Hobby Link

## Editior:

I recently discovered the rainbow and it has renewed my enthusiasm in personal computers. It is the best magazine of its kind around and I find its approach very refreshing.

My interests lie mainly in interfacing, construction projects and applications programs. Having been a shortwave listener and Ham radio operator (K2AZ) for over 30 years. Ifound your recent WEFAX program
[February 1985, Page 42] very interesting and would like to see similar articles that link my two hobbies. I receive Morse code, radioteletype (RITTY), WEFAX and other facsimile information regularly on a CoCo , Model I and IBM PC, I would like to exchange frequency lists with other readers. Write to me at 3 Sherman Avenue, 07950. Perhaps you could also occasionally print some station listings from readers similar to your BBS information.

John C. Maikisch
Morris Plains, $\mathrm{N}^{\mathrm{J}} \mathrm{J}$

## COMMENTS

## Editor:

I typed in the "Simple Text. Processor" in the January 1985 issue [Page 103] of THE RAINBOW: 1 was wondering if there have been any improvements on it yet. If anybody has any, would you please write me at 6321 Bosker Lane, 48444.

I would also like to support Mr, Carroll. He mentioned [August 1985, Page 6] that he would like you to encourage your authors to write or modify their programs to work on tape-based systems. I think this is a good Idea since many of us have only a tape-based system. It would be niec to have most if not all programs work with cassette-based systems.

While running the Text Processor on its printing subroutine my Radio Shack DMPto5 printer will look up. I have to turn the printer offline and then back online before it will continue. When I use the greater than and less than signs to underline, the printer underlines but prints a $[p]$ around the underlined area. Why do these things happen and how can 1 correct them?

> John Gormley
> Imlay City, MI

> Editor's Note: Your problem is due to the fact that the program uses printer codes for a Brother Correctronic 50 typewriter and must be changed for use with your printer.

## A Good Word for Mr．White

## Editor：

I find Richard White＇s treatment of spreadsheets to be most informative，partic－ ularly with the comparisons of different sheets where he shows the strong and not so strong points of those that are the most popular．However，he did make a statement In the October 1985 issue of RAINBoW that VIP Calc will not take a leading space（Page 238，right column，Line 9）．I find that VIP Cale will take a leading space if you first invoke the Label format using inverted commas（shift 2），which is the same com－ mand that VisiCalc uses for that purpose， then enter the space．The same command allows you to enter numbers as text．

The one thing I find most annoying with VIP Cale is when you make a new entry，or do a recalculation，the whole screen goes blank and then the sheet unfolds down the sereen again．（Is that what is called＂sereen refresh＂？）Does this happen with DynaCalc？

Why not have a similar column（columns） that gives the same treatment to word processors，database managers，accounting packages，etc．，and even hardware，where appropriate．

A working comparison with an expe－ rienced user can be of infinitely more value to a prospective user than a short review，no matter how harsh，or generous，the review may be．This may lead to software producers attempting to incorporate more features than is now the case，because of what the individual packages are demonstrated to be capable of and，even if this is not the case， a user can choose the package that fulfills their purpose．

RAINBOW magazine is really the prover－ bial＂pot of gold＂－the only difference being that the treasure is found at the beginining as well as the end of THE RAIN． Bow．

Ray S，Preston
Rarotonga，Cook Islands

## SPECIFIC PROGRAM SEARCH

## Editor：

I would like to know if anyone has come up with a good program that works with Radio Shack X－pad．I would appreciate it if anyone would send me what information you have．My address is 6681 Marsh Road， 48039.

I would also like to hook up my CoCo to a Lionel train and would like to know if anyone has any information on this．If you do，please send me any information you have．

Brian Van Peteghem
Marine City，MI
Dr．CoCo

## Editor：

Hopefully you can heip me with two problems I am having，I own two TRS－80s， with Extended Color BASic，dual disk drive， Tandy DWP－ 220 and DMP－ 110 printers．I am looking for a business－oriented package for a medical office，for patient records， accounts recelvable and payable，spread－
sheet capability，invoice generating，inven－ tory control，etc．Does such a program exist for the CoCo？I have Desklop．Scripsil on Disk，Small Business Accounting by Color－ soft，and their Accounts Receivable pro－ gram，but they do not seem to fit my appli－ cation．Please，if you or any of your readers know of such software，contact me at 3340 Tully Read，Suite C－1，95350，or phone （209）571－3453．

Also，is there a full－size sereen dump program for the DMP－1107 If your readers can help me out，it would be greatly appre－ ciated．I have owned my CoCos for less than one year and have graduated from games and Adventures to using it in my business for letter writing and other report writing． but would like to fully utilize the power of CoCo．Thanks for the help．kainbow has been a great help in learning how to use both my new toys．

> Jack R. Morris. D.C. Modesto, CA

## Editor＇s Note：Please read the following letfer from Chuek Haw－ ley．

## Salltor：

From month to month，as I thumb through the rainnow＇s＂Letters to the Editor＂and＂Downloads＂columns，I notice many people looking for graphics screen dumps．Also，many of the screen dumps 1 have seen have been for the Line Printer VII or similar．None for the Radio Shack DMPs．

So，after a few tries I came up with Fast Dump，which 1 use with my DMP－120． It＇s a rather short program so it could be used as a subroutine in a graphics program． The only drawbacks are that it takes about 10 to 15 minutes to print up a graphics screen，and the printout is if rather small version of the sereen．But you can＇t expect a miracle in IS lines！

## Martial Bliss

Editor：
I would like to tell you that I enjoy receiving each issue of THE RAINBOW；I read them from cover to cover．I would also like to tell you how much I enjoy RAINBOW ON TAPE．

1 wondered if any company has ever made a martial arts program for the CoCo．Thave searched through your magazines and have－ n＇t seen one yet．Is there anyone out there who has made a martial arts program and would like to sell it to me？If so，please contact me at 7489 Kellogg Road， 44077.

Kevin Nasky
Painseville， OH

## HINTS AND TIPS

Editor：
I ordered a 64 K conversion for my 16 K CoCo from Skyline Marketing in Chicago， It arrived，I installed it and it worked．They also included a＂pager program．＂With this combination，I have two banks of 22,823 bytes of memory．

By combining my business programs and a meno，I use 20,649 byles on Page 1．This leaves Page 2 open with 22,823 bytes for personal programs；I have managed to merge programs and add a menu using only 14,766 bytes．

Each of the two programs contains an ＂escape＂line to＂exec＂the alternate page of programs．Just how many of your readers keep 35,415 bytes ready and on－call at all times？

L．Jackson
Forest Park，OH

## ＇Relatively＇Helpful

## Editor：

Here is a little program I concocted after hearing from a former classmate that he was very busy during his retirement with tracing his ancestry．He has found 6,000 so far，not all of them completely documented， 1 as－ sume．In any event，running the program should prove interesting to some of your readers．

## Rainbow Superiatives

## Editor:

As much as I appreciate your magazine it is unfortunate (for me) that I discovered THE RAINBOW just within the past year. I say unfortunate because I know I've missed many good programs and/or tips and advice on using the CoCo. Therefore, I would like to suggest to you to put together a "best of" issue or series. I hope you will seriously consider the concept.

The following one-line program will center any title or heading on an 80 -column printer.

```
1 CLS:INPUT-TITLE`:T$:L=INT(BO-
LEN(T$))/2:PRINTH-2.TRG(L):T$:RUN
```

I hope this one-liner will be helpful to your readers. Thank you for a great magazine and keep up the excellent work.

P. Giordano<br>Quebec, Cariada

## The Gang's All Here!

## Editor:

Congratulations on adding Dennis Kitsz to your staff. You picked up a valuable asset, We already know what he looks like from his ads, and we've all seen pictures of Mr. Falk. As for the rest of the staff, 1 only have a mental picture of what they might look like. Personally, I'd like a chance to match
up the voices and/or bylines with the faces. Do you think you could print pictures of: Jim Reed, Jutta Kapfhammer, Dan Downard, R. Bartly Betts, Steve Blyn, Frank Hogg, Joseph Kolar, Michael Plog, Dale Puckett, Fred Scerbo, Richard White and Richard Ramella.

1 realize this doesn't cover everybody, but they're the names I most often see and wonder about

Bill Bernico Sheybogan, WI

## Prolific Pokes

Editor:
1 have wanted, for some time, a list of CoCo Pokes and their functions. Every month there is someone who has found a new PDKE to use with a computer game or in programming. If anyone who knows of any POKEs would send them to me, I'd be more than happy to return a list of all the POKEs I receive. Be sure to include the name of the program and company if the POKE helps you in a program (e.g., additional
turns). My address is R.D. \#2, Box 751, 13167.

Because of the cost, I can only give lists to the original contributors, Include as many as possible to be sure a new one is there.

Dave Mount
West Monroe, NY

## INFORMATION PLEASE

## Editor:

Thave a DWP-210 printer and love it. It's a bit slow, but the printout is beautiful My problem is the only print wheels available through Radio Shack are basic "Iypewriter" faces. What I need is something to use as italics. For two years, I've been trying to find out who made the DWP- 210 for Radio Shack and/or who makes compatible daisy wheels, but to no avail; now my problem is even greater, since the DWP-210 printer is an orphan because it has been replaced by the DWP-220. If anyone can tell me where I can get other print wheels, Id be greatly appreciative. Please write to me at 7410 NW 11 Court, 33313.

A second question is whether there is a program that will support right-hand justification of proportional spacing for the DWP-210, I use VIP Writer for word processing (work letters, law school papers and general correspondence), and have managed to make it do just about whatever I want It would be perfect if I could use propor-

lional spacing，because it would almost look typeset．Such a program would not need all of the features of a word processing program －you could do the basic work with VIP or something else－just make it print out ＂pretty，＂

Phillip H．Snaith Plantation，FI．

## Editor：

I really enjoy reading Rainbow．I espe－ cially liked Rockfest II，which was featured in＂Wishing Well＂（July 1985，Page 162）， Could you please tell me the issue in which you featured Rockfeat I？

Chiris Leazer
Mooresville，NC

Editor＇s Note：Rockfest I can be found in the May 1984 issue，Page 89.

## Assembly Acclimation

Edinor：
I would like to know how to do the equivalent of PMODE 4,1 ：SCREEN 1,1 in pure assembly language．Send correspond－ ence to 21 Prospect Avenue，01940．Thank you．

Jon Fabris
Lynnfield．MA

## What Next？

## Edfor：

I am writing a program that uses the disk drive but I can＇t figure it out．I am making it say＂Hello，I＇m your Color Computer，＂ then＂What is your name？＂Then it says＂Hi， Greg．＂Next，I have it ask＂Would you like to play a game？＂You type＂yes＂or＂no．＂ Then it says＂What game would you like to play－drawing／zodiac／pop／bigfoot？＂I can＇t figure out when you type in what game you would like to play and how to load it from the disk drive．

Here is a listing of my program．

## KUDOS

## Editor：

I could not resist this opportunity fo tell you how much your magazine has meant to me and increased my knowledge and interest in my CoCa．Until I discovered THE RAIN． Bow，other magazines did not inspire or assist me nearly as much as yours has．I have also trusted your judgments and used your advertisers almost exclusively when order－ ing software and hardware．Thanks mil－ lions．

I would also like to commend and recom－ mend two of your advertisers：Software Plus in Citrus Heights，Calif，and Reitz Electron－ ics in Toledo．Both have rendered excellent service and satisfaction thus far．

Stan Weaver
Toledo．OH

## Making Sparks

## Editor：

1 believe in giving credit when and where it＇s due．But first，let me explain．I have been a CoCo owner for a little over a year and enjoy every opportunity I have to use it． However，I have tried everything to spark an interest in computers among my wife and three daughters．

Then came the rainaow．I think it＇s great．Now my wife occasionally helps me type in a program and the girls will come in and watch the results，but nothing further，

1 liked Dave Koscinski＇s＂One－Liner＂ ［February 1985，Page 233］so much that 1 saved it and showed it to the family．My wife and oldest daughter have not left my CoCo alone since，RAINBOW，you＇re doing a great job and i special thanks to Dave Koscinski．

CALL OR WRITE FOR CATALOO

## Editor:

1 am writing to congratulate you on your excellent magazine. I have seen two other magazines just for the CoCo . I thought they were good magazines, but when compared to THE RAINBOW, well, let me say 1 haven't bought any other CoCo magazines since. I got my first Rainbow. It is everything I wanted: a computer catalog, a list of reviews, an informative book and all the great programs. It really is a "pot of gold."

David Harris Idaho Falls, ID

## BULLETIN BOARD SYSTEMS

## Editor:

We have a BBS that is maintained by Valley Micro Systems. This BBS supports down-/uploads as well as a message base. Call (209) 526-2030 9 a.m. to 9 p.m. PST. My phone is (209) 523-5176 anytime after 9 a.m. PST. For more information write to 801 W. Roseburg Avenue, Suite 200, 95350

Ken Denny
Modesto, CA

- Custom Key Computer Services supports a BBS at (305) $281-0082$ as long as Color Computer people desire to use it.

Dan Mills
Orlando, FL

- There is a BBS in Brunswick called the "Port City Underground." Call (912) 2655045. The SysOp is Robert Callahan.

Tommy Donovan Brunswick, GA

- I am pleased to announce a new BBS called CoCo Creations running 24 hours a day, seven days a week. It supports 300/1200 Baud. The number is (201) 928-9488

Howard Wolk Jackson. N.J

- This is to inform all CoCo users of the Fido BBS of Ann Arbor. It runs on an IBM PC, supports $300 / 1200$ pbs. We have a large library of CoCo programs. Call (313) 662 2184.

Jason Johnson
Milan, MI

- Call the Kings Byte Computer Club, Inc. BBS at (718) 837-2881, 24 hours a day.

## Morty Libowitz

- I would like to inform your readers of the new Robotech BBS, which is online from 11 p.m. to 4 p.m., Monday through Friday, 24 hours on weekends, Call (304) 287-2341. Jeff Frost
Carlonia, WV

THE RAINBOW welcomes letters to the editors. Mail should be addressed to: Letters to Rainbow, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. Letters should include the writer's full name and address. Letters may be edited for purposes of clarity or space.

> These Introductory Level stories are now available for TRS-80 Color Computers.

If you have a TRS. 80 Color Computer with disk drive, the stories below offer the perfect introdaction to the addictive pleasures of Infocom interactive fiction.

WISHBRINGERTM
In this fantasy story you start out as an ordinary mail clerk delivering a mysterious ransom note and end up-magic stone in hand-embarking on a series of whimsical adventures that take you to a destination beyond your wildest dreams.

PLANETFALL ${ }^{*}$
In this sci-fi comedy you'rea mopwielding ensign on a Stellar Patrol ship which promptly explodes, stranding you on a mysterious
 deserted world with only Floyd the mischievous robot to help you save it.

THE WITNESS
In this classic 1930's whodunit, a case of blackmail turns to murder before your eyes. You'll have to look for clues, question sus-
pects, und analyze evidence to solve the case. If you live that long.

THE FOURHN. ONE INFOCOM SAMPLER

Still not convinced? This sampler; which contains portions from PLANETFALL.' ZORK ${ }^{*}$, The

WITNESS, ${ }^{\circ}$ and INFIDEL, ${ }^{2}$ will give you a taste of our stories for just \$7.95, If you don't love it, well give you a refund. If you do, well give you $\$ 8$ toward any regular Infocom story You can't lose.

Call 1-800-262-6868 to order. The TRS 80 Color Computer versions of these stories and the ones shown on the opposite page are not available in any store. Call toll-free to order yours now.

# Earth will be destroyed in 12 minutes to make way for a hyperspace bypass. Should you hitchhike into the next galaxy? Or stay and drink beer? 

Slip the disk in your computer and suddenly you are Arthur Dent, the dubious hero of THE HITCHHIKER'S GUIDETO THE GALAXY, a side-splitting masterwork of interactive fiction by novelist Douglas Adams and Infocom's Steve Meretzky. And every decision you make will shape the story's outcome. Suppose for instance you decide to linger in the pub. You simply type, in plain English:
DDRINK THE BEER
And the story responds:
YOU GET DRUNK AND HAVE A TERRIFIC TIME FOR TWELVE MINUTES, ARE THE LIFE AND SOUL OF THE PUB, THEY ALL CLAP YOU ON THE BACK
 CHAP VOU ARE AND THEN THE EARTH GETS
UNEXPECTEDLY DEMOLISHED, YOU WAKE UP WITH A HANGQUER WHICH LASTS FIR ALL ETERNITY. YOU HAUE DIED.

Suppose, on the other hand, you decide to: $>E X I T$ THE UILLAGE PUB THEN GO NORTH In that case you'll be off on the most mind-bogglingly hilarious adventure any earthling ever had.

You communicate-and the story responds-in full sentences. So at every turm, you have literally thousands of alternatives. If you decide it might be wise, for instance, to wrap a towel around your head, just say so:

SWRAP THE TOWEL AROUND MY HEAD
And the story responds:
THE RAVENOUS EUGELATTER BEAST OF TRAAL IS COMPLETELY BEWILDERED. IT IS SO DIM IT THINKS IF YOU CAN'T SEE IT, IT CAN'T SEE YOU. Sow avilable for TRS-60 Coks Compotern whth isedrive. at 18 CankridjePark Drive, Cumbiridge, MA (21w0.

## PRINT\#-2,

Many of you have probably heard by now in one way or another - through friends, on Delphi, at RAINBOWfest, on CompuServe or in other ways - about the plans of Hot CoCo to discontinue publication after its February issue.

Those who have a subscription to Hot CoCo will start to get a magazine called 80 Micro to "fulfill" their subscription. The editors promise there will be a "Color Computer Section" in 80 Micro.
80 Micro is the "flagship" magazine of a company called CW Communications/Peterborough, which used to be Wayne Green, Inc. In fact, 80 was the first magazine to support the Radio Shack computers, beginning with the Model 1 , and now primarily supports the Model I, III and IV computers. Hence the " 80 " from the Z-80 central processor on which those machines are based.

A long time ago, in the CoCo's infancy, there were some articles in 80 about the Color Computer. It was 80 Micro's dearth of coverage of the CoCo that inspired me to start a newsletter for the Color Computer. That newsletter, of course, grew into THE RAINBOW.

Knowing the people at CW Communications pretty well. I would suspect those who have subscribed to Hot CoCo will get more than a smattering of Color Computer news, It certainly won't be like having a whole magazine, but I believe there will be a genuine effort to bring CoCo information to 80 Micro, at least for as long as the subscriptions have to run. Contrast this, if you will, to the demise of The Color Computer Magazine, which "fulfilled" with Creative Computing, carrying one column on all Tandy products.

I want to make THE RAINBOW's position clear. And I think it is important, I have received a couple of letters and quite a few telephone calls from people who have heard the news about Hot CoCo and are concerned that this constitutes an crosion of support/popularity/ utility for the Color Computer. I happen to not think so. I want to make it clear that no one at CW Communications/Peterborough has said this as of this writing, but there has - in the pasi - been a tendency to blame the market, not the products themselves, for the failure of a product.

The truth of the matter is that both Hot CoCo and The Color Computer Magazine came into the market too late to have a great impact. They were facing an established product, THE RAINBOW, with an established record. They were publishing magazines of around 100 pages while we were running between 250 and 300. They were able to sell 50 or so advertisments an issue, while we were able to sell over 100. Their subscription rolls, and single-copy sales, never came close to THE RAINBOW's.

I wouldn't like to see anyone equate the end of Hot CoCo to a problem in the market. The end of Hor CoCo merely means that a product has failed. There are many other products for the Color

# Telewriter-64 the Color Computer Word Processor 

## 3 display formats: 51/64/85 columns $\times 24$ lines

True lower case charactersUser-Iriendly full-screen editor
Right justification
Easy hyphenation
国 Drives any printer
Embedded format and control codes

- Runs in $16 \mathrm{~K}, 32 \mathrm{~K}$, or 64 K

图 Menu-driven disk and cassette I/O

- No hardware modifications required

## THE ORIGINAL

Simply stated, Telewriter is the mod powerful word processor you can buy for the TRS-80 Color Computer, The original Telewriter has received rave reviews in every major Color Computer and TRS-80 mazazine, as well as enthusisstic praise from thousands of satisfied gwners. And rightly so.
The standard Color Computer display of 32 characters by 16 lines without lower case is simply inadequate for serious word processing. The checkerboard letters and tiny lines give you no feel for how your writing looks of reads.
Telew iter gives the Color Computer a 51 column by 24 ine sereen display with Iflue (ower case characiers. So in Telewriter screen looks like a printed page, with a good chunk of lext on screen at one time. In fact, more on screen texi than you'd get with Apple it. Atari, TI, Vlic or TRS-80 Model III
On top of that, the sophisticated Telewriter full-screen editor is so simple to uie, it maken writing fm . With single-leter mnemonic commands, and menu-driven 1/0 and formationg, Telewriter surpasses all others for user friendiness and pure power.
Telewriter's chain printing featore means that the sire of your text is never limited by the amount of memory you have, and Telewriter's advanced casserfe handler gives you a poweiful word processor without the major additional cost of a disk.

## LHe of the ber programo for the Color Compuice I hige seeli.

- Color Computer Newn, Jan 1982

## TELEWWRITER-64

Bun now we've added more power to Telewriter. Not just belis and whistles, but major features that give you total control over your writing. We call this new supercharged version Telewriter-64. For two reasons

## 64K COMPATIBLE

Telewriter-64 funs fully in any Color Computer - $16 \mathrm{~K}, 32 \mathrm{~K}$, or 64 K , with or withour Extended Basic, with disk or cassette or both. It automaticalty configures itielf to take optimum advantage of all available memory. That means that when you uperade your memory, the Telewriter-64 text buffer grows accordingly. In a 64 K cassette based system, for example, you ger about 40 K of memory to slore lext, So you don't need disk or FLEX to put all your 64 K (o work immediately

## 64 COLUMNS (AND 85!)

Besides the original 51 columin sereen
Telewriter-64 now gives you 2 additlonal highdensity displays: $64 \times 24$ and $85 \times 2411$ Both high density modes provide all the standard Telewriter editine capabilitios, and you can iwitch instantly to any of the 3 formats with a single control key command.
The $51 \times 24$ display in clear and erisp on the sercen. The (wo high density modes are more crowded and less easily readable, but they are perfect for thowing you the exact layout of your printed page, all on the sereen at one time, Compare this with cumbernome "windowi" that show you only fragments at a time and don't even allow editing.

## RIGHT JUSTIFICATION $\alpha$ HYPHENATION

Onc outstanding advantage of the fulf-width sereen display is that you can now set the screen width to match the width of your printed page, so that "what you see is what you get." This mikei exact alignment of columns possible and it makes byplienalion simple.
Since short line are the reason for the large spacei offen found in standard right justified text, and since hyphenation is the most effective way to eliminate shors lines, Telewriter-64 can now promlse you some of the best looking right justification you san get on the Color Computer.

## FEATURES \& SPECIFICATIONS

Printing and formatiling: Drives any printer (LPVIt/VIII, DMP-100/200, Epson, Okidata, Centronics, NEC, C. Hab, Smilh Corona, Termiset, E(C)
Einbedded control codes give full dyramic acces io imeligeni prinier leaturs like underining. ubserfipl, supenctipl, sartuble foni and lype vize, dotgraphles, ete.
Dynumic (embedifed) (ormat conirnti for: Iop, botions, and left margins; line length, lines per pase; line spacing, new page, chunge pase rumberits. conditional new page, enable/disable justification Meriw-driven conarol of these parameiers, as wall an pause at page botlom, page numbering, baud rate tho you can run your wrinter at fop seed), and Epont font. WHITE HOUSE COMPUTER
p.o. Boox 0025

Williamsport, PA 17701
(717) 322-7700 (In Pennsylvania)

HOURS: Monday IVru Filiday 9:00 am till 6;00 pm

know some of the things we are, indeed, going to do.

For the first time since we have been in business, we do not plan to increase subscription prices at the end of the year, Based on our business and budget projections, and assuming they are right, we plan to keep subscription prices the same throughout 1986. The same goes for single-copy prices. And, as an aside, we will not be increasing our advertising rates, either,

I believe that holding the line on all our prices expresses much more than mere words our confidence in the CoCo and the CoCo Community. We have always been devoted to the betterment of the CoCo Community and I see this plan - despite some rising costs here as a good one for all of us.

In the past, when we did increase prices at the end of the year, we offered everyone an opportunity to renew their subscription to THE RNINBOW at the old subscription rate so long as they did so by the end of the year, Since we won't increase prices this time around, we have another deal that I hope will be just as attractive.

If you renew your subscription before December 31, 1985, at the present rate

Computer - and for every other computer - that have failed as well.
Here at the rainbow we see the CoCo future as bright. Tandy has announced new, lower, Christmas prices for the CoCo, we foresec a new Color Computer sometime next year, and our own business remains healthy. I expect the Color Computer - and THE RAINBow - to be here for a long time to come.
The other reaction we have been hearing to the Hot CoCo announcement is that some members of the CoCo Community are concerned that we are now the only Color Computer magazine available.

As a message on CompuServe noted the other day: "What will Lonnic do now that he has a monopoly?" While I hardly see that we have a "monopoly," I think it might be interesting to you to
( $\mathbf{S 3 1}$ in the United States, U.S. $\$ 38$ in Canada, U.S. $\$ 68$ other foreign surface mail or U.S. $\$ 103$ other foreign air mail) you can order a set of RAINBOW Binders for $\$ 11$ instead of $\$ 13.50$ (plus $\$ 2.50$ shipping and handling via UPS or $\$ 4.50$ shipping and handling foreign and to al post office box). That's a savings of over 18 percent and it will not only ensure you of another year of THE RAINBOW, but also give you a set of two attractive binders in which to store them. THE RAINBOW is so big it takes two binders to store a year's worth.
There are two rules to this offer: First, you have to have both your subscription renewal and binder order in by December 31, 1985 (that means postmarked by that date), and second, you must order both at the same time.
We won't repeat this price on the binders. We've found that many

# "I believe that holding the line on all our prices expresses much more than mere words our confidence in the CoCo and the CoCo Community." 

members of the COCo Community wait until the end of the year to renew to take as much advantage of our "old rate" subscription offer as possible. Since there will not be a "new rate" for subscriptions this time, we thought the binders and subscriptions would make a nice package for you.
In fact, it may be a perfect holiday gift, too. And if it is a gift, well even send a gift certificate!

Which brings me to wish you and yours a most happy, healthy and prosperous holiday season and New Year from me, personally, and all of us at THE Rainbow.

At this time of the year, I think we all seem to be closer to one another. And 1 have always had this special feeling for all of the CoCo Community, too. After all, despite the fact that we are scattered all across the world, that we come from many backgrounds and that we have a wide variety of interests, we all "belong" - and I think that is important.

Happy holidays to everyone!

\author{

- Lonnie Falk
}

AUTOTERM shows true upper/ lower case in screen widths of 32 , $40,42,51$, or 64 characters with no split words. The width of 32 has extra large letters. Scrolling is forward. backward, and fast. Block graphics pictures are displayed automatically and can be scrolled.

The screen's top line shows operating mode, unused memory size, memory on/off, and capslock on/off. It also gives helpful prompls.

## SWEET TALKIN'

KEY-BEEP can be on/off. Unacceptable keystrokes cause a lower pitched BOPI This ERROR-
BEEBOP can be on/off.
Talks to other computers with Full or Half Duplex; Baud Rate of $110,150,300,600,1200$; Parity as even, odd, mark, space, none; 7 or 8 bil Word; any Stop Bits; all 128 ASCII characters; true line Break; XON/XOFF protocol; and optional line-at-a-time transmission. Able to send and receive text, block graphics, BASIC and ML programs. A 64 K machine holds up to 45,000 characters ( 33,300 in HI-RES).

DUAL PROCESSING lets you review \& edit while more data is coming in.

XMODEM for disk file transfer.

Fully supports D.C. Hayes and other intelligent modems.
Talks to your printer with any page size, margins, line spacing, split word avoidance. Embed your printer's control sequences for boldface, underlining, etc. Narrow text can be automatically spread out.

## You'll also use Autoterm for simple word processing and record keeping

You can display directories, delete files, transmit directly from disk, and work with tiles larger than memory. Easily maintain a disk copy of an entire session,

Compatible with TELEWRITER (ASCII) \& other word processors.

## SMOOTH WALKIN'

AUTOTERM moves smoothly and quickly between word processing and intelligent terminal action. Create text, correct your typing errors; then connect to the other computer, upload your text. download information, file it, and sign-off; then edit the received data, print it in an attractive format, and/or save it on file.

Editing is super simple with the cursor. Find strings instantly, tool Any operating parameter, such as screen width, can be altered at any time. Uncompleted commands can be cancelled

## PUTTY IN YOUR HANDS

The word processor can be used to create, print, and/or save on file your personal KSMs. They let AUTOTERM act like you. For example, it can dial through your modem, sign-on, inferact, perform file operations, \& sign-olf; an entire session without your help. KSMs can answer the phone, prompt the caller, take messages, save them, hang-up, and wait for the next call. The KSM potential is unbelievable!

NO OTHER COMPUTER IN THE WORLD CAN MATCH YOUR COCO'S AUTOMATIC TERMINAL CAPABILITIESII!

## WHAT THE REVIEWERS SAY

"AUTOTERM is the Best of Class." Graham, RA/NBOW, B/83
"The AUTOTERM buffer system is the most sophisticated - and one of the easiest to use...
Banta, HOT COCa, $9 / 84$

> "Almost a full featured word processor..."
> Elers, RAINBOW $11 / 84$
> "AUTOTERM's excellent errorhandiling routines, thorough documentation, and logical, easy-to-use command structure make it stand out."
> Parker, HOT CoCo, $5 / B 5$

# Our Holiday Issue . . . <br> With Great Gift Suggestions . . . And the Promise of a Prosperous New Year 

Aholiday greeting to our readers and a salute to the postal people who help deliver THE RAINBOW to your home: our December cover. Many of you will immediately recognize the work as that of our talented artist Fred Crawford, who came through, as always, when we asked him to create a warm, friendly painting to serve as a greeting card from all of us to all of you, wishing you the very best for the holiday season and the coming new year!

Yes, this is our Holiday issue. And, though there's a jack-a'-lantern lit up tonight in my office window at this mid-October writing, there's been a Santa's workshop atmosphere about THE RAINBOW editorial offices as we've scurried about to pull this month's package together.

Chanukah lights, holiday music and graphics, an Alpine Slopes game, assorted Christmas pageantry and a salute to the most famous reindeer of all are part of our stocking stuffer issue. As with holiday shopping, it was hectic, but fun. We turned the entire place (especially my office) upside down to do Lonnie Falk's last minute idea - our "Rainbow Holiday Shopping Guide" - but that just added to the festivity!

Some of our staff members were hastily drafted to serve as models in our holiday shopping layout, providing a partial answer to one of this month's "Letters to Rainbow" asking what we look like. Let me introduce three of those who help build THE RAINBOW each month (see Page 25). That's designer Tracey Jones smiling at us with the EARSphone on. Designer (and camera ham) Kevin Quiggins holds a JDOS drive, while editorial assistant Angela Kapthammer (Jutta's sister) appears to be wrapping a gift in her living room; actually, she's in Bond Pharmacy next door, just out of reach of row upon row of drugstore items. Oh yes, the hands belong to advertising representative Kim Vincent. We hope the gift suggestions help you pick the right thing for the CoCo lover in your life.

Along with our holiday theme we have some hard-hitters in our editorial mix: Richard Duncan continues with his CoBBS program development; veteran contributor Dennis Weide begins developing a CoCo burglar alarm; and, the newly-elected president of the national OS-9 Users Group, Brian Lantz, joins our "Rainbow Tech" staff. How's that for rounding out the year with a bang!

The new year has its own special beginnings for THE RAINBOW, too. We're pleased to announce that William Barden, Jr., author of some 30 computer books, is adding new distinction to our eminent corps of contributing editors. No wonder we're in a mood for revelry around here.

Lastly, a gift idea of my own. I recently received a review copy of the revised and updated edition of Alfred Glossbrenner's excellent work, The Complete Handhook of Personal Computer Communications. I sincerely believe it lives up to its billing that it covers "Everything you need to go online with the world," At 552 pages, it's more than 200 pages longer than the original 200,000 -copy bestseller, and I commend it to your attention. It is so filled with useful tips and solid information that our reviews editor, Monica Dorth, can't pry it out of my hands: hence, this mini-review. It is just what I needed to go online in Rainbows new Color Computer group on Delphi. Which brings me to my holiday invitation: Check our ad in this issue about free membership and free time on Delphifor RAINBOW subscribers, both old and new. We're bringing the CoCo Community closer together - and want you to join us!

## COCO TIME

A monthly magazine on tape and disk
Now every month you can get $8-10$ ready-to-run utilities, programming tips $\&$ hints, business applications, home management, tutorials, and educational programs. Also a Buy 'N Sell section and much, much more NO GAMES, ONLY REAL STUFF

Each issue shipped to you by first-class mail.

Programs written by computer wizards like Kishore M. Santwani and Gary T. Jes.

## SUBSCRIBER BENEFITS

- Free advice/help on your Basic and ML programs, whenever possible.
- Free Buy 'N Sell ads on computers and soltware
- 109 off on all Microcom software/books
- Subscribers encouraged to submit programs for inclusion. (Contact us.)

## EVERY YEAR YOU GET OVER \$1500 WORTH OF SOFTWARE. So Act Now!

## PREMIERE ISSUE

## (October 1985)

- Ram Disk (30k)
- CoCoDiskZap
- Memory Monitor
- Educational Hangman
- Easic Program Packer
- Tape Encryption (Basic)
- Disk Encryption (Basic)
- Basic Speedup Tutorial
- DMP (100/1 10/120)

Graphics Dump
The market value of these programs is OVER $\$ 150$, DOUBLE the price of our annual subscription.

## Subscription Rates (USA \& Canada)

## UTILITY ROUTINES for the TANDY <br> \& TRS-80 COLOR COMPUTER (Vol. 1)

This powerful book lor Basic and ML Programmers, Includes program explanation. memory requirements, and an annotated source listing for the utility routines given below, These routines if bought individually will cost you HUNDREDS OF DOLLARS
These are 100\% Position Independent ML Ulilities and require no ML programming knowledge.
COMMAND KEYS: Access most Basic commands with 2 keystrokes.
CURSOR STYLES: Greate OVER 65000 Oursor Styles.
FULL LENGTH ERRORS: Get full lengtherror messages.
KEY CLICKER: Ensure key input accuracy.
PAUSE CONTROL- Pul Basic/most ML programs "on hold.'
REPEAT KEY:Repeat ANY key 5 different key speeds.
REVERSE VIDEO (Green and Red): Eliminate eye strain
SPOOLER ( $16 \mathrm{~K}, 32 \mathrm{~K}, 64 \mathrm{~K})$ : Don't wail for those printouts, 32 K Spooling Butter in 64 K .
SUPER SCROLLEA ( 64 K K Onlv). Save and examine everything that scrolis off the lext screen, AND MUCH, MUCH MORE!
Compatible with $16 \mathrm{~K} / 32 \mathrm{~K} / 64 \mathrm{~K}$ ECB/Cassette and Disk Systems and CoCol and CoCo II.

BOOK \$19.95
THESE ROUTINES (READY-TO-RUN)
ON CASSETTE/DISK: $\$ 24.95$
BOTH BOOK \& CASSETTE/DISK: $\$ 36.95$

## DISK

ANTI-PIRATE
(A Breakthrough in Disk Protection)
Your Only Weapon Against Software Pirncy! Here is a chance for you io copy-protect your Basic and ML programs, DISK ANT1-
PIRATE does much more than any other program in the market.

MIN. 16 K ECB Disk System.
(Works witn CoCol and CoColl)

$$
\text { Only } \$ 59.95
$$

HIDE-A-BASIC 1.1
(A Breakthrough in Cassette Protection)
AT LASTI A program that combines autoslart with complete protection Dl your valuable Basic programs

## WITH HIDE-A-BASIC 1,1 THERE IS

PRACTICALLY NO WAY ANYONE CAN 'GET INTO' YOUR PROGRAM.

Buy Now a Protect your Prolits
For 16 K ECB Cassatte System.
Tape Only \$24.95
Buy вотн for ONLY \$79.95

NEVER BEFORE has this information of vital sipnificance to a programmer been so readily avaliable to everyone This book will help you 'GET UNDERNEATH THE COVER of the color Computer and develop your own HI-QUALITY programe, SO WHY WAIT?

This book includes
POKEs, PEEKs, and EXECs to:

- Auto alait our Basic programs.
- Disables most Colot Basic/ECE/Disk Basia
commands
- Disable BREAK KEY, CLEAR KEY and RESET EUTTON
- Gerierate a Repealokery
- Merge Iwo Basic piograme
- Transfer Rompalar to tape (for 64 K only
- Speed un your programs.
- RESET, MOTOR ON/OFF Irom key Doard
- Reslart your Basic Program Thre the RESET BUTTON
- Producer Key-Clicks and Error-Beeps.
- Recoyer Easic progams latt by NEW, 110 ERAORB and favify RESET.
- Ent 23 difiersnt GRAPHICJSEMIGRAPHIC modes.
- Sel 15 of the most commonly used Baud fatos.
- Alow you thote plays in 23 of your fayonte arcode gamet
- AND MUCH MUCH MORE

COMMANDS COMPATIBLE WITH $16 \mathrm{~K} / 32 \mathrm{~K} / 64 \mathrm{~K}$
COLOA BASICIECB/DISK BASIC SYSTEMS
and CoCol and GoColl.
ONLY \$16.95
Pakin Programming Tricks Revealed - S14.95 Color Basic Unravelied-\$19.95

 value) on additional disk with purchase of 10 or more disks. NO SHIPPING charges on disks il ordered with any other soffware.
# RUDOLPH The Red-Nosed Reindeer 

A tribute to "the most famous reindeer of all"

## By Ellen and George Aftamonow

hristmas is a joyous, festive time of year, and a good time to sit back and let the CoCo display its colorful capabilities. In the tradition of the season, this feature uses "Rudolph the Red-Nosed Reindeer" as the background for a story-telling graphics and music program. Your computer's screen will present a series of graphics illustrations, which match the song's lyrics, while playing the famous holiday tune. Rudolph the Red-Nosed Reindeer takes advantage of the POKE 178 command, which allows a brilliantly colored screen that otherwise would not be possible.

While written on a 64 K ECB computer, Rudolph should work on any ECB with 16 K or greater. There is a speed-up POKE in Line 750. If your computer cannot handle the POKE 65495,0 command, it may be deleted without causing any appreciable effect on the animation portion of the program.

When the program first starts, you will see a large dot on your screen. This dot should be red. If not, press Reset and RUN until you get a red dot, or instead you'll have "Rudolph the Blue-Nosed Reindeer."

[^2]

# VERSADRIVE 

NEW 1 MEG 40-80 TRACK COLOR COMPUTER DISK DRIVE STORES OVER 4 TIMES THE DATA OF THE STANDARD RADIO SHACK® DISK DRIVE READY TO RUN ON ANY COLOR COMPUTER WITH EXTENDED BASIC CO CO DOS, OS9, JDOS AND FLEX

## Model CC802 shown

## - Each Drive Switchable 40 or 80 Tracks

 Reads 35 or 40 Track Radio Shack ${ }^{6}$ Dlsks- Four Surge Protected Outlets
- Operates with Radio Shack® or J\&M controller
- Coples 40 and 80 Track with One Drive

Protects Software and Controller Investment

- Serves as a heavy guage monitor stand

Large Capacity for Hard Disk Backup

- Drive Address switch selectable from front panel

| CC801: | Single 1 Meg Drive | $\$ 349.00^{*}$ | CC801-A: | $\$ 369.00^{*}$ |
| ---: | :--- | :--- | ---: | :--- |
| CC802: | Dual 1 Meg Drives | $\$ 569.00^{*}$ | CCB02-A: | $\$ 589.00^{*}$ |
| CC801-A1: | Add on Drive for V1 | $\$ 250.00$ | CC801-AA: | $\$ 374.00^{*}$ |
| J\&M: | JFD-CP Disk Cont w/JDOS | $\$ 139.00$ | CC802-AA: | $\$ 594.00^{*}$ |

-Price Includes:
Cable to Controller - Large Dual Drive Cabinet
Four Surge Protected Switch Controlled Outlets • Complete Instructions

## INCREASE YOUR DATA STORAGE

Store over four times the data of a Standard Radio Shacke FD-501 disk drive with each Versadrive disk drive, Versadrive's quality teatures include a transformer power supply, gold connectors, surge protected duplex outlets that allow all your peripherals to be powered on and off with the Versadrive power switch, and a heavy guage versatile all-metal cabinet with high spec components to provide trouble free operation.
The Model CCB01 (single disk drive) can load and format disks with either 35 or 40 tracks, and copy your 35 or 40 track disks to 80 track, saving valuable disk space.
Versadrive requires a controlier and is compatible with the standard Radio Shacke and J3M disk controllers. We highly recommend the J\&M controlier. Our experience has shown their gold contacts to be a real plus for reliability. You may order J\&M controllers from us at a discount.

It you have a Radio Shacks disk drive or drives, they may be used with Versadrive by ordering our A or AA models. All models are shipped with complete instructions and necessary cables.
Protect your CPU, printer and other deyices by using Versadrive's surge protected outiets and also enjoy the convenience of furning all your peripheral devices on and off with one switch. A quick glance at Versadrive LED shows you the power status of alf devices using Versadrive's outlets.
Versadrive will run on TRS 80, Models III \& 4 as drives III and 4 in 40 track mode.

| Performance Specifications | 40 Track <br> Mode | 80 <br> Track <br> Mode |

NEED A HOLIDAY GIFT FOR THAT SPECIAL COCO ENTHUSIAST?

We here at the rainbow have taken special care to select some great Color Computer gift ideas. And we've brought them all together to help you through the maze of holiday shopping for the CoCo lover in your life.
There are many useful and just plain fun producjs in this special Holiday Shopping Guide - all of interest to CoCo owners - and we're sure there's at least one item (if not more) that's perfect for your gift-giving needs:

Here's one for the nimble-lingered, quickwitted game lover. The Sallor Man pits our hero againat Bigfatbadguy for the heart of the fair Elsie. From Tom Mix Soltware, cassetfe $\$ 29.95$, disk $\$ 34.95$, requires 64 K .

A muat-have for any game-loving CoCo owner is a deluxe joystick. Pictured is the Mach II, available from Spectrum Projects, Inc., $\$ 39.95$,

Put a complete work station at your CoCo owner's fingertips with DaskMato, a comprehensive package of six applications, including word processing, spreadsheets and telecommunications. Available in Radio Shack stores nationwide, $\$ 99.95$, requires 64 K 'and disk drive.

Here's an arcade game favorlfe for your favorite CoCo owner. Marble Maze needs a joystick and quick reflexes to guide a marble through a mazo filled with monsters, acid-puddies and electric anakes. From Diecom Products, $\$ 28.95$, require: 64 K .

This lucky CoCo 2
hes a friend thate true blue To keap if cool
While playings school
It's REM's CoCo Cooler Too!
CóCo Cooler Too from REM Industries, Inc., \$44.95. Couni to 100 from *
CY-BURNET-ICS, \$29,95.

## Need a perfecl giff for the

 "printer's devil"? CoCo Calligrapher allows your Cutenberg and his CoCo to produce typescripts for all occasions in a variety of tonts. Available from Sugar Sottware, caasette $\$ 24.95$, disk $\$ 29.95$.Got a budding composer on your gift list? Give your music lover Symphony 12 music syathesizer to make a CoCo sound like any of 10 presel Instruments in 12 voices! From Speech Systems, $\mathbf{5 7 9 . 9 5}$.

For CoCo enthuslaste with programming ambitions, thure's hands-off ease with EARS Irom' Speech Systemis, 599.95

 Fress cshith s of to cedins

Shopping for a Simulations aficionado? The Rainbow Book of Simulations features award-winning programs, such as Clvil War, which puls you in the role of Commander-inChief of the Confederate Army during the war, between the stales. Avaliable from The Rainbow Bookshelf, book $\$ 9.95$, tape $\$ 9.95$.

For a neophyte Advanturer, there's Adventure Starter, which comes in a talking version to help introduce one to the wonderful worid of Adventure games. Available Irom Owls Nest Software, \$17.95.

The perlect gitt for a chess-playing CoCo owner is Cyrus World Class Chess. This atate-ol-the-art prograin olfers the challenge of: tournamunt condilions as well as anilysls options to help sharpen playing strategies. Avallable in Radio Shack stores nationwide, $\$ 39.95$.

For the efficiency-minded CoCo owner, there's Pro-Color-File (enhanced Version 2.0), a serious database program that even boasts its own support group of satisfied userk: Available from Derringer Software, $\$ 59.95$.

Pictured with the HJL- 57 Keyboard are Amdek's Dual three-inch drives. Check the pages of THE RAINBOW for our advertisers offering these drives on sale.

A joystick-driven Adventure with hundreds of thrililing eltuations awaits your CoColst in the illusirated chapters of War of the Worlds. Available from Triad Pictures Corp, package of three chiapters $\$ 39.95$, requires 64 K and a Radio Shacktype joynilck.

Delight your CoCoist with the now JDOS drive system. Comes with cable and manual from JaM - Systems, \$289.

Shoppling for a young artronomen Solar Explorer show and telis all the facte about the planets and moonw in the Solor System, Availabla in Radio shack stores nationwide, $\$ 19.95$, requires 32 K and Electronic Book.

## Starship Falcon Graphics Adventure Game

Six months ago a terrorist group demanded to be designated the rulers of Alpha SIgma III, under the threat of world starvation on the planet Earth. The Federation denied their demands, so they released a biologlical weapon which has destroyed all known edible plant species from throughout the known galaxy. To date no plant life has been able to survive on Earth. Recently. Federation undercover agents have reported a story told by a roving space trader, of a planet with abundant edible plant life. These plants have a reputation of being able to survive in all climates and in fact, are supposed to grow at an incredible rate. The Federation is desperatel If Earth's food source is not replaced soon. the Federntion will have to evacuate all animal and Human life. Your mission is to go to the planet Zephyr and obtain the seed of these plants and return to Earth. Several Federation agents have been sent to obtain the seeds and none has returned! Can you get the seed and survive? GOOD LUCK!

# Working With The Electronic Book Part 2 

By Steve Blyn<br>Rainbow Contributing Editor

This month we present the second of a two-part series on Radio Shack's Electronic Learning Book. Last month, we described how to use this new peripheral; in this installment, we will demonstrate a practical educational application for it,

Just to review briefly, it is our contention that the Electronic Book is a wonderful idea and a pleasure to use with certain students. These include the preschool set and many physically disabled individuals. Both of these groups often have motor dexterity problems and find it difficult to use the computer's keyboard. The Electronic Book offers them an alternative means of entering data. It is also useful for those who thrive and learn best through a new medium.

It was difficult narrowing down to just one subject area to demonstrate the book's use. We feel that Radio Shack often makes the decision to direct their CoCo software almost exclusively to
> (Steve Blyn reaches both exceptional and gifted children, holds two master's degrees and has won awards for the design of programs to aid the handicapped. He owns Computer Island and lives in Staten Island, N. Y.)
younger children. This decision has caused hoards of overpriced Apples and even TRS-80 Model IIIs to be purchased by middle school classrooms instead of the better and less expensive CoCo.

We felt on safe ground with an arithmetic program. The level chosen is twodigit addition examples. This is often taught in second and third grades. The

program can be altered fairly easily to a higher or lower level. Converting to a subtraction or multiplication program would similarly be a simple task. We will explain how to alter the program after discussing how it works.

Lines 110 and 120 tell the computer to eheck the right joystick port values, JロYSTK (0) and J0YSTK (1). These values are read in and altered by pres-
sure on the Electronic Book's surface. Lines 130-220 read the joystick values to determine if any of the numbers have been pressed. When a number is pressed, it is drawn by Line 250 and a tone is played on Line 260. Since the answers are all two digits, this process is repeated twice by the FOR/NEXT loop created by lines 80 and 300 .

Line 310 checks to see whether the child's answer is correct. If correct, a happy tune is played. If incorrect, the real answer is converted to strings and drawn underneath the example by lines 320-370. A pause in the action occurs, then it goes back to Line 70 for the next example.

No scorecard is included in this program as we are concerned mainly with getting our user to become familiar and then comfortable with the apparatus. No timer or limit on the number of examples was included for the same reason. Please feel free to add any of these enhancements as you see fit for your own purposes.

This program can easily be converted to a different degree of difficuly. The numbers in the examples are randomly chosen on Line 640. ' $Q$ ' and ' $S$ ' are the 10 's place digit values, ' R ' and ' T ' are the unit's place digit values. In our pro-

CHRISTMAS IS CDMING!

Put your computer to vork on that Christmas card list, You vill be done in a jiffy with our LABEL64 or LABELLIII programs! thile you're at it let us help with your gift list. An Ouls Nest adventure makes an excellent gift.

LABEL64 - LABEL64 is a name and address file/print system that takes advantage of your 64 K . You can develop and maintain a mailing list. Print lists or mailing labels in your chaice of 1,2 , or 3 wide. Supports 3 or 4 line addresses with phone optional. You can sort by last nane, first name, and/or zip code. You can work with up to 300 records in memory ot a time. We include a second copy for back up at no additional charge. Take advantage of your 64 K with LABEL64. Cossette - 64 K EXT Postpaid
$\$ 24.95$
FILE64 - FILE64 is a data management aystem deoigned to take advantage of a 64 K machine. You can create and maintain records on anything you choose. Recipes, coupons, household records, financisl records - you nane it. You create records containing up to five fields you define. You can search, bort, modify, add, delete, save on tape, display on the screen and print on a printer. The program could cost you much more and ve include a back up copy at no edditional charge. Cumuette - 64 K EXT Postpeid $\$ 24.95$

SAVE $\$ \$$ Take both our LABEL 64 and FILE64 for only $\$ 40.00$ Postpaid. Don't miss this speciol offer:

ALCATRAZ ADVENTURE Our nevest and we think most involved adventure. You have been unjustly imprisioned and sentenced to death. You must escape to ptove your innocence. You vill face many unique problems as you work on your goal. If you liked our BASHAN adventure you vill love ALCATRAZ. Your adventure contains a large vocabulary and aome unique featuren. This is a tough one recommended for advanced players. 32K EXI Postpaid Disk $\$ 20.95$ Cassette $\$ 17.95$

CUBE ADVENTURE - Cube la a non violent adventure for a minimum 16K EXT system, You must locate and enter the "CUBE" gathering treasures alonig the way. You will encounter some unique problems an you work on your goal. CUBE in an intermediate ta hard adventure sultable for everyone.
16K EXT postpaid Diek $\$ 20.95$ Cessette $\$ 17.95$
GOOD NEWS FOR OUR FRIENOS FROM DOWN UNDER:
We are pleased to announce that our customers in Austrailia can nov purchase our programe from our Australian distributor. This will avoid long shipping delays. Remit in Australian Dollars to COMPUTER HUT SOF TWARE 21 WILLIAMS 5t. BOWEN QLD. 4805 Phone (077) 862220

GOOD NEWS FOR DUR FRIENDS FROM UP NORTH: Now our friends fron Canada can purchase our programe direct from our Canadian diatributor. Remit in Conadian dollars to KELLY SOF TWARE DIST. LTD. P.O. BOX 11932 EDHONTDN, ALBERTA 15J $3 L 1$ (403) 421-8003

## NOW LABELIII IS AVAILABLE ON DISK!

LABELIII - (Revieved in Nov B3 Rainbow) With LABELIII you can develop and maintain a mailing list. Print liata or mailing labols in your choice of 1, 2, or 3 wide. Supports 3 or 4 line addresses with phone optional. Sort by laat nane, first name or zip code. 16K EXT Postpaid Disk $\$ 21.95$ Cassette $\$ 19.95$
FILEIII - Data nanagement system, With FILEIII you can create and maintain recorde on anything you choose. Recipen, coupone, household records, financial records you nume it. You create recorde containing up to five fielde that you define. You can eearch, bort, add, delete, modify, diaplay on the acreen or aend to a printer. The program is user friendly and uaer proof, Prompting is extenaive. A comparable program could cost you much more. This one is a barqain! 16K EXT Postpaid Diak $\$ 21.95$ Caenette $\$ 19.95$

PROCRAM FILE - (rev Dct 83 Reinbow) Organize your prograns. With PRDGRAM FILE you create a file of your computer programs. You can search, sort, add, modify, delete, aave to tape and dioplay on the acreen or send to a printer.
16K EXT Postpaid Disk $\$ 16,95$ Cassette $\$ 14.95$
DATA MANAGEMENT PACKACE - Save $\$ \$$ Take the three above on disk or tape (specify) for only $\$ 40.00$ Postpaid

ESPIONAGE ISLAND ADVENTURE - (revieved in June B4 Rainbou) You have been dropped off on an island by subnarine. You nust recover a top aecret microfilm and signal the sub to pick you up. Problems abound in this 32 K EXT adventure.
32K EXT Postpaid Disk $\$ 20.95$ Cassette $\$ 17.95$
FOUR MILE ISLAND - You are trapped in a disabled nuclear power plent. The reactor is running avay. You must bring the reactor to a cold ahutdown and prevent the "Chins Syndrone". Can you save the plant (and yourself)? It's not easy!
16K EXT Pontpuid Diuk $\$ 20.95$ Cassette $\$ 17.95$
KINGDOM OF BASHAN - Our Plagahip advanture. Beahan has a very large vocabulary and sone unique features. You wat enter BASHAN (not enay), gather the ten treasures of the anciont kingdom (aven harder) and return to the starting point (harder yet), If you can acore the maximim 200 pointe in BASHAN you are an expert! 32K EXT Postpaid Dlak $\$ 20.95$ Cessette $\$ 17.95$

ADVENTURE COMBO Save ss The three above adventuree on three cassettes or one disk (apecify) poatpeid for only $\$ 40.00$

ATLANTIS ADVENTURE - This one is not easy - in Fact ve challenge you to conolete it in 30 daya. If you do vo will send you any adventure ve sell - pootpaid - at absolutely no charge. You start on a disabled sub near the lost eity of Atlantis. You nuat get the sub (and yourself) safely to the surface. Do you think Atlantlans are friendly?
Postpald $\quad 32 \mathrm{~K}$ EXT Disk $\$ 24.95$ 16K EXT Cussette $\$ 21.95$
ADVENTURE SIARTER - Learn to play thase adventurea the painless way. You atart with an easy adventure and move to an internediate. Ivo complete seperate non violent adventures plus hints and tips on adventuring in general. Finish this and you will be ready for ATLANTIS!
16K EXT Postpeid Disk $\$ 20.95$ Cassette $\$ 17.95$

OWLS NEST SOFTWARE
P O BOK 579
OOLTEWAH, TN 37363
gram, we arranged their random values so the sum of the two two-digit numbers does not exceed 98 . This means we will always have a two-digit answer. You may change the level of difficulty by altering these values. You would, of course, also adjust the value of YY in Line 80 for the proper number of digits in the answer.

The program can easily be changed for other arithmetic operations. "AN" is the answer the program is looking for. It is computed on Line 660. The answer in our example is $A N=[0 * 10]+R$ $+(5 * 10)+T$. To change to a subtraction program, for example, change Line 660 to read $A N=\left(\left(Q^{*} \neq\right)+R\right)-\left(S^{\circ}\right.$
10) + T). You should also be careful to keep the value of ' $Q$ ' larger than 'S' to avoid negative answers.

Last month, we challenged those readers who also have a Tandy 1000 . Although not designed to work on the Tandy 1000, the Computer Island staff found the Electronic Book works fairly well on it. The joystick values are, of course, different. Our challenge was for you to determine those values. The answers are as follows:
$\mathrm{AN}=1$ if $\mathrm{A}=26$ and $\mathrm{B}=10$
$\mathrm{AN}=2$ if $\mathrm{A}=2$ and $\mathrm{B}=10$
$\mathrm{AN}=3$ if $\mathrm{A}=17$ and $\mathrm{B}=11$
$\mathrm{AN}=4$ if $\mathrm{A}=24$ and $\mathrm{B}=12$
$\mathrm{AN}=5$ if $\mathrm{A}=44$ and $\mathrm{B}=12$
$A N=6$ if $A=65$ and $B=12$
$A N=7$ if $A=14$ and $B=28$
$\mathrm{AN}=8$ if $\mathrm{A}=14$ and $\mathrm{B}=3$
$A N=9$ if $A=14$ and $B=16$
$\mathrm{AN}=10$ if $\mathrm{A}=14$ and $\mathrm{B}=24$
The Tandy 1000 also uses the left rather than the right joystick port at the front of the computer. Joystick, incidentally, is called STICK on the Tandy 1000 rather than JOYSTK.

In conclusion, we feel the Electronic Learning Book can be a valuable educational aid to many. We hope we have helped to convince you to pursue this avenue and, also, that Radio Shack continues to support this device.

## PAYROL/BAS ${ }^{\text {TM }}$

By Bernie Litton

A dynamic tool for businesves and accountants. PAYROL/BASTM outs checes and keeps records lor companies up to 100 employees. All you nevd is a computer with 64 K Exjended Basc, one disk drive and a printer, and PAYROL/BAS ${ }^{[M}$ lets you

- Enter employee data (name, sddress, SSY. FICA, laxes deductions. protil stiating, insurance)
- Cut checks. (The program woriss with poth pin teed and Incton-teed printem and we can even supply the checks if you need them.)
- Automatically calculates and stores seven deductions. inctuding federal FICA state, three of your choosing (such as city, proff sharing or insurance) und one miscellaneous
* Wall calculate tax and print to screen for approvai belore printing ctweck
- Keep ledgers ancluding monthly listings of ail checks, gfoss income FICA. taxes. protit sharing, insu/ance)
- Efror correcting routine lets you change data il you have mide a mistake
- Handies weeldy, biweekly serti-monithly and monithly pay petiods.
- Calculates state tax automatically.
- Each state has custom code included.
- We have New York City witholding. \$29.95/extra.

## Only \$79.95 (\$2 shpg)

THE COMPUTER CENTER
901-761-4565, 5512 Poplar, Memphis, TN 38119

Ringing out some traditional tunes of the season are these charming computerized chimes

## By Joseph M. Urbas

Tlaking on a seasonal "note," this program is composed of five Christmas songs. Each note goes through a machine language routine that loops through a sound envelope to produce a bell sound.
There are 48 values in the sound envelope located at lines 180 and 190. These values may be changed to obtain sounds other than a bell tone, but to run the songs I've typed in, the values in lines 180 and 190 , which are $162,96,74$, 58,34 and 0, must remain that value and in the same location. These values are what terminate the machine language

[^3]routine each time through. They are what equals the note length.

74 Dotted quarter note
58 Half note
34 Dotted half note 0 .
0 Whole note
Example: If a whole note is being played, the machine language routine continues till it reaches a ' 0 ' in the sound envelope. If a half note is being played, the machine language routine continues till it reaches a ' 58 ' in the sound envelope.
Lines 90-110: Turn on the digital-toanalog converter and output the sound to the television speaker.

Lines 120-170: The machine language routine that is poked into memory locations $\$ 3600-\$ 365 \mathrm{~A}$ to loop through a sound envelope poked in at memory locations $\$ 365 \mathrm{~B}-\$ 368 \mathrm{~A}$.
Lines 230-380: This is the menu, choice, direct to play and return to menu.

Lines $460-1340$ : Data is read and poked into memory locations \$368B and $\$ 365 \mathrm{~A}$ to be found by the machine language routine when the USR function is called.

Data is read and poked two per cycle, ' F ', the note and ' D ', the length of the note.
' F ' - The Notes

'D' - The Note Length
These are $162,96,74,58,34$ and 0 , as previously explained. However, you may change all of the values in the sound envelope in lines 180 and 190, but you must also change the note length value in the data line of your song to its own unique value.
The third value in Line 200 controls the speed that the song moves; it may be changed to whatever you prefer.
(Questions about Christmas Songs may be directed to the author at RD I Box 238, Winderest Dr., Cecil, PA 15321, phone 412-746-4537. Include an SASE when writing.)

## PRO-COLOR-FORMS 2.0

ciged by Dermper Sotinate tac
PRO-COLOR-FORMS will access data files created with PRO-COLDR-FILE and merge them with a lettes or place them on pre-printed forms.

- STORE UP TO 6 FORMATS - USER DEFINED PAGE SIZE - SUPPORTS SPECLAL PRINTER CONTROL CODES , RGGI JUSTIFICATION. PASSWORD PROTECTION - MERGES WITH GRAPHICS FROM MASIER DESIGN OH TELEGRAPHICS

You can use the buill in ML text editar for creating the form or use your favorite word processot.

## PRO-COLOR-DIR <br> 

PRO-COLOR-DIR will read your directories and create a master data file that can be accessed by PRO-COLOR-FILE for sorting and reporting. $1000+$ records can be stored on one giskette with valuable intormation about each plogram

- DISK ID NAME - FILENAME/EXT - TYPE OF FILE - DATE CREATED - DATE UPDATED. NUMBEA OF GRANS ALLOCATED - NUMBER OF SECTORS ALLOCATED AND USED. MACHINE LANGJAGE ADORESSES -

You can obtain hard copies of the information and crate labels of the tilenames for placing on the diskette itsel!

## Escape: 2012

by BJ Chambless
SCENARIO: You are on an alien prison ship behind the enemy lines, captured while on a recon mission for the United Earth Forces.
OBJECT: The same for any prisoner of war-to escape and return back to your sidel
SETTING: In the year 2009 the Earth solar system was attacked by hostile forces from another solar system. The battle has raged for a years. Even with faster-thanlight star ships and planet-covering force fields, the war remains a stalemate. Both sides use their spies, scouts. and uitimate weapons to gain an edge, but, as in any war, the turning point can be the actions of a few or geven one person!
In this graphics adventure there are over 35 objects to deal with, 137 rooms arranged in a 3 dimensional maze of 4 levels to traverse, and at least 2 arcade sequences to master before you can proceed. The graphics and action are superb!

## of the aztecs

treasure

## by John Sandberg

The year is 1520. After taking the emperor Montezuma hostage, Hernando Cortes storms Mexico City, Cortes conquers the Aztecs, but when the Spaniards search the fallen city the great Treasure of the Aztecs cannot be foundl

As a greedy Spanish soldier under the Cortes, you take a smail force to search the jungles in hopes of finding the missing treasure. While following a faint trail. your team is ambushed by Aztec warriors. Knocked unconscious during the battle, you awaken alone and disoriented. You must assume your men are dead and now face the relentiess jungle alone; but your greed won't let you forget the Treasure of the Aztecs! Can you. a lone soldier, survive the perils of the jungle. . . . and recover the great Treasure of the Aztecs?

Treasure of the Azteos is unique, featuring special sound effect and four volce music, over 50 hires graphic screens, input with arrow keys or joystick, and allows use of the Radio Shack SSC Speech Cartridgel
Requires 64 K

Cass $\$ 24.95$
Disk \$27.95

Are you ready to tee ofl into a challenging computer simulation of America's most played sport? WARNINGIl! This is NOT a game, but a simulation that will make you work for your scorel It offers practice sessions with the Putting Practice and Driving Range options. Then you must tee off to play either the front nine or back nine. You will face real situations with wind factor, lies in the rough or out-of-bounds, careful club choice decisions, coordination problems, trees and water and traps; and morel But do not despair, with practice you can certainly improve your score.
Pro Golf provides an entertaining challenge to the beginner and the pro with 2 disks with a total of 36 holes to practice on!
Requires 32K Diak \& Extended Basic
$\$ 29.95$

Box 668 .
by Scoll Cabit

During your research as a theoretical physicist, you discover a way to warp space and time, allowing you to pass from one dimension to another. By using these "gateways" you can go anywhere in the multidimensional universel But during your travels through time and space, you uncover an alien plot to take over the entire omniverse by controlling networks of these gateways! You must be careful, but since you are the only person on Earth who knows about the gateways, you must find a way to save Earth! It isn't easy passing through the different dimensions-and you don't know when you may pass through an alien gateway

Enjoy the graphics of the many difterent lime periods and the suspense of this complex challenge! If you have the Radio Shack Speech and Sound Cartridge, it will even speak every word displayed!

## Personal Productivity Tools from

Computerware

With this desktop software your CoCo becomes your own personal administrative assistant. Load C.E.O. first thing each workday and everything you need is at your fingertips! Screens are shown in an easy-to-read $51 \times 24$ hires display with upper and lower case. The Macintosh-like icons (pictures for commands) make it simple and fun to be organized, efficient, and on time!

## DATE BOOK:

You'll never miss an important occasion again! C.E.O.'s calendar stores an entire year's appointments. Each day has entries for one special occasion, one memo, and hourly notes for 8 am to 5 pm . You can display or print any daily schedule or a whole week at a time.

## CALCULATOR:

A full four function calculator is at your fingertips!

## CLOCK:

The accurate real-time software clock keeps date and time, beeps on every hour, and has a convenient alarm you can set to remind you of those important appointments. Let C.E.O. do your clock watching for you!

The Complete Electronic Organizer
by Warren Ulirich III
FREEFORM FILE DRAWER:
C.E.O.'s free-form data base keeps your important info a few keystrokes away. Just type in your notes (up to 4600 characters with a 48 character title line) the same way you'd jot them down on a scratch pad. Your notes will be neatly organized and saved for instant retrievall The sophisticated keyword search can scan all of the titles for any occurrence of a given phrase, making it easy to find notes on any topic. And there's room for alot of info-up to 479 entries can be stored on the data disk!
You can display or print any or all entries upon request. C.E.O.'s mini-formatter helps print it in easy-to-read style. Now you can keep track of clients, business notes, minutes of meetings, or "whatover" with oaso!

## MEMO PAD:

If you need to jot a note to yourself or someone else, just pull up C.E.O.'s convenient memo pad and type awayl When you're done,, save and/or print it as you see it! Use it for quick memos, business communications, or personal reminders. It's easy, quick, and organized!

## REQUIREMENTS:

 $\$ 49.95$ 64 K and at least one disk drive are required C.E.O. supports two drive operation when avallable.

# 75TD SUPER CONTROLLER 

## FEATURES:

- Gold contacts on all connectors.
- Shielded melal box lor low RF noise.
- 428 -pin sockets for software expandability.
- Uses 2764 or 27128 EPROMS.
- EPROMS are sollware selectable.
- Internal Mini-Expansion Bus interface for
- 80 Colurinns
- Real Time Clock and/or
- Parailel Printer or
- EPROM Programmer or
- User Projects.
- Complele Radio Shack compatibility.
- New technology, no adjustments needed.
- Very Accurale 16 mhz High Speed Master Clock.
- Needs + 5 volts only, works on all COCOs or COCO Ils.

## EXPANSION ADD-ONS:

There are currently four add-ons available from DISTO for this controller,
PPRINT
The first is a Centronics Compatible Parallel Printer adapter. This adapler will allow you to connect a Centronics compatible printer directly to your controller, leaving the serial port of your computer free for your mudem. Printer driver soltware included.

## RTIME

The second is a Real Time Clock. This is a clock chip that will keep the proper time, date and year. A small battery keeps the lime when the Computer is off, retreive and set the time by using simple Basic POKES. Also available with the Real Time Clock is the optional Centronics Compalible Parallel Printer adapter. Solliware to set the clock and printer driver included.

## MPROM

The third is a Mini EPROM Programmer. Yes, a low cost programmer that attaches to the disk controiler. A musi for the DISTO Super Controller. Program those often used utilities into EPROM and plug them directly into your conlroller. Will program 2764's or 27128's, a perfect mate for the DISTO Super Conitroller.

## DISPLAYBO

The fourth is a real knock-oul. This is a three in one card. It's major function is to add an $80 \times 24$ display to your computer. A feature packed package also includes RTIME and PPRINT. All in one neat package that lits inside the controller. 059 software available. Call for more information.

# Successful Organizational Factors For Integrating Computers In School 

By Michael Plog, Ph.D. Rainbow Contributing Editor

WThen we form a mental image of schools, we generally picture people and objects: students, teachers, administrators, books, chalk, desks, pencils, long hallways, or even playground equipment. The organizational factors of a school are mach less visible, both in a mental image of remembered days of our own childhood and in observations of current school settings. Yet these organizational factors are extremely important to the process of educating. Books have been written and graduate courses offered in the approaches to organizational factors of educating.

Most schools are organized according to the preferences of community leaders. These preferences can vary dramatically from one community to another, and as much so within a community. The organization of a school district, including each building and classroom, determines how decisions are made, what activities are appropriate for classrooms, how spending priorities are established and a host of other characteristics that give schools their "flavor" as well as their day-to-day operational features.

[^4]School districts can be organized in such a way that decisions are "top down." The superintendent and a team of administrative experts make decisions about curriculum and experiences that are followed in all classrooms in the district. Some of these districts view the school as a "factory," with learming considered a manufactured product. Teachers are viewed as a cross between quality control specialists and line supervisors. Students are expected to complete the product (learn the assigned material) in an efficient, regulated manner and time span.

Other districts have more flexibility at the classroom level, so two classes in the same grade may appear vastly different from each other. Two different fourth grade teachers may have different class content and different expectations of students. This situation is accepted, even encouraged, by district administration.

Of course, there are an infinite number of variations between these two extremes. Most schools are a blend between flexibility and rigidity. Students can generally expect the same (or similar) curriculum if they move from one school to another.

Classrooms have a variety of organizational features, as do districts. I have heard of one teacher who has a "slow row." One row of student desks is reserved for students who do not perform as well as the other students in the class. (I personally find this distasteful
and insulting to students.) Some teachers organize the classroom so all students are doing exactly the same work at the same time. An opposite extreme type of organization may appear chaotic when first viewed. Desks and chairs may be placed in seemingly random order, with different students working on different assignments.

Researchers have examined the effects of school organization on all aspects of education. Findings from several sources relate school organizational features with positive student outcomes and positive teacher attitudes when using computer-based instruction. The way seats are arranged in class is determined by the type of organization in a school; the way computers are used for educational purposes is also determined by these organizational features.

There are several conditions associated with successful use of computerassisted instruction. First, the school and classroom environment is considered. Flexible scheduling of students appears to be related with successful use of computers, as does individual student self-pacing. Computers are ideally designed for self-pacing of student learning, It is difficult to imagine successful implementation of computers in a school where all students are expected to be on the same page of the workbook at the same time.

Researchers also found that computers are more successful in schools if the
use is targeted with a specific group (e.g., handicapped, gifted, slow learners). This is not to say that all students will not demonstrate positive outcomes while using the computer. Trying to introduce computers to all students at the same time is less successful than concentrating on one group for one program. When introduced into a school, computers should be focused on a specific task, with a specific group of students.

Computers are more successful if the school environment provides opportunities for integrated use of hardware and software in a classroom setting, rather than a laboratory-type setting. This is not surprising, especially given the finding that computers are more successful when students set their own pace for learning and have a flexible schedule. A laboratory situation makes flexible scheduling difficult.

Students seem to produce more positive results when computers are available in their classrooms. One possible explanation for this finding is that students working with a computer in a classroom also have access to the teacher directing the lesson. In a laboratory setting, the teacher may not be knowledgeable about every computer lesson subject.

More positive student outcomes and teacher attitudes are related to the active support of computer use by the principal. Also, the computer tends to be more successful when principals view its role as instructional rather than administrative. In some settings, the role of the principal is primarily administrative - the job is to enforce and fulfill district policy and attend to administrative tasks. In other organizational settings, the principal is the instructional leader of the school. The
job in this case involves student contact and close interaction with teachers.

Factors other than classroom and school environment have been found to be related to successful use of computers in schools. The decision-making process is also important. More successful use is related to a more decentralized and flexible decision-making process, especially during implementation of educational computer uses, key teachers are crucial. If those key teachers have a role in the decisions made about implementation, then greater success is realized. Some of the decisions to be made by the teachers include courseware and, to a lesser extent, hardware. This is only reasonable. Teachers work harder to make students accept and achieve if they help select the courseware they will be teaching.

Finally, an important organizational feature of successful computer implementation is training. Teacher training in the use of the courseware packages before actual use in the classroom is very beneficial. Lessons are easily handled if the teacher is prepared. When both teachers and students are learning a particular courseware at the same time, confusion can be expected. This reduces the computer's benefit for students and teachers.

Another aspect of training is for the staff to provide the training. The most successful training is provided by people who are or have been in similar teaching situations. This finding does not decrease the importance of training by sales agents. There are times when a software package is unfamiliar to the staff, therefore training by sales agents, as well as the package developers, cannot be slighted.

Successful computer implementation
is also related to follow-up support for the instructional staff. Initial training may be important, but follow-up service helps ensure adequate use of the courseware. This might be especially important for a rather large package with several units of instruction included. The greater the number of components for a package, the greater the need for follow-up service.

Teachers who have had training in individualized instruction tend to produce better results than teachers without it. Since the computer works better in an individualized setting, training and familiarity with this technique is important for teachers.

If software producers take these findings to heart, we can expect some changes in courseware in the near future. It is logical to assume that future development will include comprehensive plans for implementation as part of the courseware. Also, we should expect more customization of software for local district curricula.

These findings only relate to computer-assisted instruction (CAI). We would expect similar findings if examining programs for computermanaged instruction (CMI). Unfortunately, those studies are not available at this time. We would also expeet similar findings for packages related to other uses of computers in schools than just CAI or CMI.

While many factors are important in successful use of computers in schools, we should not overlook the organizational features of the school system. Any comments, thoughts or suggestions about these ideas are always welcome. If you want to share your thoughts, please write. My address is 829 Evergreen, Chatham, IL 62629.

# FROM THE PEOPLE THAT 

# SYMPHONY 12 

# A 12 VOICE POLYPHONIC STEREO MUSIC SYNTHESIZER $\$ 79.95$ <br> (1) WHEN PURCHASED <br> WITH <br> MUSICA 2 

## - 12 SIMULTANEOUS VOICES

- STEREO \& MONO
- 4 NOISE GENERATORS
- SOUND EFFECTS
- PLAYS AND CREATES MUSICA 2 FILES

SUPER POIYPHONIC. Speech Svstems is proud to bring you SYMPHONY 12, a polyphonic 12 voice hardware stereo music synthesizer for the Color Computer. SYMPHONY 12 also gives you 4 noise generators for percussion synthesis and snumd effects. The PIANO KEYBOARD and MUSICA 2 (sold separately) turns your COCO into a real music machine with incredible flexibility.
STEREO and MONO. By connecting SYMPHONY 12 to your home stereo system, music is produced in stereo, 6 voices from each channel. However, you don't need to have a stereo system, all 12 voices also come out of your TV or monitor.

PICK AN INSTRUMENT, SYMPHONY 12 lets you choose from 10 preset instruments to synthesize chimes, violin, oboe, banjo, harpsichord, piano and more. You can even change instruments as the music plays.
SOUND EFFECTS. SYMPHONY 12 is a sophisticated sound generator, 12 voices and 4 noise generators give you incredible sound effect capability, We have included gun shot, explosion, racing car and more.

WATCH IT PLAY. As SYMPHONY 12 plays, a graphics display of a piano keyboard shows the notes playing. The display is entertaining as well as very educational.
PLAY MUSICA 2 FILES. Thousands of MUSICA 2 users will be excited to know SYMPHONY 12 plays all music developed using MUSICA 2 like you have never Seen or Heard it. In fact we highly recommend the use of MUSICA 2 ats a composition development tool for SYMPHONY 12. Use MUSICA 2 's superior graphics input capability and then play it through SYMPHONY 12. You can also take advantage of our MUSIC LIBRARY series (sold separately) to give you access to over 500 music pieces representing 20 hours of music.
LLTIMATE MUSTC DEVELOPMENT SYSTEM. SYMPHONY 12, MUSICA 2 , and the PIANO KFYBOARD give you incredible flexibility. Imagine sitting down at the PIANO KEYBOARD, playing a piece and recording it as you play just as you would to a tape recorder. Save your masterpiece and then using MUSICA 2 edit it If you like and print is. If you have a MIDI synthesizer, you can take the music and play it using COCO MIDI (sold separately). Try that on an IBM. APPLE, or COMMODORE (good luck.

PIANO KEVBOARD. For those wishing to turn SYMPHONY 12 into a real polyphonic synthesizer we offer the extremely powerdul and versatile PIANO KEYBOARD. The PIANO KEYBOARD was deisgned to be used in our ention musie produrt line. You can use it with SYMPHONEY 12 , MUSICA 2 , SYNTHER 77 PLUS, and even our advanced speech synthesizer, SUPER VOICE.
When using MUSICA 2 , you will be using 4 of the 12 voices available from SYMPHONY 12. To take advantage of the full 12 voice capability of SYMPHONY 12 you may use either the Color Computer's keyboard or the PIANO KEYBOARD.

Y-CABLE or MUITT.PAK. Tape users using both SYMPHONY 12 and the PIANO KEYBOARD will require a Y-CABLE. Disk users will require the Triple Y-Cable or MULTI-PAK.
SYMPHONV 12. You get over a dozen music and sound effect selections and complete documentation. Software is shipped on Tape or Disk.

## COCO

Tape or Disk

Plug this gem into your computer, connect to your home stereo system and sit back and enjoy music realism. The STEREO PAK is a hardware music synthesizer that plays out MUSIC LIBRARY series and MUSICA 2 music in stereo. Because it was designed specifically with music reproduction in mind, the sound is superb. The highs are crisp and clear while the bass notes will rattle your walls. Internally we use two high performance 8 bit digital to analog converters to assure fidelity.
The STEREO PAK is all hardware. It is intended as an enhancement for MUSICA 2 and our MUSIC LIBRARY series. Disk users will require our Y-CABLE or a MULTI-PAK.

The MUSIC LIBRARY series consists of 5 volumes: 100, $200,300,400$, and 500 each sold separately. Each contains over 100 four voice music selections with a playing time of over 3 hours each. The disk version is shipped on 5 full disks. When coupled with the STEREO PAK, the music is reproduced with unsurpassed realism.
A IUKEBOX program is included to allow you to select specific songs or automatically play each. These songs are ready to go, you don't need MUSICA 2 or a knowledge of music. MUSICA 2 users may customize each song, Requires minimum of 32 K .
MUSIC LIBRARY 100

Stage, Screen, \& TV
Music of the 70's Music of the 60's Music of the 50's Old Time Favorites

CHRISTMAS FANTASIA

## $\$ 19.95$

Tape or Disk

Christmas Fantasia is a collection of traditional Christmas music combined with beautiful high resolution Christmas scenes. Christmas Fantasia picks one of more than a dozen Christmas scenes and music selections from tape or disk, displays the picture and plays the music. Upon completion, another scene and piece of music is loaded and played The Christmas scenes are beautiful. One shows a chapel nestled in a valley with snow actually falling. The low price is our way of saying "SEASONS GREETINGS" from Speech Systems. 6.4 K required.

Now you can really play your Color Computer and pick any or all 4 instruments: MUSICA 2 , SYNTHER 77 PLUS, SUPER VOICE, and the ultimate SYMPHONY 12.
MUSICA 2 users can use the PIANO KEYBOARD as an easy method to input music. Version 2.7 is required. Previous users may obtain an update by returning original tape or disk with $\$ 7.00$.
SYNTHER 77 PLUS turns your COCO into a music synthesizer without any additional hardware. You specify Vibrato, Bender, Volume, as well as Attack, Decay, Sustain, and Release (AD5R).
SUPER VOICE, COCO's most advanced speech synthesizer becomes a music synthesizer when connected to the PIANO KEYBOARD.
SYMPHONY 12 and the PIANO KEYBOARD gives you a professional 12 voice music synthesizer.
These Piano Keyboards are not toys. They are the same style, shape, size, and feel as professional synthesizer keyboards. Disk owners must use a $Y$-CABLE or MULTIPACK.
2'/2 oclave ( 32 note) . . . . . . . . $\$ 79.95$ a octave ( 49 note)
$\$ 119.95$

## MU <br>  <br> \$29.95 <br> Tape or Disk

- When in stereo mode, music is played through our STEREO PAK (purchased separately).
- Loudness of each voice may be individually specified.
- Memory available is constantly displayed.
- Voice waveshapes may be exchanged between voices at any point.
- Tempo may be specified and may even be altered as the music plays.
- Flats and sharps supported.
- Billions of timbre combinations.
- High resolution graphic display. looks just like sheet music.
- MUSICA 2 is $100 \%$ soitware, no need for hardware unless you want music produced in STEREO. In that case, the STEREO PAK may be purchased separately. It's a must for the audiophile!
- Repeat bars allow repeating of music without re-inserting music a second of third time.
- 30 page manual describes all.
- Requires minimum of 64 K
- Allows you to specify key signature.
- Voice timbre (waveshape) may be altered by specifying harmonic content just like stops on an organ.
*During editing, voice being inserted is displayed
- Each measure is numbered for easy reading of music.
- Measure bars aid in reading and developing music.
- Each voice may be visually highlighted for easy identification.
-4 Voices produced simultaneously.
- Input notes from Coco keyboard, joystick, or Piano Keyboard.

- Play music from your own BASIC program.
- Block copy music for easy music development.
- $100 \%$ machine language so it is lightning fast.
- Vibrato effect easily produced.
- With STEREO PAK, voices may be switched between left and right speakers as music plays.
- Durations include: whole, half, quarter, eighth, sixteenth, thirty-second, sixty-fourth. and triplet.

An advanced music course that covers Major and Harmonic Minor scales, interval spelling, Triad (Chord) theory, Inversions, Dominant 7th chords, and interval ear training. Format of the course includes drill and practice sessions, a scorecard to measure progress, graphics and sound outpur, and a reviewing session.
32K Disk only
$\$ 49.95$

## 'HOME COMMANDER'

The HOME COMMANDER easily connects to the cassette port of your Color Computer and lets you control appliances in your home.

NO WIRES NECESSARY
The HOME COMMANDER uses your home's existing electrical wiring to control virtually anything. Appliances are controlled via small control modules available at your local SEARS or Radio Shack store.

ON FRIDAY 7:42 PM, OFF SUNDAY 1:26 AM
Included FREE is a program to allow you to control up to 256 devices and specify the time and date they are to be activated. That's right, the software has its own built in accurate clock.

Imagine controlling a light or TV with your voice. When used with our Electronic Audio Recognition System, EARS, you can literally control any appliance.

## PLUG'N POWER USERS

If you were disappointed in the software that came with the Radio Shack PLUG'N POWER unit, and you probably were, we'll offer you our powerful software separately. An early version is described in the Feb., April, June, and August 1983 issues of RAINBOW. Our current version is even better.
............................................. $\$ 19.95$ PLUG'N POWER is a trademark of Radio Shack*

## PRECISION TIME MODULE $\$ 59.95$

\author{

- INCLUDES OS DRIVER -
}

Now your computer will always know the correct time and date, This amazing precision time modute is calibrated to the National Bureau of Standards (WWV) atomic clock and you should never have to change it.
Use the PRECISION TIME MODULE to add the time element to your games or use on BBS. If you like, purchase separately our B8S.
COLORAMA BBS ( $64 \mathrm{~K}, 7$ drive minimum) $\$ 99.95$
BATTERY BACKUP
Even when your computer is off, the clock keeps correct time by operating using the internal battery backup system

MONTHS, LEAP YEARS \& DST The PRECISON TIME MODULE automatically adjusts for the different number of days in each month as well as leap years. And believe it or not, it adjusts for DST so you don't have to remember if it's SPRING FORWARD or FALL FORWARD.

1 MEGAbYTE
DOLOFAMA

Electronic Audio Recognition System

- HANDS OFF PROGRAMMING

## - HIGH QUALITY SPEECH REPRODUCTION

 EARS Does It All!

Two Years In the Making. Speech Systems was formed to develop new and innovative speech products. After 2 years of intensive Research and Development, we have created a truely sophisticated speech recognition device. Recognition rates from $95 \%$ to $98 \%$ are typical. Until now, such a product was outside the price range of the personnel computer market, and even small businesses.
EARS is trained by your voice and capable of recognizing any word or phrase. Training EARS to your particular voice print takes seconds. Up to 64 voice prints may be loaded into memory. You may then save on tape or disk as many as you like so that your total vocabulary is virtually infinite.

Speech and Sound Recognition. EARS is really a sound recognition system, so it really doesn't matter whether you speak in English, Spanish, or French. In factyou do not have to speak at all, you can train EARS to understand sounds such as a musical note or a door slamming.

Hands Off Programming. Imagine writing your own BASIC programs without ever touching the keyboard. Everything that
you would normally do through a keyboard can now be done by just speaking.

Programming EARS is Easy- LISTEN, MATCH and other commands have been added to BASIC so that programming EARS is a piece of cake! The single BASIC line: 10 LISTEN: MATCH will instruct EARS to listen to you and return the matching phrase.
It Talks. EARS is also capable of high quality speech. We mean REALLY high quality. The speech is a fixed vocabulary spoken by a professional announcer. Speech Systems is currently creating a library of thousands of high quality words and phrases. For a demonstration call (312) 1379-6844, you won't believe your ears or our EARS.

DISK OWNERS. EARS will work with any disk system with either a MULTI-PAK or Y-CABLE. Our new Triple Y-CABLE was specifically developed for those wishing to add SUPER VOICE as a third device.

You Get Everything You Need, You get everything you need including a specially designed professional headset style noise
cancelling microphone. The manual is easy to use and understand. Several demonstration examples are included so you don't have to write your own programs unless you want to. EARS will work in any 32 K or 64 K Color Computer.

## SUPER VOICE $\$ 20$ OFF

Imagine talking to your computer and it talking back to you, When you need an unlimited vocabulary, you can't beat SUPER VOICE. For a limited time, we will give you the SUPER VOICE for $\$ 59.95$ with your EARS purchase. Even if you already have another speech unit, here is your chance to buy the best and save $\$ 20$.

## VOICE CONTROL

Applications for EARS are astounding. Here is our first of many listening programs to come. VOICE CONTROL is a program specifically designed to allow you to control any appliance in your house with your voice and our HOME COMMANDER (sold separately). For example, you can control your TV by saying "TV ON" or TV OFF". $\quad \$ 24.95$

[^5]
## ‘SUPER VOICE’

COCO'S MOST ADVANCED SPEECH SYNTHESIZER.

IT TALKS, SINGS AND MORE. only . . . \$79.95 WITH EARS OR PIANO KEYBOARD PURCHASE only . . . \$59.95

SUPER VOICE is no ordinary speech synthesizet. It uses Silicon Systems, Inc. SSI-263, the most advanced speech/sound chip available. SUPER VOICE is not only capable of highly intelligible speech, sound effects, and singing over a 6 octave range, but now we have turned SUPER VOICE into a monophonic Super Musio Synthesizer with our PIANO KEYBOARD.
IT TALKS. A tree TRANSLATOR text-to-speech program makes writing your own talking program as easy as SAYING "HELLO."
SUPER VOICE warks in any 32 K or 64 K computer. A disk system requires a Y-Cable or Mutti-Pak.

Here are the facts; the decision is yours.

FOREIGN LANGUAGE Learn a foreign language. French dictionary is included.
\$9.95
PRESIDENTS The student is able to master the Presidents of the U.S. $\$ 9.95$
STATES A program designed to aid the student in learning correct spelling of the states.
$\$ 9,95$
CAPITALS Learning the State's Capitals is made more interesting using speech.
$\$ 9.95$
HANGMAN A word guessing game, You must guess the word betore you hang. $\$ 9,95$ MATH DRILL A program to help teach arithmetic. $\quad \$ 9,95$

## Designating this final column as a 'graduation ceremony'

# It's Been A Great Two Years 

By Bob Albrecht and Ramon Zamora<br>Rainbow Contributing Editors

"School is In The Heart of A Child" is for parents of quite young children. We want to beip you work and play with your 3- to 8-year-ald child and learn to use compaters as a joyful family experience. We suggest wass to use the home computer ar another meanato encourage your childs independence, growth and control over her own life. See the pride on her face as she direets the computer to do what she selects with deliberation. See ber head gears switch to "on" as she progrewes atep by step with your pretence and caring guidance We will explore (we hope, with your help) the following:

- Sproife "teaching" tectiniques io the dheovery can be the childh own.
- Critical evaluation of soltware based on extenvive playesting in family and related environments.
- Additional resourses to consult: bools, meyavinec software publishers, networks, ete
- Suggettions for interludes and fun times away froms the computa (a must)s call the librarian for information, watch TV together and ditcuss it work together as voluntecre in a community project, take an "awareness wall:
* Whatever we learn from families we work with in Menlo Park or from you, our readers Let's pool our knowledge and thare our experiencer as we learn from our children:

Copyrigbte 1985 by DragonQuest, PO Box 7627, Menlo Park, CA 94026-7627. Portions of "School is In The Heart Of A Child" are extracted from TRSS-50 Color BASIC by Bob Albrecht.
> (Well-known author Bob Albrecht has written mumerous articles and books on personal computers through his association with DragonQuest. Ramon Zamora is author and co-author of several books, co-founder of Computer Town USAl, and is currently designing computer games for kids at Child Ware Corp, in Menlo Park, Calif.)

TThe first episode of "School is in the Heart of a Child" in February 1984 began like this:

## Hello, and Welcome

A long time ago, in a galaxy nearby, the home was the center of learning. Parents and children worked together to pass on knowledge to daughter and son. What was not learned at home was commonly learned by becoming an apprentice who learned from a master. There were few "schools" - institutions devoted to teaching instead of learning.
Time passed and schools flourished. In the U.S.A. today schools are becoming increasingly less adaptive to a changing world. Fortunately, something is happening, something that provides rich and highly motivating environments for learning outside of schools. Millions of people are buying computers for home and personal use. Within a few years nearly everyone will have a computer. There exists an unprecedented opportunity for learners to take control of the means of learning.

As learning moves out of the school into the direct control of learners, once again people are enjoying learning as an adventure - for themselves, their families, their friends and neighbors. Through the use of a home computer, the entire family can work and play together to learn anything from the mundane to the most esoteric subjects, and on a schedule and pace chosen by the learners.

This is the last "School is in the Heart
of a Child." Thanks to everyone at THE Rainbow for giving us space and wonderful readers so we could experiment and develop these ideas. Our almost two years of writing for the best CoCo magazine has been a great experience. This ending is another beginning. We'll tell you about that at the end of this final installment.

## DragonTown Library

Here are some additional sources of information that we find helpful, useful, entertaining, mind-stretching or inspirational.

A Book of Puzzlements: Play and Invention with Language by Herbert Kohl. If our house was burning down, we would save this book. It is a neverending source of ideas. Open it anywhere and enjoy a wonderment of words. From: Shocken Books, 200 Madison Avenue, New York, NY 10016, S14.95.

Edmund Scientific - Worlds of "Ir" indeed! The Edmund catalog is full of it! Imagine a school with everything in the Edmund Scientific catalog and a bunch of kids. Stand back and let them try everything. Stand close and learn with them. From: Edmund Scientific, 101 E. Gloucester Pike, Barrington, NJ 08007.

Computer Currents - We love good information. We find it all in Computer Currents. And, it's free! Computer

Currents is a bi-weekly tabloid that knows all and tells all in the San Francisco Bay area. You can pick it up at more than 1,300 places. To find the closest place, call and ask: (415) 8486860. If you live elsewhere, you can subscribe: $\$ 22$ for six months (13 issues). From: Computer Currents, 2550 Ninth Street, Berkeley, CA 94710.

Grolier Encyclopedia on CD-ROM - Here it is, the beginning of the next revolution in home learning. Grolier's Encyclopedia Americana is now available on laser video dise and also on compact disc, read-only memory (CDROM). KnowledgeDisc, the laser video disc product, is compatible with any standard laser disc player. Users can scan or "browse" the disc, frame by frame, or use an index to get to specific entries - all this without a computer! The KnowledgeDisc containing the entire 21-volume Encyclopedia Americana costs $\$ 89.95$.

The CD-ROM (\$199) version hooks up to a computer and offers sophisticated search capabilities. The educational and entertainment possibilities far exceed any home computer capability from the BCDR (Before CD-ROM) era. We predict that encyclopedia adventuring, or just plain browsing, will become the oext great induor sport!

By the time you read this, low-cost CD-ROM drives will be available for the ATARI ST and IBM compatible computers. Let's hope Tandy will make a drive for the CoCo. For information, contact Grolier Electronic Publishing, Inc., Sherman Turnpike, Danbury, CT 06816.

## Mail-File Games

At our house, we have a family mail
file. Each family member has a hanging file folder with his or her name on the tab. There are also file folders for several friends. We use the mail file for "mailing" information to each other.

We also use the mail file in another way - for in-home Play-By-Mail (PBM) games. Popular games are Guess My Number, Guess My Letter. Guess My Word and an assortment of two-dimensional games where the player must find an invisible something in a grid, a map, a tree, a network or whatever space someone dreams up.

One person is the GameMaster (GM); the other is the player. The GM prepares a game sheet and puts it in the player's file. When the player finds the game sheet, she or he makes a move and puts the game sheet in the GM's file. The GM records an appropriate hint and returns the game sheet to the player's file. This process continues until the player has won the game, solved the puzzle, found the invisible object, discoyered the secret message or otherwise completed the game task. These games are played in a leisurely fashion, typically one move a day for each game.

Now here's the boggler: Many of our mail file games are available as expensive computer games! We are amazed by the prices charged for some educational software. For home use, many "educational" programs we have seen are overpriced. So, instead of using the $\$ 29.95$ or $\$ 39.95$ computer versions of our mail file games, we simply write simple progams in BASIC. We find the combination of playing by mail in the mail file plus playing a simple version of the same on the computer is much better than using high-priced software.

## DragonSmoke

We will continue with DragonSmoke, our own periodical about personal and family learning, In DragonSmoke, we share our ideas about the following things.

- Computers for beginners: Anyone can learn how to read and understand computer programs. Think of it as a recreation - it can be fun! DragonSmoke will help make it fun. - Role playing games: Millions of people, mostly kids, play role playing games: Dungeons \& Dragons, Champions, RuneQuest, Star Trek and dozens more. Powerful ways to learn! We will develop games encouraging nonviolence, cooperation, exploration, story-telling and problemsolving. DragonSmoke will explore the bright side of "The Force."
- Play-by-Mail (PBM) games: A great way to use basic skills! We encourage you to explore this emerging world of computer-moderated, multi-player games that you can play by mail once or twice a month. Yes, you will also find games that can be played at home using your own mail file.
DragonSmoke is intended to be shared. You may copy anything in it for yourself or to give to others. Make and give away as many copies as you wish. For a sample copy, send \$1 to DragonSmoke, P.O. Box 7627, Menlo Park, CA 94026,

Farewell, Rainbow. Thrive and remember: Reality expands to fill the available fantasies.

## One-Liner Contesy Winner

This program draws circles and fills them in a way that really shows off the CoCo's graphies capabilities!

# SLEEP TIGHT <br> Your CoCo Is Awake Tonight 

In this first of a two-part series, you'll learn how to use CoCo to keep an eye on the home front while you're away<br>By Dennis H. Weide

"Sleep Tight - Your Air Force Is Awake Tonight." Many may remember the pieture of a wrinkled 99 -year-old man in full flight gear. It hangs in almost every U.S. Air Foree office around the world. While it isn't much of a confidence builder, it's always worth a good laugh.
This month, Ill show you how to sleep tight when away from home. because your CoCo will be awake. This is a program and hardware project that allows you to scan your house or apartment from a remote location.
What are the advantages of this? The next time you go out of town, a housesitter can call your house at scheduled intervals to check security. If there's a terminal available, you can call and check yourself. The housesitter can leave messages to inform you of any major problems (i.e., the washing machine hose just broke and your house is flooded).

I always call my house and scan the alarms and messages at least once a day. It's a good feeling knowing the house is secure. Before you complain about long distance costs, they're really fairly inexpensive. Using an AT\&T credit card and a Model 100, I can call from a motel room and not have to pay the motel charge for placing the call; an hour's worth of calls costs only $\$ 10$ per

[^8]month - a small price to pay for knowing your home is secure, I stay on the line less than 10 minutes per call.

There is one thing that must be understood before we go any further: The program will only scan alarms upon command. If someone tries to break in, the alarm will be tripped and stay tripped until reset, but the computer will not recognize the alarm until it has been commanded to scan the circuit.

## A Look at the Software

First let's take a look at the program required to scan the alarms. Listing 1 is the alarm program. It's menu driven and requires a password to sign onto the system. You can change the password (up to 200 alphanumeric characters) by changing PASSWORD in Line 7900. If the correct password isn't given, the system won't allow access to any other program section,

Once signed on, the program asks for the date, time and terminal width. Date and time are for disk reference only. The system doesn't have a real-time clock. The width of the terminal you're calling from determines sereen formatting. Default is 32 characters wide. The menu is displayed at the beginning of the program and anytime the ENTER key is pressed.

The terminal program used is a modified version of Dan Downard's terminal program from the November 1983 RAINBOW. The modifications include changing the memory location and disabling the BREAK key. This prevents anyone from having access to the disk by interrupting the program. It is hand

BEWARE
of the
COMPUTER!
assembled (without an editor/assembler), so there is no assembly language listing. To make it simple, it's in bASIC so it can be loaded and run from one program.

Reading and writing messages is easy. It uses DSKIs to read the directory so wrong filenames won't stop program execution. Duplicate message names are not allowed since the second message would erase the first. To keep messages short, use abbreviations whenever possible. The maximum message length is 200 characters. The time you signed on is added to the message before being written to disk. When messages are read, the date and time are displayed at the beginning of each message. Erase
messages vin DOS using the KILL command.

## Scanning Alarms

To activate the alarm system (turn it on), turn on the power supply switch and computer and load the program. When you run the program, sign on answering all prompts and request RESET ALARM to initialize the alarm circuits.

To scan the alarm circuit, request an ALARM STATUS from the main program menu. If the alarm system is turned off, an ALARM DEACT1VATED message appears and the program stops scanning, If the alarm system is on and no alarms exist, an

## Table 1

## Typical Joystick Values for Figure 1

| Joystick | Conliguration | Reading | Range |
| :--- | :--- | :---: | :---: |
| $0 \& 1$ | All switches open | 31 | $>28$ |
| $0 \& 1$ | S1 closed only | 24 | $20-28$ |
| $0 \& 1$ | S2 closed only | 12 | $9-15$ |
| $0 \& 1$ | S1 \& S2 closed | 0 | 0 |
| $2 \& 3$ | All switches open | 30 | $>28$ |
| $2 \& 3$ | S1 closed only | 23 | $20-28$ |
| $2 \& 3$ | S2 closed only | 12 | $9-15$ |
| $2 \& 3$ | S1 \& S2 closed | 0 | 0 |

ALARM ACTIVATED message is printed on the sereen. If an alarmswitch is open, scanning the alarm circuit will detect the alarm.
The circuit is divided into four sectors: north, south, east and west. A message is printed whenever an alarm condition exists showing which side of the house it's on. To check if the alarm is clear, use the RESET ALARM command. If clear, an ALARM CLEAR message is printed when scanned. If not, the alarm is printed again.
There is a tamper switch located in the electrical box with the on/off key switch. Any attempt to defeat the alarm system at this box closes the tamper switch. The next time the circuits are scanned, a TAMPER ALARM message is printed on the screen. The only way to reset this alarm is to turn off the external power supply.
All responses to commands are written to disk along with the time you signed on the system. The alarm log can be reviewed by entering the command ALARM LOG. This will list all system activity. If the log gets too full, erase it with the CLEAR LOG command. The next time you read the log, the only entry will be LOG CLEARED and the date and time you signed on.

The last command is SIGN OFF. This, of course, signs you off the system and stops program execution until ENTER is sent from the remote end or from the CoCo keyboard. The next time you sign on, press ENTER. The program jumps to the SIGN ON routine and you can begin again. Any command not acceptable will result in an INVALID COMMAND message.

## A Look at the Hardware

The hard ware for this program is easy to build. All input to the computer is via the joystick ports with the exception of the alarm reset circuit, which uses the cassette motor relay to reset the alarm circuit. Layout of the components is not critical and they can be soldered or wire wrapped on perf board.

## A Simple Circuit

The basic circuit for the alarm system is a simple voltage divider acting as a variable resistor. Look at Figure I to see how it works. Three resistors are connected between +5 volts of the joystick port and ground. Closing either switch, S1 or S2, shorts the associated resistor and changes the voltage fed to the output. This output is fed to JOYSTK (e). Closing both switches puts the output at ground potential. Since
the joystick port is the input to an analog-to-digital converter, voltage changes result in a corresponding change in the digital output of the converter. The digital output is then used to determine the alarm circuit status.

The entire alarm hardware works on this principle. Resistor R3 is used to ensure that the joystick port always sees at least 100 K ohms of resistance. Anything less than that causes the other three joystick ports to vary erratically. Table 1 gives the values of the four joystick ports for all circuit configurations. Your readings will probably vary somewhat, but if they're within the range listed, you won't have to modify the program. Now let's look at the individual circuits to see what they do.

## On/Off and Tamper Switches

Schematic 1 shows the on/off circuit and the tamper switch. You can see that the basic circuit of Figure 1 is used in this portion of the alarm circuit. Resistors R1 through R3, switch S1 and relay K1 make up the circuit. In addition, resistor R4 and a light emitting diode (LED) are used along with an external +5 volt supply to provide an alarm on/ off indicator. All components are located on the alarm board except the on/ off switch (S1), the tamper switch (S2) and the LED. These are located in the electrical box at the front door.
Closing the on/off switch (S1) turns on the alarm system by shorting R1. This lowers the voltage fed into the joystick port and the corresponding digital reading. This also places ground on the cathode of the LED, causing it to light. The LED is the on/off indicator at the front door.
The tamper switch ( S 2 ) is a push button switch that rests against the front plate of the electrical box at the front door. Any attempt to defeat the alarm system causes this switch to close momentarily operating relay KI. This relay shorts resistor R2, indicating to the computer that a tamper alarm exists. The relay has a self-holding path that keeps it operated until the power is removed. The tamper alarm can't be defeated from outside the house.

## Remote Alarm Loops

The remote alarm loops are shown in Schematic 2. They are also similar to Figure 1 except they use two relays along with the switches. Again, these relays are used to hold the alarm activated until reset by program command. This prevents someone from opening a

door or window and closing it before the alarm circuit can be scanned. Even though the door or window might be closed immediately, the relay stays released and the alarm condition remains until reset.

Switches S3 through S6 are the door and window switches located at each door and window. Each switch on the schematic consists of several switches in a series. The switch assignments are as follows:

$$
\begin{aligned}
& \mathrm{S} 3= \text { All switches on south side of } \\
& \text { house in series } \\
& \text { S4 }= \text { All switches on north side of } \\
& \text { house in series } \\
& \mathrm{S} 5= \text { All switches on west side of } \\
& \text { house in series } \\
& \mathrm{S} 6=\begin{array}{l}
\text { All swithes on east side of } \\
\text { house in series }
\end{array}
\end{aligned}
$$

The switches are closed when the door or window is closed. When the alarm circuit is turned on and a door or window is opened, that switch opens, releasing the associated relay and re-
moving the short across its resistor. When scanned, the alarm circuit indicates an alarm in this sector. Once released, the relay can't be operated again until the RESET ALARM command is sent.
Notice the relays are all wired to Pin 1 of the cassette jack on the back of the computer. Pin 3 of the jack is wired to +5 volts. When the RESET command is given by the program, a relay inside the computer operates, shorting Pin I and Pin 3 of the cassette jack together, applying +5 volts to one side of each relay in Schematic 2 . This momentarily operates the relays. They stay operated as long as the associated switches (S3S5) are closed.

Notice the pin assignments on the schematic. Some wires connect to the left joystick, some to the right joystick, some to the cassette jack and some to an external +5 volt supply. This +5 volt supply is used so that no internal connections have to be made to the computer, Table 2 is a list of Radio Shack parts.

## Table 3

Power Supply Parts List

| Project box for power |  |  |
| Supply and alarm board | 3.99 ea. | 270-252 |

## The External Power Supply

Schematic 3 shows the external power supply. It uses a 7805 regulator chip (IC 1) to provide a regulated +5 VDC. Switch S1 is the on/off switch for the power supply and a $1 / 2 \mathrm{amp}$ fuse is used in the transformer primarily for overload protection. The rectifier is an IC bridge.

Capacitor Cl is an electrolytic capacitor used to provide better regulation. Capacitor C2 is a bypass capacitor and is not absolutely required. Ground on the power supply must be connected to ground on either joystick port (Pin 3) to provide a common system ground. Table 3 gives a list of Radio Shack parts for the power supply.

## Connecting to the Computer

Before connecting the alarm circuit to the computer, breadboard all the components and test your wiring, then verify that the voltages fed to the joystick port never drop below zero (negative) or rise above +4.8 volts for all possible circuit configurations. The analog-to-digital converter inside the computer can't handle voltages outside this range. Voltages outside this range indicate an error in the circuit wiring.
While the alarm circuit doesn't have an audible alarm, you can modify it to aetivate an alarm bell outside the house, The secret to a good alarm system is one nobody else can figure out. You can modify this circuit to provide all sorts of configurations and options.
For those who wish to save money, shop around for parts. You can save quite a bit if you mail-order parts or buy them from Radio Shack when they are on sale.

## Next Month: Something for Those without Modems

Next month, I'll show you how to use this information to provide a local alarm system that uses a hardware clock and has continuous alarm scanning.
If you have any questions or comments, you can address them to me at 14201 Marquette N.E., Albuquerque, NM 87123. If you wish an answer, please enclose a self-addressed, stamped envelope. I'll mail an answer back within 24 hours. Please include as much information about the problem as possible - I can't help much, for instance, If you only say you get an error when the program is run. Let me know what kind of error and what line it is in. Also, explain what you were doing when the error occurred,

## Buy the sale-priced 64 K Color Computer 2 and use the 60 savings on exciting accessories!

The powerful 64 K Extended BASIC Color Computer 2 (26-3127. Reg. \$219.95) is now just \$159.95. It's one gift the entire family will use the year round for education, entertainment, home management tasks and more. Just attach the Color Computer 2 to your TV and your family can enjoy the advantages of home computing right away-even if you've never used a computer!

## The Perfect Accessories

The Color Computer 2 is easily expandable as your family's interests, skills and needs grow. You can add a 156 K Disk Drive for only $\$ 199.95$ (26-3129, Reg. \$349.95), or give a new dimension to BASIC
programs with the Sound/Speech cartridge ( $26-3144$ ). You can even create electronic music on your home stereo with the Orchestra 90 cartridge (26-3143). These instantloading Program Paks are only $\$ 79.95$ each. And you can make computer games even more exciting with a pair of Deluxe Joysticks (26-3012, \$2.9.95 each).

## Access Data By Phone

Take advantage of special holiday savings on our deluxe RS-232 Program Pak for only $\$ 59.95$ (26-2226, Reg. \$79.95). it lets you communicate with information services and other computers-just add the DCM-3 telephone modem
(28-1178, \$59.95). The DCM-3 plugs into any modular phone jack.

## Add a Printer

Every computer buff needs a printer and the DMP 105 is an excellent choice for only $\$ 199.95$ (26-1276). It prints 80 characters per second and graphics, too.
Make this holiday season one of the best ever for everyone at home with a Color Computer 2 from Radio Shack. And don't forget to include accessories and software!

## 4K Fit

Editor:
I have discovered a way to shorten the USA Flag program by J.E. Borger (July 1985, Page 113) to fit in a 4 K ECB Color Computer. The following is my version of the program:
$20 \operatorname{LINE}(1,1)-(255,156)$, PSET, G
$38 \operatorname{LINE}(1,1)-(108,84)$. PSET, 日
40 FRR $Y=10$ TO 74 STEF 16
50 FDR $X=10$ TD 90 STEF 16
Ge CIRCLE $(X, Y), 5$
70 NEXT $X$, Y
EO FOR $Y=18$ TO 66 STER 16
Se FRR $X=1$ E TO $9 \Leftrightarrow$ STEP 16
100 CIRCLE $[X, Y$ ), 5
110 NEXT $X, Y$
120 FOR $Y=12$ TO B 4 STEP 24
$130 \operatorname{LINE}(100 . Y)-(255, Y+12)$, PSET, 日F
140 NEXT Y
150 FAR $Y=84$ TD 144 STER 24
160 LINE $(1, Y)-(255, Y+12)$, PSET, BF
170 NEXT Y
$180 \operatorname{PAINT}(5,5), 3,4$
190 FOR $\psi=5$ TO 150 STEP 24
290 PAINT $(250, Y), 2,4$
210 NEXT
$220 \operatorname{LINE}(1,1)-(255,191)$. PSET, B
Lines 1430 through END remain the same.

## PRICKLY-PEAR SOFTWARE QUALITY PROGRAMS FOR YOUR COCO \& TDP-100 PROQRAMS REQUIRE $16 K$ EXTENDED BASIC FOR TAPE, AND 32K DISK UNLESS OTHERWISE NOTED.

## HALL OF THE KING

This program combines all the things you look for in a great two disk graphics adventure program. The Hi-Res graphics are superbly done. The text portion of the screen and the graphics change quickly as you move through the HALL OF THE KING. You can move Ireely from one portion of the adventure to another, Call up your inventory at any time, You can even save or load a game at ANY time. HALL OF THE KING will challenge even the most seasoned adventurer.
in an age long past, a dwarven race lived in their mountain home. They were forced to flee under threat of destruction leaving behind their most powerful possession, the Earthstone. As a prominent adventurer, you will be asked to undertake a perilous quest, the recovery of the Earthstone! This is your FIRST adventure in the search lor what is deemed to have been the cornerstone of the legendary power of the dwarves.
HALL OF THE KING requires 64 K EB and one disk drive This exciting two disk adventure comes packaged in a vinyl library case. $\$ 39.95$

## WARP FACTOR X

If you have been waiting for a game for your color computer that has everything. your wait is over. WARP FACTOR $X$ is here. This all graphics simulation game requires strategy, fast thinking, an eye for detail, and above all experience in knowing the capabilities of your starship and its computer. You will begin your adventure into space as a cadet but your ultimate goal is to become Captain of the Enterprise. To do this you must neutralize the enemy planets and eliminate the Klingon starbases along with the Klingons themselves. The Klingon is not a "Robot" He has the same capabilities as your starship but he is aiso subject to the same problems. You will find that he is inclined to move around while you are attacking him and may even chase you when you find it prudent to retreat. You must form alliances with neutral planets and bring them into the federation. Many of the planets will have special resources which will help the federation.
WARP FACTOR X was written by an engineer for the Kennedy Space Center and has been three years in the making. You will appreciate the attention to detail and complex inner workings of the program. The program is supported by eight pages of documentation important to the success of your mission. Your progress through the eighteen sectors of the galaxy will be recorded and saved
for your next adventure into space. WARP FÁCTOR $x$ includes versions for $32 \mathrm{~K}, 64 \mathrm{~K}$, and COCO 2. It requires one disk drive and comes packaged in a vinyl library case. $\$ 34.95$

## DR. WHO

BWNOW
DR. WHO is a graphics program based on Britains' number one longest running television series, "Doctor Who". As the game begins you are in control of the Tardis, a time machine disguised as a police call box, and you must find and recover the seven keys to time. To accomplish this feat you will travel around the Galifry Solar System from planet to planet. You must find each planet, fight you way through aliens, and land on each planet. The difficuity level increases with each planet. DR. WHO is a real time game. No matter what you are doing energy is being consumed and planets are moving in orbit. All controls and commands are entered through the keyboard. Move your Tardis through the galaxy as you search for far away planets and battie aliens in you quest for the seven keys of time. Your ultimate reward, however, lies out beyond the stars. Requires 32 K . Tape - $\mathbf{\$ 2 4 . 9 5}$; Disk - $\mathbf{\$ 2 9 . 9 5}$

## RTD TRIO

Take advantage of this special offer. This package of three utility programs includes our newDISK TO TAPE, TAPE TO DISK (version 2.0), and ROMFREE (version 20 ). TAPE TO DISK moves BASIC, ML and DATA files from tape to disk automatically - one program or an entire tape. It even fixes those programs that load at hex 600 so they work on a disk system. ROMFREE moves ROM packs to tap eor disk easily, and fixes them so you just load and EXEC, ROMFREE now accomodates the larger 16 K ROM packs. You won't believe how easy it is to protect your soffware libraryl These programs are shipped on tape. Require 16 K \$49.95 (\$24.95 each if purchased separately)

## DISK TO TAPE

空NEWUE
Move BASIC, Machine Language, and DATA tiles from disk to tape automatically - one program or an entire disk. Use the arrow keys to help make your selection. No machine language or data file is to large to handie. Protect those important disk programs by including them in your tape library. There is no better way to protect your investment! This all new utility is a "State of the Art" program making use of the most recent methods in translering disk programs to tape. This program is written by the author of TAPE TO DISK and provides the user with the same easy to follow instructions and user friendly format. Don't be caught with your disks unprotected DISK TO TAPE is shipped on tape and may be moved to disk. It works with any Radio Shack formated disk and a $16 \mathrm{~K}, 32 \mathrm{~K}$, or 64 K disk system, $\mathbf{\$ 2 4 . 9 5}$

POLICY ON PROTECTION - We believe our customers are honest - all of our software can be backed up using standard backup procedures.

Your personal cbeck is welcome - no delay Include $\$ 1.50$ shipping for each order. AZ residents add 5\% sales tax. Orders shipped within two days.

Dealer and author inquiries are always welcome, Canadian dealers should contact Kelly Software Distributors, LId., P.O. Box 11932, Edmonton, Alberta T5J-3L1 (403) 421-8003.

# Trivia Tic-Tac-Toe 

## ' $X$ ' (or 'O') marks the spot with this multiple-choice quiz

By Rick Pitel

ne of the problems with quiz or trivia games on the computer is that the answer must be exact. A misspelled word or failure to state the answer exactly the same way the computer sees it gets counted wrong. On the other hand, the multiple-choice type question lends itself very well to computer logic. This is the idea behind Tic-Tac-Toe.
The format is that of a tic-tac-toe game with nine categories from which to choose. It uses low resolution graphics and can be run from disk or tape. The program is generally selfexplanatory and can be played from the keyboard or with joysticks. If done from the keyboard, first enter the number of the square to be chosen and then one through four to choose the answer. With joysticks, ' X ' uses the right joystick and ' O ' uses the left joystick. Choose the square by positioning the joystick according to the flashing indicator and push the button. Choose the answer in the same way.

If the answer is correct, an ' X ' or ' O ' will appear in the square. If the answer is wrong, the correct answer is shown and another category is placed in that square. The game works by pulling a data file holding 100 questions into an array, then feeding multiple-choice questions to the squares as needed.
> (Rick Pitel is a design engineer with Freightliner Corporation and has been programming in BASIC on the Color Computer for about two and a half years. He lives in Brush Prairie, Wash.)

In order to create the data file it was necessary to write a utility program (Listing 2). The utility program is menu driven and allows for creating and saving the data file on disk or tape. If using disk, the data file is named to distinguish it from any others you may create. The utility program walks you through the creation of the data file
asking for "category," "question," "correct answer" and three "bogus answers." It then scrambles the answers into random order.

Because of the screen format, the category is limited to seven letters, the question is limited to one line and the four answers are limited to two lines. The program will let you know if the
entry is too long. I have included a data file that consists of 100 trivia questions.
(Any questions you may have about Tic-Tac-Toe can be directed to Mr. Pitel at 10416 NE 156th Street, Brush Prairie, WA 98606, phone 206-2544638. Please include an SASE when writing.)

## WELL RESPECTED

## $\varepsilon$

HIGHLY ACCLAIMED

Elitee Word is a terrific word processor with an impressive list of features, yet it's easy to leam and use. - Stuart Hawkinson, HOT COCO

I like Elite•File . . . it's power and speed have to be seen to be appreciated.
-Ed Lowe, RAINBOW

Bruce Cook's Elite• Calc is, . . . potentially one of the great Color Computer programs. . . . is the easiest to use and most intuitive of the major CoCo speadsheet calculators,"
-Scott Norman, HOT COCO

Too often, "power" is achieved at the expense of simplicity of operation. Elite Software has more than met that challenge with their Elite Word . . .

- Don Lloyd, ONLINE TODAY - COMPUSERVE

Not all software "plays" the same ...
Our programs have been widely recognized for their ease-of-use, powerful features, performance speed, and cross-file compatability.

Elite Software DOES make a difference.

## WORD PROCESSOR

Elite*Word is highly respected for $1 \mathbf{i t s}$ powerful features AND excellent ease-of-use. Don't compromise one for the other . . . EliteeWord is ready to do your letters and reports. 32 K req.

Elite $\cdot$ Home lets your Color Computer manage some very imporlant household items. In creating Elite*Home, we selected the most requested home database applications, and cusfom designed Elite•Home to handle them. All of these custom applications are completely finished, fully detailed and READY TO USE Just load-in YOUR data. One ma/or advantage is that Elite $\bullet$ Home contains a modified
version of our highly respected Elite*File program. This leature insures that you'll get fast and efficient processing of your information, without having to learn all the messy details about databases. Look at the applications below at less than \$10 per application area, Elite Home offers an exceptional user value.

* MAILING LABELS-Stop hand addressing the same envelopes when paying bills every month. Elite * Home is ready to do your mailing lists for Clubs. Church, Leagues, and Bill paying.
* PHONE BOOK-OK, so we all keep a personal phone book ... whether it's in the ikitchen drawer or our briefcase. If you used the Elite *Home phone books you could ask for a display of all the card club phone numbers, do a search for the "contractor" that did that work last year (what was his name anyway?), etc.
- CAR REPAIRS - When was the last time you changed oil in that car(s) of yours? When is state Inspection due? Let Elite *Home keep track of your service records, and inspection dates.
- CHECKS - At tox time, do you go back through your check book and total checks for donations? What about the total for medical expenses? With data from your checks stored on Elite*Home, you can quickly select any grouping of checks for a display and total.

Not available thru Radio Shack.

- COLLECTIONS
complete catalog of all your personal collections, like Stamps, Photos, Records, etc.
* IMPORTAMT DATES - Quicify! What dates are coming up that are Important to you? See, you need Elite ${ }^{-}$Home already to remember Birthdays, Anniversaries, Quarterly payments, etc.
* CREDIT CARD INVENTORY-If you lost your wallet/purse tomorrow, who would you contact, and with whal information? Elite - Home would remember.
- HOME INVENTORY - In case of fire or theft, could you remember all details Ior lost items? Why not let your children catalog your possessions on Elite•Home. You gain protection, they gain computer database experience.

559.95 After January 1. 1986

Elite*Desk brings a calculator, calendar, note pad, and ASCII lable to your Color Computer, You can use Elife•Desk by itself, or have it run co-resident with any program in the Elite Soltware series, Imagine being able to "pull down" a calendar or calculator while typing text on Elite ${ }^{\text {Word, saving notes while using Elite*Calc, or "call- }}$ ing-up" an ASCII table while working on a Basic program.

CALCULATCR - Full featured, with all standard functions :-a plus 3 memories. Also works in HEX as an added leature for programmers.
CALENDAR - Shows all days in any month. Lels you "scroll" through months and years with the arrow keys.

16 K if used alone 54 K with other programs

Buy direct: Add 53.00 shipping PA residents add 6 sales tax

We've made Elite eDesk fully re-locatable so you can try it with other programis as well. Whether you use Elite Desk by itseif, or along-side another program, it's a valuable addition to your software library. Remember, it you've ever reached for a calculator, calendar, or note pad while using your Color Computer then you need Elite•Desk.

ASCII TABLEE-Full table displays all hex and ASCII values. An excellent quick-reference tool.

MOTE PAD - Write and save a full screen of text for later reference. Also includes directory and kill-file capability.

## Enjoy Your Rainbow Programs With The Greatest of Ease Subscribe to RAINBOW ON TAPE!

Each month, RAINBOW ON TAPE gives you as many as two dozen ready-to-run programs from the current issue of THE RAINBOW, excluding OS-9 programs and those less than 20 lines. With just a one-year subscription, you'll receive more than 230 new programs. And, using the documentation provided by the magazine, all you have to do is load and run them.

RAINBOW ON TAPE is not a stand-alone product, but is intended as an adjunct and complement to the magazine. Even if you purchase RAINBOW ON TAPE, you will still need the magazine for loading and operating instructions.

Subscribe to RAINBOW ONTAPE Todayl

## LOOK FOR OUR ORDER CARD BETWEEN PAGES 34 AND 35

The cost for a single copy of rainaow on TAPE is $\$ 10$ within the United States; U.S. $\$ 12$ in all other countries. The annual subscription rate for RAINBOW ON TAPE is $\$ 80$ within the U.S.; U.S. $\$ 90$ in Canada; and U.S. $\$ 105$ for all other countries. U.S. currency only, please. In order to hold down non-editorial costs, we do not bill.

## Need a back issue of RAINBOW ON TAPE? Issues available beginning with April 1982

## Programs From Our Past Holiday Issues:

December 1984 - Holiday Music, a fun program combining the CoCo's great sound and graphics capabilities; Holiday Helper, a Christmas card file and labeler to help you prepare holiday greetings; Holiday Graphics, a Christmas or Chanukah message presented as an electronic greeting card or a display. Also, The Head of the Beast Adventure game, information on expanding BASIC, an upgrade tutorial on expanding CoCo's memory, a tutorial on creating a disk mailing list program and more.

December 1983 - Christmas Carols, eight holiday favorites courtesy of your CoCo; Xmasltr and Stdltr, two programs to help with your Christmas cards; The Dridl Game, a traditional Chanukah favorite; Merry Christmas To All And To All A Good Byte, a totally animated and colorfully graphic Christmas card. Also, a printer graphics program that makes either Christmas or Easter greeting cards, how to create eyecatching title pages, a Ham radio utility listing Ham frequency authorization by operator class, a utility to alphabetically sort both filenames and extensions, a trivia game and more.

## A steal at any price. Darn near a felony at these prices.

## SDOS ${ }^{\circ}$

Real Disk Operating System and Professional Software Tools Full 2-Pass Assembler Text Editor 6809 Debugger
Fully interrupt driven Disk buffer pool/LRU cache Supports up to 4 drives Date-stamped file backup utility
Disk disaster recovery utility
RSDOS data file transfer utility
Friendly command interpreter User-definable error messages Keyboard typeahead at all times (not just when disks are idle)
Screen-edit style input editing
Full ASCII keyboard (inc. CTRL) Software selectable baud rates Full serial I/O to 19.2 Kb thru RS Modem cartridge $400+$ pages documentation only $\$ 49.95$ !

## SD BASIC Compiler

Full-featured language Tight code, fast execution ( $3 \times$ times faster than RSBASIC doing Prime Number search)
FOR I $=1$ to $10000 /$ NEXT 1 takes 1.8 second ( $12 \times$ faster) $A=1$ takes 2 bytes of memory (not counting Runtime Package) Automatic runtime integer/ floating point optimization 32 letter variable/label names True Subroutine/Functions with named, multiple arguments WHILE-DO and IF-THEN-ELSE All execution errors trappable Fast, 65 K char string facilities Assembly language interface Fast Decimal f.p. arithmetic (no money conversion errors!)

## Cursor positioning

 Print USING Device-independent ASCII and binary file I/O to the byte Indexed file option available $\$ 49.95$ (requires SDOS) Not RSBASIC compatible
## SEDIT/TYPE: Word Processing

SEDIT: full screen text editor Place cursor and start typing! What-you-see-is-what-you-get Typeahead and autowrap on margin "No wrap" mode for programs Edits files up to 80 Kb Global Search/Change SEDIT or SDOS can use 24 by 80 CRT via modem card with multipak

TYPE: Document Processor
Formats raw text mode with SEDIT according to embedded commands Automatic justification Automatic pagination Definable page titles/footings
Automatic page numbering Centering
Foreign language accents Multiple file merge (for big documents or mailings) Table of Contents generation Semi-automatic index generation
$150+$ pages documentation
$\$ 49.95$ (requires SDOS)
CHESSD ${ }^{-1}$ : A REAL CoCo Chess Program

High resolution display High quality play
Variable skills levels
Plays Black or White Can act as referee
Accepts Algebraic-like notation Handles and plays special moves Castle, En Passant, Pawn Promote Tournament/Rapid Transit Modes Tournament timer logic built-in 32,000 move disk opening book
$\$ 49.95$ (does NOT require SDOS)

All products require Color Computer with 64 K and at least one disk drive.

# Fun For The Whole Family With Galloping Gamblers 

By Fred B. Scerbo<br>Rainbow Contributing Editor

Editor's Note: If you have an idea for the "Wishing Well," submit it to Fred c/o the rainbow. Remember, keep your ideas specific, and don't forget that this is BASIC, All programs resulting from your wishes are for your use but remain the property of the author.

Christmas is traditionally a time for giving and sharing. While the "Wishing Well" is always a source of sharing for those who regularly read the rainbow, I thought this holiday season would be an extra special time to offer all of my friends one of my most popular family game programs from the past: Galloping Gamblers.

## The Wish

I don' like getting stuck with a label such as "game programmer," but 1 have to admit that iff it weren't for microcomputer games, I might never have gotten this deeply involved with writing software for the Color Computer. In fact,
(Fred Scerbo is a special needs instructor for the North Adams Public Schools in North Adams, Mass, He holds a master's in education and has published some of the first software available for the Color Computer through his software firm, Illustrated Memory Banks.)
it was a desire to find the ultimate "Star Trek" microcomputer Simulation that originally led me to buy my first 16 K CoCo.

A recent phone call from The rainBow staff suggested that they were always thrilled to publish one of my game creations. (Hint, hint!) Well, this month I'll grant that wish along with all the other readers who have suggested the same thing. Since creating a new game from scratch always takes some time, this seemed like a good opportunity to raid the archives from one of my original IMB programs.

## Not So Ancient History

The first program I ever published for the CoCo was a game called Meteor Siorm, which was released under the publishing name of IMB (Illustrated Memory Banks). Most of my game writing is graphics, so my brother suggested the "Illustrated" title and chose IMB because it reminded him a little of another computer giant with similar letters. Since little software was available for the CoCo at the time, a number of people grabbed the opportunity to get a copy of Meleor Storm when it came out.

As a follow-up to Meteor Storm, I wrote a game that a number of people
could sit around the CoCo and enjoy. The result was a horse race game, which I entitied Galloping Gamblers.
While never a monster of a seller, people who played Gamblers all agreed that it was an exciting game to play, However, the advent of Hi-Res graphics machine language arcade games put the BASIC IMB games at an extreme disadvantage in the marketplace, People liked the BASIC games, they just didn't want to pay money for them. Finally, two years ago, IMB went the way of the dinosaur and was given a private burial. Thus, for the last two years, none of these programs have been available.
Even though BASIC games do not have a chance in the marketplace, BASIC programming is still a vitally important option available to all home computer owners. Only by showing what can be milked out of a computer in BASIC can we later appreciate what assembly code and machine language programming are capable of doing.
Even though the IMB programs couldn't compete for the dollar of CoCo owners, that does not mean they cannot be an interesting addition to a CoCo owner's software library. Besides, the number of CoCo owners has escalated since the last time these programs were available. A whole new audience of

CoCo owners never had a chance to try these and see what CoCo's humble beginnings were like. Therefore, as time and space permit, I will offer some of those better programs in these pages. Gamblers is the first of these IMB programs that will be given new life for those interested in trying them for the purchase price of a copy of THE RAIN. bow or rainbow on tape. (This doesn't mean I don't want your wishes. They will still provide the bulk of the "Wishing Well's" material.)

## The Program

In giving new life to Galloping Gamblers, there have been a number of changes made in the original program. The original Gamblers had an IMB game opening done totally in graphics. This slightly rewritten version uses a text graphics title page, which is now familiar to most RaINBOW readers. Other modifications have also been made to make the program run a little more efficiently.

You will notice that Gamblers is also not the most efficiently written code compared to the programs usually listed in the "Wishing Well." While I have cleaned up some of the most noticeably sloppy areas, you will see how confusing a program can be if GOSUBs are overused. I could have taken the time to completely rewrite the code, but that would have defeated the purpose of listing Gamblers.

Therefore, consider the listing to be an example of how far we have all come in what can be accomplished with our built-in BASIC. Although the code does not follow completely from top to bottom, it does work without error. That is the beauty of BASIC. You can
break the rules of structure and still have an error-free program. (Structured programming advocates would also point that out as its weakness.)

## Typing in the Program

Since the program does call several high number GOSUBs, be careful not to try running the program before it is all typed in. If the program should lock up on you, press Reset to regain control of the text screen. Any sections of the listing that appear in lowercase may be typed in by pressing SHIFT and ' 0 ' to enter that mode, and SHIFT and ' 0 ' to return from it.

Also, be sure to save the program before running it. If you make an error on one of the POKE commands, you could lose all your work in the blink of an eye. Be careful in the DATA statements as well, since some contain what may appear to be misplaced commas. These are not mistakes. The values READ here are simply zero, so we are trying to save a little memory.

## Running the Program

On running Gamblers, a colorful title card appears asking you to select from one to four players; simply press the number you desire. The text screen displays a betting board. Located at the bottom of the screen are the pay-off odds for each of the four horses. Press the number of the horse you wish to wager on, but do not press ENTER. If you do, you may accidentally bet zero dollars on the horse.
When the prompt appears, enter your dollar bet in whole numbers and press ENTER. The next player may now bet as player two. If no others are playing, the pink screen will turn green and pause
while the graphics screen prepares the track.
When the track is ready, you will hear the familiar race track song. The race will start and you will hear each horse gallop around the screen. You may keep track of your horse by the number of the lane it is in. (Don't worry, the inside track is no advantage.) When one horse crosses the finish line, you will see a graphic flashing. Wait about 15 seconds and press ENTER to return to the betting card. You will now go on to the next race, of which there are 12.
Once you have lost your money, you must still select a horse for your turn, but you must enter zero (0) for your bet. After the last race, you may restart the game by pressing ENTER. Sorry, but your winnings may not be caried over to the next game.

## Conclusion

One thing you will notice when playing this game is that the participants quite often forget it is a game and start screaming at their horse to move that's the fun of Galloping Gamblers. It can be played with almost any age, whether at a party or a family gettogether. At a time when some people complain that families do not spend enough time together, consider Gamblers my Christmas gift to your family to help increase those leisure times. Happy holidays to all of you.
Next month: I am just putting the finishing touches on something that a number of you have been suggesting for a long time, Next month's "Wishing Well" will show my first Adventure game, which will be of an educational nature. Until then, keep those wishes coming.

Back copies of many issues of THE RAINBOW are still available.
All back issues sell for the single issue cover price. In addition, there is a $\$ 3.50$ charge for the first issue, plus 50 cents for each additional issue for postage and handling if sent by United Parcel Service. There is a $\$ 5$ charge for the first issue, plus a \$1 charge for each additional issue on orders sent by U.S. Mail. UPS will not deliver to a post office box or to another country.

Issues July 1981 through June 1982 are available on white paper in a reprint form. All others are in regular magazine form. VISA, MasterCard and American Express accepted. Kentucky residents please add 5 percent state sales tax. In order to hold down costs, we do not bill and no C.O.D. orders are accepted.

Due to heavy demand, we suggest you order the back issues you want now while supplies last.

To order, just fill out the form on the next page and mail it with your payment to:

VIDEO TECH - The IIA 17th Annual Convention and Exhibition, which will run Nov, 3-6, will feature a thorough examination of videotex developments, both in the U.S. and internationally.
The convention will also include videotex panel sessions, which were developed by Laurence Fuller, president of Gannett New Media Services. Some topies that will be highlighted at the convention are: what's new in home and office interactive videotex; progress in public access videotex; a look back and ahead at videotex; niche markets in videotext; new developments in teletex; and opportunities in the international videotex market.

Information Industry Association, 316 Pennsylvania Ave. S. E., Suite 400 , Washington, D.C. 20003.

PCC FROM P.R.O. - P.R.O. Systems of Kansas City has taken the Tandy Color Computer 2 and created a completely portable version. The PCC is compatible with all Color Computer software because no changes were made in the ROMs or hardware. The processor card is custom-designed, but all standard functions, addresses, etc., have been retained.
The PCC is housed in a heavy, durable aluminum case. The detachable keyboard serves as the front cover and comes with a 24 -inch cord. Front panel controls include contrast, brightness, color level and tint.
The PCC comes with 64 K memory, Disk Extended BASIC operating system, full schematics and documentation, and a 90 -day warranty.
P.R.O. Systems of Kansas City, 10601 West 63rd St., Shawnee, KS 66203

DISK, TOO - Creative Technical Consultants, which has specialized in cassette-based educational programs for the Color Computer, has announced
that all of its educational software is now also available on disk.

Free catalogs are available by writing to Creative Technical Consultants, 16 8 Sangre de Cristo, P.O. Box 652, Cedar Crest, NM 87008.

PHOTOFARE - PhotoSource International now offers three publications - Photo Bulletin, PhotoMarket and PhotoLetter - on NewsNet, the nation's largest distributor of specialized business newsletter information.

Photo Bulletin is designed to save photographers research time through NewsNet's electronic clipping service, Photo Market is intended for part-time professional photographers or serious amateurs. Published twice a month, the service focuses on buyers who pay midrange prices.

PhotoLetter is recommended reading for entry-level photographers. There are also marketing tips, pricing methods and other information for more experienced photographers. All listings include photo editors' needs, prices and contact information.
NewsNet, 945 Haverford Road, Bryn Mawr, PA 19010.

SOFTWARE CATALOG - Aquarius People Materials, Inc., publishers of a full line of educational software for the Tandy Color Computer and other computers, has released its latest catalog. The catalog includes over 200 programs in curriculum areas ranging from preschool through vocational education.
Aquarius People Materials offers networking versions, licensing agreements and volume discounts on bulk orders. For your free catalog or more information, write to Aquarius People Materials, Inc., P.O. Box 128, Indian Rocks Beach, FL 33535.

HOME BANKING - North Carolina National Bank has launched a home banking program that offers personal computer owners free use of the service until the end of the year.
NCNB's system is the first commercially available home banking program in North Carolina, the first video banking system to be run on CompuServe by VideoFinancial Services and the first outside Florida to run on KnightRidder's recently announced national Viewtron network.
The bank's program operates in ASCII on CompuServe with almost any personal computer and on Viewtron with some Commodore and Apple models, the IBM PC and its compatibles.

TANDY TUNES - Tandy Color Compters can now be turned into programmable music synthesizers with Orchestra-90 CC, a unique combination of hardware and software.

The Orchestra-90 CC cartridge slips into the Program Pak port of the Color Computer or into one port of a MultiPak Interface. Connector jacks built into the Orchestra-90 CC cartridge connect the Color Computer to a stereo system to produce a stereo synthesizer.

Files may be transmitted through an optional 300 Baud modem, and a builtin communications package permits communication with online services.

Tandy Corporation/Radio Shack. 1700 One Tandy Center, Fort Worth. TX 76102.

THE LOG - Cynwyn has recently released The Log, the latest in its Hamware series of software for amateur radio operators. The Log runs on the 16 K or 32 K ECB Color Computer and is available in cassette or disk versions.

When loaded, The Log tests for memory and configures itself to take maximum advantage of the available memory automatically. It also provides fields for entering all standard logbook data, as well as a remarks field.

Cynwyn, 4791 Broadway, Suite 2F, New York, NY 10034.

# Maximum Learning With Minimum Effort 

By Joseph Kolar Rainbow Contributing Editor

BASIC allows the newcomer to create practical, interesting and educationally oriented computer programs. We shall examine a simple Color BASIC program that is ideal, but not limited to, self-study in the foreign language arts. As usual, the application of any educational program is limited only to the scope of the beginning programmer's imagination and inventiveness.
The heart of this program is remarkably short and simple. This "core" can be CSAVEd and CLOADed whenever the desire strikes you to create a program you deem suitable for self-study. It can be geared to your students'/children's school work, or just to see what can be created. The object is to create a text sentence on the screen, then add the translation.

And so to work! CLDAD Listing I. (You may want to CSAVE it first, giving it a name such as "langcore" or "core.") It is very short but serves the purpose of formatting the text without much sweat. The text is displayed on a back-

[^11]ground of one of the eight colors available in Color BASIC, which are randomly chosen in Line 5 by $Z=R N D(\theta)$. The color is called in a $\operatorname{COSUB}$ routine in Line 2000.

The first sentence is displayed on one or more rows of text beginning at PRINTEX, " located at 96 (Line $5, x=96$ ). This is the left end of the fourth line from the top on the text screen.

The first panel presents a French sentence, without accent marks, at program Line 10. EDIT10 and press ' X ' to get to the end of the line. Space twice to allow for a two-space indentation. Key in the sentence: "C'est une idee excellente." Add appropriate punctuation marks. Space twice to allow for a blank trailing area so the last word stands out clearly; add the closing quotation mark. If you don't want the line to extend to the end of the row at the right side of the screen, and we don't, add a semi-colon (;). Add a colon (:) to separate the French text line from the next statement to create multipleline statements. The purpose is to create each panel using one program line.

We will pause until any key is pressed by using EXEC44539, which is taken from Line 3000 by typing G0Sub3000. Instead of keying GOSUB3000, you
could type EXEC44539. Bitter experience indicates that repeatedly keying in EXEC44539 leads to errors, such as 44439,45439 and so forth. Both of these wrong numbers will hang up the CoCo , requiring RESET to put things right. It is possible that some wrong number can damage the program beyond salvaging. If you had completed about 20 panels, tears of frustration are apt to well in your eyes.

Thus, it is safer to place the EXEC44539 into a subroutine and call it with GOSUE3000, which, if incorrectly entered, can be easily rectified without panic.
RUN the listing and check the sentence for correct spelling and punctuation. Check for two blank spaces at both the beginning and ending of the sentence. The background should be Color 8, orange, on the first panel. This was deliberately set in order to guarantee a contrasting background color to check the ribbon of text. Press any key (ENTER will do just fine) and a flicker will run through the ribbon of text. Now press BREAK and type LIST.

Note at this time that Line 6 creates an orange background followed by instructions to go to Line 10. More about this important line later.

EEE QUR COLGRFUL UTILITY PAGGAAMS IN THE DIRECTORY GF REVIEWE日 SOFTWARE AT YOUR LOCAL मADIO SHACK COMFUTEA CENTER

Type EDIT10 and press ' X ' to get to the end of the line, Add :PRINTEY, ${ }^{*}$ and space twice. Key in the English translation: "That is an excellent idea" and space twice. Add the closing quotation mark and semi-colon and colon to stop the green ribbon from extending to the right end, and to prepare to add another multiple statement.
Now, key in SOSU日2000. It picks a random color and waits for a key to be pressed so CoCo can set up a random color background for the next panel.
Type RUN and press ENTER once for the French sentence, then Enter a second time to produce the translation. Check your work and correct as necessary. (Press Enter or any other key.) You will get a new screen with the French sentence. Press break and type LIST. Since there are no other sentences, the next instruction after Line 10 is Line 1000 , which tells the CoCo to go back to Line 10 and repeat. We will maintain an increment of 10 for our program lines.
Type EDITS and press ' $X$ ' to go to the end of the line. Press the left arrow twice to erase 10, then key in 20 and Enter. Or, EDITG and space over so the cursor is under ' 1 '. Press ' C ' and ' 2 ', then ENTER.
As soon as you finish this change, begin creating the new program line: 20 PRINTEX, ? Using the same technique you used to create Line 10, type in the Italian sentence, "Spenga le luci, per favore," making sure you have two leading and trailing spaces at each end. Add ; : :GOSUB3000 and RuN. Check out your work!
Press enter a few times. Note that after the initial cycle, the color of Line 20 is randomly chosen. Line 2000 took care of that chore. That is why Line 20 on doesn't require a CLS(Z). Line 10 will always be on an orange background, unless you care to go back at this stage and change CLS(8) to CLS(Z). Of course, you could EDIT1e press ' 7 ', 'D' and ENTER, and get the same result.

Press break and type editza; press ' X ' to go to the end of the line. Now, type :PRINTEY, , space twice and type in PLEASE TURN OFF THE LIGHTS. Space twice at the end of the line and type ";:q0SU日2000 and ENTER.

Type RUN and press enter twice. Check your work! Press bre^k, type EDIT6 and change 20 to 30 and ENTER.

Start the next line; type 30 PRINTEx. and space twice. Key in "Haben sie verstanden was lch gesagt habe?" and finish up as usual: space twice and type in "::G05ub3000.
Now run the program and if you keyed in this German sentence correctly, you will note that it requires two rows to display it You will also note that GESAGT is split on both lines. You can readily see that it is simple to move ' $G$ ' to the next line by inserting a space in front of it. Press break, type EDIT30. press ' 1 ' (for insert), space, press ENTER and RUN, When you check it, it should be correct. Press break, type EDIT 30 , press ' $X$ ' to go to the end of the line and type :PRINTEY, - then space twice. Add the English translation: "Did you understand what I was saying?" Finish up, add the GOSUE and RUN.
Even though this translation required two program lines, no words split between rows. You win some and lose some!
On your own, edit Line 6 and create the next panel. Key in the Portuguese sentence: "Terei que aumentar o meu vocabulario, "RUN when you are ready. You will find that YOCABULARIO is split between two lines. It is better when keying in foreign words fo avoid hyphenation, which can be confusing to the student.

Studying the text display, we note that we can move "VOCAB" down to the next row by inserting five blanks in front of ' $V$ ': Type EDIT40 and space over until the cursor is under the ' $V$ ', Press 'T' and space five times, then press enter and run to check it out. Next, press break and add the translation in its proper format: "I will have to increase my vocabulary." When finished, run the program again. "VOC" is on one line and "ABULARY" is on the following line. The first syllable is "VO." We can insert a hyphen ( - ) in front of ' C ' and push it to the next line. To do this, press BREAK, type EDIT40 and space over until cursor is under the ' C '. Press ' I , put in the hyphen, press ENTER and run.
This is OK. If you prefer, go abead and edit Line 40 to push the "VO-" to the next line. See which you prefer. Type EOIT40 and space over until cursor is under ' $V$ '. Press ' T ' and space three times, press the SHIFT and uparrow keys together and space twice, press ' $D$ ' to delete the hyphen, then ENTER and run.

Change Line 6 to 50 , and use the same format type in the Spanish sentence, "Por favor, fraigame otra taza de te con dos rodajas de limon."

Run the program. You notice that there is only one orange spot at the end of the sentence. It would look better if it was green. Make this change on your own so the entire line is green.

The word "rodajas" is unfamiliar to me and I gather from the context that it means "slices." If you have some doubt about the meaning of a word in the sentence, you can add a "gloss" (translationorcommentaryaccompanying text) as a hint. Naturally, we would want the gloss to appear before we add the translation in English. To do this, press BREAK, type EDITS0, then press ' X ' to get to the end of the line. Add :PRINTQA.- and space twice, then type dOS RDDAJAS=TWD SLICES. Finish up as usual using B0SUB3000 because we want to remain on the same page. Now run and the gloss, reminding you of the definition, appears at the top of the screen.

You may want to locate it out of the way near the bottom. If so, change $A=2$ in Line 5 to $\mathrm{A}=4 \mathrm{82}$. Now run and the gloss is relocated inconspicuously. If the gloss required two lines at the bottom, the screen would scroll up in order to show the entire gloss. The semi-colon (;) won't help on the bottom line in this case. The trailing end will extend to the right side.

Now you can add the English Iranslation, "Please bring me another cup of tea with two slices of lemon." When finished, run and note that there is one space indented on the second line. Move the line to the left margin. You may also want to take out the semi-colon (i) at the end of the translation to see how it looks with the rest of the row in green.

This is the end of our demo program, Run the entire program for a final check. You may lower a text line one row, such as the English translation line in Line 50, by adding 32 to the ' $\mathrm{Y}^{\prime}$ value.

At this point, from Line 6, hack off :GDTO50 so the program begins at Line 10. Type EDITG and space over so the cursor is under the colon (). Press ' H ' and ENTER. You may want to change ' 8 ' in Line 6 to ' $Z$ ' to generate a random color in Line 10.

To review: Change Line 6 to the current line you are creating. This will bring you directly to the proper line without the bother of beginning at the

first panel on Linc 10 and working through all the intermediary panels to get to the one you want to study. The longer the program, the more useful Line 6 becomes.
Using the regular format, locate the first text sentence using the ' X ' variable and use G0Su日3000 to remain on the same panel. Use the 'A' variable and GOSUB30e0 for any glosses. Use the ' $Y$ '
variable and E05UB2000 to display the second sentence and continue on to the next panel. Remember, Line 10 is slightly different when you begin creating.

Listing 2 is what your program should look like after making suggested changes. If your demo program is OK, don't waste your time keying it in.

You may modify any line you create
to suit yourself. You can reverse the lines and have the English sentence pop up first, followed by the foreign translation. You can alter it into a question-and-answer format. It is apparent that countless educational programs can be created for you, your students or children with a minimum of effort. So, go on, create!

HOW DO YOU GIVE A RAINBOW?

## It's simple - <br> Give a Rainbow gift certificate...

Give your friends a piece of THE RAINBOW with a gift subscription to the premier information source for the Color Computer. Then, each month, all year-round, they'Il enjoy the spectrum of RAINBOW programs, articles and information written exclusively for their CoCo !

First, they'll receive a handsome card announcing your gift. Then, they'll be reminded of you each month when they receive up to 300 pages of THE RAINBOW - including as many as 24 programs, 15 regular columns and more than two dozen product reviews.

When you give a RAINBOW gift certificate, you'll also be safeguarding your own collection. No more frantic searching for those back issues you've lent to a friend.

Give a RAinBow gift certificate and let your friends in on something you already know - THE RAINBOW is the perfect companion for the Color Computer!
Get your order to us by Dec. 25 and we'll begin your triends' subscriptions with the February rainsow.

Please begin a one-year (12 Issues) gift subscription to THE RAINBOW for:

Name
Address $\qquad$

## The Coco Greeting Card Designer

The Coco Greeting Card Designer is the pertect program for the Holiday Season! You can Create and Print custom Greeting Cards to send to Friends and Relatives.
The Coco Greeting Card Designer can be used to design and print custom Greeting Cards for all occasions including: Thanksgiving, Christmas, New Years, Birthdays, Valentine's Day, Mother's Day and others. It can also be used to make custom Invitations, Thank-You Cards, Get-Well Cards and Announcements.
The Coco Greeting Card Designer is easy to use and includes a library of predrawn Hi-Res Graphic Pictures! You can write custom messages on the cover and inside your cards in a selection of character fonts and sizes. An easy to use screen editor allows you to pick your type style, font size and more. Two tonts are included, and the easy to use editors allow you to create many more! Also included is a selection of border patterns.
The Coco Greeting Card Designer requires a Coco or Coco Il with a minimum of 32 K , One Disk Drive (Compatible with: Disk BASIC 1.0 \& 1.1 and JDOS.), and one of the following printers: EPSON RX/FX. GEMINI 10 X or SG-10, C-1TOH 8510, RS DMP Series, GP-250 and GORILLA BANANA.

You Bet! There are empty spaces in your 32 K and 64 K CoCo. The Preble VOOS Un-DISK heips you fill them up with PROGRAMS!

- Un-DISK uses your computer's extra memory like a fast disk drive.
- Un-DISK can store BASIC and MACHINE LANGUAGE programs.
- Un-DISK is INVISIBLE. Yup! Un-DISK does not interfere with normal Color Computer Operation.
- Un-DISK appears only when you type the magic word VDOS.
- Un-DISK comes with comprehensive instructions which you may not need because:
- Un-DISK is selt-prompting and easy to usel
- Un-DISK is provided on cassette.
- Un-DISK is faster than a slow clumsy DISK DRIVE and best of all:.
- Un-DISK is CHEAPER than a DISK DRIVE!
- Un-DISK will work even if you already own a disk but WHY BUY A DISK AT ALL?
- Un-DISK should be in the library of every serious CoCo user even if you own a disk says Frank. Esser, independent reviewer for raineow Magazine!

OK sure, disk drives. ARE NICE I own one. But il your finances are limited, the Un-DISK can give you much of the power of the mechanical drive. Even if you already own a disk the Un-DISK can work like a super fast. extra disk.

EXTRA. . EXTRA. . . EXTRA. . . EXTRA... Additional Power For $\$ 14.95$

Only with VDUMP for the Un-DISK!

- VDUMP lets you make a cassette backup copy of everything stored in the Un-DISK.
- VDUMP lets you save $5,10,15$ or more programs on a single cassette tape file.
- VDUMP lets you switoh Un-DISKs. With a single load operalion replace a group of financial programs with a set of children's programs (The new VDUMP tape overwrites the old.)
- VDUMP can allow you to save a whole iot of RAINEOW ON TAPE in a SINGLE file.
- VDUMP is the perfect companion to the Preble VDOS Un-DISK
Available from Doctor Preble's Programs, naturallyl Bringing you fine Color Computer Producls Since 1983|

## DISK UTILITY

"The purpose of this program (aside from being a handy utility) is to help beginning machine language programmers hurdle a major obstacle of the interface between hardware and liveware': code conversions."

## By Jeffry Dwight

There are three major components in any computer system: hardware, software and "liveware." The hardware is the computer itself, the physical machine and its peripheral devices, such as the monitor or the printer. The software is the program the machine runs. The software must conform to the hardware's requirements and limitations; it can't, for example, access more RAM than is currently installed. The liveware, however, can be tricky to understand. By liveware, I mean the people using the computer.

Some people love computers - they walk around mumbling in binary, talking about MSBs and CPUs and the fantastic CPS of the latest LPT device, or just performing bit manipulations the way others twiddle their fingers. These are the so-called "hackers." Another group, called "users," only tolerates computers. They use them at the office because the boss says they must, or at home because they believe computers are educational for the kids.

But the fastest-growing percentage of computer aficionados is somewhere between the two extremes - the sort of people who like computers and want to know more about them, but don't know how to get past the basics.

The purpose of the following program (aside from being a handy utility) is to help beginning machine language programmers hurdle a major obstacle of the interface between hardware and liveware: code conversions. Why are code conversions necessary? Because the hardware "thinks" in binary, but people don't.

[^12]Most people think in terms of decimal notation and don't know what to do when faced with something like " $\mathrm{SB4FA}$," or worse yet, a string of ones and zeros. The task of software (and ergo, the software programmer) is to accept values from the user in whatever notation he finds appropriate and "translate" them into binary for the hardware to process. And of course, the software must do the same process in reverse. This is where code conversion comes in and, incidentally, where a lot of beginning programmers walk out.

A good, basic understanding of what numbers are does a lot to relieve beginners of their worries. The first thing to learn is that numbers are just representations of values. There are all sorts of ways to represent values, but all of them rely on quantification. That is, no matter what system is used, you are specifying a quantity when you name a value. Thus, if you have three apples in a bag, it's just as true to say, "I have three," as to say "I have 11." The difference is that in the former, the
representation of the value is expressed in decimal notation; the latter used binary notation. The value didn't change, but the numbers did. What is missing is the radix designator, the symbol that tells others what value you mean when you use those numbers.

A radix is a base. Decimal notation is also called "base 10." Technically, we should say the radix is 10 , since 10 is the value arbitrarily chosen as the limit. There are 10 digits ( $0-9$ ) available in decimal notation. When the value we wish to express exceeds nine, we must add another "column." Since our radix is 10 , the value of the digits in this new column is multiplied by 10.
-The radix of binary notation is two. This means there are two digits available per column ( 0 and 1 ). If the value we wish to express exceeds one, we add another column, and the value of the digits in that column is multiplied by two (remember that the radix is two). Therefore, "11" in binary has the same value as ' 3 ' in decimal. (See Example 1.)
The radix of hexadecimal notation is

## Example I

II
Lthe value of this column is multiplied by 1 , so $1 \times 1=1$
-the value of this column is multiplied by 2 , so $1 \times 2=2$

$$
1+2=3
$$

## Example 2

"Lhe value of this column is multiplied by 1 , so $|\times \quad|=1$
the value of this column is multiplied by 16, so $\frac{1 \times 16=16}{1+16=17}$

## Example 3

## Decimal: <br> radix 10

$$
|1|=1,111 \text { (decimal) }
$$

$$
\begin{align*}
& \text { - the value is multiplied by } 1 \\
& \text { the value is multiplied by } 10(1 \times 10)  \tag{10}\\
& \text { the value is multiplied by } 100(10 \times 10) \\
& \text { the value is multiplied by } 1000(10 \times 100) \\
& \hline
\end{align*}
$$

## Hexadecimal: radix 16

$$
1\left[\begin{array}{l}
L_{\text {L }}^{\text {th }} \\
L_{\text {th }} \\
\text { th } \\
\text { th } \\
\text { th }
\end{array}\right.
$$

$$
=4,369 \text { (decimal) }
$$

- the value is multiplied by

$$
\begin{aligned}
& \text { L the value is multiplied by } 16(16 \times 1) \\
& \text { the value is multiplied by } 256(16 \times 16)
\end{aligned}
$$256

$$
\text { -the value is multiplied by } 4096(16 \times 256) \quad 4096
$$

Binary;
radix 2
$1 / 1 t=15$ (decimal)
the value is multiplied by I

- the value is multiplied by $2(2 \times 1)$
The value is multiplied by $4(2 \times 2)$1248

16. Thus, there are 16 digits, and the value of the digits in the second column is multiplied by 16. In order to express 16 values in one column, it is necessary to use symbols other than the familiar $0,1,2,3,4,5,6,7,8$ and 9 . The letters A, B, C, D, E and F are used to express the values $10-15$. So, " 11 " in hexadecimal has the same value as " 17 " in decimal, or " 100001 " in binary. (See Example 2.)

Of course, each additional column we add means the values in the new column should be multiplied by the radix again. (See Example 3.)

These three radices, or bases, are the three most commonly used in programming. We still need to know, however, which radix is being used. If you promised to give me " 1111 " dollars, I really need to know whether you mean $\$ 4,369$, $\$ 1,111$ or only $\$ 15$. Fortunately, there are some standard symbols, known as radix designators, that are recognized throughout the industry. When you encounter these symbols, youll know how to interpret the value.

- A dollar sign (\$) means the following value is in hexadecimal.
- A percent $\operatorname{sign}$ (\%) is used to indicate binary values.
There is no standard symbol to denote decimal values, probably because without a radix designator people assume the value is in decimal notation. Occasionally, you will encounter a 'T' after the value - this means decimal. Sometimes a ' D ' is put before the value; this also denotes decimal.
Other symbols are also recognized. An 'H' that either follows or precedes an expression means hexadecimal. A'B' preceding an expression means binary. If you look at Table 3 for a moment, you'll see how the following program uses these symbols. There is one symbol in Table 3 we haven't yet discussed: the symbol for ASCII.

ASCII (American Standard Code for Information Interchange) is not technically a radix, although it is included in Table 3. Each character (number, letter or otherwise) has an ASCII code by which it is known. This code bears a relation to the value expressed, but it is not a one-to-one correspondence. For instance, the value one is written ' 1 ' in almost any notation, but its ASCII code is $\$ 31$ (which translates to D49 - from now on, we'll use the radix designators just described. Whether the computer's user recognizes it or not, the software
is always dealing with ASCIL. Not only must values be "translated" from radix to radix, the resulting answer must be converted yet again into ASCII so it can be displayed on the screen!

To complicate matters further, the Video Display Generator chip (VDG) in your computer has its own ideas on how characters should be coded. The result is that the alphabet is stored according to its ASCII code, but numbers and special symbols (including the graphics characters) are interpreted differently.

Sometimes it is appropriate to denote an ASCII value rather than its corresponding hexadecimal or decimal equivalent. To do this, an apostrophe is commonly used just before the character. Therefore, these three assembler instructions are equivalent (that is, they indicate the same value):

## LDA \#'Z inote the glitch, which means ASCII <br> LDA \#S5A ; the dollar sign indicates hexadecimal

LDA \#90 this is decimal, since there is no symbol

The notion of "equivalence" can be misleading. $\$ 5 \mathrm{~A}$ does notequal D90 any more than my Volkswagen equals my Cadillac. They are but two names for the same thing - in this case, a value.

The various notations are for your convenience only. When thinking of addresses in a computer, hexadecimal seems most convenient. When thinking about the letters of the alphabet, ' $A$ is certainly more clear than $\$ 41$. And if you're trying to perform bit manipulations, then binary is best. Use whatever notation is clearest - that is, the notation that gives the most appropriate name for a given value in a given situation.
The following program, Quickzap, is a disk zap utility, You can change as little as one bit of one byte in a sector. or the entire sector with a few simple keystrokes. Furthermore, it allows you to see all those "invisible" characters stored on the disk in your choice of output formats. Each byte (eight bits) is translated into four notations: hexadecimal, decimal, ASCII and binary. Quickzap also accepts input from you in any of those four. It prints out an entire sector in your chosen notation, searches through an entire disk for a string of characters, and even copies, sector by sector, one disk to another (or to itself).

In addition, there is an eight-bit calculator built in that allows you to add, subtract, multiply, divide, logical AND, logical OR, exclusive OR and rotate (in either direction) any values you supply. The calculator is also handy for immediate code conversions: Set the output for one radix and give your input in another. Refer to Table 1 for an explanation of the calculator's functions.
Type in the assembler listing (if you are using Radio Shack's assembler, you must use EDTASMOV or there won't be room) and save it to disk, then assemble it to disk. If you have errors, correct them before running the utility; you don't want to risk destroying information on your disk! Use the name "QUICKZAP."

From basic, type LOADM-quICK ZAP" and press ENTER. The utility will
boot itself, so there's no need to type EXEC.
Table 2 shows how to move the cursors around on the screen. The lower cursor is your "offset location." When first loading the program, it is set to the first (or zero) location. Your input and output defaults are set to decimal (notice the top line on the screen), and the byte under your offset cursor is expanded into the four notations. The current track, sector and offset number are displayed in decimal. You have a choice of Hex or decimal for these three displays. If you choose either binary or ASCII as your output default, the track, sector and offset number will show up in Hex. Refer to Table 3 and try changing your input/output defaults.
Table 4 shows the one-letter commands that Quickzap recognizes. They are all fairly self-explanatory, and a little experimentation will clear up any

## Table 1: The Quicksap Calculator

| Symbol | Syntax | Description |
| :---: | :---: | :---: |
| + | $\mathrm{A}+\mathrm{B}=$ | Adds value A to value B |
| - | $A-B=$ | Subtracts value B from value A |
| * | $A^{*} \mathrm{~B}^{\prime}=$ | Multiplies value A times value B |
|  | $\mathrm{A} / \mathrm{B}=$ | Divides value A by value B |
| \& | $A \& B=$ | Logically ANDs value A with value B |
|  | $A . B=$ | Logically ORs value A with value B |
|  | $A: B=$ | Exclusive ORs value A with value B |
| $>$ | $A>n=$ | Rotates A to the right ' n ' times |
| $<$ | $\mathrm{A}<\mathrm{n}=$ | Rotates A to the left ' $n$ ' times |

Note: These are all eight-bit (one-byte) operations. Thus, rotating a value nine times in either direction produces the original value. Since 255 is the maximum value any byte may contain, the operation $255+1$ will yield a sum of zero (the carry is "hidden").

## Table 2: Quickzap Cursor Control

## Key

Down arrow
Up arrow
SHIET Up arrow
SHIFT/Down arrow
Right arrow
Left arrow
SHIFT/Right arrow
SHIFT/Left arrow

Operation
Move offset cursor forward one space
Move offset eursor back one space
Move offset cursor to the first position
Move offset cursor to the last position
Move input cursor forward one position
Moye input cursor back one position
Insert a blank space under input cursor
Delete character under input cursor

Note: Quickzap has two cursors that may be moved independently of each other. The lower one is the offset cursor, and it signifies the offset (in bytes) from the zero byte of the currently displayed sector. The upper cursor is your input cursor. This blinks to show your place as you enter commands to Quickzap.

questions, I strongly recommend, however, you practice on a disk that doesn't contain information you need to save. There is no protection built into Quickzap - you may change the directory and the file allocation table as easily as anything else. If you're not sure what you're doing at first, use Quickzap only to examine the contents of the disk don't rewrite any sectors. If you rewrite the directory accidentially, BASIC would no longer be able to access your files!

There are two things to mention about printing out the contents of a sector. First, some printers (non-Radio Shack) require a line feed in addition to the carriage return. Quickzap provides for this in the assembly process; if you want line feeds, change Line 1546 to LFEED FCB $\$ 0 \mathrm{~A}$ before assembling the utility.

The other thing concerns Baud rates. Quickzap's command 'P' will print out a sector according to the preset Baud rate. If you want to change this rate, enter Pn , where ' n ' equals the Baud rate desired. Since Quickzap only recognizes
eight-bit values, the following values are used.

If $\pi=1$, Baud is 120
If $\mathrm{n}=3$, Baud is 300
If $\mathrm{n}=6$, Baud is 600
If $\mathrm{n}=12$, Baud is 1200
If $\mathrm{n}=24$, Baud is 2400
If $\mathrm{n}=96$, Baud is 9600
The subroutines that provide the code conversions are fairly simple. If you examine the listing, you'll see that they all operate on one byte at a time and proceed in a logical fashion. Four BASIC ROM calls are used: CL5, located at \$A928; Printer-out, at \$A2BF; POL CAT, called indirectly at $\$ \mathrm{~A} 000$; and DSKCON, also called indirectly, at SC004. The first two are "undocumented" routines, but work on every version of BasIC l've encountered. The second two are documented, and therefore guaranteed by Microsoft.

The IRQ and RESET vectors are changed by the entry routine and normalized only when you terminate the

Tahle 3: Quickzap Input/Output Options

## Command Description <br> Ir <br> Sets input default to specified radix ( $f$ ) <br> Or Sets output default to specified radix ( $r$ )

' $r$ ' may be any one of these characters: A, B, D or H. These letters represent the desired radix (or base) you want Quickzap to use.

A ASCII: values will be displayed as ASCII characters.
B Binary: values will be displayed as a string of eight characters, Example: 00110010
D Decimal: values will be displayed in decimal (base 10) Hexadeoimal: values will be displayed in hexadecimal (base 16). Example: FF

ASCII is not actually a radix, but is a useful display mode. Note that when displaying in ASC11, Bit 7 is undefined. Thus, only the least significant seven bits ( $0-6$ ) determine the ASCII character that will be displayed.

You may override the imput default by prefacing the value with one of the radix designators. Examples: HFF, B11110000, D255. If you do not use a radix designator, Quickzap assumes your value is to be interpreted according to the defaule radix

To provide compatibility with accepted nomenclature, the following symbols are included in Quickzap's vocabulary:

$$
\begin{array}{ll}
\$ & \begin{array}{l}
\text { Hexadecimal yalue (same as } \\
\text { Binary value (same as ' }
\end{array} \text { ' } \mathrm{B} \text { ') } \\
\text { ASCII value (same as ' } \mathrm{A} \text { ') }
\end{array}
$$

If you are entering hexadecimal values alone (that is, without prefacing them with a radix designator) it is necessary to include a zero before any non-numeric characters, For example, if the input default is hexadecimal, any of the following is valid: SFF, HFF, OFF. The zero tells Quickzap that the following characters are values rather than commands.
utility. The only way to exit the utility is by entering the ' Q ' (Quit) command. If you press the Reset button, Quickzap will reinitialize itself. The interruptdriven parts of the utility control the disk drive motor, handle the booting process and allow for repeating keys.

There is not enough space here to detail all of the routines Quickzap uses, but if you're interested in code conversions, a careful study of the source listing explains how the various tasks
are accomplished. Of course, if all you want is to "zap" some disks, then ignore the listing and have fun.

I realize the listing requires a lot of typing, but when it's all assembled, it only uses 2.5 K of RAM (\$AC0, to be precise), so it will work on any machine with at least 16 K .
Several "tricks" have been used to keep the utility's size down to manageable levels. First, the text screen itself is used as the main 1/O buffer. This saves

Table 4: Quickzap Command Functions

Note: Quickzap does not allow any operations on a command line that follow a READ or WRITE operation. This is to help prevent mistakes. All other commands may be concatenated at your discretion. Examples are IH,0B,P03, P ENTER (set the input defanttio hexadecimal, the output default to binary, the Baud rate to 300 and print); ++R ENTER (increase the sector by two, and read the resulting track/sector); and FH20,H20,W:2 ENTER (fill 20 Hex bytes with Hex 20 and write the track/ sector out on Drive 2).

bytes and also eliminates the need to move data around before and after accessing the disk. Second, most of the variables and buffers are kept on the "direct page" (addresses \$0000 $\$ 00 \mathrm{FF}$ ), which makes for quicker, shorter code. Also, some of the routines most notably GRAN, which calculates track and sector for a given granule are elegant, avoiding conditional branches and thus saving time and memory. Elegant algorithms are harder to understand, but well worth the effort, since once you've puzzled them out, you
have an excellent grasp of the individual bit manipulations involved in each processor instruction.
Although Quickzap is a very useful utility as it stands, and may be used without understanding how it works, it was written primarily to demonstrate methods of converting different codes into binary and back. Therefore, it was written in a modular fashion, with the separate routines each performing one specific function. Feel free to borrow or adapt these algorithms in your own programs, or to modify Quickzap itself.

There are as many ways to approach code conversions as there are programmers and the right method for you may be different from the one l've chosen.
For those without an editor/assembler who, nevertheless, would like to have Quickzap, an assembled version is available on disk for $\$ 10$. You may write to me at 519 N. Scott Street, Wheaton, IL 60187, if you have any questions or would like a copy.

Figure 1: Shows functions of three areas into which Quickzap divides the screen.

This is an illustration showing the functions of the three areas into which Quickzap divides your screen. Your input cursor is controlled with the rightand left-arrow keys; the offset cursor is controlled with the up-and down-arrow keys. The light gray area works just like an abbreviated screen in BasIC. The only difference is that it is only four lines deep. The lines will scroll within this area without affecting the other two areas.

The top (shown in white) contains status information and expansions of the bytes "under" the offset cursor. Whatever values are entered on the input line appear at the offset cursor location, and the offset cursor moves forward one position.
The dark gray area is where the 256 bytes of each sector are displayed. Since many of these bytes are non-ASCII, the screen may appear to be filled with "garbage." If you want to see the actual
value of a non-ASCII character, simply postion the offset cursor over the byte you want to view. The status line reveals the contents of that byte in four notations: Hex, decimal, ASCII (if applicable) and binary. Non-ASCII characters show up on the bottom half of the screen either as block graphics or as inverted ASCII. For instance, the value zero shows up as a reversed '@' sign, and a space character (\$20) shows up as a dark block.

## Take your CoCo to the MAX.

This is one of those rare programs that will captivate everyone in your family.... No one can see CoCo Max and not want to try it!

We are all witnessing an exciting revolution in microcomputers: a radically new kind of computer and software that opents a whole new world of creative power to computer users,
It was inevitable that this exciting approach would be brought to the CoCo. With this in mind, Colorware chose to go all out and maximize this new concept for the color computer. That meant designing not just software but hardware 100. It meant thousands of hours of pare machine language programming. Rarely has this much eflor been applied to one product tor the Color Computer.

## UNMATCHED CAPABILITY...

Because we fook the maximum approach: highly optimized mächine kode combine: ed with hardware CoCo Max truly stands above the rest as the uttimate creative tool ior the Color Compuler, its unnivaled pertormance lets you create with more brilliance and more speed than anv similar system = much more. than you ever imagined possible. And. you can do it in black \& white of colot.

All the sophisticated power of the bigger systems is there: Icons, Pull-Down Menus, full Graphic Editing, Font Styles, and all kinds of handy tools and shortcuts.
Plug your foystick, mouse or touch pad into CoCa Max's Hi/Res Input Uniut. Then use a defightully simple Point-and-Click method to get any of CoCo Max's. powerful graphic tools. It has them all:

You can Brush, Spray or Fill with any Col. or, Shading or Pattern, Use Rubber Band Lines and Shapes (square, rectangle, circle, elipse, etci) to create perfect illustriations with speed and ease There's a Pencii, an Eraser and even a selection of Caligraphy Brushes. And, as you can see, CoCo Max can do a lot with text. All of the newest special effects are there: Irace Edges, Flip, Invert, Brush Mirrors, etc, And all of the very latest supercapabilities like: Undo, which automatically reverses your mistakes, and Fat Bits which zooms you way in on any part of vour subject to allow dot-ror-dot precision.

## THE BIG PICTURE

The large image box in the middle of the CoCo Max screen is actually only a window on an even larger image. Use the Point-and Click "Hand' to eftortlessly move your swindow over any portion of the larger image You have a working area of up to 3 3/2 times the area of the window iseli.

## FLEXIBLE PRINTING...

CoCo Max gives you many ways to print. Fill a whole page with your image or condense two full CoCo screens to less than 4 a page for a tinely detailed copy. Dump ${ }^{*}$ your CoCo Max screen full size or shrink it to $\%$ page size.

## FREEDOM TO CREATE...

Anyone who wants to create anything at all on their CoCo screen or printer will certainly be very glad to meet CoCo Max. CoCo Max's friendly yet sophisticated graphic and text capabilities let you almost instantly produce illustrations, diagrams, charts.

graphs, and computer ant - for serious use or just tor creative fun.

tion by using software schemes such as sliding windows. Although clever, these schemes yield sluggish and awkward results. Only CoCo Max does it the right way. The CoCo Max Hi-Res Input Unit plugs into your ROM slot and adds an entirely new joystick input to your computer - a precision one with a 49,152 point resolution to match the CoCo screen exactly.
Plug your same joystick, mouse or touch

You may then use CoCo Max's graphic magic on it. The DS-69 is available as an option from Colonware from $\$ 149.95$ complete with its own software on disk or tape. Using the DS-69 with a disk requires an RS multi-pak adaptor.

## COCO MAX REQUIREMENTS

The CoCo Max System includes the Hi Res Input Unit, software on disk or cassette (please specify) and user manual. It will work on any 64 K Extended or non-

# THE COCO MAX 

AN ABSOLUTE GUARANTEE

CuCo Max is a hardwaresoitware ststem that no sottware-only system can march, Ge CoCo Max and see vour CoCo pertorm as it never could before. If you don't agree that CoCo Max is the ultimate crealive tool for the Color Computer, simply return it within 20 davs for a full, courterous refund irom Colonvare.

## THE HARDWARE...

This is the key 10 CoCo Max's unmatch. ed pertormance. Did you know the normal jorstick input buill into the Color Computer only allows access to 4,096 164 $\times 64$ points on the CoCo screen? Yet, the Coor Computer's high resolution screen

has $49,152(256 \times 192)$ pixels. This means that a joystick. mouse or even a touch pad can, at best, only access about one renth of the pixels on the CoCo screen. Most graphic programs ignore this hardware limitation of the Color Computer and give you-only low-res control. Others attempt to overcome the limita-
pad into this new input and you have a whole new kind of control, The dif. rerence is remarkable.

## A DIGITIZER OPTION...

We studied all the video digitizers available and picked the best of them to link with CoCo Max. The D5-69 from Micro Works was our choice. This optional device lets you capture the image from any video source (video recorder, camera, etcil on your Color Computer.

# Why do more CoCo owners choose 'REAL TALKER'? 

Sure it's priced right, but there's more...

Thousands of 'Real Talker' owners know Real Talker' beats ALL other Coco voice synthesizers in ease of use and flexibility. And, NO other Coco talker has a clearer, more intelligible voice. That's quite a lot of advantage when you consider Real Talker's unbeatable price. Yet, Real Talker has some important features that you simply will not find in other Coco talkers:
'Real Talker' is compatible with any $76 \mathrm{~K}, 32 \mathrm{~K}, 64 \mathrm{~K}$ Extended or nonextended Color Computer, It works with any cassette or disk system and comes complete and ready to talk through your T.V. or monitor speaker. Peice includes the 'Real Talker electronic voice synthesizer in a ROM pack, software on cassette (may be transterred to disk), and user manual.
' $5 A Y^{\prime}$ command - You'll have your computer talking brilliantly in jusi minutes thanks to this powerful new command Type SAY "ANYTHING YOU WANT" and your words are instantly spokent I's that simple. Think how easy this makes creating speaking Basic programs. Adding speech to your exiting programs is a snap too
'CONVERT' - This is a truly powerful command for the basic programer. CONVERT automat cally transforms a machine language dependent speaking program into a stand-alone Basic program. In other words, you can efrortiessly write speaking Basic programs that do fot require a machine language translator in memory, This is a unlque ieature of Real Talker' No other voice synthesizer gives you anything even remotely approaching this type of capability even synthesizers costing considerably more,

Real Talker' is a full--eatured electronic voice synthesizer unit built inlo a compact cartridge case. You simply plug it into the side of your computer.

## NOW INCLUDED WITH 'REAL TALKER'.......

1. DR. TALK-This interactive "Eliza" type psychoanalyst program will discuss your innernost problems at length.
2. TALKING BATTLESHIP'll's you Vs. the computer in this speaking version of the classic game-
3. TALKING BLACKIACK'. Play for big stakes against a rather talkative casino dealer.

# ONLY $\$ 5995$ 

Other reatures include soitware controlled pitch, unlimited vocabulary text-to-speech, and even a program that will recite any ASCll file (such as ftom Telewriter. 64 \& other word processors), You also get Colorware's unique fuil-screen phoneme editor program that let's you experiment with and modify speech at it's most fundimental level.

REAL TALKER-1' (for the original Color Computer)............... $\mathbf{S 5 9 . 9 5}$
'REAL TALKER-2' (for the Color Computer-2)...
. 564.95
$\gamma$ - BRANCHING CABLF' For disk systems. If you have a disk system but do not have a Radio Shack Mult-Slot unit, this economical cable will allow to connect and use your Real Talker and Disk system together. 27.95

## TALK

If you have a 'Real Talker', do not deprive yoursell of this absolutely incredible machine-language Talking Head simulation program. While other talking head simulations use a minimal cartoonlike face, TALKHEAD uses high resolution, fultscreen, digitized images of an actual person's lace to create a life-like animated effect.

## SOFTWARE FOR THE 'REAL TALKER'

TALKHEAD can be easily commanded in Basic to appear on screen and say arything you want. Available on cassette or disk for only $\$ 19.95$, TALKHEAD requires 64 K and a Colorware 'Real Talker.

## ONLY $\$ 19.95$

ACTLAL UNRETOUCHID PHOTO

# Looking for an Interface? 

 Look no further. Interfaces for as low as " 39.95 "
## Model 101 Interface $\$ 39.95$

The Model 101 is a serial to parallel intarface intercdad lor use with a 00CO and any Centionics compatiole paralle! rout prifter. Ther 101 has 6 switch selectable baud rates ( $300-3600$ ) The 101 is onily $4^{*} \times 2^{*} \times 1^{10}$ and cortres with all cables and connectors for your cormpiter and prinie?

## Model 104 Deluxe

 Interface \$51.95The Model 104 is a sertal to parailef irterface be the Model 101 but it has the aoded teature ol a serial port (sometimes ieferred to as a modem swich) This leature allows the connection of a parallel prister and ary serial device (riodem, serial printer etc) to your computec You may then setect either output, serial or parallof, with the tip of a switch The 104 is onily $45^{\circ} \times 25^{\circ} \times 125^{\circ}$ and comes with all cables and cornectors for your corputer You supply the serial cable for your modem or other serial device.

## Model 103 Combo \$68.95

With the turn of a kroo the miodal 103 switches jour compuler's RS232C Eerial poft to ary one of 3 outputs -2 serial and 1 parallel. The serlal ports may be used for modems, serial printers or even another computer. The paraliol port can be used with any Centronics compatitie primer The 102 has ine beis teatures from the 101 and 102 color coded position indicator lights, 6 swiach selectabio baud raten, neayy anodized aluminum cabinet, and mary more.

## Model 102 Switcher

 \$35.95The Model 102 has 3 switon positions that allow you 'o swich your computery perial oufput between 3 different dovices (inodern, printers of athother comperter) The toe has color coced lighta that indicate the swatch porition. These lights aiso acd as power indcators to let you know your somputer is on. Supplied with the 102 are coior coded labels that can be applied to your accessories. The 102 has a heavy guige anodized aluminum tabinet with rionstip rubbet feet.

## Cassette Label <br> Program \$6.95

This tancy prinfing utility prirts 5 lines of information on pinterd cassetle labels "Cissebe Label" is menu driven and is wry easy to use. It unes the special teatures of your prisier for Btarndard, of condensed characters. Each line of leat is mitornaticaly centerag. Before the labul is pinled, it is shown on your CAI - enabling you to maje changes II you tike - then print t. 2 or 100 labets The progiam comes on lape and if is suppled wath 24 labels to get you started 16K ECE ivcuired.

## COLOR DISK MANAGER

## Color Disk Manager will do aelective initializations, verifies.

 backups, repaira and much more!- Will initialize single iracks, a range of tracks, or the entire disk to more than 35 tracks
- allows you to make a backup of the directory out of reach of basic and put it back if a directory crash occurs; has a recover file command which will load entire files off the disk it the difectory crashes and the allocation table is good. will repair or salvage crashed disk several ways
- is 64 K compatible allowing a 64 K backup, does backups by track,
a range of tracks, or the whole disk (will do more than 35 tracks)
- gives an allocaton table map with granules $x$-telerenced to track 5 and sectors, and showing which granules are used; displays a file granule map showing whict granules, tracks, and sectors the bie uses, and the length
- will do a directory displaying tile names in two columns, the number of tree granules, and the free bytes it below 65535; has a kill lile command
- Loads and saves, sectors, tracks or files; loads files two ways, as done by basic, or with header bytes left in, which helps in studying how files are saved on disk; has an append sector command
- verfies tracks or the entire disk showing the track and sector if an
erfor occurs, with the option of continue or stop
- is multiple drive compatible
a allows you to save a block of memory fo disk; transters prograins from lape to disk
a has a rapid scan leature which allows you to scan the disk by tracks and sectors using the arrow keys
- Will dump memory to the screen in ascil, good for listing basic programs or source fies; has a move memory biock command, and a transler control command
- converts decimal to hex or hex lo decimal
- allows you fo examine memory using the arrow keys with displays in hex (or decimal) and ascil
- Will load and execute rompac's saved on disk: has a move rom to ram command
* allowe you to change origin (start addr.) of ML- programs; displays the start, end, and execute addresses of ML programs
- 32 K - 64 K ECB $\$ 34.95$ Disk

## RAINBOW SCREEN MACHINE

- Add these features lo your computer/program: ML extension of Basic loads on top of 16, 32, or 64K machines to enabie easy mixture of hi-res graphics and text in your programs. Dense text or large lettering for children, visually impaired or VCR title screens with no programming!
- User definable 224 character set featuring lower case descenders, Greek, cars, tank, planes, elc., completely interfaced with all keys, commands, and PMODES. 12 sizes (mast colored) from 16 $\times 8$ to $64 \times 24$, PRINT 保, TAB and comma fields are fully supported.
- 2 distinct character sets automatically switch for sharpest lettering featuring underiine, subscript, superscript, reverse video, top and boftom scroll protect, double width, colored characters in PMODE 4, and help screen.
- Simple 2-letter abbreviated commands inside your program or control key entry from keyboard, even during program execution!
- Includes demo program, character generator program and manual 16 K Basic required- 32 K recommended. $\$ 29.95$ Tape; $\$ 32.95$ Disk.

## COLOR TAPE MANAGER

- merges multiple basic programs into one; appends multiple machire language programs into one, appends machine language to basic (example included)
- converts numbers from hex to decimal or decima! to hex: allows input in hex or decimal
- rapidly scans memory using the arrow keys with aulo-key repeat
of displays memory in hex (or decimai) and asci, allows the changing of memiory in decimal or hex
- deals with mussing and of file biocks, loads and saves dala with or without a liename block
- handles programs with varying block lengths
- displays the slan, end, and execute addresses of ML programs, displays the buffer start. end and top addresses
- converts ML programs into basic data statements which can be loaded as, of merged with, a basic program
- Juins the audio and cassettermotor on and off with one hey commands: has invertec displays which lessen eye fatigue
- finds the end of programs on tape even from within a program with a skip fia command; allows the transterring of control to other programs with a go command
- moves blocks of memory from start through end address to new start address; allows the changing of the origin (stant adds) or ML programs
- has an 8,380 byte loading butfer with 16 K systems and 24.760 byle loading bulfer with 32 K systems
* 16 K ECB mimimum $\$ 19.95$ Tape $\$ 22.95$ Dish.

## SUPER SCREEN MACHINE

All of the features of Screen Machine and more:

- Variable SMOOTH Scroll for protessional displays, listings, business use.
- Variablo volume KEY Click (tactile leedback)
- EDTASM + command for instant compatibility with cartinge EDTASM.
- Superpatch + command for instant compatibility with the Superpatch - Editor- Assembler.
- True Break key disable and recognition.
- 10 User Delinable commands used to act vate your special drivers or subroutine.
- Dynamic Screen Dump command for use with Custom Sotlware, Engineering's Graphic Screen Print program Ior simple prinier "Snapshots" of your screen even during program execution
* Super Screen Machine - \$44.95 Tape; \$47.95 Disk.

Screen Machine can be used in games, word processors, uhlifies, etc. In addition, the custom graphics characters can be used to develop easy, offective hifes character-graphics programs, The potential is truly unlimited.
Screen Machine is tully interfaced with all keys and commands Although some Basic programming knowledge is recommended just a few minutes spent studying and referencing your computer's Basic manuats will fum you on to the power of computing with Screen Machine.
Screen Machine can be used to directly create video recorder title screens or large lettering for children or the visually impaired simply by typing

> Dealer and author inquiries are always welcome, Canadian dealers should contact Kelly Software Dis: tributors. Lid., P.O. Box 11932 , Edmonton, Alberta T5J-3L1, (403) 421-8003.
> Disk software compatble with Radio Shack DOS only.

## SUGAR SOFTWARE

1710 N. 50th Ave.

## LET US HELP YOU EDUCATE:

Create and print a test for someone else or let them study on their own. Tests can be short answer, multiple choice, or ture false. There is even an option for the computer to generate the multiple choice answers! June 84 Rainbow, "I found Quiz All to be an excellent program..."

16 K tape/32K disk/Ext Bas - $\$ 24.95$

See your own list of words incredibly transformed into CROSSWORDS. WORDSERRCHES, and WORDSCRAMBLES. Then print the puzzle and key with any dot-addresssable or Okidata printer and save the words to tise later for a different puzzle. 100\% machine language.

32 K tape or disk - $\$ 29.95$

## Both for only \$45.95-Save over 15\%

Now these popular programs are better than ever! A fle Utllty adds advanced editing to Quiz All and transfers from one program to the other. You can even select ttems from separate files to create a comprehenstve list for puzzles or quizzes, And PUZZLER is more sophisticated than evert Upgrades avatlable.

## NumberJack

## The HJL Numeric Keypad

## for Color Gomputers

## Cuts number crunching down to size

Now you can enter and revise data twice as fast in spreadsheats, accounting and other numberintensive appilcations with the HJL numeric keypad, NumberJack.

## A sleek addition to your personal computer

NumberJack has a streamlined, low-profile ABS enclosure that measures just $5-1 / 2 \times 7-1 / 2 \times 2.1 / 4$ max. The full-travel keyswitches have the same comfortable feel and reliability that have made the HJL-57 everyone's favorite CoCo keyboard.

## Much more than numbers

Besides the ten numeric keys, you get all four cursor keys, Clear, @. decimal point, Comma, Enter, and all four standard math keys.

## Autoshifted Add and Multiply

One keystroke is all it takes to enter the Add and Multiply keys
without shifting. Meanwhile the colon and semicolon are still instantly accessible from your main keyboard. What's more, NumberJack has its own shift key to provide convenient access to all the numeric shifted symbols.

## Quick and easy installation

The completely self-contained NumberJack Keypad can be installed in five minutes or less. No soldering, no driliing, and no special tools are required. Comes with complete instructions, a 3 -foot plug-in cable and all necessary connectors.

## HJL performance-.

## You can count on it

Bounce-Proof keyswitches are rated for 50 million cycles per key minimum and mounted on a solid aluminum baseplate. Contacts are covered by a protective membrane to guard against dirt, dust, and accidental spills. The NumberJack is bullt so well it carries a full,

[^13]one-year warranty and the exclusive HJL Products 15-day money back guarantee.

## Works with all color computers

Including Original, F-version, CoCo 2, TDP-100 and Dragon. Some CoCo 2 computers purchased after November, 1984 will require a special adapter ( $\$ 3.00$ ); just let us know the model number and we will add it to your order if required.

## Order yours today

Just $\$ 89.95$
Cut the tedium out of numeric data work. The NumberJack gives your CoCo the input capability of machines that cost hundreds of dollars more.

# CoBBS: A Look At The Commands 

By Richard Duncan

> In Part 2 of this series, we'll discuss the logon routine and provide the listings for logon, start-up and creating the RS-232 driver.

Welcome back! Last month we introduced you to CoBBS, a bulletin board program designed to give you, the SysOp, the power you need. This month we will look at the commands available, discuss the logon routine and provide the listings for logon, start-up and creating the RS-232 driver.

Table 1 is a list of the various commands available to the SysOp. When CoBBS boots up into the main system it goes out to disk and gets information from a file named MENU/SYS. This file contains the data required to set up a menu for the user. A menu can be any number up to 255. A discussion of the menu file will be done later with how to actually set up the menu.

What we need to remember now is that each menu consists of different

[^14]commands, which are called command types. A command type is an ASCII character. For instance, the command used to download is a Type 'D'. Certain types of commands require additional information and that is contained in the DATA. We will discuss the additional data required when needed.

## Load Commands

Types !, H, S, ( and ) are considered Load commands. These are used to allow access to the various editors (load and run them) from a BBS menu without the need to exit into BASIC. None of the editors have to be on the disk for the system to operate normally whether they are or not depends on your convenience and disk space. No optional data is required for any of these types.

## List Commands

Types 0, 1, 2 and 3 are LIST commands. These are used to list various text files on the disk. Type 0 is for HELP files. Additional information is required and the format is BNAME. Optional data can contain up to five characters, which this one does. The 'B'
part of it is for "buffer control." If $\mathrm{B}=0$ then the file will just list; if $\mathrm{B}=1$ then the system will send an open buffer control code to the user, list the file and close the buffer. The "NAME" part is a fourcharacter name to specify which file to list.

The BBS creates the name of the file to list from the LIST type and the fourcharacter name. If you specified the optional data to be "ICLUB," then the system takes the name CLUB and adds HELP in front of it since this is a HELP list. It also adds the suffix "/TXT." Since a ' 1 ' was specified, the system opens the user's buffer, lists the file $H E L P C L U B / T X T$ and closes the buffer. You do not need to specify the drive number as the BBS searches all of your drives for the file.

The only difference between the HELP type and the others is the first four letters of the filename. A Type 3 command that has the same information as above in its DATA will scarch for a file called BULLCLUB/TXT.

## Leave Commands

There are three leave commands: types L, N and Y, A Type L command
is the standard leave. It allows a user to leave a message to another user on the system. The menu number to post the message to is put in the optional data. If a ' P ' is included in the data then the user may specify that the message be private, otherwise only public messages are allowed. Putting a ' K ' in the data will tell the system to kill the message after it has been received.

Type $N$ is the same as ' L ' except this type only allows private messages. It is considered the "Email" type. Type $Y$ is the SysOp message leave. It is posted to menu 255 and is always addressed to the SysOp. No one except those with SysOp privileges will be able to see this message.

You can specify that the message be posted to any menu other than 255 . If you specify a menu between 0 and 249 . then the message is posted to that number and a Read command is required, which allows viewing of that number. Specifying a number between 250 and 254 causes the system to ask which number the user wants to post that message to. He can specify any menu number that he is authorized on, including 250 through 254 . If you specify 255 as the number, then another number must be given by the user and can be any active menu on which be is authorized.

## Read Commands

Read commands allow the user access to messages posted to the system. There are four commands types: $R, V$, W and X. Type R is the standard read. It allows the user to read any message posted to the number specified in its data if that message is a public message. A private message may be read if it is $t o$ or from that user. A Type V is the same except it allows the user to read all messages (public and private) posted to the number specified in DATR, even if not addressed to him.

Types W and X take the privilege one step farther. A Type W allows the user to read all public messages and private messages (if to or from him) posted to any number on or below the number specified in DATA. This is a kind of combined message read. The Type $X$ is the same except it allows the reading of all messages, like Type $V$, posted to the number specified in DATA or below.

Messages may be read in a forward or reverse scan, or individually. There is also a NEW mode in which the system shows the user all the messages that
have been posted since the last time he was on. While the message is being read, pressing a ' P ' pauses the message scroll and pressing ENTER resumes it. Also, an ' N ' stops that message and goes to the next one, while an 'S' stops the Read function and returns to the menu.

If a message is deleted the user is given the opportunity to reply. Make special note of one thing: The system determines who is authorized to reply to a message by the privilege of the first Leave command on the menu he is using. If a privilege of 30 is required to leave a message and the user has a privilege of 25 , he may not reply to that message even if it is addressed to him. A menu may contain several different types of Leave commands, but the first one of the list is the one that determines the required privilege to reply to a message.

There are four additional Read commands. Types S, 7, 8 and 9 are SCAN types. These operate the same as their Read counterparts, except only the header of the message is printed and the user is then given the option of reading the text or continuing.

## Download Commands

This is the standard download of the board, and all files must be in ASCII, A good understanding is required of the way the system determines the filenames.

The download type has a privilege level and 16 flags as do all commands of COBBS. The DATA is formatted as follows: BNAME, where 'B' is the buffer code and "NAME" is the download's four-letter name.

The best way to understand how the downloads function is to take an example. Consider the following command specification.

## Type: D <br> DATA: 0COCO

DATA is "0COCO." The buffer number is zero; this means when the directory of programs ayailable is listed the user's buffer will not be opened and closed automatically. A $\%$ ' as a buffer number would specify "open buffer, list directory, close buffer:"

The download's name is "COCO." The system takes the name COCO and adds the following: DOWN + name + /MNU so the name of the text that contains the directory of programs available is DOWNCOCO/MNU. The directory should contain a program number or designation for each item
listed. An example of a download directory is:

1) INVENT/BAS - Program to maintain your inventory.
2) DIRPRINT/BAS - Print out your disk directory.
3) STREK/BAS - Excitement of Captain Kirk.
The user is then prompted for the number to download. This is why you want to set up a directory preferably with numbers. The download command takes this number to specify the file to be downloaded. The format for this is NAME + number $~ / ~ D O W$. For our example, if the user chooses number ${ }^{\prime} T$, then the file the system looks for is COCOI/DOW.

There is a totally different type of download available and it is set up by using a ' 3 ' or ' 4 ' in the buffer code of the DATA statement. While a ' 0 ' or ' 1 ' determines whether or not the user's buffer is opened when the menu is listed, it takes on a different meaning when the code number is greater than two. The format for the DATA statement in these cases is: BDPxx, where ' $\mathrm{B}^{\prime}=$ download type; ${ }^{~}{ }^{D}{ }^{+}=$drive to access for downloads; ' P ' - if a ' P ' is included then the user may not download any program with an extension of "/SYS,""/BAK" or "/BIN."

When a ' 3 ' or ' 4 ' is specified in DATA the user is prompted with "FILE TO DOWNLOAD: ${ }^{\text {n }}$ only, He supplies the filename desired. If a ' 3 ' is used the system limits the user's access to only the drive specified in DATA. If a ' $\mathbf{P}$ ' is included the user may not download any program with extensions noted in the format above. A "B=4" allows full access to all drives. Information that is specified in DATA is ignored. A ' $P$ ' restriction may also be used in this type.

One other command is available when using a ' 3 ' or ' 4 ', When prompted for the file to download, a directory may be obtained and listed by using the DIR command for the drive desired.

## Upload Commands

All uploads are the same for any menu, but there are options available to the SysOp determined by DATA. The format of DATA is: TDxxx, where, $T=$ type of upload; $D=$ drive to upload to; XXX = ignored by system.

When $\mathrm{T}=1$ the system uploads to the specified drive in DATA. The user provides an eight-character filename and the system adds a "/UPL" extension. If a file exists already it may not be overwritten. If $\mathrm{T}=\mathbf{2}$ the user specifies the

## DIGISECTOR DS-69 VIDEO DIGITIZER FOR THE COCO

Give your COCO the gift of sight!
The Micro Works is happy to introduce the newest member of our DigisectorTM family - the DS-69 Video Digitizer for your COCO. It has all the standard features of its big brothers but comes with a price tag that's right for you.

- High Resolution 256 by 256 spatial resolution.
- Precision 64 levels of grey scale.
- SPEED! $1 / 2$ second for a full screen of video.
- Compactness Self contained in a plug in Rompack.
- Ease of Use Software on disk will get you up and running fast!

The DS-69 Digisector opens up a whole new world for you and your COCO. Your computer can be a security system, take portraits, analyze signatures, inspect assembly work ... the DS-69 is your COCO's eyes. Use the DS-69 and a TV camera to get fast, precise conversion of video signals into digital data.
Powerful C-SEE ${ }^{\text {TM }}$ software.
C-See is a menu-driven software package included with your DS-69. It provides high speed 5 level digitizing to the screen, high precision 16 level digitizing for superb hard copy printout, and simple software control of brightnoes and contrast. Or call our driver routines from your own Basic program for easy 64 level random access digitizing. Pictures taken by the DS-69 may be saved on disk by C-See and then edited by our optional MAGIGRAPH package for enhancements and special effects.

The DS-69 comes with a one year warranty. C-See supports both cassette and disk operation with the Multi-Pak adaptor and requires 64 K . Cameras and other accessories are available from The Micro Works. Let your COCO see the World!

- DS-69 Digisector \& C-See Software $\$ 149.95$
- MAGIGRAPH Graphics Package on disk
\$ 39.95
Terms: Visa, Mastercard, Check or C.O.D.
Purveyors of Fine Video Digitizers Since 1977.

filename and extension. Upload goes to the drive specified in DATA. No overwrites are permitted. A $\mathrm{T}=3$ allows the user to specify filename, extension and drive for the file to write to, but will not allow a file to be overwritten. A $T=4$ lets the user specify the filename, extension and drive for the file to write to. If the file exists, it will be overwritten.

## Menu Control File

Type @ is a menu control command for the user. This command gives the user some control in how the menus list and which menu he will access the system when logging on. The first part is the Menu Control Editor. This allows the user to specify which menu he will initially use after getting through the logon routine. It is normally set to menu zero through SCF/EDI for new users, but may be changed by the user to any menu that he is authorized. If changed, the next time the user calls he automatically starts on that menu after logging in.
The second part of this command allows the user to determine how the various menus will prompt him from full menu listing to just seeing "COMMAND" only, Even if a user chooses a higher menu prompting, if he gets lost or cannot remember what the various commands are, he may hit the carriage return key to get a full listing of the menu.

## System Movement

The following commands are used to move between menus and also out of the system.
Type A is considered an ABORT command. This will exit a menu and go to another one based on DATR. The following types are available:

0 - Return to menu the user last came from
1 - Return to menu specified as the logon menu
2 - Return to menu zero

Type E to exit and run the BASIC program specified in DATA. (Note: If no extension is given on a filename it is assumed to be "/BAS."
Type G is a GATD command. The system will "goto" the menu number specified in DATA,

Type Q is the same as END. It stops the board program and puts the user into basic.
DATA: 0 - Exit immediately
1-Exit with password
The format of DATA is TPASS, where T=type of quit; PASS=four-character password if Type 1.
Type T terminates the user's session. DATR specifies whether the user is asked if he wants to leave a SysOp message or not. DATA types are:
0 - Terminate immediately
1-Allow the user to leave a private message to the SysOp
Type $Z$ causes the system to restart as if the user has first called.

## Miscellaneous Commands

Type * command shows the user start time, end time and time on system.

Type C is a "chat" command. It pages the system with audio tones, then prompts the user to continue using the system until the SysOp breaks in. Entry into chat is by pressing the space bar. To exit chat mode, press shirt and CLEAR, then ENTER on a line by itself.
Type 0 lists the user in the Userlog file (USERL/SYS). It either searches for a certain user or lists the whole file. New users will not be displayed. This way, a nuisance caller cannot access the system and see his "name" up in lights. It displays Probationary users and Registered users.

Type P is a password change command, It allows the user to change the password that he uses to access the system.

## Logon Routine

After going through a BOOT process the system comes up with a sereen that
has the BBS's name, copyright, message numbers, etc. The system waits until it either receives a carrier or gets one of the SysOp's key commands.

Upon receiving a carrier, the system prints the board's name and copyright. (I feel like it is very little to ask that this be retained. Since this is one of the few requirements I had when releasing it for distribution, I hope that you would be decent enough to give me credit for my time and work.)

After the copyright is displayed, the system checks to see if it has received a Control-C or an '*". If so, before it lists a SIGNON/TXT, it prints the prompt PLEASE PRESS <ENTER> TO CONTINUE:, At this point, you may enter a password and exit directly into BASIC. This password is specified in Line 22 of USER/SYS and should be changed to whatever you want. Since it is a string the password may be up to 250 characters long. If no Control-C is received, the system goes on and lists SIGNON/TXT.

The system then asks for a user number. This feature allows a user to have quicker access. The user number is actually the record number of his entry and is given to the Registered users after he logs on and sees the system information. Note: The use of this type access requires that users must not be deleted from the userlog or all numbers past that point will be changed. If this type of access is not desired, then remove Line 68 from USER/SYS.

Users who do not have a number, or if it is not used, are requested to enter their name and where they are from. They may use a semi-colon to separate "name,from" to enter it all on one line. If there is no space in the name they are requested to enter it again, thus, hopefully requiring them to enter first and last name. If the information they entered is more than 90 characters long. then they are dropped. This is helpful

## CoCo Cat

for the nuisance calls. The system then checks the USERL/SYS file for any record of them. If found, it will request their password and give access if entered correctly.
There are four different ways you can specify that a caller be handled when logging in:

1) If not already in the Useriog, the system disconnects.
2) User is requested registration information and then terminated.
3) Same as ' 2 ' but the system displays an ASCII text file, NEWUSER/ TXT, and disconnects.
4) Normal operation. New user will register and access.
Of course, a caller who is in the Userlog will access the system normally.

After all the above has been completed, the user will be into the system. If specified by SCF/EDI (System Control File, to be discussed later) the system checks for any messages to the user. This routine may be aborted by the end user by pressing the 'S' key during the check. If a message is waiting, the user is shown its number, menu name, who it is from and the subject.
Access is now complete and the main BBS routine is loaded and run.

## Starting Up

Some of the routines required to boot up the system will be presented in Part 3 of this series, which includes the System Control File Editor (SCF/ EDI) and the editors to create the file MENU/SYS. Let's look though what is involved in booting up the BBS.

1) Format a disk for each drive to be used on the system. The one referred to as the "system disk" is the one in Drive 0.
2) Load and run the System Control File editor and create the system parameters you desire to match your equipment online.
3) There are three programs that are only used once when booting up the system. If you do not wish to keep them online and save disk space, format another disk for these files and copy them over. These are 64/BAS, START $U P / B A S$ and COTERM/SYS.
4) Copy the following files over to the system disk that will be in Drive 0: USER/SYS and COBBS/SYS.
5) Copy the following files to the disk that will keep that file as specified by SCE: MENU/SYS, USERL/SYS, HDR/SYS and MSG/SYS. For example, if you specified the message header to be on Drive 1, then copy HDR/SYS to the disk that will be in Drive I.
6) If you are going to call up an editor
from the board then copy over the ones desired to Drive 0 .
7) Get the system into 64 K . Type PCLEARI and press Enter. CobBS must be run in 64 K mode.
8) Load and run STARTUP/BAS. Enter the correct date, day (first three letters) and time, You are prompted as to whether or not you want to "PROTECT?" the system. If you answer "yes," the system's BASIC is modified. When under protection, if the board ever breaks into BASIC it locks up. The routine is crude but effective and secure.

You are asked if you want the "C/R Mod?" This modifies the RS-232 driver so the system puts out a CHRS (13) when no carrier is being detected.
This mod requires a few additional steps for the SysOp to use the system locally. Before exiting the system, or using the SysOp logon, it is necessary to remove the modification. This is done within the system by using its exiting commands. To logon locally, you must first exit into BASIC with the Shift and up-arrow key, then type RUN. When the screen reappears, press the '@' key as you normally would. To reinstall the modification in either USER/SYS or COBBS/SYS, type GOTO10000 from BASIC. Typing this in USER/SYS completely reboots and reprotects the system, including dropping the modem. Doing it while COBBS/SYS is loaded reprotects and starts COBBS/SYS again, but doesn't drop the modem.

If the boot programs are put on a separate disk, insert the system disk in Drive 0 before answering the protect question. After answering, the system loads the logon routine and presents you with the standby screen.

With the system protected, the SysOp may not break into BASIC with the break key, but presses and holds the SHIFT key. Next, press the up-arrow key while still holding down the SHIFT key. Once you break into BASIC this way the system is no longer protected. To reprotect, type GOTO10000 while the logon routine is in memory.

## Conclusion

We will continue next month and look at all the editors required to get the system up and maintain the Userlog. I will be glad to provide you with a disk of all the programs and also a disk with expanded documentation for $\$ 25$. If you have any questions you can call my BBS at (501) $735-5614$ online 24 hours a day, or write to me at 2504 N . Gathings Drive, West Memphis, AR 72301.

## TIME BANDIT <br> Beal Dunlevy \& Harry Lafrewar

Tred of the same old screens? in Thit BANDIT, you pick from more lhan TWENTY places with over 15 levels in each place That's over 300 screens! Visit FANTASY WORLD. WISTERN worlo. 3 SPace worla, Fight the Evil Guardians riller Smuphs, the Looking Lurker: Angry Elmo and more! Find the Kers and collect the treasures of time Crisp Supergraphucs, colorlut SEROLCING tandscapes fult anmation and over THREE HUNDRED SCREENSI The corquest of line and space awalts yout

## SIMULATIONS

 an linked logether with action and re-action at at either location, or play alone. The P-51 Mustang was the attack workhorse during WWII. To experience the flight of this beautiful plane in actual combat situation will give many hours of excitement. You can lest your skill against the computer to defend your position or try your hand competing against your opponent at any remote location. Two CoCo's can be linked by cable for TRUE two-player adventure. With the use of a modem you can test your skill across town or across country!! (Each individual needs a copy of the program.) This program is another first from Tom Mix Software. Order your excitement today. Direct cable available separately for using two computers at the same location.

## MATH DUEL

MATH DUEL is a chalenging mathematics game that pits you against the computer in a game of wits. You must ute aff of your knowledge of factors. mult ples and prime numbers to dovelop a stratogy that alows you tog ather more numbers and thus more points than the computer. The game is doceptively simple. you select the size of the playing field that is composed of from 6 to 100 numbors. You must then choose numbers that will give you tho meximum number of points and the computer the least number of points. There are only 6 rules

# 'Tis the season to surprise your family with an exciting Color Computer for only ${ }^{5} 88$. 

Save $\$ 31.95$ and make this holiday season one of your family's best ever with a 16K Standard BASIC Color Computer 2 (26-3134, regularly $\$ 119.95$ ). Your family will immediately start to enjoy the advantages of home computing together-even if you've never used a computer beforel

## A true family computer

Simply attach the Color Computer 2 to your television set, and add instant-oading Program Pak ${ }^{\text {w }}$ cartridges or ready-to-run cassette software (requires cassette recorder). The Color Computer 2 can help you set up personal and household budgets, keep track of
your investments, create an inventory of household items, store recipes, write letters and reports. With a wide selection of educational software available, your children can use the Color Computer 2 to help strengthen their math, spelling and reading skills. The family can even play exciting computer games.

## Learn to program

You can learn to write your own programs in easy-to-understand and easy-to-use BASIC language (a 185-page beginner's manual is included). And you'll quickly be able to create spectacular graphics in eight vivid colors with exciting sound effects, too.

## Easy to expand

As your family's interests, skills and needs grow, the Color Computer 2 is easily expandable with accessories. You can add a printer, telephone modem, joysticks and disk drives at any time.

Place the Color Computer 2 at the top of your family's gift list. Do your shopping early at Radio Shack and take advantage of special holiday savings!

## SUPER BACK-UP UTILITY (C)

WITH S.B.U. FROM COMPUTIZE - YOU'LL NEVER NEED RNOTHER BACK-UP UTILITY FOR YOUR COCOIII SUPER BACK-UP UTILITY WILL PERFORM ALL OF THE FOLLOWING FUNC. TIONS

1. TAPE TO TAPE (Regardless of most protection schemes!)
2. TAPE TO DISK (Move Casselte programs to Diskl)
3. AUTO RELOCATE (For those Cassette programs that conflict with Disk operating systems,
4. DISK TO TAPE (Place Disk programs onto Cassette)
5. DISK TO DISK (Our powerful Split-N-Image Program, Copies regardless of protection schemes!

- MENU DRIVEN
- REQUIRES 32K EXTENDED COCO
- REQUIRES I OR 2 DRIVES
- ALL MACHINE LANGUAGEII! COMPARE WITH OTHER INDIVIDUAL PROGRAMS COSTING IN EXCESS OF $\$ 100.00$
DISK $\$ 49.95$
Cat. No. 107CD

## NEW MASTER KEY II

New Improved Versiont A hardware product that takes control of any program regardless of protection. Now use with RS Mult-pak, " Y " cable or optional extender cable. Captures register contants as they were when Master Key II was engaged. Complete disassembler, memory save, and much more. Requires some familiarity with Assembly Language
ROM PAK Cat. No. 160 HR . . . . . \$ 99.95 Whit Ext. Cable Cat. Ho, 161HR , \$109.95 See Page 289 For More Holiday Values

## HOLIDAY GIFT IDEAS FOR

## Computer Cassette Recorder

## - Built-In Automatic

 Level Control- Recorder Starts and Stops Automatically

## $49^{95}$

The CCR-82 recorder (26-1209) is ideal for loading and saving programs and data. It features cue/review and tape counter. Requires four "AA" batteries.

The Power Line Filter (26-1244) filters line noise from nearby appliances and reduces interaction between peripherals. It also protects equipment from damaging transient voltage spikes.
Power Line Filter

## Protect Your Diskettes

51/4" Wallet File. Holds 10 diskettes. 26-1366, \$7.95.
51/4" Library Box. Stores like a book when closed. Holds 10 disks. 26-1452, \$4.95.
$51 / 4^{\prime \prime}$ Travel Tote (not shown). Holds 5 disks. 26-1348, \$2.95.

# COLOR COMPUTER OWNERS 

## Save ${ }^{\text {s }} 20$ on a Thermal-Matrix Printer

Low-Cost Dot Matrix Printer

## 19995

A Radio Shack price breakthrough! The DMP 105 (26-1276) prints crisp $8 \times 9$ dot matrix characters on an $8^{\prime \prime}$ line. It's ideal for data processing and general-purpose use. Bi -directional-prints 80 or 132 characters on an $8^{\prime \prime}$ line.

## Get Your Favorite Teacher CLASS.

$\$ 49.95$
A Radio Shack Color Computer with $32-64 \mathrm{~K}$ and Exlended BASIC becomes an electronic grade book OLASS, includes 7 programs and 2 data files to ease the entry. manipulation, and reporing of grades
$G$ faces entered may be totters or number correct. All entres are converted to, and sfored as, percent scores. individual incomplete grades are allowed Each assignment or cumulalive grade is assigned a weight. More than 2500 grades may be stored in memory. Any number of students and assignments thal amounts foless than the memory limit Is allowed eg 50 sfudents with 50 assigniments. The ponfiguration may be modified later. As many as 1000 prades have been entered per hour during use.
Printed teports are conlidential. Students are identified by number on the screen and printer. Accurnulaled average percent and grade are reported
All information may be changed conveniently. Files compatible with Radio Shack's Colorstat may be cieated Student names may be alphabeticaliy sorted
Sallors System Soffware 1943 N Gartield Avenue Pasadena, CA 91104

Experiment in the exciting world of Artiticial Intelligence on your COLOR computer with this LISP interpreter
This is a powerful but minimumly implemented LISP interpreter that includes the tollowing commands:

LISP - EVAL CAR CDR. UST. CONS. NUL. ATOM. EA COND. PUT. GET. SETC. OBLIST. READ. PRINTI. PROG PROGN.GO RETURN NUMBERP ZEROP. GREATERP LFESSP K SC, MAPCAR RPLACA RPLACD
GRAPHICS - CLS. SET POINT
CASSETTE - LOAD, SAVE CLOSE LOADWS SAVEWE: Aldio, MOTOR SKIPF
MISCELLANEOUS - BASIC. PRINTER. PEEK. POKR. USR. SOUND JOYSTK. FIRE(EUITON)
SUPPORTS: Recursion. Property Lista, Garbage Colloction. FEXPRA EXPRs. machine tanguage subroultines 10 W resolution grap hics, interger numbers, long error messages usp objects stored on casselle, node and slack area can be recontigurect.
Requires a 32 K Radio Shack Color Computer with Extended BASIC
Price: $\$ 39.95$ (casselle only) plus $\$ 2.00$ shipping and handling ( $\$ 500$ toreign) VT residents add 4\% sales tax. Send check or money order.

## NEM ATTENTION OS-2 ${ }^{T M}$ USERS <br> 

## EZ-MANAGER

- find J: scans through your file system to locate any specified file(s):
- wild card expansion
- shell forking
- peruse- quick and concise way to look through directories. No more tiresome chd - dir sequences, Artificial intelligence feature included to maximize the display information.
- mod time: modifies the time very accurately and fast with very simple procedures, Disk 549 (U.S.) 559 (CDN.)

## EZ-BACK

new back-up procedures which include file compaction leading to less disk wear and faster load time.
Can be used with SSDD up to hard disk drives. Disk 559 (U.S.) 570 (CDN.)
All programs are user friendly, interactive and contain help features.

## INSTRUCTIONS

# Which Award Is Which? 

This "generic" program, easily modified to individual needs, is designed to keep track of various awards for Ham radio operators

By Burt B. Witham, Jr.

Ham radio operators like to earn awards for operating their stations and confirming contact with other amateur radio stations all over the world. There are literally hundreds of awards offered by various radio publications, organizations and clubs. It would be impossible to outguess the Hams and create a program to record individual desires insofar as award types, so I have designed a "generic" program that can be modified to suit the individual's needs.
(Burt Witham, holder of amateur radio license W4CNZ, has authored several programs for the Color Computerist who is also a "Ham." Burt retired from the U.S. Navy in 1973 as a eaptain after 31 years of service. He lives in Virginia Beach, Va.) Awards includes a few of the most popular awards as examples. The program lines $10-40$ initialize the program and present a menu for selection of the award data to be read. The program sections $100,300,400,600$ and 700 each present the data on a selected award. Since the data entries, or changes, occur at irregular intervals (often months apart), it was decided to store the data in DATA statements and have it read by the main program. This makes it easy to use and does not require disk or tape 1/O functions. Thus, the program can be used with either tape or disk, as is, without modification.

Each award section consists of a simple data READ function and a screen printout of the required award data. Adding to or revising the data merely requires a rewrite of the appropriate DATA statement for BASIC (or an edit of the statement for Extended BASIC).

When revising these statements, be very careful to maintain the position of all of the commas, as they are the separators between the parts of the DRTA statements. Changing their position causes the READ function to error. Several DATA statements have been filled in with "dummy" information (lines 750-790 and Line 810) to demonstrate how to record DATA in the data lines. The dummy information should be replaced with your own real information.

Using this program, the amateur operator can quickly and easily "let CoCo do it," and determine his status in earning any of the current awards desired.

Awards uses 12 K of memory and Extended BASIC. It is available on disk or tape from the author at P.O. Box 2072, Virginia Beach, VA 23452, or through RAINBOW ON TAPE.

That's right. We've decided that programs like Shenanigans and Symphony 12 aren't the only great ones around. There are also Silver Streak and Star Trek and Some Like It Hot - software of a different sort.

That's why we are introducing VCR, The Home Video Monthly, the magazine for the new generation of home viewer.

Home video has evolved beyond the "hacker" era, when you needed a degree in electronics just for a little entertainment. Most people don't care about how the signal-to-noise ratio and wow-and-flutter specs of their equipment compare to the latest models. They simply want to know how best to use and enjoy the equipment that they have.
And that is what VCR will offer how to get the very best in home entertainment from your equipment.
Each month, VCR will bring you previews and ratings of every new offering on tape and disc: music videos, children's shows, how-to guides, and movies, movies, movies.

We will tell you which shows the critics themselves will be taping on the networks and cable, along with tips from the experts on how to get the best possible reproductions. And

you can turn to us for the answers to your questions, ranging from the trivial to the technical.
Even more, each month we will feature exclusive interviews with the stars and the star-makers, along with articles designed to help you relive some of your fondest video "memories" of the past.

Yes, programming is more than spreadsheets and databases. And we know you'll want to be a charter subscriber to the guide to the very best in entertainment software.

VCR, The Home Video Monthly, debuts in January 1986.

## Yes, I'm ready for some real entertainment! Send the next 12 monthly issues of VCR to my door.

## CoCo's Best \& Fastest Spreadsheet System ACCLAIMED BY THE EXPERTS

"DYNACALC is my choice for a CoCo spreadsheet." Dan Downard, RAINBOW, September, 1984.
"Eat your heart out, Lotus 1-2-3!"
Scott Norman, HOT CoCo, October, 1984. Builtin Features:

- $51 \times 24$ Display with Lower Case
- Super-fast Smart Screen Refresh
- Auto-Repeat Keyboard Driver
- Keysaver (TM) repeats last command $x$ times
- Disk Operating System (works just like ROM DOS)

## NOW <br> ONLY <br> \$9995

- Easy communication with BASIC/DOS programs
- Two-way communications with PRO-COLOR-FILE $\star$ Enhanced *

RAINBOW
CERTIFICATION SEAL

- Outputs to ASCII Word Processors like Telewriter-64
- Fast 16-Digit Arithmetic with Scientific Functions
- Summation Mean, and Standard Deviation Functions
- Logical Functions with String \& Numeric Comparison
- String locate command to navigate large worksheets
- Sort full or partial worksheet by columns or rows
- Line, Bar, Hi/Lo/Close, Circle Graphs
- Full Graphics captioning and overlay facility
- Graphics Drivers for all popular Printers
- Joystick/Mouse Driver for Cursor Movement
- Works with any ROM versions, even JDOS
- 33k Available Worksheet Space
- Up to 256 Columns or 256 Rows
- Can use VisiCalc worksheets \& training materials
- On-screen Help Messages

FOR 64K DISK SYSTEMS

## 

Give us your besi: Join the ranks of these coupageous CoCoists in showing the Color Computer world your high score al your favorite micro-diversion. We want to put your best effort on record in THE RAINBOW's "Scoreboard" column. All entries must be received 60 days prior to publication. Entries should be printed - legibly - and must include your full name, address, game title, company name and, of course, your high score. Each individual is imited to three score entries per month. Send your entries to Scoreboard, e/o THE RAINBOW.

## ScOREBOARD POINTERS

In conjunction with theraineow's Scoreboard, we offer this column of pointers for our game-playing readers' benetit. If you have some interesting hints and lips, we encourage you to share them by sending them to the Scoreboard, व/O THE RAINBOW.

## FEEDBACK

## Scoreboard:

I would like to respond to Charles Farris: letter (October 1985) concerning Calixio Island I have solved the game, and as far as I know there is nothing in the pottery. Also, the spees are used to read the mierofilm.

Thave some other hints for Calixfo Island that may be helpful to those of you who have been frustrated time and time again. To get across the water you need the ancient canoe paddles. To find them, bring the machete, the flashlight and the mice to the pyramid Finding the paddles is up to you. One last hint: When going across the water, bring the bucket with you It may prevent you from getting into the game over your head.

Edward Heinemant Newton Centre, MAA

## Scoreboard:

In response 10 Chris Allbritton's Ietter (Ocfober 1985) concerning Raaka-Th, when you leave the room with the statue in it, it states that you are at the south end of the Great Central Hallway. You simply go north to the north end of the Great Central Hallway and then travel west once. There you'll find the candle.

> Mike Gaither
> Clarence, $N Y$

## TIME FOR REBUTTLI

## Scorrboard:

First to lan Loeppky, I would like to point out one important fact about the game Pyramid: If you try to get the statue of the bird while holding the scepter, it will come alive and fly to the other side of the room. In fact, the only way to get the statue of the bird is if you have the box to carcy it in. It is not possible to get the bird while holding the scepter unless you have a copy of the program that differs from mine.

Now, for Todd Harris. My letter (March 1985] said, "For Pyramid don't worry about the scepter. you'll find you don't need it, 50 why waste valuable moves getfing it." At no point did 1 say it is useless. Sure, you can wave the scepter over one of the pits and a bridge will fall: however, if you go thal way, and if you get the seepter, you are wasting at least six. moves and the object of an Adyenture game is to gather ill the objects needed to complete the Adventure in the shortest moves possible.

David Oelhiaup! Calgary, Alheria

## SNEAKING UP FROM BEHIND

## Scoreboard:

For everyone who is having trouble with Rommel 3-D by MichTron, I have a hint you may find useful. Get the enemy tank behind you so that he is chasing you. Then, drive your tank off of the screen and you will come up behind him on the opposite side of the screen. While you are behind him and the enemy tank is turning around to face yout you can blast him.

Steve Smith
Ashdown, AR

## OUTSMARTING THE ALIENS

## Scareboard.

Thave a few hinis for Galagon. The surest way to get two fighters on the screen is to get one fighter captured, shoot all remaining aliens except the one with the captured fighter, and then kill the alien with your fighter. This also works if there are two or less aliens on the screen. At the beginning of each stage, hold down the fire button and move back and forth. This will decimate the aliens in the first wave. Also, when you have two fighters on the screen at once, both of their shots only count as one. This will boost your hit/miss ratio.

1 need some help with Shenanigans. How do you open the window in the dimly lit hall? What does the billboard say and what does it mean?

Also, does anyone out there live in the Netherlands or Belgium? I would like to lind a fellow hacker here.

Please send any information to the "Scoreboard." All help would be appreciated.

Charles Farris
Schinveld. The Netherlands

## 00PS ...

## Scoreboard:

To all the people who wrote to me for the solution to Dungeons of Daggorath, I made an error. The incantation of the third ting is not Power, but Energy. I hope the mistake didn't cause you any problems.

Mike French
Covington, VA

## SO CLOSE

## Scoreboard:

Ive almost finished Keys of the Wizard, but I don't know what to do with the jester or unicorn. I'd appreciate any help.

Jimmy Doyle
Barrackville. WV

## LEFT IN THE DARK

## Scoreboard.

Does anyone know how to get past the trading post in Dallas Quest? T've been able to bribe the monkey to puil aside the rug in order to reveal the trapdoor. The problem is I don't have a flashlight to see anything. Also, how do you get to the crossroads?
In Sands of Egypt, could anyone please tell me how to get the treasure out of the secret chamber?

Jon Olson
Englewood, OH

STRIKING BACK

## Scoreboard:

In To Preserve Quandic, if you are continuously killed by the guard in the den, try typing ATTACK BUARD. You may have to do this a few times to kill him. Sometimes he will kill you, but it is the only way you will be able to get into the safe behind the pieture. If you aren't able to program the computer (and if you are in the closet on the second floor), try typing EXAHINE RGAT This will give you the password to the computer.
In Madness and the Minotaur there are iwo erypts on the second level. To open a crypt, you must be carrying nothing at all. Type IPEN CRYPT and you will find a treasure.

In Shenanigans, if you are unable to get past the muggers in the atreet (and if you have the pocket knife), try typing DPEN KNIFE,
I am having trouble in Syzygy. I am able to get the light saber, but I am unable to defeat Darth Vader with it. How is it done?

In Sea Search, I am unable to find the eredit card. Where is itt" Any help with these questions would be greatly appreciated.

Ric Miller
Winnipge Manitoha

## ALLIED ASSAULT

## Scoreboard:

After slaughtering the wizard for at least the 40th time. I'tI share a foolproof way to quickly clean out the fifth level of Durgeons of Daggorath without getting hit or being chased by creatures. I call this way the "Alfied Assault" strategy, The seerer lies with the fact that the lower level creatures (spider, smake and bloh) cannot kill you, even if you occupy the same cell withou a shield! From the fourth level, descend through the hole near the northwest corner and turn east. Move to the second intersecfion and stop. Wait (or scurry about) until a lower level creature occupies the same cell as you. Do not kill it - it's your ally.

Creatures will line up along the east-west and rorth-south corridors from your intersection position. Creatures in adjacent cells
cannot attack you. Move (M) forward once Hit twice with the Elvish sword and move back (MB) once - fast - so your ally does not have a chance to move. Continue slaughtering creatures until you kill the wizard:

If you are good on the key board and know the number of hits required to kill a creature. you can "steal" the dropped goody before your ally has a chance to move from the corridor intensection, Note: Atter the wizard is killed, you'll see the perrified ghosts of any remaining creatures, including your ally,
L. Grant Shrideler
lakewood. CO

## KNOW YOUR NUMERALS

Scorehoard:
Here are a fow hints for those of you having trouble with Trekboer
Onee you dig on the frozen planet, use the blunket io get the ice. Don't worry about the steel canteen - it's useless.

Don't throw away the amulet, It brings good luck on the garden planet, and if you want to find the coordinates of the secret planet, you need to know your Roman mumerals.
In Dungoons of Daggorath, when you defeat the wizard's image you will go to the fourth level with only a torch and what you have in your hands. Don't try to attack the galdrogs right away. Go for easier things at first. Move around a lot on the fourth level or the monsters will "form a line" after a few minutes, waiting for their turn at you. Don't attack with the Elvish sword many limes in a row. This is hazardous to your health.

I need help with To Preserve Quandic. How do I use the car or the helicopter'' I am nearly sick of Pyramid! I can't find six treasures. Any help would be apprechiated.

Tommy McClure Doyline, L.A

## SAFETY LADDER

## Scoreboard:

I know of a glitch in the game Canyon Climber. I cin get the high scores listed in "Scorcboard" for Canyon Climber with the blink of my eyes. What you do is get past the first level (goats) and play the second.

Jump the arrows, but don't get the shield. After you elimb the first tadder and the second Indian begins shooting, climb down and just start to jump arrows. The arrows shouldn't kill you if you don't move from under the ladder.

Jermaine Jackson
Tailulah, EA

## RESISTING TEMPTATION

## Scarehoard:

Herc are a few interesting bits of information about Tandy's Dragon Fire and Dallas Quess.
In the Dragon's Treasure Room sequences of Dragon Fire, the points the player gathers for Ireasure are placed in a buffer and added one-by-one to the score. Therefore, on higher level screens, you must spend more time in the room to receive the points you've earned. Fight the natural tendency to grab the Ireasures and leave: play dodgeball with the dragon until your score stops increasing to get the maximum score for each castle.

Adventurers who have solved Dallas Quesi may be interested in the program's demonstration mode: Pressing and holding down the ' $T$, ' $R$ ' and ' $S$ ' keys during the opening credits until the screen turns orange (SCREEN 8,1 ) causes the computer to ruil a movie trailer-like demonstration of the Adventure, Players who haven't solved it yet are advised not to try this because it gives away some of the climactic graphics and spolls the surprise. I assume that Radio Shack included the attract mode for display in stores, but it's a lot of fun and something to do when you've "finished" the program.

Dale Dobson
Menomiltee, MI

To respond to other readers inquiries and requests for assistance, reply to Scoreboard Pointers, e/o the hainbow, P.O. Box 385, Prospect, KY 40059. We will immediately forward your letter to the original respondent and, Just as importantly, wellishare your reply with all Scoreboard readers in an upcoming issue.

- Debbie Hariley

# A potpourri of games to challenge your wits 

# Brain Games 

By Kraig Brockschmidt

Acollection of five challenging and exciting programs combined into one, Brain Games requires 32 K ECB for the full program. It can easily be altered to fit into a 16 K machine with the deletion of a graphics display in one of the games, which has no effect on the program. The five games are Towers of Hanoi. Jump 15. Flip-Over. Short-Term Memory Test and The Human Cannonball. The first three are chatlenges for your insight; the last two are a test for your memory and a fun practice in trial and error.
Type in the program or load it from cassette using CLOAD and ENTER. If you need to make the 16 K alterations, follow the steps below:

1) In Line 7, change the 65 after the ON. . .GOTD statement to read 69.
> (Kraig Brockschmidt is a 16 -year-old senior at Hazen High School in Remon, Wash. He has won in the rainbow One-Liner contest and runs Sigma Software. He's had his CoCo for five years and plans a career in Astrophysics.)
2) Delete the $X(900)$ after the DIM statement in Line 0 (make sure you also delete the comma preceding it).
3) Detete lines $65-68$ and Line 73.
4) Remove the PUT statement in Line 71.

When you run the program, a title screen with the five individual program names appears. The line that reads TOWERS OF HANOI will be blinking alternately black and green. If you want to play that game, hit the ENTER key. If not, hit either the up- or down-arrow keys and the blinking will move accordingly. When you get to the title of the game you want, simply hit the ENTER key and it will play that game. If the title HUMAN CANNONBALL is blinking. hit the down-arrow key and the blinking will move up to TOWERS OF HANOI. Likewise, if you're on TOWERS OF HANOI, hit the up-arrow key and it will move to HUMAN CANNONBALL.

Each subprogram has completely different instructions and objectives. All five are outlined separately as follows.

Towers of Hanoi: The object is to transfer the stack of different-sized discs from the first peg to the third peg. As you begin, the computer asks you to select the number of discs you wish to play with, from two to six. Keep in mind that the more dises you choose, the longer and harder the game will be. You can place any disc on any peg, provided the disc underneath (if there is one) is not smaller than the one you are attempting to place on top.

To move the dises, the computer asks FROM? TO? and awaits your input. The first number should be the number of the peg from which you want to move the top dise, and the second number is where that dise is to be placed. When entering these numbers, separate them with a comma and check for typing errors to avoid a REDO? message, which will ruin the display. If you get all the discs from Peg \#1 to Peg \#3, you win. The computer tells how many moves you made and the minimum possible for that number of discs, given by the simple formula ( 21 N )-1, where ' N ' ' 's the number of discs.

If you get stuck, type in two zeros for your move. The computer asks PLAY

AGAIN ( $\mathrm{Y} / \mathrm{N}$ ) . If your answer is ${ }^{\mathrm{N}} \mathrm{N}$ '; the program returns to the title page.
Jump 15: The object here is to eliminate all but one of the dots in the pyramid by jumping any other dot. The game starts with drawing the screen display and 14 dots, in the numbered spaces 2 15, and an open spot in Space 1. It then asks you FROM? TO?, to which you'll respond by typing in the number of the dot you wish to jump with, a comma and the number of the space you want it to jump into. Any jumping must be done in a straight line; you can't jump more than one dot or off the board. Once a dot is jumped over by another, it's taken off the board.

If you noticed that there aren't any DATA statements containing all the possible jump combinations, it's because of a simple twist of this puzzle. If you take the number of the space you're jumping from and add the number of the space you're jumping to, divide by two and drop all fractions, that is the number of the only possible space you can jump over in that line. While there are several routes to take, the last dot will always be in Space 13.
Flip-Over: This is the hardest of the first three games. To win, you must move the white dots on the left side to occupy the four spaces on the right side, which are occupied with either blue or red dots. You can move any white dot one space to the right or jump one dot, but white always moves to the right - it cannot move backwards. Likewise, the blue or red dots can only move to the left in the same manner.
Operation is fairly simple. To "pick up" the dot you want to move, hit the right- or left-arrow key until the small line under the bottom of the rectangular border is directly under the dot you
want to pick up. Press the ENTER key and it's been pieked up. Next, move the small line under the space you want to move it to (this space must be black) and hit the ENTER key again. If it's a legal move, the dot will be moved, otherwise. you'll hear a short, low tone, and you must pick up a dot again and continue playing.

If you get stuck, which is not uncommon, press the ' $Q$ ' key and the familiar PLAY AGAIN appears, If you succeed in "תlipping-over" the puzzle, you win. An amazing show of exceptional intelligence!

Short-Term Memory Test: This is simply to test your memory, and you can't win or lose. On start-up, youll be asked to remember two numbers. When you're ready to have them flashed before you, hit the ENTER key. Two numbers will be shown quickly and you'll be asked to type in those numbers in the order they appeared on the screen. Be sure you put a space between each number and no space at the end or the computer will say you're wrong. If correct, you'll be told, then you have to remember one more number. If you're wrong, you still have two more chances to remember the right sequence. This keeps running until you miss the sequence three times in a row, The average amount of numbers memorized by a person is seven.

Human Cannonball: The object is to land the stunt man safely into the net by choosing the correct angle of elevation of the cannon so he'll fly just as fat as the net, but not over- or undershoot it. If you're running the 32 K version, you'll have to wait while it draws a circus tent and the audience before playing. After you wait once, however,
you don't have to wait again, unless you BREAK the program and rerun it. If you have 32 K and wish to speed it up, you can make the 16 K alterations.

Once the display is drawn, an entire half of the PMODE 4 screen is stored in Array X. Contrary to the ECB manual, you don'l need to $\operatorname{DIMX}(256,96)$ as the manual says, but you only need one array variable ((DIM X(1) would be one array variable) for every 40 pixels being stored. Instead of "DIMming" $\mathrm{X}(256,96)$, which is 24576 bytes of memory, you need only DIM onefortieth of that, or 615. In the program I use 900 to be on the safe side, so there's no chance of getting a? BS Error caused by not having enough array yariables.
Once you type in an angle between one and 89 (decimals are allowed). you'll see a graphics display of the results. If you hit the net, you'll hear some peppy musical notes and are asked to PLAY AGAIN? If you missed, you'll be told how much you missed by and asked for another angle. If you missed by a negative number, it means the net was undershot; a positive number means it was overshot. In either case, type in a smaller or larger angle and ENTER it. Muzzle velocity of the cannon is 110 meters per second.

Please realize that the first three games are rather challenging and it may take awhile to solve them. If you decide you can't figure them out, I'll be happy to send you the solutions for SL and an SASE. 1 can also send you listings of each and any of the five individual games which are self-running. for 25 cents each and an SASE. Finally, if typing is not your game, send me $\$ 4$ and I'll mail you a cassette with several copies of the program on it. My address is 14024 152nd Ave. S.E., Renton, WA 98056.

Don't panic if you missed our October RAINBOWfest in Princeton, N.J. , or if you were there and can't wait for our next show. The first RAINBOWfest of 1986 will be Feb. 14-16 in Palo Alto, Calli The Hyatt Regency will again be our host and, as usual, they're offering a special room rate of $\$ 71$ per night, single or double. The advance ticket deadline for Palo Alto is Feb, 7.

The second RAINBOWfest of 1986 will be May 23-25 in Chicago. Rooms at the Hyat1 Regency-Woodtield are $\$ 60$, single or double, and the advance ticket deadine is May 16.

Be one of the first tive people in your state to order tickets for either RAINBO Wfest, and you'll receive a free RAINBOWfest T-shirt. If your order is one of the first 500 , you'll receive a tree Rainbow poster.

RAINBOWfest is the only computer show specifically dedicated to the Tandy Color Computer. Nowhere else will you see as many products, have immediate access to the top experts, or be able to attend free seminars of such import. It's the next best thing to recelving the latest issue of THE AAINBOW in your mailboxt
Every RAINBOWfest features many delignttul surprises because it's a great opportunity for commercial programmers to show
off new and innovative products for the very first time. You get the jump on new capabilities for your CoCo In exhibit after exhibit, there are demonstrations, opportunities to experiment with software and hardware, and apecial RAINBOWIest prices:

To make it easier for you to participate, we schedule RAINBOWfests in three parts of the country Since we've just met in Princeton N. J., make plans now to join us in Palo Alto or Chicago next year. For members of the family who don'tstare your affinity for CoCo. you'll be glad to know that RAINBOWfest opens Friday evening. It is a daytime-only show Saturday. The CoCo Community Breakfast kicks off the festivities with a well-known speaker to keynote the highly popular affair On Sunday the exhibit hall opens at $11 \mathrm{le.m}$. and closes at 4 p.m. These traditional gatherings allow you to catch up on significant happenings in the CoCo Community in an intimate setting.

Come to our next RAINBOWfest and help us all celabrate CoCo Community!
For more intormation contact our RAINBowtest coordinator dindy Brastiear. (502) 228-4492.

## Show Schedule:

Friday evening - Exhibits open from 7 p.m. to 10 p.m.

## Saturday - CoCo Community

 Breakfast at $8 \mathrm{a} . \mathrm{m}$. Exhibits open at 10 a.m. and close at 6 p.m.Sunday - Exhibits open from 11 a.m. to 4 p.m.

YES, I'm coming to Palo Altol I want to save by buying tickets now at the special advance sale price. Breakfast tickets require advance reservations.

## Please send me:

Three-day tickets at $\$ 9$ each
One-day tickets at \$7 each Circle one: Friday Saturday Sunday Saturday Breakfast at \$12 each Handling Charge \$1

# The Eight Lights Of Chanukah 

By Aryeh Glaberson

Menorah aids the user in lighting Chanukah candles and reciting the proper blessings. It gives a short history lesson of the origin of the eightday observance and the menorah.
Chanukah commemorates the miraculous military and spiritual victories of the biblical Jewish people and the rededication of the Temple in Jerusalem.

## Using the Program

After the history is given, press the numbers ' 1 ' through ' 8 ' consecutively for instructions on the ceremonial lighting of the menorah candles. Written directions include a graphics diagram to illustrate the appropriate procedure. After lighting is shown, the blessing recital appears on the screen in English along with the Hebrew phonetic pronunciation. When the flickering candles appear, press any key to continue.
(Any questions regarding this program may be directed to the author at 20 Celler Road, Edison, NJ 08817, phone 201-572-0324. Please include an SASE when writing.)
(Aryeh Glaberson is a 12-year-old ninth grade student at Rabbi Jacob Joseph Yeshiva in Edison, N.J. He plans to become a Talmudic scholar.)

# The Rainbow Bookshelf 

## The Complete Rainbow Guide To OS-9

The book that demystifies the state-of-the-art operating system for the Tandy Color Computer. Authors Dale L. Puckett and Peter Dibble show you how to take advantage of $05-9$ s multi-tasking and multi-user features, and the capability of redirecting input and output commands at will. An easy-to-read, step-by-step guide packed with hints and tips, tutorials and free software in the form of program listings,
Book $\$ 19.95$. Disk $\$ 31.00$ (2 diske, book not included)

## The Rainbow Book of Simulations

Features 20 award-winning entries from THE RAINBOWIS first Simulation programming compation you are the Commander-in-Chiet of the Confederate Army during the Civil War, an air tratfic controller at one of the nation's busiest airports, the owner of your own soltware business, a civil defense coordinator in charge of saving Rainbow City from a raging flood, a scientiat conducting experiments on Mars . . . Your wits are on the line. Book $\$ 9.95$, Tape $\$ 9.95$

## First

## The Rainbow Book of Adventures

A collector's item containing 14 winning programs from THE RAINBOW's very first Adventure contest. Includes such favorites as Sir Randolf of the Moors. Search for the Ruby Chalice, Deed of the York, Horror House, One Room, The Door and Dr. Avaloe. Plus, hints and tips on solving Adventures.
Book $\$ 7.95$, Tape $\$ 7,95$

## The Second Rainbow Book of Adventures

Our newest arrival features 24 ol the most challenging Adventure games ever compiled. Meet the Beatles and battle the Blue Meanies, find a hidden forlune, or win the heart of a beautiful and mysterious princess. Experience the thrills and chills of the most rugged Adventurer without ever leaving your seat. Ring Quest, Secre! Agent Man, Dark Castle, Curse of Karos, Island and morel
Book $\$ 13.95$, Tape $\$ 13.95$

# Submitting Material To Rainbow 

Contributions to THERAINBOW are welcome from everyone. We like to run a variety of programs which will be useful/helpful/fun for other CoCo owners.
Program submissions must be on tape or disk and it is best to make several saves, at least one of them in ASCII format. We're sorry, but we do not have time to key in programs. All programs should be supported by some editorial commentary explaining how the program works. Generally, we're much more interested in how your submission works and runs than how you developed it, Programs should be learning experiences.

We do pay for submissions, based on a number of criteria. Those wishing remuneration should so state when making submissions.
For the benefit of those who wish more detailed information on making submissions, please send an SASE to: Submissions Editor, THE RAINBOW, The Falsoft Building, Prospect, KY 40059. We will send you some more comprehensive guidelines.

Please do not suhmit programs or articles currently submitted to another publication.

## How To Read Rainbow

Please note that all the BASIC program listings you find in the rainbow are formatted for a 32 －character screen－ so they show up just as they do on your CaCo screen．One easy way to check on the accuracy of your typing is to com－ pare what character＂goes under＂what． If the characters match－and your line endings come out the same－you have a pretty good way of knowing that your typing is accurate．

We also have＂key boxes＂to show you the minimum system a program needs． But，do read the text before you start typing．

Finally，the little cassette symbol on the table of contents and at the begin－ ning of articles indicates that the pro－ gram is available through our RAINBOW ON TAPE service．An order form for this service is on the insert card bound in the magazine．

## What＇s A CoCo

CoCo is an affectionate name that was first given to the Tandy Color Computer by its many fans，users and owners．

However，when we use the term CoCo，we refer to both the Tandy Color Computer and the TDP System－100 Computer．It is easier than using both of the＂given＂names throughout THE RAIN－ Bow．

In most cases，when a specific com－ puter is mentioned，the application is for that specific computer．However，since the TDP System－100 and Tandy Color are，for all purposes，the same computer In a different case，these terms are almost always interchangeable．

## The Rainbow Check Plus

The small box you see accompanying a program listing in THE RAINBOW is a ＂check sum＂system，which is designed to help you type in programs accurately．

Rainbow Check PLUS counts the number and values of characters you type in．You can then compare the number you gel to those printed in THE Rainbow On longer programs，some benchmark lines are given．When you reach the end of one of those lines with your typing，simply check to see if the numbers match．

To use Rainbow Chock PLUS，type in the program and CSAVE it for later use， then type in the command RUN and press ENTER．Once the program has run，type NEW and ENTER to remove is from the area where the program you＇re typing in will go，

Now，while keying in a listing from THE hainaow，whenever you press the down－ arrow key，your CoCo gives the check sum based on the length and content of the program in memory．This is to check against the numbers printed in THE RAINBOW，If your number is different． check the listing carefully to be sure you typed in the correct BASIC program code． For more details on this helpful utility， refer to $H$ ．Allen Curtis＇article on Page 21 of the February 1984 RAINBOW．

Since Rainbow Check PLUS counts spaces and punctuation，be sure to type in the listing exactly the way It＇s given in the magazine．

## Using Machine Language

Machine language programs are one of the features of THE RAINGOW．There are a number of ways to＂get＂these pro－ grams into memory so you can operate them．

The easiest way is by using an editor／ assembler，a program you can purchase from a number of sources．

An editor／assembler allows you to enter mnemonics into your CoCa and then have the editor／assembler assem－ ble them into specific instructions that are understood by the $6809 \mathrm{ch} / \mathrm{p}$ that controls your computer．

When you use an editor／assembler，all you have to do，essentially，is copy the relevant instructions from THE RAINBOW＇s Ilsting Into CoCo．
Another method of gatting an assem－ bly language listing into CoCo is called ＂hand assembly＂As the name implies， you do the assembly by hand．This can sometimes cause problems when you have to set up an ORIGIN statement or an EQUATE．In short，you have to know something about assembly to hand－ assemble some programs．
Use the following program if you wish to hand－assemble machine language listings：

```
10 CLEAR208, BH3F00:J=2H3FBE
2& PRINT "AODRESS: ';HEXS(1);
3e \NPYI -BYTE'285
40 PDKEE I, VAL (- SH*+BS)
50I=1+1:G0T0 20
```

This program assumes you have a 16 K CoCo．It you have 32 K ，change the EH3F00 in Line 10 to SH 7 F 0 e and change the value of I to SHPFBe．

## The Rainbow Seal

The Rainbow Certification Seal is our way of helping you，the consumer．The purpose of the Seal is to certify to you that any product that carries the Seal has been physically seen by us，that it does，indeed，exist and that we have a sample copy here at THE RAINBOW，
Manufacturers of products－hard－ ware，software and firmware－are encouraged by us to submit their pro－ ducts to THE RAINBOW for certification． We ascertain that their products are，in actuality，what they purport to be and， upon such determination，award a Seal．

The Seal，however，is not a＂guarantee of satisfaction．＂The certification pro－ cess is different from the review process． You are encouraged to read our reviews to determine whether the product is right for your needs．

There is absolutely no relationship between advertising in THE RAINBOW and the certification process．Certification is open and available to any product per－ taining to CoCo．A Seal will be awarded to any commercial product，regardless of whether the firm advertises or not．

We will appreciate knowing of in－ stances of violation of Seal use．

PHALANX By John Galus. 32K Hi-res ML game circa Alexander the Great. Bit mapped graphics. Player controls Cavalry, Archers, Phalanxes in an attempt to out manuever and out fox the enemy. Choose Attack, Defensive, Normal or Range stance for combat on any of three battlefields. Disk ( $\$ 30.95$ ) and Cassette ( $\$ 27.95$ ) versions are different.
D-DAY THE 6th of JUNE By Phil Keller. 64 K Hi-Res ML game (See Barbarossa for graphics information). Player designs order of battle consisting of Rangers, Infantry, Armor, Recon, Fighter Bombers, Airborne and Artillery. Bit mapped graphics. A host of options including air support and naval battery fire, You even get to see things explode. Disk ( $\$ 33.95$ ) and Cassette ( $\$ 30.95$ ) versions are different.

ANIZO 32 K By Carl Carpenter. Game of the Italian Campaign for 1 or 2 players where Churchill's "soft underbelly of Europe" became Mark Clarke's "tough old gut". Our first simultaneous movement game. All units historically portrayed. Disk (\$28.95) and Cassette $(\$ 25.95)$ versions are different.

# WERE BRINGING THE COCO 

## RAINBOW'S BROADENING ITS SPECTRUM

THE RAINBOW and the Delphi Information Utility have joined together to allow CoCo owners all over the world to connect with one another!

Delphi is a full-service information utility. It offers everything from up-to-the-minute news stories from The Associated Press to electronic mail services. But, best of all, it now has a special forum for Color Computer owners, and It's operated by the people who bring you THE RAINBOW each month.

The CoCo Special Interest Group (SIG) features a variety of services, including an open forum where you can send and receive messages from Color Computer owners all over the world. It also has several databases to which you can upload your favorite programs and from which you can download programs written by other CoCo enthusiasts. Some of these databases are BASIC programming, OS-9 and home applications.

When setting up your account with Delphi, if you do not have a credit card or prefer not to use it. Delphi requires that you send $\$ 20$ to give your account a positive balance. This will be refunded after your first free hour if you choose to no longer use the system or it will be applied to future connect charges.

## PEEK INTO THE RAINBOW

The CoCo SIG's conference feature allows you to meet electronically with other members of the CoCo Community. You can join conferences with notables such as Fred Scerbo, Dan Downard, Ed Ellers, Lonnie Falk, Dick White, Tony DiStefano and others - on a regular basis. Conference schedules will appear in THE RAINBOW each month. Be sure to check online announcements for changes and additions.

## THE OTHER SIDE OF THE RAINBOW

On Delphi, you also are able to buy RAINBOW ON TAPE - order a whole set, or download an individual program immediately. You can also renew your rainbow subscription, make a fast and easy order for software or hardware from a multitude of vendors, or inquire about products on the CoCo SIG.
We also have a number of programs that you can download and use, just for the cost of the time you spend transferring them. There'll also be corrections for RAINBOW articles, helpful hints and many other useful features.

## FREE LIFETIME MEMBERSHIP

THE RAINBOW is offering subscribers a free lifetime subscription to Delphi - a $\$ 29.95$ value - and a free hour of connect time - a $\$ 6$ value at either 300 or 1200 Baud during evening, holiday and weekend hours so you can sample Delphi and the brand new rainbow CoCo SIG. That's right. Your subscription to THE RAINBOW entities you to this $\$ 35.95$ value as a free bonusI
If you're not a RAINaOW subscriber, just enter your order when you sign on with Delphi and you'll get the same great deall For our \$31 subscription fee, you'll get the finest Color Computer magazine ever, a free lifetime subscription to Delphi and a free hour of connect time.

## SAVE EVEN MORE

Want to save an extra $\$ 15$ ? While you're online, you can order the Delphi Handbook and Command Card (\$21.95) and three hours of connect time (\$18) for only \$24.95.
Delphi provides us all with Immediate CoCo Communlty. Check it out today. After all, you can sample it for free!

## How to reach RAINBOW's Color Computer SIG . . .

There are several ways to connect to Delphi and THE rainbow's CoCo SIG. In most cities you will not even have to pay long distance charges; you can use special data communications networks, like Uninet, Tymnet and the Canadian Datapac network.
First, set your terminal program to operate at either 300 or 1200 Baud (depending on the modem you have), and also select either 7 bits with even parity or 8 bits with no parity, and one stop bit. (If one combination doesn't work, try another.)

Decide which network you should use (there is no charge for any of them, unless you have to make a longdistance call) and follow the instructions below:

On Uninet: Call (800) 821-5340 to get the Uninet number for your area. After you call the appropriate number for your own area and make connection, you'll see a prompt of "L2" Press enter, the period key (.) and ENTER again. At the "service:" prompt, type GVC (for General Videotex Corporation) and ENTER.

On Tymnet: Call (800) 336-0149 to get the Tymnet number for your area. After you dial your designated number and connect, you will see either "garbage" or a message saying "please type your terminal identifier." At this point, even if the screen is garbled, simply press ' $A$ ': When "please log in:" appears, type DELPHI and press ENTER.
From Canada (on Datapac): Call Delphi Customer Service at (617) 491-3393 to get the Datapac number for your area. After you connect, press the period key (.) and ENTER (use two periods if you're using 1200 Baud), type SET $2: 1,3: 126$ and press ENTER. Now type p 1 3106, DELPHI; and press ENTER.

From other countries: Many countries have their own data networks that can connect to either Uninet or Tymnet. Check with the telephone authorities in your country for details on how to sign up for this service. When you have an account set up, you can reach Delphi with a "host code" of 312561703088 through Uninet, or 310600601500 through Tymnet. (Youll have to pay the toll charges for this connection.)

## Type in Your Username

If you're already a subscriber to THE RAINBOW, at the "USERNAME;" prompt, type RAINBOWSUB and press

ENTER, At the "PASSWORD:" prompt, type your individual subscription number from the mailing label of your latest issue of the rainbow. (If there are one or more zeros at the beginning of this number, include them.)

If you don't already have a subscription, at the "USERNAME:" prompt, type RAINEDWORDER and press enter. At the "PASSWORD;" prompt, type SENDSUB and press enter. Have your MasterCard, VISA or American Express card ready, because you"l be led through a series of questions that will enable us to put your Ransbow and Delphi subscriptions into effect. In an effort to hold down non-editorial costs, we do not bill for subscriptions.

If you make a typing error, just press ENTER and start over. Remember that at any point, when you're on Delphi, you can type HELP to get help on how to use the system. To get off the system just type BYE.

## Come Visit Us! Type: Group coco

After you sign in, you'll be prompted to set up your own, personal "user name" - Delphi is a friendly service, no numbers to remember - and you'll be asked a number of questions so Delphi can set up your account. You'll also be assigned a temporary password. No time is assessed against your free hour of service while you answer these questions.

Delphi will tell you that your account will be ready after 6 p.m. the same day if you sign up before noon (Eastern time zone.) If not, your account will be ready at 6 p.m. the next day. Once an account is opened, each RAINBOW subscriber will be credited with an hour of free time!

When you log back in, use your chosen user name and your temporary password to access the system. At that point, you will meet Max, who will help you configure things and will change your temporary password into your own personal password. This is the password you will use for subsequent sessions - or until you change it. Again, there is no charge for the time you spend configuring your account. Your hour of free time starts after Max bids you goodbye.

You'll wind up at the Delphi Main Menu; type in GROUP COCO and join us on the CoCo SIG:

# Alpine Slopes <br> A small amount of memory for the big thrill of skiing . . . 

## By Mark Sabbatini

TThe 4 K Color Computer is all but ignored today. There is almost no software written or available for it and magazines pay little, if any, attention to it. Alpine Slopes is an action game that fits into 4 K of memory. There are many programming techniques used to fit the program into 4 K that should be helpful to beginning programmers.

When you first run the program, a title screen appears showing the present highest score and the score of the last game played, Upon pressing a key, you are asked several questions on what type of course you want to ski. The difficulty level allows you to start at zero, 200 and 400 yards down the course, depending on the level set. The fast or slow option can only be used if your computer can handle the POKE 65495,0 . Otherwise, leave it out of the program. The third question determines what type of race you are running and your score is kept accordingly. The fourth question determines how far down the slope you can see.

After the fourth prompt, an orange block appears at the top of the screen. Use the left- and right-arrow keys to move the skier back and forth. There's no need to press the keys repeatedly, just hold them down. As you move down the slope different objects appear. The most common of these are trees. They start out as bushes, but continue to get larger. Also, as you move down the course your distance is marked every 10 yards. You must avoid these yard markers.
(Mark Sabbatini is a student at Mountain Open High School in Conifer. Colo. He enjoys skiing, backpacking and computer programming.)

CER-COMP 5566 Ricochet Ave. Las Vegas, NV 89110

Helpful objects include blue ski jumps, which move the skier ahead 50 yards. If you are racing slalom, gates will appear. Every gate you go through adds 100 points to your score, Once in a while the program will not give eredit for hitting a slalom gate or a jump. Try to hit them head on to increase your chances of success. Once you run into something other than a ski jump or gate. the game is over.

Once the game is over, your yard total is added to the score one yard at a time. In a downhill race you will receive two points for every yard gained. If you want to skip the totaling process, press a key and the title screen appears. If your machine cannot handle the PRIKE here, leave it out. If you have the high score, it is indicated in reverse video, Press any key for another game.

## Program Techniques

One of the most important requirements in an action game is speed. But in a game like this, there are often up
to 15 or 20 objects on the sereen at the same time. How does a simple program such as this manage to attain its speed? The answer is simple and often overlooked. The screen scrolls up every time it is filled. By printing 31 black spaces at the bottom of the screen, the program simulates movement.
One of the biggest aggravations I suffer in some programs is that after the game is over, I often accidentally press a key, thus causing the title screen or other to be missed. 1 avoided this in Alpine Slopes by putting in extra INKEYs statements to help guard against accidental input.

The breakdown of the program lines is as follows:

| 130 | Set high score to zero |
| :--- | :--- |
| $140-300$ | - Initialize game |
| 340 | Check for keyboard |
| 350 | input |
| 360 | Position skier |
| 370 | Print skier |
| 370 | Check to see if skier hit |

jump or gate and give appropriate result
380 - Check to see if skier hit trec or yard marker
390

- Print tree
- Random action to put gate or jump on screen
420 - Scroll screen
430 - Print yard marker
440 - Add one to yard score
450 - Determine tree size
480 - Erase skier
490 - Repeat loop
500-520 - Game over and title screen
530-540 - Set up new game
I think Alpine Slopes shows patt of what can be done with 4 K of memory. 1 hope this article inspires some 4 K programmers. If you have any questions you may call or write me at 12139 Circle Drive, Conifer, CO 80433, (303) 838-7042. Please include an SASE when writing.

## Corrections

"Screen Pokes Made Easy" (November 1985, Page 162): Bill Bernico has informed us that there are two minor errors in the text. The listing referred to as SCRNPOKE in the ext should actually be called TITLPOKE, the reference mode to Listing I should really be Listing 2 (DEMOPOKE).

CINCPAC - Battle Of Midway (August 1985, Page 198): H Lawrence Elman tells us that the program fix he gave in his review is in error. The correct line should be:

1186 IF AS="S" THEN 1196 ELSE IF A\$<"I" OR A\$>"g" OR IF VAL(A\$)> (UC+1) THEN 1185

Hint.

## Cheap Keyboard

Most CoCo owners are disappointed over the lack of a good keyboard supplied with their machine. However, a lot of people do not want to spend $\$ 80$ on a keyboard for their $\$ 160 \mathrm{CoCo}$. Look no further! Radio Shack is selling [while supplies last] a keyboard with 57 keys ( 2 function keys, Contrel and Alternate, Cat. No. 277-1019). The price? $\$ 4.95$ !

The keyboard layout is slightly better than the CoCo keyboard, and the feel of it is almost as good as the Model 1000's keyboard. The arrow keys are arranged in a diamond pattern to the right of the ENTER Key, with the BREAK key moved right to prevent accidentally hitting it. The two function keys are to the right of the space bar and the CTRL and ALT keys are where the vertical arrows were on the old keyboard. All software written for a 57 -key keyboard upgrade will work with it.

Installation of the new keyboard is simple. Unplug the CoCo and flip it on its back. Unscrew all the screws (last one under the warning label) and put some tape over each screw hole so they won't fall out. Then flip it right-side-up and remove the cover. Lift the old keyboard off its posts ind pull the keyboard's cable out of its connection. Save the keyboard someplace safe and remove the new keyboard from lis packaging. If you have a newer CoCo (October 1985 or tater) the new keyboard's cable will plug into the existing connector. Otherwise, you will need two pieces of cardboard ( $1 / 2$ inch by 2 inches). Bend all the connector pins down against the board, making sure they are straight and parallel to each other. Then, slip the new keyboard's cable under the pins and line them up with the traces on the cable. Move the first piece of cardboard in between the cable and the board, and realign the cable with pins. Put the second piece of cardboard in between the first piece of cardboard and the eable. Make one last check to see that the cable is aligned with the connector pins, then put the keyboard on its posts.

After putting the new keyboard on its post, close your CoCo and power it up. Test every key - the cursor should at least turn back orange. If some or all of the keys don't work, unplug your CoCo and check the connector and cable. If you still have problems, I can be reached on Tuesday evenings at (315) 689-7864,

- Mike Sweet

## See You AT RAINBOWfest Palo Alto

## FREE PROGRAMS!

We learned from THE RAINBOW that readers want programs to type in, so, each month we bring you an assortment of them, including games, utilities, business applications and graphics.

## BAR CODE, TOO!

Also, PCM is the only computer publication in the world (that we know of) that brings you programs in bar code, ready to scan into memory with the sweep of a wand!

## TUTORIALS GALORE

Add to this our regular tutorials on telecommunicating, hardware and machine language, as well as BASIC programming tips and product reviews, and we think you'll find we're one of the most informative and fun magazines on the market today.

So if you're ready to add portability or step up to MS-DOS, stay with Tandy and THE RAINBOW family through PCM.

## YES! Please send me a one year (12 issues) subscription to PCM for only \$28.* A savings of 22\% off the newsstand price.

## Devon Copley Sunset

Devon continues our paean to Sol with this serene sunset from a thalassic point of view. Devon used Extended BASIC and Micropainter to achieve this beautiful scene. Devon lives in Amherst, N.Y.

## Sean McDonough

## Roadside Sunset

From Hillsboro, Ohio, Sean gives the gallery a picturesque representation of a sierra sunset beside an archetypical highway. Sean used Graphicom and a BASIC program he wrote for this modern American vista.

Clinton Kajinami Angelfish Clinton used Extended Color BASIC for this submission to the gallery and informs us that he used the advantage of having four live models who share his home in Walton, Kan.

Send your entry on either tape or disk
to.
CoCo Gallery
THE RAINBOW
P.O. Box 385

Prospect, KY 40059
Attn: Monica Dorth

## George Aloía

A Small Byte for Mankind
George lives in Margate, Fla., and used CoCo Max to round out our Holiday Gallery with this delighttully surrealistic depiction of the Space Shutthe deploying its arm.

## SHOWCASE YOUR BEST!

You are invited to nominate original work for inclusion in upcoming showings of CoCo Gallery. Share your creations with the CoCo Community!

Be sure to send a cover letter with your name, address and phone number, detailing how you created your picture (what programs you used, etc.) and how to display it. Also, please include a few facts about yourself.

Don't send us anything owned by someone else; this means no game screens, digitized images from TV programs or material that's already been submitted elsewhere.

We will award a first prize of $\$ 25$, a second prize of $\$ 15$ and a third prize of $\$ 10$. Honorable mentions will also be given.

# Christmas Pageantry 

## By Mike Hall

Let's trim the tree And kiss under the mistletoe! CoCo can dress up the festivities With a Christmas Show Some music and graphics That will add To the season's glow.

Christmas Show displays various holiday scenes accompanied with traditional tunes of the season. Songs include "We Wish You a Merry Christmas," "Deck the Halls" and "Frosty the Snowman."
(You may contact the author of this program with questions you may have at 3019 Sylvester Dr., Hartland, WI 53029, phone 414-367-6186. Please enclose an SASE when writing.)
(Mike Hall is a 19 -year-old student at the University of Wisconsin-Madison. He is a self-taught programmer and an active participant in the CoCo-Mug, a Milwaukee users group.)

## About The One-Liner Contest

the rainbow's One-Liner Contest has now been expanded to include programs of either one or two lines. This means a new dimension and new opportunity for those who have "really neat" programs that simply just won't fit in one line.

Here are the guidelines: The program must work in Extended BASIC, have only one or two line numbers and be entirely self-contained - no loading other programs, no calling ROM routines, no poked-in machine language code. The program has to run when typed in directly (since that's how our readers will use it). Make sure your line, or lines, aren't packed so tightly that the program won't list completely. Finally, any instructions needed should be very short.
Send your entry (preferably on cassette) to:

## the rainhow One-Liner Contest

## About Your Subscription

Your copy of the rainbow is sent second class mail. If you do not receive your copy by the 5th* of the month of the publication date, send us a card and we will mail another. *Canadian subscribers and foreign airmail allow two additional weeks.

You must notify us of a new address when you move. Notification should reach us no later than the 15th of the month prior to the month in which you change your address, Sorry, we cannot be responsible for sending another copy when you fail to notify us.

Your mailing label also shows an "account number" and the subscription expiration date. Please indicate this account number when renewing or corresponding with us. It will help us help you better and faster.

For Canadian and other non-U.S. subscribers, there may be a mailing address shown that is different from our editorial office address. Do not send any correspondence to that mailing address. Send it to our editorial offices at Falsoft, Inc., The Falsoft Building, Prospect, KY 40059. This applies to everyone except those whose subscriptions are through our distributor in Australia.

## I(IU))CoCoTuner ${ }^{(I(U U))}$

An easy-to-use tuning instrument of unbelievable precision

Actual Display

- Tunes like a Strobotuner * at a lraction of the cost!
- Both generates pitch and measures pilch
- Real-Time strobe pattern displayed on screen.
- Full 7 octave range, including sharps \& llats.
- Accurale to .003\% " ${ }^{\text {- }}$
- Extremely friendly user interface.
- ROM pack works with any Color Computer
- Accepts standard $1 /$ B $^{\prime \prime}$ microphone plug.
- Percent offsel and direct Irequency selection available.
- Optional piano funing kit available (prolessional tuning wrench, 4 mutes, 1 tell muting strip, and "How To" booklet),

The following products recently have been received by THE RAINBOW, examined by our magazine staff and approved for the Rainbow Seal of Certification, your assurance that we have seen the product and have ascertained that it is what it purports to be.
This month the Seal of Certification has been issued to:

Micro Illustrator, a 64 K graphics program requiring a joystick or mouse and a disk drive. Possible are a variety of brushstrokes, assorted patterns, colors, graphs, geometric figures and fantasy designs limited only by your imagination. Text is possible anywhere on the screen. Tandy Corp., available in Radio Shack stores nationvide, disk \(\$ 29.95\)

Spidercide, a 16 K arcade game requiring a joystick wherein your spaceship is attacked over a planet populated by fast and deadly arachnids. Your mission is to stay alive by defeating the webs'strategy and destroying the spiders, Tandy Corp,, availahle in Radio Shack stores nationwide, cassette \$19.95

CD Editor, a 64 K full-screen editor requiring a disk drive and residing in the space of the currenL EDIT command in Extended Color BAsIC. This short ( 400 bytes) program allows insertion and deletion of characters and is compatible with JDOS, Disk Color HASIC and Disk Extended Color BAsic. Possible are the user's choice of re-burning the ROM for constant full-screen editing or running from the ansic loader that comes with the disk if the user doesn't wish to reburn the ROM, C\& D Computer Products, 1706 Seabrook Avenue, Cary, NC 27511. disk 319.95 plus \(\$ 2\) S/H

Super Directory Catalog, a \(32 / 64 \mathrm{~K}\) organizational utility to keep track of files, sort them in alphabetical order and give a printout of the user's personal disk catalog. Possible are the storage of up to 1,700 filenames for 32 K and 3,800 Ior 64 K . Metalsoft, P.O. Bow 7796. Independence, MO 64054. disk \(\$ 24.95\) plus \(\$ 2 \mathrm{~S} / \mathrm{H}\)

Color COMPAC, a communications utility to provide computer-to-computer access of information and or perform data transfer operations. Requirements are 16 K ECB, telephone and modem. Features include relocatable code for \(32 / 64 \mathrm{~K}\) CoCos, selection of Baud rate, full or half-duplex capability, selection of 7 - or 8 -bit word length, 1. or 2 -stop bit selection and ability to transmit or receive BASIC or ML programs. Tandy Corp., available in Radio Shack stores nationwide, casselte \(\$ 29,95\)

Color Essential Math Volume 1, a supplement to regular classroom instruction requiring 32K ECB for cassette systems and Disk ECB for disk systems. Skill building exercises cover addition, subtraction, multiplication, division and number concepts. Documentation includes sample record sheets for students and appendices for planning application5, making backup copies and lesson content summaries. Tandy Corp, available in Radio Shack stores nationwlde, cassette and disk \(\$ 120\)

VIDCODIT, a video digitizer requiring 16K for cassette systems and 32 K or greater for disk systems. It is necessary to assemble the digitizer; some limited building experience and knowledge of electronics is recommended. The unassembled kit contains machine lunguage software, a blank, pretimned and drilled printed circuit board, a full parts list, schematic diagram, parts layout, assembly and trouble-shooting instructions, and sample picture and image recall program (for disk version only). Possible are the selection of three, five or seven gray levels, recall of menu, mage repeat or hold mode, right joystick and cassette port for signal and power, 256 horizontal by 192 vertical resolution PMODE 4 and selectable negauve or positive video repeat or hold mode. Kinney Softivare. Depr. 1. 121 N. Hampton Road, Donnelsville, OH 45379.339 .05 plus \(32 \mathrm{~S} / \mathrm{H}\)

CoCo Cooler Too, a hardware addition for CoCo 2 Made of high impact plastic and made to fit over the vents on the outside left half of the computer case, CoCo Cooler Too pulls air through the computer to keep temperature at a safe level. REM Industries, Inc., 9420 B Lurline Avenue, Chatsworth. CA 91311 . 544.95 plus 82.50 S/ H

Stylo-Pak, OS-9 versions of three programs. Stylo-Graph word processing system with cursor-based editing, dynamic screen formatting, text mobility, margin and tab sets, Ilexible format display, text control and yaried printing options; Stylo-Merge mail merge program with these features: append files together, possible definition and insertion of variables and printing of individual
envelopes/labels; Stylo-Spell with a dictionary of 42,000 commonly used words and user-defined additions for a supplemental dictionary. Siylo Sofiware, P.O. Box 916 . 482 C Sireet, Idaho Falls, ID 83402, three disks and marual \$199.95 plus \$4 S/H
The CoCo Chronicles, a soft cover book detailing the history of the Color Computer. Included are anecdotes, a running Who's Who, dates and locations of major product and publication debuts and events, and the identity of the person who dubbed our friend "CoCo." Spectrum Projects, Inc, P. O. Box 21272. Woodhaven. NY 11421, 314.95 plus \$3 S/H

BASIC-PLUS, a \(32 / 64 \mathrm{~K}\) ECB utilityrequiring a disk drive to allow users to enter mostused commands with single keystrokes. Features include a 32 -character, interruptdriven, type-ahead keyboard with auto-key repeat, audio key click and 32 K printer spooler: Spectrum Projects, Inc., P.O. Box 21272, Woodhaven. NY 1/421, disk 329.95 plus \(\$ 3\) S/H

CCZAP, a disk utility allowing modification of data the same way programs are modified in memory. Use of indirect addressing ensures compatibility with other Disk ansiCs. Supported are up to four drives and up to 80 tracks. Possible are Hex mode entry. ASCII mode entry, writing modified sectors back onto disk, incrementing and decrementing sectors and use of CCZAP as a database not readily available to unauthorized persons. Matrix Compuring, P.O. Box 2011, 380 5th Avenue. Salmon Arm. British Cohmbia, CND., VOE 2T0, disk \$49.95, U.S. funds

Vincent Van CoCo, a 32 K ECB graphics utility requiring Iwojoysticks but capable of ascepling commands from either joysticks or keyboard. Possible are four-color sets, enlargement/reduction of graphics sereen, scramble/unscramble the graphics screen, text and individual scrolls, Documentation comes with quick reference card, Rococo Software, 3019 Sylvexter Drive, Hariland, WT 53029, cassetfe \$17.95, disk \$18.95

Knock Out, a 64 K boxing game that pits you as Champion of the World against five challengers; each opponent becomes harder than his predecessor to knock out. The first challenger-starts punching slowly with ample time for youl to react, but speed increases and reaction time decreases with each opponent. Diecom Products, 6715 Fifth Line, Milton. Ontario, Canada L9T \(2 \times 8\), cassette or disk \(\$ 28.95\) U.S. funds, \$38.95 Canadian funds

House Doc, a 64 K home utility requiring a disk drive that asks users personal medical history questions and offers advice on when to seek a physician's care and when and how to use home resources. Documentation includes descriptions of common tests and procedures, charts of nutrients and a glossary of terms, For Your Health Software, 58-A Star Route, Coalmont, TN 37313, disk \(\$ 59.95\)

Parts Per Million, a 16 K or greater home utility requiring a disk drive to help horticulturists and gardeners calculate formulas for liquid fertilizers. Possible are the necessary formulas and ratios for any kind of dry, water-soluble ingredients. Green Horirons, P.O. Box 768, Mooresville, NC 28115, disk \(\$ 17.95\) plus \(\$ 1.50\) S/H

Puzzler, a 32 K machine language game that will take any word list supplied into the buit-in editor and create any of the following types of puzzles: a crossword puzzle complete with clues and small numbers to identify the words, a word search puzzle with the option of no backward or diagonal words (for the enjoyment of younger children) and a word scramble puzzle. All puzzles have an answer key that can be printed out. Color Connection Software, 1060 Buddlea Drive, Sandy, Utah 84070. cassete or disk \(\$ 29.95\)

Marble Maze, a 64 K maze game requiring a joystick. The object is to move your marble through the maze to a finish line while suecessfully avoiding monster marble eaters, acid puddles and electric snakes, among other perils. Diecom Products, 6715 Fifth Line, Milton. Ontario. Canada L9T 2 X8, cassette or disk \(\$ 28.95\) U.S. funds, \(\$ 38.95\) Canadian funds.

DOS Switcher, a hardware accessory for I\&M controllers allowing users to switch back and forth from JDOS and Disk ROMs 1.0 or 1.1, thus permitting use of software such as Telewriter and CoCo Max with the J\&M Controller in place. Spectrum Projects, Inc, P.O. Box 21272, Woodhaven, NY 11421. 324.95 plus 33 S/H

JFD-CP Disk Controller, a new generation of the J\&M disk controller. The JFD-CP uses the WD1773 controller chip. Two selectable 28 -pin ROM sockets, an 8 -pin parallel port and JDOS 1.2 are included. Gold contacts and fully buffered I/O lines ensure maximum reliability. Hardware selectable step rates allow a wide selection of drives. JDOS 1,2 supports auto-line numbering, error trapping, Baud rate selection, OS-9 boot and Memory Minder. J\&M Systems, Lud., 15100-A Central SE Albuquerque, NM 87123 , drive, coniroller, cable and manual \$289. Memory Minder disk \$26, plus 56 S/H

OS-9 Ramdisk Driver, for use with Thunder \(R A M\), this is a RAM disk driver for OS-9 consisting of a device driver and device descriptor, which, after loading into memory, gives users, in effect, another disk drive online and enhances execution speed. Spectrum Projects, Inc., P.O. Box 21272, Woodhaven. NY Il421, 324.95 plus \(\$ 3\) S/ H

ThunderDupe 2, a disk duplication program for use with ThunderRAM as a buffer for the master disk. Up to four disk drives can be used for duplication. Spectrum Projects, Inc, P.O. Box 21272, Woodhaven, NY 11421. 524.95 plus \(\$ 3\) S/ H

Spectrum Font Generator, a printout utility requiring a disk drive and compatible with most dot-matrix printers. Users can print out any document previously saved in ASCII files with any of the five supplied fonts or create a personalized font with an included program. Font styles are Roman, Italic, Futuristic, Block and Old English. Spectrum Profects, Inc. P.O. Box 21272. Woodhaven, NY 11421, \(\$ 29.95\) plus \(\$ 3\) \(S / H\)

Symphony 12, a polyphonic 12 -voice hardware stereo music synthesizer with four noise generators for percussion synthesis, sound effects and choice of 10 preset instruments such as violin, oboc, banjo, harpsichord, piano and chimes, among others. Possible is the connection to a home stereo system with six voices per channel or all 12 voices will sound from TV or monitor speaker. Speech Systems, 38 W 255 Deerpaih Road, Batavia, IL 60510, \(\$ 79.95\) plus \(\$ 3\) S/H

Don Pan, a 16 K game requiring \(\boldsymbol{H}\) joystick. You must help Don Pan, the magical flying puffer fish, stay away from danger as he flies through the air. You guide him to the balloons that contain the precious air he needs to survive and score points for yourself along the way. Tandy Corp., available in Radio Shack stores nationwide, cartridge \(\$ 19.95\)

One-on-One, a 64 K game requiring a disk drive and joystick. There are four levels of play in this basketball game in which users can play against human opponents or against CoCo. Level one is "Park and Rec": the referee is asleep and shots are easy to make or block; level two is "Varsity": the ref is awake and paying attention and shots and blocks take finesse; level three is "College": there are the standard settings and conscientious refs; level four is "Pro": though the 24 second clock ticks 24 times, the ticks are faster and going one on one with CoCo at this level is playing a champion on his home court. Tandy Corp., available in Radio Shack srores nationwide, \(\$ 39.95\)

Panic Button, a 16 K game requiring a joystick. You are in charge of an assembly line that produces robots, cakes, phones, houses, lamps and TV sets. The object is to fill the orders before time runs out to avoid getting fired. If things start piling up, push the Panic Button, instead of going into a frenzy. Tandy Corp., available in Radio Shack stores nationwide, cartridge \$19.95

Geography USA, a 16 K educational program that deals with the 48 contiguous states, the state's capital, largest city, main product and neighboring states. Viking. Inc., 910 Soo Blvd., Rice Lake, WI 54868. casselte or disk \$19.95

The XPNDR2 and SuperGuide, a CoCo breadboard card that extends the cartridge port signals to wirewrap pins on the bottom of a 40 -pin disk controller/ ROM pack connector. The package consists of over 24 square inches of drilled card for interface or prototype circuits to facilitate software development or tools available for the CoCo. Robotic Microsystems, Box 30807, Seattle, WA 98103, XPNDR2 \$39.95, SuperGuide \(\$ 3.95\)

The Seal of Certification program is open to all manufacturers of products for the Tandy Color Computer, regardless of whether they advertise in THE RAINBOW.
By awarding a Seal, the magazine certifies the product does exist - that we have examined it and have a sample copy - but this does not constitute any guarantee of satisfaction. As soon as possible, these hardware or software items will be forwarded to THE RAINBOW's reviewers for evaluation.
- Monica Dorth

\section*{BASKETBALL STATISTICS}

\author{
by Jeff Stevens
}

Coaches, let CoCo do the paperwork! Keeps each individual game, plus league, non-league and all game totals for a maximum of 16 players in up to 29 games. Stats can be kept in as many as 17 different categoties assists, steals, fieid goals, and free throw stats (made-attemptedpercentages), offensive and detensive rebounds, turnovers, personal fouis, charges, playing time, quarters played and points. Totals for the opposition leam and for your individual players are printable, Your season record and scores-to-date are available at any time. Basketball Statistics prints a year-end summary of each Inolvidual player on a game-bygame basis. Team stats for your leam and the opponents' totals for the year are included. Menu driven - Easy to run - Excellent for most any basketball team

\author{
WORD-PAK II
}

\section*{Editor:}

I recently purchased a Word-Pak II [based] on the May 1985 Rainbow review [Page 212]. For use with prepackaged 80 -column software on the CoCo , I think this product would be hard to improve. However, the software provided to link the hardware to BASIC is a weak one.

The screen editor provided is of such poor quality that I prefer not having it at all. (On my version of the software, the screen editor can be disabled by peeking the values in locations 363 and 364 prior to executing the Word-Pak II software, calling these values ' \(X\) ' and ' Y ', executing the software, then replacing the values with POKE \(363, x\) :POKE 3E4, \(Y\). The CHRS control codes will still function. Thanks to Art Flexor for the information.)

The documentation notes that the editor cannot be used for lines longer than 80 columns. The writer goes an to assure the user that such lines are not common. This is sloppy research. It also means that the editor is useless to me and most of the serious programmers I know.

While the the rainbow review claims that the screen editor allows you to enter a BASIC program "in much the same manner as you use a word processor," the resemblance is poor. The screen editor is clumsy and slow compared to other editors I have used.

The obvious solution is to use the BASIC EDIT command to avoid the screen editor. Unfortunately, when using EDIT, the new cursor characteristics make it easy to completely ruin the line you are editing. Also, there are now certain combinations of keystrokes in EDIT that will lock up the software and require you to press Reset.

The much promoted, smooth scroll option is not satisfactory for program listings. It is either too slow or, if sped up, too choppy, Smooth scrolling only works in 80 -column mode, not in the optional 32 - or 64 -column modes.

If for any reason you want to return to the CoCo's 32 -column display you
must turn off both the computer and Multi-Pak. Since exiting from WordPak to the standard display would involve simply resetting a set of addresses to the original values, 1 feel the omission is inexcusable.

The documentation itself contains a good deal of information, but is not well-organized. It is also less than complete for the Word-Pak II, having been originally written for the first Word-Pak.
When I sent my product registration for the Word-Pak back to PBJ, 1 included a note mentioning many of the items noted here. I have not received a reply.

Anyone interested in more details may send an SASE to me at 4715 W . Wadley, \#701, 79707.

\section*{P5I MUSTANG ATTACK FLIGHT SIMULATOR}

\section*{Editor:}

I would like to make some comments about P5I Mustang Atlack Flight Simulator that were not mentioned in rainbow's review [June 1985, Page 222]. In direct connect mode the program gives eight frames per second. By modem you get four frames per second. Extensive graphics on the ground were sacrificed in order to achieve a fast update rate that is necessary to have a good dog fight. The review describes the horizon as "a line." It does not mention that the sky is solid blue and the ground is black. This is very different than a white line drawn on a black background. The solid colors are important when doing loops and rolls to help you know when you are upside down or right side up.
The biggest reason I did not put in a rudder is because it is very difficult to hold and operate two joysticks while having a dog fight. What all the flight simulators need is two joysticks mounted on one box such as they do for remote control airplanes.

P51 is not meant to compete with standard flight simulators such as Worlds of Flight. P5I is an excellent game but it should not be thought of as just a game because it is also an excellent acrobatic flight simulator. PSI has fewer instruments and graphics but has much smoother controls. Loops, rolls, immelman turns, etc., can be performed more accurately than on any of the standard flight simulators.

Hopefully these comments will help readers know what \(P 51\) is and what it is not.

Brian Bruderer Author of P51

\section*{COOKBOOK}

\section*{Editor:}

I wholeheartedly agree with Howard Lee Ball's review of Cookbook [September 1985, Page 195]. It is an excellent program but needs a few patches, which I would like to share with your readers.

To the *BAS program add: 5 POKE 150,18 for a 2400 Baud printer.

To the DISPLAY,BAS program add:
620 IF Is="p" THEN GQSUB 2000
2000 CC=D:FOR II=10BB TO 1439: \(\mathrm{CC}=\mathrm{CC}+1\)
2005 IF CC=33 THEN PRINTH -2 . CHRS (13): :CC=1
\(2010 \mathrm{FF}=\operatorname{PEEK}(I I\}\) : IF FF \(>128\) THEN \(\mathrm{EF}=239\)
2020 IF \(F F=96\) THEN \(F F=32\)
2030 PRINTH-2, CHR玉(FF); : NEXT II:PRINTH-2, CHRS(13);:RETURN

This allows you to print the menu when it is displayed on the screen by typing P. The FF \(=239\) in Line 2010 selects the border character that I chose; you can change it to suit your taste and printer,

I suggest you make these modifications to your working copy and leave the master copy intact.

Mark Sullins
Manhattan, KS

\section*{PROBALOTO}

\section*{Edifor:}

I wanted to write and express my appreciation for your excellent review of Probalolo in the October 1985 issue (Page 196). It was obvious that the
reviewer took the time to work with and understand the program.

Even though the reviewer stated that his "criticisms of Probaloto were very minor," I would like to answer them. The weighted portion of Probalolo was set up to be as flexible as possible. Most of the time, Probaloto will be used to pick lottery numbers, but each state has different rules. States use six or seven numbers from one to 40 . From one to 44 , from one to 48 or other combination of numbers.

Probaloto will play these and more. The program will even sort the numbers in order if five or more numbers are being selected. In addition, an operator can use the weighted option to pick the first, or the first, second and third place horse in a race. By creating a data file that contains the published odds of each horse ( 20 to \(1=20,10\) to \(1=10\), etc.). then weighting towards the least picked numbers, the operator makes a random selection weighted by the odds of the horses. If four or less numbers are selected then they will not be sorted, so he may ask for three numbers from one to, say, II (for first, second and third place in a race with II horses). There are numerous other ways Probaloto may be used.

The reviewer stated that the data printout was not formatted well enough, but not knowing how many numbers will be printed makes formatting difficult. The operator may be selecting from nine, 40,48 or even 100 or more numbers. Besides, the printout from a lottery that uses numbers from one to 48 still takes less than one page. Flexibility is also the reason the program goes to the start rather than the main menu after printing or saving data files. This takes only a few seconds and forces the operator to set up the program properly. It is imperative that the operator does not play one state's lottery and then start on another state's without changing the parameters.

As far as the spelling error, well I stand corrected and so does the program. If anyone who has already ordered the program is bothered by this error, I will, upon return of the original, send a corrected version and pay the postage both ways.

Thank you again for your review. Any questions concerning this program should be addressed to me at 322 Haymarket Pl., 43230.

\title{
Magazine Index System's Flexibility Suits Many Purposes
}
"Now where did I read that article about a special DOS command?" How often have you asked yourself a similar question when you need to locate a specific article, program, review, POKE, etc., and of course you need it right now?

To solve this problem there is Magazine Index System, a specialized database program to catalog magazine articles, "Oh no," you are thinking, "another database program!" I confess being somewhat skeptical myself, but this program has so many pluses that it has a legitimate raison d'etre.

For starters, the author has included four files (albeit with typos as noted by the author) that encompass CoCo articles published between the years 1982 to 1985. This alone makes the program very attractive to purchase. Additionally, the program has an abundance of interesting and convenient operating features.

Magazine Index System requires 16 K , one disk drive and the Radio Shack disk operating system. Since the program is not copy protected, backups are easily accomplished. Being a disk database, Magazine Index System accesses the disk drive quite often to store and retrieve data. According to the author, data is stored in a compressed format, thereby using only 75 percent of the space of a normal file.

The ninc-page manual is printed on \(81 / 2\) by 1 t -inch paper. Since the instructions are clear and the program is totally menu-driven, Magazine Index System is a snap to learn.

To operate the program, simply type RUN - INDEX - (16K users will need to do a PCLEAR1 first) and a colorful title screen appears, Upon pressing any key, a file menu is displayed, listing all the filenames that have the programassigned lowercase "inx" extension. A maximum of 12 files can be on one disk. If a file is too large for one disk, additional data can be stored on other disks. Upon opening a file, the main menu is presented.

At the top of the main menu is the program's name, the filename, the number of records in the file and the number of free granules on the disk. Below this information are the six main functions of the program. Each of these also has a submenu.
"Add new data" permits entering new data in an opened file. There are two fields available for data entry, The first field is 60 characters in length and is for the article's title and a short description. The second field holds 20 characters and is recommended for the page number, the issue date and any other pertinent information. Since this field retains the data from the previous record, the page number should be listed first to facilitate easy editing of that number on additional records instead of typing in the entire field.
A niee feature of this sereen (and the edit sereen) is the ability to move the cursor left and right without destroying any of the data. To change a character, simply write over it; to delete a character, press break. Pressing Clear inserts a space that can be changed to any other character. As a word of caution, if the number of characters exceeds the field's size, then the last characters in the field "fall off."

Another weicomed feature in these screens is a repeating key. Once the key is held down for one to two seconds, it will automatically repeat.
"Edit current file" displays both fields of the record in question. You can request a specific record number, edit a record, go to the next/previous record or return to the main menu. If the first or last record of a file is displayed, the previous and next record keys are inoperable.
"Search files" permits searching an opened file or all files. Up to nine separate search words or phrases (with each being up to 29 characters in length) may be used. Numerous search words require more time to complete the task, but as a speed lest I used a non-word (ZXY) in one of the author's files, it searched the entire file of just under 1,000 records in about 90 seconds!

After entering the search word, you have the option of having the record displayed on the screen or on the printer. The screen display shows the record numbers being searched, the filename and the record once a match is found. You may then continue the search, print the record or end the search. If the printer option is chosen, only the record numbers and filename are shown, with all records being printed that contain the search word. A search can be terminated at any time by pressing BREAK.
"Change file" returns to the file menu and permits the opening of a different file.
"Open new file" creates a new file.
To exit the program, press the BASIC option. This closes all files, clears memory, resets the drive to Track 0 and does a cold start.

As an added benefit, the author provides an ASCII transfer program that permits files to be read by othet programs. 1 did so using Telewriter-64 and had no problems.
To test the program, I used the author's data as well as my own by entering all of the 1985 articles from an astronomical magazine. The program performed extremely well. Only two small problems were detected; both in the "Search files" routine. When requesting the next or previous record, the program occasionally incremented by two records instead of one. The other problem concerned searching all files: the record count was on the last file searched, not a count on all of the files.

A few routines would assist in making Magazine Index System a highly polished product. For example, there is no form feed command, which results in records being printed on the perforation. Also, words are cut in two on the first line if two lines are printed. A record deletion feature as well as a sort routine might also be beneficial. However, these items are not major distractions.

Even though the author has intended Magazine Index System to be used primarily as a magazine index, it is flexible enough for many other purposes that are only limited by the user's imagination. 1 really enjoyed using the program and recommend it for those who want a wellbehaved database at a low price, with the added benefit of extensive CoCo article files already included.

\section*{The HJL－57 Keyboard}

\section*{Now available for all models，}

\section*{including CoCo 2.}

\section*{Compare it with the rest． Then，buy the best．}

If you＇ve been thinking about spending good money on a new Keyboard for your Color Computer， why not get a good keybuard for your money？
Desianed from scratoh，the HJL 67 Prolessional Keyboard is buillto unlock AlL the polenilal performance of your Calor Computer．Now，you can do real word processing and sail through lengthy listings．．．with maximum speed；minimum errors，

At \(\$ 79.96\) ，the HJL－67 is reason－ ably priced，but you can find other CoCo keyboards for a few dollara less．So，belora you buy， we suggest that you compare．

\section*{Compare Design．}

The ergonomically－superior HJlL－ 57 has scuiptured，low protile Keyoaps；and the three． oolor layout is idenilical to the original CoCo keyboard．

\section*{Compare Construction．}

The HJL－57 has a rigldized aluminum baseplate for solld， noillex mounting．Switch contacis are rated for 100 million cycles minimum，and eovered by a spill－ proof．membrane．

\section*{Compare Performance．} Offering more than full－travel， bounce－prool kaybwilches，the HJL－ 57 has RFIIEMI enielding that ellminates Irritating noise on displays；and four user－definable function keys（one latchable）， speolally－posiltoned to avold inadvertent actuatlon．

\section*{Free Function Kay Program} Your HJL－57 kit Includes ueage instrualions and decimat oodes produced by the function keys， plus a free sample program that defines the function keys as follows：\(F 1=\) Screen dump to printer．F2 \(=\) Repeat Key（atching）：F3＝Lower case upper case filp（if you have lower case capability）．\(F 4=\) Control kay；subtracle 64 from the ASCII value of any kay pressed．Runs on disc or tape； extended or standard Basio．

\section*{Compare instaltation．}

Carefully angineered for easy installation，the HJL－57 requires no soldering，drilling or gluing． Simply plug il in and drop li right on the original Coco mouning posts．Kit includes a
new bezel for a totally finished conversion．

\section*{Compare Warrantles．}

The HJL－ 57 is built so well，it carries a fulf，one－year warranty． And，it is soid with an exclusive 15－day money－back guarantee．

\section*{Compare Value．}

Youknow that a bargain is a bargain only so long as it lasts． If you shop carefully，we think you will agree．．．The HJL－ 67 is the last Kayboard your CoCo will everneed．And that＇s raal value．

\section*{Order Today．}

Only \(\$ 79.95\) ，the HJL－57 is available for immediate shipment for either the orlginal color Computer（sold prion to October， 1982）or the F－version and TDP． 100 （introduced in October，1982）， and the new 54 K CoCo．Now alao avallable for CaCo 2.

\title{
Super Cosmos Connection Cures Slow Printer Blues
}

One frustration for many CoCo users is waiting for long printouts to finish. Printing a listing for a 32 K program seems to take an eternity, particularly if you are waiting to run or edit it. Wouldn't it be nice if you could print one chapter of your "World's Greatest Novel" while writing the next? The Super Cosmos Connection may be just what you have been looking for.

The unit acts as a buffer between your CoCo and a printer. It is capable of receiving data from the computer at 9600 Baud (19200 if you're lucky), storing it and sending it to the printer as fast as the printer can handle it. The output from the unit is made to go into a printer's Centronics compatible parallel port. There is no serial (RS232) output available. The manufacturer claims the unit will work with any parallel printer or they'll give you your money back. I had no problems in hooking it up to an Okidata u82A printer.

How much can it store? The Super Cosmos Connection comes in an \(8 \mathrm{~K}, 16 \mathrm{~K}, 24 \mathrm{~K}\) and a 32 K version. The unit tested for this review was a 32 K model. 32 K works out to nearly seven pages of solid text at 80 characters per line and 60 lines per page. In addition, the unit can act as an RS-232 switcher by providing a modem connection.

The buffer is built into a compact plastic case that measures 4 inches wide, 7 inches deep and \(11 / 4\) inches high. There are three top-mounted switches that add a half inch to the height. Power is supplied by a small plug in an AC power-pack that comes with the unit. Two 44 -inch cables come out of the back and are terminated with color coded four-pin male DIN plugs. One plug goes to the computer and the other is for a modem. The modem plug is wired for a Radio Shack Modem I. A two-foot long ribbon cable with a 36 contact printer connector also comes out of the rear of the case.

A small, eight-page manual comes with the unit and covers the setup and operation of the unit. Unfortunately, if you have a problem with the hookup, there are no charts or diagrams to explain the signals on any of the connectors.

As mentioned before, there are three switches on top of the unit. The first is a power on/off toggle switch. With the power turned off, the modem is connected to the computer. With the power on, the modem is disconnected and the buffer is tied to the computer.

The next switch is a 10 -position rotary that selects the input Baud rate. Available speeds are: \(110,150,300,600\), \(600 / 7\) bit, 1200, 2400, 4800,9600 and 19200 Baud. The Super Cosmos Connection's manual explains the POKEs required for the various Baud rates. The 19200 Baud setting requires the famous high speed POKE (POKE 65495, Ø) and may not work on all computers.
For those with BASIC 1.1 or later ROMs, setup is a matter of making sure the switch setting corresponds with the PGKE information. For those with BAsIC 1.0 ROMs, the setup takes one extra step because BAStC 1.0 sends seven bits of data while the unit normally expects to see eight. The buffer must be turned on with the selector set to the \(600 / 7 \mathrm{~B}\) position. You may then set the switch to the desired rate.

The last switch is a lighted pushbutton switch marked "copy/clear." The light indicates the unit is on, has passed an internal self-test and is ready for data from the computer. If the amount of data sent to the buffer is less than the capacity of the unit, you can make duplicate copies of your document. Pressing the button after printing has been completed produces a duplicate copy of the original. You have to be careful though; pressing the button during printer operation aborts the printing and clears the buffer.

If you turn the unit on with the button pressed, you get a printout that gives the version number of the unit, the amount of RAM installed and the Baud rate switch setting.

How well does it work? At 9600 Baud, it took the computer 20.6 seconds to print a listing for a 10 K Adventure program. The printer, at 120 characters per second, took 160 seconds to finish.
I also wrote a test program to see what happened when there was more data than buffer space. The program sent the proper control codes to set the printer to 132 characters per inch (the unit had no problems with control codes) and then sent 324 full lines of a string of test characters. With the printer running, the program didn't slow down until it got to the 302 nd line of printing. At that point, the buffer put in more data at the same rate it was being printed. The program finished in one minute, 39 seconds and the printing took a total of six minutes, 54 seconds.

For those who do label printing from data files, this unit could save quite a bit of time. You can search files and print at the same time. The RS-232 switching function may be a problem for some; you cannot print from the buffer and be connected to a modem at the same time because switching over to the modem kills the power.

If you do not wish to get a full 32 K unit, you may buy a smaller capacity and upgrade at a later time. Upgrading is a matter of plugging more RAM IC5 into the unit's sockets. A three-page instruction sheet for upgrades is available from the manufacturer, Super Cosmos Connection comes with a typical two-year limited parts and workmanship warranty. It doesn't cover accidents, abuse, unauthorized modifications or damage caused by improper user upgrades.
(Cosmos Computer Services, Inc., 620 Stuart Street, Green Bay, WI 54301.8K \$129.95, 16K \$144.95, 24K \$154.95, 32K S169.95, 8 K upgrade RAM \(\$ 15.95\) each)

\section*{ChesSD Makes A Formidable Opponent}

Ready for a good game of chess? Having trouble finding \(a\) worthy opponent? Thanks to Software Dynamics you can sit down to your CoCo, load ChesSD and enjoy a good game of chess againsta competent opponent.

Like most computer chess games, ChesSD draws the board and displays the moves using the CoCo's Hi-Res graphics. But, unlike some other computer chess games I have seen, the graphics in ChesSD are excellent. All the pieces are easily and clearly recognizable.

The board is shifted slightly left on the screen and the right side is used to display the computer's move, the number of moves, a "score" based on pieces lost and taken, an estimated score that shows what the computer thinks the status will be several moves in the future, white and black clock times, and the skill level the computer is using. The space below the board is for messages from the computer and entry of moves and other commands, The game uses the standard column/row notation for entering and displaying moves. As we would expect from a good computerized chess game, it is capable of castling, en passant and pawn promotion.

ChesSD offers skill levels one through seven, although skill level one is an invalid entry. Default starting level, therefore, is level two. Normally the computer is black, meaning you, as white, start the game. However, if you prefer to have CoCo start, you can do so by entering "play" - this reverses the board. Play also works during the game if you want to see how ChesSD will play your next move.

Other features and capabilities include Tournament mode, which designates a certain number of moves within a specific amount of time and the ability to enter moves to get a previously started game back to a particular point. The game also provides the ability to set up a board to try different game situations.

What kind of player is ChesSD? First, let me explain that I am not a world class chess player, in fact, I'm not even a "neighborhood class" player. I fall into the class of "lunch time" players - finishing any game in less than a half hour. I personally found ChesSD to be unbeatable, so I called on a friend who has greater chess skills to see how he would fare against it. He also found it a difficult opponent, At this point, we wondered what would be a proper opponent for ChesSD and came up with an interesting idea - how about another computer?

My friend has an IBM PC (not everyone is smart enough to buy a CoCo!) and has two chess games for it, PC-Chess and Sargon III. Sargon III has generally been recognized as the best chess game for a PC. We set up our two systems and alternately entered the moves from one computer into the other, effectively having the computers play against each other.

I am happy to report that against PC-Chess, ChesSD played a good game, ultimately defeating PC-Chess in about 53 moves. However, when it came to playing against Sargon HII, Ches SD met its match. With both games playing at their lowest skill levels, Sargon defeated Ches SD in about 18 moves. Does this mean ChesSD is not a good player?

Idon't think so - no more than saying that your local chess champ is not a good player if he/she is soundly defeated by a Boris Spassky or Bobby Fischer.
So far, this review has been positive, and I try to tell it like it is. So, let's go over the game's less attractive points. Although the instructions that come with the package indicate the game recognizes checkmate, I found this is not true. On two occasions the game had me in checkmate and only said "check," allowing me to move, In the same way, when it was finally placed in checkmate in the games against Sargon, it also did not seem to recognize it and attempted to move. Although this is not a bug that affects the play of the game, it is not the "proper" way to finish.

One other "bug" I found was during one of the games against Sargon, when ChesSD made a move that 1 call "super pawn takes bishop." It moved a pawn forward four (yes, four!) rows and over one column and captured a bishop. This was done when an en passant would have been the logical move for the pawn in question. In fairness, 1 must add that 1 made three attempts to reproduce the circumstances and each time the game moved properly, so it may have just been a bug caused by some glitch when the game loaded.
Finally, if you insist on playing to the bitter end and ChesSD takes your king, it does it with a "Chomp, slurp, yum!" Although the author may think this gives it a cute touch, I do not think it's "cool" for a sophisticated game like chess.
To sum it up, I definitely recommend ChesSD as a good, playable chess game for the CoCo.

\title{
Cash Prophet Provides Budget Forecasting
}

Cash Prophet, by Everyone's Computer Company, is an easy-to-use budgeting program that provides the user with both a weekly forecast and an annual budget. The program requires a minimum of 16 K , Microsoft Extended BASIC and a cassette recorder. It is distributed on tape but may be easily modified for disk operation. A simple set of instructions is included to accomplish this. Including the time it takes to load the tape, it takes all of five minutes to create a disk version.

Included in the package is a 20 -page, spiral-bound manual. The table of contents includes a quick reference guide to each individual menu option. The manual is written as a self-paced instruction guide and is best utilized by running Cash Prophet as you read the manual. Sample budget data and accounts are provided for this purpose.

The manual begins with simple definitions of some terms, such as "account," "bank account" and "transaction schedule." The term of interest here is transaction schedule. The manual defines it as "A set of information which estimates the amount of income or expense that will occur on a given day of the month throughout the year." Here is where Cash Prophet differs from most other budget programs I have seen. It is used to compare predicted income to predicted expenses over a 52 -week period. Most programs compare a set budget with actual expenses, providing tax information as an additional side benefit. Cash Prophet identifies times when you may have extra cash available and more importantly, times when you will fall short of cash.
Page 2 in the manual states that you may use up to 90 accounts numbered from 10 to 99 , while Page 13 states that you may use any 73 numbers from 10 to 99 for your account names. One thing is definite, however, it can only handle one checking and two savings accounts. The savings accounts must be numbered 11 and 12 , Interest rates may be specified for the checking and savings accounts and the interest may be deposited into any of the three bank accounts.

Once Cash Prophet is loaded, modification instructions for the user with more than 16 K are provided. According to the manual, this speeds up processing by more than 50 percent. After receiving the title screen and copyright notice you are prompted for a month and day. When using Cash Prophet for the first time, use 1023 as the month and day entry, otherwise, use the month and day of your last data file. The sample data files are identified as CPN \(\$ 1023\) and CPD\$1023. First-time users must load the sample data file and modify it to create their own customized version of Cash Prophet.

After loading the sample file, the main menu appears. There are eight options to choose from.
1) Transaction Schedule
2) Bank Balances, Interest Percents
3) Account Names
4) Tape/Disk Storage
5) Screen/Printer Option
6) Weekly Forecast
7) Annual Budget
8) Go To basic

Options 1 and 5 both have submenus. For Option 1 they are:
1) Specify Account
2) Display First Record
3) Add A New Record
4) Main Menu
and for Option 5 they are:
1) Display On Screen/Printer
2) Main Menu

Instead of simply explaining each menu option, let's walk through the steps required to build a prophecy of our own. The first records that need to be built are our bank accounts. Using Option 2, we enter our initial checking and savings account balances along with any interest information. The ENTER key is used to place the cursor in the field we wish to update, then we simply type our figures.

After this, we choose Option 3 to create our account names and assign them a number between 10 and 99. You may change an account name by using an account number that already exists and typing the new name. Delete an account by giving an account number and pressing ENTER with a blank name.
As our last step, we need to set up our transaction schedules. A transaction schedule simply sets up a dollar amount to be added or subtracted from our budget. Income is entered as a negative number while expenses are positive. A dollar amount is entered for each month. Typing an ' S ' in a month copies the figure from the preceding month. The day of the month this transaction is to take place is also specified here. A day code of 77 indicates a weekly transaction, while 41 and 42 mean every other week beginning on either the first or second week of the budget year, respectively. Just to be safe, before requesting a forecast we use Option 4 to save our data.
With our data safely saved, we will now use Option 6 or 7 to request a weekly forecast or an annual budget. With Option 6, you may request a detailed forecast (one displaying every transaction processed) or just a summary providing only your bank account balances at the beginning of each week. The annual budget displays each account along with its weekly, monthly and yearly expense or income totals.

If you desire a printout, choose Option 5 and submenu Option I to toggle the display from the screen to the printer. This provides a forecast for 52 consecutive weeks without the option to terminate after each 13 weeks as the screen output allows.

For someone needing a forecast of their income and expenses, Cash Propher will do the trick. Since the program is written in BASIC, the input/output routines are a little slow, however, the hare does not always win the race.
(Everyone's Computer Co., P.O. Box 771, Chesterfield, MO 63017, tape [convertible to disk] 539.95 )

\section*{Scepter of Ursea Is A 'Handful'}

As the autumn months fade away, the mighty Thorafin Crimsonblade realizes it is time. He must once again search for an Adventure that can challenge an Adventurer's most dreaded enemy: the winter blahs. It takes an Adventure with a special quality that will keep our thrill-seeker occupied during the snows of January. Our hero's hopes looked pretty dim until a special package arrived via Dragon Express. Pulling out his mighty broadsword (letuer opener), the hardy Adventurer finds himself faced with Prickly-Pear Software's latest release, The Scepter of Ursea.
On booting up Scepter, the mighty dwarf's characteristics are generated. These attributes are the basis of our character's fighting prowess, and ability to take damage in battle. These characteristics include strength, dexterity and constitution. From these values the armor class, damage adjustment and number of "hit points" are calculated. These values are the basis of the Adventurer's success (or lack of) during his Adventure.

Entering commands is an adventure in itself. The character moves on the Lo-Res screen by using one-letter commands that do standard functions such as eating, inventory and updating weapon status. If the one-letter abbreviations are forgotten, a help screen is readily

Send a Tapeor Disk in a SELF-ADDRESSED STAMPED MAILER to:
 ㅁ.D. BOX 391 CLEVELAND, DHID 44107 PLEASE REQUEST ONLY ONE PROGRAM
available. While moving across the varied terrain, an Adventurer will encounter a host of friendly (and not-sofriendly) beings who each have their own set of abilities, strengths, weaknesses and dispositions. Sometimes the creatures attack on sight, others offer you advice (for a small fee). In my opinion (and Thorafin's, too), these creatures make the game much more interesting than some Adventures that merely state "you are being attacked by a red Warthog."

Another nice feature is the three dungeons it offers. Each dungeon contains several levels, each having its own tricks, traps and guardians. By exploring the dungeons, our hero can find potions, keys, weapons, armor, treasures and, most notably, great peril. Finding the dungeons is not easy: mastering them is even harder.

Combat with hostile encounters is handled through a random "die-rolling" method that is quite dramatic, but can get a little lengthy when large battles are going on, especially when both combatants have high armor ratings. Overall, however, this aspect is handled quite well, with a system highly reminiscent of the Dungeons \& Dragons genre of games.
The wary Adventurer must keep in mind the possibility of fatigue and thus the necessity of rest and food to keep from running out of energy. Another concern is money. To really achicve any success, our hero must gather up enough money to purchase a boat. Horses and advice are always easy to gather, but they, too, have a price. The Adventurer must seek out encounters that have money and relieve them of their responsibility while still maintaining his vital organs in a working order.

The documentation is complete, although it has some minor bugs, and provides the Adventurer with the information on program operation. The game also includes (yea!) a game save/load feature, which prevents Adventures from being cut short by a need to use the word processor.

Although Scepter contains a few minor bugs, the staff at Prickly-Pear was very helpful and supportive, and promised to update future shipments. The Adventure on Ursea is very complete, but I think the program could be strengthened even more to make it comparable to games of this type played on (ahem!) other computers. The addition of a party of characters, each with their own identities and attributes, could add a "group involvement" to the game that it lacks right now. Also, using the remaining disk space to create a city where the Adventurer could wander would be very appealing.

I can wholeheartedly recommend Scepter of Ursea to anybody who enjoys Adventure/Simulation-type games. Scepter of Ursea takes weeks to master and provides a great deal of enjoyment.
(Prickly-Pear Software, 2640 North Conestoga Avenue, Tuscon, AZ 85749, 32K disk \(\mathbf{\$ 2 9 . 9 5}\) )
- Eric Oberle

\section*{The RAINBOW extends Season's Greetings!}

\title{
GOLDKEYS Is The Ultimate Keyboard Enhancement
}

Many times I have wondered how companies come up with names for their products. In the case of Vidtron, their utility is named descriptively. GOLDKEYS is a keyboard enhancement utility for 64 K Color Computers. I have used many enhancement programs before, including complete disk operating systems, however, GOLDKEYS is by far the best product I have come across. Unlike many other products of this type, it does not include useless options that serve only to waste valuable memory. Instead, every option is well thought out and practical.

GOLDKEYS boots up with its own copyright and replaces the CoCo's "OK" with its own prompt. The normal cursor is also replaced by a non-destructive cursor. This means you may backspace without destroying the text already entered. This is an immediate saving of time, especially if you are at the end of a 200 -character BASIC line. (A good comparison of this feature would be to a word processor.)

GOLDKEYS supports inserting and deleting characters within a line. Yes, Extended BASIC has the same options with the EDIT command, but only on lines already entered in BASIC. Also, it has an auto-key repeat that makes getting to the error much quicker. Of course, the auto-repeat may be toggled on and off with a basic command.
Another efficient feature is its function keys, They ean be defined as single commands or a whole string of commands. This enables a programmer to enter several to several hundred characters with a simple keystroke. Once all function keys have been defined, they may be saved to tape or disk.
Not only does GOLDKEYS support function keys, it also incorporates a type-ahead feature. This is a 100 -character buffer that allows you to type ahead of the computer's current operation. For example, if you type CLOAD the computer will start loading a program from tape. While that is being done, you can type RUN and when the program is through loading, it will start immediately, A5 with normal input, a key click is incorporated in the type-ahead feature as well. (Key click may also be toggled on and off.)

One of the most frustrating problems a programmer faces is the chance of his soltware being balted either by the areak key or the Reset button. Preventing this is where GOLDKEYS shines! All of its commands are added to BASIC. These include BREAKOFF, ONBREAK GOTO and ONRESETGOTO. The first obviously disables the BREAK key. The second sends the CoCo to a specified basic line whenever the break key is pressed. The third command allows you to do what all of those game writers love to do - disable the Reset button. After using this command, whenever Reset is pushed, BASIC jumps to whatever line you wish.

The last feature of GOLDKEYS is certainly not its weakest. This is the INPUTUSING command. This command adds a few new dimensions to the INPUT found in Radio Shack basic. First, if the variable being used already has a value, it will be displayed in the space where the user
is expected to input. Thus, the old contents of a variable or string will be displayed under the cursor and in the following spaces.

GOLDKEYS also allows a limit to be set to the number of characters that can be entered. Thus, if a date is supposed to be entered, only six characters can be typed. Also, if you wish for something in the string to remain the same regardless of what a person enters, it can be predefined as a non-destructive character. This means if someone is entering the date (i.c., \(11 / 01 / 85\) ), he will enter " 11 " and the cursor will automatically skip the slash and jump to the next number.
The one feature I rarely find in software packages is a graceful exit. GOLDKEYS has a command called UN BOOT that allows you to return to the BASIC ROM without having to press Reset or losing your BASIC program. Finally, since GOLDKEYS uses 64 K , it takes up absolutely no BASIC memory.
Considering that GOLDKEYS takes no memory away from BASIC, and it adds so many features that are practical and flawless, this is one utility no serious programmer can afford to be without.
(Vidtron, 4418 E. Chapman Ave., Suite 284, Orange, CA 92669 , requires \(\mathbf{6 4 K}\), tape \(\$ 20\), disk \(\$ 22\) )

\section*{You Need Coco-Accountant}
"It's the most usefut piece of sottware fown.

That's what we hear again and again from folks who buy Coco-Accountant II. This \(32 / 64 \mathrm{~K}\) single-entry accounting system for the home and small business is all you need to manage your finances and give you the information you need at fax time.

We wrote the original version for ourselves two years ago because we wanted to know three things: Where did the money come from, where did it go, and what can we deduct from our taxes?

As it turned out, we liked it better than anything else on the market, so we decided to sell it. And we've been improving it ever since.

People say they like it because it's easy to use. Just spend a few minutes each month entering your data: checks, cash outlays, credit card expenses or income. In any order. CoCo-Accountant takes the whole mess and makes sense out of it. Here's what it does:
- Lists and totals entries by month, offsetting income against expenses.
- Lists and fotals entries by account, for a month or the whole year.

4 Lists and totals entries by payee or income source, for a month or the whole year,

- Provides a year-to-date summary by account.
- Prints a spreadsheel showing activity by account and month for the whole year (seeing this one is believing).
- Flags deductible expenses.
- Flags expenses subject to sales tax and figures out how much sales tax you paid!
- Lets you define up to 48 accounts (in 64 K version).
- Takes 900 entries in 64 K version, 500 in 32 K disk and 450 in 32 K tape.
- Sorts entries by date.
- Stores your data to tape or disk.

You can use CoCo Accountant as a simple checkbook register or make it into a comprehensive home accounting package. Our customers tell us they use it in the home, at school, for their clubs, churches and small businusses. In lact, they use it in ways we never dreamed ofl

CoCo-Accountant II is so easy to use and flexible that you'll be delighted. So stop shoving all those records in a shoe box and join the computer age!

The price of Coco-Accountant II is \(\$ 34.95\). Please be sure to tell us your memory requirements and whether you want tape or disk.

\section*{Thoroughbred, Harness, Greyhound \\ }

Use your Color Computer to improve your performance at the trackl These 16 K programs for Thoroughbred, Harness and Greyhound racing rank the horses or dogs in each race quickly and easily, even if you've never handicapped before. All the information you need is readily available from the Racing form, harness or dog track program. We even provide diagrams showing you where to find each item!

Thoroughbred factors include speed, distance, past performance, weight, class, jockey's record, beaten favorite and post position. Hamess factors include speed, post position, driver's record, breaking tendencies, class, park-
ed-out signs and beaten favorite. Greyhound factors include speed, past performance, maneuvering ability, favorite box, class, kennel record, beaten favorite and breaking ability.

We include complete instruction and a wagering guide that tells you which races to bet and which to avoid-one of the real secrets of good handicapping. You can buy a more expensive handicapper, but we don't think you can buy a better onel Thoroughbred, Hamess or Greyhound Handicapper, \$34.95 each on tape or disk. Any two for \(\$ 54.95\) or all three for \(\$ 74.95\).

\title{
Disk Pilot Uncomplicates Scroll Control
}

One of the things that has always exasperated me about the CoCo is the lack of scroll control. You know what I'm talking about. First type DIR, then take a deep breath and position your fingers over the 1) ENTER key, 2) SHIFT key and 3) '@' key. You press Enter, then wait a second and press SHIFT and '@': Hopefully, this does the trick and you are presented with approximately one-half the directory; if so, you may hit a key to continue. If your timing is a little off, you have to start all over.

Disk Pilot solves this problem by presenting one screen full of filenames, allowing you to move up or down the directory listing with the arrow keys, much the same way a screen editor allows you to move through text. This one feature alone makes the program worthwhile.
The Disk Pilot is a disk file maintenance utility with a strong accent on the user interface aspect, i.e., it is designed to link the user with the computer comfortably, In this respect it performs quite well.
The program has seven major functions:
1) Copy a file or all files
2) Kill a file
3) Rename a file
4) Get information about a file or all files
5) Print information about a file or all files
6) Run or execute a file
7) Format a disk

When you RUN "PILOT", the program reads the directory of the disk inserted in the drive. If you have two drives it reads from both of them. The filenames are sorted alphabetically, and the results are displayed on a split leftright screen with Drive 0 on the left. One of the filenames is displayed in reverse video. This is the working file. Another file may be selected with the arrow keys. Once the file is selected, simply press one key to execute any of the functions.
All of the functions perform well. According to the documentation, the format option is faster than DSKIN1. I found this to be true but only slightly -39.98 seconds for the DSKINI and 38,01 seconds for the format option. There is, however, a benefit to having the format option available. If you need to copy some files and find that all your disks are new, unformatted blanks, there is no need to exit the program, use DSKININ, then return to copying, Instead, just press ' F ',
The documentation supplied with the program is wellwritten and, although brief (five pages), is more than adequate. I spent approximately five minutes reading the information and this was all the time I needed to operate the program effortlessly. Disk Pilot has a help screen always available by pressing the CLEAR key, which gives a summary of the options and their codes. I did find one omission in the documentation. On the help screen 1 found an option ' S ' not explained anywhere in the literature. Being adventurous, I tried it. Lo and behold! It gave me the alternative of having Drive 0 or 1 on the left side of the screen. I trust that later printing will correct this minor omission.
Disk Pilot was supplied on a cassette that CLOADed correctly the first time and all subsequent times. Using the
program this way has the advantage of immediate access to both drives, however, the CLOAD is so slow to those of us used to disk drives that I decided to save it on disk. It also LOADed and ran without problems this way, which is not always true with programs having embedded machine language routines, I was not able to make the program crash nor was I able to break out of it. The program is not copy protected in any way and comes with a plea from the authors to not distribute it to friends and acquaintances.
There are a few things I hoped the program would do, but it didn't. It will not create a disk file with the names of the files for use with a database management program. There is also no facility to print labels with the filenames. Further, there is no option to copy programs and change them from tokened code to ASCIL I know that's something many people need for use with communication programs.

I judge a utility program in five areas:
1) Does it really do something useful?
2) Does it do what it says it will do?
3) Is it user friendly?
4) Does it crash easily or frequently?
5) Is it a good buy for the money?

Disk Pilot rates well in all these areas. 1 recommend it to anyone who does not already own a similar program.
(CMD Miero Computer Services, Ltd., 10447-124 Street, Edimonton, Alberta, Canada, requires 32 K , disk \(\mathbf{\$ 1 4 . 9 5}\) plas \$2 S/H)

\title{
OS-9 Ramdisk Driver And ThunderDupe 2 Are Super Utilities For Thunder RAM
}

I feel like the guy in the carly 1900s who invested heavily in rail transportation because he felt airplanes would never fly. As soon as my review of Chris Erving's Thunder RAM hit the newsstands I received a package from Spectrum Projects containing a RAM disk driver for OS-9. I said it was difficult, but OS-9 guru Brian Lantz made it fly. Another utility for the Thunder RAM was written by Marty Goodman, ThunderDupe 2, a disk duplicating system that takes advantage of the TDOS RAM disk.
One thing about the review was accurate: Thunder RAM is gaining support extremely fast. Needless to say, to use these programs you must have Thunder RAM from Spectrum Projects.

Brian Lantz has written a super RAM disk driver for OS9. Itincludes a device driver, "RAM," and device descriptor, "R0." After loading these two programs into memory you just type FDRMAT /RO R "OS-9 RRMDISK" and in about 10 seconds you have another disk drive online.

What's so great about a RAM disk using OS-9? Due to the intensive disk calls since OS-9 is a true DOS, there has been a great need to improve disk access speeds. With the OS-9 Ramdisk Driver, disk access is nearly instantaneous.

\section*{*PERSONAL BOOKKEEPING 2000 * WHAT OTHER PERSONAL BOOKKEEPING SYSTEM HAS ALL THESE FEATURES?}

> Quick-and-easy data entry - use day-to-day. LOGICAL abbreviations for data entry - no special symbols.
> ON-LINE help for data entry.
> IINTELLIGENT" data entry minimizes keystrokes and rejects illogical keystrokes and entries. CHANGE data at any time as easily as new entries 45 accounts; , serer-detinable expense categories, CASH and credit card expenses easily entered. Separate record of extraordinary expenses. Monthly and yearly printed reports, COLOR graph compares expenses. Monthly table of expenses compares last 4 or 8 months and shows \% changes
> Yearly report itemizes expenses, totals taxed and non-taxed expenses and income, prepares reports of interest on accounts and sales taxes on expenses.
> DUPE latest entries in seconds (needs 2 drives). Complete printed report of all accounts. BALANCE checkbook in minutes. SEARCH file by transaction, expense, check number, payee or note.
> "Personal Bookkeeping 2000" is a powerful program that is user friendly. It provides the user with a wealth of information." The Rainbow, October 1985, Page 195.

Requiren 32 K ECB with disk drive and printer
\(\$ 39.95\) plus \(\$ 1.30\) shipping AMDT-STANDANCERS, INC.

762 Brady Avenue
Bronx. New York 10462

To point out the benefits, a procedure file named \(I N\) IT. RAMDISK is included. This program formats the RAM disk and copies your current CMDS directory to the RAM disk"/R0."After running this program you can change the execution directory to R0 and remove your system disk. Entering a command such as MDIR will invoke an almost immediate response.

The OS-9 Ramdisk Driver was used with several programs, including Lantz's Databank and Spectrum's OS-9 Solution. It's like the difference between night and day as far as execution speed is concerned.

If you're anticipating mass production of disks, and can't afford a \(\$ 30,000\) duplicator, Thunder Dupe 2 is your salvation. By using the Thunder RAM as a buffer for the master disk, up to four disk drives can be used as slaves for duplication. For 35 -track, 30 ms drives, each copy takes about 45 seconds, including formatting!

A configuration program is included that allows the selection of:
1) Number of tracks
2) Drive speed
3) Normal or picture disks
4) Number of slave drives
5) Optional formatting

Thunder Dupe 2 was tried on several different programs and worked like a charm. After loading the master disk into the Thunder RAM buffer, you are prompted to insert the blank, or formatted, disks into the slave drives, depending on your configuration.

During the process of duplication the status of your copies is displayed. If an I/O Error is encountered you are notified, but the duplication process does not stop. An audible beep alerts you to the fact that all of the copies are complete. You are then given the option of whether to make more or quit.

I only had two drives, but ThunderDupe 2 is capable of handling four drives. If you are planning to make a lot of copies, this program is for you.

Who knows what's next for Thunder RAM, but if the rest of the programs are as good as the first two, we can look for some interesting software in the near future.

\section*{Recovering Fast Cassette Saves}

I read Mr. Bourgeois' letter in the February 1985 issue about saving programs with the speed-up PDKE, This happened to me once and I tried several things to get the program back. Here is a method that works;

POKE 143, B: PDIKE 149,24: POKE 145, 4: CLOAD
This will load BASIC programs saved at high speed back into the CoCo so that a normal save can be made. I hope this helps the many people who have made this (formerly) fatal ertor.

\title{
EDOS 2.6 ROM Adds UsefuI Features To Disk BASIC
}

\author{
By Tom Carl
}

Few who have worked on other computers have not wished once in a while that our CoCo had a certain feature seen elsewhere. A Canadian firm, Micro Computer Services, has recently issued an enhanced version of Disk Extended Color BASIC 1.0, which just might have some of the features on your wish list,
EDOS 2.6 ROM is shipped on a ROM that must be installed in your disk controller. It not only offers a nice selection of new features, but also corrects some annoying bugs in Disk BASIC. Auto-line numbering, print spooling, on-error trapping and repair of the bug that causes data loss from buffers during certain file-close procedures are, in my mind, the most important elements of this new product. But this is by no means the whole story.
To use features of this new ROM, one must have a 64 K Color Computer, disk drive and a controller manufactured to work on the TRS-80, such as the J\&M disk controller or Radio Shack's own controller. It comes in a 24 -pin version, though a 28 -pin version can be specially ordered should your controller require it. The EDOS 2.6 ROM can be updated with later versions at a cost of 20 percent of the original cost to you, and you can even have it customized in certain ways, provided you file your registration card, which gives a warranty of 30 days.

The manual is well-organized and gives very adequate instructions for installing the ROM and using each of the new features. Compatibility with Disk BASIC has been kept very high by using much of the original instruction base and inserting jumps out to addresses just beyond Disk BASIC, where the new features are efficiently coded.

Programs that auto-load above SD 800 in 64 K RAM mode are the most likely to give you compatibility problems (Ellte \({ }^{*}\) Calc 64 K version is one of these). Appendix A of the manual contains a program you can type in and store on disk that will restore EDOS 2.6 ROM back to Disk BASIC just before you start using programs that are not compatible with it. After using such a program, cold starting will bring the full EDOS 2.6 ROM back into use automatically, which is the main advantage of having DOS modifications stored in a ROM instead of on a disk that constantly has to be reloaded, This restore program can even be made a part of the incompatible program, so its use could also be transparent.
Installation is relatively easy. A small screw driver, a small amount of care and a small amount of patience are the only requirements. The controller comes apart, generally through releasing just one screw. Finding the ROM chip is no problem, and one can remove it with the small screw driver used as a pry on each end. The new chip goes in just about as easily, though be sure all legs of the chip are started in their holes before applying any pressure. The manual gives good step-by-step instructions and the necessary cautions.
When you come up with the EDOS 2.6 ROM, you are greeted with a new sign-on logo, and the OK prompt of Disk

HASIC is replaced with READY, Should you experience trouble at this point, there is a phone number in back of the manual to call for help. Except in the unlikely event of erasure of the ROM in shipping and handling, there is little that can go wrong provided you use the required care in installation.
EDOS 2.6 ROM sets the number of tracks at 40 as default for DSKINI and BACKUP, sets the default Baud rate to 1200 instead of 600 and initializes an error routine that gives an audible bell tone and full explanation error printout. In addition, about a hall dozen bugs in Disk BASIC are automatically repaired and four little convenience sophistications are added to I/O commands (my favorite is one that warns you during a SAVE command there is already a program on the disk by that name). The rest of the new features are invoked by the user through typing one of the new commands, which are: AUTO, COLD, DIS, DOS, DPOKE, ERROR, HIDE, MRUN, NSPL, OLD, RAM, RST, SPL, WAIT, TRACK, MOD and DPEEK,

The 40 -track default ean be changed back to the 35 standard through use of the TRACK command, so your old disks will read just fine. Appendix B has a program you can type in that will modify 35 -track disks to 40 -track without affecting the data already on the disk. All new disks you initialize with the TRACK value set at 40 will have the extra five tracks immediately.

The new HIDE command puts a copy of the disk directory on Track 37 as a guard against destroying the directory. RSTore command recovers the directory from 37 and puts it back on Track 17 should you need such help.

The DOS command operates just as the Disk Basic 1.1 command does, except it has an extra gimmick permitting you to say DOSXX, with XX specifying the track where the DOS routines are writien (normally this always defaults to Track 34, as it does with EDOS 2.6 ROM, if you specify no track). For those with 1.0 BASIC or those who have never used their DOS feature of 1.1 BASIC, you are in for a real treat because this feature puts a boot-up command processor at your disposal. Many of the annoying commands can be eliminated that normally have to be entered by hand each time you start your system. EDOS 2.6 ROM extends this beautiful idea by letting you choose any of several such command strings to bring up your system.

The SPL command converts the unused 32 K of RAM into a spooler or buffer for printing. This permits release of the material being printed at a rate much faster than your printer can handle; this data is stored in the spooler until your printer can handle it. The advantage is that you can begin using the computer for other work while the spooler finishes the printing automatically. The NSPL command disables the SPL command in cases where you wish to use the extra 32 K RAM for other purposes.

DPEEK and DPOKE let you see and modify two consecutive addresses in memory at the same time, which is an operation many will have little use for, but there are a number of times when this can be a big time saver for some people.

MOD (short for modulus) is a handy instruction that has been around in computer languages for a long time. It is not a necessary instruction since it can be imitated in any language with three normal instructions, but it is handy. \(\mathrm{A}=\mathrm{MOD}(\mathrm{X}, \mathrm{Y})\) will return in ' A ' an integer that is the remainder after having divided ' X ' by ' Y '.

MRUN is another convenience instruction allowing you to load and run a machine language program with one
instruction, as RUN does for a BASIC program.
Those who change their minds as often as 1 do may find the OLD command handy; it restores a program erased via NEW.

If you are going to write programs commercially, one of the real musts is an on-error command. ERROR 5000 is an EDOS 2.6 ROM command that turns on error branching so every run-time error that occurs will sound a tone, print the full error message, then branch to Line 5000 where the programmer can process the error. This is the only command \(I\) found myself wishing had been implemented differently. I prefer the system to put the error number in a variable and the line number in a variable, then pass control directly to Line 5000 for handling, so that I, the programmer, could decide on what I wanted the user to see on the screen. Through use of various peeks, EDOS 2.6 ROM lets me see what error occurs and where, so I can still accomplish some of the things I want to do in recovery, but I didn't like the idea of having the screen messages forced on me.

WAIT is another command very handy for programs destined for the commercial market. \(\mathrm{X}=\) WAIT("ABC") works like an INKEYฐ command, but it will accept is an unswer only an 'A' ' \(B\) ' or ' \(C\) '. Any other responses leave the user looped. If ' B ' is pushed, the variable ' X ' is set equal to two so the programmer can take appropriate action.

The AUTO command lets you specify where to start numbering and what increment to use, which is a better implementation than some AUTO functions I have seen. Plus the fact that all keys will repeat when you hold them down, I found this function is a very nice addition for supporting the overworked programmer.

Overall. I was impressed with the nice attention to detail and the smoothness of operation of the many enhancements. Micro Computer Services offers customizing of their EDOS 2.6 ROM chip, including adding other features, as well as fixing the sign-on logo to put your name up in lights, so you might want to ask them what it would cost to include other enhancements.

\title{
Young Writer's Notepad A Simplistic Word Processor
}

\author{
By Kenneth D. Peters
}

With the kids back in school, there is one more "notepad" you might consider - Young Writer's Notepad, from Middletown Educational Software Association (MESA). It is a word processing program designed to be easy enough for kindergartners to learn and use, yet versatile enough for fourth graders to be creative. Network users and teachers may also use it as a flexible, creative tool in just about any area of elementary education, from spelling and writing to math. This program may even be a fun introduction to the keyboard and word processing for preschool children. It has single key selections for printing documents on an attached printer in one of three modes/styles and for typing on the screen in any one of three colors.

Young Writer's Notepad is not a sophisticated word processor like Telewriter-64, VIP Writer and others of that caliber. It wasn't meant to be! As the name implies, the program is intended to be understood and used by "young writers" in grades K-4. I think it does an admirable job in holding kids' interest and in being so readily understood, When my kids use the other word processors 1 have, they come running to me constantly to help them do this or that, There is too much for them to remember when using more complex word processors. Young Writer's Notepad is simplicity. My kids, age 6 and 8 , have learned how to use it to produce notes, letters and math worksheets completely without my help.

Young Writer's Notepad is written in BASIC, so you simply type RUN -NOTEPRD" (after loading either from disk or tape) and turn on the printer. After the initial title/ copyright page, the screen is cleared and a solid nonblinking red cursor appears in the upper left of the screen and you can begin typing.

Young Writer's Notepad has its own graphics characters. The characters are large and easily read by young children (three-quarters inch high and three-eighths inch wide on a 13 -inch TV), and include the full upper- and lowercase set as well as the numbers and special characters on the keyboard.
Being written in BASIC and having to form its own characters, the program has a relatively slow typing capability when compared to other word processors. Still, a young writer can type approximately 20 words per minute before getting ahead of the computer and losing characters. If you can use the high speed poke on your computer, you can increase that speed to between 30 and 40 words per minute.

In the simplest case, the child can type eight lines of text containing 16 characters per line, all on the first page/ screen. If he reaches the bottom right-hand of the screen, a new page appears. There are a total of 16 pages available for use on a 32 K machine (approximately 2 K ).
You can "change pens" while typing and type in a different color by pushing the '@' key, You are given a choice of three colors, yellow, blue and red. Initially, yellow characters appear on the screen's green background. Pushing '@' the first time gives a screen containing a yellow box, a blue box and a red box. Choose a color by moving
an arrow up or down to the colored box of your choice. Pushing '@' again returns to the document and characters appear on the screen in the selected color. This feature might be useful in applications such as writing, spelling or math worksheets where the problems are made up in one color and the changes or answers can be typed in another color to be easily recognized and checked. When you decide to print the text, simply push ENTER.

Pushing ENTER gives the "print" menu. Here you have four choices. There are four yellow boxes and an arrow. The arrow points to the first yellow box, which is empty, indicating that no printing is to occur, If you push ENTER the first time by mistake, pushing ENTER the second time will return to the document. The other three boxes contain black lines of varying lengths (short, medium, long) to indicate the type of printing desired. The first mode (short line) gives a print line 16 characters wide, centered on the line and in expanded/double-wide format. The text is printed exactly as it appears on the screen (what you see is what you get). The second mode (medium line) is 32 columns wide, centered and expanded, but the text is checked and adjusted to prevent splitting of words between lines. The last mode provides 64 characters wide in normal print (not expanded).

Editing of text in the simplest form consists of scrolling through the document using the four arrow keys and typing over the areas that need correction. Insert and delete functions are also available by using the SHIFT and rightarrow keys and the SHIFT and left-arrow keys. My kids usually corrected their mistakes on each page as they went along. Generally, the insert and delete capability would be used by more advanced users,

Advanced users also have additional features available. Pushing shift and CLEAR brings up a special function menu where you can save and load documents on tape, save/load documents on disk (or send/receive through network, if you have this configuration), erase a document in memory, set the high speed poke (if your computer can bandle it), return to the document, end the session or view online help screens. A disk index card is provided where you can keep a reference list of files/documents created on a particular disk. With the online help screens provided, you probably won't need the documentation. A help screen is provided for just about any available function with the stroke of a key, and you can return to your document at any point in the help pages.
The program was originally written for "network" users, using several CoCos tied together with a host and Radio Shack LP VIII or DMP-200 printers, and was then modified for individual home use. I did not have an opportunity to test the program under network conditions, as our school system does not use CoCos.
Aside from a couple of minor typos and one erroneous statement (which should be corrected in the near future), the excellent 15 -page documentation thoroughly discusses network use and individual use. It provides a good description of all facets of the program and includes some good suggestions for applications.
The documentation says the program contains codes that are consistent with Radio Shack dot-matrix printers. This is not correet! Not all Radio Shack printers use the same codes for expanded (double-wide) characters. Therefore, if you don't have an LP VIII or DMP-200, you will probably have to substitute your printer's codes to turn expanded mode on and off in lines 960 and 1190.

In addition, most other users will have to add a line setting the Baud rate of the computer to your printer and selecting "emphasized or double-strike mode" to enbance the print quality of the document, if desired. These are easily added to the BASIC program and any other changes can be tailored to your individual needs. Printer codes and where to put them is probably the only major fault of the documentation and program. But, if there are problems you can't resolve, you are instructed to contact MESA and they will try to help. They also have a 30 -day, money-back satisfaction guarantee.
I might make only one other suggestion. It is possible to erase a page in memory by pushing CLEAR while the cursor is in the "home" position (upper left of screen). It is also possible to scroll through your document and push CLEAR by accident, consequently losing your page. A prompt would be beneficial at this point to be sure you really want to delete the page.
If you are using a "network" of CoCos in your educational system, I highly recommend trying Young Writer's Nolepad. There are many useful applications of this program in the educational environment, and young children appear to be quite comfortable using it. Outside the network environment, parents should find Young Writer's Notepad a good addition to the home library, My kids found Young Writer's Notepad easy and fun to use. 1ms sure just about any young writer will find creation of his "masterpieces" just as easy and enjoyable through its use.

Live The Tycoon's Lifestyle With Corporation Plus
}

I think almost everyone would like to be able to make money by playing the "market" or buying investment property or gambling on long shots at the track. Unfortunately, for most of us, these activities have a very high admission price and we can only read about such lifestyles in the "fast lane." Now, for those of us lucky enough to own a Color Computer, there is a new game available that allows us to have fun playing the role of tycoon.
Corporation Plus is a board-style game designed for fast play in the world of high finance. We are talking millions here, folks - the numbers used in the game situations have so many digits they are almost hard to read.

Corporation Plus is modeled loosely after the popular board game "Monopoly. "In Corporation Plus, one to seven people play to become the first billionaires (or the last to go bankrupt). Like "Monopoly," you lose or gain capital from situations that occur as you move around the board. Unlike "Monopoly," you move about a color maze on the computer screen; this maze is lined with a series of colored sections ( 32 in all). The color of the section indicates the type of action that can take place.

The corporations that can be purchased and developed are a hospital zone, a hard luck zone, a lottery square, a

\title{
E.T.T. Electronic Typing Teacher by CHERRYSoft
}

Learning to type the right way oan save you hours of tedious work when entering prograins into your CoCo, and this is. Just what ETT was designed to do. Devote a littie time every day practicing with ETT and betore you know it you will be typing with con. fidence. Entering those programs will no longer be the chore it use to be.
ETT's videc keyboard lets you practice with all the keys labeled, all the keys blank or only the "home" keys Iabeled. The visuai cues guide you while you learn to type without watching your tingers. ETT shows your accuracy, response time, and words per minute. You will quickiy see that you are improving with practice.

With the sentences provided by ETT learning to ype can be lun. Over 1000 varlations chosen because they include every letter in the alpnabel You can also create your own practice sets. This outstanding program was written by a certified feacher and protessional programmer and comes with a ten page student manual-study guide. Requires 16 K Exiended Basic

ETT is oing used in schools inroughout the US. See ETT at your tavorile dealer or order direct.

DEALER INOUIRES INVITED

Where Shopping By Mail is "USER FRIENDLY" 500A N. DOBSON . WESTLAND, MI 48185 Phone (313) 722.7957
city hall, etc. Because of the limitations of the Color Computer display, the color sections are not labeled and you must rely on color association to indicate the type of square on which you land.
The advantage of playing a game like this on a computer is its ability to keep track of your wealth (or lack of it) no need to appoint a banker, sort the play money and keep track of the ownership deeds. All financial transactions are handled by CoCo and the player is prompted for various decisions (buy, sell, etc.) as the game progresses. The computer also rolls the dice and automatically moves your token. The game plays fast and is a lot of fun,

The instructions for Corporation Plus come on tape. They are an excellent description of the game, but they are not very convenient to refer to during play. This could, in some instances, create a problem since the game does not have a "save" feature. Another minor problem 1 had with the instructions is the appearance of several misspelled Words. In my mind, this is almost unforgivable in a game likely to be played by children.

Both the instructions and the game are auto-loading. Because of the complexity of the game, it takes about three and a half minutes to load and requires 32 K of memory. No joysticks are needed; all input comes from the keyboard.

Corporation Plus is not a true simulation of the stock market or the world of business. Almost all of the action in the game, with the exception of the decision to buy or improve a corporation, is determined by random events. But, this doesn't detract from the game. It is a fun game to play and represents a welcome variety in game software available for the Color Computer. If you are a board game fan and like to play tycoon, you may want to try this program. With the exception of the problems I mentioned about the instructions, I believe this is a very good piece of software.

\section*{Let CoCo Set A Party Mood With Christmas Fantasia}

Speech Systems has come out with a delightful program for the Christmas season. Christmas Fantasia comes in two versions: one for disk and one for tape systems. Both require 64 K and will support an optional Stereo Pak for enhanced sound reproduction.

Christmas Fantasia has 11 songs and 13 graphics screens that will help create a festive mood for any Christmas gettogether. When Chrisimas Fantasia loads, you are asked to reset until the correct color appears, After that, the program is totally self-running.

As the tape or disk loads in, viewers are greeted with colorful Christmas pictures drawn in Hi-Res graphics, such as poinseltias, Frosty the Snowman, Santa Claus and Rudolph the Red-Nosed Reindeer, a band of carolers and other holiday scenes. After the picture loads, the program plays an accompanying yuletide song. Christmas Fantasia is an excellent program for those popular Christmas parties. Instead of just letting your little CoCo sit in the corner, give it a present by letting it show off to all of your friends.

The tape version of the program goes to the end and then needs rewinding. The disk version needs no rewinding; it simply repeats all 11 songs until you tell it to stop. If you have ever had any guests in your home say "Gee, what does that thing do?" in reference to your CoCo, invite them over for the holidays this year and show them a computer can be the "life of the party."
(Speech Systems, 38 W 255 Deerpath Rd., Batavia, IL 60510, cassette or disk \(\$ 24.95\) )
- Jim Sewell

\section*{Hint}

\section*{FCC Patch for Disk EDTASM}

I recently purchased Radio Shack's Disk Editor/ Assembler package and found some of its functions to be very useful, but I miss the features Roger Schrag has added to the cartridge version of EDTASM + I have added one of his changes, the "FCC print" patch, to Disk EDTASM as follows:
- Start up Disk EDTASM and enter ZBuG. Enter 'B' for binary mode.
Type 3C04/39 and ENTER to apply the patch.
- Type PD EDTASM 1600 4ATF 1600 and ENTER to save the new version to disk.

To execute the new version, fun the DOS program in the usual way and specify EDTASM + instead of EDTASM on the Execute menu. This patch changes the way EDTASM handles the FCC instruction, so those long lists of Hex codes are no longer printed.

USER FRIENDLY AND MENU DRIVEN
}

SMALL BUSINESS ACCOUNTING This sales.
based accounting package is designed for the non-accounting oriented businessman. It also contains the fiexibility for the accouniling oriented user to set up a double entry journal with an almost unilimited chart of accounts. Includes Sales Entry, Iransaction driven Accounts Receivable and Accounts Payable, Journal Entry, Payroll Disbursement, and Record Maintenance programs. Syatem outputs include Balance Sheet, Income Statement. Customer and Vendor Stalus Reports, Accounts Receivable and Payable Aging Reports, Chech Register, Sales Reports, Account StaIus Lists, and a Journal Posting List.
\(\$ 59.95\)
ACCOUNTS RECEIVABLE Includes detailed audil Irails and history reports for each customer, prepares invoices and monthly statements, mailing labels, aging lists, and an alphabelized customer listing. The user can define net ferms for commercial accounts or finance charges for revolving accounts. This package functions as a standalone \(A / R\) system or integrates with the Small Business Accounting package.
\(\$ 49.95\)
PAYROLL Designed tor maintaining personnel and payroll dala for up to 200 houriy and salaried omployens with B deduclions each. Calculates payroll and tax amounts, prints checks and maintains year-to-date totals which can be automatically translerred to the SBA package. Computes each pay period's totals for straighf time, overtime and bonus pay and determines taxes to be withheld Additional outpuls include mailing list, listing of employees. year-to-date lederal and/or state tax listing, and a lisiling of current misc. deductions. Soited for use in all states except Oklahoma and Delaware.
\(\$ 49.95\)
All programs require a printer and a minimum of 32 K and I disk drive but will take advantage of 64 K and 2 drives. Each package features a hi-res \(51 \times 24\) black on green screen.

INCLUDE \(\$ 5.00\) Shipping/Handling Per Order.

\title{
Microartist - Graphics For The Computer Artist
}

CoCo is a powerful computer that can do the business work, but CoCo is also fun and that means graphics. Graphics are what the Microartist is all about. Try a circle in your graphics screen and move it higher, lower, left or right without thinking about the syntax of those wonderful BASIC graphics commands.

The disk version comes with a non-copy-protected diskette and five pages of instructions. The diskette contained the Artist program, two utility programs (stripes and convert) and four pictures. System requirments are 32 K disk or cassette and Extended BASIC with mouse or joystick. The documentation recommends the use of a mouse with this program. I used both a mouse and joystick; the mouse was easier to work with on intricate designs.

Microartist is child's play. The program is executed from disk by typing RUN "ARTIST- The screen comes to life with a title page and pressing any key produces the menu screen. The menu presents 16 furctions, called "modes" by the documentation: rectangle, line, ellipse, circle, rhombus, pencil, eraser, paint/texture, spray paint, zoom, get/put, view screen/print, save file, load file, erase screen and text. Move the blinking eursor to the mode you want and press the firebuttion to enter that mode. To change modes, move the cursor to the upper left-hand corner of the graphics screen and press the firebutton; the menu screen will reappear.

\section*{STRING VARIABLE EQUATION SOLVER .. A "FIRST" IN MICROCOMPUTERS ..}

What is it??
It is a program in which YOU put ANY equation that YoU want solved, such as: \(\left(A^{*} \cdot N / B\right)+2 X=F+Y\)

Then YOU put in what YOU want solved for such as " N ".

Then your computer solves the equation and glves, \(\mathrm{N}=\mathrm{B}^{*}\left(F+\mathrm{Y} \cdot 2^{*} \mathrm{X}\right) / \mathrm{A}\)

WOW, A GENUINE EQUATION SOLVER.
For students, technically minded \& those who want to show their computers "brains".

M F ESTES SOFTHEAD co. PO Box 335
Elba, N.Y. 14058
JUST \(\$ 49.00\) plus \(\$ 3\) shipping \& handiling

Create a picture by selecting one of the first six modes, which produce graphic shapes (circle, line, ellipse, rhombus, rectangle and pencil). Move the cursor to the place on your drawing you want to put the shape and press the firebutton to anchor the shape, then move the mouse around to shape and size the figure. When the firebution is released, the figure becomes a part of the graphics page.

The paint/texture, spray paint, zoom, text and get/put functions are used to add richness to your creation. The paint/texture function is the most complex function in the program. To paint, move the cursor to the part of the figure you want to paint and press the firebutton. The cursor will disappear and wait for you to enter two digits (00 to 99) from the keyboard. The paint function fills the enclosed area with one of 100 different choices. Solid colors are 00-03 and striped combinations are 05-99.

Texture is a feature that functions similar to paint except it only paints down from the cursor position. Texture produces patterns and takes three inputs from the keyboard. A wide a variety of patterns is available using texture. Texture does not paint around objects as easily as the paint function does, therefore, several tries may be necessary on a complex figure.

In the zoom mode a box about two inches square becomes the cursor and moves around the screen. When the firebutton is pressed, the area in the box is enlarged to a full screen and the cursor becomes a box one pixel in size, You can change any pixel by moving the cursor over it and pressing the ' \(1,2,2\) ', \(3^{\prime}\) ' or ' \(4^{\prime}\) key. With this function you can repair any part of a picture.

There is a text mode for typing text on your graphics screen in four sizes. The view screen/print mode saves your creation. The documentation lists five printers that are supported: Gemini-10, Gemini-10X, Epson MX80, LP VIII and DMP-200. I used an Epson MX80 and got fine graphics prints. The printer drivers are in BASIC, and you can experiment with other printers.

There are two features that are uncomfortable to me. The get/put function has only one put for a get. I prefer a get that can have multiple puts. In trying to make a pile of rocks from a circle, multiple puts are a plus. The paint and texture choices cannot be viewed from the main program. You must tun the utility stripes to view your choices and record the numbers for input into the main program. Microartist gives what it promises. It is not the equal of CoCo Max, but at one-third the price it gives a good value.
(Prickly-Pear Software, 2640 N. Conestoga Ave., Tueson, AZ 85749, tape \(\$ 24.95\), disk \(\$ 29.95\) )

\section*{Software Review}

\section*{Super LOGO: A Must-Have For Child Computer Education}

Super LOGO is an expanded version of Radio Shack's original Color LOGO. I already have Color LOGO, and my three grammar school kids use it at home and in school.
There are books, columns, magazines and clubs with information about LOGO. It's a graphics oriented learning language where kids of all ages easily pick up math concepts and computer logic, while "just foolin' around."

Super LOGO has been upgraded to include list processing, decimal math, interactive programming and animation possibilities. Other improvements are a more sophisticated editor, the addition of duplicate commands for syntax compatability with other variations and better disk features.
Most of what you learned in Color LOGO is carried over. We'll still use Break, Edit, Run and Doodle modes. Variable "turtle" shapes and multiple turtles are carried over along with all the old commands.

We still have a complete manual. I's grown to 192 printed and illustrated pages. I call it complete because everything is clearly explained step by step, with examples and lots of suggestions and tips for parents. The manual is wellorganized with a table of contents, logical chapters, an index and a summary of all commands.
Let's look at the new features. List processing lets you teach the computer English words and program a response. You'll also be able to manipulate text on the screen and label your output. The manual suggests an interesting word game where words are put into a sentence at random. Nested lists are not included.
Our original logo lets you pass a value from a main procedure to a subroutine. Super LOGO allows you to send data to a subroutine for processing and return the new value. That's similar to processing allowed in higher level languages like Fortran and CObOL. You can write your own math functions. If this sounds complicated, there are several examples in the manual.
We still don't have a floating decimal, but Super LOGO does handle decimal arithmetic.
Super LOGO is now interactive. That is, it'll ask for and accept input from you at run time. It accepts input from the keyboard or joysticks.

\section*{Hint . . .}

\section*{More about Moire Patterns}

While playing with the program "Creating Moire Patterns in PMODE 4" (October 1984, Page 18), I discovered that if you change lines 90,100 and 110 in Listing 4 to read as follows
\(90 A=A-V 1\)
\(100 \mathrm{~B}=\mathrm{\theta}-\mathrm{V} 2\)
\(110 x=x-13\)
you will get a spectrum in the familiar order of red, orange, yellow, green, blue, indigo and violet.

James Darrin McDougald MI. Home AFB, ID

The Editor is more sophisticated in that it now provides search and line erase features. You can also change the Baud rate of output to your printer. Speaking of printers, Super LOGO now provides a screen dump to your dot-graphics printer.

One of the frustrations of the original Color LOGO was that some published programs were in various dialects of LOGO that wouldn't work with our version without some translating. Most of those "foreign" terms have been included in Super LOGOso you can copy and run programs from most other versions. I checked that against programs in back copies of "Turtle News" and didn't find any programs that wouldn't work now.

Some other new commands are TRACE (like BASIC), ECHO (sends output to both screen and printer) and full graphics or text screens to eliminate those lines at the bottom of your beautiful procedures. I also checked to make sure the kids'old procedures would still run in Super LOGO - no problems.

The disk operation has been improved by adding a directory (it'll work on your old disks, too), partial saves and merge. You still have to go out to BASIC for other disk features.
LOGO is a must-have if there are kids around, and Super LOGO is, in fact, super! I assume they"ll be offering the upgrade to all of us far-sighted owners of Color LOGO I sure hope so; 1 want it!
(Tandy Corp., available in Radio Shack stores nationwide, 599.)

\title{
Baseball Statistics Package Keeps Stats In Check
}

Baseball Statistics Package, by Sugar Software, is designed to keep team and player statistics for a baseball team. According to the accompanying manual, it will track little league, high school, college or softball teams. To accomplish this it maintains three different sets of statistics: team, pitcher and opponent.

The team stats are by player and contain their performance in each game by opponent. Numbers include At bats, Hits, Doubles, Triples, Home runs, Walks, Hit by pitcher, Sacrifices, Runs scored, RBIs, Steals made, Steals attempted, Strike outs and Errors, Team summary stats add Batting averages, On-base percentages, Strike-out percentages and Extra-base percentages. In addition, it gives in season total for each player.

Pitchers' stats are also by game and include Number of innings, Runs scored, Earned runs, Hits, Strike outs, Wulks, Hit batters and Win-loss-save.

Opponents' stats include Total at-bats, Hits, Doubles, Triples, Home runs, Walks, Hit by pitch, Sacrifice outs, Runs, Stolen base attempts, Stolen bases made, Strike outs and Errors.

The software is menu driven and allows options to start new stats and continue adding stats for team, pitcher and opponent. There are also options to review and correct existing entries and to print out the various statistics.

EASY SOLDERLESS IWSTALATIOM
INCLUDES \(35 / 40\) TRACK RAM DISK

P.O. BOX 2572 - COLUMBIA, MD 21045 Hourr Weekends Noon - 8 pm EST; Weeldaps 7 pm - 10 par EST (301) 987-0578 or (301) 788-6540

In general, Baseball Statistics Package provides a computerized record of a team's statistics. However, most of these statisties are numbers that would be recorded by the team statistician anyway, so the question really is, "What does this program do that makes it worth buying and justifies the extra work of sitting down at my CoCo and entering all the data the statistician has already entered into the record books?" For me, it would have to provide several features that would save more work than is required to enter the data.

Iteach systems analysis and programming, and some of the things I stress are that systems and programs should do all calculations (computers are good at that), they should help the user reduce errors and minimize the amount of entries a user has to make, Using these criteria, let's see how Baseball Statistics Package shapes up.

As far as doing calculations, Baseball Statistics Package calculates several averages (previously mentioned) and seasonal totals by player and team. It gets a passing grade here.

However, when it comes to reducing errors, Baseball Statistics Package falls a little short. It does not seem to do any edit checking on the input. I entered zero hits for a player, then said he had three triples and a home run. The program accepted it and hung on a / 0 (divide by zero) error when it started printing out the stats. Since many of these entries could easily be cross-checked against each other, it would be valuable to provide that feature.
The third criterion, reducing the amount of data the user has to enter, also falls short. In entering stats, an entry must be made for every field rather than just those for which there is data. So if, for example, a player has no triples in a game the user must press ' 0 ' and ENTER, rather than just pressing ENTER to skip to the next field.

Finally, what could make this package above the rest, would be the ability to use the entries for more than one purpose. For example, why is it necessary to enter the stats for each opponent when the pitcher stats for a game are, for the most part, the same numbers that would be entered for an opponent in any given game? Why not carry over the entries for pitcher stats to the opponent stats, instead of entering them separately? It's this kind of thing that makes a program well worth buying.

To summarize, Baseball Sratistics Package is a statisticskeeping software package that does as advertised. What does it give you that a stats book doesn'? It gives a much neater printout in several different formats and automatic calculation of all averages and totals.
(Sugar Software, 1710 N. 50th Avenue, Hollywood,
FL. 33021, \$29.95)
- James G. Kriz

Hint

\section*{DMP-105 Ribbons}

The cartridge ribbon for the Tandy DMP-105 printer is apparently only available from Radio Shack, Ribbon life is rated at one-million characters. but this can easily be extended two- or three-fold

Gently pry off the top cover of the cartridge and invert the large foam ink wheel, The constant reinking process can be further enhanced by putting a few drops of matrix printer ink on the foam.

\section*{Software Review}

\section*{Venture Into The Past Or Future With Time Master}

Have you ever wondered on what day the first Fourth of July fell? How about how many shopping days until next Christmas? Would you like to know what your good and bad days are according to your biorhythms? Are you and your mate compatible?

Time Master tells you all of this and more. This program Is written in BASIC and is made for a 16 K ECB computer, With the calendar and biorhythm sections, you have the option of sending the output to the screen or to a printer. The instructions state that almost any 80 -column printer will work.
The program is on cassette, so all you need to do is CLOAD "TIMEMASTER" and, when it is loaded, type RUN. The title screen comes up and you may choose one of the following six options.
1) Day of Week - Enter any date and the computer tells what day of the week that it was/is/ will be.
2) Days between Dates - Enter two dates and find out how many days are between them.
3) Calendar - This prints a calendar, on screen or paper, of any months you specify. On-screen calendars are limited to one month at a time.
4) Biorhythms - This prints out a chart of your three states, physical, emotional and intellectual, on screen or printer.
5) Human Compatibility - Enter two persons' birthdates and learn their compatibility rating, based on their biorhythms.
6) Quit - End the program.

After making your selection, follow the prompts on the screen.

The first section, Day of Week, asks for the numerical month, day and year. The second section, Days between Dates, asks for the earliest month, day and year, then for the later date. You will get the number of days between those dates.

The third section, Calendar, asks if you want the output on the screen or printer. After choosing, you are asked for a month and year and the computer will show that month. If you choose a hard copy, the computer will ask how many months you want listed.
The fourth section, Biorhythms, also asks for a choice of screen or printer. Next, the program asks you to enter your birthdate and a current date. The screen changes and the computer tells how many days you have been alive and shows a chart of your biorhythms.
The fifth section, Human Compatibility, asks for two birthdates, the earliest one first. After entering both

\section*{Rainbow Gift Ideas for Happy CoCoing!}
birthdates, the computer then compares them, based on how well their biorhythms match (my wife and 1 got 5.9 on a scale of 1 to 10 ). We are happily married for 12 years now with two lovely children. We must remember that biothythms are as scientifically acceptable as astrology.

The sixth section, Quit, allows you to end the program.
All sections of the program accept years in A.D. or B.C. I tried entering a lot of different years; the highest I could go in A.D. years is 3E35, which means a ' 3 ' followed by 35 zeros. That's a long time into the future! Would you like to know what day it was on June 8, 5635 B.C.? It was a Tuesday. You can amaze your friends and really stand tall in academic circles!

When I read the instructions, they stated that Time Master had "numerous, useful and entertaining, calendarrelated functions." I was skeptical at first, but after using the program, I was impressed. There are a couple of things I should mention, however. When you enter the date, be sure to enter the entire year. I made the mistake of entering only the last two digits and was getting the wrong days and monthly calendars. Also, if you use Function 2, be aware that the computer automatically calculates the extra day in leap years.

1 recommend Time Master for anyone who has some extra "time" on his hands.
(Tothian Software, P.O. Box 663, Rimersburg, PA 16248, cassette \$19.95)

\title{
Fun Learning For All Ages With Wizard's Math Board
}

This one surprised my kids, ages 13, 10 and 6; they enjoyed playing The Wizard's Math Board even though they know it is an educational program.

The Wizard's Math Board is available on either disk or eassette and runs on a 32 K Color Computer with Extended basic. For one to four players (ages 10 through adult), it is similar to a board-type game. Movement is based on the computer's random roll of two dice. Money is awarded to each player for correctly answering a problem, with the game objective being to accumulate enough money to purchase three keys. Purchasing the three keys gives the winner the opportunity to try to solve the wizard's final riddle.

The type of mathematical problem - addition, subtraction, multiplication, division or a word problem - is determined by the square on which a player lands. In addition to the mathematical problem squares, there are also several game-related squares: the "pit" (landing here costs you \$75), "lose a turn," "teleport" and 'S'. Landing on the ' \(\$\) ' square allows a player the opportunity to purchase one or more keys, depending on the amount of money earned.

To accommodate players of different ages and skill levels, a menu allows each player to select an appropriate level of

\section*{SPRITE GRAPHICS}

You can have hi-res ( \(64 \times 192\) ) semigraphics-24 sprites with 8 REAL colors in each sprite (twice as many as Commodore-64 multi-color sprites), smooth scrolling, easy to call from your BASIC program. SPRITE EXEC is a 100\% machine language program that loads into top of memory and runs transparently in the background to enable the sprites. SPRITE EDITOR is a powertul menudriven. user-friendly graphics development system that allows you to quickly and easily create and save 8 -color sprites that can be used to simplify animation, game, educational and computer art programs. Both of the above plus sample sprites, animation demo programs and complete documentation only \$24.95,

\section*{COLOR COMPUTER GRAPHICS TUTOR}

Teaches and demonstrates mathematical graphics techniques that can be used to create beautiful geometric graphics displays, 3-D spheres, hyperboloids, paraboloids, etc. The advantage of this tutor program over textbooks is that all of the programming examples are already typed in for you, error-free and ready to run at the press of a single key, Includes booklet that lists the BASIC source code for atl the demos that accompany each topic, \$15.95
Programs are on disk and require minimum of 16 K and Extended Color Basic. We pay postage. Send check or money order to:

\section*{REDTRONIX}

4247 Makyes Rd.
Syracuse, NY 13215
difficulty. At the lowest level, problems use only the digits I through 9, the second level uses digits I through 20, the third level uses digits between 10 and 50 , and the fourth (most difficult) level uses digits between 99 and 999. The menu also allows each player to select one of four bonus levels. The first level awards a player a \(\$ 5\) bonus if he answers the problem within 30 seconds; the fourth level awards a \(\$ 20\) bonus for answering the problem within five seconds. (The second and third levels give intermediate bonuses.)

This software arrived (disk version) packaged safely within an attractive, five-page instruction booklet. The instructions are well-written and very complete. Included at the back of the booklet is a Program Evaluation Form, pre-addressed for mailing to the authors.

Every detail of this package, program and manual, is carefully executed. The four difficulty levels allow children to play along with adults, each competing at an appropriate level. Word problems as well as the numerical problems are generated using random numbers (within the selected difficulty range).

The game board is attractive. Each player's move is shown first on dice, then on the board. The correct answer is displayed for problems answered incorrectly. Scores (money accumulated) are displayed for each player.

The manual is well-done - easily read, complete and neatly packaged. (And being a technical writer by profession, I tend to be extremely critical of written documentation.) I was very impressed with this program, with respect to both form (program execution) and content (educational value).

Also included is a price list (with order blank) of the 12 educational programs produced by the Middletown Educational Sof(ware Association (MESA). Priees are given for both disk and cassette versions, and additional charges are itemized for networking rights and the license to make copies. Other programs teach keyboard skills (grade three through adult); music composition (grade four through adult); handling money (grades two through nine); counting skills (preschool and kindergarten); letter and shape matching (preschool and kindergarten); addition and subtraction (grades one through six); and word processing.
(Middletown Educational Software Association, Middletown High School, 114 Valley Road, Middletown, RI 02840 , cassette \(\$ 20\), disk \(\$ 22\) plus \(\$ 2.50 \mathrm{~S} / \mathrm{H}\) )
- Jerry Oefelein

\title{
Sharpen Gambling Strategies With Blackjack Dealer And Feeler Dealer
}

If you are planning to go by Las Vegas on your next yacation, Saguaro Software has a program you need before you go. There are actually two programs in the package, Blackjack Dealer and Feeler Dealer. Blackjack Dealer lets you play against CoCo , the computerized house, without the chance of losing any real money. Feeler Dealer lets you test a gambling strategy you have devised.

In Blackjack Dealer, the house rules are those commonly used by most gambling casinos. The house will stand on 17 and must hit on 16. If a tie or "push" occurs, the bets are canceled. In some casinos the house wins all ties. The house will pay three to two on a blackjack. This means if you bet \(\$ 10\), you will win \(\$ 15\) if you get 21 on the first two cards.
The manual with the package is quite good. It explains the different house rules and which ones are in effect in this version of "Blackjack." It also explains some of the rules that different casinos use and why you should not play with these rules. The manual suggests the different strategies you should use for the different house rules and what to do when different numbers of card decks are used. If you have your own method, it can be tested out with Feeler Dealer.

Feeler Dealer allows testing of different strategies and you can go through hands very quickly. First, pick the number of hands you want played. You are given the options to have the results of each hand go to the screen, printer or just have the computer play each hand using your strategy, then display how you fared at the end of all the hands. At that time, you again have the option to have it printed out, start over with a new strategy or run it again using the same one.
You enter your strategy from a series of menus of the most commonly used strategies. Therefore, you can mix and match to the different ones. If your method uses some really special features, the program allows you to go inside the program to enter different betting strategies, how and when to split pairs and different strategies on when to take a hit. The program is designed to be very versatile.
One of the things Blackjack Dealer shows very quickly is how easy it is to lose money. The "dealer" or "house" has the advantage most of the time. This package tries to teach you when the dealer does not have the advantage, thus giving you a better chance of winning. Now nothing can

guarantee winning, but knowing how the game is played and when it is advantageous to make larger bets could possibly make a big difference in your pocketbook.
1 am not much of a gambler, but I really had fun with Blackjack Dealer and Feeler Dealer. There is a lot of thinking behind this simple-looking game. It is not all luck, as few things really are. Mainly, these programs helped me learn to slow my losses down some. I guess if it can do that in just a short time, with a little more practice, maybe I could actually start breaking even, or who knows, maybe I could win!
But seriously folks, 1 did have a lot of fun with this package and I learned a lot more about the game of "Blackjack" than I knew before, If you are interested in really learning how to play "Blackjack," 1 recommend this package. It makes you aware of when the odds are with you and when they are against you, I recommend playing Blackjack Dealer before reading the manual on the different strategies, then compare your previous winnings to playing the game after you study the instructions. If you just like playing and do not want to lose any money, then I can still recommend this package - just remember to play it on the computer and stay away from the casinos. Blackjack Dealer and Feeler Dealer require 32K Extended Color BASIC and are available on both disk and cassette.
(Saguaro Software, P.O. Box 1864, Telluride, CO 81435, cassette \(\mathbf{\$ 2 4 . 9 5}\), disk \(\mathbf{\$ 2 9 . 9 5}\) plus \(\$ 1 \mathbf{S} / \mathrm{H}\) )

\title{
Play War Games With City War
}
"Let's play global thermonuclear war," was the premise in the movie War Games and now Prickly-Pear Software is offering City War, which is a scenario of that premise.

The game has the United States and the Soviet Union as the combatants in a nuclear exchange. The objective is to obliterate the population of an enemy city where their president or premier is located; this, then, ends the game.

City War is designed to be played by two or more players. The program requires 16 K and is available on either tape or disk. I received a tape version that loaded in 75 seconds
and ran with no problem at all. The program only has one copy on tape (but is not copy protected) and is easily tranferred to disk.

The instruction manual is eight pages of \(51 / 2\) by \(81 / 2\)-inch sheets. The commands for the game are shown in Table I.

There are also commands for saving and loading a game in progress since a game may take several hours to play,

Upon running the game, the title page displays the program's name, a mushroom cloud graphic, the authors and the distributor, Upon pressing any key, you are prompted to enter the access code for the U.S.A. and then your opponent is requested to do the same for the U.S.S.R.

The next screen displays the cities of each country, their total populations, and their total missile inventory. Each country has eight cities with ' X ' number of offensive and defensive missiles in them. Play commences in the year 1960

and each turn takes "one year," except for nuclear exchanges, which are in real time.
During peacetime, it is beneficial to increase your arsenal since numerous offensive missiles are needed to eliminate a city and defensive missiles are required to knock out offensive missiles.
Once you are engaged in warfare, the offensive player chooses the number of missiles to be launched, the launch site and the target. The defensive player can launch defensive missiles to intercept the incoming missiles. However, defensive missiles are only effective half of the time and they can only destroy an equal number of offensive missiles. If you choose not to defend, your losses are potentially much higher but you have the opportunity for immediate retaliation.
Once the incoming missiles detonate, the monitor screen flashes and then displays a body count. If a city's population is totally obliterated and your head-of-state is there, the game ends. If your head-of-state is not there, the game continues but the destroyed city is no longer usable.
While playing the game, there are some random variations. For example, a militant group may overtake a missile silo and launch missiles toward an enemy site. Also, as the years pass, the populations increase, making it more difficult to eliminate them. Additionally, during wartime, missiles may malfunction and not render any effect.
While I played the game, I found some illogical moves as well as a few irritants.
First, the 'A' or armed code is usable even though the missiles are already armed. As mentioned above, this code uses a turn. Likewise, the 'U' or unarmed code is usable even though the missiles are unarmed and this also uses a turn.
Second, if you accidentally enter anything other than a number in the launch menu, you are asked to redo the input when the message repeats itself; upon doing this, a second request overwrites a portion of the first request. Also in the launch menu, if you do not have any offensive missiles remaining, the program goes into an endless loop wanting to know which city is the launch site. If this happens, you have to BREAK the program.

Third, I see no use for the access code unless it is to make the game appear more realistic. I feel it is a time waster,

Also, since you have to destroy the city where the head-of-state is located in order to win, there appears to be no use for the 'R' (reduce missile inventory) command. And, If you accidentally try to defend a city with no defensive missiles (which is easy to do), you use a turn.

Lastly, there are misspellings in the text, and abbreviations are used for some cities in the main menu even though there is ample room to spell them out. Some of these items may seem like nitpicking, but the game would play better and appear more polished if these changes were made. Fortunately, some changes are easily implemented by the user.
Overall, I give the game a five out of a possible 10. It would be interesting to some, but failed to hold my interest.

\title{
Spectrum Font Generator Gives CoCo More Versatility
}

This recent offering from Spectrum Projects incorporates some interesting and powerful features. First, it allows the user to print out letters, documents or most anything else from previously saved disk ASCII files. This means you can simply use your favorite word processor program to create a letter or other printed text. Then, after saving it as an ASCII file, send it to your dot-matrix printer in any one of the five supplied fonts.
Secondly, if you would like to create your own personalized font or edit any of the five supplied, the software incorporates a program that provides a grid on which you specify just how you want each character to look. Obviously, this is a slow process, but nonetheless possible, and even challenging!
Most dot-matrix printers are compatible with this program. Specific character sets are included on the disk for use with most Radio Shack, Epson, Gemini and Okidata printers. I should point out that the resultant printed text is larger than the normal text output to these printers. Of the five fonts supplied, Roman is the smallest at \(1 / 2\) inch high. The other four fonts, Old English, Futuristic, Block and Italic, all measured \(3 / 16\) inch high.
Since the printed text is larger, it's much easier to read than the normal text output from my Gemini-10X printer. I printed out a letter using the Italics font from my Telewriter-64 disk and it reminded me of the print style and size in my old family Bible. Because of the larger printing, the instructions recommend selecting 60 characters per line with the Telewriter-64 format menu if you're using either Gemini or Epson printers. If you're using one of the other compatible printers, 30 characters per line is recommended.
It's not necessary to use this software only with a word processor. You can simply load in the font of your choice and LLIST or PRINTH-2 will result in some very interesting program listings.

The Spectrum Font Generator only works on disk systems. The package consists of the diskette and a two-page instruction shieet. The disk is not copy protected, so backup copies for your own use are no problem. I was impressed with this program. It offers a variety of uses and provides even more versatility for our favorite computer. I recommend it highly.

\title{
The Complete Rainbow Guide to OS-9 Thoroughly Covers Every Aspect Of OS-9
}

\author{
By George Dorner
}

Where was this book when I needed it? I needed it the first day I got OS-9, 1 needed it last fall, and I needed it last week. I will need it again, and I am delighted to have it next to my CoCo and other OS-9 systems. It will stay there for a long time, except for the excursions to my bedside, to the hammock or to other leisure-reading locales. I plan to order a couple of copies for use at the college where I work - where OS-9 is used regularly by faculty and students.

The chief rap against OS-9 has been the lack of printed aids, such as this one. Many have criticized the OS-9 documentation from Tandy (it was a great improvement over the originals from Microware), but those manuals are reference documents. The Complete Rainbow Guide to OS9 is the supplement one needs to really get a handle on just what OS-9 is and what it is good for.

I have been fond of referring to the difficulties of learning OS-9 as a "shallow learning curve." Dale Puckett and Peter Dibble have been on the curve a long time and have a wealth of varied computer experience between them. They have distilled their experiences onto the pages of this book for us all. In fact. there is enough in Chapter to to justify the cost of the book to those who have spent bours reconfiguring a new system or changing the stepping rate on their drives.

Who are these knowledgeable authors? Dale Puckett is well-known to readers of this magazine and to most of the 68 XX community for his articles and programs in a variety of media. He is also the president of the OS-9 Users Group. Peter Dibble is a columnist for 68 Micro Journal where his "OS-9 User Notes," appears monthly. Peter has taught programming and has worked in the instructional use of computers at a university. He returned to graduate school about a year ago to pursue a Ph.D. in computer science and is the vice-president of the OS-9 Users Group.
Let me give my unbiased opinion: This is an excellent and useful book. It has something for everyone who wants or needs to know about OS-9, the sophisticated UNIX-like operation system, which became available for the Color Computer almost two years ago. Those who bought OS9 because it just seemed to be the next thing to do with their CoCos, professionals who use UNIX at work and who want to compare OS-9, and even those from the SS-50 buss crew who have had OS-9 for a couple more years will all be able to study it with profit or dip into it for pleasure. The book's accompanying diskettes enhance both the learning and the pleasure.

Falsoft did a dandy job of production on the book and diskettes. The book is attractive in soft cover, and its \(420-\) some pages, 32 chapters, seven "Workshops" and other parts are laid out well, have wide margins for making notations, and make use of a cartoon character to highlight the themes and break the monotony of the printed page. They reproduced actual program listings and output rather
than resetting into type, thus avoiding the errors that always accompany such attempts to make the listings look better.

Roughly the first halr of the book will be useful to the OS-9 neophyte; the bulk of the material is tailored to the CoCo OS-9 environment. The second half is for programmers who want to "work within the system" or for the technically ourious who want to know what is going on behind the scenes. Surprising to me is the amount of Level II OS-9 material here. It is well-known that Tandy has licensed Level II and there is a Level II CoCo somewhere in the making, but for most CoCo folk, this material only serves at this point as extra study material ("honors work") or as a presentiment of things to come.
The presence of Level II material makes the book genuinely useful to the entire OS-9 community. At this moment I am typing on a CoCo sitting next to a terminal that is hooked into a system running OS-9/68K on a 68008 , and in the next room is my Apple II with a 6809 board, which can also run OS-9. Dale and Peter's book can help me in many ways on all three systems and on the sixterminal Level II system at work.
Occasionally, there are terms mentioned (like the module named ACIA or the ESCAPE key) that may be mysterious to CoCo users, and likewise there may be "phasing errors" (what is CCLO ? ) in some of the text for non-CoCo readers. But I laud and commend the authors and publishers for giving us a book that not only targets the audience THE Rainbow obviously wants to hit, but that will be useful to so many more, as well. I will mention some of the high points of the book, then, in order to maintain the pose as a real critic, I'll criticize a few things.
I liked the idea of starting the book with an overview: "The Historical Connection." Most new users of OS-9 who can't understand what all the shouting is about have very little experience with any other "real" operating system. What comes on a CoCo or Atari or Apple and is integrated with Microsoft BASIC hardly gives an adequate reference point for the subtleties and power of OS-9. Users familiar with \(\mathrm{CP} / \mathrm{M}\) or just about any mainframe operating system know or quickly come to appreciate the rationale and the nuances of how OS-9 lets you control the computer.

The first review of OS-9 I ever saw referred to OS-9 as "a finely tuned Ferrari." If you've been driving a ' 68 Ford Fairlane, you might be in awe of a Ferrari the first time you get behind the wheel. The initial historical approach, a discussion of hardware and a look at memory are a good start at laying down "a foundation that will let you build a staple of OS-9 programming skills with ease."
There are a couple of chapters that serve as a thumbnail sketch or overview for what is to be covered in detail in the rest of the book. It is hard to present a simple linear description of OS-9, even when you know your audience has the necessary background. This material helps, but readers should not be concerned if every detail isn't understood on First reading. Some of this discussion assumes the reader has experience as an assembly language programmer.

The rest of "Part I" covers the essential topics related to the file system under OS-9. This includes directories, pathlists, anonymous directories, working directories and standard I/O paths. A pieture of the directory tree structure would have been helpful here. Also, the cartoon character could have been worked in to fix in the reader's mind this important concept and its relation to the data and execution directories.
"Part II" is the actual tour guide, a walk-through of the
use of the system from the initial boot. This is the user's manual, which might save hours for new users, especially Color Computer users, for whom this part is very much tailored. The only thing I have to criticize here is the light coverage of what is called the "Repeat Key," the Control A/Clear A function that is so useful and seems to be unique to OS-9. I hoped the authors would write the definitive work on this little function, which OS-9ers "in the know" have been talking about, but nobody has yet written.
"Part III" continues the tour through the command set, those utilities that reside in the CMDS directory on the distribution disk of OS-9. I liked the classification of the command set into those that give information, those that work on files, those that work with directories, those that are used to create or copy disks, and those that change the system. The last two chapters of this section cover Shell commands and procedure files, and by this time the reader should realize the power and enormous flexibility of the OS9 system.
The gears are shifted for "Part IV," where various toolkits, which make an OS-9 user's life easier, are presented, use of the assembler is covered and the aASIC09, C and PASCAL languages are discussed. Six of the popular packages of tools, filters and other programs are reviewed in detail. There is a discussion of the various approaches toward overcoming the disk format and screen shortcomings that Tandy presented with OS-9.
It is always a help to see working programs in the language you are studying, and there are a number of excellent assembly language programs and fragments. Several of the fragments have typos that prevent them from working. These are mostly in the spelling of the system calls, though some formatting was disturbed when the typesetter transferred the listings to nice bold print. There are, however, some useful programs written by a computer science student from the University of lowa, Tim Harris.
The program examples for BASIC09 are each presented twice, once in "normal" BASIC and once in BASIC09. Studying how a familiar program may be restructured and simplified gives the best type of tutorial in this powerful PASCAL-like extension of the most popular hobbyist computer language. There are also some listings of very useful utility commands written in Basicoo. The fact that these could be made to look like other commands by packing them and using RunB did not receive any attention here. This point seems to have been missed in the book.
There are eight listings of programs written in C. These are from Tim Harris and from William H. Ball of Indianapolis. The rest of the material on C is terse, but study of these well-documented and useful programs will help those who are starting off with this powerful and enigmatic language. Only a cursory discussion of PASCALO9 is given, since the language was not available for the CoCo when the book was written.

At this point, we are on Page 232. A beginning OS-9er should probably put down the book for a while and gain some familiarity with OS-9 before proceeding. The rest of the book is intended for real hackers in the old sense and for those with a computer science background or who wish to peer into the innards of OS-9. Not only the thrust, but the writing style changes here. This is Peter's part of the book and his style is less folksy than Dale's. While such differences in style are apparent throughout the book, 1 feel they are appropriate. The expert who will get the most from the latter half of the book needs less space devoted to the
handholding that is designed into the earlier part of the book.
"Part V " covers the details and some of the philosophy of OS-9 operation. The use of memory, the management of disk space and the details of the various modules that reside in memory are discussed. Device descriptors and drivers and the various managers in the system are discussed as they are in no other source and as could only be done by someone who knows about several other operating systems. There is also a chapter on disk formats and a comparison between the standard format and the one that Tandy produced because of their investment in disk duplication machines.
"Part V1" continues with a more detailed look at modules and memory management. The last two chapters are devoted to memory management in a Level II system. If you haven't seen a Level II system work, be assured that just about all the memory constraints and thus, the other shortcomings of Level I on the CoCo, go away in that setting. We can hope we will see it on an upgraded CoCo soon.

In an appendix there are diagrammatic memory maps of both Level I and Level II systems. These could have used more explanation in text, but they are invaluable to inveterate hackers.

That wraps up the review of the traditional part of the book, and The Complete Rainbow Guide to OS-9 would indeed be complete if it stopped there. But there is a really nice bonus just near the end of the book in the form of seven "Workshops." A Workshop is a significant program or two with a very brief discussion, all presented with the intent that inquisitive people will want to study good, non-trivial,

proven programs for style, techniques and tricks. These are good programs - all of them are very interesting.
There are two programs in Workshop 1. The Cookie Monster and The Daemon. Cookie is a program that "takes over your system" by demanding "I want a cookie" until you offer it one. The utility of the program is nil, but the techniques used in the assembler listing to avoid exit from this program by the usual methods are interesting and applicable in other programs you may write. Incidentally, be sure you have the lowercase enabled before you run this program, for the Cookic Monster doesn't like COOKIEs.

The Daemon is a more interesting and a much more useful program. This "guardian spirit" lives in your system and runs programs every so often according to instructions you have previously given. The program sleeps for 10 seconds, wakes up, checks its duty list, does the work and goes back to sleep. This program and the one in Workshop 2, a Notepad, which stores short messages in memory without going to the disk, use "data modules." These are modules that have been dummied up to be loadable into memory (OS-9 only will load valid memory modules), but with storage space allocated for use by a program. Peter wrote several columns about this concept, and these two programs give you an opportunity to see them at work.

Workshops 3 and 4 contain useful programs to conveniently read files at the terminal, to change priorities of programs that are executing, or to absorb the output of a process and letting it disappear. Again, these are both useful and worthy of close study.
The last three workshops are simply assembler listings for OS-9 device drivers, pieces of code that will be written by very few hobbyists, but are excellent examples of how to
tap the system resources. 1 won't say more about them, but this is the first time I recall seeing anything like them in print in wide distribution or for this price. (You may, if you wish, buy copies of source code directly from Mieroware.)
You only retain what is learned from a book like this if you put it into practice. Unless you like copying long programs and searching for typos, you should also buy the two diskettes that are available from Falsoft. They contain the listings and the executable code for just about all the programs in the book. There are a few "bonus programs" thrown in as well, and these are useful utilities in assembler or C . The package includes a booklet listing all the programs. I counted over 50 BASIC09, assembler and C source files, and executable code is included for all those you desire. There are also good instructions on how to use the diskettes to the best advantage. These diskettes make it possible to "test out" a program or an idea illustrated by a program in the book without the delay of doing the data entry and worrying about your typing skills getting in the way.

That's the package! With The Complete Rainbow Guide 10 OS-9 at hand, you, too, can conquer OS-9 ... at whatever level you wish. With the diskettes at hand, you will be able to concentrate on using and understanding excellent examples of programming on the most sophisticated operating system available for small machines.
(The Rainbow Bookshelf, The Falsoft Building, P.O. Box 385, Prospect, KY 40059, book \(\$ 19.95\), disk \(\$ 31\) ( 2 disks, book not included) plus \(\$ 1.50 \mathrm{~S} / \mathrm{H}\) )

\title{
What Is A VDG, Anyway?
}

\author{
By Tony DiStefano \\ Rainbow Contributing Editor
}

Iwrote an article on how to add a video output to the CoCo in the May 1984 issue of RAINBOW. To this very day, 1 still get letters about it; I decided to take a moment and answer the most common questions. The single most-asked question is "Where (or what) is a VDG?"

All the chips in the Color Computer have part numbers that identify them. While numbers are good for ordering and sorting, they say very little about what the chip does. The makers of these chips have given names to them that describe their respective functions. For instance, the heart of the CoCo is a microprocessing unit designed and manufactured by Motorola. Motorola gave this part the code number of MC6809. For technicians who are very familiar with chip numbers, it is no problem to remember that a MC6809 is a microprocessing unit.

There are so many different chips made by different companies (which do basically the same thing) that numbers no longer have a clear meaning. Especially when talking about computers in

\footnotetext{
(Tony DiStefano is well-known as an early specialist in computer hardware projects. He lives in Laval Ouest. Quebec.)
}
general and not about one specific model. People started calling chips with a specific function by nicknames. A MicroProcessing Unit soon came to be known as an "MPU," This is known as an acronym. An acronym is a word formed from the first letter or group of letters of a series of words. There are a lot of abbreviations and acronyms in computer jargon. Some of them are directly related to the CoCo and some are not.

I have compiled a list of all the

Acronyms and Abbreviations
ACIA (*used in the Deluxe RS-232 Pak) - Asynchronous Communications Interface Adapter. Used for serial data.
A/D - Analog-to-Digital. A chip that converts an analog voltage to a digital value.
ALU - Arithmetic Logic Unit. Used to perform binary arithmetic functions.
ANSI - American National Standards Institute.
> "There are so many different chips made by different companies (which do basically the same thing) that numbers no longer have a clear meaning."
abbreviations and acronyms for computer parts I could think of. The ones marked with an asterisk (*) mean that the CoCo has one of them inside or uses it in one of its add-ons, such as a disk drive. Along with the acronyms is a full name and short description. Not all of the acronyms represent one chip some may represent a group of chips and some represent a type of standard. I am open to letters for the ones I may have missed and will write an update as soon as I can.

ASCII - American Standard Code for Information Interchange. Better known as ASCII characters. The format is such that all alphanumeric and special characters on a typical computer keyboard are given a specific numeric value. Anyone using the ASCII standard will use the same values.
BASIC (The language, as in Color BASIC 1.1) - Beginners' All-purpose Symbolic Instruction Code. (Bet you didn't know that one, ay?)
BCD - Binary Coded Decimal.

CPU (*the CoCo uses an MC6809) Central Processing Unit. Basically the same as MPU described earlier.
CRT - Cathode-Ray Tube.
CRTC - Cathode-Ray Tube Controller. A chip used when an 80 by 24 character display is needed. Sometimes referred to as a CRT.
CTM (*the CoCo uses an MC1372) Color Television Modulator. It takes the signals from the VDG and converts them into a signal that is suitable for a color TV.
D/A - Digital to Analog. A chip that converts a digital value to an analog voltage.
DMA - Direct Memory Access. A process of moving data from one device or memory area to another device or memory area without the use of the CPU.
EIA - Electronic Industries Association. An agency that sets standards.
FDC (*the older Radio Shack disk controller uses the WD 1793 by Western Digital and the newer Radio Shack uses the WD 1773 by the same company) Floppy Disk Controller. This is the main chip used when a computer talks to a floppy disk.

EEPROM - Electrically Erasable, Programmable, Read-Only Memory. It is the same as an EPROM except that electricity rather than ultraviolet light is used to crase it.
EPROM - Erasable, Programmable, Read-Only Memory. More permanent than RAM but less than ROM.
IC - Integrated Circuits. It means all chip-like components.
IIA - ( \({ }^{\text {the }} \mathrm{CoCo}{ }^{\prime} \mathrm{F}\) ' board and the CoCo 2 use an MC6822) - Industrial Interface Adapter. It is much like a PIA but has slightly different input capabilities. Used in conjunction with the newer keyboards.
LCD - Liquid-Crystal Display. Usually seen on a digital watch.
LED - Light Emitting Diode. The indicator on almost any disk drive.
LSI - Large Scale Integration. Many transistors in one package.
MMU - Memory Management Unit. Something that is lacking in our CoCo , this chip lets a CPU handle more memory than it could without it.
MSI - Medium-Scale Integration, Smaller than the LSI.
MSO - Montreal Symphony Orchestra. Has nothing to do with computers,
but it is something we are proud of in Canada.
OP-AMP (the CoCo uses the old standards LM741 and LM339) - OPerational AMPlifier. Used in audio circuits to amplify a given signal.
PIA (*there are two of these in the CoCo, they are both MC6821s) Peripheral Interface Adapter. Lets the computer "talk" to things like a keyboard or joysticks.
PIC - Priority Interrupt Controller. This chip is useful when a computer has many levels of interrupt.
PLL - Phase Locked Loop. This is a device that compares the phase of one signal with another.
PROM - Programmable, Read-Only Memory. Like an EPROM but not erasable.
RAM - Random-Access Memory. Usually pertains to any kind of memory but mostly refers to static memory, as opposed to dynamic memory.
ROM (*the regular CoCo has one of these. If you have Extended BASIC, it is another one, If you have Disk Extended BASIC, there are a total of three ROMs in your CoCo . The newest CoCo 2 has BASIC and Extended basic ROMs

bundled together) - Read-Only Memory. It is called "read-only" because the information is inserted into the chip at the factory and cannot ever be changed. This process is called a "masked" ROM. SALT (*only the CoCo 2 s have this custom chip) - Supply And Level Translator. In the CoCo this chip is responsible for main voltage supply regulation, RS-232 interface level conversion, cassette read operations and driving the cassette relay.
SASE - Self-Addressed, Stamped Envelope (see the last paragraph).
SAM (*ihe CoCo has one of these an MC6883) - Synchronous Address Multiplexer. This chip takes care of the DRAM ROM and \(\mathrm{I} / \mathrm{O}\) in the CoCo.
SSI - Small-Scale Integration. Even smaller than MSL.
TTL (*there are a few of these in the CoCo ) - Transistor-Transistor Logic. Actually TTL refers to a whole family of chips that do everything from simple buffering to AND and NOR gates to full memory refreshing. There are many levels of TTL, ranging from the regular to the 'S' (Schottky) series and the LS (Low-power Schottky) series. Today there are even more. There is the ALS (Advanced Low-power Schottky) series, the AS (Advanced Schottky) series and even the ' \(F\) ' for fast series. There is even a HC (High-speed CMOS) series. All have different specifications for speed, power dissipation and price.
UART - Universal Asynchronous Receiver/Transmitter.
VDG (*the CoCo and CoCo 2 use the MC6847) - Finally, the one we have been waiting for! It stands for Video

Display Generator. It is the chip that translates memory data into the visual display with which we are most familiar. VLSI - Very Large Scale Integration. Refers to chips that have thousands and thousands of transistors, something like the Motorola MC68000, a 16 -bit CPU that is used in the . . . sorry 1 just can't say it, red-fruit like computer.

There are also a lot more chips and components that go into making up the CoCo, but the rest do not have fancy abbreviated names. The following is a list of the active components in the CoCo that are not mentioned in the list of acronyms.
The MC14050B is a latch used in the D/A circuit.

The UMI285-8 is a Modulator. It takes the signal provided by the CTM and converts it into a signal that can be used by a regular home TV.

The MC14529 is a data separator used to select the analog inputs for the A/D circuit. These are the joysticks, sound, cassette and exterior sound. In fact, all of the analog-type signals that are in the CoCo go through this chip.

The CoCo also has four voltage regulators. The regulated voltages are +12 volts, -12 volts, +5 volts and -5 volts. The CoCo 2, on the other hand, has only two regulated voltages: +5 volts for all the circuits and an internal (to the SALT chip) -5 volts.

Through the years the CoCo has evolved from the first board (which I believe to be the ' B ' board) to the latest CoCo 2. As a point of interest the next list is the amount of components it takes
to build a \(\mathrm{CoCo}{ }^{-} \mathrm{F}^{\prime}\) board and a CoCo
\(2^{*} A\) 'suffix board:
\begin{tabular}{lrr} 
& \begin{tabular}{c} 
CoCo \\
'F'
\end{tabular} & \begin{tabular}{c} 
CoCo 2 \\
'
\end{tabular}\({ }^{\prime}\) \\
& & \\
Capacitors & 85 & 49 \\
Connectors & 7 & 6 \\
Crystals & 1 & 1 \\
Diodes & 17 & 13 \\
ICs & 29 & 16 \\
Fuses & 1 & 1 \\
Inductors & 10 & 7 \\
Relays & 1 & 1 \\
Resistors & 83 & 34 \\
Switches & 3 & 3 \\
Transformers & 1 & 1 \\
Transistors & 4 & 2 \\
Misc components & 89 & 43
\end{tabular}

Though I do not have the exact numbers, the CoCo ' B ' board has even more parts than the CoCo 'F' board and the CoCo 2 ' \(B\) ' board is supposed to have even less parts than the \(\operatorname{CoCo} 2^{\prime} \Lambda{ }^{\prime}\) board. How is that for progress? And don't forget the price difference, too,

Next time someone talks to you about his VDGs and DMAs, you will be able to understand what he is talking about, and tell him what we have in our own CoCo.

As always, if you have a problem with something in this column and absolutely can't wait for the mail, give me a call on Monday nights only, at (514) 473-4910. My address is 4680 18th Street, Laval Ouest, Quebec H7R 2P9. If you write to me and expect an answer, include an SASE; you won't get an answer without one. I am sure you know what SASE means, right?

\title{
Getting The Most From 256K RAM Chips
}

\author{
By Dan Downard \\ Rainbow Technical Editor
}

\begin{abstract}
- Lately I have seen 256 K RAM chips (41256) advertised in several different electronics magazines. Will these chips work in the Color Computer? If they do, how would you access the memory above \(32 \mathrm{~K}^{*}\) Also, how fast do the chips need to be?
Is the VDG chip in Co Co capable of being used with an RGB interface? Do you know of anyone working on that idea? What is the usual makeup of an RGB interface circuit (block diagram)? Do you know where I could get any additional information on the VDG chip or RGB theory?
\end{abstract}

Steve Tolley
Theodore, AL
The 256 K chips have to be rated for 150 ns, Steve. You will also need some kind of interface hardware and software, such as Thunder RAM, to address the different memory banks.

I recommend writing Motorola to obtain information on the 6847 VDG in your CoCo. I recently saw an ad for an RGB converter for your CoCo video, but have yet to see one in operation.

The RGB system of video has individual red, blue, green and sync outputs to the
(Dan Downard is an electrical engineer and has been involved in electronics for 25 years through ham radio [K4KW'T]. His interest in computers began about six years ago and he has built several 68 XX systems.)
monitor. The 6847 is not capable of generating the proper signals for RGB and it is a major project to undertake. Good luck, and if you get it working, write us and we'll publish it.

\section*{DOS Double (Sided) Bind}
- I have just recently purchased a doublesided disk drive from Software Support, Inc. It has a J\& M disk controller, but I requested Disk bestc. The disk drive does not operate right. It loads programs, but I cannol save, format or do anything that has to do with changing the disk.

I contacted Software Support's technical staff. They told me I needed JDOS and a DOS switcher, I wasn't too sure about JDOS so I bought A DOS. Yes, you guessed it. ADOS didn't help either. How do I get my disk drive to work?

Jaysen Kingery
Pacifica, CA
Jaysen, I suggest you read "Getting On the Right Track" by Colin Stearman in the July 1985 issue of THE RAINiow (Page 26). Double-sided drives require special connections to take advantage of the extra storage space.

I think your problem is hardware, not software, related. At the same time, Disk BASIC will not support double-sided drives without a patch as described in the above
mentioned article. You can always use them as single-sided drives.

\section*{Upgrade Uncertainty}
- Ever since purchasing a 16 K Color Computer, 1 have been looking for the correct way to upgrade my system to 64 K . I have my own 4164 RAM chips to use, but I'm not very certain on how the upgrade is performed. I have the newer CoCo 2 that uses the conventional dynamic RAMs and these chips are situated in two rows (one with three chips, the other with five). The memory chips and the addresser are socketed, while the rest are soldered directly to the board, but I'm not sure what PC board I have.

When I upgraded my old 'E' revision CoCo. I had to connect TPI and TP2 with jumper wire. Would I have to do this in the case of my CoCo 2? And what would be needed to connect the \(64 K\) socket printed on the PC board?

\section*{Loren Dickey}

Tucson. AZ
Loren, the hardware gurus at Spectrum Projects recently sent me a sheet with upgrade guidelines for your computer. According to them, besides replacing your memory chip5, you have to solder a wire between two pads labeled "JI." These pads
are located between resistors R7 and R27 on the lower right-hand side of your circuit board.

\section*{Joystick Combo}
- Iown a Color Computer with ECB and \(64 K\). I have this problem with the Radio Shack white joystick. I know they sell adapters for the CoCo so you can use an Atarijoystick. Instead of buying this adapter. I thought I could fust cut the plugs off of the Radio Shack and Alari joysticks and put them both together.

I examined ihem by removing the oulside covering to see which wire went to the direction of the joystick. I did this and had some success, but on the Radio Shack joystick there are some wires that go to more than one direction of the movement of the foystick. What one or more of the wires would go to the Atari joystick?

> Johnny Harris Newport Beach, CA

There is a wiring diagram for the CoCo joysticks in the Color Computer Technical Manual (Radio Shack Cat. No. 26-3193), Johnny CoCo joysticks use a potentiometer for an analog output to the computer. Atari joysticks are just switches controlled by a lever. If you look in the ads in Theraineow, a few companies make adapters for using Atari joysticks with the CoCo, but I don't see any way to use CoCo joysticks with an Atari.

\section*{Graphics Garbage}
- The Radio Shack Disk System Manual states that if DSKI \(50,17,2\), A\$, B\$ ENTER and PRINT AS; BS ENTER is used. the contents of Track 17, Sector 2 will be printed to the screen. All I get is graphics garbage. Sector 2 contains the file allocation table and Id like to see it in English. The PEEK rouiline, for the file allocation table on Page 51 in 500 Pokes, Peeks \({ }^{1}\) N Execs gives me the same garbage.

When I use some of the lower sector numbers (3-7) I get a resemblance of the directory, but there are still some graphics characters between the program histings, Also, I have to CLEAR 300 before I ENTER the DSKIs listing to avoid an OS Error. According to the manual, no CLERR command is necessary.

1 have a CoCo 264 K Extended and single Slim Line Drive with a I.1. ROM. Is there something wrong whit my computer or controller?

\section*{Jose Garcia Mooresville, NC}

There's not a thing wrong with your computer, but if you think it speaks English, wait till you hear this.

When BASIC is intialized, there are only 200 bytes reserved for string space, Jose.

Since each sector has 256 bytes, a CLEAR 300 gives a few more extra bytes than you need, but it's only memory.

The garbage youre seeing on the screen is non-ASCLI codes, or graphics representations of hexadecimal numbers greater than 128. You can convert these characters to numbers by using the masic function ASC. Try the following program:

5 CLEAR 300
10 DSKI \(50,17,2\), R\$
20 FOR \(x=1\) TO 6日
30 PRINT HEXS (ASC (MIDS, \(X, 11))\);
40 NEXT \(\times\)
We'll have you speaking hexadecimal in no time at all.

\section*{Preserving Pages}
- I am interested in making a graphics Adventure that uses disk space to store pages. Is there any way I could save Micropainter files to disk and LOADM them 10 my game?

Also, what building is that always picrured on the "RainbowTech" page? Just thought I'd ask!

Dale Alwater Cherryfield, ME

As far as yout first question Dale, sure, you can LDADM any Micropainter file as a command from an Adventure game, as long as you first use the proper SCREEN and PMODE commands to put your CoCo into the proper graphics mode.
The second answer escaped all of the expertise of our editorial department. We would like fo think of it as "Rainbow Tech," but after extensive research, and a litte help from Jerry McKiernan, our assistant art director, we discovered it is Highland Middle School In Lonisville, Ky.

\section*{Printing the Picture}
- I am in the market for a graphics program. My search took me to Radio Shack. where a program called Disk Graphics was recommended. This appears to be a firie program and certainty does the things I want it to do, with one exception: I cannol print it using my Star Gemini SG-10 printer- It seems that it can only be printed by a Radio Shack printer.

My question is; Do you know of a disk graphics program, similar 10 that of the Radio Shack program, that can be printed on an SG-10? This program generates bar graphiles, both horizontal and vertical, pie charts, line charts and dot graphs. It also has calculation functions for averaging pur-
poses, enhanced printing sizes and automatic lining.

If you do not know of such a program, do you know of any way that the Radio Shack Disk Graphics program can be printed on my SG-107 I would not mind procuring another piece of software such as a screen dump utility, provided it is a reliable, no-hassle method that is friendly to use.

John E. Walsh
Danvers, MA
We have found the SG-10 to be very popular, John, and feel there are others with the same question. One program that comes to mind, which will allow you to compose and print graphies pictures, is Graphicom. Most other graphics programs require a customized screen dump routine for your printer, You may experiment with Hardcopy by Computize; even though the SG-10 is not listed in their literature, I think it is compatible with Epson printers.
I think your best bet will be to find a graphics editor you like, such as Disk Graphics, and just use a screen dump program such as CoCo Screen Dump by Specfrum Projects.

\section*{Piggyback Replacement}
- Ihave an 'E' board 16 K Color Computer that was upgraded to 32 K by the "piggyback" method. However, I seem to have a problem with some soffware due to this upgrade. For example, Color Disk Scripsit's graphics mode will not work. All that is seen is a screen of "garbage interference," Also. this problem occurs in other graphies-type displays with other programs.
My questions are, is there any way to get around these problems through any PQKEs and /or PEEIG, and is it difficult to replace the "piggyback"upgrade to a legitimate \(6 \$ K\) (or is it not worth the effort since 99 percent of most programs work fine)? Will Radio Shack perform the 64 K upgrade since the machine was not upgraded originally by them? Do any of the advertisers in RAINBOW perform this type of upgrade?
D.A. Turowski

Natrona Heights, PA
1 have seen 64 K RAMs as cheap as \(\$ 15\) for a set of eight. At that price, I think you would be wise to replace your piggybacked RAM chips as soon as possible. Your problems will disappear.

Your technical questions are welcomed. Please address them to: Downloads, THE Rainiow, P.O. Box 385, Prospect, KY 40059. We reserve the right to publish only questions of general interest and to edit for space and clarity. Due to the large volume of mail we receive, we are unable to answer letters individually.

\section*{Adding more features to the LIST command}

\title{
The Utility Room
}

\author{
By Brian A. Lantz
}

Welcome back to the "Utility Room"I Step over that hammer, and have a seat on that sawhorse.

If you missed the last issue, you missed my explanation of the LIST command, along with the changes required in order to allow the LIST command to receive its input from the standard input path, as well as from specified files.

I will try not to repeat information from one installment to another, so if you missed the last one, try to get a back issuc. All line numbers mentioned in this article are in reference to the listing in the last issue.

This time we will add more features to the LIST command. We'll give LIST the ability to print only a specified range of lines, instead of printing out the entire file. OK! Get out your reference book on assembly language programming, the last issue of Rainbow along with this issue and let's get started.

\section*{Let Me 'Count' the Ways}

In order to print only selected lines within a file, we need to first show the computer how to count. A computer, by itself, is really a dumb machine. We need to "teach" it everything. So, how
> (Brian Lantz lives in Tampa, Fla, and is president of the National OS-9 Users Group. He is a free-lance programmer. with programs carried by Tandy, Computerware and Frank Hogg Labs. He has developed much of the commercial OS-9 software released in the last year.)
do you teach a computer to count? Let me show you.

In order to keep track of the eurrent line number, let's set aside a place in data memory for the command to use for the current line count. Add a Line 155 to the listing that contains:

GOUNT RMB 2 ifne counter
Now, let's initialize it to zero. A simple way to do this is to make Register D (registers A and B combined) equal to zero and store it at COUNT. Add these lines between lines 250 and 255 of the listing (Line 255 was added in the last issue):

Well, we set aside our scratch pad. Next, let's add the assembly code that counts the lines as they are read. In between lines 350 and 360 , add the following:
\[
\begin{array}{ll}
\text { LDD cotpit } & \text { set the eurrent Lind count } \\
\text { ADDO si } & \text { add I to the line count }
\end{array}
\]

\section*{Your Choice of Options}

We are now ready to determine how

We want to be able to give our choice of range options to the LIST utility command. With bASIC's LIST command, a range can be specified with any one of the following:

> LineL-
> LineL-1inu2
> -1 ine
> Linel
```

fron "1inel" ts che end
Irom +1in\#1" to "1Ins/"
Iron the beginntris, to "line2*
l

```

We will do basically the same thing, except we will require our option list to begin with either a plus sign or a minus sign. This makes it easier to check and see if there are any range options on a command line (we simply check for a -- or a ' + '). Therefore, our equivalent ranges are:
\begin{tabular}{|c|c|}
\hline Hnel. & Iran *innal" co the and \\
\hline 2LneL-15xez & fron "Iinal" ro "Hne2" \\
\hline -L1/inl & from the lueginuing to "iine2* \\
\hline 11mel & *1tneL" oniy \\
\hline
\end{tabular}

Before we design the assembly code, let's set up a small chart of syntax rules that we must handle within our code in order to reach our destination.

Rule H1 - Any number following a " + ' (if present) is used as
```

Table I
OPTGHK

```

LDA . \(\mathrm{X}+\) CMPA \#', BEQ OPTCHK CMPA \#\$2 \(\phi\) BEQ OPTCHK GMPA \#' + BEQ PLUS
get next character
check for a comma
if it is, skip it
check for a space
if it is, skip it
check for a "+"
if it is, branch

Put a Monitor on Your CoCo with

\section*{The New Universal Video Plus}

We would like you to look at our old Video Plus IIU with new eyes. We now call it the Universal Video Plus \& would dare you to compare it with any other video interface. We feel confident that you will see that it is the best product \& the best buy in CoCo monitor drivers ever!

Sure, at first glance you will notice that it costs a littie more. But look further \& see how much more you get The bottom line is that the Universal Video Plus is the best bargain available. Here are the important features to consider a compare.
- The Universal Video Plus works with every CoCo made Easy-to-follow, clear instructions are included for every model.
- All cables (audio \& video) are included. There is no need to buy extenders or extra cables as required by other drivers. With this consideration, the Universal Video Plus is now the most cost effective video interface of ail.
- Heavy duty construction, evidenced by sturdy leads \& connectors, allows the necessary handiling for installation without fear of breakage.
- Shielded audio a video cables insure that no extra RF interference will be introduced from the Universal Video Plus, unlike other interfaces.
- The adjustment pot on the Universal Video Plus makes it easy to optimize the video signal for each computer. You don't have to modify your computer to get good displayl
- Our advanced design gives the highest quality display-better than any other davice offered
- Installation is easy. There is no soldering \& no dismantling of the RF shield.
- Thousands of Universal Video Plus' are in use throughout the U.S. Clearly the test of time has proven its reliability.
- The Universal Video Plus is backed by the Computerware reputation for excellence \& service.

Universal Videa Plus
\(\$ 34.95\)
also avallable. . while supplias last...

Video Plus \(1 \quad \$ 24,95\)
Interfaces the original model of Color Computer to any composite video monitor (color or manochrome)

Vidao Plus IIC
\(\$ 34.95\)
Interfaces the Colo Computer II (model) 26-3026) witheither a color or monochrome composite video monitor. Computer must have video chip in socket.

\begin{tabular}{|c|c|}
\hline & the first number of the range. \\
\hline Rule \#2 & - If Rule \#1 applies and the number is not followed by a \(-=\), then the last number of the range is the same as the first number. (This allows single line printouts.) \\
\hline Rule \#3 & - Any number following a -' (if present) is used as the last number of the range. \\
\hline Rule \#4 & - If the first number of the range is not specified, then the first number of the range is the first line of the input. \\
\hline Rule \({ }^{\text {H }}\) & - If the last number of the range is not specified, then the last number of the range is the last line of the file. \\
\hline Rule \#6 & - The range list (if present) must be terminated by either a CR or a delimiter (space or comma). \\
\hline
\end{tabular}

With these rules in mind, our next task is to write the routine to check for ranges and analyze them. Insert the lines from Table 1 into the listing between the current lines 500 and 510 .

Now for an explanation of what these new lines do. The first line gets the character pointed at by ' X '. The next four lines skip past the delimiters (commas and spaces). The next four lines check for the '+' and '-'characters, If the character in Register A is not one of these, the branch is made to OPTOUT and it is assumed this character is the first character in a pathname.

\section*{'T' Minus One and Counting}

If the character is a 'r then the MINUS routine is processed, This routine checks to see if the next character is a digit. If it is not a digit and it is a character greater than ' 9 ', it is sent to PARERR. This is to satisfy Rule \#6. If the next character is greater than ' 9 ' it is not a number and it is not a delimiter.

If the character is less than ' 0 ' it is sent back to OPTCHK, since it may be a delimiter or a CR. This allows for Rule \#2 and Rule \#5. If the -- is followed by a delimiter, the last number is assumed to be the end of the file.

The next task of the MINUS routine is to convert the ASCII decimal number

Table 1 (continued
\begin{tabular}{|c|c|c|c|}
\hline \multirow{17}{*}{MINUS} & GMPA & \#' & check for a "-" \\
\hline & BNE & OPTOUT & 1f not, end OPTCHK \\
\hline & L.DA & \(9, \mathrm{x}\) & get next character \\
\hline & CMPA & \#'g & test low number range \\
\hline & BLO & OPTCHK & if less, branch \\
\hline & CMPA & \#'9 & test high number range \\
\hline & BHI & PARERR & if too high, error \\
\hline & BSR & getnum & convert the number \\
\hline & STD & то & store "line2" at To \\

\section*{Color Basic Compiler} by Warren Ulich III
CBC lets you wite in the familiar Extended Sasic and then converts it to machine language for you. It produces afficient. compact, machine code that is position independent, relocatable, and runs an average of 40 times laster CBC features over 60 commands and functions, a subset of Extended Basic. The compiler is limited to integer variables, but variables are easily passed between a compiled program and BASIC programs. Strings and mult-dimensional arrays are fully supported. (Write for a detailed description.) Requires 32 K
32K Disk \(\$ 39.95\)

\section*{Macro Conditional Assembler}

MAC not only supports all standard mnemonics and directives; but also thrives on macros, conditional assembly, repeat sequences, inclusion of source library ilies and more. The macro capabiltifes allow you to create standard subroutines only once, and then simply call them when they are needed. Conditional assembly allows you to have only one multi purpose source file, and then conditionally assemble various versions from one source. And we've included our Assembler Cross Reference program.
32K RSDOS \(\quad \$ 49.95 \quad 64 \mathrm{~K}\) OS-9 \(\quad \$ 49.95\)

\section*{The Sourcerer}
by Frank Delargy
The Sourcerer is a menu driven symbolic 6809 disassembler that produces syinbollo source code that can be assembled. It is compatible with most editor/assemblers that produce ASCII files. Added features include automatic equate generation for labels and symbols out of disassembly range; FCC, FCB, and FDB generation; user defined symbol/label buffer area; and symbollc labels for all extended addresses. The position independent code is relocatable to any area of memory.

\section*{64K Screen Expander \\ by Gregory Forseth}

The 64 K Color Gomputer can have a \(64 \times 24\) or \(51 \times 24\) upper and lower case di5play without hardware mods! Use it with BASIC and assembly language programs that use text displays. Added features include the mixing of lext and hirres graphics on the same soreen. Keyboard auto repeat; type ahead keyboard; two PRINT (4) formats: ON ERROR command; auto line number; and an enhanced PMODE command that allows you to specify page 0 the start page. Requires 64 K

Disk \(\$ 27.95\)

\author{
Color Connection III for RSDOS \\ by BJ Chambless
}

This is the most comprehensive modem package for the Color Computer! All standard protocols are supported including CompuServe's Protocol B, XMODEM protocol, and XON/XOFF. Full aupport of the auto answer/auto dial feature for both Hayes compatible and Radio Shack modems is provided You can use all baud rates when using the Radio Shack Deluxe RS232 program packl A big buffer of up to 42 K is offered ( 64 K is required for maximum bulfer size.) You can print directly from the buffer, and flles bigger than the buffer can bo uploaded and downloaded The automatic XON/XOFF protocol downloads direct to disk as welll Printer baud rates are selectable from the software.
The hi-res \(51 \times 24\) screen has optional inverted colors and antl-truncation. All printable characters are available at the keyboard and all control characters are supported including ESCape, RUB, DEL, ofc. Sinigle key macros allow easy viliy of often-used passwords and ID's with a single key touch. Our introduction to Data Communications tutorial and glossary of terms are included. You won't find a better telecommunication package anywhere! Requires 32 K , modem, and disk drive.
32K RSDOS Diak. \(\$ 49.95\)

\section*{Color Connection II for Cassette \\ by BJ Chambless}

Golor Connection tIf is an easy-to-ase: menu ditiven terminal package. it supports 300 baud, full and halt duplex, and auto-dial for modems with this feature The upload/download protocol is user defineable to allow you to customize your system to most standard hosts. Single key macros allow you to enter often-used passwords and ID's with a single key. All printable characters aro available at the keyboard and all control characters are supported including ESCape, RUB, DEL, etc. Color Connection reads and writes ASCll files. You can upload and download these files using the buffer. You can save your buffer to tape. It has a \(51 \times 24\) or \(32 \times 24\) screen display with selectable "Inverted" screen and anti-truncation Our Introduction to Data Communications" tutorial is incluced at no chargel Requires 16 K .

\section*{Color Connection II for OS-9}

\author{
by Brian Lantz
}

Our O\$-9 Color Connection is a great terminal package and really takes advantage of OS-9. The OS-9 shell is accessible, so you can invoke any OS-9 command! XON/XOFF software handshaking is supported. The expandable buffer allows you to save anything on the screen to memory. Macros allow you to enter often-used passwords and ID's quickly with a single key. There is a unique 12 page on-line screen display with which you can view any of the last 12 screena even while the software is still receiving datal
Color Connection II reads and writes standard ASCII files. The upload/download protocol is user defineable so you may customize your system to most standard hosts. All printable characters are available at the keyboard and all controt characters are supported. it supports 300 baud, full and half duplex, and auto dial for modems with this feature. It is menu-driven and easy to use. A handy glossary of telecommunications terms is aiso included. Requires 64 K , Disk, 8 OS-9.

Box 668 Encinitas, CA 92024 (619) 436-3512
into a binary number (BSR GETNUM). After this is done, the number is stored at TO (this meets the conditions of Rule \#3) and the next character is analyzed. If it is a delimiter or a CR the routine branches back to OPTCHK to skip past any delimiters that precede the pathname. If the character is not a delimiter or a CR, then a parameter error has occurred. A delimiter, either a comma or a space, must separate the range options and the filename (Rule \#6 again).

\section*{PLUS}

The PLUS routine first converts the decimal number to binary (BSR GETNUM again), then stores it at FROM. Next, it checks the next character to see if it is a \({ }^{-}\). If it is, the routine loops back to OPTCHK. If not, the routine checks to see if it is a delimiter or a CR. If it isn't, a parameter error has occurred. (Rule \#6).
If the next character is a delimiter or a CR the routine loops back to OPTCHK, after first storing the FROM value to TO. This is so that only the one line gets listed (from linel to line1). This fulfills the conditions of Rule \#2 and Rule \#5.
The OPTOUT section simply resets Register X to point again to the character that was not processed.

\section*{Handle it}

The parameter error handler routine is next. Place it after the last section that we added.

And, to add the error message, add these lines after Line 230:
```

ERROR FGA \$0A
FCG /cat: parameter error/
FCB \$9D

```

This is a very simple error message. In the next installment, I will explain various ways to present error messages. from the simple to the complex.

\section*{Numeric Conversion}

Add the lines from Table 2 after the PARERR routine. These lines convert the decimal number given in the command line to a binary number that the computer can work with.

The routine ONCE processes one ASCII digit. The TWICE routine processes two digits. The third line of the routine processes the first digit. The next line adds the second and third digits. The TWICE routine processes the fourth and fifth digits. The number given may have from one to five digits (1-65535). Once the end of the number is reached, the pointer at ' X ' remains where it is.
This same routine (DIGIT) can be used in other programs for other base numbers (base 8, for instance). To do this, just change the MULT equate to the desired value, and call the DIGIT routine onee for each possible digit.

\section*{On Option GOTO}

Just 11 more lines and this command can handle an optional defined range of lines. The next two lines reserve storage space in the data area for the two variables that mark the beginning and the end of the range list. Add these lines right after Line 155 :
\(\begin{array}{llll}\text { FROM } & \text { RHB } & 2 & \text { to stora "Inna1" } \\ \text { TO } & \text { RHB } & 2 & \text { to stora "Ine2" }\end{array}\)

\hline & & \\
\hline
\end{tabular}

Now，to make our ranges＂do their thing，＂add these four lines before Line 360：
\begin{tabular}{ll} 
CMFD EROM & compars COUNT to FROH \\
BLO MAIA & if less than，loop \\
CHPD TO & compare COUNT to TO \\
BHI EOF & if high，ond file
\end{tabular}

Finally，we need five lines at the beginning of the program that will initialize the FROM and TO pointers， send the program to the OPTCHK routine and then save the new value of Register \(X\) at PRMPTER．Place these lines before Line 255：
\[
\begin{array}{ll}
\text { STD FROH } & \text { clear EROM pointer } \\
\text { SUBD } 11 & \text { make D equal } 55535 \\
\text { STD TO } & \text { set TO pointer } \\
\text { BSR OPTCHK } & \text { process opefons } \\
\text { STX PRMPTR } & \text { store X ac PRMPTR }
\end{array}
\]

\section*{The Results are in}

The result is Listing 1．I made one cosmetic change by changing the com－ mand＇s name to CAT to keep this new version distinct from the original LIST command．And since this is the first edition of CAT，VRSION was changed toat：

In the next installment，I will cover how to handle more complex error messages．Later，we will add automatic line numbering to our CAT command．

\section*{Mail Call}

1 received a few letters after last month＇s article，but I didn＇t receive a letter from you！I would appreciate any feedback on other command changes you＇d like to see explained．Drop me a line．I can＇t give you what you want if you don＇t tell me what it is！See you next time in the＂Utility Room．＂

The OFFICIAL BASIC09 TOUR GUIDE is skillfully written in a friendly and easy-to-read style, Just perfect for those new to computers and to BASIC09. It's also a valuable reference book for programmers, engineers, students and hobbyists, providing an in-depth look at BASIC09 plus an overview of the OS-9 operating system. Comprehensive reference sections on BASIC09 and OS-9 commands are also included.
The book "maps" out your route through the Mercedes of Basics... BASIC09 and puts you in the driver's seat in no time. Fasten your seatbelt, sit back and enjoy the ride to perfecting your programming skills.

\section*{MICROWARE . . .}

The OFFICIAL BASICO9 TOUR GUIDE comes from the people who wrote BASIC09. As the leader in 6809 system software, we at MICROWARE care about our users and want to help you get the most from our products.

It's here! THE SECOND RAINBOW BOOK OF

Twenty-four of the most challenging Adventure games ever compiled await you in this latest offering from The Rainbow Bookshelf, Journey through time, fight World War III, win the heart of a beautiful and mysterious princess. Experience the titillations of the most rugged Adventurer without ever leaving your seat.
Order The Second Rainbow Book of Adventures and among the 24 program Ilstings you'll recelve are:

> Yellow Submarine - Meet the Beatles and attempt to outlast the Blue Meanies while enjoying some of the Fab Four's all-time musical hits.
> Ring Quest-Regain possession of a magical ring and save a kingdom.
> Ice Princess - Just one glance at this beauty will steal your heart.

Chief Inspector - Who killed B.L. Brown?
Sir Randolf Returns - The sequel to a favorite from our first Adventure book.
Silverton House - Where's the money been stashed?
Time Tripper - Lost in another dimension.

Experience other traditional and contemporary challenges: Stowaway, Hero of Lonesome Valley, The Aiddle of Randomar, Lunar Escape, The Crypt of Flodnar, Secret Agent Man, Pappy's Gold, Scavenge, Thief of Dirloc, World War III, Dark Castle, Castle of Naurios, Curse of Karos, Island, African Transference, and Robert's Adventure.
The Second Rainbow Book of Adventures sells for only \(\$ 13.95\) !

\section*{THREE BONUS PROGRAMS \\ WHEN YOU BUY THE SECOND RAINBOW ADVENTURES TAPE!}

\section*{That's right. You'll receive a total of 27 fantastic Adventures when you get the Second Rainbow Adventures tape. The three bonus games are Castle Thuudo, Halls of Dungeon Death, and Ceves of Kalakh - programs with listings too lengthy to include in the book. Save yourself hours of typing listings Load these great Adventures into your computer and run them! \\ The Second Rainbow Adventures Tape is only \(\mathbf{\$ 1 3 . 9 5}\). \\ The tape is an adjunct and complement to the book. Even if you buy the Second Rainbow \\ } Adventures Tape, you'll need the book for the introductory material and loading instructions.

Keep your Rainbow Bookshelf up-to-date!
See Page 197 for additional Rainbow Bookshelf offerings.

Please send me The Second Rainbow Book of Adventures for \(\$ 13.95^{*}\)

\title{
An Explanation And Review Of Spreadsheet Functions
}

\author{
By Richard A. White Rainbow Contributing Editor
}

Aspreadsheet contains a variety of predefined mathematical formulas called functions. These are buillin operations that can quickly perform a task that would otherwise take much longer or might not be able to be performed at all. In many instances, functions also save memory space since they remove the need to type in long formulas.

A widely used statistical function is @SUM(X . ... Y). It simply adds up all the numbers in a row, column or block. The form shown is from DynaCalc. The form in VIP Calc is essentially the same except the range is specified as \(\mathrm{X}: \mathrm{Y}\). Elite*Calc specifies the range in the same way, but omits the '@'. In Elite you use an equal sign \((=)\) to start formula entry. For the discussion below, I will use Lotus \(|-2-3|\) DynaCalc syntax.

The '@' symbol serves to distinguish the function from a normal label entry. The characters within the parentheses form the argument of the function. An argument is information that a function needs in order to perform its task. In@SUM (X... Y) the argument is the cell or cells that are to be added together.
\(@ \operatorname{SUM}(\mathrm{C} 6 \ldots \mathrm{C} 25)\) Compute the sum of the values in cells C6 to C25.
It does not matter whether the values have been directly entered or have been calculated by some other formula or function. However, CoCo spreadsheets and most others as well have no way of checking if a computed value is right.

\footnotetext{
(Richard White lives in Fairfield, Ohio, and has a long background with microcomputers and specializes in BASIC programming. With Don Dollberg, he is the author of the TIMS database management program.)
}

If the value to be used is positioned so it will be calculated after calculation of the current cell occurs, the value may not be right. As long as you know this can happen, you can handle the matter yourself by doing a number of manual recalculations to assure that all formulas and functions are using properly ealculated values.

Many functions perform on a range of values. In some spreadsheets, some functions can handle a block as a range while the same function in other spreadsheets cannot. Our three CoCo spreadsheets can handle ranges and even lists of ranges and cells in some functions.

Figure 1: Sample spreadsheet and formulas

The more 1 dug into ways to specify the argument for @SUM () and other statistical functions, the more hidden power I found. In Figure I, I show a simple example with numbers in cells AI ., B3 and the results of some calculations. The formula dump is shown in Figure 2. In cell A5 is a simple summation of the column A1 ... A3. In cell B5, the summation is taken over the block AI B3.
In cells A7 and A9, we see that the functions can accept a series of ranges and single cells in the argument. This can open all sorts of possibilities in that it starts to free you from having to think about how you're going to organize the spreadsheet in order to simply perform one of these functions at the end. The spreadsheet still needs to be organized logically so you and others can easily understand it and its results when it's done.
@SUM(A1 . . A3 3 BI . . A B3,A7)
Note that each range or cell citation is separated by a comma. In addition to being somewhat faster, @SUM() and the other range functions are more adaptable to changes made in the spreadsheet. Figure 2 shows Column A added using a straight cell addition formula. Column B uses @SUM().

Figure 2: Spreadsheet using cell addition and @SUM () before row is deleted

Figure 3; Spreadsheet using cell addition and @SUM () after Row 2 is deleted
\begin{tabular}{|c|c|}
\hline 1 A & ] B \\
\hline 1. & 1 \\
\hline 2 - & 3 \\
\hline 3-2.-.-....- & -.-2-- \\
\hline 4- +AI + @ERROR + A 2 & @SUM(B1 \\
\hline
\end{tabular}

When Row 2 is deleted the spreadsheet tries to adjust the formulas. In the case of @SUM () it can, since the missing cell was within the defined range, which is simply shortened by changing B3 to B2. The addition formula always has three cell entries. The spreadsheet is able to adjust A3 to A2, but it cannot make the old A2 entry go away. @ERROR is entered in its place by DynaCalc and will be displayed when the sheet is recalculated.
Of course, a range function is not totally forgiving. If you delete the start or end cell of the range, @ERROR will be substituted. Let's now see what happens when we go the other way and insert a row and add data to it.

Figure 4: Spreadsheet using cell addition and @SUM() after a row and data are added
\begin{tabular}{|c|c|c|}
\hline 1 & A I[ & B \\
\hline \(1-\) & 1 & 4 \\
\hline 2 - & 2 & 5 \\
\hline \(3-\) & 196 & 190 \\
\hline 4- & 3 & 6 \\
\hline & .-- & \\
\hline & A2+A4 & (B1. . . B4) \\
\hline
\end{tabular}

In the addition formula, the A3 reference was changed to A4. The result returned in A6 remains '6', @SUM() includes the new row and its data in its calculation and puts \(t 15\) into B 6 rather than 15 . In most instances, the reason you add columns or rows is to make room for a larger range of data and you expect to have the added figures included in the calculation. When using a range function and making sure the new rows or columns are between the start and end cells, you are automatically taken care of.

Figure 5: Preferred way to define a range for @SUM()
\begin{tabular}{|c|c|c|}
\hline A & 11 B & 1 \\
\hline 1-Heading A & Heading & \\
\hline 2 - & 1 & 4 \\
\hline 3- & 2 & 5 \\
\hline \(4-\) & 190 & 109 \\
\hline 5 - & 3 & 6 \\
\hline 7- \(+\mathrm{A} 2+\mathrm{A} 3+\mathrm{A} 5\) & @Sum(B1. & \\
\hline
\end{tabular}

Figure 5 shows a better way to define ranges for the @SUM() function. Be careful since it is the wrong way to describe a range to other functions in some spreadsheets. I inserted a row at the beginning of the sheet and have shown column headings. I left the formula now in A7 alone to show how the sheet will adjust formulas.

I changed the range of @SUM( ) to include both the cell containing the heading and the cell containing the dashed line indicating a summation. B1 and B6 have math values of zero and will not affect the summation. When adding extra lines for data, you are most likely to add them below the heading or above the dashed line and will always have your new lines within the range.
@COUNT() is another range function. @COUNT() counts only those cells that have a mathematical value, including a zero - at least that's the way it works in Elite*Calc and DynaCalc. My version of VIP Calc counts all cells in the range whether they have anything in them or not. (In fairness, I am using one of the early editions of VIP and that problem may have been fixed.) In Elire* Calc and DynaCale, @COUNT() ignores all blank cells, including all cells containing labels. If you use Lotus 1-23 at the office, be aware that it considers celis containing labels as having a zero and counts them.
@COUNT() in DynaCalc has one other feature (read maybe bug) that it shares with \(1-2-3\). @COUNT(A1) will return a one even if AJ is blank. Further, any @COUNT() function whose argument contains a single cell reference will

 by Steven Hirsch lively new arcade game. The road twists to the horizon on the 3-D panorama that sets the stage for the most exciting race the CoCo has ever seenl Vie for time as you speed through the curves at incredible speeds. Step through the gears to stay ahead of the pack, but step lively since some will stop at nothing to see the end of the race, or the end of youl Four challenging raceways, complete with obstacles and colorful 3-D scenery, put your skilis to the test in this Pole Position type game.

32 K Color Computer Required.
\(\$ 34.95\)

\(\rightarrow\) B B B B K Kary McFadden
You clutch the tank controls, searching for any sign of the enemy. Suddenly a blip appears on radar! Frantically, you move your tank into position. At last you spot the elusive enemy tank! Facing it, you race to lock sights and fire before he does!
Enter the ultimate battle-zone in this exciting 3-D tank combat game. Strategy, speed, and your tank's cannon are your only hope as you wind through a three-dimensional course inhabited by impenetrable barriers and enemy tanks.
Dazzling graphics and lifelike sound take you a step beyond the ordinary in this fast, machine-language arcade game. Enter the next dimension, ROMMEL's troops are waiting for you!
return at least a one, Assume that cells A1 ... B2 are all empty. Following are a number of @COUNT() functions and how they react.
```

@COUNT(A1)=1
@COUNT(AI ... A2) =0
@COUNT(A1 ...A2,B1)=1

```

This apparently is not a bug, but I am hard pressed to tell you what value this "feature" has.

For those who need to calculate statistics, many spreadsheets can calculate the variance, VAR(list), and standard deviation, STD(list), for a set of data. I will presume those who are familiar with these statistical functions and need to use them will be able to figure out how to use them. If you are not familiar with them, you either don't need them or need far more training than 1 can give in the column.
The financial functions built into VIP Calc and Dyna Calc generally deal with the time value of money. Many larger businesses use the time value of money to seleet their investments. The idea is that there are always more ways to spend money than there is money to spend. There need to be ways to compare various investments to choose the best ones from a current prospective. One of the problems is the cash flow that an investment may generate each year varies with time.
Let's consider a fictional company that makes "Whatits" and "Thatits." Available for investment this year is \(\$ 400,000\), and the Whatits and Thatits division managers

have been asked to submit plans for that amount of investment in one or the other of the divisions. The investment plans will include estimates of the annual savings and revenue each investment will produce. The company wants at least a 15 percent discounted rate of return. We will see what that means later.
Whatits and Thatits are two very different businesses. Whatits division has to buy some parts from the outside now and investment now would save growing amounts over the next few years, stabilizing five to six years out at \(\$ 150,000\) annual savings after taxes.
Thatits is booming and a \(\$ 400,000\) investment this year will produce \(\$ 200,000\) after tax revenue next year. But, competition is coming and Thatits is sort of a trendy item. The company cannot count on being in the business seven or eight years from now.
An entrepreneur will typically make a "gut feeling" decision on the data. In this case neither decision will lead to bankruptey. On a cash flow basis, one is better than the other and should maximize company profit and strength. @NPV ( ) is a tool to make the choice. Figure 6 shows the spreadsheet.

Figure 6: A project return analysis spreadsheet

Project I and Project 2 represent the respective proposals of the Whatits and Thatits division managers. Each proposes to invest \(\$ 400,000\) this year. Project I returns much more cash to the company over 10 years, but much of the return comes in later years. Project 2 returns lots of cash in the early years and then diminishes. A primary question is which project has the greatest net present value? Cells in Row 21 contain a @NPV() function. The one in B21 reads:
@NPV(.15,B8 . . B17)

Cells C21 and D21 have similar formulas adjusted for their column positions. One way to look at @NPV( ) is that the current value of money earned in the future is reduced by the compounded interest that amount of money would earn between then and now.

If I buy a \(\$ 1,000\) two-year CD, two years from now I have the \(\$ 1,000\) plus earned interest. If 1 invest \(\$ 1,000\) now in an asset, earn no interest over the next two years and then sell it for \(\$ 1,100\), I will certainly have less money at that time than if I had put the money into the CD. The net present value of the asset is less than the net present value of the investment in the CD.

Therefore, the first argument in @NPV() is the interest rate or the rate I expect or need the capital I invest to be returned - rate of return for short. It is entered as a decimal number though we talk about 15 percent interest. The next argument specifies the range over which @NPV () works.

There is one big "beware" when you use @NPV(). The first entry in the range must apply to the first interest period; each succeeding entry must pertain to a succeeding period. The periods must be equal. For most applications, use an annual interest rate or rate of return entered as a decimal number rather than a percentage, and have your periods be years.

Now we can see differences between the two projects. Project I has a larger total return, but Project 2's net present value is better. A more sophisticated analysis would show that Project 2 would pay back its capital investment much sooner making more money available earlier for other investments. And who can say for sure that the Whatits business will really be as projected five years from now? Certainly, the projection of the Thatits return over the next two years is on much firmer ground.

On the basis of the spreadsheet, the company should invest in Thatits now while they address what to do about the Whatits business. There is some time to act there, while there isn't in the Thatits business.

One option is to invest the \(\$ 400,000\) three years from now when Whatits savings start to peak. The net present value of that approach is only \(\$ 260,000\), but the net present value of the investment three years out is also about \(\$ 260,000\). The
company can afford to wait and still meet their investment objectives.

What if you won a million dollars in your state lottery? It really isn't worth a million to you now since it will probably be paid in 20 yearly payments with the first one this year. In the meantime, the Lottery Commission will invest some money at a good rate and expect to pay you your annual installments out of the interest they earn. At the end of 19 years, they keep their investment.

Figure 7: Net present value of a \(\$ 1,000,000\) state lottery win
\begin{tabular}{|c|c|c|c|}
\hline \multicolumn{2}{|l|}{2-AMOUNT} & & 1999996 \\
\hline \multicolumn{4}{|l|}{3.} \\
\hline & & & 468246 \\
\hline \multicolumn{4}{|l|}{5.} \\
\hline 6 - & YEAR & 9 & 59090 \\
\hline 7. & YEAR & 1 & 59996 \\
\hline 8 - & YEAR & 2 & 599990 \\
\hline \(9-\) & YEAR & 3 & 50906 \\
\hline \(24-\) & YEAR & 18 & 596000 \\
\hline \(25-\) & YEAR & 19 & 59990 \\
\hline
\end{tabular}

In this case, you are paid \(\$ 50,000\) now so it has its full value. Next year's payoff will be the first one used in the NPV computation. The formula in C4 is +C6+@NPV(.1,C7 \(\ldots\) C25), assuming a 10 percent interest rate. If you are disappointed, try computing the NPV of \(\$ 0.00\) installments over 20 years!

\section*{SERIAL TO PARALLEL PRINTER INTERFAGE}

\author{
SP-2 INTERFACE for EPSON PRINTERS: \\ - 300-19.200 BAUD rates \\ - Fits inside printer - No AC Plugs \\ - Optional external switch ( \(55^{\infty}\) extra) frees parallel port for use with other computers \\ - \({ }^{3} 49^{95}\) (plus \({ }^{5} 3^{000}\) shipping)

\title{
A Time For Reflection
}

\section*{By Dale L. Puckett Rainbow Contributing Editor}

Christmas and New Year's are almost upon us. For Christmas, I hope you tind some new OS9 software in your stocking. As for the New Year, I hope we all get to see the new Color Computer everyone's been talking about for the past two years. Well cross our fingers.

In any case, the holidays give us a few days away from the grind and time to relax as we reflect on the past and plan for the future. We have another column full of OS-9 treats and tips this month. We'll take a look at a new OS-9 mousedriven word processor and pass along a few tips from professional c programmers. But first, let's make up our wish list for next Christmas, We need to give the Software Developers in the OS-9 Community a head start.
(Dale L. Puckett is a free-lance writer and' programmer who has worked with the Motorola family of microprocessors since 1976. He is the author of The Official BASIC09 Tour Guide, and coauthor, with Peter Dibble, of The Official Rainbow Guide to \(\mathrm{OS}-9\). He is a chief warrant officer in the U.S. Coast Guard and lives in Alexandria, Va.)

\section*{Intuitive Software}

The computer business has been in a slump most of this year. While both Apple and IBM have been having problems. Atari and Commodore have thrown their fate to the wind - teaming up with Madison Avenue and locking horns to see which one of their new 68,000 -based machines will catch the public's attention and stir the imagination of software developers.

On the surface, the OS -9 community appears to have been sleeping through the slump. Very little new software has been announced this year and the products that have been released have, for the most part, been a rehash of old technologies. Yet, under this calm, I sense a swell of excitement and imagination. Developers seem to be working on products that will run on new hardware designed to knock down the ageold barriers of speed and memory, Other hardware is opening the door to the world of graphies.

Microware has grown to the point that it can advertise in the most professional trade journals, meeting AT\&T and 1 BM on their own turf. And, they've announced a new software
driver that mates OS-9 with the new graphics chip from Hitachi - one of the best in the world. That driver uses the same graphics standard as the one used by AT\&T and IBM.
In the meantime, UNIX has proven to be too large and rigid for many applications. OS-9 with its fast and modular code has become the answer for many Original Equipment Manufacturers. And, some of these OEMs have big names.
Since we have all been pioneers running OS-9 on the Color Computer, let's stop and think about what we want this new generation of hardware and software to do. If you have a pet wish, drop us a line and well share it with our readers. To get you started, I'll share some of the things I would like to see.
If OS-9 is ever going to be a success in the consumer world, we must see some intuitive software hit the market. Look at the rough start OS-9 had on the Color Computer. Hundreds of people came out of the woodwork to complain about the documentation from Tandy. When you look at it academically, the OS-9 documentation is among the best in the business. From a reference standpoint, everything is there, The problem

\title{
NEWS RELEASE October 1st, 1985
}

\title{
NEW QT Plus multi-user computer
}

\author{
* Available for Immediate Delivery
}

Frank Hogg Laboratory announced their new QT Plus computer system today. The QT Plus computer joins FHL's standard QT computer system as part of their product line. The QT Plus is the second 68000 based computer system the company has released this year.
The QT Plus differs from the standard QT in several ways:
68000 running at 10 mhz vs 68008 running at 8 mhz . 16 bit data bus vs 8 bit data bus 512 K RAM standard vs 128 K Up to 128 K ROM vs 32 K
Supports 4 floppys vs 2 floppys

The QT Plus adds these features:
Expandable to 1 meg with an additional board. Buffered I/O expansion port with 32 addresses. The I/O is of the style of the SS 30 bus with 8 data, 5 address, interrupt, R/W, select, reset and E lines. The I/O bus itself is an inline 34 -pin connector on the main board. For example the 32 addresses could be used with 16 serial ports (ACIA's) or 8 parallel ports (PIA's) or any combination.
The QT Plus uses a Multi-Level Interrupt Structure for improved I/O.
The QT Plus with 512 K costs \(\$ 500\) more than the standard QT with 128 K .
\begin{tabular}{lll} 
QT 1 & 128K single floppy drive & \(\$ 1595\) \\
QT Plus 1 & 512K single floppy drive & \(\$ 2095\) \\
QT 2 & 128K dual floppy drive & \(\$ 1750\) \\
QT Plus 2 & 512K dual floppy drive & \(\$ 2250\) \\
QT HD & 512 K one floppy, one 10 meg hard drive & \(\$ 2695\) \\
QT Plus HD & 512K one floppy, one 10 meg hard drive & \(\mathbf{\$ 3 1 9 5}\) \\
QT HD & 512K one floppy, one 20 meg hard drive & \(\$ 2995\) \\
QT Plus HD & 512K one floppy, one 20 meg hard drive & \(\mathbf{\$ 3 4 9 5}\) \\
QT Plus & 512K expansion board for 1 meg total RAM & \(\$ 395\)
\end{tabular}

All QT systems include the operating system, OS9/68K with all utilities and RAM disk, Basic09 and Runb, Stylo word processor, mail merge and spell check, and the Dynacalc spreadsheet program! Over \(\$ 2000\) of bundled software is included in the system!

770 James St., Syracuse, New York 13203
surfaced because an operating system as powerful as OS-9 with its hierarchical directories and multitasking was something new. Many of the pioneers that bought OS-9 for the Color Computer had no idea what they were getting. Essentially, they didn't know what they needed to look up.

After this shaky start, the application programs began to show up on the market. However, most of them were simply recoded versions of software that had been running on the FLEX operating system or the pseudo-disk operating system in the ROM in the Tandy disk controller At first, few of them took advantage of OS-9's ability to allow multitasking.
using the older OS-9 application software you probably feel that software withour documentation is an impossible goal. But, it's not. During the past six months I have been using software, both at home and at work, that doesn't require a user's manual. Betieve if or not, it is intuitively obvious what you need to do ajob. This giant leap forward was made possible by designers who made their software work the way people think.

In the past this wasn't possible and designers had to write the software the way the machine wanted it. But today, powerful operating systems like OS-9 are helping designers break this bond with the machine. They are making it

\title{
"Using a mouse doesn't mean you are lazy. It means you are effective. A mouse lets you work the way you think."
}

Then, slowly but surely, programs that allowed you to read a directory or go out to the OS-9 Shell and run a second and third program white executing another began to appear. But from a design standpoint, the programs we have seen for OS-9 so far have stuck with older concepts. Most are command line oriented; few use the graphics capabilities built into the Color Computer.

During the past summer, a few programmers started to break from the past. Jeff Francis, working for Bob Rosen at Spectrum Projects, advanced the state of the art for OS-9 programs on the Color Computer to the realm of menu-driven software. The OS-9 Solution was a great leap forward. This program is almost intuitive and is bound to ease the entry into OS-9 for many people. Yet, it is based on a rigid menu. Essentially, it brings us to the era of software technology used by the Wang dedicated word processors during the past five or six years.

I hope no one takes our comments this month as criticism. We are not complaining, rather, we are shooting for pie in the sky, attempting to stimulate your imagination so that you can influence software developers to harness the power that's built into OS-9.

What do we mean when we say we need intuitive software? First, we'll dare to take a utopian viewpoint and state that we mean software that doesn't need any documentation. If you've been
possible to turn these small, desk-top machines into powerful tools that can be used by anyone to do almost anything.
Another thing that makes this new generation of software work better is that must majur developers have stuck with a standard. When you save information from your database manager, spreadsheet or word processor - it doesn't matter which one - you do it the same way. All Editing operations work the same way: delete a character on each application program using the same steps; move data or blocks of text from one part of a document to another using the same steps.
Essentially, on a well-designed system you have one standard way to do each job. Once you learn how to run one program, you know how to run all programs. You quickly find yourself out of the learning curve and into a very productive environment. Isn't that why we bought our computers?

\section*{Driving with a Mouse}

The designers at Tandy must have known something that we have been too proud or stubborn to admit. They came out with a mouse for the Color Computer more than a year and a half ago.
I must confess that when the idea of using a mouse first hit the trade publications. I thought it was utterly ridiculous. "If I get so lazy I can't type a command line, I better get out of the business," I thought. I was wrong.

Using a mouse doesn't mean you are lazy. It means you are effective. A mouse lets you work the way you think. You select an object - a character, word or sentence in a word processing document for example - by pointing to it. After selecting it, you do something to it. For example, you can simply delete it, cut it out and save it, copy it, or take it and paste it somewhere else in your document. This algorithm matches the way most people think. Journalists, for example, have been using scissors and tape to cut and paste news stories since newspapers have been published.

Granted, you can cut and paste on a computer without a mouse. Usually, you use the terminal's arrow keys to move the cursor to the beginning of a block of text and push a key to mark the beginning, then you must use the cursor keys again to move the cursor to the end of the block. When you arrive at your destination, you must hit yet another key to mark the end of the block. Still, you aren't done. You must go back to the cursor keys and move the cursor to the point where you want to insert the block of text. These actions are two-dimensional and unnatural. With a mouse, you simply move the arrow on the screen to the beginning of a block, hold down the button and drag the arrow to the end of the block. When you arrive, simply let go of the button. To move the block selected, you move the arrow to the insertion point and hit a single key and you're done.

\section*{Where are our Desk Applications?}

Dave Gibson, the new secretary of the OS-9 Users Group, called me one day nearly a year ago with an idea. "Why doesn't someone write a SideKick for OS-9?" he asked. That's a very good question and I'm glad I finally got around to sharing it with you.
As was the case with the mouse, I had to use a powerful desk accessory in order to realize it was a very handy tool. An anecdote here should make the point nicely: How many times have you come up with a great idea while you were busy working on a spreadsheet? Without a desk accessory program such as SideKick, you had two courses of action available. You could pick up a pad of paper and write a note to yourself - or you could exit the spreadsheet program and call up your word processor to write yourself a note.
The first alternative is tacky. As a matter of principle, an automated office that requires writing notes on a piece of

FLEX or OSS \(\$ 50\)
Source avaliable, OS9 or
Flex for \$50.00 extra.
paper is hardly automated．Besides， When you write short notes on small pieces of paper you wind up with a cluttered desk and usually can＇t find them－at least not when you need them．The second approach is counter－ productive because it takes too much time．If your ideas are fleeting，you＇ll find they pop out of your mind by the time the word processor gets going．
The real OS－9 shakers（especially those with OS－9 Level II computers， which give them access to more than 64 K of memory）haven＇t been stifled by this problem．They have been using OS－ 9 ＇s multitasking capability for a long time．Many programs，DynaCalc and DynaStar for example，let you escape to an OS－9 Shell．You then use this Shell to start another process to do the second job．Essentially，if you have been run－ ning OS－9 with enough memory，you＇ve had a host of powerful desk accessories online all along．
It makes you realize how far ahead of the 1BM crowd you are in this arena when running an OS－9 Level II system． IBM users have had formal desk acces－ sory programs at their fingertips for several years now．However，until re－ cently，none of them had a multitasking ability，In other words，you had to completely stop whatever program was rumning－even though you didn＇t need to exit it－to do another job with a desk accessory．Compare this with OS－ 9．where you can escape from a program to use a Shell to start another time－ consuming job working in the back－ ground，while continuing work on your original application．
Gibson was talking about an inte－ grated desk accessory system．For
instance，as I type this column，I can reach over to a menu bar，push a button and do any of the following jobs：take a note from a phone conversation； record a phone number；dial a phone number；add an item to my calendar； add an item to my＂to do＂list；look up an area code；use a powerful calculator； cut the answer out of the calculator and paste it in the document 1 am writing； display a clock that gives the time；call CompuServe and download the latest news on the OS－9 SIG；or print another text file．In fact，several of these small accessories can be running at the same time．The program is the new version of SideKick that runs on the Macintosh．

Now let＇s look at two facts．This is the first set of desk aecessories to allow multitasking on the Mac．You have been using multitasking since the first day you fired up OS－9．All we need now is for someone to put together a package of short utilities that can be summoned by hitting a yet undefined escape key． That key would take us to a menu where we could point to a tool and push a button to use it．Believe me，OS－9 was made to write this type of application． Start talking about it with your favorite developers．

\section*{Where＇s＇ThinkTank＇for OS－9？}

And while we＇re making that wish list for next Christmas，when is someone going to write an outline processor that runs on OS－9？This is another applica－ tion I was skeptical about at first．I waited several months after buying Think Tank before using it．Now，I use it for almost everything 1 write．

Here＇s a typical scenario．You need to write an article for your club newsletter．

You met with the club president after the last meeting and he gave you a list of topics he would like to see covered． When you got home that night，you typed the title of each topic on a single line using Think Tank．

You have just outlined your article． Several days later you look at the list and get some ideas for a couple of the topics．You call up Think Tank，point to the tail of one of these headlines，hit RETURN and enter your ideas．Through－ out the month you make phone calls to gather information about each topic in the outline．As you get the information on each topic，you point to that headline in the outline，push a button to open a text window and enter the information obtained on the phone．When it is all entered，you simply close the window．

Finally，at the end of the month after finishing all of your research and enter－ ing the information in a window under each headline，you send the article in to the editor．You call up the outline，look at it and decide the topies are right but the order is wrong．No problem－you point to a headline，hold down a button and drag it to another position in the article．

Here＇s the magic：When you finish putting the headlines in order，your entire article will be in order because the text you typed in a window under each headline went with the headline when it was moved．You have，quite simply， reorganized the article by rearranging the headlines．

How about it，Tandy？How about it， third party developers？OS－9 is a pow－ erful enough operating system to make the job easy．Essentially，all you need is a series of pointers to the headlines．

\section*{The Last Word}

Let's move from our wish list to reality, At least one developer in the OS-9 community has dared to be different and attempted to move his software into the realm we've been describing. It's a move 1 approach with much optimism since every great journey starts with a single step.

Likewise, move to the top or bottom of the active text buffer by holding down the CLEAR key and striking the up- or down-arrow key. If you'd rather move along a line from tab stop to tab stop, rather than word to word, hold down the CLEAR key and type a ' \(T\) '. If you're moving a long distance, however, it's much easier to take the mouse and move the cursor to the destination.

The mouse-based operation really shines when coupled with the virtual file handling capability. If you are through editing everything in the present buffer

\title{
*Bailey has made The Last Word especially intuitive. I tested it without reading the manual; that's about as severe a test as can be offered."
}

Mike Bailey of Unified Software (525 South Chestnut St, Cameron, MO 64429) has finally released his mousebased word processing program, The Last Word, It implements many of the theories we listed earlier, including: pull-down menus, point and press file selection, fast on-screen formatting, an online 22,000 word dietionary and virtual file handling. It works with its own Hi-Res screen or with Word-Pak from PBJ.
The Last Word is a big step toward the future; Mike tells me he had quite a time making it all fit in the limited workspace available with OS-9 Level I. In fact, he had to leave the dietionary look-up feature out of the Hi-Res version because of the extra memory required by the screen. This feature works extremely well in the Word-Pak version and is a fantastic tool for writers.
Bailey has made The Last Word especially intuitive. I tested it without reading the manual; that's about as severe a test as can be offered. As an example of the intuitive nature of the program, look at the cursor control scheme. The cursor is moved one position by moving one of the four arrow keys in the proper direction. To move to the next word, hold down the SHIFT key and strike the right- or left-arrow key . To move to the top or the bottom of the screen, hold down the SHIFT keys and strike the up- or down-arrow key.

If you're really in a hurry, move to the left or right end of the line you are on by bolding down the CLEAR key while striking the left- or right-arrow key.
and need to move on to another paragraph that's still on the disk, you don't even need to think about it - just use the mouse to drag the cursor to the bottom of the screen. The Last Word automatically goes to the disk file and reads in additional text. If you didn't hear the disk drives start up you'd hardly notice that the program had to go to the disk.

Likewise, if you forgot to make a change in a portion of the text that has already scrolled onto the disk, simply take the mouse and move the cursor past the top of the screen. When you do this, The Last Word will read in the information from the disk automatically and continue to scroll backwards in the file until you let go of the mouse.

The point-and-click philosophy is evident everywhere in The Last Word To edit a file, put the cursor on the menu title numed FILE. The word FILE is highlighted and you can click the button on the mouse or joystick or strike the enter key. When you do this, a pulldown menu folds out of the menu bar You then pull down the cursor to your selection For example, if you need to make some changes in a source code file, pull the cursor down until the word EDIT is highlighted. Once you see it light up, simply click the mouse button again and you'll be grected with a prompt line at the top of the sereen.

At this point you can type in your filename. But, if you can'I remember the name of the file, simply click the mouse button or strike the ENTER key. After doing this, a box is drawn on the screen and a list of filenames are displayed in
the box. Move the cursor on top of the file you want to edit and click the mouse button again. Almost instantly your file is opened and you can begin editing.

The dietionary look-up feature in the Word-Pak version of The Last Word works the same way. Point to any word in the text by placing the cursor anywhere in the word. Then, go up to the MISC menu and pull it down to the word "LookUp." After doing this, a box appears on the screen and a list of similar words is displayed in the box. If the correct spelling for your word is in the box, simply move the cursor on top of that word and click the mouse button. Like magic, the word is corrected with your selection.
To change the format of the text, you also point and click. To change a format, move to the menu har and select FORMAT, pull down the menu and select your choice of format and click the mouse. Then, move the cursor into any format line and click the mouse again. The Last Word lets you insert format lines anywhere in the text and this makes it easy to make the text appear just the way you want it. You can left-justify your copy, right-justify it or double-justify it. The latter means you will have even margins on both sides of the page. You can also center a number of lines of text, a feature that comes in handy many times.

Yet, despite his intuitive, progressive approach to this word processing program, Bailey gives the option of doing things the old way if you like. You can exercise every option in the program without a mouse or joystick if you like. If you can't stand using a menu, you can use a series of shorthand commands.

Presently, the restrictions in The Last Word are hardware imposed. For example, with the Hi-Res screen version there was not enough memory left in the work space to allow the use of the LookUp routines. And, even in the Word-Pak version, the wild card algorithm had to be removed from the LookUp code so it could fit and rum within the work space. However, this program is a giant step in the right direction. With the new hardware we all hope to see soon, it will be dynamite.

Bailey also sent us a program called PixDump, which lets you dump a file containing a bit map of your CoCo screen to your printer. The C source code for PixDump is printed in this column. The code in the listing is set up to work with a Gemini 10-X printer.

To make it work with my Epson, I made three changes. 1 added a " \(\backslash 07\) "

\title{
Os9 + X
}

\section*{XTERM}

XTERM is a full fealured OS-9 communications program that takes full advantage of the power of OS.9. It works with the normal text screen, XSCREEN, or the Wordpak BO columin board.

XTERM is menu oriented for ease of use, it is simple to cse even for the novice OS-9 user. And yet, XTERM is powertul enough for the ex. pert OS. 9 user.

Some of the features of XTERM include: full upload and download support with remole buffer operation: supports XON/OFF protocol; \(110 / 300 / 500 / 1200\) baud, \(5 / 6 / 7 / 8\) bis, evenvodd/no parity, full or haif duplex; abla to execute an OS-9 sheil command from within XTERM.

XTERM works with a Color Computer using the standard Gerial interface, but also will work with a hardware serial port. Also, if you are using a hardware parallel printer port, you can print data to the printer as it is received.

Now includes XMODEM
protocol and function keys.

\section*{XTERM \$59.95}

\section*{XMENU}

XMENU is a system that creates a menu-driven environment for the Color Computer using O5-9. O5. 8 now becomes easy-to-use with command selections made from menus. Merus are included to access OS.9 commands. An easy-lo-uge utlity is provided that allows for the creation and maintenance of menus.

XMENU works with XSCREEN, the normal fext screen, O-PAK, and the WOROPAK AO-column board

XMENU \$29.95
WITH SOURCE 359.95

\section*{XSCREEN}

XSCREEN creates a high resolvtion screen for the Color Computer using OS-9. This high resolution screen gives you 24 lines of text with 51 , 64, of 85 characters per line. Characlers can be either white on a black background or vice versa. Easy menu operation.

\section*{XSCREEN \$19.95}

WITH SOUACE \$39,95

\section*{XDIR \& XCAL}

A package of two powerful utiriber you wor't want to be without. XDIR is an OS-9 directory program that printt full hierarchical directories. The directory does full sorting and has complete pattern matching, including wildcard and character classes.

XCAL is a powertul zalcutator for OS.9. Ideai for both programmers. and for general use. XCAL features include. work in decimal, hexadecirnal, binary previous 25 resulis are stored; functions inciude AND, OR, NOT, XOR.

\section*{XDIR \& XCAL \(\$ 24.95\)}

\section*{Ordering Information}

Add \(\$ 3.00\) shipping 8 handling. MN residents add 6\%b sales tax Visa, Mastercard, COD (add \(\$ 2.50\) ), personal checks: all ship. ped from sfock within 24 hours.
following the " \(\times 331\) " in all three lines of the array "grafinit," used "sdump (3,2, 2):" in "main" and added a line feed in the write statement that prints out each line of pixels. The first line in that routine looks like this: "if ( - bitrow \(<\) 0) [." Note that when adding an item to a write statement you must change the last parameter. To do that, change the "\#define STRSIZE 4" to "\#define STRSIZE 5 " and change the ' 1 ' to ' 2 ' in the write statement where you add the "\I." Note also that the " 1 ' is a lowercase "ell," not a numeral one.

You can configure PixDump to your printer by looking up the required code in your printer manual and placing it in the proper code. The source is wellcommented, so you shouldn't have any difficulty.

\section*{ThunderDupe 2 from Bob Rosen}

Bob Rosen at Spectrum Projects, Inc, (P, O. Box 21272, Woodhaven, NY 11421, phone: 718-441-2807) seems to be sticking by his pledge to fully support OS-9 products.

He has just released a program called ThunderDupe 2 that works with his 256 K Thunder RAM upgrade and lets you copy a full OS-9 disk in only one pass, including formatting. He uses it with four disk drives to make four commercial distribution copies of his OS-9 Solution and OS-9 RamDisk software. It also works with normal single-sided, 35 -track Radio Shack Disk basic and Graphicom picture disks as well as any single-sided CoCo format OS-9 disk.

By running a BASIC utility program that comes in the package, ThunderDupe 2 can be altered to copy 40 -track, single-sided disks. In this mode it will also copy Model III and 4 single-sided
disks. It will not work with copyprotected disks, FLEX disks or doublesided disks. Thunder Dupe 2 was written by Marty Goodman.

ThunderDupe 2 works by reading every bit of data off of your standard 35 -track, single-sided drives and storing it in the Thunder RAM. After reading the master disk, remove it and put your blank disks in all available drives. When it's finished, Thunder Dupe 2 beops. It also signals you by lighting the light on your disk drive if it senses a bad copy. If you don't trust "idiot" lights, you can read the printed report on your CoCo screen. The program comes with the C source code.

\section*{Putting D.P. Johnson's 512K RAM Disk to Work}

While we're on the subject of RAM disks, we'll pass on the information about D. P. Johnson's CCRD 512 K RAM disk we received from Michael D. Revnell of Las Cruces, NM. He finds it very handy when working with the Microware c Compiler from Tandy.

Here's how he operates: "The modules 'cel' and 'c.prep' control where the libraries and defs files are accessed during a compile," Revnell writes. "I dumped the two files containing the modules and found one place in each one containing the null terminated string, /DI. Using the Microware Debugger, I changed these to \(r\) and I can now compile a c program with no access to the floppy disks. These are the patches."
\begin{tabular}{lllr}
\multicolumn{3}{c}{ Module } & Offset \\
ccl & Old & New \\
& OEES & 64 & 72 \\
& OEE6 & 31 & 00 \\
c.prep & 135C & 64 & 72 \\
& 135D & 31 & 00
\end{tabular}

\section*{Listing I:}
```

/* flism,c
w text editor setup stuff
*TU B9,9,4,8,12,16,29,24
*

* flist.cille liat utility
*unagefile <fllename> |<fllename>*] >/<printes>
moo options recognized
*Output is to StaOut so redirection is neceasary
*Screen Output is possible but not too useful
*
*/
Annclude <stadorh>
*include <eime.h>

```
Adefine void int \(f^{\text {t }}\) dumay function return sype */
Adefine LTNES \(66 / 4\) nuabor of linef on printer poge *)

Remember, if you save the modified modules into new files, you must run the OS-9 Verify utility to update the CRC of the modules before you can load and run them.
Once the two modules are modified, you must still solve the problem of getting all of the files and directories from your floppies into your RAM disk. Revnell gets the job done with the start-up file below. His start-up disk also contains a copy of Stylograph III word processing system.
> setime 85
> load cerd \(t\)
> sformat / r r"cerd"
> chd /do
> dsave - \(515 / \mathrm{d} 0 / \mathrm{r}!\) shell

After the first disk has been moved to the D. P. Johnson RAM disk, he removes the start-up disk, inserts the C Compiler disk in Drive 0 and the C Library disk in Drive 1, and types the following command line.
```

chx/r/r/cmds;cha rdo:dsave
-s15 /d0 <ricmds ! shall; chd
/d1; dsave-sl5/d1 /r ! shall;
chd/r/r/prags

```

Note that he types both lines on one command line. (It is printed in four fines so it will fit in the magazine.) If you don't like to type long command lines like this one, save it on your start-up disk and have your start-up procedure copy it to the RAM disk. Then, all you need to do is change your disks and type the name of that file - you'll need the complete pathlist - and OS-9 will do the job for you.
Revnell also contributed the listing of another file listing program written in C. This one lists files with both a header and a footer and numbers lines in a manner consistent with the error diagnostics produced by "c.pass1," Incidentally, if you type a comment that begins in space one, which looks like this *page*), the listing skips to the top of the next page.

\section*{COMM-4: Four Serial Ports on One Card}

On the new hardware frontier, CoCo Devices (Box 677, Seabrook, TX 77586, phone 713-474-3232), has announced a new plug-in cartridge that gives you four serial ports online, You can hook up a terminal, a modem, a letter-quality printer and a high-speed printer to your Color Computer all at the same time.
Each serial port has its own controller

built, allowing multitasking and simultaneous I/O without using software timing loops. Full modem control is available and all communications with the ports are interrupt driven. Two of these cards may be connected if you need eight serial ports. Connection to the card is made with standard RS-232 DB- 25 plugs. The introductory price of the unit is \(\$ 89\). After January 1, 1986, the price goes to \(\$ 108\).

\section*{c Shorteuts}

We got a nice letter packed with information from Rick Moore, a 17-year-old who knows more about programming than 30 of us old-timers. He is a high school student in Tempe, Ariz.

Rick contributed the two procedure files, c.setup and diskstep. "As soon as OS-9 starts up, type c. setup and this procedure file speeds up the disk step rate and loads several OS-9 commands into memory," he said. "The commands loaded - rename, ccho and del - are used often by the compiler and the OS-9 line editor. After loading these commands into memory, the compiler will not have to access the disk as much and it speeds up your compile time quite a bit.

Here is c.setup:
```

debug < Codersys~diskstep
load rename
load echo
load del
echo
echo Now Insert your C Compller
disks.

```

Here is / do/sys/diskstep:
```

1 ecdisk
. <SPACE>. +1 Fe
$=12$
I ecdisk
. <SPACE> . +204
=0日
=8日
1 cedisk
. $\langle$ SPACE $>.+20 D$
$=42$
1 ecodsk
. <SPACE> .+2e9
$=02$
$\square$

```

Moore writes that you can also decrease \(C\) compile time by using the separate compilation option for extremely large programs. "First, separate the main program from the user written functions," he said. "Then, after the functions are 'bug-free,' you can com-
pile them, but do not link them. To do this, use the following command line.

\section*{059: col myfunctions.c -r}

When you run this command line, the compiler puts its output in a file named myfunctions.r. After you are finished with your function files, work on the main program. When you are ready to compile the entire program, use a command line like this:

\section*{0S9: col mainprogram.e myfunc tlons.r}

You may use more than one function file on your command line. They don't even need to be compiled ahead of time, either. In this case, the name of your function files would still end with '.c.' The command line might even look like this:
```

QS3: cel malnprog.r myfun.c
myfunz,r myfun3.c

```

This command line is legal and, when run, the compiler first compiles all the files with a ' \(\mathrm{c}^{\prime}\) ' extension, then links all of the files together. It's all automatic

on Microware's excellent C Compiler.
Finally, Moore begged to differ with a c language BASIC INKEYฐ function we published in January and submitted a much simpler version:

\section*{setbuf(stdin, NULL)}

Moore says if you place this line at the beginning of a program, it will cause all future calls to getchar() to simulate the INKEYs function. At the same time he notes that it doesn't seem to affect fscanf() or other \(1 / 0\) calls - even ungete() still works. Thank you, Rick.
Moore's elosing line was a challenge to all "KISSable OS-9" readers. If you accept, send your version of a C function that simulates INKEYS without the wait to us in care of THE RAINBow.

\section*{C Tips}

Our final e tip comes from Albert Pinto, who works for the U.S. Army Night Vision and Electro-Optics Lab at Fort Belvoir in Virginia. He uses a pair of quad density drives -2880 sector per disk - on his Color Computer to do a lot of C programming. He sent us some information about the bytes to change to use only one of these drives with the
