# SysOp Stands up for a Clean Board 

## Editor:

I applaud your "Print\#-2" column in the April 1987 issue. The column discussed copyright laws and the clubs, BBS and pen pal listings provided by the rainbow. I am a SysOp of Lansing's CoCo BBS. Ever since I began operating Benchboard BBS in 1984, I've had to deal with ridicule from a few users for attempting to run a "clean" board. I've also had to deal with the mentalities expressed by both SysOps mentioned in your column; the "I didn't know" type and the " 1 know it's OK because I got them from another BBS" type.

1 appreciate the support of the Greater Lansing Color Computer User's Group (CCUG) and articles such as yours. Please continue to remind those who "don't know," while maintaining the rainbow's clubs, BBS and pen pal listings. These listings provide contact for the many computerists who do respect copyright laws.

John Evans
Lansing, MI

## Bit-Banger Rebuttal

## Edilor:

In the "CoCo Consultations" column of the March 1987 issue, Page 151, a reader used the expression "bit-banger" in a request for information. This expression has been used in a derogatory sense for some time by columnists in THE RAINBOW as though the serial port of the CoCo is in some way inferior. As your readers seem to be starting to use the expression, it is probably time to set the record straight.

The RS-232 specification defines an industry standard for serial data communications that is a bit-by-bit transmission and reception standard. It does not matter whether one uses a PIA or a UART to produce those bits to provide the serial bit stream. The UART produces other signals as well that a modem's hardware and software may expect; however, if the modem and its sof tware are designed carefully, it will still operate with a simpIe bit stream satisfactorily. What does matter a lot is the design of the terminal software at each end of the communications loop and the care used in writing and tuning the time delay loops.

Super Color Terminal, by Dan Nelson (Softlaw, VIP), is an example of quality software that works reliably through the CoCo serial port, in duplex, at baud rates up to 4,800 .
My two "old gray"CoCos run in a master-
coprocessor mode, communicating at 8,000 baud, through their serial ports. Additionally, the transmit and receive routines in my Kamelion [See March 1987, Page 141] software for the CoCo/SC68008 combination operate reliably through the serial port, at 4,800 baud, duplex, with a Tektronics 4105 color terminal.
So, you see, if unreliability is encountered when using a well-designed modem, it is the software, not the CoCo's PIA-driven serial port that is not reliable above 300 baud.
D.J. Leffler

Cocoa Beach, FL

## Computer Contributions

## Editor:

I represent a non-profit, charitable organization that uses microcomputer equipment in virtually every aspect of its affairs. We would be grateful if your readers would consider contributing additional equipment. Donations of this sort can have substantial tax benefits. If you are in a position to contribute or would like more information, please write or call (collect, if you like) (617) 495-9020.

Dr. Roberı Epstein
Executive Director
Cambridge Center for Behavioral Studies
11 Waterhouse St.
Cambridge, MA 02138

## Discovering CoCo Software

## Editor:

Why don't Radio Shack stores sell The RAINBOW? I think the thing that hurts the CoCo most is that many new CoCo owners think the only programs available for the Color Computer are the ROM packs and disk software from Radio Shack. They fail to see the super programs from Diecom Products, Colorware and many other great software dealers. I'm not trying to put down Radio Shack (they did make this awesome computer), I just wish people would quit saying "Yeah, I got a Trash-80 Computer, but their games are sorry."

Francisco Rios Houston, TX

## BACK TALK

## Editor:

I must disagree with Dale Puckett's implied position that Login for OS-9 Level II is superfluous. Admittedly, most users do not require multiuser capabilities, and the
multitasking capabilities are astounding. However, there are a few of us who use the CoCo in a multiuser mode and require the capabilities Login provides.
We use a CoCo 2 with hard drive and two DT-I00 terminals as a point-of-sale system in our store. The system operates under OS9 Level I and is written in BASIC09. (Performance rivals and of ten exceeds similar systems provided by the three-letter and other large companies.)

We are completing the conversions necessary to run the system on the CoCo 3 under Level II. One major stumbling block has been the lack of restrictions to accessing certain files. Everyone is super-user. Also, should two salespersons write sales tickets simultaneously, the printer will print both sales tickets simultaneously, alternating lines. To prevent this, we had to rewrite the printer device descriptor making it nonshareable which, in turn, required that some of the associated software be rewritten. A Login capability, normally part of OS-9, would have alleviated these problems.

Edward Gresick Middletown, $D E$

## HINTS \& TIPS

## Editor:

I just received my May Rainbow and, as always, read it from cover to cover right away. In it, two people ask about printer codes for underlining using VIP Writer and the Smith-Corona printer. Since I use both in my home business, I thought I would help if I can.

Smith-Corona L-1000 Printer Codes
Code 3 turns on underline - all words: 3围27;69
Code 1 turns on underline - one word: 1=27;90
Code 4 turns off both underlinings: 4=27; 82
Since I use two printers (the other is an Epson LX-80), I have a list of codes for each and load each one before doing any writing. This also helps remind me which printer to turn on and which to turn off. You must use the "no print" comment (CLEAR-SHIFT+) in front of anything you do not want printed.

Roxann Brown
Franklinville, NY

## EASY COMMUNICATION

Full prompting and error checking. Step-by-step manual has examples. Scroll text backward and forward. No split words on screen or printout. Save, load, delete files while on line. Print, save all or any part of text. XMODEM for machine language files. 128 ASCII characters, 1200 baud, etc. Works with D.C. Hayes or any modem. Handles files larger than memory. Print on line with J\&M or RS232 Pak. Screen widths of 32, 40, 42, 51, 64.

Please hire the mentally retarded. They are sincere, hard working and appreciative. Thanks!

Phyllis.

+ WORD PROCESSING

Editing is super simple with the cursor. Find strings instantly too! Insert printer control codes. Specify page size and margins. Switch quickly between word processing and intelligent terminal action. Create text, correct your typing errors; then connect to the other computer, upload your text or files, download information, file it, and sign-off; then edit the receive data, print it in an attractive format, and/or save it on file. Compatible with TELEWRITER.

## CASSETTE \$29.95 <br> DISKETTE \$39.95

Add $\$ 3$ shipping and handling MC/VISA/C.O.D.

## TOTAL AUTOMATION

Advanced system of keystroke macros lets you automate any activity, such as dial via modem, sign-on, interact, sign-off, print, save. Perform entire session. Act as message taker. At start-up, disk version can automatically set parameters, dial, sign-on, interact, read/write disk, sign-off, etc. Timed execution lets AUTOTERM work while you sleep or play. No other computer can match your COCO's intelligence as a terminal.

## The Button 'll Fool Ya

## Editor:

The CoCo 3 with an analog RGB monitor gives no indication when it is turned on. Its power button, when turned on, extends farther out than the power button on a CoCo 1 does when it is turned off. I recommend that the computer plug be disconnected when inserting or extracting the disk controller. Had I taken these precautions, I would not have blown my controller within 15 minutes after having received it.

The chip most likely to be damaged in CoCo disk controllers is the 7416 . There are two of them in the Disto controller. The WDI773-PH can also be destroyed, but less often. Since the cost of a 7416 chip is currently about $\$ 2.40$ from most electronics parts distributors, it is a reasonably good gamble to try replacing this chip before sending the entire controller to be repaired for a charge of about $\$ 30$.

James Harris
Troy, MI

## COCO 3

## Editor:

There are those who are worried about Rainbow covering mostly CoCo 3 in the future, but I am sure what you give the most attention to will be governed by what you receive from your readers. We bought a CoCo 3 as soon as it was available and are enjoying it more with each new program
from your magazine. I do hope your guide to OS-9 Level II will be helpful, as I couldn't get anywhere on my own.

Tom David
Ganges, British Columbia

## Keyboard Substitution

## Editor:

When I read your September '86 preview of the CoCo 3 home computer, dreams of complex new word processing and / or database management, combined with fully integrated graphics applications (running concurrently under OS-9 Level II) floated in my mind. Alas, Radio Shack kept the old repulsive Model I and Apple II + compatible, non-Selectric keyboard.
It's incredible that they didn't implement the excellent layout of the now-obsolete IBM PCjr (the replacement one, not the original Chiclet-type). It includes all the necessary keys (and more), in a small, portable, detachable, cordless, Selectrictype unit.

Now, I wonder, is there any way to interface a PCjr (or Compatible) keyboard to the CoCo 3 and thus solve Tandy's mistake? Then it would be simple to write a device-d river under OS-9 to gain access to it. I know many people who would sell their PCjr keyboards. Surely this could make the CoCo 3 Number One in the home computer arena. Long live CoCo!

Carlos A. Osuna Roffe
Monterrey, N.L.

## REQUEST HOTLINE

## Editor:

I am looking for all the CoCo users in the (509) area code of Washington State. Please call 547-4293, or write.

Troy Sanders 209 S. 26ıh
Pasco, WA 99301

## Program Wish List

## Editor:

I am looking for a program to use with my 64 K ECB CoCo 2, C-It oh Prowriter 8510 printer, and $t$ win Digital drives. I am a sales manager with 470 part-time and full-time real estate agents and have to keep a running roster of them that can be updated periodically. I am currently using a program called Label III by Owl's Nest Software, but it has limitations that make it difficult to operate. The program I need must do the following:

1. Store names, addresses (street, city, and ZIP codes with a provision for an extra line) and phone numbers.
2. Sort quickly through the files (autoloading files as it sorts). Search by last name (by ZIP and first name would be nice, too).
3. Print files on fan-fold paper " 3 wide" and be able to stop at end of page and start at the top of the next page.
4. Print files on adhesive mailing labels.
5. Store large amounts of files ( 400 to 600 ). It is OK to refer back and forth to the disk automatically.

I would prefer for the program to be written in machine language, but BASIC is OK if it will do the above functions.

Donald Skaff
Toledo, OH

## BBS Quest

## Editor:

I was reading the section called "Bulletin Board Systems" in your May issue. I have been wanting to set up a bulletin board for a long time and have called all over the area looking for one, but haven't been able to find one. I see that there are a lot of them listed here in your magazine. Could someone tell me where I can purchase a BBS program?

Jeff Sweet
R.D. \#l Box 480

Gloversville, NY 12078
Check out our four-part series on the CoBBS bulletin board system in the November '85 through February ' 86 issues.

## VIP Frustrations

## Editor:

I am the happy owner of a new CoCo 3. It's been a long time coming and I sure like it. However, I have the entire VIP series and none of it works on my new CoCo. I have been hoping for months that a patch would be published in THE RAINBOW. I've read that a patch is on Delphi, but I can't get there because I have VIP Terminal. Can anyone out there help me?

Also, can anyone tell me how many CoCo 3s have been sold so far? Now that our favorite computer has the memory that the bigguys do, will we get programs like Lotus, $d B A S E, P f s$, etc.?

Robert W. Jobin 5430 Quail Run West Theodore, AL 36582

## Seeking an Encore

## Editor:

There must be someone out there who can solve my problem. I have a JX-80 Epson printer. I have Bob van der Poel's Ultra Telepatch and a CoCo 3. Once, I got the embedded commands to work correctly in the text of a letter to make selected words print in color for emphasis. The next time 1 tried, I could not get them to work. Would someone please give me the correct procedure?

George Barber
Box 353
Summit City, CA 96089

## All Done With Mirrors

Editor:
I was paging through an electronics magazine and read about someone who was able to interface the Commodore 64 computer to drive digital radio control airplane servos. I was impressed with the article, as it involved a Helium-Neon laser and the ability to store coordinates input from joysticks to later drive the servos in the desired sequence. Mirrors were hooked onto the servos and a rather impressive laser light show followed.
I have heard that my CoCo is the best there is and I certainly believe it can outperform any C-64 on the street. My question is:

Can anyone tell me of a source or article in any magazine that will allow me to emulate this device? I am not an engineer and, therefore, must rely upon someone with that special genius to help me out. Thank you for providing a great magazine for the CoCo user and keep up the good work.

Gregory J. Zamites Jr. 602 Alexander St.
St. Marys, GA 31558

## INFORMATION PLEASE

## Editor:

I have a 64 K CoCo R OM Color BASIC 1.2, Disk ECB I.I, a CCR-8I cassette, Modem IB, a Smith-Corona SE-200 with messenger module and a Line Printer VII. I have Version 1.0 of Elite-home and would really like to be able to use it as it's advertised in the Rainbow. However, after loading 92 albums in the records file I got an IE Error. I called Elite Software, was told no one else had reported such a problem, and to return the disks and they would see what they could do.

A few days later, I received new disks in the mail and, after backing up a set to work from, I started using the Checks program. After loading 184 checks, I got an IE Error. I called Elite Software, who called me back a couple of days later and told me I must have removed the disk from the drive without exiting the program properly.

I formatted another disk and started over. I had been at the keyboard continuously the entire time and the disk had definitely not been removed from the drive. I again got an IE Error after 184 entries. I called Elite and was told the only possible way the IE Error could occur was if I had pulled the disk out without following the proper exit procedure.

I denied pulling out the disk and was told I must have pulled it out without noticing.
I did my print free (0) on both disks, and on the records disk found that Records took 10 granules (which left me with 8 granules free) and the Checks disk took 11 granules (which left me with 0 granules free). I tried deleting other programs on both disks to gain room, but it didn't work. Neither program will take any more entries. My questions are:

1. What am I doing wrong?
2. How can I correct it?
3. Can I use a third disk for specific fields (e.g., checks, records, etc.)? If so, how do I do it?
4. Is there anyone out there who has had and solved similar problems?

Harry K. Buchanan
314 S. Walnut
Maroa, IL 61756

## Poke Preservation

## Editor:

Being a novice CoCo owner is really a ball. I've had my CoCo 2 for two months. 64 K is plenty of memory for me right now, but I've got a couple of questions about some pokes and peeks I have been reading about in the Ralnbow's last two issues.

I have a DMP-130 printer and it will accept up to 2400 baud. The higher speeds that are achieved at this baud rate are great when I have written a program I want to print out, but how do I use this faster rate when using a program pack like Color Scripsit?

I realize POKE 150,18 will do the trick while programming, but what can I do to keep this poke intact after inserting the cartridge? The computer always wants to drop back to its normal rate. Also, when I PEEK 150, my CoCo 2 prints 88 , not 87 like you would expect.

Michael R. Wetzstein
ll55 O'Quinn Drive
Tifton, GA 31794

## The Upgrade Dilemma

## Editor:

Is it worth upgrading to a better, eight-bit machine (CoCo 3) when there are 16-bit machines that don't cost much more? When I speak of 16-bit machines, I don't mean a Tandy 1000 or IBM PC. I am convinced an OS-9 Level II CoCo 3 is better than these. I am interested in the new MC68000-based computers, like the Atari ST and Amiga. How important is CPU clock speed? I love my 64 K CoCo 2 and would like to love a CoCo 3, but I have reservations.

Mike Linksvayer
305 Cartwright
Springfield, IL 62704

## Another CoCo Heard From

## Editor:

Is there anyone out there in CoCo land who can tell me how to get my CoCo 2 to talk without any additional hardware? I have seen many programs advertised that say they have good quality speech, and the speech is made possible through program-

## FOR THE TRS80 COCO

NEVER BEFORE has this information of vital significance to a programmer been so readily available to everyone. This book will help you GET UNDERNEATH THE COVER of the Color Computer and develop your own HIQUALITY Basic and ML programs. SO WHY WAIT??
This 80-page book includes POKEs, PEEKs and EXECs to:
$\star$ Autostart your basic programs

* Disable Color Basic/ECB/Disk Basic commands like LIST, LLIST, POKE, EXEC, CSAVE(M). DEL, EDIT, TRON, TROFF, PCLEAR, DLOAD, RENUM, PRINT USING, DIR, KILL, SAVE, LOAD. MERGE, RENAME, DSKINI, BACKUP, DSKI\$, and DSKO\$.
* Disable BREAK KEY, CLEAR KEY and RESET BUTTON.
* Generate a Repeat-key.
* Transfer ROMPAKS to tape (For 64K only).
* Speed Up your programs.
* Reset, MOTOR ON/OFF from keyboard.
* Recover Basic programs lost by NEW.
* Set 23 different

GRAPHIC/SEMIGRAPHIC modes
$\star$ Merge two Basic programs.

* AND MUCH MUCH MOREII COMMANDS COMPATIBLE WITH $16 \mathrm{~K} / 32 \mathrm{~K} / 64 \mathrm{~K} /$ COLOR BASIC/ECB/DISK BASIC SYSTEMS and CoCo 1. 2. \& 3.

ONLY \$16.95

## SUPPLEMENT to 500 POKES. ONL

200 additional Pokes, Peeks' $n$ Execs to
give you MORE PROGRAMMING POWER Includes commands for:

- Hompak Transter to disk
- PaINT with 65000 styles
- Use o 40 track singled double sided drives with variable step rates
- High-Speed Cassette Operation
- Telewriter 64. Edtasm+ ${ }^{\circ}$ and CoCo Max ${ }^{\circ}$ Enhancements
- Graphics Dump (lor IMP printers, \& TexI Screen Dump
- AND MUCH MUCH MORE!
- 500 POKES. PEEKS N EXECS is a prerequisite

## * 300 POKES PEEKS'N EXECS FOR THE COCO III

Get more POWER for your CoCo III. Includes commands for:

- 40/80 Column Screen Text Dump
- Save Text/Graphics Screens to Disk
- Command/ Function Disables
- Enhancements for CoCo 3 Basic
- $128 \mathrm{~K} / 512 \mathrm{~K}$ Ram Test Program
- HPAINT Character Modifier
- and many more commands

## 5 Nin: <br> COLOB MAS 3

Finally, your wait is over!! The ultimate graphics program for CoCo 3 has arrived Features include:

- Icons and pull down menus
- $320 \times 200 \mathrm{~h}$ - res screen
- Choice ol 64 colors
- Pencil Eraser, Spray Can Line, Rectangle, Paint Brush \& more functions
- Electronic Typesetting with 11 buill-in fonts
- Zoom-in (Fat Bitss and Undo
- Variety of brushes and patterns
- Editing features such as invert. Ilip. copy, cut. paste and clear
- Load/Save/ Compress/Print your work
- Works with RGB \& Composite Monitors
- Printer Drivers - EPSON, GEMINI \& DMP
- Requires AS Hires joystick interlace

Requires CoCo 3, 128K Tandy Disk Controller, Hi-Res Joystick Interface

ONLY \$59.95
HI-RES JOYSTICK INTERFACE: $\$ 11.99$

The CoCo Graphics Designer allows you to create beautifully designed Greeting Cards, Signs and Banners for holidays, birthdays, parties, anniversaries and other occasions. Comes with a library of predrawn pictures. Also includes utilities which allow you to create your own character sets, borders and graphic pictures. Requires a TRS-80 COLOR COMPUTER I, II OR III OR TDP-100 with a MINIMUM OF 32 K , ONE DISK DRIVE and a PRINTER compatible with DISK BASIC 1.0/1.1, ADOS 1.0/1.1 AND JDOS. Supports the following printers: EPSON RXVFX, GEMINI 10XSG-10, NX-10, C-Itoh 8510, DMP-100/105/400/430, SEIKOSHA GP-100/250, LEGEND 808 and GORILLA BANANA

## DISK ONLY \$29.95

PICTURE DISK \#1: 100 more pictures for CGD: $\$ 14.95$
FONT DISK \#1: 10 extra fonts! \$19.95 COLORED PAPER PACKS $\$ 19.95$

All orders \$50 \& above shipped by 2nd day Air UPS with no extra charge. Last minute shoppers can benefit.

VISA, MC., Am Ex, Check, MO. Please add $\$ 3.00$ shipping and handling (USA \& CANADA, other countries $\$ 5.00$ ). COD add $\$ 2.50$ extra NYS residents please add Sales Tax. Immediate shipment Dealer inquiries invited
ming. I would appreciate any information anyone can give me on this great trick.

Jim Patterson
7044 Brandywine Drive Derby, NY 14047

## KUDOS

## Editor:

I had to send this letter to Rainbow to let your readers know about the outstanding service I got on a recent order to MicroWorld Computer Center.

I ordered a Color Computer 3 by mail no phone call - and received it in less than a week at quite a savings! MicroWorld rates high in my book.

David Johnstone Torrington, CT 06790

## Speedy Disk Delivery

## Editor:

T \& D Software should be congratulated on its expedient service and reliability. It is the only company out of several which promptly sent software as part of a "free software" campaign in conjunction with my subscription order to the rainbow. Orders to T \& D are filled quickly and of ten arrive within two weeks. Recently, I experienced trouble with some disks and returned them for replacements. The new disks arrived the same week! It is refreshing to find a business that conducts "good business" - and T \& D accomplishes that task.

## Lynn Simmons

New Orleans, LA

## An Assortment of Support

## Editor:

I would like to take this opportunity to thank all the RAINBOW staff for bringing such a fine publication to the CoCo world.

I would also like to pass on special thanks to Greg Miller and Erik Gavriluk for taking the time out of their day to talk to fellow users about seemingly trivial bits of CoCo information. These are two very talented programmers, and I appreciate very much what they are doing for the CoCo world.

More thanks are in order for Computize's service department, which has been very friendly and helpful every time I've called.

Finally, my hat is off to Mr. B.J. Chambless and Computerware for their long-term and continued support of the CoCo. I bought Magic of Zanth [See March 1987, Page 140] and Ramdisk from them - two great programs for the CoCo 3 .

Alan Parker Grissom AFB, IN

## RAINBO Wfest Raves

## Editor:

We want to express sincere thanks to two organizations:
First, to therainbow, for sponsoring the Chicago RAINBOWfest. It was amazing to see so many people in one place all dedicated to a computer that so few people seem to know about. (My wife likened it to the Dayton Hamvention, and she was right!) All the vendors and rainbow people we met were just great, and we certainly intend to return next year. (And yes, we did pig out on sof tware, not to mention hardware!)

Second, our thanks to the Elliotts at HJL

Products. We bought an HJL Number jack at RAINBOWfest, and had trouble getting it to work. A letter to HJL brought a very prompt, helpful answer, but when that didn't work, a phone call (on their quarter, yet!) got the information we needed. Support like this is hard to find these days, but HJL really came through, and we thank them for it.

David Wendt
Indianapolis, IN

## PEN PALS

I am $10 \frac{1}{3}$ years old and have a CoCo 2 and some joysticks. Anyone wanting a pen pal, please write to me.

Armando Perea 824 N. Humbolt \#4 San Mateo, CA 94401

- I would like to have some pen pals. I am 16 years old and own a 64 K CoCo, a printer, a disk drive and a lot of software. David Jolley
6656 Lake Avenue Elyria, OH 44035
- I am 15 years old and looking for a pen pal who has a 64 K Extended Color BASIC CoCo 2 with cassette player.

Shannon Webb
Rt. I Box 29
Watonga, OK 73772

- I am 14 years old and looking for a pen pal. I have a CoCo 2 and enjoy almost everything. I would like to have pen pals from all around the world.

Dena Warren
3428 So. 109 E. Ave.
Tulsa, OK 74146

- I would like to know if there are any CoCo users in the Pennsylvania area who would like to have a pen pal. I have a 128 K CoCo 3, CCR-8I cassette recorder and a DMP-105 printer. I am II years old and enjoy games.

Pete Malizia
33I Gertrude St.
Latrobe, PA 15650

- I am interested in having pen pals from the United States and around the world. I am 15 years old, have a CoCo 2, and a CoCo 3 with two disk drives, along with a DMP105 and CGP-220 printer. I will try to answer all responses.

> Ed Emelett
> 108 Hanlin Drive
> Nanticoke, PA 18634

- I'm looking for pen pals once again. I have a DCM- 3 modem, a DMP- 105 and 130 printer, a disk drive, 64 K CoCo, a CCR-82 tape and a Radio Shack monitor. I would like pen pals from everywhere and I will answer all replies.

Chris Curtis
Route I Box 186
Walling, T N 38587

- I am a 23 -year-old fiction writer seeking pen pals from anywhere with any type of system. I have a CoCo 2 with cassette only, but have access to an IBM PC (GW-BASIC, MS-DOS), and am especially interested in a PASCAL tutor.

Ron Corder
3030 Elmside Drive \#23
Houston, TX 77042

- I own a CoCo 2, disk drive, tape deck and a DMP-100 printer. I have lots of games and programs, and have solutions to Adventures like Dallas Quest, Trekboer, To Preserve Quandic, etc. Anyone who wants to write, please do so. I'm into action games like F-16, Wrestle Maniac and Shock Trooper. I just purchased a CoCo 3, also.

Michael Cress
P.O. Box 427

Bridgetown, Nova Scotia
Canada BOS ICO

- I am 14 years old and looking for pen pals to exchange programs, preferably on disk. I own a CoCo 3, FD-500 disk drive and a CCR-82 tape recorder. I also love solving Adventures and playing CoCo 3 games.

Brendan Wood
360 Victoria $\$ 204$
Greenfield Park, Quebec Canada J4V IM2

- I want to correspond with a pen pal who shares my interest in programming utilities and general BASIC programming. I do not have a computer, but I have quite a considerable amount of programming knowledge. I will be getting a computer in the near future. I am 12 years old and considering learning assembly language soon.

## Mathew Dafilis <br> 19 Carolyn Crescent <br> Bundoora, Victoria <br> Australia 3083

- I have a 64 K CoCo 2 with a cassette system. I'd like to have a pen pal to exhange programs. I have about 200 games.

Ariel Bensimon
9816 Emek Hefer
42220 Natania Israel

- It's a long distance letter from Egypt! I am 25 years old and have a 64 K CoCo 2 with a tape system. No one here has a CoCo except me and a couple of my friends. Anyone looking for a pen pal, please write me.

> Remon Samy Ebrahem
> 8 Aziz Fahmy St.
> Tanta, Egypt

- I am 26 years old and looking for a pen pal. I have a 512 K CoCo 3 and 64 K CoCo 2, disk drive, cassette recorder, multipack interface and DMP-200 printer. I have many games and OS-9 Level I and II.

> John D. Cleveland P.O. Box 735

THE RAINBOW welcomes letters to the editor. Mail should be addressed to: Letters to Rainbow, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. Letters should include the writer's full name and address. Letters may be edited for purposes of clarity or to conserve space.

Letters to the editor may also be sent to us through our Delphi CoCo SIG. From the CoCo SIG $>$ prompt, type RAI to take you into the Rainbow Magazine Services area of the SIG. At the RAINBOW $>$ prompt, type LET to reach the LETTERS $>$ prompt and then select Letters for Publication. Be sure to include your complete name and address.

## UTILITIES

## SUPER TAPE/DISK

 TRANSFER 届- Disk-to- Disk Copy ( $1-3$ passes)
- Tape-to- Disk Copy
- Tape-to-Disk Automatic Relocate
- Disk-to-Tape Copy
- Tape-to-Tape Copy

Copies Basic/ML programs and DATA files. CoCo 1, 2 \& $3 \quad 32 \mathrm{~K}$ Disk System
(Disk to Disk Copy requires 64 K )
DISK ONLY $\$ 24.95$

## UTILITY BONANZA I

Includes 20 best-selected utilities:

- 40 K Disk Basic - Disk Cataloger
- Super Tape-to-Disk Copy (with Automatic Relocate]
- LList Enhancer - X-Ref for Basic Programs
- Graphics Typesetter |lwo text sizes!
- LARGE OMP Graphics Dump - Basic Stepper
- Hidden 32 K (Use the "hidden" 32 K Irom your 64 K CoCol
- RAM Disk (for Cassette \& Disk Users)
- Single Key Printer Text Screen Dump
- And much, much more !!!

Most programs compatible with CoCo 3
DISK (64 K Req) ONLY \$29.95

## UTILITY ROUTINES for the TANDY \& TRS-80 COCO (Vol 1)

- COMMAND KEYS - CURSOR STYLES - ERROR SKIP
- FULL LENGTH ERRORS - KEY CLICKER
- REPEAT KEY - REVERSE VIDEO

SPOOLER - SUPER SCROLLER

- AND MUCH MUCH MORE!!!

For 16 K/32 K/64 K Cassette or Disk Systems, Bоок $\$ 19.95$ CAS/DISK $\$ 24.95$
BOTH BOOK AND CAS or DISK $\mathbf{\$ 3 6 . 9 5}$

## UTILITY ROUTINES (Volume II)

Includes 20 oft-used utilities such as:

- Add SUPERSCRIPTS to your OMP printer
- Design your own commands! - Programming Clock
- Fast Sort for Basic Strings - CoCo Calculator
- Create a character set for your DMP printer
- Let the computer locate your errors!
- Automatic Directory Backup - And much much more! 64K DISK ONLY \$29.95

## COCO DISK ZAPPER

Are you trustrated with crashed disks? If so, this program can save hours of labor by restoring complete or part of the information from the disk It's indespensable!
Requires minimum 32 K 64 K disk system ONLY \$24.95

## ALL SOFTWARE COMPATIBLE WITH COCO 1, 2 \& 3

(Except those marked with *)

CABLES/HAROWARE
AVATEX MODEM: Hayes compatible

## Some Seventh Year Changes

All's well that ends well.
William Shakespeare wrote it. Wendy Falk said it.
For those of you who read this space last month, I have news to report. Sacy has been found.
Sacy is my eldest daughter's (Soft And CuddIY) teddy bear, who turned up missing when she came home from an around-the-world educational semester aboard ship. Somehow, Wendy's tote bag was lost - and with it her 17 rolls of film, a number of presents and Sacy.

Wendy is 20 and Sacy is 17 , so you can imagine how upset she was. After a couple of weeks of hoping he might turn up somehow, Sacy had to be decreed lost. It was depressing. I wrote about it last month. And one of the things I said was that it was a shame Sacy would miss our Sixth Anniversary issue of the rainbow because it would be the first one he had missed.
As it turned out, Sacy was on hand after all. Just a couple of days after we went to press with the July issue and the Saga of Sacy, Wendy got a letter from Delta Air Lines. They had a bag in Atlanta lost and found, they wrote. If she could identify it, they would send it to her.

Wendy didn't fly on Delta, but they apparently ended up with her bag all the same. Her first question when she called Delta was whether Sacy was safe. He was. And it was Sacy's presence that seemed to be adequate to "identify" her lost tote bag.

We're not sure exactly how Sacy ended up in Atlanta or on Delta, but we do know that Sacy arrived on the late flight from Atlanta and Wendy was there to meet him. He's home now, and all the film has been developed and pictures looked at many times already.
Just this evening I came home with the first copy of the Anniversary Issue. Sacy was there to look it over, too. Everyone was glad.

Phone (716) 223.1477

Thanks, Delta Air Lines. I guess sometimes it helps to wish on a Rainbow.

Year Seven of the Rainbow brings some changes.

Jim Reed, who has been managing editor for many years, is moving to a new position as assistant vice president of programs and projects for our parent firm, Falsoft, Inc, and Jutta Kapfhammer - who has been Number Two to Jim for several years - takes over as managing editor.

Expect to see some changes. Jutta comes with a charge to spruce things up a bit, both as far as content is concerned and, with art director Heidi Maxedon, will be looking at new design-type things as well.

Jim will be in charge of a number of special things - some new and some that we hope to expand. He will, of course, as executive editor, continue to work with and advise me directly on this magazine, in addition to our other publications.

There are a number of other changes associated with all of this, of course, but they should not really affect the way you relate to the magazine.

One other change, which may affect a number of you, is in our advertising area. Cindy Shackleford, who has run our West Coast operation for a number

of years - first as an employee and then as an independent representative - has decided to seek another opportunity.

As a result, we have decided to move all of the advertising territory that Cindy formerly had into our own office here in Prospect. If you are interested in advertising and are in the western
part of the United States, you can now get information from Belinda Kirby here. Her number is (502) 228-4497. Those who have worked with Kim Vincent and Jack Garland are unaffected by any of this.

I know you will want to wish Jim, Jutta, Cindy and Belinda well in their new ventures.

By way of "finally," I've been asked to point out two important things here.

The first is that our new OS-9 book, expected to be ready very soon now, is available from us only on a pre-order basis. We are not planning to print more copies of the book than for which we have orders on hand when we "go to press."So, if you want one, please order it in advance.

Also, and very important, please fill out (or photocopy and fill out) the Color Computer Hall of Fame ballot on Page 109 of the July issue. And, please, only one ballot per nominator. This is a special program we are planning in conjunction with one of our future RAINBOWfests, and we want everyone to have a chance to make nominations.

- Lonnie Falk

## Jim Reed jumping off .

Jutta Kapfhammer coming on . . . and Rainbow train keeps rollin' . . .

INthe first installment of my "Building A Rainbow" column, which began in the April 1983 issue, I compared the creation of each month's issue of the rainbow to a train. I also explained that, at a certain point in time, even though my heart remained with "those still on board" as the "Production Express" clattered on down the line toward "Printer's Station," I would have to jump off, roll down the bank and get about the process of forming the next month's "train."

After 55 of these monthly tumbles, this time I'm not forming up another trainload of material as this issue's caboose disappears into the distance. In fact, the September RaINBOW is already chugging along the production line with Jutta Kapfhammer at the controls. She's been appointed the new managing editor of the rainbow.

We were still in that crowded, former-beauty-salon of a RAINBOW office when German-born, but American-raised Jutta (pronounce that "Utah") joined the staff in February of 1983. So, even though she's only 28, Jutta's an "old-timer" by RAINBOW standards. She's been our submissions editor for four years and for the past year has also supervised editorial production for all of our publications. Thus, becoming RAINBOW managing editor, while hard-earned, is but one more feather in her Falsoft cap.
For those who don't know, the managing editor is the one who actually decides what will be in THE RAINBOW, based on broad general guidelines established by editor and publisher Lonnie Falk. Thus, each month, Jutta will make the selection of specific articles to fit the monthly theme as well as "book" a variety of material to ensure a balanced "editorial mix." She will then oversee the entire editorial process, from "putting out fires" to making decisions about style and content, until it's time for her to "jump off the train" and start forming yet another issue. Given the same dedicated support, enthusiastic encouragement and enduring patience that it has been my good fortune to receive from readers and contributors alike, I am sure Jutta will find the challenge a rewarding one, too.

No, no gold watch for me yet. I'm simply going to be exploring and pursuing some new avenues here at Falsoft as assistant vice president for programs and projects. As executive editor, I'll retain a general oversight responsibility for the editorial content of all Falsoft publications and, as groups manager on Delphi, I'll be online almost every evening, as I am now. In fact, many of you will be hearing from me more often than before. So, no good byes are in order, but it's impossible to say thank you too of ten and I want to use this juncture as an opportunity to express my appreciation to all of you, too numerous to mention individually, for helping us "Build a Rainbow" each month over the $41 / 2$ years of my tenure as managing editor. I like to think that, together, we met the goal of "something for everyone, and some things for everybody."

Thank you, CoCo Community. l'll miss the rumble, the rhythm and the roar of the monthly train ride, but look for me waving at the crossing whenever the "Rainbow Special" whistle blows. As it was when I first began, "my heart is with those still on board," and I'm proud to be a part of it all.

Finally, the same invitation I extended in that very first "Building A Rainbow": "If you aren't among those who have a year 'round pass to THE RAINBOW's train load of top-flight articles and programs, I hope you'll pull out the subscription card and climb aboard."

Let's keep in touch, keep working together and keep following the rainbow.

*- See July'87 Rainbuw pg 69 for product descriptions !!! Also 58 off any product on pg 67 of same issue !!! Offer expires 8/25/87!

## INSIDE OS9 LEVEL II

With over 100+ pages, it is a must B00R for ANYONE interest.ed in LEVEL II. Has FIXES for KNOWN BUGS, how to convert a \$29.95 ROGUE disk into a WORKABLE LEVEI II disk, WINDOWS, tips, tricks and many things that TANDY left out!!! \$39.95 OS-9 Lev II Solution- A front-end "USER ERTENDLY" interface for LEVEL II $\$ 29.95$

## COLOR MAX III - The CoCo III CoCo Max

It's here! The COCOIII BREAKTHROUGH PRODUCT everyone was waiting for! $320 \times 200$ graphics, pull down menus, icons $\ll \mathrm{OW}$ the choice of any 16 colors from the CoCo III's 64 color palette plus RGB support! Eleven (11) fonts are included for hundreds of lettering styles and painting is a breeze with 16 colors and 32 editable patterns! ! Color Max III requires a 128K CoCo III and Hi-Res Joystick interface. (Specify printer!) $\$ 59.95$. Color Max III Pix Converter - contains six (6) converter programs for CoCo Max, Graphicom and 6K binary files \$29.95. Hi-Res Joystick interface \$14.95.

## SPECLAL BONUS - BUY ALL 3 for only $\$ 99.95$ !!!

## TW-80 - 80 columns for TW-64 on CoCo III

It's finally here! An 80 column version of Telewriter-64 for the COCO III with TELEPATCH features plus much, much more! Use the F1 \& F2 keys to access the MAIN MENU or EDITOR \& now you can use the CIRL key instead of CLEAR! New FONTS \& PRINT SPDOLER too! Req. TW-64 DISK and 128 K COCO III \$39.95

## FKEYS III - Function keys for the CoCo III

A productivity enhancement that gives you the capability to add twenty (20) pre-defined functions to the CoCo III by using the CTL, F1 and F2 keys! \$24.95 "Get more from your keyboard with FKEYS III" (4/87 Rainbow Review)

## 512K UPGRADE (NOW \$79.95*) LOWEST <br> Easy installation with a superior design for a reliable upgrade, processing efficiency and AVAILABLE NOW for

 the CoCo III! ( $\$ 779.95$ when pur hased with our 512K RAM DISK rogram for \$19.95) A 512K chips $\$ 39.95$ - The lowest upgrade prices in the Ra nbow
## COCO III FONT BONANZA - 出

Replace the 'PLAIN' COCO III characters from a menu of INCREDIBLE fonts or create your own. 128K DISK \$29.95. NEW!!! FONT DISK \#I with over 25 more PONTS! \$19.95/Buy 'em both for \$39.95. *(4/87 Rainbow Review)

## RGB PATCH - No more BLACK \& WHITE dots ...

Did you buy an expensive RGB monitor ( $\mathrm{OM}-8$ ) just so that you could see your Hi-Res artifacting coco 2 games in BLACX \& WHITE ??? RGB PATCH converts most games to display in COLOR on an RGB monitar, 128K DISK \$29.95

## PAL SWITCHER - Designed by Marty Goodman!

Have the best of both worlds by being able to switch between COCo II and COCo III modes when using a Multi-Pak Interface. Req. OLDER PAL \& NEW PAL chip for the 26-3024 Multi-Pak Interface \$29.95/with NEW PAL chip \$39.95

## RGB MONITOR - Better than TANDY CM-8!

Our monitor is more versatile than the Tandy CM-8! Includes RGB Analog, Color Composite \& RGB TTL video input. Unlike the $O M-8$, FMODE 4 artifact colors don't show up BLACK \& WHTTE (thr the Color Composite input) Magnavox 8515 w/CoCo III cable $\$ 329.95$ - BONUS! Includes FREE $\$ 19.956^{\prime}$ RGB Analog Video Ext Cable - Add \$14 shipping.

COCo III 512K RAM sticker $\$ 4.99$
Level II Quicr Ref Guide $\$ 4.99$
Guide to Coco III Graphics $\$ 21.95$
Level II Basic09 binder .. $\$ 9.95$ Better CoCo III Graphics . $\$ 24.95$

COCO MaxII/CoCo3 Patch* $\$ 29.95$ Coco III Service Manual $\$ 39.95$ 512K COCO III COMPuter $\$ 299.95$ * - Req. 26-3024 M/P Interface

## CoCo Gallery

Scavenger
Hal Katschke

Hal, of Frankfort, Illinois, depicts a scene from the far future when mankind may need to mine the asteroids for fuel. He created this using Color Max 3.

Tio created this graphic with a program he wrote. He lives in Miller Place, New York.

This aquatic reptile enjoys a "pondside" lunch on a hot August day. Mr. Lee is the Technical Training Director for a major business equipment manufacturer and created this graphic with Color Max 3. He lives in Massapequa, New York.

This graphic displaying mystic powers was created in BASIC. Francisco lives in Houston, Texas, and is a junior in high school.

The mystery of the ancients is revealed in this graphic created with DeskMate and BASIC. Mark is a self-taught programmer who lives in Baltimore, Maryland.

Tut's Tomb
Mark Bollinger

## CoCo Concentration

By Allan J. Belanger

Memocards is a game that requires a good memory and strong powers of concentration. It runs on any 16 K Color Computer with Extended Color basic.

The game has a 40 -card grid containing 20 identical pairs that must be matched within a given amount of turns. If

Allan Belanger is a computer technician who has experience with eight- and 16-bit microprocessors. His hobbies are designing and building circuits for the TRS-80 systems and writing the software to drive them. He has been involved with electronics for 10 years.

TURN明:

# The Amazing A-BUS 

An A-BUS system with two Motherboards A-BUS adapter in foreground
The A-BUS system works with the original CoCo,

## Plug into the future

With the A-BUS you can plug your PC (IBM, Apple, TRS-80) into a future of exciting new applications in the fields of control, monitoring, automation, sensing, roboties, etc.

Alpha's modular A-BUS offers a proven method to build your "custom" system today. Tomorrow, when you are ready to take another step, you will be able to add more functions. This is ideal for first time experimenting and teaching.

A-BUS control can be entirely done in simple BASIC or Pascal, and no knowledge of electronics is required!

An A-BUS system consists of the A-BUS adapter plugged into your computer and a cable to connect the Adapter to 1 or 2 A-BUS cards. The same cable will also fit an A-BUS Motherboard for expansion up to 25 cards in any combination.

The A-BUS is backed by Alpha's continuing support (our 11th year, 50000 customers in over 60 countries).

The complete set of A-BUS User's Manuals is available for $\$ 10$.

## About the A-BUS system:

- All the A-BUS cards are verv easy to use with any language that can read or witte to P Port or Memory In BASIC use INP and OUTH Or PEEK and POKE with Apples and Tandy Color Computers)
- They are al compatible w theach other You can mix and match up to 25 cards to fit your application Card addresses are easily set with jumpers - A-BUS cards are shipped with power supplies (except PD-123) and detailed manuals (including schematics and programming examples)

## Relay Card <br> RE-140: \$129

 Includes eight industrial relays. ( 3 amp contacts. SPST) individually controlled and latched 8 LED's show status. Easy to use OUT or POKE in BASIC) Card address is jumper selectable
## Reed Relay Card

RE-156: \$99 Same leatures as above, but uses 8 Reed Relays to switchlow level signals (20mA max). Use as a channel selector, solid state relay driver, etc.

## Analog Input Card

AD-142: $\$ 129$ Eight analog inputs. 0 to +5 V range can be expanded to 100 V by adding a resistor. B bit resolution (20mV) Conversion time 120 us . Pertect to measure voitage, temperature. Iight levels, pressure, etc. Very easy to use

## 12 Bit A/D Converter

AN-146: \$139 This analog to digital converter is accurate to. $025 \%$ Inpul range is -4 V to +4V Resolution. 1 millivolt. The on board amplifier boosts signals up to 50 times to read microvolis. Conversion time is 130 ms ideal for thermocouple strain gauge, etc. 1 channel. (Expand 108 channels using the RE-1 156 card)

## Digital Input Card <br> IN-141: $\$ 59$

 The eight inputs are optically isolated, so if's sale and easy to connect any "onollf" devices, such as switches thermostats, alarm lopos etc 10 yout computer. To read the eight inputs. simply use BASIC INP (or PEEK)
## 24 Line TTL I/O

DG-148: \$65 Connect 24 input or oulput signals (switches or any $\Pi L$ device) to your computer. The card can be set for input. latched output, strobed output. strobed input, and/or bidirectional strobed $1 / 0$. Uses the 8255 A chip

Clock with Alarm CL-144: $\mathbf{\$ 8 9}$ Powerful clock/calendar with: battery backup for Time, Date and Alarm selting (time and date): built in alarm relay led and buzzer timing to $1 / 100$ second Easy to use decimal format Lithium battery included.

Touch Tone ${ }^{\circ}$ Decoder PH-145: $\$ 79$ Each tone is converted into a number which is stored on the board. Simply read the number with INP or POKE Use for remote control propects, etc
A-BUS Prototyping Card PR-152:\$15 $31 / 2$ by $41 / 2$ in with power and ground bus. Fits up to 10 I.Cs

RE-140

Smart Stepper Controller sc-149: \$299 World's finest stepoer controller on board microrocecessor controls s 4 motors simultaneously. Up to five Mothertoards can be laned inis way to a single ABUS adapter Sturdy auminum frame and card duides included - The $A$-BuS is not a replacement lor the Multi-pak
you are successful in completing the grid, another grid will be dealt out, and a bonus score will be awarded for the number of turns left upon completion of the grid.
After you load and run the program, the screen shows the main title and the message "Building Graphics" in the center of the screen. After a few seconds, the main playing grid appears showing the 40 -card grid, the score set at 0 , and the turn indicator set at 60 . You are now ready to start playing the game.

Use the digits ( 0 to 9 ) on the keyboard to enter the card numbers you want to look at. Two cards must be selected for each turn. The number of the card chosen must be from 01 to 40 . For example, if you want to see the two cards numbered 01 and 02 , type 01 , and after that card is revealed, type 02 to reveal the second card. A tone sounds for every key pressed. A high-pitched tone indicates that your entry was accepted, and a second key may be pressed. If a low tone sounds after you enter a two-digit number, this indicates that your entry was rejected. You may now enter another two-digit number. Typing any letter resets the keying sequence in case you type a wrong number by mistake.

If the two cards revealed are not a match, the computer lets you examine them for about one second. Your turn indicator will then be decremented by one, and the cards
will be turned face down again. At this point, you may make another selection.

When you select two cards that match identically, the computer removes them from the grid, you are scored for the pair, and the turn indicator is decremented by one. At this point, you may make another selection.

If you complete all 20 pairs of the grid within the allowed amount of turns, you are scored a bonus of 10 points for each turn left on the turn indicator and dealt a new grid of 20 pairs, and your turn indicator is set with five fewer turns than the previous round.

A player may play many rounds. The more rounds a player completes, the harder it becomes, since there are fewer turns allowed to complete the grid.

When a player runs out of turns on the turn indicator, the computer reveals the entire grid, your total score is displayed on the score board, and the turn indicator will display 0 . To play again, simply press the space bar.

The computer scores your matched pairs according to their added total face values. For example, two 5's are worth 10 points; two aces are worth 28 points.
(Questions about this program may be addressed to the author at 1857 Durocher St., Varennes, Quebec, Canada JOL 2P0. Please enclose an SASE for a written response.)

# Telewriter-64 the Color Computer Word Processor 

■ 3 display formats: 51/64/85 columns $\times 24$ lines

- True lower case characters
- User-friendly full-screen editor
■ Right justification
E Easy hyphenation
■ Drives any printer
- Embedded format and control codes
틀 Runs in $16 \mathrm{~K}, 32 \mathrm{~K}$, or 64 K
- Menu-driven disk and cassette I/O
■ No hardware modifications required

## THE ORIGINAL

Simply stated, Telewriter is the most powerful word processor you can buy for the TRS-80 Color Computer. The original Telewriter has received rave reviews in every major Color Computer and TRS-80 magazine, as well as enthusiastic praise from thousands of satisfied owners. And rightly so.
The standard Color Computer display of 32 characters by 16 lines without tower case is simply inadequate for serious word processing. The checkerboard letters and tiny lines give you no feel for how your writing looks or reads.
Telewriter gives the Color Computer a 5 ! column by 24 line screen display with true lower case characters. So a Telewriter screen looks like a printed page, with a good chunk of text on screen at one time. In fact, more on screen text than you'd get with Apple II, Atari, TI, Vic or TRS-80 Model III.
Ontop of that, the sophisticated Telewriter full-screen editor is so simple to use, it makes writing fun. With single-letter mnemonic commands, and menu-driven $1 / 0$ and formatting, Telewriter surpasses all others for user friendliness and pure power.
Telewriter's chain printing feature means that the size of your text is never limited by the amount of memory you have, and Telewriter's advanced cassette handler gives you a powerful word processor without the major additional cost of a disk.
..ne of the best programs for the Color
Computer I have seen.

- Color Computer News, Jan. 1982

## TELRWRUITRE4

But now we've added more power to Telewriter, Not just bells and whistles, but major features that give you total control over your writing. We call this new supercharged version Telewriter-64. For two reasons.

## 64T COMDAIIBLE

Telewriter-64 runs fully in any Color Computer - $16 \mathrm{~K}, 32 \mathrm{~K}$, or 64 K , with or without Extended Basic, with disk or cassette or both. It automatically configures itself to take optimum advartage of all available memory. That means that when you upgrade your memory, the Telewriter- 64 text buffer grows accordingly. In a 64 K cassette based system, for example, you get about 40K of memory to store text. So you don't need disk or FLEX to put all your 64 K to work immediately.

## 64 COLUMNS (AND 858)

Besides the original 51 column screen, Telewriter-64 now gives you 2 additional highdensity displays: $64 \times 24$ and $85 \times 24!!$ Both high density modes provide all the standard Telewriter editing capabilities, and you can swich instanty to any of the 3 formats with a single control key command.
The $51 \times 24$ display is clear and crisp on the screen. The two high density modes are more crowded and less easily readable, but they are perfect for showing you the exact layout of your printed page, all on the screen at one time. Compare this with cumbersome
"windows" that show you only fragments at a time and don't even allow editing.

## RIGII USTITCATION : Hyphination

One outstanding advantage of the full-width screen display is that you can now set the screen width to match the width of your printed page, so that "what you see is what you get." This makes exact alignment of columns possible and it makes hyphenation simple.
Since short lines are the reason for the large spaces often found in standard right justified text, and since hyphenation is the most effective way to eliminate short lines,
Telewriter-64 can now promise you some of the best looking right justification you can get on the Color Computer.

## FEATURES \& SPECIHCATIONS:

Priniling and formatling: Drives any printer (LPVII/VIII, DMP-100/200, Epson, Okidata, Centronics, NEC, C. Itoh, Smith-Corona, Terminet, etc).
Embedded control codes give full dynamic access to inteligent printer features like: underining, subscript, superscript, variable fonl and type size, dotgraphics, etc.
Dynamic (embedded) format controls for: top, bottom. and left margins: line length, lines per page, line spacing. new page, change page numbering, conditional new page, enable/disable justification.
Menu-driven control of these parameters, as well as: pause at page bottom, page numbering, baud rate (so you can run your printer at top speed, and Epson font. "Typewriter" fealure sends typed lines directly :o your printer, and Direct mode sends control codes right from the keyboard. Special Epson driver simplifies use with MX-80.
Supports single and multi-line heeders and automatic centering. Print or save all or any section of the text buffer. Chain print any number of files from cassette or disk.

File and I/O Features: ASCII format files create and edit BASIC. Assembly, Pascal, and $\mathbb{C}$ programs, Smart Terminal files (for uploading or downloading), even text files from other word precessors. Compatible with spelling checkers (like Spell'n Fix).
Cassette verify command for sure saves. Cassette auto retry means you type a load command only once no matter where you are in the tape.
Read in, save, partial save, and append files with disk and/or cassette. For disk: print directory with free space to screen or printer, kill and rename files, set default drive. Easily customized to the number of drives in the system.
Editing features: Fast, full-screen editor with wordwrap, block copy, block move, block delete, line delete, global search and replace (or delete), wild card search, fast auto-repeat cursor, fast scrolling, cursor up, down, right, left, begin line, end line, top of text, bottom of text; page forward, page backward, align text, tabs, choice of buff or greem background, complete error protection, line counter, word counter. space left, current file name, default drive in effect, set line length on screen,
Insert or delete text anywhere on the screen without changing "modes." This fast "free-form" editor provides maximum ease of use. Everything you do appears immediately on the screen in front of you. Commands require only a single key or a single key plus CLEAR.
irmiy a state of the art werd processor. outstanding in every respect.

- The RAINBOW, Jan. 1982

## Pronessionat.

 mORD ELOCLSSINGYou can no longer afford to be without the power and efficiency word processing brings to everything you write. The TRS-80 Color Computer is the lowest priced micro with the capability for serious word processing. And only Telewriter-64 fully unleashes that capability.
Telewriter-64 costs $\$ 49.95$ on cassette, $\$ 59.95$ on disk, and comes complete with over 70 pages of well-written documentation. (The step-by-step tutorial will have your writing with Telewriter-64 in a matter of minutes.) To order, send check or money order to:

## Submiting Material To Rainbow

Contributions to THE RAINBOW are welcome from everyone. We like to run a variety of programs that are useful/helpful/fun for other CoCo owners.

Program submissions must be on tape or disk and it is best to make several saves, at least one of them in ASCII format. We're sorry, but we do not have time tokey in programs. All programs should be supported by some editorial commentary explaining how the program works. Cenerally, we're much more interested in how your submission works and runs than how you developed it. Programs should be learning experiences.

We do pay for submissions, based on a number of criteria. Those wishing remuneration should so state when making submissions.
For the benefit of those who wish more detailed information on making submissions, please send a self-addressed, stamped envelope (SASE) to: Submissions Editor, the rainbow, The Falsoft Building, P.O. Box 385 , Prospect, KY 40059. We will send you some more comprehensive guidelines.
Please do not submit programs or articles currently submitted to another publication.

## Hint

## Circuit Solution

When my tape recorder began giving me numerous I/O Errors, I began to look for the cause. It appears the dropping resistor in the aux input circuit of the recorder had "gone high." This resulted in marginal program saves. I replaced the resistor with one of the proper value and all is well now. So, if you are technically minded and the usual head alignment adjustment doesn't do the trick, you might check for this possibility.

Theodore Looman Sacramento, CA

# INTRODUCING <br> COLORMAYB 

Unleash the power of your CoCo 3 with $320 \times 200$ screen resolution, and the choice of any 16 colors from the CoCo 3's 64 color palette, and your graphic creations almost can't help, but come alive with color and detail. Icons, pull down menus, and dialog boxes make COLOR MAX 3 very easy to use. 11 tonts are supplied, making hundreds of lettering styles posssible. Text can use any combinations of color, shadow, outline, bold, and italics. Painting is a snap with 16 colors and 32 editable patterns. COLOR MAX 3 requires a 128K CoCo 3 with disk drive, High-Resolution Joystick interface, and a joystick device (mouse, touch pad, or joystick).
ORDER YOURS TODAY!
Pleasse include $\$ 3,00$ shipping \& naialing. PA residents add $6 \%$ sale tax Specily catalog numbers when orcering

DI Petar Kerckioff

neaky Snake is a colorful game with sound effects the whole family can enjoy. You lead a snake around on the screen looking for root beer, a voiding snake pits and tying your snake into a knot. It requires a 32 K Color Computer, a disk drive, and, as an option, a joystick.

Type in the program from the listing and save it to your disk as SNEAKY. Be careful typing in lines 780 on, as these lines contain the data needed to generate the machine language portion of Sneaky Snake. Most of the program is written in BASIC, but where quick response is needed, machine language is used.

When you've copied Sneaky Snake onto your disk, plug a joystick into the left joystick port (if you don't have a joystick, you can elect to use the arrow keys on the keyboard) then type RUN "SNEAKY" to start the program. The screen will display the opening graphics while the computer pokes in the machine language program. Once the machine language program is in memory, the rules and objectives of Sneaky Snake will be displayed. Follow the instructions on the screen. In general, the rules and objectives are to guide your snake around on the screen using the joystick (or keyboard), trying to lead the snake to the little blue mugs of root beer, avoiding the red snake pits. Hitting a mug of root beer causes your snake to grow one body length; hitting a snake pit causes your snake to shrink one body length. The game ends if you run your snake into a wall (outside edges of the play field) or tie your snake into a knot (run the snake over itself). As you will quickly learn, short snakes are easy to guide around the screen, but long snakes can be difficult.

I hope you enjoy Sneaky Snake. Be careful about who you let play with the game, especially with joysticks. I lost two joysticks when a frustrated friend violently tried to avoid running his snake
into a wall; funny how the
"stick" doesn't bend after it reaches the end of its travel.

# Approaches for Lifelong Learning 

By Michael Plog, Ph.D. Rainbow Contributing Editor

Too of ten, we think of education as something only for young people. Sometimes we expand our definition of education to college students. The truth is that we learn at any age, indeed at all ages. Instead of thinking just about young people, consider for a moment the adult learner, especially the adult in need of computer education.

Adult learners come in all types. For example, many businesses offer computer training for employees. Most of these programs are oriented toward specific applications, such as word processing, database manipulation, spreadsheets, or a general orientation to computers. Many times, the learner (company employee) is only taught enough to start a computer, run the specific application, and get out of the task. In some cases, training is severely limited to job-specific applications. For example, some businesses only want employees to update information in a database file. Training is limited only to how updating is done. There is no broader learning about databases in general or about how the machine works.

This limited type of training serves a

[^3]purpose for the business - employees can now complete the tasks assigned to them. It is not, however, much in the way of adult education. The purpose of adult education is the same as the purpose of education for children: to increase the knowledge level of the learner and provide a set of skills that can be used in a variety of situations. Thus, this training is not true education.

There are millions of people who entered the world of computers late. In my own case, it has been over two decades since I was in high school. When I went to high school and college, computers were discussed, but only as powerful machines available to a few and understood by even fewer. I know some people who did not have the opportunity to learn about computers - when micros were on the market until they were retired!

There are many adults who want to learn some general information about computers, master a few applications, or just increase their knowledge in some specific area. These people represent the need for adult education. Different options exist to satisfy the need. All have advantages; all have disadvantages.

Most adults learn about computers by the informal method. It is impossible to talk with adult computer enthusiasts for very long without hearing the phrase "self-taught." Some people say it with pride; some people say it with an apology. The fact of the matter is that most adult computer users are indeed self-
taught in many aspects of their machines. The idea of "self-taught" is a little deceptive, however. Many people have tutors - friends or relatives who provide the basic instruction necessary for continuing education to occur. After the initial introduction, the computer user becomes truly self-taught, learning from books and trial and error.

This approach to computer knowledge is not without merit. People tend to learn more and faster when a topic interests them. Informal learning also centers very quickly on specific areas of major importance to the learner. For example, a person wants to learn about spreadsheets. After a period of agony and review, a spreadsheet is purchased. The user quickly becomes familiar with that package and with spreadsheets in general.

Informal learning does not necessarily mean reliance only on self. Many computer users have friends who pass on information and "tricks" about manipulating the machines. Information is shared freely among hobbyists. The problem is that learning is spotty and incomplete. The informal learner misses many of the details, some of which may be important.

One aspect of informal learning is information shared at conferences. Some people attend RAINBOWfest primarily to talk to other users with similar problems or to ask questions of those with more experience.

There are other options for adult learners besides the informal method.

## The Biggest The Best The Indispensable

THE RAINBOW is the biggest, best, brightest and most comprehensive publication a happy CoCo ever had! THE RAINBOW features more programs, more information and more in-depth treatment of the Tandy Color Computer than any other source.
A monthly issue contains more than 200 pages and up to two dozen programs, 14 regular columns and as many as 20 product reviews. And advertisements: THE RAINBOW is known as the medium for advertisers - which means every month it has a wealth of information unavailable anywhere else about new products! Hundreds of programs are advertised in its pages each month.

Every single issue of THE RAINBOW covers the wide spectrum of interests in the Tandy Color Computer - from beginners' tutorials and arcade games to telecommunications and business and finance programs. Helpful utilities and do-ityourself hardware projects make it easy and fun to expand your CoCo's capabilities. And, monthly reviews by independent reader reviewers take the guesswork out of buying new software and hardware products.

Join the tens of thousands who have found THE RAINBOW to be an absolute necessity for their CoCo. With all this going for it, is it surprising that more than 90 percent of THE RAINBOW subscribers renew their subscriptions? We're willing to bet that, a year from now, you'll be doing the same.

## Rainbow On Tape

## \& Rainbow On Disk!

- great ways to bring THE RAINBOW into your life. Each month, all you do is pop the tape into your cassette player or the disk into your drive. No more lost weekends. As soon as you read an article about a program in THE RAINBOW, it's ready to load and run. No work. No wait.
Just think how your software library will grow. With your first year's subscription, you'll get almost 250 new programs: games, utilities, business programs, home applications. And, with RAINBOW ON DISK, you'll also get all the OS-9 programs.

RAINBOW ONTAPE and RAINBOW ON DISK they're the "meat" of THE RAINBOW at a price that's "small potatoes." And now you even have a choice about how it should be served up to you.

To get your first heaping helping, just fill out and return the attached reply card. No postage necessary.

The Falsoft Building S8E x0g 'O'd

Prospect, KY 40059

## Use our 800 number!

For credit card orders, you may want to phone in your subscription. Our credit card order number is (800) 847-0309, 8 a.m. to 5 p.m. EST. All other inquiries please call (502) 228-4492
We accept VISA, MasterCard and American Express.
Subscriptions to the rainbow are $\$ 31$ a year in the United States. Canadian rate is $\$ 38$ (U.S. funds only). Surface rate elsewhere is $\$ 68$ (U.S.). Airmail is $\$ 103$ (U.S.). All subscriptions begin with the current issue. Please allow 6 to 8 weeks for the first copy. Kentucky residents add $5 \%$ sales tax. In order to hold down non-editorial costs, we do not bill.

## Our 800 number is also good for ordering RAINBOW ON TAPE or RAINBOW ON DISK!

Just call (800) 847-0309 anytime from 8 a.m. to 5 p.m. EST. Credit card orders only. Subscriptions to Rainbow on tape are $\$ 80$ a year in the United States, $\$ 90$ (U.S. funds) in Canada and $\$ 105$ (U.S.) in all other countries.
RAINBOW ON DISK is $\$ 99$ a year in the United States, $\$ 115$ (U.S.) in Canada and $\$ 130$ (U.S.) in all other countries.

Individual issues of rainbow on tape are $\$ 10$ in the U.S., $\$ 12$ (U.S.) in Canada and all other countries. Individual issues of rainbow on disk are \$12 in the U.S., \$14 (U.S.) in Canada, and $\$ 16$ (U.S.) in all other countries. Kentucky residents please add $5 \%$ sales tax.
RAINBOW ON TAPE and RAINBOW ON DISK are not stand-alone products; you need the magazine for loading and operating instructions and the necessary documentation. therainbow magazine is a separate purchase.

：omputer conferences also provide a lore formal type of education through orkshops and presentations．Some of ic presentations deal with very specific pplications，such as database manage－ ent or spreadsheets．
Other，less informal，training is pro－
＇ed by equipment dealers．Tandy still Jffers classes through Computer Cen－ ers for people who buy Tandy equip－ nent．The learner must pay a fee for hese classes，but gets continuing sup－ inrt（including telephone support）from local Center．Other dealers may also vide training for local markets，but Tandy training is a national institu－ 11. Many adult learners have discovered n －credit courses at community（two－ ear）colleges．In most states，these istitutions have continuing education adults．Community college admin－ rations have discovered that comput－ education is a hot－selling topic at iesent．All types of students will enroll 1 computer classes．Classes are typi－ ＇ly for specific applications，such as ，SIC instruction or word processing． addition，most community colleges fer a course in beginning computer
literacy．The beauty of this somewhat formal education for adult learners is that tuition is often inexpensive，and community colleges are of ten easy to get to．
> ＂No matter how much you know about your computer， there is still more to learn．＂

However，adult learners are not lim－ ited to community colleges for formal instruction about computers．Private firms are rapidly getting into the act， also．In most towns，you can find private instructors offering classes in computer applications．Adults can attend classes on a variety of topics，
from computer literacy to detailed training in specific software packages． Fees for these courses range from down－ right cheap to outrageous．
Formal instruction is even offered by users clubs．Some of these clubs offer free instruction to members，although others charge a fee for instruction．This seems like an ideal situation for adult learners．Local experts can set up classes for club members on topics of interest．Club members determine the areas of interest．

In order to institute this activity，a fairly large club is necessary．The club needs to be large enough to have more than one expert in several areas．Also， the club would need to have a fairly large pool of members as students．This activity offers benefits for the club，as well as for members．The lure of free or inexpensive adult education can help boost membership．

Education is truly a lifelong activity． No matter how much you know about your computer，there is still more to learn．With the possibilities available to the adult learner，the limits of your education are only what you decide to place on yourself．

# Keeping Score With CoCo 

By Lou Ashby

Until recently, the area around my computer was a mess. Lots of little bits of paper with cryptic messages, such as "Bill Zaxxon 18000" and "Luanne - Pacatak - 23,450," were scattered all over the place. They represented (I discovered) landmarks of achievement. Arcade gamesters are proud of their high scores - and heaven help anybody who misplaces one! My three resident joystick jocks think their game scores are even more important than the latest issue of RAINBOW!

My solution to this problem is a paper-eating program called CoCo Scoreboard. I wrote it, put it on a disk and stuck it in the box with the games disks, and the clutter disappeared. Neatness has returned and errant breezes no longer threaten to disperse the scores of my offspring.

The menu allows you to create the games file, add games, insert or change high scores, and display and print the scoreboard, all from one LOAD or RUN. Those with only 16 K will have to delete lines 10 through 90 and PCLEAR 1 to

[^5]avoid an OM Error in the game-add function.

One advantage of direct file organization is that if a file doesn't exist, DOS will build one, so you use the game-add function to create your initial games file. Just type in your game names in any order (maximum length: 15 characters). When you have entered them all, a final ENTER will drop the program into a sort to alphabetize the names and write the records to disk. You also use this function whenever you add new games to your collection. Your new additions will be merged with the existing records and sorted into their proper positions in the file.

The second function allows you to randomly insert or change player names and scores on the game records. At the "Game?" prompt, simply type in the name of the game record you want to update; if it exists, the system will find it, display the current data and prompt for changes.

If no update is to take place to a field, press ENTER and the current data remains. Otherwise, enter the player's name (maximum: 10 letters), press ENTER and type the score at the "Score" prompt. One hint about the score field - it is alphabetic. You can enter nonnumeric data (maximum: 10 charac-
ters), such as times, ratings or scores, with punctuation for better visual impact. Press $Q$ to return to the menu.

The third function displays the scoreboard sequentially on your monitor or TV. This is an ego-builder for one and all - see your name on the screen as best-in-the-house at something.

To prevent excessive wear and tear from looking up scores to see if a new record has been achieved, use Function 4 to print an occasional list for quick reference. This also helps minimize the "oops" factor. Those without a printer might want to keep the code for this feature intact and simply change Line

150 from ON C GOTO 170, 2日0, 540, 790 to ONC GOTO 170, 280, 540, 100, which will reject entry into hard copy logic until your printer arrives. (You will get one sooner or later!)

Now if I can just design a program that untangles joystick cables.

For product descriptions of items not listed in this issue of Rainbow see our 7 page catalog in the May issue starting on page 39.

Two Years In the Making. Speech Systems was formed to develop new and innovative speech products. After 2 years of intensive Research and Development, we have created a truely sophisticated speech recognition device. Recognition rates from 95\% to 98\% are typical. Until now, such a product was outside the price range of the personnel computer market, and even small businesses.

EARS is trained by your voice and capable of recognizing any word or phrase. Training EARS to your particular voice print takes seconds. Up to 64 voice prints may be loaded into memory. You may then save on tape or disk as many as you like so that your total vocabulary is virtually infinite.

Speech and Sound Recognition. EARS is really a sound recognition system, so it really doesn't matter whether you speak in English, Spanish, or French. In fact you do not have to speak at all, you can train EARS to understand sounds such as a musical note or a door slamming.

Hands Off Programming. Imagine writing your own BASIC programs without ever touching the keyboard. Everything that
you would normally o through a keyboard can now be done by just speaking.

Programming EARS Is Easy. LISTEN, MATCH and other commands have been added to BASIC so that programming EARS is a piece of cake! The single BASIC line: 10 LISTEN: MATCH will instrucl EARS to listen to you and return the matching phrase.

It Talks. EARS is also capable of high quality speech. We mean REALLY high quality. The speech is a fixed vocabulary spoken by a professional announcer. Speech Systems is currently creating a library of thousands of high quality words and phrases. For a demonstration call (312) 879-6844, you won't believe your ears or our EARS.

DISK OWNERS. EARS will work with any disk system with either a MULTI-PAK or Y-CABLE. Our new Triple Y-CABLE was specilically developed for those wishing to add SUPER VOICE as a third device.

You Get Everything You Need. You get everything you need including a specially designed professional headset style noise
cancelling microphone. The manual is easy to use and understand. Several demonstration examples are included so you don't have to write your own programs unless you want to. EARS will work in any 32 K or 64 K Color Computer.

## SUPER VOICE $\$ 20$ OFF

Imagine talking to your computer and it talking back to you. When you need an unlimited vocabulary, you can't beat SUPER VOICE. For a limited time, we will give you the SUPER VOICE for $\$ 59.95$ with your EARS purchase. Even if you already have another speech unit, here is your chance to buy the best and save $\$ 20$.

## VOICE CONTROL

Applications for EARS are astounding. Here is our first of many listening programs to come. VOICE CONTROL is a program specifically designed to allow you to control any appliance in your house with your voice and our HOME COMMANDER (sold separately) or the Radio Shack Plug ' N ' Power controller. For example, you can control your TV by saying "TV ON" or "TV OFF". . \$24.95

Speech Systems 38W255 DEERPATH ROAD BATAVIA, ILLINOIS 60510
We accept CASH, CHECK, COD, VISA and MASTER CARD orders.

## SATISFACTION GUARANTEED

If for any reason you wish to return Turbo Ram, you may clo so within 15 days and be charged only a $10 \%$ restocking charge. You may keep the GIME CHIP Technical Specs, 512 K Ram Test program and MUSICA RAM DISK, a $\$ 30$ value.

## TURBO RAM DISK

TURBO RAM DISK adds 2 lightning fast Ram Disks to your C()CO system. Imagine saving and loading programs instantaneously and having hundreds of your programs "on line" for fast access. Single clisk system users can
use TURBO RAM DISK 10 easily make backups without continuously switching disks.
Requires 512K Turbo Charged COCO 3 . . . . . . . . . . . . . . \$24.95
When purchased with TURBO RAM . . . . . . . . . . . . . . \$19.95

## COCO 3 128K

## COLOR CONNECTION IV

This is the most comprehensive modem package ior the COCO 3. All standard protocols are supported including CompuServe's Protucol B, XMODEM protocol, and XON/XOFF. Full support of the auto answer/auto clial feature for both Hayes compatible and some Raclio Shack modems is provided. Single key macros allow easy entry of often-used passwords and ID's with a single key stroke.
Disk
$\$ 49.95$

## COLOR SCRIBE III

This great Word Processor can take full advantage of the 80 column'display of the COCO 3. Justification, Headers, Footers, and Pagination make it perfect for letters and documents as well as programming in BASIC, PASCAL, "C," and Assembly Language. Over 20 line editing commands inclucle capabilities like character insert and delete, skip over words, breaking a line, and more!
Disk
$\$ 49.95$

## THE MAGIC OF ZANTH

In the Land of Zanth, magic is commonplace. Dragons, Griffins, Centaurs and Demons abound. You are sent on a quest to discover the source of magic in the Land of Zanth. This intriguing adventure features over 2 clozen hi-res 16 color animated graphic screens, 4 voice music and sound efiects. The 16 color, $320 \times 192$ graphics look great.
Disk
$\$ 34.95$

## RETURN OF JUNIOR'S REVENGE

This is the same Junior you've seen in the Kong arcarle series, but with new COCO 3 graphics. This tireless little monkey must overcome all sorts of obstacles ( 4 screens worth) to rescue his father, The King, from the mean zookeeper. He will traverse the jungle and swamp, climb vines, avoid chompers and birds, open locks, and more berore he finally meets with his big clacldy. The 16 color, $320 \times 192$ graphics are superb.
Disk .... ..... ... .... .............. . . . . $\$ 34.95$

LYRA is the most poweriul music composition progran we have seen on any computer. We don't mean just the COCO, we really mean any computer. Whether you are a novice trying to learn music or a protessional musician with MIDI equipment you will find LYRA a powerful tool. You
see, we wrote LYRA for musicians that hate computers. If you want proof, purchase a LYRA demo ior $\$ 7.95$. We will apply the demo price to your purchase. NIIDI output requires the LYRA MIDI cable (\#MC158) or COCO MIDI Sec/Editor (\#CMI47).
$\checkmark$ Ultra Easy to use, just point with joystick or mouse and click.
$\checkmark$ Compose with Lip to 8 completely independent voices.
$\checkmark$ Room for ovei 18.000 notes. (This is not a misprint!)
$\checkmark$ Super Simple Editing Supports
Note insert
Note delete Note change
$\checkmark$ Output music to:
TV Speaker STEREO PAK SYMPHONY 12 MIDI Synth hardware

- Outpul all 8 voices using either SYMPHONY 12 or one or more MIDI synthesizers and drum machines
$\checkmark$ Output any voice on any of the 8 MIDI channels.
Transpose music to any key
$\checkmark$ Modify music to any tempo.
$\checkmark$ Automatically inserts bar for each measure as you compose
Vey signature lets you specify sharps and flats only once. LYRA will do the rest
$\checkmark$ Plays MUSICA 2 files using LYRA CONVERT (\#LC164).
$\checkmark$ Each voice may be visually highlighted or erased
$\checkmark$ Each measure is numbered for easy reading.
$\checkmark$ Solo capability
$\checkmark$ Block edits are highlighted
$\checkmark$ Tie notes logether for musical continuity.
$\checkmark$ Name of note pointed to is constantly displayed.
$\checkmark$ Jump to any point in the score instantaneously.
$\checkmark$ Memory remaining clearly displayed, however you will have plenty of memory even for the most demanding piece
$\checkmark$ Help menu makes manual virtually unnecessary.
$\checkmark$ LYRA is $100 \%$ software, no need for extra hardware unless you want more power
$\checkmark$ Music easily saved to tape or disk.
$\checkmark$ Requires 64 K and mouse or joystick
LYRA (Disk only) \#LY122
$\$ 54.95$

These LYRA options are not required. They are provided for those wishing additional flexibility.

LYRA CONVERT
A program to convert MUSICA 2 files to LYRA files.
(Disk) \#LC164
$\$ 14.95$

## VERSION UPDATE

To receive the latest version of LYRA return your original disk. \#UP162
$\$ 10.00$
LYRA MIDI CABLE
A cable to conneat your computer to your MIDI synthesizer
\#MC158
$\$ 19.95$

[^6]Illinois residents add $61 / 2 \%$ sales tax

LYRA SYMPHONY 12 ENHANCER
Lets LYRA play all 8 voices through SYMPHONY 12.
(Disk) \#LSI77

## LYRA LIBRARY

A collection of 50 songs ready to play for hours. Most have 7 and 8 voices. \#LL 137
$\$ 39.95$
SYMPHONY 12
A real hardware music synthesizer, lets LYRA play all 8 voices in stereo
(T or D) \#SY149
$\$ 69.95$

COCO MID Seq/Editor A professional quality MIDI interface for MIDI synthesizers.
(Disk only) \#CM147
$\$ 149.95$

MUSIC LIBRARY
A collection of over 900 songs. When used with CONVERT, it gives an incredible LYRA library. Each volume 100 songs.
(T or D) \#MLXXX
$\$ 29.95$

COCOMAX is a trademark oi Colorware.
ORCHESTRA 90 is a trademark of Radio Shack

Spezch Systems
38W255 DEERPATH ROAD
BATAVIA, ILLINOIS 60510

Now your COCO can talk to your MIDI music synthesizer. Whether you have a Korg, Roland, Casio, Yamaha, or Moog, it doesn't matter as long as it's MIDI equipped. Choose from our
$\checkmark$ Supports 16 Track recording and playback
$\checkmark$ Adjustable tempo
$\checkmark$ Over 45 Kbytes available
(Over 15.500 MIDI events possible)
$\checkmark$ Record to any track
$\checkmark$ Low Level track ediling
$\checkmark$ LYRA editing. (one voice per track).
$\checkmark$ Playback from any number of tracks
$\checkmark$ Giantizing to $1 / 16$, $1 / 32,1 / 64$ intervals.
$\checkmark$ Dynamic memory allocation.
$\checkmark$ Filter out MIDI data: Key pressure Program change Pitch wheel
$\checkmark$ Graphic Piano Keyboard Display in both record and playback mode.
$\checkmark$ Adjustable Key (Transposition) for each track.
$\checkmark$ Save recording to disk for later playback or editing.
$\checkmark$ Syncs to drum machine as MASTER or SLAVE.

Control Change Channel Pressure System Message
entry level MUSICA MIDI system that plays MUSICA files or our Professional COCO MIDI 2 system.
$\checkmark$ PUNCH IN and PUNCH OUT ediling.
$\checkmark$ Sequencer features.
$\checkmark$ 100\% machine code.
$\checkmark$ "Musician Friendly" Menu Driven.
$\checkmark$ Metronome
$\checkmark$ Many songs included.
Includes MIDI hardware interface, 2 MIDI cables, detailed manual, and soflware. Requires 64 K CoCo, Y-Cable or Multi-Pak.
COCO MIDI 2 (disk only) \#CM147 . \$149.95
DOUBLE Y-CABLE \#DY 181 .... \$28.95
TRIPLE Y-CABLE \#TY 173 . . . . . $\$ 34.95$

## DX LIBRARIAN ${ }^{\text {TM }}$

Save and load voice parameters for the Yamaha DX series of synthesizers (DX-7, DX-100, DX-21 etc.). Save sounds individually or as a group letting you load the entire synthesizer in seconds.

Comes with professionally developed voices for the DX-7 worth 10 times the price. Requires COCO MIDI hardware interface. DX LIBRARIAN (Disk only) \#DX143
$\$ 39.95$

## CASIO LIBRARIAN

Save and load voice parameters for any Casio synthesizer (CZ-101, CZ-1000, CZ-5000 etc.) You can save from the: presets, cartridge,
memory or buffer. Requires COCO MIDI hardware interface
CASIO LIBRARIAN (Disk only) \#CL169
$\$ 39.95$

## MUSICA MIDITM

MUSICA MIDI takes any MUSICA 2 music file and plays it through your MIDI synthesizer. We offer you over 800 tunes from our MUSIC LIBRARY series (sold separately) or create your own music
using MUSICA 2. Inlcudes: documentation, plenty of music, and the cable to connect between the COCO and your synthesizer. MUSICA MIDI Complete (Disk Only) \#CM126 \$39.95

## MIDI KEYBOARD

If you own the Casio CZ-101 or similar MIDI synth, you know that the mini keys and the short 3 or 4 octave keyboard is limiting. MIDI KEYBOARD when used with our full size 5 octave keyboard
gives you the flexibility you need. Comes with cable to connect the COCO to your MIDI synth.
MIDI KEYBOARD (Disk only) \#MK167
$\$ 29.95$

## Put an end to alien-ation

## By Steve Donald

Aliens are attacking, zooming around the sky, shooting laser bolts at your fuel tanks and crashing "kamikaze" into your laser cannons. You're in charge of defense at this military base, so it's up to you to eliminate the aliens by aiming the cross hairs of your heavy lasers and firing a bolt of energy at them.

To play Munchkin Blaster, push the firebutton to bring up the game screen. In the bottom corners are your two laser cannons, and in between them are your four white fuel tanks, which must be protected at all costs. When either or both of your lasers are destroyed, or all of your fuel tanks are blown up, the game is over and you are asked, "Another planet?"

After 20 aliens are eliminated, bonus points are awarded for lasers and fuel tanks remaining. Then, a new set starts, with all damages repaired and more vicious aliens to defeat.

I added the rapid fire feature to save your firing finger, and you have the options of using the speed-up poke and a high score. To make your high score permanent, change Line 30 so that $\mathrm{HS}=$ your high score and $\mathrm{H} \$=$ your name, then resave the game. Good Luck!
(Questions about this game may be sent to Steve Donald, Oba, Ontario, Canada POM 2 PO. Please enclose an SASE for a response.)

## Model 101 <br> Interface \$39.95

- Serial to parallel interface
- Works with any COCO
- Compatible with "Centron ics" parallel input printers
- 6 switch selectable baud rates 300-600-1200-2400-4800-9600
- Small size $4^{\prime \prime} \times 2^{\prime \prime} \times 1^{\prime \prime}$
- Comes complete with cables to connect to your computer and printer

## Other Quality Items

High quality 5 screw shell C10 cassette tapes. $\$ 7.50$ / dozen

Hard plastic storage boxes for cassette tapes. $\$ 2.50 /$ dozen

Pin-Feed Cassette Labels White S3.00/100
Colors $\$ 3.60 / 100$ (specify red, blue, yellow, tan)

## Model 104 Deluxe Interface \$51.95 <br> Model 102 Switcher \$35.95

Same features as 101 plus

- Built in serial port for your modem or other serial device
- Switch between parallel output and serial output
- Size is $4.5^{\prime \prime} \times 2.5^{\prime \prime} \times 1.25^{\prime \prime}$
- Comes complete with cables to connect to your computer and printer

## NEW! Cables for your COCO

- U.L. Isted foll-shielded cable - 2 Types: male/fernale extension cables (used between a serial device and existing cable) male/male cables (used between two serial devices such as a modem and one of our switchers)
- 3 ft ./\$3.95, 6 ft / $\$ 4.49$, $10 \mathrm{H} .1 \$ 5.59$ Specify M/M or M/F and length.

- Connect to your COCO serial port and have 3 switch selectable serial ports
- Color coded indicator lights show switch position
- Lights also serve as a power on indicator for your COCO
- Heavy guage blue anodized aluminum cabinet with nonslip rubber feet

The 101 and 104 require power to operate. Most printers can supply power to your interface. (Star, Radıo Shack and Okidata are just a few that do - Epson and Seikosha do not). The interfaces can also be powered by an AC adaptor: Radio Shack model 2731431 plugs into all models. If you require a power supply. add a "P" to the model number and add $\$ 5.00$ to the price (Model 101P \$44 95, Model 104P \$56.95).

## Model 105 Switcher \$14.95

- Connects to your COCO to give you 2 switch selectable serial ports
- 3 foot cable to connect to your COCO's serial port
- The perfect itern to use to connect a printer and a modem to your COCO
- Small in size, only $4.5 \times 2.5$ $\times 1.25$

The Model 101, 102, 104 and 105 work with any COCO. any level basic and any memory size. These products are covered by a 1 year warranty.

The Model 101 and 104 work with any standard parallel input printer including Gemini. Epson, Radio Shack.
Okidata. C. loth. Seikosha, Panasonic and many others They support BASIC print commands, word processors and graphic commands.

We manufacture these products - dealer inquiries are invited.

## Cassette Label Program \$6.95

- New Version - tape transferrable to disk - save and load labels from tape to disk
- Prints 5 lines of information on pin-feed cassette labels
- Menu driven, easy to use
- Standard, expanded and condensed characters
- Each line of text auto matically centered.
- Label display on CRT. enabling editing before printing
- Program comes on tape and is supplied with 24 labeis to get you started - 16 K ECB required

## Ordering Information

Free shipping in the United States (except Alaska and Hawaii) on all orders over $\$ 50.00$. Please add $\$ 2.50$ for shipping and handling on orders under $\$ 50.00$. Ohio residents add 6\% sales tax.
Call (513) 677-0796 and use your VISA or MASTERCARD or request C.O.D. (Please add $\$ 2.00$ for C.O.D. orders). If you prefer, send check or money order; payable in U.S. Funds to

## Rainbow Review 3/85 Hot CoCo 10/85

## BOB'S MAGIC GRAPHIC MACHINE

Can generate BASIC code to use in your programs. Easy drawing and manipulation of circles, elipses, boxes, lines and ARCS. Single joystick operation with on line HELPS at all times Allows text on the graphics screen \& movement of objects on the screen Can be used as a stand-alone graphics editor. Instruction Manual. GRAPHICS EDITOR. REG. $\mathbf{\$ 3 9 . 9 5}$-ONLV \$24.95 for disk or tape. 64k ECB

Rainbow Review 7/85, Hot CoCo 9/85 "The graphics bargain of the year"

## 'KEEP-'TRAK' Accounts Receivable.

Feat:ures: auto interest calculation, auto ageing of accounts, installment sales, total due sales, explanation space as long as you need, detailed stat:ements. 'KEEP-TRAK' General Ledger tie in, account number checking. credit limit checking \& more User frıendly/menu driven. Includes manual. $\mathbf{\$ 3 9 . 9 5}$ or $\mathbf{\$ 4 9 . 9 5}$ General Ledger \& Accounts Receivables [Disk Only)

## 'COCO WINDOWS’

With hi-res character display and window generator. Features an enhanced key board [klicks] and 10 programmable function keys. Allows the user to create multiple windows from basic. Includes menu driven printer setup and auto line numbering. Four function calculator, with memory. The above options can be called anytime while running or writing in BASIC. APPLE PULL YDUR DRAPES YOU DON'T WANT TO SEE THIS \$24.95 (disk or tape] includes manual

## The excitement continues!

## The Third Rainbow Book of Adventures

Nineteen fascinating new Adventures from the winners of our third Adventure competition. Discover backstage intrigue at the London Theatre, attempt a daring space rescue, or travel through time to save the universe, and that's only the beginning!
Challenge yourself! Put your wits to the test with Adventures like:
Evil Crypt - Encounter bottomless pits, graves that kill, flesh-frying fires. Even the rocks and trees conceal dangers.
The Professional - You're hot on the trail of international jewel thieves.
Cleopatra's Pyramid - Perilous action along the banks of the treacherous Nile River.
Johnny Zero - Fight against evil in the year 2091 as a genetic android. And when you're at the end of your rope, revenge is in reach with:
Balm - You are the Adventure, determined to exterminate anyone fool enough to travel your cavern.
Experience other traditional and contemporary challenges from these winning authors: Mark and Mike Anderson, Jon Blow, Jason Dolinsky, Matt Hazard, Joab Jackson, Curtis Keisler, Franklin Marrs, Ann Mayeux, Scott McCleary, Chris McKernan, Philip Newton, Fred Provoncha, Carlos Rocha, Michael Shay, Don Sheerin, and Walt Thinnes.
The Third Rainbow Book of Adventures is only \$11.95!
Save yourself from typing listings with - the Third Adventures Tape or Disk Set.
Get on with your game and eliminate typing hassles. Just load these great programs into your computer and run.

## Tape \$9.95, Two-Disk Set \$14.95

The tape and disks are adjuncts and complements to the book; the book is necessary for introductory material and loading instructions.

## Learn CoCo Learn

By William D. English

Bill English teaches computer literacy, calculus and advanced mathematics at Greenfield-Central High School in Greenfield, Indiana. He also teaches night courses in programming at a local college.
rtificial intelligence is an area still in its infancy. If a computer can ever be designed that can think logically and creatively, the possibilities are both exciting and frightening. What would geniuses accomplish if their human needs did not have to be satisfied; if they had unlimited access to all knowledge? Incredible thought, isn't

I have written a short program, CoCo Learn, that allows CoCo to learn to play a game better. The first time I saw a discussion of this game was about 10 years ago in a math book. The idea is to reward the machine's moves every time it wins and to penalize the moves when it loses. This is accomplished by labeling boxes with each possible move. Thus, every game has to be designed beforehand.

1 felt it would be better if the computer's memory expanded as the different games were played. The storage of the games had to be intertwined so that the same moves in the same situation would only be stored once.

Think how you learn to play a game. At first, your moves are only random. But, after a while, you begin to find certain methods that allow you to win and others that cause you to lose. This is what I wanted CoCo Learn to be able to do. Each time a game is won, all moves in the game are rewarded with a higher probability. If the game loses, all moves are given a lower probability. With a good player, the computer will learn quickly. Against a poor player, it will take much longer to learn winning ways.

CoCo Learn is played on a 3-by-3 quare like Tic-Tac-Toe. You begin with hree yellow markers at the bottom of
he screen he screen, and CoCo has three blue
narkers at the top. Each location numbered I through 9 . You win a a
name by either having one of your men reach the opposite end of the board or by blocking your opponent from any possible move.

Movement is similar to pawns in chess. You may move straight ahead only if that square is open, or you may move diagonally if an opponent's marker occupies that square. The object is to teach the computer to play better and better, eventually winning every game. CoCo will learn from each game played.
The board displays which opponent you're facing - another person or the computer - and whether the computer is playing at random or from memory, each move, and the number of wins for each player. To begin the game, you must answer two questions about the type and speed of the game. The board will then be displayed and you are ready to begin. You move first in every game. The manner in which the program stores the moves may be of interest to you. For the opponent's moves, two bytes are required. The first contains the actual move, and the second contains the number of locations in memory to the next possible move at this point. For CoCo's moves, there are three bytes, the additional byte containing the probability of that particular move. This memory is stored at 30000 ( 15000 for 16 K ). You might like to look at this area after a few games. To do so, just type FOR $X=L$ TOE: $2 X, \operatorname{PEEK}(X):$ NEXT $X$ and press
common to a previous game.
Now a third game is played with the first two moves the same as in the first game. The moves from the second game are moved down in memory, and the third game is added after the 4-2 move of the first game. The following table shows the situation after the third game.

I hope you enjoy this exercise and will correspond with me about your experiences with artificial intelligence.

If you have a 16 K computer, change the 30000 in lines 20 and 30 to 15000 , and enter PCLEAR 1 before running.
(Questions about this program may be addressed to the author at RRI, Box 407. Greenfield, IN 46140, 317-4626034. Please enclose an SASE for a reply when writing.)
the memory is expanded either at the bottom or somewhere in the middle, depending on how many moves are the new moves. As each game is played,

ENTER. Use the SHIFT and @ keys to scroll. CoCo's moves have 100 added to them; thus, they are easy to spot.

Here is a short example. Remember, the opponent (you) always moves first. Suppose the first game's moves are 74, 3-6 and $4-2$. Memory beginning at $L$ would be $L, 74, L+1,0, L+2,136$, $L+3,0, L+4,0, L+5,41$ and $L+6,0$. Then, a second game is completed with moves 7-4, 2-4, 9-6 and 4-8 with the computer winning this game. The memory would be the same from $L$ to $L+6$, except for $L+3$, which would contain a 5 to point to CoCo's other possible first move. $L+7$ through $L+14$ now contains

Table 1: Situation after third game.

The listing: COCDLERN

## *P-51 Mustang Attack/Flight Simulation

The ultimate video experience! Link two CoCo's together by cable or modem, and compete against your opponent across the table OR across the country! (Both computers require a copy of this program). TheP-51 flight simulator lets you fly this WWII attack fighter in actual combat situations against another player, OR a non combatant computer drone.

32 K Machine Language
Joysticks Required \$34.95
Specify Tape or Disk

## *Goldfinder

Here's the quality you've come to expect from TOM MIX. Endless possibilities await you in this exciting new creation. Move over Goldrunner and Loderunner, here comes GOLDFINDER

32K \& Joysticks Required
$\$ 22.95$
Disk

## *Approach Control Simulator

A complete simulation package which will lead to countless hours of discovery and adventure.

- Specify Disk or Tape
- Quick Reference Guide
- Comprehensive Manual
- No Joysticks Required

32K Machine Language
$\$ 34.95$

## *Trapfall

The "Pitfalls" in this game are many. Hidden treasures, jump over the pits, swing on the vine, watch out for alligators, beware of the scorpion. Another game for the Color Computer with the same high resolution graphics as "The King.'

16K Machine Language
$\$ 23.95$

## Look What's New at NOVASOFT!

- Color III Only -

Seven of the most popular slot machine games found in VEGAS are yours for the price of one. Designed to be as real as being there. You simply will not believe your eyes when you see the graphics and realistic movement. This is by far one of the most outstanding programs we have ever offered. Disk only \$34.95

## *Lunch Time

Your chef, Peter Pepper, is surrounded! Dodge pickles, hot dogs, and eggs while building hanburgers. This high res game features 7 difficulty levels of wild entertainment. Fast-paced action for either one or two players. Have a Burger Time
Requires 32K \& Joysticks \$21.95 Specify Tape $\alpha$ Disk

## *The Wild West <br> - Color III Only -

Get out your six shooter and polish your spurs! Journey into the gunslinging land of the old west. As sheriff of Dry Gulch, your job is to keep the peace. But the notorious desperado Black Bart has escaped from jail and is on his way to Dry Gulch to recover his hidden fortune!

- Incredible animated $320 \times 19216$ color hi resolution graphic scenes!
- Four voice music and sound effects.
- Save and load games in progress.
- A vocabulary of over 100 words.
- Automatically SPEAKS with a Tandy Speech Pak.

Disk Only $\$ 25.95$

## *Moneyopoly

Play the popular board game on one of the most realistic computer game simulations ever! Contains all the features of the original. Buy, sell, rent, wheel \& deal your way to fortune.

32 K Joystick Required $\$ \$ 22.95$
Specify Tape or Disk
-FOUR CUBE - Now you can play TIC-TAC-TOE in 3D! Pit your wits against the computer Requires $32 \mathrm{~K}-1$ or 2 Players and you'll agree - it's a "real challenge"
$\$ 18.95$
-MAUI VICE - Step into the shoes of Crock \& Bubbs with this state-of-the-art that guaran- 64K Ext. Basic \& Joystick Required lees excitement and newness every time you play.
-DONUT
DILEMMA

- Chambers

An:gn', Angelohas raided Antonio's Donut Factory and you must restore law - and order. But hurry! Time is running out!

- Cuber Destroy the evil creatures in 20 levels, $30-35$ rooms per level.
-BREWMASTER - Move along to the end of the bars to serve your thirsty customers, but watch out for falling glasses and rowdies! Loads of fun!
*FANG MAN
- A high res graphics arcade-type game based on the Dracula legend. You are Dracula and must evade countless hazards in your search for new victims
-PAK PANIC - A fast paced game in which 'Pakman' is steered through a maze, pursued by lour monsters, while trying to eat dots and power pills.

Disk Only \$21.95
Requires 32K $\$ 24.95$
32K \& Joysticks Required $\$ 22.95$
$32 \mathrm{~K} \&$ Joystick Required $\$ 23.95$

$$

The scenario: You are flying your F-15 Eagle in pursuit of an enemy fleet of craft intruding on your airspace. Your orders are to shoot to kill.
F-15 Ground Assault Simulator is an action game written specifically for the new Color Computer 3 with 128 K . An RGB monitor is recommended for correct color interpretation, but not needed.
You must perform your mission using the right joystick and various keys on the keyboard to operate plane functions.

After running the program, you are greeted by the title screen and a short song. Next, you need to type the skill level at which you want to play. The easiest is Level 0 ; Level 9 is nearly impossible. Let's play Skill Level 3, just for starters.

The game screen appears and you see a fuel gauge, a horizon gauge, a thrust meter and radar (all of which work in real time). Control your ship like a real aircraft: to go up, pull the stick back and vice versa for down. If you are not using an RGB monitor, you will not be able to see your own aircraft. You will only see its shadow on the ground. Therefore, pulling back and pushing forward on the stick will have little visible effect.

The radar shows the enemy position in relation to the screen, and the horizon gauge shows the ground in relation to your craft. The fuel gauge shows how much fuel is left in your tanks; when you run out of fuel, you will crash. The thrust gauge controls the speed and maneuvers of your plane. Use the up and down arrows to control this factor. The more thrust you've got, the more quickly fuel is used.

Move your ship into position and press the joystick button to fire. Watch out: The enemy may shoot back. The frequency of the enemy's attacks depends on the skill level you picked at the start of the game.

Now that you know how to play, let's take a look at how some of the game's effects are achieved. The moving scenery is drawn in two palette colors. One is a visible color and the other is the background color (invisible). These colors are switched from visible to invisible, using the palette command, at a speed that achieves

Eric Wolf is 14 years old and attends Dickinson Middle School. He is currently writing a line of computer soft ware that deals with games and utilities.
flicker-free animation. The variable for thrust controls how much time passes before the next switch of scenery lines.

The game's graphics, like the plane's in-flight positions, are drawn at the very beginning of the program right before the title screen is displayed.

F-15 Ground Assault Simulator uses the speed-up poke, 65497,0, to make the program run even faster. It also uses the new Color Computer 3's advanced graphics system and the 320-by-192, 16color screen. The palette colors for the screen may be changed to fit your personal preferences; they are contained in Line 185.

I hope this explanation will get you started, but if you have any questions, please feel free to write.
(Questions about this game may be addressed to Eric Wolf, 1630 N. Johnson St., South Bend, IN 46628. Please enclose an SASE for a reply.)

# Technicians Tackle Shifty Display 

By Marty Goodman Rainbow Contributing Editor

I have a CoCo 1 and 2, two CoCo 3s, three Zenith televisions, a CM-8 monitor and some other brands of TVs. When I hook either of the Co Co 3s to the Zenith TVs, the picture jumps a little. This does not happen when I hook the CoCo 3 to either a CM-8 or another brand of TV. Nor does it happen when I hook the CoCo 1 or the CoCo 2 to the Zenith TVs. Can you help me?

Wooten A. York Lincolnton, GA

I have heard a dozen or so reports via Delphi of problems with a jumpy picture with the CoCo 3. I'm still not really sure what the problem is. However, Tandy has noted a different, but perhaps related, video problem with the CoCo 3. It seems that on some CoCo 3 s when you power them up, the 32column display either is missing or is shifted over one or two horizontal character spaces to the left and will wrap around on the same line on the right.

They discovered two possible causes: In some cases, the GIME chip was poorly seated in its socket, with some of its pins making poor contact. In that case, they advised their repair technicians to remove the GIME chip (a very delicate matter!) and clean both it and

[^7]its socket with alcohol, then carefully reinsert it.

They also noted that in some cases there was a problem with a capacitor in the clock circuit. In this case, they advised their technicians to replace C64 (which is originally 150 picofarads) with a 220 -picof arad capacitor. I'm not sure whether either of these manipulations will help with your particular problem, but you might want to try them.

## Pin Assignments

I have a book that describes the pinout of the CoCo's parallel port and lists one of them as +12 V and another as -12 V . Does this mean that the book only applies to the CoCo I? What are the pin assignments for the CoCo 2? Where can I find books with specs on the 7400 series of IC logic chips?

Steve Roy
Cincinnati, OH
The book you have is probably the old, green "Technical Reference Manual" for the ancient CoCo 1 'D' board. What you are calling the "parallel port" is more accurately termed the CoCo's "system bus." As it happens, the pin assignments for that system bus are exactly the same on all models of CoCo , with the one exception: Those two pins you mentioned (the + and - 12 -volt pins) are, on the CoCo 2 and 3 , not connected to anything. Other than that, all pin assignments are the same.

Actually, much of the CoCo's circuitry has remained fundamentally the same through all revisions of the machine. But to get an accurate reference
for your particular model CoCo, you should order the service manual for that particular model. The price will be around $\$ 12$. These service manuals tend to be extremely well-written and very educational.

As for the 74 series of logic chips, National Semiconductor, Motorola and Texas Instruments all publish extensive reference books on these items. Call your local representative for any of these companies and find out how to order one. They might give you one free. These books are often on sale at technical book stores, too.

## Disk Access Problem

A friend complained to me of a Color Computer that shows garbage on the screen on the right-hand side during disk access. It appears to work well otherwise. Have you any idea how to cure this?

Dave Archer
(DAVEARCHER)
In a Technical Bulletin to its repair technicians, dated May 23, 1985, Tandy discusses this problem. They say it can be cured by soldering $10 \mathrm{~K}-\mathrm{ohm}$, pull-up resistors to the A0 and A1 pins on the main system bus of the CoCo. That is, solder a 10 K resistor between the pad for the A0 line of the system bus and a source of +5 volts (which can be found at Pin 9 of the connector, as well as at about a hundred other places on the board). Then do the same for the Al line. Note that to reach the A 1 line you will probably have to take off the motherboard and work on the solder side, whereas it is possible to accom-

plish the addition of the pull-up to the A0 line without removing the board.

## Seeking Schematics

I have some Disto equipment and am interested in getting the schematic diagrams for it. These have not been available in the past. Can you help me?

Dennis Skala
(DENNYSKALA)
Fairview, PA
1 am pleased to announce that CRC/ Disto has started providing schematic diagrams for their products. Currently, diagrams of their later revision RAM disk card and their later revision Super Disk Controller card are available. Regrettably, the schematic they released of the Super Disk Controller, while showing the main disk controller circuitry, still does not show the details of the ROM select circuitry. Still, the information they have released is a giant step in the right direction.

Disto also has information available on how to upgrade early model Super Controllers to make them work with the CoCo 3 (there were some problems with some of these early models) and information on how to upgrade the earliest model RAM disk card to allow it to function at 2 MHz , making it usable with OS-9 Level II on the CoCo 3. Disto will perf orm these upgrades for you for a reasonable service and shipping fee, or it will provide you with the information you need to do it yourself. Both of these sets of upgrade instructions are also posted on Delphi in the CoCo SIG Hardware Hacking topic area.

## Six-Pin DIN

Where can I get a cable to hook my new Magnavox Monitor 40 to my CoCo 3's RGB port? This monitor has a six-pin DINsocket for RG B input and also features composite video input. I can make one up myself if you tell me how.

Jason McCampbell St. Johns, MI

Your "Magnavox Monitor 40" is probably the Magnavox 8CM505 monitor, judging from your description of it. This monitor (and also the Magnavox 8CM515 and 8CM643) all have the same sort of six-pin DIN RGB input
jack. To make up a cable for it, you need 6 feet of 10 -conductor ribbon cable, to which you must crimp a 10 -conductor female dual in-line IDC connector, of the sort that mates to the CoCo 3's RGB connector. This connector is not available at Radio Shack, but can be ordered from major electronic supply houses. You also need a six-pin DIN connector, available at Radio Shack.

Then, all you do is hook pins on the Magnavox connector to pins with the identical signal function on the CoCo RGB connector:

|  | CoCo <br> 10-pin <br> RGB | Magnavox <br> six-pin <br> DIN RGB |
| :--- | :--- | :--- |
|  | 1,2 | 3 |
| ground | 1,2 | 4 |
| red | 3 | 1 |
| green | 4 | 5 |
| blue | 5 | 2 |
| H sync | 8 | 6 (center pin) |
| V sync | 9 |  |

CoCo RGB connector pins 6,7 and 10 are not used in this cable arrangement.

You are quite lucky that the Magnavox takes separate and upgoing sync for its RGB input - just the type of sync the CoCo 3 provides! Note that some other RGB monitors (like the Sony KV13IICR) require combined and down-going sync, which in turn require a sync combiner circuit in order to accept the CoCo 3's RGB signals.

## SAM Chip Assessment

In your February 1987 column, you wrote that the 74LS785 is significantly better than the old 6883 SAM chip. Is this chip pin-compatible with the older CoCos? Where can I get one? My store manager here in Canada refuses to help me acquire one.

Also, I just discovered that the $F, N$ and V keys won't work on my CoCo. My $G$ and SHIFT keys have just died, too. When I try my keyboard on my friend's Co Co, it works fine, but his fails in the same way on my CoCo. I noticed that my 6821 (U17 on my CoCo ' $F$ ' board) is running hot too. Is this the problem? Where can I get a new 6821?

Steven Stady
Colinton, Alberta
If your CoCo is working fine, there is no reason to replace the SAM chip. The 74LS785 is indeed totally pincompatible with the older 6883 chip (also known as 74LS783) and can
simply be dropped into older CoCos, where it will work just fine. If you were having problems with your old SAM, however, it is possible that this new one, which has somewhat refined internal timing, may work better. It also may run cooler and last longer.

The part number for the 74LS785 chip is MX-6433. When ordering it, say you want "a 74LS785, Part Number MX-6433, for a CoCo Catalog No. 263I34A." In the U.S., Radio Shack stores can order parts directly from National Parts. You may have to call Fort Worth and order the part yourself.

As to your second problem, U17 has nothing to do with reading the keyboard, which is governed by U18, the 6822 chip. But U17 (the 6821) should not be running hot to the touch, and so it may need replacement. Before you run around replacing chips without knowing what you are doing, I strongly urge you to get a service manual for your particular model CoCo. If you don't have a schematic and technical reference for your machine, you really should not be attempting any repairs.

The $\mathrm{F}, \mathrm{V}$, period and N keys (along with the right arrow and 6 key) are all in the same column of the keyboard scan, hooked to Wire Number 15 of the keyboard connector. The G and SHIFT keys (along with the $\mathrm{O}, \mathrm{W}$, space, 7 and slash key) are in the column hooked to keyboard Line Number 16. Thus, I suspect that either at least two lines are out on your motherboard, or your U18 6822 is on the fritz.

All CoCo parts can be ordered from Tandy National Parts. The 6821 chip is a standard chip available from dozens of electronic parts suppliers. The Tandy National Parts number for the 6821 chip in my CoCo 1 ' $F$ ' board service manual is 8040821 , and for the 6822 chip is 8040822. The ' $F$ ' board is catalog number 26-3004A.

Your technical questions are welcomed. Please address them to CoCo Consultations, the rainbow, P.O. Box 385, Prospect, KY 40059.

We reserve the right to publish only questions of general interest and to edit for brevity and clarity. Due to the large volume of mail we receive, we are unable to answer letters individually.
Questions can also be sent to Marty through the Delphi CoCo SIG. From the CoCo SIG> prompt, pick Rainbow Magazine Services, then, at the RAINBOW> prompt, type ASIK (for Ask the Experts) to arrive at the EXPERTS $>$ prompt, where you can select the "CoCo Consultations" online form which has complete instructions.

# XTEAM OS-9 

## XTERM

OS-9 Communications program.

- Menu oniented
- Upload/download. Ascii or XMODEM protocol
- Execute OS-9 cornmands
from within XTERM
- Definable macro keys
- Works with standard serial port, RS232 PAK, or PBJ 2SP Pack, lncludes all drivers. - Works with standard screen. XSCREEN, WORDPAK or DISTO 80 column board. with source $\$ 89.95$

## AND FOR RS DOS

SMALL BUSINESS ACCOUNTING
This sales-based accounting package is designed for the non-accounting oriented businessman. It also contains the flexibility for the accounting oniented user to set up a double entry joumal with an almost unlimited chart of accounts. Includes Sales Entry, transaction driven Accounts Receivable and Accounts Payable, Journal Entry, Payroll Disbursement, and Record Maintenance programs. System outputs include Balance Sheet, Income Statement, Customer and Vendor status Reports, Accounts Receivable and Payable Aging Reports, Check Register, Sales Reports, Account Status Lists, and a Journal Posting List.
$\$ 79.95$
INVENTORY CONTROL/SALES ANALVSIS
This module is designed to handle inventory control, with user defined product codes, and produce a detailed analysis of the business' sales and the sales force. One may enter/update inventory data, enter sales, run five sales analysis reports, run five inventory reports, set up product codes, enter/update salesman records, and update the SBAP inventory.
$\$ 59.95$

## PAYROLL

Designed formaintaining personnel and payroll data for up to 200 hourly and salaried employees with 8 deductions each. Calculates payroll and tax amounts, prints checks and maintains year-to-date totals which can be automatically transferred to the SBA package. Computes each pay period's totals for straight time, overtime and bonus pay and determines taxes to be withheld. Additional outputs include mailing list, listing of employces, year-todate federal and/or state tax listing, and a listing of current misc. deductions. Suited for use in all states except Oklahoma and Delaware. $\$ 59.95$

## PERSONAL BOOKEEPING 2000

Handles 45 accounts. Enters cash expenses as easily as checks. Handles 26 expense categories. Menu driven and user friendly. $\quad \$ 39.95$

## ACCOUNTS RECEIVABLE

Includes detailed audit trails and history reports for each customer, prepares invoices and monthly statements, mailing labels, aging lists, and an alphabetized customer listing. The user can define net terms for commercial accounts or finance charges for revolving accounts. This package functions as a standalone A/R system or integrates with the Small Business Accounting package.
$\$ 59.95$

## ACCOUNTS PAYABLE

Designed for the maintenance of vendor and $A / P$ invoice files. The system prints checks, voids checks, cancels checks, deletes cancelled checks, and deletes paid $\mathrm{A} / \mathrm{P}$ invoices. The user can run a Vendor List, Vendor Status repor, Vendor Aged report, and an A/P Check Register. This package can be used either as a standalone $\mathrm{A} / \mathrm{P}$ system or can be integrated with the Small Business Accounting Package.
$\$ 59.95$

# A Guide to RGB Analog Monitors for the CoCo 3 

By Marty Goodman<br>Rainbow Contributing Editor

The term "RGB monitor" refers to those color monitors that accept luminance information for red, green and blue intensities on three separate wires. All such monitors must also be given synchronization ("sync") information. This is accomplished by providing sync pulses either combined with the green luminance line, on a single separate wire (Sony), or via two separate wires.

Other things that can vary on RGB monitors are whether the luminance information is sent in analog or digital fashion, the exact details of the timing of the sync information, the voltage levels the monitor wants to see on the $\mathrm{R}, \mathrm{G}$ and B lines, and the horizontal scan rate of the monitor. I want to make it clear that there is no such thing as a standard RGB monitor.

## Analog Versus Digital

One of the major divisions among the many sorts of RGB monitors is between "analog" and "digital" (sometimes also called TTL, RGB I or RGBX) RGB monitors. The Color Computer 3 must have an analog RGB monitor in order

[^8]to resolve its full palette of 64 colors. Most inexpensive RGB monitors on the market today are digital R GB monitors, and cannot be used to display more than eight colors with the CoCo 3 , and even for that it takes a special hardware adapter (currently made and sold by J\&M Systems). The reason digital R GB monitors are so prevalent is that the two most common RGB protocols used with IBM PCs and clones are digital in nature. These are the Color Graphics Adapter standard (CGA RGB I) and Enhanced Graphics Adapter (EGA RGB). The 'I' refers to the presence of a separate intensity line in the signal protocol.

On a given line, digital RGB monitors can recognize only an "on" or "off" condition. Thus, on the CGA protocol, the $\mathrm{R}, \mathrm{G}$ and B intensity at a given point can be only either on or off. This yields capability to display a total of eight different colors. By adding an I line that can exist in either of two states (on or off) the IBM CGA standard is able to double this and display a total of 16 different colors. The IBM EGA standard adds an extra $R, G$ and $B$ line and so allows for 8 by 8 or 64 possible color combinations. IBM EGA standard also involves a faster horizontal scan rate, allowing for greater vertical resolution.

Analog RGB monitors do not need or use intensity lines. Instead, intensity information is conveyed by the exact voltage on each of the red, green and blue lines. This voltage may vary continuously, and, in theory, an RGB analog monitor can express 16 million
or more different colors. In practice, the number of different colors an RGB A monitor can resolve will be limited by how finely the computer driving it is capable of varying the $R, G$ and $B$ signal levels. In the Color Computer 3, the GIME chip reserves a total of two bits per luminance line for specifying voltage and thus can set the $R, G$ and $B$ lines to one of four different voltage levels, allowing for 4 by 4 by 4 or 64 different total colors in its palette. By comparison, the Atari 520 and 1040 ST systems allow for three bits of voltage level data on each of the luminance lines. They can set the $R, G$ and $B$ lines to any one of eight voltage levels and so can resolve a total of 512 different colors in the palette. The Amiga, allowing four bits per luminance line, has provisions for any of 16 different voltage levels on its $R, G$ and $B$ lines, resulting in a total of 4,096 colors in its palette. The IBM "PGA" standard (a seldom-used analog R GB protocol used on some IBM systems) also can resolve a total of 4,096 colors.

Analog RGB protocol is used for professional video signal transmission. This is because its analog nature allows expression of the full range of possible colors. Its separate transmission of RGB and sync information allows for much greater image resolution than does the "mushy"composite color video protocol commonly used on most home video equipment. In composite color video, all of the color and sync information is mashed into a single wire. The result is reduced signal quality.

Screen Star

Screen Star Implements the popular WordStar editing capabilities. Screen star uses the disk as an extension of memory so it will edit files larger than memory. Move, copy, or delete blocks of text with one keystroke. Powerful cursor commands allow fast andeasy movement throughout the document. The find/replace command makes masschanges and searches a snap. Set Tabs, toggle the video, access the OS-9 Shell and choose wordwrap. Define up to 10 function keys for fast, repetitive functions. Imbed Compuferwares Text Formatter commands in your Screen Star file for maximum word processing capabilities.

Unlike most spelling checkers that require a huge dictionary file, Smart Speller uses a small dictionary which contains the most common English misspellings and their correct spellings. it also recognizes any abbreviations you commonly use and replaces them with their full spelling automatically Versions for Level 1 \& Level 2 OS-9 are included in the Screen Star package. The most powerful editing product ever available on the Color Computer.
Requires OS-9
With Text Formatter

$\$ 49.95$
$\$ 74.95$

## OS-9 Text Formatter

OS-9 Text Formatter interfaces with any editor that produces standard ASClil text files including Computerware's Screen Star: and Radio Shack's TS Edit. Supports:

- Right \& Left Justification
- Automatic Pagination
- Headers and Footers
- Macros, Tabs, Etc.
* Page numbering \& Auto Date Insert
- Send ESC \& CTL codes to printer

Why just print it when you can FORMAT it with OS-9 Text Formatter.
Requires OS-9
$\$ 34.95$

## New Color Max 3

Now $320 \times 200$ screen resolution, and a choice of 16 of the 64 colors are available onyour CoCo 3 . Painting is a snop with it's easy to use icons, pull down menus, and dialog boxes. Color Max 3 has 11 fonts making hundreds of lettering styles possible. Any combinations of color, shadow, outiline, bold and italics are available for text.

Requires $\mathbf{1 2 8 K}$, disk, hi-res joystick interface
(Specify printer type when ordering)

## Monitors

$12^{\prime \prime}$ NAP amber monochrome monitors $\$ 114.95$ Shipping $\$ 5.00$
Universal Video Plus Summer Special \$29.95
Video interface for the CoCo 1 or 2

Terminal Soffware

Color Connection for RSDOS, and OS-9 Connection are the best in communication software. All of the standard protocols are supported, including CompuServe Protocol B, XMODEM, and XON/XOFF. The auto dial feature for Hayes compatible and some Radio Shack modems is supported. Macros allow easy entry to often-used passwords and ID's. Communicate with confidence with either Color Connection, or OS-9 Connection 3.0.
OS-9 version requires $\mathrm{R} \$ 232$ pak
$\$ 49.95$
RSDOS versions for COCO $2 \& \mathrm{CoCo} 3$ inc.
$\$ 49.95$

## Mitsuba 1200 Baud Modem

SPECIAL \$145.00

$100 \%$ Hayes compatible, full or half duplex, speaker alert to busy signal, touch tone or pulse dialing.

## Complete 512K package for \$96.50

Price limited to quantity on hand.

512K Memory Board that is easy to install
$\{20$ ns Ramships included for fast, reliable use.
Ramdisk Software that creates two additional drives that can be configured as $0 \& 1$ or $2 \& 3$.
Memory Diagnostics for 512 K that tests three ways convergence, rotating bit \& latency
GIME Chip technical specifications
This is the lowest price you'll find anywhere Read the others' fine print and compare!!!

## Monochrome as an Option

Note that it is the mashing of all the color information into a single wire that causes the degradation of signal quality. Composite monochrome signals are usually of quite fine resolution. Color picture tubes of fine-resolution phosphor are difficult and expensive to produce. This is due to the need to lay down extremely tiny dots or stripes of red, green and blue phosphor, fabricate and precisely position inside the tube a "shadow mask" to allow the electron beam to individually light up each cluster of red, green and blue phosphors. In a monochrome monitor, a single phosphor is "smeared" continuously across the surface of the tube, and there is no need for a shadow mask. All of this makes a color monitor with resolution equivalent to a monochrome monitor cost six to 10 times as much.

If all you want is to resolve 80-column text, then perhaps you don't need an RGB monitor at all, but rather a composite monochrome monitor. Tandy sells one such (the VM-4), and so do Computerware, Howard Medical and other RAINBOW advertisers. Tandy's VM-4 is perfectly compatible with the CoCo 3 and will sharply resolve 80column text. Indeed, the 80 -column text you get with the \$115 VM-4 is somewhat sharper than that which you would get using a $\$ 600$ NEC Multisync RGB monitor.

What Monitors Work With a CoCo 3?
When looking for an RGB monitor for the CoCo 3, you need to get an analog RGB monitor. Most monitors advertised as "digital," "TTL," "IBMcompatible," or "RGB I" will not work with a CoCo 3. However, a few monitors have been designed to provide a variety of different inputs, including RGB I, RGB A and, in some cases, composite video. These monitors are most desirable to CoCo 3 owners. Such monitors will work fine with an IBM PC or Tandy 1000 or similar clone, and will work fine with a CoCo 3. Monitors that also have a composite video input will allow CoCo 3 owners to view the vast number of CoCo games and educational software written over the last five years using "artifact colors." Any attempt to display such "artifact colors" on an RGB A-only monitor will result in the screen appearing in black and white.

## Shopping for an RGB A Monitor for Your CoCo 3

As I have noted in some "CoCo

Consultation" columns, there are many factors that make up a good RGB monitor. Some are product specifications and others are seldom measured or listed. But the bottom line is that no combination of product specs will tell you exactly which RGB A monitor is better than another. You must look at the image made by the CoCo 3 on all monitors and compare. This is difficult
> "If all you want is to resolve 80-column text, then perhaps you don't need an RGB monitor at all, but rather a composite monochrome monitor."
because the different RGB A monitors are never sold in the same stores and often are hard to find, or they are available only by mail order. It is even more difficult because for each different monitor, a special RGB A cable usually has to be made up. Over the last three months, I have viewed the CoCo 3's output on six different RGBA monitors.

Probably the most relevant of the commonly listed specifications for RGB monitors is the "stripe width" (or, for those monitors whose phosphor is laid down as dots, the "dot diameter" or "dot pitch"). Ed Ellers, Rainbow Consulting Editor, tells me that .50 mm stripe width is often considered, by rule of thumb, the absolute minimum needed for proper resolution of 80column text. The monitors I discuss below feature stripe widths ranging from .65 mm to .25 mm . Note that unless we are talking about monitors that all have the same size tube, the stripe-width figures have to be "normalized" to the tube size in order to provide a meaningful comparison of the resolution of the system. That is, a 26 -inch diagonal monitor with a stripe width of .74 will be able to resolve exactly the same sharpness of image as a 13 -inch diagonal monitor with a stripe width of .37 mm . Obviously, the issue here is the total number of stripes per horizontal
line. The monitors we compare are all in the 12- to 14 -inch diagonal measure range. I judge this range to be sufficiently narrow, so I will not attempt to "normalize" the stripe widths to tube size.

## Tandy CM-8

This is the monitor Radio Shack specifically designed to work with the Color Computer 3. It has a phosphor rated at .52 mm stripe width and provisions for only CoCo 3 type analog inputs. The diagonal tube measure is 13 inches. It will not work with any other type of computer, nor will it work with a VCR. It cannot display artifact colors because it lacks a composite video input. The resolution of 80 -column text is adequate, but not strikingly crisp. Its screen image is somewhat dimmer than that of the other RGB monitors discussed in this group. In addition, many owners have complained that the cable provided is a tad short. On the positive side, it is (at the $\$ 250$ mail order price) by far the least expensive RGB A monitor available that will work with the CoCo 3. Should it develop problems, it can be serviced via any Radio Shack store. Spectrum Projects sells an RGB video extender cable that can add about 6 feet to the length of the CM-8's (or any other CoCo RGB monitor's) cable, without substantial loss of signal quality. The CM-8 is by far the easiest CoCo 3 RGB A monitor to find. Because of its availability and low price, the CM8 from Tandy is likely to be the most popular CoCo 3 RGB monitor.

## The Magnavox "Professional" 8CM515 Monitor

This was the first CoCo 3 RGB A monitor I owned, and it is the one currently used by Steve Bjork, Richard Esposito ("Doctor ASCII") and Paul Searby (founder of Computerware). It has a rated stripe width of .42 mm and a tube measure of 13 inches diagonally. It features provisions for RGB I, RGB X, RGB A and composite video inputs and boasts a frosted anti-glare screen. It also has audio inputs and a s witchable comb filter. It will work with IBM PCs (CGA RGB I protocol), CoCo 3s (RGB A), CoCo 2 s and VCRs (composite color video) and can resolve artifact colors on the CoCo 3. You can switch between RGB A and composite video inputs via a convenient push button on the front panel of this monitor. It resolves 80 -column text a bit more sharply than does the CM-8 from

## DIGISECTOR DS-69B GIMIITIZER FOR THE COCO 3

COCO 3 SCREEN

USE YOUR COCO 3 TO ITS FULL POTENTIAL! Use The Micro Works' DIGISECTOR™ DS-69 or DS-69B and your COCO 3's high resolution graphics to capture and display television pictures from your VCR or video camera. The DIGISECTOR ${ }^{\text {™ }}$ systems are the only COCO video digitizers available that accurately capture and reproduce the subtle shades of gray in TV pictures!

- COLOR: Add color to your screen for dramatic special effects.
- HIGH RESOLUTION: 256 by 256 spatial resolution.
- PRECISION: 64 levels of grey scale.
- SPEED! 8 images per second on DS-69B,

2 images per second DS-69.

- COMPACTNESS: Self contained in a plug-in Rompack.
EASY TO USE: Software on disk will get you up and running fast!
- COMPATIBLE: Use with a black and white or color camera, a VCR or tuner.
- INEXPENSIVE: Our low price puts this within everyone's reach.

## POWERFUL C-SEE 3.3 SOFTWARE

This menu-driven software will provide 5 and 16 shades of gray to the screen and to the printer with simple joystick control of brightness and contrast. Pictures taken by the DIGISECTOR ${ }^{\text {™ }}$ may be
saved on disk by C-SEE 3.3
and then edited by our

optional MAGIGRAPH, or by COCO MAX or GRAPHICOM. This versatile new software is included in both DIGISECTORS ${ }^{\text {M }}$

## DS-69B and C-SEE 3.3

$\$ 149.95$

## The Complete Rainbow Guide to OS-9

Authors Dale Puckett and Peter Dibble show how to take advantage of OS-9's multitasking and multiuser features. An easy-to-read, step-by-step guide packed with hints, tips, tutorials and free software in the form of program listings.
Book \$19.95, Disk Package \$31 (2 disks, book not included)

## The Complete Rainbow Guide to OS-9 Level II Vol. I: A Beginners Guide to Windows

Puckett and Dibble have done it again! They uncover the mysteries of the new windowing environment and demonstrate clever new applications. More hints, tips and plenty of program listings. Book \$19.95, Disk \$19.95

## The Rainbow Introductory Guide to Statistics

Dr. Michael Plog and Dr. Norman Stenzel give a solid introduction to the realm of statistical processes and thinking for both the beginner and the professional. (80-column printer required.) Book $\$ 6.95$, Tape or Disk $\$ 5.95$, Package $\$ 11.95$

## The First Rainbow Book of Adventures

Contains 14 winning programs from our first Adventure contest. Includes Sir Randolph of the Moors, Horror House, One Room, Dr. Avaloe and more. Plus hints, tips on solving Adventures.
Book $\$ 3.50$, Tape $\$ 3.50$

## The Second Rainbow Book of Adventures

Featuring 24 of the most challenging Adventure games ever compiled. Meet the Beatles and battle the Blue Meanles, find a hidden fortune, or win the heart of a mysterious princess. Ring Quest, Secret Agent Man, Dark Castle, Curse of Karos and more! Book \$13.95, Tape \$13.95

## The Third Rainbow Book of Adventures

The excitement continues with 19 new Adventures. Discover backstage intrigue at the London Theatre, attempt a daring space rescue, or defeat evil in the year 2091 as a genetic android. Evil Crypt, Spymaster, Time Machine, The Amulet, and that's only the beginning! Book $\$ 11.95$, Tape $\$ 9.95$, Two-Disk Set $\$ 14.95$

## The Rainbow Book of Simulations

20 award-winning entries from THE RAINBOW's first Simulations contest. You are a Civil War Commander, an air traffic controller, a civil defense coordinator, or a scientist on Mars . . . your wits are on the line.
Book $\$ 9.95$, Tape $\$ 9.95$

## The Second Rainbow Book of Simulations

The 16 winners from our second Simulations contest. Fly through dense African jungle, bull your way down Wall Street, lead a bomb squad, or try your hand at Olympic events. Test your skills and talents. Book $\$ 9.95$, Tape $\$ 9.95$, Disk $\$ 10.95$

Tandy, and its screen image is somewhat brighter, as well. Its styling is compatible with the rest of the Color Computer system. The specific type of RGBA protocol that Magnavox uses is exactly the same as that of the Color Computer 3. Both use separate and upgoing H and V sync lines. Making a cable to hook the CoCo 3 to the Magnavox is easy. Merely obtain the appropriate $10-$ pin CoCo RGB A type connector and 6-pin DIN connector used on the M agnavox (the same as that used on the newer Tandy two-button joysticks) and, referring to the user manuals for the CoCo 3 and the Magnavox, merely hook $R$ to $R, G$ to $G, B$ to $B, H$ sync to $H$ sync, $V$ sync to $V$ sync, and ground to ground. Sound is supplied via a separate phono connector that can hook to the CoCo 3's separate audio output.
As you can probably tell, I am impressed with the Magnavox 8CM515 monitor. But it does have some flaws. Its handling of composite video input is less than excellent. When used in composite video mode, some 8CM5I5s occasionally fail to pick up the color burst signal from the CoCo , resulting in a black and white image. A few of the

Magnavox 8CM515 monitors I've tested have trouble accepting the vertical sync pulse from the CoCo 3, although in some cases, analysis indicated that the CoCo 3 in question had a marginal 74LS04 buffer chip, which needed to be replaced. Finally, while the video is a bit sharper than that of the Tandy CM-8, there still is some appreciable blurriness in the 80 -column display. Not a whole lot, but some.
The Magnavox 8CM515 is approximately $\$ 100$ more than a Tandy CM-8. It is currently being offered by Spectrum Projects and Howard Medical [See review on Page 140]. Both of these are RAINBOW advertisers. Spectrum Projects and SpectroSystems (of ADOS fame) also sell, separately, cables that can be used to hook the CoCo 3 to the Magnavox series of monitors. As I designed and, in most cases built, those cables, it would not be fair for me to review them. For the average CoCo 3 owner, when all is said and done, a Magnavox 8CM 515 will end up costing about $\$ 330$ to $\$ 350$. In my opinion, the added cost is well worth the added quality and capability it yields, but the individual user and his pocketbook will have to be the final judge.

## The Sony K V-1311CR

This has virtually all of the features of the Magnavox monitor (except for support for Apple's R GB X protocol), but features a somewhat brighter and sharper phosphor ( .37 mm stripe width). It also is a full-function, infrared remote control, 13-inch diagonal measure television! It has somewhat better quality circuitry for its color composite video input than does the Magnavox 8CM515.
This is the monitor that Bob Rosen, of Spectrum Projects, and I currently use on our CoCo 3s. When used with 80 -column text, the image is very sharp with only a trace of fuzziness to the letters. When used to display CoCo 3 graphics, the images are extremely sharp and the colors quite vibrant. When used as a color TV, it produces a stunningly sharp picture, so much so that quite a few of my friends have, without prompting, remarked on its fine picture quality. There is one quirky trick to using the audio input on the Sony K V-I311CR: To use the separate phono jack audio input with the analog RGB input, you must simultaneously push down both the RGB and "Video" (composite color video) selector but-

## Clearbrook Software Croup

Information Management System

CSG IMS is THE fuil featured relational database manager for the Color Computer and OS9. The comprehensive structured application language makes CSG IMS the ideal developement tool for file-intensive applications. Sophisticated applications can be developed in a small fraction of the time required for traditional languages.

- Interactive access to databases and quick ad hoc queries.
- CSG IMS includes a recursive compiled language supporting program modules with full parameter passing.
- User defined screen and report formats

Sumas, WA 98295
OS9 is a trademark of Microware Systems Corp.
tons on the front panel so that they both lock in the ON position. Only then will you get RGB A video input and be able to pipe in sound through the RCA audio input jack on the side of the monitor.

Howard Medical Computers now offers the K V-131ICR for $\$ 449$ (plus $\$ 15 \mathrm{~S} / \mathrm{H}$ ) and has the necessary cable for $\$ 36$. Spectrum Projects also carries the cable to hook up a CoCo 3 (\$40). The cables are complex and, therefore, expensive. Overall, I am very pleased with my Sony K V-I311CR.

Note: In a "CoCo Consultations" column I incorrectly stated that the Sony K V-131ICR had been discontinued. This was my mistake.

## Hackers Note Regarding the Sony KV-1311CR

The Sony KV-1311CR uses a rather odd 34-pin RGB A connector, and its provisions for RGB A input are for a slightly different protocol than that used by the CoCo 3. The Sony wants to see a combined and down-going sync signal, whereas the CoCo produces separate and up-going sync signals. In order to hook it to the $\mathrm{CoCo3}$, you have to combine and then invert the sync lines from the CoCo 3. A single NOR gate on a 74ALS02 chip does this quite nicely. A second problem faced by would-be cable makers for the Sony KV-1311CR is that you need a source of +5 volts to power the 74 ALS 02 chip. The Sony does not supply this, and it is not present on the CoCo 3 RGB A connector either. Using a "sneaky trick" in commercial Sony RGB A to CoCo 3 cables that I designed for Spectrum Projects, I "stole" a source of +5 volts from one of the joystick connectors on the CoCo 3. Although note, on my own Sony, I opened the monitor and brought a source of +5 volts out to two of the unused pins on its 34 -pin connector (pins 1 and 2). This enabled me to make a cable that did not have to take up one of the joystick ports. Regulated +5 volts is available on either Pin 14 of the 14 -pin IC or Pin 16 of the 16 -pin IC that is near the 34 -pin R GB A connector on the vertical PC board inside the Sony.

## Magnavox 8CM505

Despite the similarity of its model number to the Magnavox "Professional" 8CM5I5, the Magnavox 8 CM505 is a less desirable beast. Its stripe width is only .65 mm and cannot adequately resolve 80 -column text. It is a possible choice for those who want to use the CoCo 3 for dedicated color
graphics systems, for it will quite adequately resolve 320-by-200 pixel resolution graphics. Like the 8CM515, it feat ures RGB A, RGB I and composite video inputs. In my area, Toys $R$ Us sells this monitor for $\$ 200$ plus tax. It can be hooked to the CoCo with the same cable used for the Magnavox 8CM515.

## Magnavox 8CM643

If you run across a Magnavox 8CM643 monitor at a reasonable price, it might be a good choice for the CoCo 3. It is very similar to the 8 CM 515 except that it has a somewhat better quality picture tube that boasts a stripe width of .39 mm (compared to the .42 mm stripe width of the 8CM515).

## NEC MultiSync

This monitor costs approximately $\$ 580$ and is primarily of interest to IBM PC users who want support for highquality EGA and PGA video screens. It is a very popular ultra-high-quality IBM video monitor, so RAINBOW readers encountering it may want to put it to use on their CoCo 3s. The NEC MultiSync boasts a dot width of .31 mm . A 14 -inch diagonal screen accepts analog RGB input. It also accepts IBM CGA, IBM EGA and IBM PGA inputs, although it does not have provisions for composite video input. Making a cable for it is easy. It uses standard DB 9 connectors and calls for the same upgoing and separate sync arrangement as that used by the CoCo 3 in analog RGB mode. Its image is superbly crisp and sharp. Spectrum Projects sells CoCo 3 to NEC MultiSync cables, designed and manufactured by yours truly.

## Sony CDP-1302 (Multiscan)

This is the finest quality monitor you can buy for under $\$ 1,000$. Retailing for $\$ 800$, it boasts a stripe width of 25 mm , and its "multiscan" feature, like that of the NEC MultiSync, allows it to be used with the high resolution IBM EGA and PGA protocols as well as with the lower resolution IBM CGA and CoCo 3 R GB A type of video signals. Unfortunately, it lacks composite video inputs, so it cannot be used with the CoCo 2 or 3 to display artifact colors. As is the case with the NEC MultiSync, this monitor represents "overkill" when used with a CoCo 3. Unlike the NEC MultiSync, construction of a proper cable to hook it to the CoCo 3 is a little tricky, for the same reasons that hooking the Sony KV-1311CR to the CoCo 3 is tricky: its preference for combined and down-going sync pulses.

## Teknika MJ305

This monitor offers support for both R GB A (CoCo 3 compatible) and R GB I (IBM CGA compatible) video signals. I saw it used with a CoCo 3 in a booth at Color Expo '87. It has a rated stripe width of .41 mm and a diagonal measure of 14 inches. Its image has about the same quality as the Magnavox Professional 8CM515. Unfortunately, it costs a bit more than the Magnavox 8CM515 and does not have provisions for composite video input. Therefore, unless you get a good deal on it, I cannot recommend it.

## Sony CDP-1310

This 13 -inch diagonal measure, .37 mm stripe width monitor offers the same fine display in Analog RGB video mode as does the Sony K V-1311CR. However, although it supports RGB I for the IBM CGA, it does not have provisions for composite video input. Thus, it lacks flexibility. Like the KV1311 CR , it is a little tricky to interface to the CoCo 3. Unlike the KV-1311CR, it uses a rectangular 8-pin RGB video connector.

## Sony CDP-9000 and CDP-1201

These monitors are, respectively, 9 and 12 inches in diagonal screen measure. Both boast a super fine stripe pitch of .25 mm , making them possessors of the finest resolution phosphors among these monitors discussed. Note that the CDP-9000, with only a 9 -inch diagonal measure tube, offers roughly the same resolution as the KV - 1311 CR with its 13 -inch tube and .37 mm stripe width phosphor.

Both of these support only RGB A and CGA R GB I type inputs and do not provide for composite video. Like the CDP-1310, they use an 8 -pin RGB connector and require combining and inverting of the CoCo 3's sync lines in order to work.

I've seen the CDP-9000 selling for as little as $\$ 250$. At that price, if you are a hacker capable of making up a proper cable for it, it represents a better value than the CM-8 from Tandy, with a smaller screen size, of course.

The CDP-1201 is rather overpriced (\$500) and under-featured (it lacks MultiSync capability), so unless you already own one or can get a real deal on one, I would not recommend it.

## Sony KX-1211HG ("Profeel") Monitor

This is a 12 -inch diagonal RGB monitor with similar properties to that of the $\mathrm{KV}-1311 \mathrm{CR}$. It is an older unit and offers a slightly less fine stripe width on
its phosphor. It still produces a good quality image. It has all the flexibility of input as the KV-1311CR (RGB I, RGB A, and composite video). It also features a more complex implementation of the Sony 34-pin RGB A "standard" connector, which includes support for stereo audio and, of greater interest to CoCo 3 owners, supplies regulated +5 volts on pins 1 and 2 of that connector. Thus, it is possible to make a "cleaner" RGB A CoCo 3 cable for an unmodified KX-1211HG. I've made two such cables for friends with this model of TV/ monitor, and both are quite pleased with the images that resulted.

Sony KV-20XBR, KV-25XBR, KV2011CR, KV-2511CR
These are 20 - and 25 -inch diagonal RGB monitors/TV sets. The 20 -inch models offer .37 mm stripe width, and the 25 -inch models offer .55 mm stripe width (the latter combination should be equivalent to a 13 -inch monitor with a .29 mm stripe width). I have not interfaced any to a CoCo 3, but suspect the process would be similar to that of hooking a K V-1311CR to it.

## Miscellaneous Monitors

Beware of the Magnavox 8CM562
monitor! This monitor does not support RGB A and is of no use to CoCo 3 owners. Thomson is putting out a line of RGB monitors, but my preliminary assessment of that line is that it is overpriced and under-featured. Some don't have RGB A input and, of those that do, some lack composite video input. Their stripe widths are not that impressive. The Atari ST RGB Color monitor would seem to be a possibility for use with the CoCo 3. Superficially, all of its relevant video signals match those of the CoCo 3's output. But Atari slipped a joker into the deck by implementing an odd variant of sync timing. If you try to put up a CoCo 3 image on an Atari RGB monitor, the picture is shifted up and to the right to an extent that it cannot be compensated for with the external horizontal and vertical position adjustments. A video hacker could probably fix this. The Amiga model 1080 monitor might be usable with the CoCo 3, but, in RGB analog mode, it wants a combined down-going horizontal and vertical sync. I'd be interested to know if readers have gotten the Amiga monitor to work on a CoCo 3. The approach should not be more tricky than that which I used with the Sony K V-1311CR, unless the Amiga
design has surprises similar to those in the Atari.

## Conclusions and Recommendations

The information here will better enable you to make the best possible choice of RGB A monitor for your CoCo 3. Hopefully, if you encounter a monitor other than those described here, this article will have armed you with the knowledge needed to assess whether it is likely to work with a CoCo 3 and how good a value it represents.
There are three monitors I particularly recommend. The CM-8 from Tandy, though lacking in flexibility and image quality, represents the least expensive and most accessible CoCo 3 monitor. It's the easiest to have repaired.
The Magnavox 8CM515 represents the best compromise monitor I know of. Although priced a hundred dollars higher than the CM-8 from Tandy, it offers better quality and much greater flexibility of video input modes.

For those who want a little better quality, or who want the option of using their monitor as a TV at times, and who can afford to spend a nother $\$ 50$ to $\$ 100$, the Sony KV-1311CR would be the best bet.

## ANNOUNCING... the Development of a Major Breakthrough in HARD DRIVE SYSTEMS for the COLOR COMPUTER!!!

Several months ago OWL-WARE introduced the Finest OS9 Hard Drive System for the Color Computer Now we are about to introduce the only RSDOS Interface System worthy of our computer, OWL-WARE Winchester Basic. For the first time you have available a true Winchester System, although there are 10 directories made available to BASIC, the only limit to size of any file is the size of your drive. On a 10 meg drive you could have a 8 meg file on directory 5 and a 1 meg file on directory 8 and small files everywhere. You turn the computer on and you can immediately access your drive from BASIC or any language using commands you already know. You do not have to know or use OS9 to use OWL-WARE WINCHESTER BASIC, but if you do, all files saved from RSDOS are available to OS9. All files generated from OS9 can be made available to RSDOS by copying to the WINCHESTER BASIC directories. There are no partitions to wall you into, only one operating system, but nothing forces you to use an operating system you don't like.

Call for further details and availability on this breakthrough product!!!

## scoreboand pointers

In conjunction with THE RAINBOW's Scoreboard, which appears bimonthly, we offer this column of pointers for our game-playing readers' benefit. If you have some interesting hints, tips or responses to questions, or want help yourself, we encourage you to write to the Scoreboard, c/o the rainbow.

## FEEDBACK

In response to letters from:

- Travis Stromer: In Raaku-Tu, go to the gargoyle's room, light the candle and leave. Go to a room or two and wait for
a while, then go back to the gargoyle's room and extinguish the candle.
- Jason Thomas Wysokowski: To open the safe in Vortex Factor, go back in time to the old museum and go to the room
with the desk. Open the desk and read the document inside.

Tony Warchules
Nanticoke, PA

- Jason Jones: In Bedlam, you cannot
open the cabinet. You must get the key in the hole with the window hook in order to open the red doors.
- Frank Morrison: In Pyramid 2000, you must drop the scepter and get the bird. You must have the box, though. When you get to the pharaoh's room, type THRDW BIRD.
- Bill Hoban: In Shenanigans, you must find the woman in the clover field and type PUSH WDMAN in order to obtain the shamrock to kill the snake.
In Sands of Egypt, I can't find the scepter everyone is referring to in order to drain the pool, and I can't keep the rope from crumbling to dust. Is this rope useful?
In Shenanigans, I can't get the $12-$ foot pole into the cave.

David Davidson Chicago Heights, IL

- David Harris: When in the casino in the Interbank Incident, take about $\$ 650$ with you, go to the room with the roulette wheel and give the money to the roulette wheel.

When you get the "special dice" at the farmer's market, how do you use them?

Matt Smith
Fredericksburg, VA

## Mummy Dearest

## Scoreboard:

To get the bird statue in Pyramid 2000, you must be holding one specific item and not holding another. To get the Pharaoh's Treasure Chest after the mummy has stolen your treasure, go to the room where it says, "The west end of the hall of the gods." From here, go south to enter the maze.

To make it safely back to the jungle in Raaku-Tu, wait a little before you go up the hole.

When running Cave Walker on a CoCo 2 system, the CLEAR key works as a CONTROL key. Also, be sure to pick up seven locks before you try to get the first part of the key.

Brent Dingle Norwalk, IA

## Pin Problems

## Scoreboard:

Could anyone tell me the actual situation and position necessary to pin someone in Wrestle Maniac? Also, is there any way to consistently hit 3-pointers in One On One?

Jeff Stewart
Charleston, IL

## Pyramid Progression

## Scoreboard:

In Pyramid 2000, after you have climbed the plant and collected the key and egg, what is next? What does the scepter have to do with the game?

Bo Van Cleave
Eugene, OR

## Paint Me Crazy

Scoreboard:
In Bedlam, when I try to open the painted door, it says, "Are you crazy?" Also, I can't find the kennel.

Rusty Merritt
Pocomoke, MD

## Unnecessary Quest

## Scoreboard:

Does anybody have some tips on how to cut out some unnecessary moves in Dallas Quest?

Meagan Pufahl
Windsor, Ontario

## 'T'For Try

## Scoreboard:

In Sands of Egypt, I can't find the torch and in Raaku-Tu, when I get the ring, I go back to the ' $T$ '-shaped room and try to go to the gargoyle, but I go back to the statue and get killed.

Jaan Laansoo
Barrie, Ontario

## Tricky Thickets

## Scoreboard:

What can I do to find the pyramid in Infidel, and how do you get around the thickets?

## Sean McDonough <br> Hillsboro, OH

## Closed Cabinet

## Scoreboard:

In Bedlam, you cannot open the cabinet in the dispensary. To get the red key out of the cabinet, go to the maintenance room and get the window hook, then go back to the dispensary and get the red key with the hook.
How do you get past the dog in Bedlam?

Rick A. Moore
Greensburg, IN
Stay Still Statue

## Scoreboard:

I haven't found a way to get out of my cell in Bedlam. In Sands of Egypt, how can I get water?

In Pyramid 2000, I opened a panel but nothing happened. I tried what Danny Flores suggested, but I could not go up the stairs and didn't know what to do after I got to the bottomless pit. When in the pharaoh's room, I can't get past the serpent. I tried to get the statue, but it just moves away.

Brien Lougue
Paulina, LA

## Shovel Shuffe

## Scoreboard:

How do you get the small shovel in Dallas Quest?

Troy Phelps
Baraboo, WI

## Dying With Nothing

## Scoreboard:

In Sands of Egypt, I keep dying without finding anything.

Scott Melton
Seminole, OK

## Secrets of the Inner Chamber

## Scoreboard:

Some hints for Sands of Egypt: You have to have the canteen to drink water. The water is from the pool. You must dig to find the canteen. The snake oil is useful at the pyramid.

After translating the hieroglyphics, you place the object mentioned somewhere in the inner chamber. You only have to ride the camel once, not three times, to get to the pyramid.

I'm in the treasure room with the ladder and I'm stuck!

Anna Fiehler
Waipahu, HI

## Ax Facts

Scoreboard:
In Sands of Egypt, do I need an ax? If so, where can I find it?

In Dallas Quest, how do I get down into the tunnel with my inventory or items?

## Jeff Hurteau

Troy, NY

## Sea the Seahorse

Scoreboard:
In Dallas Quest: Don't accept JR's offer. Give the sunglasses to the owl. Never carry more than one object when going down the ladder.

In Wishbringer: The way to the Magick Shop is across the bridge. Don't let

## 

the seahorse die; put it back in the sea. He could save you later.

Luis Blando
Mendoza, Argentina

## Can't Pass Cannibals

## Scoreboard:

In Dallas Quest, I can't get past the cannibals by the cave

Domenick Doran
Coram, NY

## Beach House Bafflement

Scoreboard:
In Shenanigans, I found the girl in the clover field, but I can't get back.

In Black Sanctum, to build an altar, be sure to pull the nails and get the boards from the room near the bookcase. When in the room with the casket, type OPEN CDFFIN. When someone callsyour name, be sure to listen.

In Calixto Island, go up the hill and take the rug with you to trade with Trader Jack for a machete.

In Sea Quest, make sure you dig inside the cave after you move the boulder. To get to the beach house, type GO FALLS and follow the directions. Where is the key to open the door in the beach house. Russ Maede Fairbury, IL

Combo, Combo, Who Knows the Combo?

## Scoreboard:

I am stumped by the safe in Vortex Factor. What is the combination? When you use the right combination, how do you open the safe?

Scotl Garling
Norman, OK

## Battery Operated

Scoreboard:
Does anyone know if the food serves any purpose in Raaku-Tu?

In Sands of Egypt, where are the dates to feed to the camel?

In Pyramid, I can get the batteries but I can't figure out how to put them into the lamp.

Neil Johnson
Walnut Creek, CA

## Galaxy Guidelines

## Scoreboard:

Some hints for Hitchhiker's Guide to the Galaxy: First, keep all the objects that you see. Typing VERBOS causes the computer to give you a full description of a room when you enter it. The Nutrimat eventually spews out your tea, but do not
drink it! Type GET TEA and GET NO TEA.
How do you inflate the Thing so that it doesn't fall through the catwalk?

In Vortex Factor, how do I get to Cairo Moon? I can't read the hieroglyphics on the ring, and I don't have any idea what to do with the Mutant.

David Hill
Alberta, Canada

## Plotter Plea

## Scoreboard:

I need help getting the plotter in Hitchhiker's Guide to the Galaxy.

Dale Kaczmarek
Oaklawn, IL

## Un-Pharaoh Advantage

Scoreboard:
I can't seen to get past the bottomless pit or the serpent in the Pharaoh's chamber in Pyramid.

Tom Gray
Tucson, $A R$

## Pointed Predicament

## Scoreboard:

How do you score points on Madness and the Minotaur?

Allen Bruce Brodhead, WI

## Same Time, Same Place

## Scoreboard:

I am having a problem solving Level 2 of Dragon Slayer. I keep getting stuck at the same place every time.

Bruce Girard
Laguna Niguel, CA

## Sure Shootin'

Scoreboard:
Some hints for Gantelet: Play the Elf. He is the only player who shoots diagonally. Try shooting targets that are far away, and be sure to master Level 7. Save your potions for the Death.

Rory Kostman
Hershey, NE

## Southern Discomfort

## Scoreboard:

At the pyramid in Sands of Egypt, oil the scepter and take it back to the pool. When at the pool, type HOOL SCEPTER, then PULL SCEPTER to drain the pool.

In Pyramid 2000, to kill the snake, throw the bird statue at it and be sure you have the scepter.

In Dallas Quest, to get the monkey to take the mask off the head hunter chief,
show the monkey the mirror or give it to him.

In Madness and the Minotaur, beware of going south, because it is the only direction that leads to the dreaded maze.

In Raaku-Tu, after you find the secret passage behind the altar, then what do you do?

In Madness and the Minotaur, where are the spells? How do you escape the maze?

Steve Moore
Ontario, CA

## Boulder-dash

## Scoreboard:

In Dragon Blade, after I throw the boulder down the corridor and go through the tunnel, I fall into a shaft because it's too dark.

Harry Keener
Knoxville, TN

## Moon Mobility

Scoreboard:
To get past Cairo Moon 2 in Vortex Factor, get the bird. Then go into the dungeon, search the skeleton and get the string. To get out, CUT BRRS using the hacksaw.

In Raaku-Tu, how do you get past the rug?

Pat Cameron
Shippewa Falls, WI

#### Abstract

THE RAINBOW is a teaching environment and we realize that the majority of our readers will always be beginners. In our continuing effort to always keep the new user in mind, and in addition to the many beginner feature articles and programs published in every issue, "Novices Niche" contains shorter BASIC program listings that entertain as well as help the new user gain expertise in all aspects of the Color Computer: graphics, music, games, utilities, education, programming, etc.

## ames

## B <br> eat he ealer <br> By Bill Bernico and George Aftamonow

The following program is a Lo-Res text screen version of the ever popular card game, blackjack. The object is to beat the dealer's hand by getting as close to 21 points as possible without going over.

After the cards are dealt, you will be given the opportunity to take additional cards. If you feel your hand is good enough, answer no to the prompt. The computer will then deal itself a hand, trying to beat yours.
You start the game with $\$ 100$ and can bet any or all of it at a time. The game ends when the money is gone.

The listing: BLAKJJACK

## HI-RES |I Screen Commander

Tired of looking at the 16 line by 32 character display on your CoCo? Wish you could see more lines and characters? Then HI-RES II is the answer, it can give you the big screen display you've always wanted. It will display 24 lines of $32,42,51,64$ and even 85 true upper and lower case characters per line without extra hardware.
HI-RES II is the most powerful screen enhancement package available for the Color Computer, yet it is the least expensive. It is completely compatible and Lransparent to Basic. Once the program is loaded. everything works the same as before, only you have a much balter display to work with. It even allows you to have mixed text and Hi-resolution graphics on the same screen or have separate text and graphics screens. It also has an adjustable automatic key repeat feature and allows you to protect up to 23 lines on the screen.
HI-RES II features over 30 special control code functions that allow you to change characters per line, protect display lines, change background color, position cursor, switch normal/reverse video, underline. double size characters, erase line/screen/to end of screen, home cursor, character highlight and much more. It works on all models of the CoCo with 16,32 or 64K and provides automatic resel control so HI-RES II won't disappear when you press resel.

Only 24.95 on Tape or $\$ 29.95$ on Disk

## "The Source"

Now you cen easily Disassemble Color Computer machine language programs directly from disk and generale beautiful, Assembler Source Code. And "The Source" has all the features and functions you are looking for in a Disassembler.

* Automatic Label generation and allows specifying FCB, FCC and FD8 areas * Disassembles programs directly from Disk or ROH.
* Output Dis ass embled ligting wilh lobels to the Printer, Screen or both.
* Generates Assembler source files diredly to disk. or s printed listing.
* Generated source files are in standard ascll format.
* Built in Hex/ASCll dumprdisplay to locate FCB, FCC ond FDB areas.
* Buill in Disk Directory and Xill file commands.'
* Menu display with single key commands for smooth, Ensy operation.
- Written in fost machine language, one of the easiest to use Disassemblers

## TEXTPRO 11

## "The Advanced Word Processing System ${ }^{-}$

- OHi-Res Displays from 28 to 255 columns by 24 lines 点 Upper/hower Case * Three Programmble Header lines that can be re-delined at anytime. - Programmabie Footer line \& Allomatic footnote Sysiem. * 10 Programmable Tab stops \& 7 Powerfull Tab function commands. - Completely Automatic Justiticstion, Centertng, Flusth lelt and right. - On screen cisplay of underime and Double siage characters.
* Change indenis, margins, line length, elc. parameters anytime in the tex * Creste and Edit fites larger than memory, up to the size of a full disk. - Essily imbed any number of tormal snd control codes.

Automstic Memory sense 16.64 K with up to 48 X of memory work space

* Fully supporls the use of 80 column hardware cards.

TEXTPRO Ill is an advanced word processing system designad for speed, flexability and extensive document processing. It is not tike most of the other word processing programs available for the Color Computer. If you are looking for a simple word processor to write letters or other short documents. then most likely you'll be belter off with one of the other simpler word processors. But, if you want a powerful word processor with extensive document formatting features to handle large documents, term papers, manuals, complex formating problems and lelter writing, then TEXTPRO III is what your looking for. TEXTPRO works in a lotally different way than most word processing programs. It uses simple 2 character abbreviations of words or phrases for commands and formating information that you imbed directly in your text. There are over 50 different formating commands you can use without ever leaving the text your working on. There ara no time comsuming, and of ten furstrating menu chases, you are in LoLal control at all times. The formatted oulpul can be displayed directiy on the screen, showing you exactly what your printed document will look like before a single word is ever prinied. This includes margins, headers, foolers, page numbers, page breaks, underlining, column formating and full justification.

The CBASIC Editor/Compiler V1.1.2
Do you want to write fast machine language programs but you don't want to spend the next few years trying to learn how ???

Well with CBASIC, you could be writing them right now! CBASIC is the only rully integrated Basic Compiler and program aditing system available for the Color Computer. It will allow you to take rull advantage of all the capabhities available in your color computer without hoving lo spand years trying to learn assembly anguage programming. CBASIC allows you to create, adit and converi programs from a language you are already familiar with Extended Disk Color Basic, Into fast efficient machine language programs easily and quickly. We added advanced features like a full blown program edilor, Hi-Res text Displays and 80 column hardware support for editing. compiling and your compiled programs. Plus we made it exceptionally easy to use, CBASIC is the friendiest and easiest compiler available for the Color Computer.
"The most complete Editor/Compiler I hove seen for the CoCo... " --The RA/NBOW', Msrch 1086
CBASIC is a powerful tool for the Beginner as well as the Advanced Basic or Machine Language programmer. You call write programs without having to worry about the Stack, DP Register, memory allocation and so on, because CBASIC will do it for you automatically. Or. CBASIC will let you control every aspect of your program, even generating machine code directly In a program easlly.

CBASIC features well over 100 compiled Basic Commands and Functions that fully support Disk Sequential and Direct access Files, Tape, Printer and Screen I/O. CBASIC supports ALL the High and Low Resolution Graphics, Sound, Play and String Operations available in Extended Color Basic, including Graphics GET, PUT, PLAY and DRAW. all with 99.98 syntax compatibility. CBASIC also supports the buili in Serial 1/0 port with separate printer \& serial $1 / 0$ baud rates. You an send and receive dala with PRINT, IMPUT and INKEY commands.
CBASIC has its own completely integrated Basic Program Editor which allows you to load, edit or creale programs for the compiler. It is a full featured editor designed specifically for writing and editing Basic programs. It has block move \& copy, program renumbering, automatic line numbers, screen editing, printer control and more.

The Edilor is s very good one snd caulobe the subjech for review sll by itse/f...

- The R AINBOH: Horch 1080

Comparing ECB's edil mode to CAASIC's lext editor is like comparing s
Wortat'ar ll ieco to s modern sedan. Both get you to your destination
but whats difference in the ride. --Hot coco, febursry wot
The documentation for CBASIC is an 8 1/2* |1 Spiral Bound book which contains approximally 120 pages of real information.

> "CBASIC's mynus/ is essy to resadgnd wrillen with s minimum of

The price of CBASIC is $\$ 149.00$. Tt is the most expensive Color Basic Compiler on the market, and well worth the investment. Compare the performance of CBASIC against any Color Basic compiler. Dollar for dollar. CBASIC gives you more than any other compiler available. Requires 64K \& Disk, not 1005 compatible.
-The price isg it carries seemed s bil sleep lor an integer compiler on first ghance, but when you sod bth, hi-res drivers, snd fwityereen editing, CBASIC

Begins to loak more like s bargsin. - -- Hol Coco february, 1080

- Complele Eotitorrcompiler Well Worlith Price"--AA/NBOW'Merch 1080

## EDT/ASM 64D

64K DISK EDITOR ASSEMBLER
EDT/ASM 64D is a Disk basedco-resident Tex LEdtor \& Assembler It has a Hi-Resolution 51. 64 or 85 column by 24 line display. so you sea your program listings easily and it supports Column cards. The disk also contains a free standing ML Dobug Monitor, to help you debug youra ssembled programs.

This is the most powerfull. easy lo use Text Editor available in any Editor/ Assembler package for the Color Computer. It even has automatic line number generation for easy entry of program material.

* Local and Global string search and/or replace.
* Full screen line editing with immediote line update.
- Eosy to use Single keystroke editling commends.
- Load \& Save standord ASCll lormatied Tape/Disk files.
- Move or Copy single \& multiple text lines.
- Create ond Edit disk files lorger than memory.
$*$ Hi-Res Text Disploy 28 to 85 columns by 24 lines.
* Supports Word-PakI II. \& R.S. and Disto 80 column display cards.

The Assembler portion of 'EDT/ASM 64D features include:

* Supports the full 6000 instruction set.
* Supports condiLional IF /THEM/ELSE assembly.
* Supporis Disk Library files (include).
* Supports standard molorola sssembler directives
* Allows mulliple values for FDB \& FCB directives.
* Generates lishings to hi-Res text gereen or printer
* Assembles direclly to disk or tape in LoADM format
* Supports up to 0 open disk files during assembly.
- Allows assembly from editor buffer, Oisk or both.

The freestanding DEBUG program provided includes:

* Examine and change the contents of memory.
- Set, Remove ond dispisy up to 10 breskpoint in memory
- Display/Change processor regisler contents.

Move a Block of memory or Fill Memory range with specified dala,
Wearch memory range for dats paltern.
Requires 32K Disk $\$ 59.95$

TEXTPRO II! is an advanced word processing system designed for speed, flexability and extensive document processing. It is not like most of the other word processing programs available for the Color Computer. If you are looking for a simple word processor to write letters or other short documents, then most likely you'll be better off with one of the other simpler word processors. But, if you want a powerful word processor with extensive document formatting features to handle large documents, term papers, manuals, complex formating problems and letter writing, then TEXTPRO III is what your looking for. TEXTPRO works in a totally different way than most word processing programs. It uses simple 2 character abbreviations of words or phrases for commands and formatting inf ormation that you imbed directly in your text. There are over 50 diffarent formating commands you can use without ever leaving the text your working on. There are no time comsuming, and often furstrating menu chases, you are in total control at all times. The formatted output can be displayed directly on the screen, showing you exactly what your printed document will look like before a single word is ever printed. This includes margins, headers, footers, page numbers, page breaks, underlining, column formating and full justification.

Requires $128 / 512 \mathrm{~K}$ \& DISK $\$ 59.95$

## EDT/ASM I\|

## 128/512K DISK EDITOR ASSEMBLER

EDT/ASM III is a Disk based co-resident Text Editor \& Assembler It is similar to our EDT/ASM E4D for the COCO $1 \& 2$ but designed to take advantage of the new features of the COCO 3 . It has 8 Display formals from 32/40/64/80 columns by 24 lines in 192 or 225 Resolution. so you can use the best display mode whether you are using an RGB or Composite monitor or even a TV for your display. Plus you can select any foreground and backbround colors or even color or monochrome display modes. It even supports 512 K by adding an automatic 2 drive Ultra Fast RAMDISK for lightning fast assembly of program source code larger than memory. The disk also contains a free standing ML Dabug Monitor, to help you debug your assembled programs. See our other Advertisement for information on some of the advanced features supported in the Editor, Assembler and Debugger.

## Requires $128 / 512 \mathrm{~K}$ \& Disk $\$ 59.95$

## 512K RAM UPGRADE

Assembled \& Tested w/120 nsec RAM Give your COCO 3 all the power it deserves with this easy to install (no soldering/plug in) 100\% Tandy compatible 512K memory upgrade. Completely assembled and tested (in a COCO-3), not like some upgrades that give you a bare board and a set of ram chips to assemble \& test yourself. (upgrade without RAM \$49.95)

## Now only \$99.95 Assembled \& Tested

## Ultra Hi-Speed 512K RAMDiSK and MEMORY Tester

RAMDISK is an ALL Machine Language program thast will give you 2 ULTRA High Speed Ram Disks in your 512K COCO 131. It does not need or require the 05-9 operating system. It works with R.S. DOS VI.O or VI. 1 and it is completely compatible with Enhanced Color Disk Basic!!! Plus it allows your 512K COCO-3 to run at double speed all the time even for floppy disk access!!! The MEMORY tester is a fast Machine Language program to test the 512K COCO-3. It performs several bil tests as well as ăn address test so you know that your 512K of memory is working perfectly.

Requires 512 K \& DISK $\$ 19.95$

## COMING SOON

Maybe even by the time you read this!!!
IEXIPROIV - Word Processor with ON Screen Underlining, italics, Bold and Double Width display. What you see is what you get.

Requires 128/5i2K \& Disk. Only \$59.95
HI RES IIl Screen Commander
Now you can have up to 54 different charmeter sizes on your COCO-3 sereon al the same time!!!

- 54 Different Character Sizes available 14 to 212 cpl .
- Bold, /la/ic or Plain character styles.
- Double Width, Double Height and Quad Width characters
- Full 96 Upper/Lower case characters.
- Continious or Individual Character Highlighting.
- Scroll Protect from 1 to 23 lines on the screen.
- Mixed Text \& Graphics in HSCREEN3 mode.
- PRINT available in all character sizes.
- Programmable Automatic Key repeal.
- Full Control Code Keyboard supported.
- Full Cursor Control command support.
- Selectable Character \& Background color.
- Color or Monochrome Display modes.
- Uses only $4 K$ of Extended or Basic ram.
- Written in Ultra Fast Machine Language.

HI-RES Ill was designed to improve the standard display capabilities of the Color Computer 3, even the 40 and $B 0$ column displays have several features missing. For example you can't use PRINT or have different character sizes on the same screen, even mixing text and graphics with the HPRINT command leaves a lot to be desired. HI-RES III can give you the kind of display capabilities you always dreamed about having on your color computer but didn't get with your COCO-3. Well now it's here and with a wide variety of display options that you can easily use with your Basic or ML programs. HI-RES III is totally compatible with Enhanced Color Basic and its operation is invisible to Basic. It simply replaces the normal screen display with an extremely versatiie display package. It also overcomes some of the disadvantages found when using the Width 40 \& 80 sereens. You can use the Print function on any line length with HI-RES III. It also gives you a programmable automatic key repeat that can be very handy for editing your Basic programs. Automatic key repeat can be adjusted fromultra fast to super slow and can be disabled entirely if desired. You also get a full control code keyboard using the "CTRL" key. So many of HI-RES ill's extended functions can be controlled directly from the keyboard easily. With just a couple of simple keystrokes you can change character sizes and styles at any time. You can even switch back and forth botwoon tho atandard COCO-3 display and HI-RES III with a simple keyboard entry or under program control. But, after you use HI-RES III, you most likely won't want to do without it again.
HI-RES III can be used for a wide variely of applications, with its many different character sizes and styles. Youcan make your program really look proressional, witn protected menus, Dold or Italic emphasis, Double or Quad characters for easy to read displays \& menus. It can be idealy suited for Video Titles or Store Displays. Printing Signs or Fliers in conjunction with a Hi-res Screen dump program. The visually impared will espically appreciate the extra large character sizes available.
Requires $128 / 512 \mathrm{~K}$ Tape or Disk $\$ 34.95$

## aking agic <br> By John Morrison

When magicians take the stage，eyes fill with awe as unlikelihoods become realities，over and over again．Now you can play with a magic puzzle that has intrigued mathema－ ticians and magicians alike for centuries－the magic square．

This program，Magic Square，produces a 16－block square． When a number between 35 and 70 is entered，a square of different numbers（four columns and four rows）is displayed． The sum of these numbers（added vertically，horizontally and the four corner numbers add up to your original number．

Since magicians do not disclose how their tricks work，the secret to how this program accomplishes its magical display is not revealed．However，since you will be entering the program into the CoCo ，you will be，in effect，behind the scene and can figure out the magic of how the program works． Remember：A good magician never gives away the secret．

## Word un

## Mave AChand <br> At angman <br> By Shawn Stewart

The following program is a simple version of the popular Hangman game. The object is to guess random words in six tries.

If the letter you choose is in the word, the computer shows you its position in the word. Play continues until you guess all the letters or make six mistakes.
If you want to add your own words, change the DATA statements in lines 600 and 610 or add more lines. Afterward, count the number of words and make the change in Line 10. (The last number in the parentheses should become the number of words in your DATA statements.)

## crambled creen 1 Letters <br> By Neil Johnson <br> 0

Scrambled letters fill the screen. A timer, set at 90 seconds, begins its countdown. You must find and write down as many words as possible before the timer beeps at zero.

You can use any combination of letters going in any direction (up, down, right, left, diagonal, forward or backward) as long as the letters are adjacent. As an example, you can form a word by going up two letters, diagonally three letters, and then left two letters.

Grab a piece of paper and a bunch of friends, have a seat in front of your CoCo , and give this program a try!

## oy or oysticks By Richard S. Ellis

Do you ever wonder if your joystick is working properly? Lots of people do, and, unfortunately, they're either still wondering or they've gone out and bought a new one.

Joystick Check-Out does just what its name implies. The program provides information on the position of the left and right joysticks and firebuttons simultaneously. It also explains how joystick routines work.

Simply plug in your joysticks, run the program and read the data. Refer to Figure 1 to determine if the joysticks are working properly.

The program is short, but informative - perfect for inquisitive minds.

| VALUE |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 65280 | RIGHT | LEFT |  |  |
| 124 | Closed | Closed | \& Right Horizontal < 1 |  |
| 125 | Open | Closed | \& Right Horizontal < 1 |  |
| 126 | Closed | Open | \& Right Horizontal < 1 | (Varies) |
| 127 | Open | Open | \& Right Horizontal < 1 |  |
| 252 | Closed | Closed | \& Right Horizontal > 1 |  |
| 253 | Open | Closed | \& Right Horizontal > 1 |  |
| 254 | Closed | Open | \& Right Horizontal > 1 | (Varies) |
| 255 | Open | Open | \& Right Horizontal > 1 |  |
| Note: Closed is the same as firing or pressing button Open is the same as not firing |  |  |  |  |
| Value of the right joystick horizontal (left/right \& 0/63) = JOYSTK(0) |  |  |  |  |
| Value of the right joystick vertical (up/down \& 0/63) = JOVSTK (1) |  |  |  |  |
| Value of the left joystick horizontal (left/right \& 0/63) = JOYSTK(2) |  |  |  |  |
| Value of $t$ | left joy | $k$ vertic | (up/down \& 0/63) = | STK(3) |

The listing: JOYCHECK

Contributions to "Novices Niche" are welcome from everyone. We like to run a variety of short programs that can be typed in at one sitting and are useful, educational and fun. Keep in mind, although the short programs are limited in scope, many novice programmers find it enjoyable and quite educational to improve the software written by others.

Program submissions must be on tape or disk. We're sorry, but we cannot key in program listings. All programs should be supported by some editorial commentary, explaining how the program works. If your submission is accepted for publication, the payment rate will be established and agreed upon prior to publication.

# The Spelling Game 

By Fred B. Scerbo<br>Rainbow Contributing Editor

#### Abstract

Editor's Note: If you have an idea for the "Wishing Well," submit it to Fred c/o THE RAINBOW. Remember, keep your ideas specific, and don't forget that this is BASIC. All programs resulting from your wishes are for your use, but remain the property of the author.

Last month I introduced a program titled CoCo Keys, which could be used to introduce youngsters to the workings of a computer keyboard. By now, most of you have typed in that program or loaded it from your Rainbow on tape or Disk. Since it is still too early to tell whether or not any of you liked the program, I can only hope that your reactions are similar to those of the people I let try the program prior to its publication. Their verdict was thumbs up!
That program, if you recall, was based on a suggestion from Sonya Hurst of Richmond, California. She was trying to design a keyboard program that could be used for spelling with her 5 -year-old daughter. The program would work with Radio Shack's Speech/Sound Cartridge. As of this writing, I do not know if she succeeded

Fred Scerbo is a special needs instructor for the North Adams Public Schools in North Adams, Massachusetts. Heholds a master's in education and has published some of the first software available for the Color Computer through his software firm, Illustrated Memory Banks.
in creating her own program. CoCo Keys was not exactly what she requested, but it was a start for the major working parts.

Therefore, this month, CoCo Keys 2 will completely grant that wish by providing a spelling program with a graphics keyboard and speech thrown in as an added bonus. What is really nice about this program, however, is that it can also be used as a game without the Speech Pak as a way of reinforcing spelling skills with keyboard locations.

## Putting the Finishing Touch

I really thought I had the system beat this time by getting the program written a few weeks ahead of schedule. Only a little work was needed to transform CoCo Keys to CoCo Keys 2. Most of the hard parts, such as the graphics keyboard, were already designed. What I did not expect was a major setback in another area.
To put it very simply, I am sitting in front of my computer hacking out this column with one hand because my left arm is in a sling. It seems that I accidentally ripped a muscle in my left shoulder: something called the rotator cuff. Talk about pain! The worst part about the injury was how I did it. I didn't do it while working out with my wrestlers, or while lifting weights, or even while out taking my daily run. I did it while vacuuming out the car! It seems that I stretched my left arm a little too far while trying to reach something under one of the seats.

Well, besides slowing me down a bit,
it has made me a little more aware of keyboard locations while trying to do everything with just one hand. After all, that is what both of these CoCo Keys programs are about anyway. Call it poetic justice if you must. All I know is that I was lucky to get the program done before the injury took place. I only had to go through the inconvenience of writing the article this way.
However, that brings to mind what the real purpose of writing these programs is all about. Working with handicapped and special needs students helps keep you aware of what obstacles others must go through in their lives, while we take our health and fitness for granted. Just last week we had a group of handicapped students address our student body about the dangers of alcohol and drug abuse.
The students and young adults were from an outreach program called Operation Street Smarts from Lynn, Massachusetts. Some of the members of the group were wheelchair bound as a result of drug or alcohol use or alcoholrelated accidents. One person was paralyzed from the waist down and only had limited use of one hand. These people are limited in their actions and abilities for the rest of their lives. Looking back at that week makes my minor injury seem totally insignificant. I suppose that minor accidents help us keep things in perspective.

One thing I have gotten from this experience is greater resolve to have even just one of my programs help overcome the handicaps of others.

What suggestions do you have? Any ideas? Write and let me know of a need that our CoCo could help meet for a handicapped person. Later I'll tell you how this program now seems to be helping one such student: a 17-year-old named Chris.

## The Program

Type in the listing exactly as you see it, including all commas found in the DATA statements. Failure to do this correctly will result in an OD Error. The DATA statements at the end of the program starting with Line 1000 and ending in Line 5000 are reserved for you to insert your own spelling or game words. I have included some simple words and their phonetic sound so the Speech Pak can pronounce them in a way the user can understand. You must remember to use two entries for each line: the correctly spelled word and the phonetic pronunciation.

## Using the Program

This program can be used in two different ways: as a spelling program with speech or as a keyboard recognition game involving spelling words, without speech.

On running the program, you will see a solid-colored screen, either red or blue. If the screen is red, press ENTER to proceed. If the screen is blue, then press reset and run until the screen is red. This will help set up the graphics keyboard with the correct color pattern.

## Talking Version

If you are using the Tandy Speech Pak, press T for talking when the titlecard appears. (Be sure to plug in the Pak with the power off on your CoCo before loading the program.) The computer will repeat the spelling word twice, and then you must match the flashing keys on the screen to the correct keys on the keyboard. As a correct key is pressed, the letter will be spoken by the comput-
er. Press the wrong key and the screen will flash.

As you press the correct keys, the word will be spelled out at the bottom of the screen. If at any time you want to check your score, hold down SHIFT while pressing the CLEAR key. You may continue by pressing C. The score card operates like all our other score cards from our other "Wishing Well" programs.

As you can tell by now, the program will actually spell out each word for you by flashing the corresponding key on the screen. It is not testing the user on the spelling. Instead, it is helping the user go through the steps of learning and reinforcement. It can be a big help in learning new words. (Note: The words must be 10 letters or less in length.)

## Non-Talking

If you do not have a Speech Pak, you can use this same program in a slightly different way without making any other changes. Simply press N for nontalking; the program works in the same way without talking. However, this way the program becomes a game to see if the user can quickly match the flashing key to the keyboard and guess the spelling word. The teacher or parent can sit with the student to prompt him or her along. You could even use a stopwatch to time how quickly all the words are correctly spelled. (I didn't want to write that routine into the program because different CoCos, new and old, have different clock speeds sometimes. It wouldn't be as accurate.)

Believe me, students will even enjoy using the program in this way. It does not need speech to be a hit. The graphics alone will get it by.

## Using Your Own Words

To use your own spelling words, dump mine by entering:

DEL1000-4999
Line 5000 must be:

## DATA END, END

Keep your words under 10 letters in length. Use one word with its pronunciation per line. Separate each by a comma, such as:

## 1000 DATA DIRT, DURT

You may include up to 99 such words, but I wouldn't use that many. The program would take too long to run. Ten to 20 is usually a good number. Be sure to save your new version with a

## Field Test

As soon as I completed this program, one of my fellow teachers suggested I let one of our students, Chris, try it with his spelling words. Chris still has difficulty with simple words such as "stop," "taxi," "if" and "the."

I put about 10 of these words in the CoCo and let him try. While being very limited in ability, he has taken to the program like a duck to water. He really enjoys using the program and, after only a few days, is able to guess the word after only a few letters. (Special needs students sometimes have a problem with closure: completing a word, sentence or picture if part is missing.) This program will now become part of his daily routine.

## Conclusion

I hope you all can become more appreciative of those who have limited abilities. Helping them can be a big part of making your day. While this program didn't start out that way, the end result fit that picture perfectly. I hope some of you can come up with suggestions on helping others with handicaps by using our CoCo.

Until then, I'm going rest a bit and let my car get a little dirtier than usual.

# Number Fun for the Very Young 

By Steve Blyn<br>Rainbow Contributing Editor

This month's program is geared to preschoolers and children in early primary school. It is a review of the numbers 1 through 9 . We are aiming at reinf orcing which number comes before and after each of these numbers. In the beginning, children will no doubt need some adult assistance to read the directions. However, after they have played the game for a while, many will probably be able to proceed independently.

There is no scoring or true end to this program. We feel it is pointless to give a child this young a numerical score. Frequent graphics and musical rewards are more appropriate for this age group. After any example, the child may either press the ENTER key to go on or the E key to end the program.

There is little pressure when incorrect answers are given. Nothing at all happens if any of the letter keys are pressed. A short sound is heard if a wrong number is pressed. The child can make as many attempts as he needs to get the correct answer.

The program only proceeds when a

[^11]correct response is made. A pleasant tune is played and graphics are drawn on the screen. The graphics are random figures of a triangle, circle and square. This adds an extra dimension to the program; the three figures are of ten learned at about the same age as these numbers are studied.

Reinforcement is therefore only for positive answers. This is in keeping with our longstanding policy of presenting no discouraging feedback to the very young child. We only want them to have positive feelings toward their computers. Early experiences and feelings may certainly carry over to later ages. We want no child to "turn-off" to computers at any age, least of all at an early age.

The program begins by executing a GOSUB to Line 390 . Lines 400 through 650 read the strings to draw the letters and numbers that are needed. The program then returns to lines 40 through 90 , which set up the high resolution screen and print the words "Which Number Comes." Line 110 decides whether the question will read "Before" or "After." Either of these words then becomes $Q Q \$$ on Line 140. Line 150 prints the number in question as $2 \$$.
The number we are looking for is the variable R. If the word "Before" was selected, then $R=R-1$. Similarly, if the word "After" was selected, then $R=R+1$.

Lines 120 through 130 take care of this job.

Lines 160 through 270 draw a random triangle, circle and square. This is done to both reinforce learning these three shapes and to add some more pizazz to the program. We have found that it is a good idea to add as much color, sound and interest as possible to programs targeted for early childhood or preschool youngsters. They can of ten be distracted away from the computer: An extra graphic here and there never hurts in holding their attention.

Lines 280 through 330 get and evaluate the child's answer. If correct, the graphics appear and a happy tune is played. If an incorrect number is pressed, a short tune is played. After a correct response, the child is prompted to press ENTER. Only by pressing ENTER will another example be displayed. The program will end if the E key is pressed.

Please feel free to alter this program to suit your needs. One suggestion is to change the three geometric figures used if your child or class tires of them. Another fairly easy modification would be to alter the program for the numbers from 10 to 99.

We at Computer Island hope your youngster learns a little and has fun playing with this program. As always, we enjoy hearing about your experiences with our programs.

## Solves Printer Predicament

For some time, my 3-year-old Gemini 10X has been shoving the ribbon up above the pins, thereby printing several blank spaces. To correct the problem, I had been holding the ribbon in place with a pencil on either side of the print head. On a recent visit, my son was able to help me out of this predicament (a welcome relief, as holding the ribbon manually was a real pain in the back).

He carefully removed the printer head and pointed out the large amount of dried ink stuck under the plate. After removing the offending material, he replaced the head and the printer works great. If your printer has these symptoms, you might want to try this procedure. Just be very careful when working with the small print head parts - new heads are still somewhat expensive.

It's simple - Give a RAINBOW gift certificate
the rainbow is the perfect remedy for an ailing CoCo; let a gift subscription perk up your friends' tired old computers. THE RAINBOW is the information source for the Tandy Color Computer.

Each month, your friends will enjoy the intelligent programs, reviews and articles written exclusively for their CoCo.

First, your gift will be announced in a handsome card. Then, all year 'round, they'll remember you and your thoughtfulness when they get each edition of THE RAINBOW - more than 200 pages loaded with as many as 24 programs, 15 regular columns and lots of helpful hints and tips.

Generosity benefits the giver, too. There'll be no more tracking down borrowed copies of THE RAINBOW. Your collection will be safe at home.

Give a RAINBOW gift certificate and let your friends in on the fun. THE RAINBOW is the perfect companion for the Color Computer!

Get your order to us by August 25 and we'll begin your friends' subscriptions with the October issue of RAINBOW.

## Please begin a one-year (12 issues) gift subscription to THE RAINBOW for:

# The Battle Line Is Being Drawn 

By Cray Augsburg Rainbow Technical Editor

Since it started in September 1985, the CoCo SIG has steadily grown to become one of the largest and busiest SIGs on Delphi. While the SIG staff certainly deserves a lot of credit, the SIG members themselves are the most important reason for this growth. To a large extent, we have tried to mold the CoCo SIG in a fashion that would be of most service to its members. We are now introducing a new aspect to the SIG, which will greatly enhance its information value.

Beginning in the month of August, members of the CoCo SIG will be allowed to participate in what is called Battle Line. Each month, a subject will be chosen and SIG members are invited to share their views on that subject. We will offer conferences that may well turn into controversial debates, and all are invited to attend. These conferences will be looked upon as a no-holds-barred opportunity for everyone to express their viewpoints. In addition, throughout each month, polls will be posted in the Polls section and the Forum will be used by members to express their views. At the end of each month, all Polls, Forum messages and conferences related to the Battle Line subject will be archived in the database for later perusal by members. The OS-9 Online SIG will also be running Battle Line and may or may not be discussing the same subject as the CoCo SIG.

Cray Augsburg is RaINBOW's technical editor and has an associate's degree in electrical engineering. He and his wife, Ruth Ann, have two children and live in Louisville, Kentucky. His username on Delphi is CRAY.

Battle Line will give everyone a chance to "get on a soapbox." While we will be in charge of picking the topic each month, all members are encouraged to suggest ideas for these topics. We also expect SIG members to volunteer to lead a conference. When Battle Line becomes a big hit, it is very possible we will shorten the time devoted to each subject. Instead of a month, we might discuss a topic for a week or two weeks. This all depends on the reaction of the SIG members to Battle Line.
The Battle Line topic for August has not been chosen at the time of this
writing, so go ahead and send your suggestions to Jim Reed (Jimreed) or Marty Goodman (MARTYGOODMAN) via Mail or Forum. To suggest topics for Battle Line in OS-9 Online, contact Jim Reed or Greg Law (gregl). In the interest of letting everybody in on it, we do ask that you try to use the Forum as much as possible. For more details, watch the Forum for messages.

## New Delphi Handbook

Michael A. Banks (KZIN), SIGop of the Science Fiction SIG on Delphi, has been fairly busy writing a new manual

## DATABASE REPORT

FJollowing the introduction at RAINBOWfest of an outstanding graphics editor, Color Max 3, a lot of interest has been focused on generating and converting pictures to use with it. For instance, many of the Atari ST graphics screens can be converted very simply into a display format that is compatible with the CoCo 3. Many of the uploads we've seen this past month have been graphics related.

Many users are also interested in converting their favorite game programs to make use of the enhanced capabilities of the CoCo 3. One by one, users are uploading their best games, converted for the CoCo 3.

OS-9 Level II is becoming available in most areas around the country, and users are hard at work writing patches and applications for it. The OS-9 Online SIG is busy with contributions from users across the country.

## OS-9 Online

In the Graphics topic area, Toni Ryan (TNTRHODAN) sent us BDRAW. AR, a BASIC09 procedure that demonstrates a mouse interface, graphics pointer and menu handling. Kevin Darling (kDarling) sent us some Level II pictures and a Level II picture loader. These two pictures, Pharoh and Saturn, are converted Atari ST pictures in VEF (VDG Enhanced) format. They may be viewed using the Pix program that is also in the Graphics topic of the database.

In the Users Group topic, Greg Law (GREGI) has posted seven more additions to this expanding section of the database. New groups include BASUTIL, a package of two assembly routines to set the user ID number one to return the name of the driver that is in use; CHKNG, a checkbook program; $C A T$, a UNIX-style file concatenation utility; $C B$, which reformats $C$
for Delphi over the past six months．The new book，DELPHI：The Official Guide，is being published by Brady Books，a division of Simon and Schus－ ter．Through Delphi，the 400 －page book will sell for \＄19．95 and includes a coupon for two free online hours for new subscribers．Unfortunately，present subscribers will not be able to use this coupon．

DELPHI：The Official Guide is di－ vided into four major sections．The first section，＂Getting Started，＂deals with sign－up and logon procedures．The second section discusses the menu concept and how it is employed on Delphi．Also，this section covers the system commands，such as SEND and WIDTH，and control characters．The third section details each area of Delphi and discusses how they can be used． Coverage of topics like Mail，the Li－ brary and SIGs will be included here． Rounding out the book is the reference section，where various network numbers are listed．This section in－ cludes a glossary of terms and a trou－ bleshooting guide．

## Polls，Polls and More Polls

Rainbow columnist Richard White （DICKWHITE），author of＂Bits and Bytes of BASIC，＂has been chosen by Jim Reed to serve as Polls Manager．Rich－ ard＇s duties will include editing new polls and archiving old polls to make room for new ones in both the CoCo

SIG and OS－9 Online．And speaking of new polls，Richard has just finished archiving several old entries，so there is plenty of room for you to create a survey on those subjects dearest to your heart．

## Upcoming Changes

Delphi has told us that they have started＂phase two＂for the system changes in the Database area．Some of the more important（and most wished for）changes to be made are：
－Providing a clearer indication be－ fore a download is initiated of whether a particular file is in ASCII or binary format（Text vs．Non－Text）． －Allowing semiautomatic download of all files in a given group．This change will become more important as software writers start allowing the use of Kermit on the CoCo．
－Changing the DOWNLOAD option at the ACTION＞menu to allow the user＇s choice of Xmodem，Kermit，buffer capture，etc．，with this choice remain－ ing in effect throughout the session unless overridden．Delphi also hopes to allow a Profile setting for preferred download method．
－Allowing＂serialized＂downloads of programs so that the system will send Mail to the owner and down－ loader registering serial numbers． This will be a great boon to shareware uploaders．
－Increasing the number of possible topics allowed in the database．At present，all SIGs are limited to 16 database topics．
－Allowing users to：
search by ownername．
search by date．
search on more than one topic at a time．
－Allow a DIR NEW command that would give a directory of only those files in a given topic that have been posted since the last time you entered the database．
－Changing SUBMIT to respect the prompt mode you are currently using．For those who are very familiar with SUBMIT，this will greatly reduce the amount of time it takes to go about your business．
－Allowing／SEND，／WHO and MAIL at the DBASES＞，ACTION＞and WS＞ prompts．

We will try to keep you apprised of the situation as these，and other， changes take place．In the meantime， please bear with the Delphi service people as they go about making the changes．There may be times during the weekdays，for those of you who are on during this time，when you will find yourself temporarily＂locked out＂of the SIG or Database area．This is a neces－ sary precaution Delphi must take and， when it occurs，rarely poses a problem for more than a half hour or so．
programs along the lines of the $\mathrm{K} \& \mathrm{R}$ manual；and СомM，a smart terminal program that saves the input text in a buffer and dumps it to a file later．

In the Applications topic，Sam Johnson （SDJ9060）has sent us the CUTNPAST utility written in BASIC09 for fairly heavy Delphi users who like to save，file and reread some of the Forum messages they download．

In the Utilities topic，Kevin Darling has given us his SCF Editor Plus for OS－9 Level II and more of his utilities for Level II．Greg Law has posted MOUSE．日09，a short BASIC09 program that demonstrates the use of Level II＇s system calls to support a mouse．Greg also provided the file compression／decompression utility called $A R$ ．

The Patches topic area was enhanced by the addition of BOOTPATCH from Dave Philipsen（DPHILIPSEN）．This is a short script file for patching the OS9Boot mod－ ule for faster step rates．

## CoCo SIG

In the General Information topic area，

Eric Crichlow（DIAWA）provided a file from another person concerning a pirate＇s justification of software theft．Greg Miller （GREGMILLER）then provided his rebuttal file．Larry Hess（bobbihess）sent another side of the issue in this controversial series， called＂Piracy－Another View．＂Greg Miller then posted his response．（This subject is also being discussed in the Forum．）Marty Goodman，M．D．（MARTY－ GOODMAN）provided another informative medical article called＂AIDS and You．＂ Mike Fischer（mike88）provided Combus－ tion，a text file describing spontaneous human combustion．

In the Source for 6809 Assemblers topic area，Mike Tolbert（MIKEGT）posted the EDTASM source code for his BOOT3．日月S utility．BOOT3 is a version of the popular utility BOOT，which has been rewritten by Mike to support a similar function on the CoCo 3．I posted an Assembly Language tutorial in response to a user＇s question about how to test for the key combination of SHIFT and ENTER．

Mike Ward（mikeward）posted his excellent utility EDTCVT．日IN，which will
convert EDTASM source code files contain－ ing embedded tabs into standard ASCII files．Tab characters are entered into EDTASM files whenever you use the right arrow key to advance to the next field． These tabs are stripped by BASIC and most word processors，which can result in unusable files for a user．Mike＇s utility cures this problem．

Roger Krupski（HARDWAREHACK）pro－ vided source code for his excellent Morse Code Generator utility．Those interested in studying for an amateur radio license will appreciate Roger＇s contribution．

In the Utilities \＆Applications topic area，Glen Hathaway（HATHAWAY）pro－ vided T．日IN，a short M／L program that demonstrates horizontal and vertical scrolling on the CoCo 3．Roger Bouchard （HARBIE）provided his DFIX Fix file for converting Steve Bjork＇s DFIX utility for operation with ADOS．Roger also sent us a multiple disk formatter utility for those with multiple drives．

Mike Fischer sent us a BASIC program that contains his favorite patches for Disk BASIC．Brian Wright（POLTERGEIST）sent us
his ASCII print utility for producing a hard copy of text files and his Super DOS utility. I provided a cataloger program for disk libraries. Charles Pippin (CwP) sent us his checkbook program for the CoCo 3.
In the Games topic area, Stephen Macri (DRACMAN) provided his newest game called ACEY2C. Jim Pogue (impogue) provided an interesting Scrabble program, and Dave Ferreira (Skeeve) provided a welcome converted Star Trek program for the CoCo 3.

Tom Chevrette (Shazac) gave us an outstanding Escape Adventure game that contains 29 files and consumes nearly an entire disk. The graphics screens in this program are very good. Andrew Robinson (AROBINSON) sent us a patch program that enables you to play the popular game Pitstop $I I$ in color when using an RGB monitor. Brian Wright gave ustwo games, called Hotel CoCo and CIA Operative. Kurt Stecco (highrailer) provided a program for booting some CoCo 3 game programs in color.
The Graphics topic area was enriched greatly by Greg Miller (GREGMILLER), who provided us with excellent renditions of Daffy Duck and Bugs Bunny. Both of these pictures are very well done, and quite colorful as well. Bob Montowski (GRAPhICSPUB) sent us a fine addition of Snoopy and the Red Baron in MGE format.

Robert Pierce (RPIERCE) sent us his Diddles program, and Mark O'Pella (MDODELPHI) provided an XPAD program for the CoCo 3. Also, Bob Wharton (BOBWHARTON) sent us his fine collection of American League baseball team logos for the CoCo 3. Roger Bouchard sent us the specifications for the Tiny files, as well as his own ST file conversion utilities. Roger also sent us five outstanding ST pictures that have been converted into the MGE format.

Brian Wright gave us his lengthy file called Pinup Bonanza and a Fan Generator graphics demo. Eric Crichlow provided us with some excellent CoCo 3 graphics, including a graphics tribute to Steve Bjork, a picture of an Atari ST displaying a moving waterfall graphic, some proposed title screens for game programs, and an excellent animated waterfall demonstration. Eric Tilenius (Tilenius) sent us his CVLOGO BASIC program. As you can tell, the graphics topic was really busy this month!
The Music \& Sound topic of the database has also been very busy. The largest contributor to the Music topic, by far, is Bill Starr (wSTARR). Bill has graciously donated a total of 82 files to date, amounting to almost 300 kilobytes of music files! If you're serious about Orchestra-90/CC, then Delphi is definitely the place for you
to be! Bill's uploads cover practically every type of music, from oldies, country and ragtime, to popular, Latin and jazz.

Gary McCarty (bandman) provided several Orchestra files also, including Maple Leaf Rag, Easy Winners, Solace, and Battle of Shiloh. Bryan Eggers (SOFTAFFAIR) provided a text file describing how to write music for Orchestra-90.

The Data Communications topic was the scene of much excitement when Rick Adams (RICKADAMS) uploaded the longawaited Version 2.0 of Rickeyterm. This latest version provides support for the standard serial port on the CoCo 3 for communications at 300 or 1200 baud. If you still want to use an RS-232 pack, Rickeyterm will then provide online printer support. Brian Wright gave us a file describing how to set up a new Avatex 1200-baud modem. I provided a short text file describing where and how to obtain the three most popular CoCo terminal programs, namely, Greg-E-Term, MikeyTerm, and Rickeyterm.
As you can see, this past month was a busy one for us. User activity was extremely high, and the Conference areas of the SIGs were always buzzing. We hope you'll join us on Delphi soon!

- Don Hutchison

Rainbow's Delphi Database Manager

## The Rainbow Introductory Guide to

 StatisticsMost people have been using statistics since they learned to talk. Statistical results and concepts turn up everywhere. A large part of our daily news consists of statistics. Results of opinion polls, surveys, research studies, the Dow Jones industrial average and, of course, our sports news are all statistics. But statistics ale of ten misused. The informed person needs to understand the basic concepts in order to judge the appropriateness of applications.

Rainbow Contributing Editor Dr. Michael Plog and coauthor Dr. Norman Stenzel have written The Rainbow Introductory Guide to Statistics just for beginners. It is an easy-to-understand guide to this sometimes mysterious area of mathematics. Their aim is to introduce readers to the realm of statistical processes and thinking, and they belie ve that the Tandy Color Computer is an ideal machine for the reduction of data.
Sharpen your skills with The Rainbow Introductory Guide to-Statistics for only $\$ 6.95$. Included in the book is the CoCo-Stat program, a BASIC statistics programjust-for the Color Computer ( 80 -column printer required.) Forget the typing hassle by ordering the accompanying Statistics Tape or Disk for only \$5.95. Spend your time learning and enjoying the new material, not debugging your typing. Just pop in the tape or disk and you're ready for action!

Save when you buy The Rainbow Introductory Guide to Sta tistics book together with the tape or disk. Get both for only \$11.95.

Please send me: The Rainbow Introductory Guide to Statistics Book \$6.95* The Rainbow Introductory Guide to Statistics Tape or Disk $\$ 5.95$ The Rainbow Introductory Guide to Statistics Book/ Disk Set $\$ 11.95$

*Add $\$ 1.50$ per book for shipping and handling in the U.S. Outside the U.S. add $\$ 4$ per book (U.S. currency $\oplus$ nly). Kentucky residents add $5 \%$ sales tax. In order to hold down costs, we do not bill. Please allow $6-8$ weeks for delivery.
Note: The tape and disk are not stand-alone products. If you buy either the tape or disk, you still need to purchase the book for instructions.

Ready for a great new game for the CoCo 3? Shoot'n Range is a fast-paced action/strategy game that takes full advantage of the CoCo 3's possiblities.

In this game, you are developing your sharpshooting ability at the local, official practice range. Armed with the most advanced push-button-activated solar laser gun, you are determined to shoot as many happy-faced targets as you can. With just one touch of the trigger, you can take revenge on those optimistic androids.

Of course, this man versus machine battle is not all that easy. In order to continue using the shooting range, you must keep your hit/miss percentage above 50 percent. Every shot costs you a certain amount of energy, determined by you (check the power gauge on the right side of your tracking monitor). Also, because of the new solar cycle bill passed by Congress, your gun will only re-energize every 10 rounds of play. So pick up that gun, aim carefully and fry some silicon.

Shoot'n Range requires a CoCo 3 and will work with any type of color display. You control the horizontal movement of the gun, along with the power amount, by using the right mouse/ joystick. Use either button to fire the laser.

Enter the listing carefully then save and run it. As soon as the program starts, you see a screen prompting you to enter the display type you are using. If you are using an RGB monitor, such as the CM-8, press the I key on the keyboard. If you are using a television or composite monitor, press the 2 key.

After a short delay, a title screen appears. Press any key except BRK / ESC to continue the program. The next thing you should see is the playing field. Across the top, your score, hit/miss percentage and the gun's power level are

Albert Marsh is a sophomore at Antelope Valley Adventist School. He started programming in 1982 on an Apple II and has been interested in all types of computers ever since.

# Come to Radio Shack for the Very 

## What a selection!

At Radio Shack, we're dedicated to making sure that you never run out of ways to use and enjoy your Color Computer. We've got a terrific line of software-here's just a sample!

## Games for the whole family

Let your Color Computer open the door to an amazing world of fun and adventure. Radio Shack has a dazzling selection of popular and challenging games.

Explore a secret cave, collecting keys, gold and diamonds in Downland. Challenge awesome beasts to reach your ultimate opponent-the evil wizard-in

Dungeons of Daggorath. Avoid steam vents, fireballs, bullets and the Great White Bat in Cave Walker: Take part in a daring raid to claim the Ancient's exotic technology in Koronis Rift. Or enter the world of Rogue, an ever-changing game of magic and hidden perils.

Take off into the wild blue yonder with Flight Simulator I to learn the basics of aviation skill-instrument recognition, take-off and landing requirements and more. Get down on the basepaths with Color Baseball-it plays just like the real game! Or get into role-playing secret agent action with the Interbank Incident and recover a stolen codebook for a satellite.

## Make learning fun

One of the most valuable potentials of your Color Computer is giving your children a head start in education. We've got programs for kids of all ages that will give them hours of productive fun.

Younger children will learn with Color Math—older kids will enjoy developing logical problem-solving skills with Robot Odyssey, which explores the concepts of electronic circuitry, circuit design and logic. And there are also entertaining teaching programs featuring popular Disney characters like Winnie the Pooh, Mickey Mouse and Donald Duck. You'll find programs that develop hundreds of skills.

## Best in Color Computer Software

## Get the power of OS-9

Step up to a whole new world of power with the OS- 9 operating system. OS-9 lets you access the entire memory of the 64 K Extended BASIC Color Computer. OS-9 Level II supports 512 K and dualspeed operation. We also support OS-9 with programming languages like BASIC-09, PASCAL-09, D.L. LOGO and C Compiler:

## Boost your productivity

No matter what your personal needs, we've got programs that'll put your Color Computer to work where you need it most.

Spreadsheet analysis? Choose from Spectaculator ${ }^{\text {T }}$ or Dynacalc
for planning, forecasting and problem solving. Word processing? Get our easy-to-use SCRIPSIT ${ }^{\circledR}$ or TSEDIT and TSWORD for perfect letters, manuscripts and reports.

Get your household budget in order with Personal Finance II. Chart your stock holdings and market trends with Investograph.

And with Color DeskMate ${ }^{\circledR}$ and DeskMate 3 you get seven of the most popular productivity applica-tions-Text, Ledger, Index Cards, Paint, Telecom, Calendar and Calculator-all on one diskette.

Need more suggestions? Drop by your local Radio Shack today-it's your one-stop software center.

displayed. Your laser pistol is at the bottom, and a marker on the right side of the screen shows the amount of power needed for that shot.

The targets appear out of the ground. Each round completed decreases the length of time the targets stay above ground. More targets are added every five rounds, and the speed slows back down again.
There can be a total of 10 targets on the screen. If you get past Level 20, there will be 10 targets on the screen, plus two that will appear af ter there is room for them.

Position the gun so it is directly under the target you want to hit. By moving the power gauge up and down with the controller, you can determine how far your shot will go.

Even though you will still hit the target, be careful not to overshoot. By doing so, you will be wasting power. You only start with 5,000 units of
power, which is increased by 3,000 , plus 200 times the number of rounds you completed every 10 rounds. For example, after 10 rounds you receive 5,000 units of power, after 20 , you receive 7,000 units, and so on.

The game is over when you either run out of power or your percentage drops below 50 percent. You are then asked if you would like to play again.

If you press the BRK/ESC key, you will be asked if you want to restart. A nswer these questions by pressing Y for yes or N for no.

I hope you enjoy playing Shoot'n Range as much as I enjoyed creating it. If you have any questions, comments or suggestions, please feel free to write.

Good luck and have fun gaining a little revenge on modern technology.
(Questions about this game can be addressed to the author at 38850 Division St., Palmdale, CA 93550; phone: 805-273-4774. Please enclose an SASE if $a$ wrillen response is desired.)

# " I cannot imagine the CoCo 3 without ADOS-3; it would not be a complete machine." <br> The RAINBOW, July 1987 

You've moved up to a CoCo 3. A powerful new machine. Now, it's time to give BASIC a shot in the arm, with ADOS-3. Wouldn't it be nice to turn on your machine and be greeted by an 80 -column display, in the colors of your choice. with your own custom startup message? To run routinely at 2 MHz (double speed) without having to slow down for disk and printer operations? This and much, much more is possible with ADOS-3, our CoCo 3 adaptation of the acclaimed original ADOS, which shares the original's virtual $100 \%$ compatibility with commercial software. After customizing ADOS-3 using the provided configuring utility, you can have it burned into an EPROM that plugs into the Disk BASIC ROM socket, or just use it in RAM as a disk utility. (EPROM + burning will cost \$15-20; we provide information concerning how you can have this done.) Supports double-sided drives ( 35,40 , or 80 tracks). FAST and SLOW commands, auto line number prompts, RUNM command, keystroke macros, arrow-key scroll through BASIC programs, auto-edit of error line, and many more valuable features
"ON A SCALE OF 1 TO 10, I RATE ADOS-3 A SOLID 15." RAINBOW, $7 / 87$
Disk. $\$ 34.95$ Original ADOS for CoCo 1 or 2 . $\$ 27.95$ (See $6 / 87$ RAINBOW review)

BACK WITH BLACK BOX Fully compatible with Hayes and Bell 103/ 212A modem products, the Black Box Auto Modem 1200 is designed for

Black Box ${ }^{\circledR}$ Auto Modem 1200
heavy-duty use in any interoffice or long distance data communications network. This desktop device provides fullduplex, asynchronous transmission over the switched telephone network at either 300 or 1200 bps data rates. It features automatic or manual (touchtone or rotary/pulse) dialing or answering, and a soft option control eliminates switch-setting for smart or dumb terminal use. The Auto Modem 1200 retails for $\$ 275$. For more information on the Auto Modem 1200 and a copy of their new catalog, contact Black Box Catalog, P.O. Box 12800, Pittsburgh, PA 15241, (412) 746-5500.

TAKE IT TO THE BANK Sunrise Software has announced the release of Business Bankbook +3 for the CoCo market. This system is designed to replace manual check register systems for small business applications. It allows complete maintenance of your checks, including check printing. System requirements are a 32 K or greater Color Computer, one or two disk drives and a printer.

The program is shipped on disk only, with soft ware for the original CoCo and CoCo 2 on Side One and special programming for the CoCo 3 on Side Two. All data is compatible with both versions of the program. Business Bankbook +3 is priced at $\$ 49.95$ plus $\$ 2$ $\mathrm{S} / \mathrm{H}$. Florida residents add $\$ 2.50$ state sales tax. Contact Sunrise Software, 8901 NW 26 Street, Sunrise, FL 33322. To order, call (800) 628-2828.

GET PROTECTED Dynamic Electronics Inc. has announced Memory Saver 2, a rechargeable battery backup designed to protect your CoCo's memory in the event of a power outage. Memory Saver 2 mounts inside the computer under the keyboard and will work with almost any Color Computer including the newer Color Computer 3 with a full complement of 512 K . The unit will power the Color Computer for an hour or more. Supply switching is quick and automatic. Memory Saver 2 is priced at $\$ 39.95$ plus $\$ 3 \mathrm{~S} / \mathrm{H}$. Contact Dynamic Electronics Inc., P.O. Box 896, Hartselle, AL 35640.

ALSO . . . Another new device from Dynamic Electronics Inc. is CC-Therm, a digital thermometer for Radio Shack Color Computers. This unit consists of a thermistor wired to the end of a flat cable and is designed to be plugged into the CoCo's joystick port. CC-Therm is priced at $\$ 12.95$. A dual version is available for $\$ 19.95$. The dual version allows the user to measure temperature in two locations. It is also useful for measuring inside and outside temperatures simultaneously. Software on tape or disk continuously prints the temperature in both Farenheit and centigrade. Please include $\$ 3 \mathrm{~S} / \mathrm{H}$. Contact $D y$ namic Electronics Inc., P.O. Box 896, Hartselle, A L 35640.

BIG BOY PRINTER In a move to expand its current printer product line, the Panasonic Industrial Company Computer Products Division (CPD) has announced its first entry into the rapidly growing 24 -pin dot matrix printer marketplace. The new KXP1524 wide-carriage model features three levels of print quality (draft, text and letter quality) for various applications.

Through the standard parallel port, the unit offers speeds up to 240 cps in draft mode, 160 cps in text mode and 80 cps in letter quality mode. Each mode runs at either $10,12,15$ or 17 pitch. The KX-P1524 features Epson LQ-1500, Diablo 630 and IBM ProPrinter emulation and is compatible with most software. Its easy-to-use operator panel offers front panel access to font, pitch, margin, line and form feed, and page length for convenient user setup.

The KX-Pl524 also offers optional credit card-size font cards for Roman, Bold PS, Prestige, Gothic, Orator, Script and Sans Serif font styles. A special "memo load" feature has been added, which allows the user to feed a single sheet of paper or an envelope without removing the fanfold. Both parallel and DB-25 serial interfaces are standard on the KX-P1524, which carries a suggested retail price of $\$ 899$.

The KX-P1524 from Panasonic.

## WERE BRINGING THE COCO

## RAINBOW'S BROADENING ITS SPECTRUM

the rainbow and the Delphi Information Utility have joined together to allow CoCo owners all over the world to connect with one another!

Delphi is a full-service information utility. It offers everything from up-to-the-minute news stories from Ths Associated Press to electronic mail services. But, best of all, it now has a special forum for Color Computer owners, and it's operated by the people who bring you the rainbow each month.

The CoCo Special Interest Group (SIG) features a variety of services, including an open forum where you can send and receive messages from Color Computer owners all over the world. It also has several databases to which you can upload your favorite programs and from which you can download programs written by other CoCo enthusiasts. Some of these databases are BASIC programming, OS-9 and home applications.

When setting up your account with Delphi, if you do not have a credit card or prefer not to use it, Delphi requires that you send $\$ 25$ to give your account a positive balance. This will be refunded after your first free hour if you choose to no longer use the system or it will be applied to future connect charges. If you do not maintain a positive balance, you will be charged $\$ 3.50$ each month for direct billing.

## PEEK INTO THE RAINBOW

The CoCo SIG's conference feature allows you to meet electronically with other members of the CoCo Community. You can join conferences with notables such as Dale Puckett, Cray Augsburg, Marty Goodman, Don Hutchison, Jim Reed, Lonnie Falk and others - on a regular basis. Conference schedules will appear in the rainbow each month. Be sure to check online announcements for changes and additions.

## THE OTHER SIDE OF THE RAINBOW

On Delphi, you also are able to buy RAINBOW ONTAPE - order a whole set, or download an individual program immediately. You can also renew your Rainbow subscription, make a fast and easy order for software or hardware from a multitude of vendors, or inquire about products on the CoCo SIG.

We also have a number of programs that you can download and use, just for the cost of the time you spend transferring them. There'll also be corrections for RAINBOW articles, helpful hints and many other useful features.

## FREE LIFETIME MEMBERSHIP

THE RAINBOW is offering subscribers a free lifetime subscription to Delphi - a $\$ 29.95$ value - and a free hour of connect time - a $\$ 7.20$ value at either 300, 1200 or 2400 Baud - so you can sample Delphi and the Rainbow CoCo SIG. That's right. Your subscription to THE RAINBOW entitles you to this $\$ 37.15$ value as a free bonus!

If you're nol a rainbow subscriber, just enter your order when you sign on with Delphi and you'll get the same great deal! For our $\$ 31$ subscription fee, you'll get the finest Color Computer magazine ever, a free lifetime subscription to Delphi and a free hour of connect time.

## SAVE EVEN MORE

Want to save even more? While you're online you can order, for only $\$ 29.95$, a deluxe package which includes the Delphi membership, the Delphi Handbook and Command Card (\$21.95) and a total of three hours of connect time (\$21.60).

Delphi provides us all with Immediate CoCo Community. Check it out today. After all, you can sample it for free!

Problems? Call Delphi: (800) 544-4005 (617) 491-3393

# COMMUNITY TOGETHER 

## How to reach RAINBOW's Color Computer SIG . . .

There are several ways to connect to Delphi and THE RAINBOW's CoCo SIG. In most cities you will not even have to pay long distance charges; you can use special data communications networks like Telenet, Tymnet and the Canadian Datapac network.

First, set your terminal program to operate at either 300 or 1200 Baud (depending on the modem you have), and also select either 7 bits with even parity or 8 bits with no parity, and one stop bit. (If one combination doesn't work, try another.)
Decide which network you should use. There is no surcharge for Telenet or Tymnet. Canadian residents using Datapac will be charged an additional $\$ 10.80$ (U.S.) per hour.

On Telenet: Call (800) 821-5340 to get the Telenet number for your area. After you call the appropriate number for your own area and make connection, you'll see a prompt of "L?" Press ENTER, the period key (.) and ENTER again. At the "service:" prompt, type GVC (for General Videotex Corporation) and ENTER.
On Tymnet: Call (800) 336-0149 to get the Tymnet number for your area. After you dial your designated number and connect, you will see either "garbage" or a message saying "please type your terminal identifier." At this point, even if the screen is garbled, simply press ' $A$ '. When "please log in:" appears, type DELPHI and press ENTER.
From Canada (on Datapac): Call Delphi Customer Service at (617) 491-3393 to get the Datapac number for your area. After you connect, press the period key (.) and ENTER (use two periods if you're using 1200 Baud). Type SET 2:1, 3:126 and press ENTER. Now type p 1 3106, DELPHI; and press ENTER. Including the $\$ 10.80$ per hour surcharge, Canadian residents using Datapac are charged a total of $\$ 18$ (U.S.) per hour for connect time, day or evening.
From other countries: Many countries have their own data networks that can connect to either Telenet or Tymnet. Check with the telephone authorities in your country for details on how to sign up for this service. When you have an account set up, you can reach Delphi with a "host code" of 311061703088 through Telenet, or 3106 906015 through Tymnet. (You'll have to pay the toll charges for this connection.)

## Type in Your Username

If you're already a subscriber to THE RAINBOW, at the
"USERNAME:" prompt, type JOINDELPHI and press ENTER. At the "PASS WORD:" prompt, type RAINBOW. Then, at the "NUMBER:" prompt, type your individual subscription number from the mailing label of your latest issue of THE RAINBOW. (If there are one or more zeros at the beginning of this number, include them.)

If you don't already have a subscription, at the "USERNAME:" prompt, type JOINDELPHI and press ENTER. At the "PASSWORD:" prompt, type SENDRAINBOW and press Enter. Have your MasterCard, VISA or American Express card ready, because you'll be led through a series of questions that will enable us to put your Rainbow and Delphi subscriptions into effect. In an effort to hold down non-editorial costs, we do not bill for subscriptions.

If you make a typing error, just use Control-X and start over. Remember that at any point, when you're on Delphi, you can type HELP to get help on how to use the system. To get off the system just type BYE.

If you find that you're unable to log on to Delphi and enter the CoCo SIG after following these instructions, call us during afternoon business hours at (502) 228-4492. We'll be glad to offer assistance.

## Come Visit Us! Type: GROUP COCO

After you sign in, you'll be prompted to set up your own, personal "username" - Delphi is a friendly service, no numbers to remember - and you'll be asked a number of questions so Delphi can set up your account. You'll also be assigned a temporary password.

Dclphi will tell you that your account will be ready after 6 p.m. the same day if you sign up before noon (Eastern time zone.) If not, your account will be ready at 6 p.m. the next business day. Once an account is verified and opened, each RAINBOW subscriber will be credited with an hour of free time!
When you log back in, use your chosen username and your temporary password to access the system. At that point, you will meet Max, who will help you configure things and will change your temporary password into your own personal password. This is the password you will use for subsequent sessions - or until you change it.

After Max bids you goodbye, you'll wind up at the Delphi Main Menu; type in GROUP COCO and join us on the CoCo SIG!

## The astronauts stranded on the

 moon are counting on you!By Clyde Johnson, Jr.

Lunar Rescue is an arcade game for a 32 K Color Computer. It requires at least one joystick. You are a member of the Lunar Rescue Squad, in charge of the safety of all the astronaut-explorers. To rescue astro-

Clyde Johnson, Jr. is a student at Embry-Riddle Aeronautical University in Daytona Beach, Florida. He is majoring in aeronautical engineering and has had his color computer for five years.
nauts stranded in the mountains, you must pilot your spacecraft to them, pick them up with the ladder, and take them to the next base. Your fuel supply is limited so there is no time to waste.

After running the program and choosing a starting skill level, the game screen will appear. Your ship is on the lower-left side of the screen, the astronaut you must rescue is in one of the valleys of the mountain range, and the base you must fly him to is on the lowerright side of the screen. The bottom of the screen is your control panel and displays altitude, vertical velocity, fuel remaining, and other necessary information. The ship is controlled with the right joystick, and pulling the stick back adds downward thrust; the farther back you pull, the more thrust. To take off, pull the stick all the way back and hold it there until you are clear of the base.

To pick up the astronaut, maneuver your ship over him and press the firebutton to drop the ladder. You have only 30 seconds to pick him up before you must close the hatch; theref ore, you must be in position to get him before
you drop the ladder. The ladder must be positioned directly over him and extend below his feet. The extra weight of the astronaut will pull the ship down, so be prepared to add thrust when he is aboard.

After picking up the astronaut, or at least before running out of fuel, you must land at the base. To do this you must be completely over the flat area on the right side of the screen and touch down with a velocity less than 10 . You will be given a score based on your performance and, if you successfully rescued the astronaut, you will advance to the next level.

When typing in this program, be sure to save it to disk or tape before running; a machine language routine is used that could crash your computer if any typing errors are made. This routine also disables the BREAK key so you must press reset to exit the program.
(You may direct your questions to the author at P.O. Box 1197, Beaufort, SC 29901; phone: 803-525-0261. Please enclose an SASE for a reply when writing.)

Our Pro-Color-Series consists of three programs.
Pro-Color-Filie *Enhanced* V2.0 Design a record structure up to 60 fields with 1020 spaces per record, four custom-designed data entry screens and math functions on single records. Report totals, averages and summaries. Generate mailing labels. Output reports to the printer, disk or screen. Send information directly into a Dynacalc® compatible file for use in spread sheets. Streamline repetitive tasks into one keystroke with the command processor. Sort 750 records in less than five minutes and create special indexes of your file for reporting and accessing. Store as many records as your disk will hold! $\$ 59.95$
Pro-Color-Forms V2.0 This mail-merge feature will aliow you to write a letter and have names from your database inserted automatically. Design invoices, inventory cards and other forms. Or, if you use preprinted forms, you can set up a template to print information in the appropriate place. If you have our Telegraphics© program, you can have hi-res pictures included as part of the form! $\$ 29.95$
Pro-Color-Dir Read the directory of all your diskettes and create a data file that can be accessed by Pro-Color-File. Store up to 1,000 entries on one diskette and generate a master report that shows where each program is in your library. Included FREE with Pro-Color-Forms.
Our Pro-Color-Series gives you database capabilities found on larger computers, at a fraction of the cost! So if youre serious about getting organized, try our Pro-ColorSeries. It lets you organize important information together in one place, right at your fingertips, and at a savings - just $\$ 79.95$ for all three!

## Now Create Your Own Signs, Banners, and Greeting Cards.

Introducing The
Coco Graphics Designer

Last Chriatmas we introduced our COCO Greeting Card Designer program (see review April 86 Rainbow). It has been so popular that we've now expanded it into a new program called the COCO Graphice Deaigner. The Coco Graphica Designer produces greeting carde plua banners and eigne This program will further increase the usefullnese and enjoyment of your dot matrix printer.

The Coco Graphlcs Designer allow you to mix text and pictures in all your creations. The program features picture, border, and character font editors, so that you can modify or expand the already built in libraries. Plue a apecial "erabbar" utility is included to capture areas of high resolution screens for your picture library.

Requirements: a Coco or Coco II with a minimum of $\mathbf{3 2 K}$, One Diak Drive (Disk Ext. BASIC 1.0/1.1,ADOS, or JDOS). Printeri supported include: Epaon RX/FX, GEMINI 10X, SG-10, NX-10, C-Itoh 8510, DMP-100/ 130/ 400/430, Seikoaha GP-100/250, Legend 808 and Gorilla Bennana. Send a SASE for complete list of compatible printers \#Cs32 Coco Graphice Designer $\quad \mathbf{2 9 . 9 5}$

## Over 100 More Pictures

An optional applementary library diskette contsining over one hundred additional pictures is available. \#Csss Picture Diak \#1 814.95.

## Colored Paper Packs

Now available are packs containing 120 sheets of tractor-feed paper and 42 matching envelopes in assorted bright RED, GREEN, and BLUE. Perfect for making your productions unforgettable. \#C274 Paper Pack
$\$ 19.95$

With Zebra's Coco Graphics Designer it's easy and enjoyable makIng your own greeting cards, signs, and banners.

## NEWS FLASH! CGF-220 and DMP-105 NOW SUFPDRTED

As of June 1, 1987 we are shipping version 2.3 of the CoCo Graphics Designer. This version includes drivers for the CGF-220 and DMP-105 printers, and improved menu dialogs for single disk drive users. Ey the time this issue appears in print we will probably also have added Clidata printer drivers - check with us if you have an Okidata.

Ordering Instructlons: All ordert add $\$ 5.00$ Shlpping \& Handling. UPS COD add 83.00. VISA/MC Accepted. NY residenteadd asles tax.

Also from Falsoft, The RAINBOW MAKER, . . .

Not only does Tandy produce our favorite CoCo, we think they produce the best and best-priced laptop portable and MS-DOS computers as well. We've found that when satisfied Color Computer users decide to add portability or move to MS-DOS, many stick with Tandy. For these people we publish PCM, The Personal Computer Magazine for Tandy Computer Users.

Each month in PCM, you'll find information and programs for the Tandy 100, 102, 200 and 600 portable computers. And you'll find even more coverage for their MS-DOS machines, the 1000, 1200, 2000 and 3000 , along with the great new 1000 EX, 1000 SX and 3000 HL .

## FREE PROGRAMS!

We learned from the rainbow that readers want programs to type in, so each month we bring you an assortment of them: games, utilities, graphics, and home and business applications.

## BAR CODE LISTINGS AND PROGRAM DISKS!

For portable users, PCM is the only home computer publication in the world that brings you programs in bar code, ready to scan into memory like magic with the sweep of a wand! For those who don't have time to type in listings, we offer a companion disk service with all the programs from the magazine.

## TUTORIALS AND PRODUCT REVIEWS!

As if all this weren't enough, we offer regular tutorials on telecommunications and hardware; assembly language, BASIC and PASCAL programming tips; and in-depth reviews of the new software, peripherals and services as they are released. Add it all up and we think you'll find PCM to be the most informative and fun magazine for this market today!

To order by phone (credit card orders only) call 800-847-0309, 8 a.m. to 5 p.m. EST. For other inquiries call 502-228-4492.

# Clever Uses for Memory 

By Tony DiStefano<br>Rainbow Contributing Editor

Many years ago, when the CoCo first came out, I was studying the memory map of the CoCo's CPU. I had only 4 K of memory then, but soon realized that this CPU could access a lot more. In fact, everyone should know by now that the CPU in the CoCo can access 64 K of memory.

I soon upgraded to 16 K ; that was easy. Then I read an article about upgrading the CoCo to 32 K using a technique called "piggyback." That was wonderful. I now had a full 32 K . Remember, this was before the time of 64 K chips. I also had BASIC and Extended BASIC. That was another 16 K , making a total of 48 K of memory. There was 16 K left, which was reserved for the cartridge slot. I started to wonder how I could put more memory in there. I now have a CoCo 3 with 512 K , and I am still asking myself the same question!

I looked in what were then the latest catalogs on memory chips and came across a memory chip called a 2114 . This is a 1 K - by four-bit static RAM chip. Static RAM means it does not have to be refreshed as does dynamic RAM. It took two of these chips to make IK of RAM. But I was desperate for more RAM, so I bought 16 of them, hoping to make an 8 K RAM module for the CoCo cartridge slot.

After many hours of work over a hot soldering iron, I managed to make this 8 K module work. It was mapped from $\$ \mathrm{C} 000$ to \$DFFF. (For you people who still think in decimal, from 49152 to 57343.) It was great; I was the only kid

Tony DiStefano is a well-known early specialist in computer hardware projects. He lives in Laval Ouest, Quebec.
on the block to have that memory. I had many hours of fun with it.

Then came the 64 K memory, and out went the 32 K piggyback memory: A little bit of modification to the board and a little bit of wiring to the 74LS02, and presto -64 K of memory. That was great, but when it came time to use my 8K RAM module, it didn't work anymore. What the heck, I had 64 K , so I just left it. Then I got my disk drive. It connected to the cartridge slot and there was no longer room for my 8 K module. I put it on a shelf, where it gathered dust for many years.

Just the other day, I was working on something that required a little bit of memory that was protected. By protected, I mean I could not write to it when I needed. That is not the case of the CoCo in the 64 K mode. You can write to anywhere in 64 K when in the "All-RAM" mode. I thought of using an EPROM. It would certainly do the job, but an EPROM is a lot of trouble. You have to get out the EPROM burner, run the EPROM software, and erase it every time you have to start anew.

Well, this wouldn't do, so I went over to my long-term storage bin and pulled out my old 8 K RAM module. With a bit of modification, I could make my RAM module into a ROM module, with just a switch to control it. Great idea - only one problem.

When it came time to write to the 8 K module, nothing worked. I couldn't figure it out. Why wasn't I able to write to the cartridge area? After a long look at the CoCo schematic, I figured it out. When I had added the 64 K memory chips, I had done a modification using the 74 LS 02 . That modification prevented the CoCo from writing to the cartridge slot area. I was in trouble; my
little 8 K module was now useless.
After some thought, I came up with a solution. It required a little bit of circuitry, but I was able to write to the cartridge area. For the circuit I am presenting here, I didn't want to use 16 chips to make 8 K of memory, so I looked into my newest catalog and found one chip that replaced all 16 of the old memory chips. This chip is a 6264 , which is an 8 K - by eight-bit memory chip all rolled into one chip; my, how technology has advanced!

Building this circuit is a two-step process. With the proper hardware, I set up a one-byte read/write memory latch and a flip-flop, mapped at \$FF40. Remember them, way back when I was explaining about TTL gates? The first step is to store or poke a value into the one-byte memory. I used a 74LS374 for this, which is an octal latch. When you store the eight-bit value to that latch, you also preset half of a 74LS74. This is a D-type flip-flop with preset and clear. The output of this flip-flop goes to one side of a dual-input OR gate. You now have a valid byte in the latch and have flipped the flip-flop.

The second step is to read a byte from the 8 K module. Remember that this read is to the non-writable area from $\$ C 000$ to $\$ D F F F$, where the module is. The read does two things; first, it selects the 8 K module. You are reading this location using a load or a peek command. But, if you look at the circuit in Figure 1, you will see that the output of the OR gate goes to the R/W (read/ write) line of the memory. Normally, when you read from this location, the R/ W line is high, which puts the chip in the read mode. Now that the flip-flop is flipped, however, the R/W line will go low when you read from the area. So,
the memory chip goes into the write mode.

But, the CPU is reading, and if the CPU is reading and the memory chip is writing, where does the data come from? Well, remember the latch? The output of the OR gate is also connected to the Output Enable of our latch. The memory chip gets its data from the latch, which is putting its data on the bus. There is no conflict because nothing else is putting anything on the bus; the CPU is reading and the memory chip wants data in the write mode. This action causes the data that we put into the latch to be put into the memory chip. That is how you write to an area of memory that is not writable. To end things, when we are finished reading, or should I say writing, the flip-flop is flopped back to the original state.

To summarize, every time you want to write to a location from $\$ \mathrm{C} 000$ to \$DFFF, you must first store or poke that data to $\$$ FF40. That loads up the
latch and flips the flip-flop. Then, read the location you wanted to write to, to transfer the data into it. That's all there is to it! By the way, it is automatically write-protected. You can't write to it and change the data - that is why I made this in the first place.

Now for the construction of the project. There are only four parts to it, as you can see from the schematic in Figure 1. In the case of the 74LS74 and the 74LS32, unmarked pins are unused. Here is a list of connections to the chips that connect +5 V and GND:

| IC \# | Name | $\mathbf{+ 5 V}$ | GND |
| :--- | :--- | ---: | :--- |
|  |  |  |  |
| U1 | 6264 | 28 | 14 |
| U2 | 74LS374 | 20 | 10 |
| U3 | 74LS32 | 14 | 7 |
| U4 | 74LS74 | 14 | 7 |

It is recommended that you put all of these chips into sockets because if you make a mistake and burn out one of
them, it is a real pain to unsolder all the connections. You will also need a board to mount the parts on. You can get such a board from C.R.C. Computers Inc., (514) 383-5293. In fact, they have all the parts you need. The standard project building tools are necessary for this project.

A note to people who are using a Multi-Pak: In order to use this module with the Multi-Pak, you must set the switch to the slot that the module is in. If you have a disk controller and are using Disk Extended BASIC, you can switch to the modules slot by software, but you will lose Disk BASIC software, and the computer will crash. A good knowledge of machine language programming and Disk Extended BASIC is necessary to avoid crashing. The same goes with the CoCo 3. You can use it with the CoCo 3, but you must know how to switch into the ROM/RAM mode. Again, a knowledge of the machine is necessary.

Figure 1

# Looking for CoCo 3 Answers 

By Richard E. Esposito Rainbow Contributing Editor<br>with Richard W. Libra

盯I recently purchased a new CoCo 3 and a Panasonic KX-P1092 DMP. Can you tell me where I can get a graphics screen dump for my printer that will at least work for PMODE 1 through 4 screens and possibly for the new high resolution screens? Do you know of a non-OS-9 editor for the CoCo 3 that uses the Hi-Res text screens and large memory capacity? I'd like the editor to be invisible and to be able to enter and execute BASIC commands from inside the editor. I am also looking for a smart terminal program that supports the screen and memory capabilities of the CoCo 3 and emulates at least a VT52 terminal. Do you know if anyone has developed a validated Ada compiler package? I have OS-9 Level I and, after reading the documentation several times, I can still barely create a login command file. I have heard many rumors, accusations and praises about OS-9 Level II. I would like to use OS-9, but its user-hostility has made me afraid of it.

Marc Kovner
River Ridge, LA

RYou can get a reprint of "Printer Answers" from the March 1985 issue of HOT CoCo. It contained a program, VersaDump, which is a

[^13]
screen-dump generator for most 9-pin, dot matrix printers using PMODE3 and 4 screens. Write to: CW Communications, Peterborough, NH 03458. Dr. Preble's Programs ( 6540 Outer Loop, Louisville, KY 40228, 502-966-8281) markets Basic Freedom, a full-screen editor for BASIC programming (\$29.95). Extended memory support for CoCo 3 BASIC is currently available only for HSCREENs, RAM disks and print spoolers. The only terminal program for the CoCo 3 with VT-100 support that I know of is Cer-Comp's Data-Pack III Plus Version 1.1 (\$59.95). You may see an Ada package for the CoCo at some future date, but I doubt if you will ever see a validated version. The most likely source of such a product would be Frank Hogg Lab. The OS-9 Level II documentation is much better than that for Level I. Level II has 1100-plus pages.

## Wants to Use Disk

目I have backed up my ROM packs using ROM Pack Roundup from the October 1984 issue and ROMRAM from the March 1984 issue. I have been using most of them successfully with my previous cassette-based system. I recently purchased a Radio Shack Drive 0 and find that I cannot get the programs to execute after saving them to disk. I would like to use Scripsit, ED$\mathrm{TASM}^{+}$, and Spectaculator for creating disk files once I can get them to execute from disk. My CoCo 2 was purchased as a $16 \mathrm{~K} E C B$ at the end of 1983 and its serial number is 001698 and model number is 26-3027. I have since upgraded to 64 K . Another item I am concerned about is my VIP terminal programs. The cassette version works, except when I try to print the buffer. It prints the first page and then locks up. Pushing reset is the only way out. The disk version loads and the title screen appears, but then an ' $E$ ' appears above the title, the disk keeps running, and nothing else happens.

Brock Beske Mankato, MN

RFor programs like Spectaculator that generate files, the files will still go to tape. While patching the file routines is possible, it is no simple task. The easiest way would be to purchase the disk versions of those routines. In that vein, I must ask why Scripsit and Spectaculator? These are far from the best the CoCo has to offer. I suggest you consider disk versions of Telewriter and Dynacalc as replacements. The VIP terminal program, to my knowledge, is no longer marketed. Get a disk terminal
program with XON/XOFF upload/ download protocol so you can reliably transfer files and access Delphi and BBSs.

## Remote Keyboard

I've read Marty Goodman's advice to those having trouble finding room for the CoCo with Multi-Pak attached. He suggested to "make a remote keyboard, and put the main CoCo system below, above, or to one side of your desk." Sounds good to me, but how does one do it? I'm not familiar with availability or sources for keyboards nor proper methods for connecting them. If keyboards are too expensive or difficult to hook up, can another computer, if readily available, hook up instead of a keyboard? And if so, how? W.V. Barton McPherson, KS

RHold off a bit on that one. A number of companies are working on IBM PC keyboard adapters for the CoCo. I expect to see them at RAINBOWfest-Princeton.

## Calling ASCII

B
I cannot call up ASCII format programs. I download from other systems into BASIC. I have a CoCo 2 with cassette drive and modem $D / L$ Program Pak. Can you help?

Andy Brady
Lake Worth, FL

RAfter you download the programs, load them into an ASCII word processor and edit them so that each line starts with a line number and there are no statements that continue onto a second line. Save the files back to tape and then they should load OK.

## Address Conversion

䁖BASIC programs for the CoCo are readily transferable to $I B M P C s$ using CoCoUtil. However, machine language pokes within BASIC, when transferred, yield incorrect code due to differences in program map location. Do conversion tables exist for map location of CoCo Disk BASIC 1.0 or 1.1 to a PC BASIC such as GW-BASIC?

Robert Freedman Mars, PA

RUnfortunately, the PEEK-POKE address conversion is not that simple. From a user's point of view, the BASICs are quite similar, while at the machine level they are different to the
extent that a simple PEEK-POLKE on one computer can easily track to a userprovided machine language subroutine in the other.

## Those Noisy Drives

gI purchased two TEAC FD-55As about two years ago. I have always thought they are pretty noisy, especially when compared to other computers like the Tandy 1000. Are they noisy because they are in a vertical case or because they are external? They are supposed to be good drives. Can you offer any light on the subject?

Robert Jobin
Theodore, $A L$

RThe older TEAC half-high drives do run noisy. It is inherent in the drives' design and not related to their physical orientation. These drives are reputed for their reliability, and the later models (with BV suffix) do run quieter.

## CoCo 3 and the RS-232

BI$I$ recently purchased a Color Computer 3 and hooked my RS-232 to it, expecting it to be compatible. When I typed EXEC\&HCOOO, the computer refused to operate the interface. Upon testing the connection and the DIPswitches, I noticed that the Pak worked only during the computer's first cold start. I thought all of Radio Shack hardware is compatible with the CoCo 3. Is there any way I can fix the RS-232 pack? It will not lock up after the first cold start.

> Daryl Fortney Lancaster, PA

RThe CoCo 3 will run many CoCo 2 programs, but not all. According to Tandy, all programs will run "if" they follow the rules," but, unfortunately, not even Tandy itself has followed the rules (e.g., the recently released ROM pack Cyus is not CoCo 3 compatible). June's column contained a program, UNOO.BAS, that will aid in running some, but not all, CoCo 2 software on the CoCo 3. The best way to use your RS-232 pack with the CoCo 3 is with a Multi-Pak interface (upgraded for CoCo 3 use) and a real terminal program with 80 -column support and Xmodem upload/download protocol.

## Directory Printing

$\theta^{P}$I have a CoCo 2 and a DMP-110 printer plus disk drive. I use POIKE111,254:0IR to print out the
directory. I would like to know how to move the printing during the POKE111,254:0IR to another position on the paper. This would enable me to get more use out of the paper in the printer. The program I use is modified from the one-liner on Page 28 of the May issue.

```
10 PRINT#-2,CHR$(27);CHR$(7)
(;CHR$(27); CHRT (28):PRINTH -
2:INPUT"DISK NAME";X$:PRINTH-
2,X$:PRINTम-2,"-.-.-...":POKE
111,254:OIR:PRINT#-2:PRINTम-2,
"FREE GRANULES"FREE(0)"
```

I can move the disk name and the granules by adding a PRINTH2, TAB(40) after the PRINTम-2 but not for the POKE111,254:0IR. Is it possible?

## Edward Kotler El Cajon, CA

RWhen you POIKE111, 254, you are modifying the machine language program that is accessed when you type OIR to use device - 2 (Note: 256$2=254$ ). To do what you want would require either intercepting the CHROUT vector with a machine language routine or writing a routine from scratch using disk I/O to read the sectors containing the disk directory directly.

## Terminal Software Sources

-lam interested in finding a source for MikeyTerm or Greg-E-Term. I have a CoCo 2 with JDOS, RS-DOS, RS232 cartridge and a Modem lB without a compatible terminal program. I undersiand I can't contact Delphi or any other $B B S$, so I'm writing to find a source other than the above source.

Richard Schultz Carmichael, C. A

RBoth MikeyTerm and Greg.ETerm are available from the authors for $\$ 10$ plus an RS formatted disk. Write the authors at: Michael Ward, 1807 Cortez, Coral Gables, FL 33134, and Greg Miller, 9575 Roston Road, Grandledge, MI 48837, respectively.

## Boolean Algebra?

$\theta$I have seen Line 3 in the program below in one form or another in several programs published in THE RAINBOW. For example, the program Palette Color Checker in the April issue,

Page 80, lines 100 and 110. I know that Boolean algebra is involved here, but I cannot figure out how and why it works, or why it works with the numbers 31 and 63 but not with 9 or 29. It counts from 0 to 31 over and over, but with another number it just counts 0 to 1 or not at all. Can you shed some light on this for me?

10 CLS
20 P\$=INKEY\$: IFP\$=""THEN2
30 A=A+1 AND 31:PRINT@199, A
40 GOTO 2
George Quellhorst
Painesville, OH

RThirty-one is the equivalent of the binary number 00011111 , and 63 is the equivalent of the binary number 00111111 . If you AND a number with 63 , the net effect is that you get the remainder that would result from dividing 63 into that number. The same is true for any integer number that has its binary equivalent of all consecutive Is to the left of the decimal point. Now, 9 is the equivalent of 000001001, and 29 is the equivalent of 00011101 and consequently, with them, the above is not true. For a more complete description of why these conclusions hold, it would be necessary to go into a long treatise on Boolean algebra. PLUG-N-GO FOR THE GOCQ

## How Much Memory?

I own a Color Computer, extended, with dual disk drive. I also have the older model Multi-Pak, the Color File cartridge, and Color Profile. I cannot get Color Profile to work even though there seems to be nothing wrong with it. There is no one in this area qualified to give instructions on it. The Color File cartridge works fine, with one exception. I cannot default the baud rate to the printer, hence it is extremely slow. Can the CoCo 2 be upgraded to $128 K$ ? Is there a program that would allow me to put the Color File cartridge onto disk and also enable me to default the baud? I have an address list of approximately 340 names and my 64 K cannot handle it on one tape, so I have to load half at a time and print them before I can load the second half. I need the extra memory to handle the entire list at one time. I purchased the CoCo 3 because it has 128 K only to find that all I have available is what I now have in my Extended BASIC CoCo.

Ronald Rodriguez
Somerset, MA

RYour Color Profile disk should work just fine. If you are having problems with the disk, you should contact the Radio Shack from which you purchased the program. Now, in answer to your other questions, you can obtain memory upgrades to 128 K , or even 512 K , for the CoCo 1 and 2; however, this memory would not be used in the CoCo as contiguous memory. As a result, it would not be used by commercial sof tware, such as Color File or Color Profile, for data storage. In most cases, these upgrades are designed with the hacker in mind or for use as a RAM disk or print spooler. For your purposes, the best solution would be to use the CoCo 3 with OS-9 Level II and an OS-9 database program.

For a quicker response, your questions may also be submitted through rainbow's CoCo SIG on Delphi. From the CoCo SIG> prompt, pick Rainbow Magazine Services, then, at the RAINBOW > prompt, type ASK for "Ask the Experts" to arrive at the EXPERTS> prompt, where you can select the "Doctor ASCII" online form which has complete instructions.

FOR DELIVERY IN AUGUST, 1987

Dale Puckett and Peter Dibble have done it again! They've been busy pulling apart, examining and testing the new OS-9 Level II. Find out what they've discovered with The Complete Rainbow Guide to OS-9 Level II, Vol I: A Beginners Guide to Windows.

Let these popular authors open the window to OS-9 for you.
This easy-to-follow book leads you step by step through OS-9 Level II. Clear, precise text, insightful examples and helpful tips make this almost 300 -page book an indispensable resource. This book will only be available from us by advance order. We will only print sufficient copies to cover the orders on hand.

## Get Yours for Only \$19.95!

## ALSO AVAILABLE - The Windows \& Applications Disk

An adjunct and complement to the book. You'll want the book for the tutorials and the disk to save the many hours of typing in lengthy programs. Disk $\$ 19.95$

# RECEVED \& CERTIFIED 

#### Abstract

The following products have recently been received by THE RAINBOW, examined by our magazine staff and approved for the Rainbow Seal of Certification, your assurance that we have seen the product and have ascertained that it is what it purports to be.

This month the Seal of Certification has been issued to:

#### Abstract

20 Solved Adventures, a booklet listing the solutions to 20 popular Adventure games. Volumes 3 and 4 are now available in English, French and Spanish. Lomiq, Inc., CP 105 Succursale A, Jonquiere, Quebec, Canada G7X 7V8; $\$ 8$ per volume.

ALF, an artificial learning file that generates a master file of questions and answers. The user can generate a master file for any topic and have up to 300 different answers in memory at one time. For the CoCo 1, 2 and 3. High Altitude Software, 339 32 $1 / 2$ Road, Palisade, CO 81526; 88.95 .

Art Deli, a set of 10 picture disks featuring holiday and seasonal pictures. Each disk contains 22 pictures for a total of 440 pictures. Every picture is black and white, PMODE4, and can be loaded into CoCo Max or your favorite graphics software program. For the CoCo 1, 2 and 3. Specialty Projects, 4810 McCrory, Memphis, TN 38122; (901) 682-8737, \$12.95 per disk; $\$ 99.95$ set of 10 disks plus $\$ 3 \mathrm{~S} / \mathrm{H}$.

Art Gallery II, an improved version of the 32 K Art Gallery program. It now reads Graphicom and CoCo Max pictures. For the CoCo 1, 2 and 3. Tothian Software, Box 663, Rimersburg, VA 16248; $\$ 19.95$.

Blackbook, a 16 K address book that stores names, addresses and phone numbers on disk for easy retrieval. Features search selection, password protection, edit and add. For the CoCo 1, 2 and 3. Cocotronics Software, 29 Southbrook, Irvine, CA 92714; (714) 651-0283, 87.95 plus $\$ 1 \mathrm{~S} / \mathrm{H}$.

Color File II, a 16 K filing system that helps you retrieve and use information. The program comes with five predefined file types and also lets you
define your own files. For the CoCo 1, 2 and 3. Tandy Corporation; \$24.95. Available in Radio Shack stores nationwide.

Financial Time Conversions, a 32 K program that performs calculations necessary to make good financial decisions. The program enables you to compare the value of different types of transactions at the same point in time. It will also print a loan amortization list. For the CoCo 1, 2 and 3. Prometheus Software, 14684 Joshua Tree Avenue, Moreno Valley, CA 92388; $\$ 14$.

Fraze Craze, a 128 K computer version of the popular TV program Wheel of Fortune. Score points as you select the correct letters. For the CoCo 3. RAM Electronics, 814 Josephine Street, Monmouth, OR 97361; (503) 838-4144, $\$ 12.95$.

GRPH200, a 16 K position-independent ML graphics dump designed specifically for the Tandy DMP-200 printer. Features vertical page placement, graphics preview, and vertical or horizontal and vertical manipulation of the graphics pages. For the CoCo 1 and 2. Seibyte Software, P.O. Box 6464, Bakersfield, CA 93386; Disk, \$16.95; Tape, $\$ 15.95$.

## Hall of the King III: The Earthstone

 Revealed, a 64 K graphics Adventure game. The final chapter in a trilogy of two disk Adventures. Your quest is to enter the very heart of the mountain known as Firrhest and find the Earthstone to regain the ancient wealth and power for the Dwarvan race. For the CoCo 1, 2 and 3. Prickly-Pear Software, 213 La Mirada, El Paso, TX 79932; (915) 584-7784, \$39.95.Indiana Jim, a 64 K Adventure game. Join Indiana Jim in his efforts to avoid
danger as he eludes the Indians. For the CoCo 2 and 3. Lomiq, Inc., CP 105, Succursale A, Jonquiere, Quebec, Canada G7X 7 V8; 828.95 U.S.; 838.95 Cdn.

LOTZALUK, a 32 K program to help increase your odds of picking a winning Lotto $6 / 49$ chance. For the CoCo 1, 2 and 3. William Brigance, Sr., 1001 Fairweather Drive, Sacramento, CA 95833; \$29.95.

Noteland, a 32 K music education program for beginners that lets you play a tune with a joystick or cursor keys and save tunes on cassette or disk. For the CoCo 1, 2 and 3. Elegant Software, 89 Massachusetts Avenue, Box 25, Boston, MA 02115; $\$ 24.95$.

POLYTINT, a 128 K program that permits recoloring of PMODE3 and PMODE4 images in 16 colors. For the CoCo 3. Boiling Spring Lakes Software, 411 Pine Lake Road, Southport, NC 28461; (919) 845-2881, \$19.

Rescue on Fractalus!, a 128 K strategy game. Your mission is to rescue pilots shot down and stranded on the brutal planet of Fractalus and help lead our forces to victory. For the CoCo 3. Epyx Computer Software, Sunnyvale, CA; \$29.95. Available in Radio Shack stores nationwide.

The Seal of Cerification program is open to all manufacturers of products for the Tandy Color Computer, regardless of whether they advertise in the rainbow.
By awarding a Seal, the magazine certifies the product does exist - that we have examined it and have a sample copy - but this does nol constitute any guarantee of satisfaction. As soon as possible, these hardware or software items will be forwarded to the rainbow reviewers for evaluation.

- Judi Hutchinson

## Software Review

# Powerful New Utilities for the CoCo 3 

How many of you have bought a new utility program for your CoCo to find out that it was too much trouble to look up the loading address or figure out the offset, or, no matter what, the miserable thing crashed your computer if you sneezed at the wrong time? I know that it's happened to me more times than I want to remember. Bangert Software Systems has four utilities for the CoCo 3 that will not become dusty, never used relics. They work, they do what they're supposed to do, and they recover from a reset intact.

The system requirements are a CoCo 3 , one disk drive, either, RGB or composite monitor, or a TV, and a printer for two of the four programs. They can be copied to one disk so you have almost the equivalent of an OS-9 startup file or an MS-DOS batch file.

Each utility is supplied on a separate disk, not copyprotected, along with the assembly language source code, a special file called SPREXIT.BIN (which is called by pressing the reset key and leaves with all utilities still intact), and a whole barrel full of other supporting files that allow the user to list the full manual to the screen and send it to the printer, BASIC loader programs for each utility, and a master loader for all of them.

Don't let the assembly language reference scare you. You don't need it to run any of these routines. It is supplied only as an extra for those who are interested.

Each utility disk has a program called PRINT. BRS on it that lets you RUN "PRINT and be prompted as to the documents you want sent to your printer. You have the option of entering ALL, and I suggest that be done. Then you'll have the total manual for all four utilities, and it will give you an idea of how they interact and whether you want to purchase the rest of the package. Unless the final edition has one small bug perfected, you will have to first load PRINT. BAS and then list Line 40. If the last word in that line is STARTTYP, you will have to edit Line 40. Change STARTTYP to STARTYPM. Then type RUN, answer the prompts, and you can go feed the cat while the manual is being printed out. Also, when asked for the baud rate for your printer, just enter the value you're poking, not the location. That is, for 9600 enter 1 , not 150,1 .

If you don't have a printer, you may use the LIST program to read the same information on your screen. This is an example of the attention to detail Bangert has employed to make these utilities easy to use.

Print Spooler is probably the most usef ul of the package. First of all, you may LLIST a BASIC program to the printer, and while the printer is churning away, you can continue to edit the same program, run it, load another program and run it, or go watch TV. If you have a BASIC word processor, the document can be printed while you work on another one, clean up your disk files or write another program. Formatted LLISTings can be made with a simple poke. If you're writing a program, a formatted LLIST will make debugging much simpler. All baud rates are allowed, whether using a serial or parallel printer.

The spooler is a tad over 11 K , but will process anything within the limits of memory.

Directory Date is another important utility if you have a lot of files on a lot of disks and tend to lose track of when files or programs were last updated. It prompts the user to set the time and date on power up and stamps that information on all disk saves. That means if you type DIR, the time and date you saved the file will be shown.

Typ-O-Matic incorporates several functions. The first is an automatic key repeat, which repeats each key if held down for a half second. The next is an audible key click, which means when you press a key, you can hear a soft thump. Once you use these, you won't want to do without them. If you have the screen print utility installed, it can be called from Typ-O-Malic with two keystrokes. The last feature, and least useful, is an alternate keypad mode. The author has given 10 keys on the computer a second definition, which are accessed by pressing the ALT key. This
> "They work, they do what they're supposed to do, and they recover from a reset intact."

is designed to give you a numeric keypad and hardly seems worth the trouble, but more creative types than 1 might think differently. Incidentally, the 10 keys plus 25 more can be redefined by the user and saved into a startup file.

Screenprint prints the contents of your Hi-Res text screen to your printer on command.

There were a few aspects of these utilities that I found troublesome. The auto key repeat works with CTRL and ALT, which makes the user stop and think before typing a two-key combination using them. When the ALT key is depressed to change to the redefined keyboard, an ' $!$ ' is generated on the screen. These aren't bugs, only a little awkward; however, when I called Bangert the author said he had already corrected these plus the Print program listing error.

I should mention one other undocumented feature of the date/time module. When you first boot your computer, you are prompted to enter the time and date. The program asks for MMDD; that is, May l would be entered 0501, with no provision for the year. It will accept five digits, so you can enter 05017 for May l, 1987. Actually, you can enter the full year until October rolls around, because the leading zero is ignored.

This is an excellent package. It's user-friendly and easy to install; it can be customized to your system, thanks to the examples and the BASIC loaders, and also provides all the assembly language source code. In my opinion the key click, key repeat, print spooler and date/time routines are worth the price by themselves.

I also congratulate Bangert for publishing a program(s) that requires only six or seven commands to remember, operates transparently, uses only 112 bytes of BASIC memory, and pays attention to both the beginner and advanced user.
(Bangert Software Systems, P.O. Box 21056, Indianapolis, IN 46221; 317-262-8855, \$9.95 per module; All, \$24.95)

# Satisfy Your Appetite for Action With Donut Dilemma 

NovaSoft has added a new program, Donut Dilemma, to their list of excellent arcade games. The documentation is covered on two pages. As in most arcade games, you do not need much in the way of instructions; all you really need is experience. The documentation also includes a good description of the arcade scenario.

Angry Angelo has raided Antonio's Donut Factory sending everything into disarray. Donuts have come alive. They are jumping around in a wild frenzy and are deadly to the touch. Machines have gone out of control, throwing cooking fat, dough and icing sugar everywhere. All these can also be fatal to Antonio. Your job is to help Antonio climb ladders, jump platforms and ride elevators to reach the top floor and shut down the factory's power generator. For each floor level (except Floor 10), you must get to the small elevator platform that takes you up through the ceiling and into the next floor level. Unfortunately, due to circumstances beyond anyone's control, the three circuit breakers on each floor that activate the elevators have been switched off. You must, therefore, activate all three circuit breakers to activate the elevator for that floor. Bouncing donuts will be in your way. The only way to get past them is to pop them by throwing a handful of dough mix at them.
> "Your ultimate goal is to reach Floor 10 and deactivate the power generator to restore law and order in Antonio's Donut Factory."

To get some dough mix, you must first get the blue bag. You see, each floor has a blue bag that contains five handfuls of dough. Your ultimate goal is to reach Floor 10 and deactivate the power generator to restore law and order in Antonio's Donut Factory. Besides having to work against all these obstacles, you also have to work against the clock. If you do get into trouble, or rather, when you get into deep trouble, there is a panic button available that you can use once during each game. This refills your dough bag and temporarily stalls the timer.

When you first start a game, you have the option of playing a practice game. This is a very nice feature because, otherwise, I would have never seen all 10 floors. The practice game is just like a regular game except there is no scoring and you have unlimited lives. This is where you can get all the practice you want on each level. You do have to start from the bottom, though; you cannot just pick the level or floor you want. The instructions state that Floor 9 is not impossible; it just needs a lot of thought. I can agree and add, it takes some good timing. Once you think you have had enough practice, exit the practice mode and see how good you are on the regular game.

Donut Dilemma only requires 32 K and runs as well on the CoCol as it does on the CoCo 3 . I used the disk version, but it also comes on tape.

I don't think you can go wrong with Donut Dilemma. It can be a source of hours of fun.

# Custom Palette Designer Makes Color-Handling a Breeze 

I have been involved with the TRS-80 world since 1977 when I bought a 4 K Level I, Model I computer. I have always been interested in graphics and love the way they've developed. I am always interested in programs that make graphics or color-handling easier, and the Custom Palette Designer Version 1.0 makes palette color manipulation a breeze. This well-written program requires a 128 K CoCo 3 using either 1.0 or 1.1 Disk BASIC, and at least one disk drive. The Custom Palette Designer allows you to change any palette slot to any other color you desire - without having to remember names or numbers of colors. The program modifies any or all of the 16 slots $(0-15)$ to any of the 64 colors available on the CoCo 3 .

After loading the program, you are asked if you are using the RGB monitor or not, and then you are presented with the main screen, which shows the 16 default palette slots and a pointer beneath Slot 0 . Altering the color contents of the palette slots is easy and handled with the arrow keys. The up and down arrows move the pointer either forward or backward one slot at a time, and the left and right arrows change the color of the palette.

The Custom Palette Designer also makes use of the additional keys on the CoCo 3 keyboard. The FI key resets the foreground color to white; F2 resets the background color to black; and the ALT key resets all the palettes back to the default colors. This is especially helpful if you make an error and need to start all over again with a clean slate. After you have the palette slots the color you want them, you have the option of saving the configured palettes to disk as an ASCII file with the line numbers of your choice so you can use the files as a subroutine.

The power of this program is obvious. If you'd like to give your basic CoCo 3 programs a different look, and you use the PALETTE command a lot but don't want to be bothered with changing the color manually each time you run it, create several alternate palette subroutines, merge them into the BaSIC program you're using, and, presto, different colors!

The Custom Palette Designer has a place in the library of the BASIC programmer. The manual is small but easy to use, and the software can be a great timesaver.

Hint . . .

## Useful Commands for Controlling Graphics

Most people, when writing graphics programs for the CoCo, use an infinite loop (e.g., 1000 GOTO 1000) to make the graphics stay on the screen. In many cases, it is better to use the LINEINPUT or INKEY\$ commands. These commands allow you to enter a line of text or just a single keystroke, which the program can interpret, transferring control to the appropriate line. This is especially usef ul if you want to graph functions and you want to see several different values graphed.

# Basic Freedom Eases Programming in BASIC 

BASIC on the CoCo is a powerful tool. It has easy to use commands to generate graphics and sound, and manipulate text and numbers, and it can access both random and sequential files on disk. Even with all this power, however, we often find ourselves wanting "just one more feature" out of BASIC. Many of those people's wishes have now been granted: Dr. Preble's Programs has just introduced Basic Freedom, a utility to add several new features to BASIC and simplify its use for programmers.

Basic Freedom is a full screen editor for either the original CoCo 1 or 2 or the new CoCo 3 . It works in the 32 -column mode, or the 40 - or 80 -column mode on the CoCo 3 . In addition, Basic Freedom modified BASIC so that lowercase commands can be executed, added the ability to repeat any key just by holding it down, and makes the LIST command more powerful. All of this is done without losing any of BASIC's memory as Basic Freedom resides in high memory.

Basic Freedom comes on a non-protected disk for both the CoCo 3 and the original CoCo and on cassette only for the CoCol or 2 . It requires 64 K on the original CoCo or 128 K on the CoCo 3. In addition to the cassette or disk, Basic Freedom includes a six-page manual. The manual is well-written, clear and easy to understand.
Loading Basic Freedom couldn't be simpler. For those with the DOS command, simply put the disk that the program comes on in Drive 0 and type DOS. For those without a DOS command, simply type RUN "*". The cassette version is loaded with a simple CLDADM statement. Once the program loads, it is ready to use.

To use Basic Freedom's full screen editor, you type EDIT ON . On the CoCo 3, you can use the F2 key as a shortcut to turn the full screen edit mode on. Once you have the edit mode on, you can move the cursor anywhere on the screen with the arrow keys and edit the text on the screen with the ease of a word processor. After you edit a line of text, you move the cursor to the end of the line and press ENTER. The line is now entered into the computer with the changes you just made. While full screen editing, you may move the

## ADVENTURE LOVERS

Find the ledger hidden on "Cloud 9" within a two week period and you will win $\$ 25$ - $\$ 50$ - or $\$ 100!!$ A great game for all ages! Send $\$ 10$ for tape or disk to SUN RAY Box 681623<br>San Antonio, Texas 78268

cursor, delete characters and insert characters. You can always tell when the editor is on by looking at your cursor. In the 40 - or 80 -column modes, it is solid instead of blinking when the editor is on. In the 32 -column mode, the cursor blinks a single color when the editor is on.

In addition to the full screen editor and the lowercase interpreter, Basic Freedom also provides a more powerful LIST command. In addition to the normal LIST functions, you can list a number of lines past a line number, such as the next five lines after Line 40 , you can add a semicolon to the end of a line to execute a command after the LIST is over, and you can add a comma to a LIST command to list another set of lines after the ones you list. As an example:

$$
\text { LIST } 10-20,50!\mathrm{B}, 90,100-: \text { EDIT ON }
$$

This command would list lines 10 through 20, eight lines starting at Line 50 , Line 90 , Line 100 to the end of the program and would then turn on the full screen editor.

All these features add up to a program that makes programming in BASIC much easier and faster. If you do a lot of programming in BASIC, you will like this program. The bottom line is that this is a utility. You can use your CoCo without it, but it is much easier to program in BASIC with it. Is the added ease worth the price? Yes, the price is worth what you get and is in line with the rest of the market.

# Koronis Rift Lets You 'Shoot 'em up' and a Whole Lot More 

By Donald D. Dollberg

With the introduction of the Level II OS-9 operating system for the Color Computer 3, Tandy is now releasing several games that use this operating system. The latest game, Koronis Rift, is distributed by Tandy but was developed by Lucasfilm Games and Epyx. It will only run on a CoCo 3 and requires OS-9 Level II.

As has been Tandy's practice in the past, the OS-9 boot is on the game disk, so those not having OS-9 do not need to purchase it separately. The game is booted by typing DOS. For those with Disk Extended basic 2.0, you will need to type a short BASIC program, provided in the documentation, which performs the function of the DOS command. Upon initial loading of the game, you will be prompted as to the type of screen device available, i.e., composite or RGB monitor. Selection of the composite monitor allows viewing on a TV. Also, one joystick is required.

With the "technical" out of the way, just what is Koronis

Rift? Since one of the developers is Lucasfilms, of Star Wars fame, you should have guessed that this is another space Adventure. Well, you're partially correct. This is not an Adventure game as most of us know them, nor is it a continuous "shoot-'em-up" game, although you do get a chance every now and then to shoot down the aliens.

The premise of the game is simple. You are a technoscavenger or, in simple terms, a businessman trying to make a buck. In your trusty scoutcraft, you have come across the legendary planet Koronis, which is a high-tech graveyard of the Ancients - a confederation of over 30 different races who ruled the universe several hundred thousand years ago. The Ancients developed a technology that, even today, is unsurpassed.
Legend has it that the Ancients used the planet Koronis for testing their technology. Because of the deep rifts on

Koronis, it was an ideal testing ground for powerful weapons. Until now, no one has ever found the "fabled" planet Koronis - and there it is on the view screen of your scoutcraft!

You immediately put your ship into an orbit around Koronis and prepare to scavenge the planet for as much equipment as possible. With an advanced Psytek series computer in control of the scoutcraft, you beam down to the surface in a surface rover. When you land on Koronis, your radiation alarms sound, confirming the rumors that lethal radiation exists on Koronis. Luckily, your surface rover is equipped with a repo-tech robot that does the actual salvage operations once you find one of the Ancients' hulks, which house their high-tech equipment. Using the specialized radar in the scoutcraft, you guide the vehicle toward the first hulk with the joystick.

With all of the technical capablility available to you in the scoutcraft, this operation should be a "piece of cake," but is it? As you move along the rifts, you suddenly remember the other half of the Koronis legend. The hulks are protected by the Guardians, a race of geneticallyengineered warriors created by the Ancients. The Guardians were programmed by the Ancients to guard and defend their military stockpiles and have steadfastly refused to negotiate with anyone.

As you approach the first hulk on Rift 1 , you are thinking of the long and dangerous task ahead. The profits are enormous and you can quit at any time. However, while collecting equipment from the Ancients' hulks, be careful that the Guardian saucers don't destroy you first. As you
move from Rift 1 to Rift 20, you are able to make use of some of the equipment collected. You can also dismantle the equipment and eventually sell it for profit. If you make it to Rift 20, the Guardian base must be destroyed before you can claim the entire planet as your own.

Just what type of high-tech equipment will you find on Koronis and what do you do with it? The standard military systems that the Ancients used include chromoquantized lasers, which are capable of emiting a beam in a single color frequency; chromoquantized shields, which can defend against the lasers; standard power supply generators; high capacity energy storage devices; remote sensing devices, which are designed to locate specific types of hardware; electronic countermeasure devices, which are capable of interfering with enemy detection gear (making it difficult for the Guardians to find you); and propulsion modules, which can augment the power drive for the rover for different types of terrain.

As noted earlier, the Ancients were a Confederation of many races. Each race built its own version of military hardware, which was standardized throughout the Confederation. Since the races were not of equal intelligence, the same type of military hardware will have greater or lesser capability. As you travel around Koronis, you find some equipment to be more power-efficient, as well as more effective. So, you need to evaluate each item taken from the hulks and decide whether to put it into service in the rover or have it dismantled and sold for scrap.

At any time during the game, except when under attack, you can beam up to your orbiting scoutcraft. Once on board, you can have the Psytek 7500 Series Science Droid System analyze the equipment and install it in the rover to a maximum of six units or store the excess equipment in the scoutcraft's storage area. Equipment in storage can either be used later in the rover or you can have Psytek dismantle it for sale - which is how you make money, i.e., points, and eventually win the game.

Deciding which equipment modules to keep and which to dismantle is an important part of the game. Each module uses up a certain percentage of the rover's power supply and also has an efficiency percentage. The better modules use less power and are more efficient. They are found by indepth searching, as you move from one rift to the next. As modules are found, they must be analyzed. Psytek will perform the analysis and tell you the power usage, efficiency, and how many points will be earned for dismantling each module.

Some modules, when combined in the rover, provide even greater capability. For example, the generator and power reserve modules are needed to maintain a good power flow for all of the other modules and the rover's functions. Use of modules with high power requirements slow the rover's speed and may prevent you from firing your lasers at the Guardians.

You begin the game with a laser and a shield. As you fill the rover's cargo area, you must keep in mind the obvious fact that you will need a laser, shield, generator and maybe a power reserve. With the more powerful lasers, you also need better power sources because they require time to recharge. Also, the high power lasers cannot be fired continuously, so if you don't have a good aim you may be frustrated waiting for your next chance to shoot.

Lasers and shields operate at different wavelengths or colors of the spectrum. The rover has a monitor that
displays a horizontal bar graph showing the strength of the current shield in use. Six color bands are present; the length of the bar indicates how much protection your shield will give against a laser of that wavelength. Better shields give equal protection against all wavelengths. Some shields provide excellent protection against a few wavelengths and poor protection against the remaining wavelengths. This is
> "Overall, I liked this game and enjoyed it very much. The graphics are very well done, with fine detail given to the Psytek computer system and the hulks on the planet. The animation is realistic and gives the viewer the feeling of moving up and down over the hilly terrain of the planet."

good only if you know the color frequency of the alien's laser. The laser module works in the same way, but only fires at one wavelength.

The best laser is the one that is farthest away from the alien's color in the spectrum. On another monitor in the rover, you can find information on your current laser's operation. A vertical graph displays two bars. The left bar shows the color and a mount of power available for the laser, and the right bar shows the amount of power needed to fire. The left bar decreases with each shot so the laser can only be fired after it recharges to the power level indicated by the right bar. If there is no right bar, then you can fire almost continuously. The laser recharges better when there is a good power reserve module, but the power reserve module needs a good generator too

The documentation provided with the game is wellwritten and interesting. Even more interesting is the fact that the documentation never mentions the CoCo 3 but explains how to load the game into an Atari or Commodore computer! A separate instruction card provides directions on use with the CoCo 3. It appears that Tandy had Epyx port the game from these computers to the CoCo 3. This is a good sign. Since the CoCo 3 graphics screens are very similar to these machines, we should see more porting of software to the CoCo.

Overall, I liked this game and enjoyed it very much. The graphics are very well done, with fine detail given to the Psytek computer system and the hulks on the planet. The animation is realistic and gives the viewer the feeling of moving up and down over the hilly terrain of the planet. Koronis Rift is not a constant "shoot the aliens" game and does require the evaluation of the equipment you find so that you can make it to Rift 20. For those who like this type of game, I recommend that you start your salvage operations as soon as possible, and, "May the Force be with you."

[^15]
## Software Review

# Color Scripsit II Provides Power and Simplicity 

Radio Shack has a new word processing program, Color Scripsit II, for the original CoCo and the Color Computer 3. It comes on a cartridge and has no provision for disk use - all files are saved to, and loaded from, tape.
"Word processing," according to the introduction in the manual, "does for your writing what the automobile did for transportation. It provides you with a powerful new tool not available formerly to individuals." Color Scripsit II is aimed at the computer novice. While VIP Writer, for example, emphasizes its powerful features, $C S I I$ points to its simplicity. "Simply insert the Program Pak and turn on your computer. Select an activity from the Main Menu, and return to the Main Menu when the operation is finished."

That is not to say that CS $I I$ lacks sophistication. It certainly stands head and shoulders above the original cartridge Scripsit, which, it may be recalled, did not even permit varying the baud rate from the Radio Shack standard of 600 . The new program (not a revised version of the original by any means, but a totally new program) not only permits you to select the baud rate, but also to "tune" it, if your printer happens to require such a thing. And, unlike its predecessor, CS II produces ASCIIcompatible text files, yet can read files created by the old Scripsit.

Like most other word processors, CS II permits formatting, global search and replace, right-justification, block moving, block copying, block deleting, centering, headers and footers, page numbering, underlining and printer control codes.

CSII does not have wide, high-resolution display screens. A 38 -by- 24 screen, genuine lowercase characters and a variety of foreground/background color choices are available on the Color Computer 3. With the CoCo 1 or 2 , you can have any display you want, as long as you want the basic 32-by-16 black on green.

The eight menu options are: Edit, View/Format, Print, Unformatted Print, Load from Tape, Append from Tape, Save to Tape and Skip Tape File. Edit is where you go to write and make changes in your text. Unformatted Print prints a hard copy of your text file with format command lines treated as though they were printable text instead of commands. Skip Tape File is the equivalent of BASIC's SKIPF command. It advances the tape to the start of the next file, while displaying the title of the file that's being bypassed.

Edit has two subsidiaries - command mode and insert mode. When you press E for Edit from the main menu, you are placed in command mode. Before you can start writing, you must get into insert mode. In insert mode, all you can do is write (and backspace with a destructive cursor). To do anything else, you must break out of insert mode, move the cursor to the appropriate point, and then insert or "replace" as required.
Personally, I found all this mode-switching a bit annoying, but maybe that's because I'm used to a word processor that does things differently. Also, the screen and the cursor look exactly the same in the two modes. A slight variation would have been helpful.

The view mode displays the current page of your document as it would appear if it were a printed page. What you see are not the actual characters - they would be too small to be legible - but a depiction of the location of characters and spaces on the page.

What you get is a rectangle with blocks and dashes that show you how the paragraphs will be arranged on the page. I would have liked this much better if the screen background had been white instead of green. Along with the blocks and dashes, you get a cursor (represented by a cross), which you move with the arrows until it's over the paragraph you want to format. Then you enter the format mode, where you make your formatting selections by answering the onscreen prompts. Each selection generates a format command line, which is inserted into the textfile. As an alternative, you may type your format command lines manually, in the same way that you type in text.

Perhaps the best feature of CS II is its instruction manual. It has 63 pages - but its size is only $4-$ by $-41 / 2$ inches. It makes learning CS II easy for those who have never used a word processor.

As good as it is, however, the manual is not without its faults. It lacks an index, and one important feature called Fill is explained inadequately.

The underlining and other formatting features are command lines, preceded and followed by carriage returns, and they apply to subsequent paragraphs until amended by subsequent format command lines. But suppose you want to underline only a single word in a line, as I have just done.

That's where Fill comes in. You must type the word to be underlined as though it were a separate paragraph and then use fill to join the separate paragraphs into a single line. I had a lot of trouble figuring out how to get it to work right, finally discovering by trial and error that any line to be joined to a subsequent one must have no space preceding its carriage return and that the No Fill command must precede rather than follow the last line to be filled.

Color Scripsit II requires a minimum of 16 K . On a 64 K CoCo, the text buffer will hold 47,607 characters.
(Tandy Corporation; \$29.95. Available in Radio Shack stores nationwide.)

Hint . .

## A Passel of Pokes

When you ask your CoCo to print a number, it prints your number with a leading blank space if it is positive and with a minus sign if it is negative. To eliminate the sign altogether, enter POKE \&HEDE 4, 18:POKE 8.HBDE5,18. Please note this will also remove the minus signs! To restore your CoCo so that it includes the sign, enter PGI<E \&HBDE4, \&HA7:POKE 8.HBDE5, \&HC0.

If you want a plus sign instead of the blank space for positive numbers, enter POIKE $8 . \mathrm{HEDDD}, \& \mathrm{H} 2 \mathrm{~B}$. To restore your CoCo, enter POKE £HBDDD, 8.H20. All of these pokes work with the CoCo 1, 2 and 3.

Marc Gagnon<br>Quebec, Canada

## Software Review

## Super Extended Basic Unravelled for the CoCo 3

Super Extended Basic Unravelled is a bound, soft-cover, magazine-sized book that details everything you want to know about the super high resolution graphics commands and BASIC enhancements on the Color Computer 3. It provides the reader with a complete and detailed, fully commented source listing of the super high resolution graphics packages available on the CoCo 3 with Color BASIC 2.0 ROM .
The book is not a tutorial or a how-to manual, but rather, a comprehensive source of the assembly listings. The reader needs to have at least a basic knowledge of 6809 assembly language programming to be able to take full advantage of the opportunities that the book offers.

The subject matter includes CoCo 3 hardware differences, memory management, super Hi-Res graphics, colors and palettes, interrupts, and Super Extended BASIC.

This book is loaded with useful information for the serious CoCo 3 hacker. I believe that the information supplied is well worth the price; in fact, the disassembled listing of Super Extended BASIC 2.0 is worth the price of the whole book.

## Hardware Review

## Magnavox RGB Monitor 80 Provides Plenty of Resolution and an Excellent Display

The Color Computer 3's analog RGB output certainly provides very nice pictures, but it does have its limitations - not the least of which is its inability to display the PMODE 4 artifact colors used by many existing CoCo programs. The fact that the RGB colors are vastly different from those seen on TV sets or composite monitors (a problem only partly dealt with by the PALETTE CMP and RGB commands) doesn't help matters, especially for those who want to write programs designed to work with both types. One way to get around this is to use both an RGB monitor and a composite monitor or TV set, but this can get clumsy (not to mention the expense of buying two monitors, if that's what you need to do). Another is to use a single monitor that can switch between RGB and composite video, and the Magnavox Professional RGB Monitor 80 (model 8CM515) is one of the better ones. (I should note here that Magnavox also sells a similar monitor, model 8CM505, which is called the RGB Monitor 40 ; it uses a less expensive picture tube that delivers somewhat less resolution. This review deals strictly with the 8CM515.)

Don't let the Magnavox name fool you; the RGB Monitor 80 was designed and built by Philips, the European electrical giant that bought out the Magnavox TV and audio businesses some years back. Philips has a fine reputation for quality and innovation, and their skill shows in the design of the RGB Monitor 80.
The Magnavox monitor doesn't look particularly unusual; it's about the same size as most RGB monitors, and its off-white color matches the CoCo case nicely. All the controls except for the power switch are concealed behind a flip-down cover below the screen. The monitor has a tilt stand that drops down from the front edge to prop it up to a good viewing angle.
In the RGB analog mode, the RGB Monitor 80 gives a very nice display; all the CoCo 3 colors are displayed well, and the fine-pitch screen gives plenty of resolution for displaying 80 -column text. The picture tube has both a
tinted faceplate for higher contrast (though not quite as high as some other monitors and TV sets), and this has been treated with an anti-reflective surface that helps reduce reflected glare to a great degree. Although some monitors (such as the Sony KV-1311CR or the NEC MultiSync) do provide even better resolution, it's hard to find fault with the Magnavox display.

Composite color performance is quite decent as well, though with a few minor defects. The composite picture is just a bit less sharp than what I'm used to seeing, probably due to the low-pass filter used to keep the color subcarrier signal from appearing in the picture when the comb filter is switched out. (The comb filter circuit used by Magnavox, unlike that used by RCA and some others, has some unfortunate side effects on the picture in some situations; the RGB Monitor 80 h as a switch to disable the comb filter, and for CoCo use it should be switched out.) Despite this, the Magnavox monitor provides reasonably good results on the CoCo composite video output, and when I used it to watch regular TV programs (feeding the video output of my VCR into the monitor), the pictures were very good with pleasing color fidelity. (I even tried watching a newscast from London, received by satellite, which was transmitted using the European PAL system; the Magnavox monitor automatically switched over to the "foreign" 50 Hz scan rate, although I got a black-and-white picture because the monitor was built for the U.S. NTSC system.)

The RGB Monitor 80 can also be used to display the "TTL RGBI" output of a PC-compatible computer such as the Tandy 1000; since this is only a secondary consideration to most RAINBOW readers, I'll simply say that this worked every bit as well as did the analog RGB mode. The Magnavox monitor has a "green only" switch to give you the equivalent of a green-phosphor monitor.

To sum up, I would definitely recommend the RGB Monitor 80 to anyone who has a CoCo 3; it gives an excellent analog RGB display and, even if you don't need the composite video mode, it's one of the better monitors on the market.
(Howard Medical Computers, 1690 North Elston, Chicago, IL 60622; 312-278-1440, \$298 plus \$14 S/H; CoCo 3 cable, $\$ 19.95$ with monitor purchase)

## Develop Programming Skills With CoCo III Utilities

CoCo III Utilities is a set of nine programs on disk that can be used for practical applications with many of the new features on the CoCo 3 .

MEMTEST is a $128 / 512 \mathrm{~K}$ memory test program.
The new high resolution screen uses 32 K of memory and is not part of your BASIC program. This means that while your BASIC program no longer is limited because of graphics, you cannot directly save the screen to tape or disk. The LOADSAVE routine solves this problem.

VERSCROL is a utility that demonstrates how to smooth scroll vertically using the joystick; and HORSCROL, a horizontal direction.

CHARPOKE lets you change the attributes of individual text characters such as blink, underline, color and background, as well as the number of screen columns.

CC3WORD is a simple, single-screen, word processor with which you can fill the screen with text. You can even save it and print it, but its intent is to demonstrate how to effectively use the 40 - and 80 -column text modes.

CC2TOCC3 converts graphics and text to CoCo 3 format. This utility assists in making this conversion, although it won't take care of everything and only works on disk.

CIRCLES is a palette registers demo. This utility lets you display your choice of 64 different colors, 16 at a time, on either an RGB or Composite monitor.

SPINBALL is a utility that lets you create a ball that appears to be spinning by changing the palette registers color.

All of these programs are useful to CoCo 3 users and especially for those who want to develop programming skills.
(Spectrum Projects Inc., P.O. Box 264, Howard Beach, NY 11414; 718-835-1344, \$24.95 plus \$3 S/H)

## Gridiron Strategy Scores a Touchdown

For all you CoCo nuts who are football fans, SPORTSware has come out with a Hi -Res football game that will ease the withdrawal pains that come with the Super Bowl each season.

Gridiron comes in an attractive, hard-cover folder with program disk (not copy-protected), two Offense/ Defense cards, two Defense selectors, and an 11-page manual. System requirements are a CoCo 3, one disk drive and a color monitor. I tried it on both RGB and composite color monitors. The graphics were great on the RGB and fair on composite. The author said he intends to put an RGB or composite option in the release version.
The manual is well-organized and well-written and will probably be needed only about 10 minutes, as the game just about runs itself. The only criticism of any importance is that it doesn't stress, or even mention for that matter, the importance of backing up the program disk.

The game is written in machine language so after a LOADM and EXEC, it takes about 30 seconds to load and give you the game screen. This consists of a scoreboard at the top, showing the team names, timeouts remaining, score, quarter, down, yards to go for a first down, yardline the ball is on, and time left in quarter.

> "With more than 20 offensive plays and 10 defensive plays, there are 200-plus possibilities."

In the center of the screen is an overhead view of the football field, and on the bottom is an information window that shows the last offensive and defensive plays used and tclls how much the play gained or lost. There is also a message window that comes down over the field itself that asks for prompts, tells you when you made a touchdown, scored an extra point or had a pass intercepted.

You are first given the opportunity to change the name of the teams; next, to change the default time ( 15 minutes) of a quarter. This is all prompted by the program and, again, almost runs itself. Next, you get to call the coin flip to see who kicks and who receives. This was the only bug I could find in this program; it always came up "heads"! The author says this has been fixed.

Once the preliminaries are over, the kicking team is given the choice of a regular or onside kick. The computer does a simulated dice roll (shown graphically and based on football statistics) and you have the field in front of you with the ball marked, the 10 -yard marker on your screen in your team color, and a drive marker that extends if you have a sustained march.

Now the competition begins. Each player has a card with offensive plays on one side and defensive plays on the other. Each selects what he feels appropriate to the situation. The defensive player must signal - via a defense-ready marker - that the offense can enter his play in the computer. The
defense then enters the play he has picked as shown when he turns his marker over. Neither team knows what the other one is going to do ahead of time.

The computer moves the ball marker, changes the down, changes the yards to go for first down, changes the clock, and changes the possession if it was a fourth-down attempt.

At the end of each half, you are given a two-minute warning. You are also given a screen print of halftime and end game statistics, the latter after the fourth quarter.

The heart of the strategy are the play cards. Each card has 20 offensive plays plus punt and field goal on one side and 10 defensive plays on the other. The offensive plays are diagramed, categorized by runs, short passes, medium passes and long passes. They are also grouped to show average gain per play. The defensive alignments are just as thoroughly documented. Each defense is rated for its success against the type of play anticipated. This sounds complicated, but isn't.

There is very little randomness in this game. That is to say, if you run up the middle against a defense that's set to stop a run up the middle, you aren't going to gain much yardage. But the important thing to keep in mind is that with more than 20 offensive plays and 10 defensive plays, there are 200 -plus possibilities. There are also penalties, interceptions and timeouts that give this game a real football feel.

This is not a shoot-'em-up, fast fingers, joystick-type game. The program waits for the players rather than the other way around. There are sound effects, but they do not slow the play. The error protection is flawless. Good use is made of the CoCo 3's graphics. The game is not played in real time, but the author has done a clever job of accounting for time and timeouts.

In summary, this is an excellent game. After three weeks with it, I still find it fascinating. If you have your CoCo 3 connected to an old TV or composite color monitor with a bad picture, I would stay away from it, unless the issue version has a menu option for RGB or composite. Other than that, I give Gridiron a very high recommendation.
(SPORTSware, 1251 S. Reynolds Rd., Suite 414, Toledo, OH 43615; 419-389-1515, \$29.95)

# Tap Into Better Graphics <br> on Your CoCo 3 

Most would agree that one of the most important aspects of the Color Computer 3 is its enhanced graphics capabilities. Now, Moreton Bay has introduced Better Graphics on Your CoCo 3, a book designed to let you tap into these wonderful graphics abilities.

Better Graphics on Your CoCo 3, or Better Graphics for short, is a 43-page, staple-bound manual chock full of information nearly anyone can use as they learn about their new machine. It offers five major sections, each detailing certain aspects of graphics operation on the CoCo 3.

The first section, Memory Organization and Management, discusses at some length just how memory is allotted in the Color Computer 3. It is good to see that the author, Linda Nielsen, chose to discuss such an important subject first. Manipulation of graphics does require a working knowledge of memory organization.
The second section offers some information about the binary number system and discusses how graphics memory is translated into a usable onscreen image. It also gives detailed information on the assorted graphics modes available on the CoCo 3 .

The third section of Better Graphics shows the reader how to use the various graphics modes and also how to create text on the high resolution screens. This section, along with the first section, would be suggested reading for any CoCo 3 owner.

The fourth section covers animation and scrolling techniques, while the fifth section pulls everything out of the hat and gives you detailed information on using your CoCo 3 in ways BASIC never heard of.

Now, lest you think you might have to type in numerous examples, Moreton Bay includes two disks with all programs on them. In my opinion, this complete package approach really enhances the educational value of Better Graphics. After all, if you have to spend your time typing in example programs, it can be quite difficult to follow and comprehend the principles the book is trying to teach.

Certain parts of the book may be more than some people can understand. The book is intended for those people who want to program, especially with graphics. However, the book takes the chore out of understanding graphics and memory utilization on the CoCo 3. With few minor exceptions, all points are clearly presented and anyone with a basic working knowledge of Color Computer programming should be able to follow it with little or no problem. Better Graphics on Your CoCo 3 should be a part of everyone's library.

## J \& M'S 3.5" MICROFLOPPY DRIVES

Upgrade to the Latest in Technology: J \& M's 3.5" microfloppy drives allow a 720 K format under OS-9 Level 2. (Four times the storage capacity of a standard Coco format OS-9 disk on a single microfloppy diskettel)
Two Conflgurations Available: The external drive comes complete with case, power supply and cable. The internal drive is ready for installation. It simply replaces an existing $5.25^{\prime \prime}$ half-height drive. Utilize JDOS, RS DOS or your DOS.

External $\mathbf{\$ 2 5 0 . 0 0}$
We accept VISA, Mastercard or prepayment. Or, we can ship COD for cash or certified check. Shipping is extra.

should consider word processing in general and Telewriter64 in particular. I suggest $T W-64$ not only because I use it, but also because of the obvious popularity I see in the many submissions to THE RAINBOW prepared with TW-64.
$T W$ - 64 comes in either disk or tape versions and will run on any CoCo with as little as 16 K of RAM. Since it automatically configures itself to your computer's memory size, your text buffer will grow as you add memory. (By the way, it runs fine on the CoCo 3 .)

The user can select any one of three different screen formats. The screen "wakes up" in the standard 51 -column by 24 -line mode, but 64 -by- 24 and 85 -by- 24 are available, as well. The 51 -column and 64 -column are easily read on a composite monitor or a good quality TV set, but the 85column mode is only good to see the overall layout of your printed page. I use the 51-column mode exclusively and select 65 characters per line when I send the text to the printer. This results in a nice looking letter or other printed text.

The user's manual that comes with $T W-64$ is very detailed and complete in every way, with dozens of examples of what the various functions do.

Since $T W-64$ is a screen editor, all of the data or text is always present and can bescrolled up or down on the screen. This is done using the arrow keys. If you type a sentence and make a mistake, you can simply move the cursor to the mistake and type in the correction. TW-64 is somewhat different in this regard, in that it def aults to the Insert mode rather than the Overstrike mode. This means that the key depressed at the cursor will add the character rather than replace it.

While this may sound a little confusing, and takes a little bit of getting used to, I love it. In the Insert mode you will never lose text by inadvertent keystrokes. Besides, you can select the Overstrike mode if you prefer with a simple keystroke.

TW-64 features three menu screens. The first allows you to select either the Edit mode or a Newfile mode, which erases your text if selected. A counter keeps track of the number of words you have typed, as well as the number of lines. You can also select either cassette or disk I/O as well as the second Format menu.
The Format menu is used in conjunction with your printer. Here you can select line spacing, margins, lines per page, printer baud rate and queue, as well as right justify. You can even select where you want the page number to appear at the bottom of the page. Also supported is a percent print function, which allows you to print just the part of the text that you select to your printer.

The third menu screen is for disk I/O. This handles all of the disk read and write functions. It offers the same options as for cassette I/O, except for the Verify command. In the disk I/O menu, you can also see the disk directory files on the screen or send them to your printer. Here you can also save, kill or rename disk files without having to go back to BASIC.
$T W-64$ also supports the use of embedded commands in your text. This allows you to perform font changes, underlining, double-strike, etc., if your printer has the capability. You can also use these codes to flush text to the left while maintaining pre-defined columns.

There are far more features than space allows me to go
into here, but the ability to align, scroll and copy blocks of text, and do easy searches for specified words, makes it a real workhorse of a program. $T W$ - 64 is a full-blown word processor offering virtually all of the features you would expect to find in a word processor used on far more expensive machines than the CoCo. It's available for $\$ 49.95$ on cassette or $\$ 59.95$ on disk, plus $\$ 2 \mathrm{~S} / \mathrm{H}$, from Cognitec, 704 Nob Street, DelMar, CA 92041, or youcan order it from your local Radio Shack Store.

## But Wait - There's More

Telepatch II with The Wizard are two fine TW-64 enhancements available from Spectrum Projects. Telepatch II provides the user with the ability to configure $T W-64$ so that the disk I/O is RAM-resident. This is a big improvement, in that the disk I/O is instant since the programdoes not have to be accessed from the $T W$ - 64 disk. The only disadvantage to this is that about 4 K of text buffer space is sacrificed. A buffered keyboard is added with Telepatch II. Since I am not a super fast typist, I never really noticed that such a buffer was needed, but I did notice that, every now and then, $T W-64$ would drop a character during the Insert mode. This bug has been fixed with Telepatch II. The new keyboard routine remembers what characters have been typed regardless of speed.

The main menu of TW 64 with Telepatch II contains obvious changes, the most notable being that the cassette I/O functions are no longer visible. They are fully functional, however, should you need to use them. This was done to reduce screen clutter and confusion with the corresponding disk I/O functions, since Telepatch II will only work on a disk system. Other features such as auto-key repeat, key click, visible carriage returns, overstrike mode and disk drive stepping rate can be configured in the boot program to the default of your choice.

The Wizard, contained on the Telepatch II disk, is a nicely done, revised $T W$ - 64 character set. While the new characters only appear on your screen, they are a big improvement. The new characters are gently curled and incorporate true descenders. The text is very easy to read and pleasing to the eye.

Ulira Telepatch, available from Bob van der Poel Software, is one of the best enhancements available for $T W$ 64. This ultra version stores the disk I/O in RAM with no loss of buffer space. Word delete is added, so you can delete entire words instead of just one character at a time.

The boot program can be tailored to your needs with disk drive stepping rate, key clicks, on/ off and reset protection. What I like best about Ultra Telepatch II is that the text automatically unfolds on the screen as soon as it is read into the buffer from disk. Ultra Telepatch II needs 64 K of RAM and disk.

Telewriter- 64 with Telepatch II and Ultra Telepatch offer the CoCo user all that will ever be needed for serious word processing.
(Telewriter-64, Cognitec, 704 Nob Street, Del Mar, CA 92041; 619-755-1258, Disk, \$59.95; Tape, \$49.95. Telepatch I/ with The Wizard, Spectrum Projects, Inc., P.O. Box 264, Howard Beach, NY 11414; 718-835-1344; \$29.95. Ultra Telepatch, Bob van der Poel, 1734 57th Avenue, Edmonton, Alberta, Canada T6M 1E1; \$19.95)

## NEW $[\mathcal{F}$ OS9 PATCHER $E-(C)$ This is a useful utility for your OS9 Level I or II system. It allows you to modify the contents of a file or memory module using easy to understand commands. Data may be displayed and entered in either decimal, hexadecimal, octal or ascii characters. Module CRCs calculated and patched automatically Patch command files may be used as input to the Patcher and patch command files can be generated from an original and already patched file. Disk only: OS9 Level I or IL $\$ 19.95$.

## CALLIGRAPHER

CoCo Calligrapher - (Hybrid BASIC/ML) Turn your CoCo and dot-matrix printer into a calligrapher's quill. Make beautiful invitations, flyers, certificates, labels and more. Includes 3 fonts: Gay Nineties, Old English and Carloon. The letters are $1 / 2$ inch high and variably spaced. Works with many printers including Epson, Gemini, Radio Shack, Okidata 92A, Banana and Prowriter. Additional fonts are available (see below). Tape/Disk; $\$ 24.95$.
OS9 Calligrapher - (C) Although a different program from the CoCo Calligrapher, the OS9 Calligrapher prints all the same fonts. It reads a standard text file which contains text and formatting directives. You may specify the font to use, change fonts at any time, centering left, right or full justification, line fill, margin, line width, page size, page break and indentation. Similar to troff on UNIXTM systems. Includes Gay Nineties, Old English and Cartoon fonts. Additional fonts are available (see below). Disk only; OS9 Level I or II; \$24.85.
Calligrapher Fonts - Requires Calligrapher above. Each set on tape or disk; specify RSDOS or OS9 version; $\$ 14.05$ each. Set \#1 - (9 fonts) Reduced, reversed and reduced-reversed versions of Gay Nineties, Old English and Cartoon; Set \#2 - (8, ronts) Old Style and Broadway; Set \#3. - 8 fonts) Antique and Business; Set \#4 - (8 ronts) Wild West and Checkers; Set \#5 - (10 fonts) Stars, Hebrew and Victorian; Set \#0 - (8 fonts) Block and Computer;
Economy Font Packages on disk; specify RSDOS or OS9; 20.85: Font Package \#1-Above font sets 1,2 and 3 (25 fonts) on one disk. Font Package \#2 Above font sets 4, 5 and 6 ( 26 fonts) on one disk. Both Packages \#1 and \#2 (51 fonts) on one disk; 40.95. \# NEW

NEW Calligrapher Combo Package - Everylhing!; speciiy RSDOS or OS9; Includes the Calligrapher and both Font Packages on one disk: $\$ 00.05$.

## UTILITIES

Piratector - ( $100 \% \mathrm{ML}$ ) Utility to allow your own disk-based BASIC or ML programs to display a graphics title screen and then self-start after loading. Adds copy protection to your programs but still allows users to create non-execulable backups! Includes Semigraf. Disk only; CoCo 1, 2, 3 (except Semigraf); $\$ 30.05$.
Super Screen Machine - $(100 \%$ ML) Put your CoCo into high resolution mode for your own BASIC or ML programs. Smooth scroll, key click, lower case with colored characters. Tape/Disk; 32K CB; CoCo 1 , 2, 3 (except 64 K mode); $\$ 19.95$.

Color Disk Manager - ( $100 \% \mathrm{ML}$ ) Disk utility with these features: Disk repair, selective track initialization, verify sectors, backups, tape to disk transfer, ROM Pak exccution from disk, much more! Tape/Disk; CoCo 1, 2, 3 (except for 64 K mode); $\$ 24.05$
Color Tape Manager - ( $100 \% \mathrm{ML}$ ) Tape utility with these features: display start, end and exec address of MLL programs, convert ML programs into BASIC DATA statements, append ML to BASIC, load, display/modify and save tape file, handles missing EOF and filename blocks, much more! Tape/Disk; 16K ECB; CoCo 1, 2, 3 (except for 64 K mode); $\$ 19.05$.

## INF ORMATION MGT.

TIMS (The Information Management System) - (Hybrid BAsIC/ML) Tape or disk, fast and simple general data base program. Create files of records that can be quickly sorted, searched, deleted and updated. Powerful printer formatting. Up to 8 user fields, sort on up to 3 fields. Tape/Disk; $\$ 10.95$ (see combo pkg below).
TIMS Mail - (Hybrld Basic/ML) Tape or Disk based mailing list management program. Files are compatible with TIMS. Fast and simple to use. Supports labels 1, 2 or 3 across, $21 / 2$ to 4 inches wide. Tape/Disk; $\$ 10.05$ (see combo pkg below). TIMS Utility - (Hybrld BASIC/ML) Utility companion for TIMS and TIMS Mail to allow multi-term search ( $A N D$ and $O R$ logic), global change and delete, split large files and more! Tape/Disk; \$14.05 (see combo pkg below).
TIMS Combo Package - All three of the above programs: TIMS, TIMS Mail and TIMS Utility on one disk - \$34.05.

## SPORTS STATISTICS

Statistics programs for the coach, team manager or avid fan who wants to keep accurate team and opponent records. Printer output supported. The following are available: Baseball, Basketball, Football and Soccer. Disk only; $\$ 19.05$ each.

## EDUCATIONAL

NEW IF Trig Attack - ( $100 \% \mathrm{ML}$ ) In this educational arcade game, enemy trigs travel along math curves. Players learn important mathematical concepts as they play. Trig Attack is filled with sound effects, colorful graphics and features 11 challenging levels. First class mathematical entertainment for ages 9 and up. Excellent manual includes an introduction to trigonometry. Tape 16 K CB/Disk 32 K ECB; CoCo 1, 2, 3; $\$ 10.95$.

Silly Syntax - (Hybrid basic/ML) Ages 5 and up. Story creation game; output to screen or printer; includes 2 stories or create your own. Tape/Disk; $\$ 10.95$ or disk with 62 stories for $\$ 20.05$. Sets of 10 stories on tape/disk for $\$ 4.05$ : Fairy Tales, Current Events, X-Rated, Sing-Along, Adventure, Potpourri.
Bible Stories Adventure - (Hybrid BASIC/ML) Ages 4 \& up. A graphics adventure game for young children \& their families. Old testament. Tape/Disk; \$10.05.
The Presidents of the USA - $(100 \% \mathrm{ML})$ Ages 10 and up. Two trivia games, user modifiable, printer output supported. Tape/Disk; 16K ECB; \$10.05.
The Great USA - Ages 9 and up. Trivia game of the 50 states. Capitals, nicknames, abbreviations, flowers, trees and birds. Tape/Disk; 16K ECB; \$10.05.
Galactic Hangman - Ages 7 and up. Exciting new twist to the popular word game. Outstanding graphics; 700 word vocabulary. Tape/Disk; 16K ECB; $\$ 10.85$.
PreReader - (Hybrid Basic/ML) Ages 3-5 (level I); Ages 5-7 (level 2); Great graphics and music. Level 1: match colors, shapes, letters and numbers; Level 2: malch letters and consonant blends with their sounds. Tape/Disk; Joystick; \$10.95.
Statgraf - High school and college level; Linear regression analysis program combined with a plotting and line graphing system. Up to $250 \mathrm{x} / \mathrm{y}$ pairs; data transformation; residuals; regression line; print graph with screen print program (not supplied); Tape/Disk; \$10.95.

## SPECIAL INTEREST

Rental Property Income and Expense Management Package - Maintain your rental property income and expense records. Print output supported. 28 expense categories. This program may be tax deductible. Disk only; \$20.05.
Radio Systems Design Calculations Performs 14 difierent calculations commonly used in design or evaluation of land mobile radio systems, satellite TV, etc. Tape/Disk; \$10.95.
CoCo Knltter - Easy to use program to display or print instructions to knit a sweater: Cardigan or Pullover; Round or V-neck; Raglan or Set-in Sleeve; 3 weights or yarn; 8 sizes from baby to man. Tape/Disk; \$10.05.
Flylng Tigers - ( $100 \%$ ML) Fast Defenders style arcade game. 5 levels of difficulty; Outstanding graphics and sound effects. Tape/Disk; Joystick; \$10.95.

A complete catalog of other sweet Sugar Software products is available.

## SUGAR SOFTWARE P.O. Box 7446

Hollywood, Florida 33081
(305) 981-1241

All programe run on the CoCo 1, 2 and 3, 82K Extended Basic, unless othervise noted. Add $\$ 1.50$ per tape or disk for postage and handling. Florida residents add $5 \%$ sales tax. COD orders add $\$ 4$. Dealer inquiries invited. Orders generally shipped in 24-48 hours. No refunds or exchanges without prior authorization.

## Clubs, Clubs, Clubs

## w <br> e compile a list quarterly of Color Computer Clubs because of the many requests we receive. CoCo Clubs may wish to exchange newsletters, share ideas for topics of discussion at monthly meetings, etc.

Please let us know if we have omitted any clubs and send us complete up-to-date addresses. Only those clubs that have signed our anti-piracy agreement form will appear in this listing of CoCo Clubs. Also, please notify us if you wish to add or delete any names on this list. Send your information to:

## new clubs

- The Color Computer Club Eindhoven meets every first and third Monday of the month from 7 to 11 p.m. at the Community Hall, 't SLOT, Kastelenplein 167, Eindhoven (suburb Gestel). One night deals with BASIC and the next with ML. We also discuss hardware. Ca】 $\quad 040-5 \mathrm{I} 2222$ or write for information.

Jan Slaats Chopinlaan 11 5653 ET Eindhoven The Netherlands

- Tri-Cities Color Computer User's Group meets twice a month: The second Tuesday evening of each month is for all CoCo users, and the fourth Tuesday evening of each month is our new OS-9 SIG meeting. The CoCo club meets at Les Draper's Photo Classic Studio, 624 West Lewis, in Pasco, Washington. The OS-9 SIG meeting place is announced in our monthly newsletter, "The Tri-Cities CoCo Club News." Both meetings start at $7 \mathrm{p} . \mathrm{m}$. There is no cost for membership except for the newsletter subscription, which costs $\$ 5$ a year. Call Jim Vestal at (509) 943-4832 or you can write us.

Tri-Cities Color Computer User"s Group
P.O. Box 1213

Richland, WA 99352

- We would like to inform your readers of a new CoCo newsletter being published called "Basic Byte." Please enclose an SASE when writing.

## Don Henderson 152 Patty Lane <br> Florence, KY 41042

- Is there anyone in my area who would be willing to share public domain software or start a CoCo Club? If so, please write.

Daniel Thickins
102 Oakwood Avenue
Simcoe, Ontario
Canada N3Y 1 H9

- We got it together! Clovis now has The Curry County CoCo Club. Check us out.

Bill Walker
7214 B Carolina Loop
Clovis, NM 88101

- Advanced Montreal CoCo Club will have a monthly newsletter, contests with prizes worth over $\$ 30$, even a subscription to Rainbow. We welcome members from all countries.

## Advanced Montreal CoCo Club <br> 329 boul. Richelieu <br> St-Basile-le-Grand, Quebec

Canada, JOL 1SO

- Announcing the Club CoCo APPE in Montreal. For more information, call (514) 331-8418. You can also write us.

Andre Patenaude
10870 Bois-De-Boulogne Monireal, Quebec
Canada, H3M 2X1

- The Burlington Color Computer Users Group meets at Burlington Central High School the second Tuesday of each month.

Lawrence Coffey
33 Drakes Drive
Stoney Creek, Ontario
Canada L8E 4G4

- CCOG would like to invite CoCo users or would-be users to join us. We meet on the third Tuesday of each month from 7-10 p.m. at DSL Computer Products, Inc., 4950 Schaefer, Dearborn, MI. We generally have some presentation and much informal exchange of information. Anyone interested can call me evenings at (313) 334-3934.

Charles S. Van Ark
Bloomfield Hills, M1

## Hint.

## Waiting for the Keystroke

If you want your basic program to wait for a keystroke, just type EXEC 44539. This performs the same function as $\boldsymbol{A S}=\mathrm{INKE} Y \$$ : If AS = ". THEN (next line)

The computer waits for any key to be pressed before the program continues.

# DRAW Statements: Getting the Picture 

By Joseph Kolar Rainbow Contributing Editor

This may well be the most difficult tutorial you will experience in this column. The DRAW statement, with all its nuances, is what CoCo employs to create nearly all of its best graphics. Thus, it is imperative to understand how to use DRAW. In the past, we have made many cute programs using it. In the future, we shall study it in more detail.

The DRAW statement is difficult to read and interpret from a listing. It makes little sense. But, when the $M$ option is also thrown in for good measure, program lines make as much sense to the newcomer as Chinese.

Ashard as it is to create a picture with DRAW, it is infinitely harder to dig into the program and make corrections and alterations.

Key in Listing 1. Here are a few procedural hints to aid you when you are extracting or injecting new or replacement characters into the DRAW program line.

When you locate the place you intend to modify, make a notation on scrap paper of the actual characters in that area. For example, type LIST 200. If you are planning to work at the very beginning of the line, write on the scrap paper, U3NR3U3R4BR3. Figure out your expected changes, for instance,

Florida-based Joseph Kolar is a veteran writer and programmer who specializes in introducing beginners to the powers of the Color Computer.

U4NR3U2R4, and place them underneath your first notation. You then make your changes - in this example, change $U 3$ to $\cup 4$ and the next $\cup 3$ to $\cup 2$. The reason for using scrap paper is that after you make the change, the result may be wrong or disappointing. You will want to know what your original data was so that you can restore it, especially if you have forgotten which data you replaced.

Whenever you are changing some characters in a program line, take a moment to insert a blank space in front of your target area and then insert a second blank space at the end of the work area. This way you will be able to locate your bracketed work area at a glance, and the included blank spaces remain harmless. After you are finished, you can leave the blank spaces in the program line, except in the unusual case where you have the maximum number of characters in a line. You may prefer to use the semicolon in place of blank spaces.

Keep in mind that every time you tinker with a DRAW statement, there is the danger that you might distort a segment somewhere down the line. You will have to be prepared to make further remedial corrections.

If you use the "continuous line" method, you will have to adjust the B option characters/values. Frequently, you will be able to make changes in the length of a straight line segment using the $N$ option, avoiding the dislocation of some part of the program.

By "continuous line" method, I mean
that ( $\mathrm{H}, \mathrm{V}$ ), the horizontal and vertical starting location, is determined in the first DRAW line. It is not computed again, since no matter how many DRAW lines are used, they are merely a continuation of the previous line.

Relocating each succeeding DRAW program line is a big waste of time. Finding a new set of (H,V) values, after having traveled a tortuous route with perhaps 40 to 150 direction changes, is boring and time-consuming.

If you have a graph paper sketch to use as a guide, your job is half-finished. Otherwise, you may have to create a copy of the picture by plotting the information in the DRAW lines onto graph paper.

Inever told you debugging was easy! (Notice that I have avoided the nasty word to keep you in a compliant mood.) Your graph paper rendition will be an exact reproduction of your program lines. It will be a great help in planning modifications. You will find it is so much easier to make corrections on graph paper with an eraser than to execute tentative, time-consuming changes in the program lines.

To give you an idea how difficult it is to rip apart DRAW program lines, Line 200 contains the printed legend, FIGURE 1. Suppose I wanted to make the $G$ more pronounced. How would you locate it and revise it to make the hook higher up? Run, then type LIST 200.

First, you must discover the size, height and width of a letter and the width of the space between letters. The
simplest way is to get some graph paper (or make some homemade graph paper) and plot it out. Pick some line intersection on the graph paper and begin: Go up three units; go right three units and return three units left; go up three units; go right four units.

If you drew the lines correctly, an $F$ appeared. By counting the line lengths, $\mathrm{U} 3+\mathrm{U} 3=6$ and $\mathrm{R} 4=4$, we can infer that most of the letters will be six units high and four units wide.
BR3 tells us we moved three spaces right but did not print a visible line. I call this the invisible line. Therefore, we can conclude that the space between letters is generally three units wide.

Now run. The legend doesn't remain on the screen long. You can hold it by pressing SHIFT and @ together. What we expect to do is make the small, vertical part of $G$ one unit longer to make it stand out. That part was two units long. Depending on which way the two-unit line was drawn (downward or upward), it is either D2 or U2. Press BREAK and type LIST 200. We look for a U 2 or D 2 further along in the program. We spot a D2. It is in about the right location. We edit it from D2 to D3 and run.

That wasn't it! We restore the original D 2 and run, then type LIST 200. But, it has to be it. If we came from above, we must have come down BD4. D2 gives us the height of the visible line.

If we change D2 to D3, then BD4 must equal BD3. Type EDIT 200 and locate BD4. Make your change. Continue to D2 and change it, then run.

It is important that you think out your correction. Suppose I wanted to make the space between $E$ and 1 one unit wider? Type LIST 200. We know the numeral 1 is the last character in the line. We know that three spaces separate each letter. Thus, we are looking for a BR3 near the end of the program line. The nearest BR3 is too far away, so we look for a BR4 or BR2.

A BR4 stands out. We will change it to $\operatorname{BR5}$ and see what happens. Run. Yep, that was it. The reason it was four units wide was that it looked better; now we know that five units wide is even nicer looking.

This legend was written in one continuous line. Some letters begin at the top and some at the bottom. Five programmers might create this line in five different variants. I am apt to proceed one way, and the next time I am creating the same character/number, I might strike off in another direction
depending on whim. This is what makes revising DRAW lines so tricky. It is not easy to anticipate the workings of somebody else's mind. CoCo allows you to create the legend in innumerable ways.

That brings us to the face from last month's tutorial. Comparing the drawing with the actual CoCo rendition, we are struck that it is narrow - narrower than we would prefer! The figure needs eyes badly and that nose has to go!

For openers, let's put in some eyes and eyebrows. Type LIST-100. Yeah!

Figure 1
But where are the eyes? Run it. We look for clues. It is almost certain that each eye consists of ERF. Two eyes means we are likely to find two sets of ERFs near each other. Type LIST-20. Good news! It looks as if the eyes were the first feature drawn. A good way to check is to in ject an obvious pointer between 70 and E. Insert G10 or H10 and run. The graphic is likely to be distorted, but the line will point to the edge of the eye. We now know where and which eye was drawn first. We remove the pointer and run. Now type LIST 20. On graph paper we trace out the eyes to see in which order they were drawn.

Luckily, we have Figure 1 from last month's tutorial to consult. We compare Line 20 with the sketch and note the route followed: right eye to left eye to nose to mouth. We now know we can work on the eyes in peace.

Beginning at the inside of the right eye, finish up the eye; move up and do the right eyebrow; do the left eyebrow and drop down to rework the left eye. I sketch out my planned units. After the first ERF, I make the insertion GUGRHDH and run. It looks like a Cyclops, but distortions are to be expected. I con-
tinue inserting, with BHE2R2F, and run. Now insert BRER2F2BG and GUGRHDH. Run it. We are off to the left. Type LIST 20. Can you see that BR3 has to go?

The original eyes were separated by BR3. Since we covered the eyes and eyebrows without any gaps, we don't need that space anymore. Look at Figure 1. What we require now is to yank BR3 to do the top of the eye. Run. The nose must go over one unit to the left - maybe two units. Type LIST 20. We see that the move from eye to nose is $B M-3,1$. We try -5 in place of -3 and run. No good! Try -4 and run.

The eyebrows seem too high. Let's change $E 2$ to $E$ and $F 2$ to $F$. Run. Now it's cross-eyed. Let's increase the space between eyebrows two units, from BR to BR3, and run.

The nostrils are pathetic! How would it look if we rapped the nostril and just kept $F$ RE to suggest a nose? We want BM2,1 to replace BM- $3,1 D E$. FRE stays, but FNU2 goes! Now type LIST 20. We know D4 is the nose. Change BM-3,1 to BM2,1 , delete DE and run. Good! Pull out FNU2 and run. We need to change BD3 to $B M+1,3$.

If we made the tip of the nose wider, $R 2$ instead of $R$, then we would need BD4 instead of $B M+1,3$. Run. Not so hot! Let's move the nose tip one unit to the left. Type LIST 20. Next, type BM-3,1 and $B M+1,4$ to replace $B M-2,1$ and $B D 4$ and run. The nose, D4, should be one unit to the left. Or, suppose we change D4 to $M-1,4$ and $B M-3,1$ to $B M-2,1$ ? Run. Terrible! Restore D4 and leave BM2,1 alone. Run again. I am not too crazy about the eyebrows, but let them go for now.

Let's make the face wider by one unit. We will add one unit each to the horizontal areas of the chin, top of head and forehead. First, the chin: It is either L4 or R4. Type LIST 20 and look for either one. An R4 is on the bottom line. We shall put a pointer in front of R4 to see if we are in the right place. Insert D10 in front of R4 and run. The face is distorted, but if you look carefully you will see we hit the location right on the chin. Delete D10 and, while you are at it, change R4 to R5 and run.

The forehead looks like R2. It must be in Line 21 or 22 . Type LIST 21 . There is no R2, but there is an L2. Let's put a pointer, $D 10$, in front of $L 2$ and run. Yes! The face is distorted, but we are in the right pew. Remove the pointer and change L2 to L 3 .

The last R3 on top of the head must be changed to R4. Type LIST 21. An R3
is down about the 130th character．We put a pointer，D10，to verify the loca－ tion，in front of R3 and run．Right on the money！Remove the pointer and change R3 to R4 and run．

The left side of the shirt is one ！unit off．It must be where it touches the neck． The part，$M-3,2$ or $M+3,-2$ ，needs to be moved over．Type LIST 21．No such animal．Type LIST 22．There is an M－ 3,2 about 70 characters into the line． Put a pointer，R10，in front of it to see if we are zeroed in and run．That＇s it！ But，what is the correction？Type EDIT 22．Remove the pointer，R10．BE looks like the guilty party．Change it to BH and run．Close！Type EDIT 22 and change BH to BU．Now run．

Back to the eyebrows！Type LIST 20. Suppose we change the first $E$ to $B E$ and the second F to BF in the eyebrows？ Run．Now the eyes are not bulging．
That R5 chin should be R3．That would change the preceding $\mathrm{M}+3,2$ to $M+4,2$ and the following E2 to $M+3,-$ 2．Make the changes and run．

At this stage，I wandered away from CoCo and took a break．Returning refreshed，I looked at the face more critically and noted that the R3 lip line
needs an additional unit to balance it． Type LIST 20．It is easy to spot，being about 110 characters into the program line．Fortunately，the movement in front of it is $B R$ ．What is easier than deleting the $B$ to expose the $R$ and accomplishing the mission without disturbing the shape of the face？Run．

This leaves the itty－bitty $L$ or $R$ dim－ ple／lower lip line．It needs to be wid－ ened to put the face into a more bal－ anced position．Type LIST 20．No doubt，it followed the RR3．We could change this to R4，but who is going to inspect our work and object to our awkward construction？We must be on the lookout for the $L$ that follows．

To widen L without distortion，caused if we use L2 to add one unit，a better method is to use NL after L．This way， we move one unit left and return one unit right．It doesn＇t affect the following offset which，if you check it out against Figure 1，moves up to the right jaw line． Run．
I don＇t like it！It is too wide．To try to shorten its length，replace LNL with GNH and run．It doesn＇t look especially attractive，but I＇ll settle for it．

The ear could be integrated with the
sideburns by removing those angles，but I like the suggested，stylized face．

There is one more error I overlooked． It is a problem for you to solve．Note that the right，inner side of the lapel should be located one space to the left （consult Figure 1）．Make the modifica－ tion on your own initiative，then con－ gratulate yourself on mastering this tutorial．Save FINALF if desired．

You were subjected to many altera－ tions in this tutorial so that you would have the confidence to rip apart and re－ arrange those pesky components in the DRAW statements．The newcomer may be uneasy with the graphics capabilities， but now he knows how to debug his own programs with every expectation of ending up with a solid graphic．

Some of the changes we made seem petty．When you are working on your brainchild，they take on an aura of importance because you want a perfect graphic．

I hope you enjoyed having your cage rattled and working out these little bugs because I want to excite，challenge and encourage your desire to create an innovative program on your favorite computer．

## About Your Subscription

Your copy of the rainbow is sent second class mail. You must notify us of a new address when you move. Notification should reach us no later than the 15th of the month prior to the month in which you change your address. Sorry, we cannot be responsible for sending another copy when you fail to notify us.

Your mailing label also shows an account number and the subscription expiration date. Please indicate this account number when renewing or corresponding with us. It will help us help you better and faster.

For Canadian and other non-U.S. subscribers, there may be a mailing address shown that is different from our editorial office address. Do not send any correspondence to that mailing address. Send it to our editorial offices at Falsoft, Inc., The Falsoft Building, P.O. Box 385, Prospect, KY 40059. This applies to everyone except those whose subscriptions are through our distributor in Australia.

# The Best Money Can Buy . . . HDS Floppy Drive Controller Board 

Reduce your $1 / \mathrm{O}$ errors with the Hard Drive Specialist Floppy Drive Controller for the Color Computer. Gold edge card connectors, advanced design, and the absence of potentiometers make it the best available. Our newest version controller allows the use of either (two 24 pin ROMS), or (one 24 pin and one 28 pin ROM). Using this board with the standard Radio Shack ROM gives you $100 \%$ compatibility with all Radio Shack software.

## Completed and Tested Board

with Radio Shack ROM $\$ 99$. (Includes Case, and DOS Instructions) Completed and Tested Board without ROM $\$ 79$. (Includes Case)
Bare Board with Instruction manual ..... $\$ 30$.
Parts KIt For Bare Board without ROM ..... $\$ 30$.
Radio Shack ROM (current version) ..... $\$ 20$.
Radio Shack ROM 1.0 ..... $\$ 40$
Ordering inlorimation:

bLE SDrive 0 Complete ${ }^{\circ}$$\$ 199$.

# Using the 6 ms Stepping Rate 

By Dan Downard Rainbow Technical Editor

I have a Radio Shack thinline disk drive and a $64 \mathrm{~K} E C B$ CoCo 2 （Version 1．1），and I have been trying to increase the stepping rate to 6 ms ．I know the disk drive can handle it because it works at 6 ms on OS－9．I＇ve tried POKE 55232，0：POKK 5531日， 20 but it doesn＇t work．

Steven Haase Englehart，Ontario

Steven，you are close but missing one thing．Memory locations 55232 and 55318 are in ROM．You cannot change ROM memory with peeks and pokes． You have to run a program similar to ROMRAM，which moves the ROM to RAM and enables the 64 K RAM mode of your CoCo．I＇m sure that everything will be OK after you run ROMRAM，or a similar program．

## DLOAD Discovery

I have a 16 K CoCo 2 without disk drives．One day while experimenting with commands，I typed DLOAD and it hung up．I had to reset the computer to get the cursor back．What does the command DLOAD do？If it does nothing， why is it there？

Steve Nilsen
Seattle，WA

Dan Downard is an electrical engineer and has been involved in electronics for 27 years through Ham radio（ $K 4 K W T$ ）． His interest in computers began about eight years ago，and he has built several $68 X X$ systems．

DLOAD was a command to transfer programs from one computer to another，such as in a classroom envi－ ronment．There was a flaw in the orig－ inal ROM，and it would not work unless the command was patched．This com－ mand has been overwritten by the CoCo 3 BASIC ROMs to add new commands． Gook luck，Steve，and thanks for writ－ ing．

## Clever Solutions

I bought a CoCo 3 and found it consistently destroyed every directory when saving over the same file by offsetting the directory entries by one byte（sometimes the GAT was also destroyed，sometimes it was not）．When I stopped using the high－speed poke，it worked perfectly every time．In other words，for reliable operation，do not use the high－speed poke when performing disk I／O．
VIP Desktop automatically sets the $V D G$ to colors that look terrible on a monochrome monitor．Fortunately，the program may be used to fix itself using Disk－Zap．

Track 33，Sector 8 －change byte 41 from F0 to F8
Track 33，Sector 6 －change byte 34 from 03 to $0 F$
Track 33，Sector 7 －change byte 110 from 03 to $0 F$
Track 24，Sector 4 －start at byte 9， replace 12 s with $\mathrm{\theta} 603$ 日 7 FF 22
Track 26，Sector 4 －－starting at byte 85，put in 8603 日 7 FF 22 フE 46 E Kill CHECK64K／SHT and save the following program as VIP．BAS：

10 POKE\＆HFF日C，0：POKE\＆HFFBD， 4日：WIDTH32：LOADM＂DESKTOP＂

To use Desktop，simply type RUN＂VIP＂．This patches everything except Terminal（which uses both high and low resolution screens）．The low resolution is $O K$（when these patches are used）．When entering the terminal mode，simply press CLEAR－SHIFT－ 8 to change the color．Now everything is readable on a monochrome monitor．

Bill Pinnell
Winter Haven，FL

Thanks for the valuable information on VIP Writer，Bill．We don＇t recom－ mend disk operation at high speed．

## EDTASM Disk I／O

I have a 64 K ECB CoCo with disk drive．I have EDTASM + in ROM pack． Could you print the program instruc－ tions to convert the ROM pack to disk I／O？

Marcel Beausoleil
Woonsocket，RI
See the next answer for some hints for the original program to use your $E D$ ． TASM + with disk，Marcel．

## Superpatch Fixes

Roger Schrag＇s Superpatch（Sep－ tember 1983）was written for Disk BASIC 1．0．After correction was made

# OS9 LEVEL II SOFTWARE and HARDWARE <br> "Frank Hogg Laboratory has supported OS9 longer than ANY other company!!!" 

# INSIDE OS9 LEVEL II 

The definitive 'Inside' story behind OS9 for the CoCo III. Kevin Darling and Frank Hogg team up to provide the 'nuts and bolts' information needed to really use OS9 Level II. This book takes you chapter by chapter thru the inner workings of OS9 including the window drivers, fonts and patterns, bugs and how to fix them, GIME reference and it even shows you how to use Tandys Rogue game disk to make a workable OS9 Level II system, plus much more. Approximately $100+$ pages. Source listings are provided for some things plus flow charts and tables. A Must buy for anyone interested in OS9 Level II.

## Just \$39.95

Coming next "Inside Multi-View"

## THE QT CoCo

Question: The QT CoCo is the second most expensive hard drive/floppy drive subsystem for the CoCo? True or False? The QT CoCo is the only system that can be upgraded to a full 68000 based computer? (The QT Plus) True or False? The answer to both questions is True. If you want to have the best drive subsystem for your CoCo then The QT CoCo is for you. $20 \mathrm{Meg} \mathrm{HD}+360$ or
 720K floppy $\$ 1350$. Fast 40 Meg HD with 360 K or 720 K floppy is $\$ 1998$. Requires a host adaptor. (Disto etc)

Call or send for more information today!

## SCULPTOR

Sculptor is a fourth generation language, an applications generator and a database all rolled into one. The 4th GL part of Sculptor means that programming time is cut by a factor of 5 or 10. The applications generator part of Sculptor writes programs for you and the database part is a very fast B+ tree. Sculptor is FAST! New users are up to speed in a few days, up to speed users can write sophisticated programs in half an hour! In our database of over 20,000 names we can retrieve any name in less than 1 second!! The program that does that only took 2 minutes to write! That's right 2 (two) minutes! Maximum \# of records is $22,000,000$ ! No limit to \# of fields etc. Includes a menu program, a query program and a variety of utilities to maintain the files. The typeset manual is the best available with both a table of contents and an index. A handy pocket guide is also included. Requires CoCo III and OS9 Level II. Call for more information.
List \$595 - Special Only \$495!

## The WIZ

By Bill Brady

The Wiz is the First and Only program designed for the CoCo III that uses WINDOWS! The Wiz is a smart terminal and communications program for the CoCo III and OS9 Level II. Making use of multiple windows and overlay windows with pop up dialog boxes The Wiz really shines. Features include: Autolog- lets you configure The Wiz's colors, characters boldface etc., Xmodem and text send and receive, sleep mode, conference mode uses a separate window for your text, usage log and much more. Does not work with the CoCo's internal bit banger serial port. The complete package includes a special ACIA driver that allows baud rates from 300 to 19,200 baud. Requires the RS232 pak or the Disto RS232 or similar port plus a CoCo III with OS9 Level II.

Only $\$ 79.95$

Frank Hogg Laboratory, Inc. Est. 1976-770 James Street - Syracuse New York - 13203 315/474-7856 Visa, M/C, Amex, Diners club accepted. Prices do not include shipping.
for the 1.1 Version, the program worked beautifully. The corrections are:

| Line | $\mathbf{1 . 0}$ | $\mathbf{1 . 1}$ |
| :--- | :--- | :--- |
| 149 | \$CEA2 | \$CF7E |
| 172 | \$CF07 | \$CFE3 |
| 258 | \$CA3B | \$CAE9 |
| 298 | \$C8A4 | \$C952 |
| 321 | \$C468 | \$C48D |
| 392 | \$CBD2 | \$CCAC |

Gordon Shephard, Sr. Albany, CA

Thanks for the information, Gordon. As you can see in the previous letter, there is still quite a demand for the original patched version of EDTASM, even though Tandy has introduced a disk version.

## Understanding Memory

What do you recommend for a good CoCo memory map that would cover BASIC 1.2 and RS-DOS 1.1? I am looking for a map that comments on what each address does and breaks it up into the different subroutines it may encompass. It would have to be in a format that could be understood by new $M L$ programmers. A lot of maps use codes for their comments that are not included in the normal process of assembly language learning.

I have looked at Disk Basic Unravelled and the other books in the set, but they are somewhat difficult for a beginner to understand. What is FDC?

Merle Metzger
Tucson, AZ
I'm glad you wrote, Merle, as you are quite typical of the beginning CoCo user. To have a good understanding of the CoCo, you must have a good work-
ing knowledge of both hardware and assembly language programming. This is no easy task for the novice. I suggest TRS-80 Color Computer Assembly Language Programming by William Barden, Jr. (Radio Shack Catalog No. 62-2077) as an excellent start. By the way, FDC stands for floppy disk controller.

## High Resolution Graphics

I have written an assembler program that does graphics on the Co Co 2 based on a music input through the cassette port, but my output on the text screen looks a little crude. How can I get to PMODE 3 or PMODE 4 in assembler?

Joseph Weintraub Woodside, NY

The address of the VDG in your CoCo 2 is \$FF24. Figure out the color combination you want using the High Resolution Graphics section of the Getting Started with Color BASIC manual. Load this value into Register A and do a STA \$FF24. If you want to see how Microsoft did it, disassemble the ROM at $\$ 9621$.

## On the Fritz

I have a problem with Color Scripsit. Once I accidentally pulled the pack out of the computer while it was still on. Now my cursor moves across the screen randomly. I can't use Color Scripsit, and when I press SHIFT-CLEAR, I get a ' $Y$ 'instead of a slash. What is wrong?

Keith Tysinger
Asheboro, NC
Keith, it sounds like you need a new

6809E microprocessor. I would replace it and see if the problem disappears.

## Underlining Made Easy

In your May 1987 column, Bill Hodges said that he was unable to underline the spaces between words when using his Co Co and Telewriter 64 with a DWP-220. I have the same setup, and complete underlining can be had by adding one more embedded command at the top of your text. Right below^D1 15 and ^D2 14, add ^DP3 95. When you type a line you want underlined completely, begin the line with a CLEAR1 , end it with a CLEAR-2, and wherever there is a space in the line, insert a CLEAR-3. This causes $a_{-}$character to be printed in each space, giving you underlining that looks like this, not this. This also works with a Tandy $\overline{D W} \overline{P-230}$.

Dan Weaver
Amsterdam, NY
Thanks for the tip, Dan. I have received quite a few solutions to this problem, and yours is one of the quickest. Evidently you are doing fine with word processing from the appearance of your letter.

Your technical questions are welcomed. Please address them to: Downloads, THE Rainbow, P.O. Box 385, Prospect, KY 40059. We reserve the right to publish only questions of general interest and to edit for space and clarity. Due to the large volume of mail we receive, we are unable to answer letters individually.

Your technical questions may also be sent to us through our Delphi CoCo SIG. From the CoCo SIG> prompt, pick Rainbow Magazine Services, then, at the RAINBOW $>$ prompt, type ASK (for Ask the Experts) to arrive at the EXPERTS $>$ prompt, where you can select the "Downloads" online form, which has complete instructions.

The PLUS 100 - The PREMIER 512K Memory Expansion for the COCO 3.

Brochures and price Ilst avallable on request.

DISKMASTER Disk Drive Systems

## Absolutely Without Equal in the COCO World!

- 20 MB SCSI Hard Drive
- 1 MB High Speed Floppy Drive
- Hardware Real Time Clock with Battery Backup
- 3 Hardware Serial Ports
- Bi-Directional Centronics Compatible Parallel Port
- Sophisticated OS-9 Drivers by D. P. JOHNSON
- RAMDISK options up to 1.5 MB
- Expansion Port for additional Floppy Drives
- Single Cable Interface to COCO 3
- A VERY HIGH PERFORMANCE, 4 Station, Multi-User System can easily be assembled using a DISKMASTER System.

HEMPHILL ELECTRONICS, INC.
1922 Cogswell Road
South EI Monte, CA 91733

(Mon. thru Thurs., 1:30 to 4:30 PM Pacific Time)

# Controller Attacks Halt Line Problem 

By Dale L. Puckett<br>Rainbow Contributing Editor

Werecently had the pleasure of meeting David C. Wiens of Sardis Technologies, a man with a great idea in a brand new hardware product at the Chicago RAINBOWfest. He was taking orders for his new DMC Disk controller. DMC stands for Dual Mode Controller.

If you've ever lost half your command line trying to type ahead while OS-9 was accessing your disk drives, you'll appreciate Wiens' new disk controller card. You'll also appreciate it if you have had trouble using your CoCo to gather realtime data in a laboratory or lost large chunks from incoming messages from an online data service like Delphi while OS-9 was reading a disk file you were printing in the background.

Wiens' next statement sounded like an excellent sales pitch, but it also made a lot of sense. "The waste of processing power caused by the continuous halting of the 6809 microprocessor is up to twice as bad with the CoCo 3 as it was with the CoCo 2," he said. "Why? Because the CoCo 3 can run at twice the speed, twice as many instructions could have been executed during the time the 6809 E is halted."

Ironically, the fault does not lie with
Dale L. Puckett, who is author of The Official BASIC09 Tour Guide and coauthor, with Peter Dibble, of The Complete Rainbow Guide to OS-9, is a free-lance writer and programmer. He serves as director-at-large of the OS-9 Users Group and is a member of the Computer Press Association. Dale is a U.S. Coast Guard lieutenant and lives in Rockville, Maryland.
the CoCo itself, or with OS-9. Rather, all the blame can be assigned to the disk controller. And unfortunately, all other disk controllers on the market at this time have the same problem.
To maintain full compatibility with existing software, Wiens designed the DMC controller with two modes. It retains the current Radio Shack "halt" mode, but also adds a new "no halt" mode. In the latter mode, the DMC can read from or write to a disk by itself while your 6809E continues to run
independently, crunching your data or scanning your keyboard, etc. The 6809 is only needed at the beginning when it initiates the read or write operation and at the end when it checks the status and moves the data to your Color Computer's main memory area.

The DMC controller comes with an 8 K cache memory, but you may add up to 32 K . It uses a Western Digital WDI773 controller chip and comes with a version of Dan Johnson's SDisk software, which has been modified to

make full use of the controller's no halt mode under OS-9. It also will let you use $35-$, 40 - or 80 -track drives, single- or double-sided, in every existing OS-9 disk format including MIZAR OS-9, as well as OS-9 68 K and Japanese OS-9.

## Database Applications Hit Market

Two major OS-9 Level II-based database applications were shown at RAINBOW fest Chicago. Both CSG IMS (Information Management System), \$169.95 from Clearbrook Software Group, 446 Harrison St., P.O. Box 8000-499, Sumas, WA 98295, Phone: (604) 853-9118; and Sculptor, from Microprocessor Developments Ltd in London and distributed at $\$ 495$ from FHL, 770 James St., Syracuse, NY 13202, Phone: (315) 474-7856, appeared to be selling quite well.

We hope to take a detailed look at these powerful database products and feature sample applications written in both languages during the next several months. In the meantime, the pressure of a book deadline forces us to restrict this month's offering to an overview of each program.

The CSG $I M S$ uses a language similar to $d$ Base II from the IBM PC world. In fact, its extensions move it close to dBase III. IMS uses Balanced Tree Indexing, which allows several users to access your data files simultaneously. It also means you will not need to periodically reorganize your data files. You may store up to $1,073,741,824$ records in a database, and a single text field can contain up to 32,768 characters. You may use up to 127 unique indexes.

The CSG IMS compiler lets you develop complex applications quickly and easily. It contains more than 25 filerelated functions, more than $20 \mathrm{I} / \mathrm{O}$ functions and several dozen commands and functions that let you control the flow of your program, perform mathematical operations, manipulate text and trap errors. A unique feature lets you convert text values to sound codes, which means you will be able to search for "sound alike" names. A screen I/O program lets you build a "fill-in-theblanks" form on your CoCo screen. CGS IMS will take it from there and automatically create a database maintenance program based on that screen.

An interactive environment built into CSG IMS lets you search for important data without writing a report program. For example, if you need to know which salesman sold more than $\$ 1,000$ worth of merchandise in March, you could simply type:

LIST FOR sales(3) 1000
print name, sales(3)
You drive CSG IMS through a menu that gives you access to a text editor, file generator, screen form generator, report generator, language compiler, language interpreter, interactive environment and OS-9. CSG IMS application and data files may be ported to other versions of the program that run on all versions of OS-9. Clearbrook plans future implementations for MSDOS, the Atari ST and Amiga.

Clearbrook also has an offering that may interest OS-9 hackers. They are selling ERINA, a user-mode debugger developed by Seikou Electronics Co. of Japan. ERINA includes a small disassembler, an assembler and two dozen commands that speed up program debugging. Commands include Compare, Dump, Examine Registers, Execute, Fill, Goto, Input, Link, Memory Examine, Output, Protect, Quit, Search, Transfer, Unlink, Verify, Display, Trace, Print, Set Breakpoints, Set Dot Variables, Evaluate and Help.

## Sculptor: A Fourth Generation Language for CoCo

Third-generation programs were written in high level languages like basic, cobol or C. After they were written, they had to be compiled or interpreted. To generate a database application, the programmer had to oversee every last detail of the program.
Today, fourth-generation languages like Sculptor from Microprocessor Developments, Ltd, and FHL make the job of generating a database application program much easier. They do this by delivering a complete set of development tools. Each part of the set is designed to do a particular job for the programmer.

When you write a fourth-generation program, you combine selected portions from the existing set and tailor them to meet your own needs. You do not have to go back to the basics and code every detail. Essentially, the fourth-generation language does the low-level coding for you.

## ". . . you will be able to search for 'sound alike' names."

For example, Sculptor includes tools to create and maintain indexed data files, describe data dictionaries, create and update screen forms, write reports, make menus, generate programs and make inquiries into a database.

One of the beauties of the Sculptor system is its automatic program generation. Two programs, sg and rg, create standard programs for you automatically after you have defined the record layout and created a keyfile for your data. sg generates a program that lets you input, delete or amend data in the keyfile by filling in the blank spaces of a form on your screen. rg generates a program for you that will produce a printed report from your database.

While Frank Hogg awed the RAINBOW fest crowd with Sculptor, his nephew Rich and new assistant Nancy sold many copies of DynaStar with DynaForm. Both programs have been rewritten in C and customized to take advantage of the CoCo 3 and OS-9 Level II. As a bonus for CoCo I and CoCo 2 users, FHL put all older versions of DynaStar on the same disk with the new release, including the original version that works with any terminal supported by the proper GotoXy module.
The new CoCo DynaStar determines what kind of terminal you are using by reading a file named termset in your SYS directory. The file termset is also used by Microware's Scred, the screen editor that Tandy includes in the OS-9 Level II developers package. CoCo users don't need to worry about termset unless they are using an external terminal. They need only copy the

SYS/termset file from the FHL DynaStar distribution to their system disk.

On the other hand, you can amuse yourself for hours just playing with the last four parameters on each termset line. These bytes change the color of the foreground and background of both the main window and the overlay windows DynaStar uses to display its help messages. They are in this order:

1. Foreground color of help menus
2. Background color of help menus
3. Foreground color of text screen
4. Background color of text screen

If you load DynaStar first, you can pop in and out of it quickly and observe what happens each time you change one of the bytes above. 1 experimented with different color schemes for nearly an hour before I made up my mind.

If you hook up a Televideo 910 terminal to device T T2 through the RS-232 pack in slot one of your Multi-Pak interface, you will find that it works perfectly. You'll also find lines for a half dozen other terminals in the termset file supplied.

## DynaCalc Patches

Karl Quinn of Terminal Island, California, wrote us recently and passed along several patches that fix minor bugs in Version 1.00.00 of DynaCalc. The first change fixes the problem of an extra line feed being sent after every carriage return when printing a report. Specific instructions that use only "vanill a" OS-9 commands are available at no cost from Radio Shack Computer Centers. The quick fix is to use Computerware's patch utility to make the following changes:

| Offset | Old | New |
| :--- | :---: | :---: |
| 0007 | 80 | 81 |
| 0008 | 63 | 62 |
| 4BE2 | 26 | 20 |

Make sure you use the $v$ command before you exit patch, to ensure that DynaCalc's CRC is updated. A second bugattacks you if you use the DMP-105 or DMP-120 Tandy printers, which do not recognize the "Top of Form Feed" character that DynaCalc sends out. Change the following byte:

| Offset | Old | New |
| :--- | :--- | :---: |
| 5000 | 0 C | 0 D |

Again, don't forget to update the CRC with the patch $\cup$ command before quitting.

```
            strhcpy(filename, dir.name);
            if(filename[\varnothing] [= '.' && filename[\varnothing] l= '\\emptyset') (
                l3tol(&offset, dir.lsn, 1);
                offset *= 256;
                lseek(fpn, offset, \emptyset);
                read(fpn, &fd, sizeof(fd));
                show();
            )
        1
)
show()
l
    long offset;
    int 1;
    printf("%-15s", filename);
    for(1 = g; 1 <48; 1++) (
        13tol(&offset, fd.alloc[1].psn, 1);
        /* long way of saying 'if(i % 6 = |) ' */
        if(1 - 6 || 1 - 12 || 1 - 18 || 1=24 || 1=3 = 36)
                printf("\n ");
            if((1|=6 || 1|=12 || 1|=18 || 1|=24 || 1|-36) && offset = G) (
                printf("\n");
                return;
            )
            if(offset - |)
                return;
            printf(" %961X %g4X ", offset, fd.alloc[1].sectors);
        )
)
```

## Try OS-9 on Duane Perkins' BBS <br> Before You Buy

We received an interesting offer from Duane Perkins, P.O. Box 255, Mount Gretna, PA, (717) 964-3536, this month. He has written a BBS system named " 9 Online" that lets CoCo owners run OS9 remotely. Here's how it works.

You send Perkins an alphanumeric username and password and a one-time non-refundable fee. He registers your username and password, gives you an initial allotment of disk space, sends you terminal software you can run on your non-OS-9 CoCo and instructions. Your initial fee buys you three hours of online time. You pay the telephone charges.

Perkins has come up with a novel idea that could be put to good use by local Color Computer Clubs wanting to help their members get started with OS-9. If a club set up a system like this on a local
phone line and made it available 24 hours a day, many new people would be able to try OS-9 and get familiar with it before they buy it. Go for it!

## This Month's Listings

S.B. Goldberg has contributed VMode. This handy utility lets you turn the disk verify routine on and off on the fly. To turn verify on, type umode $\cup$. To turn verify off, type $u$ mode $-v$. If you don't remember what state you left the verify utility in, type umode and it reports the current state.

Greg Law is back this month with files. This utility shows all your files and lets you peek at the segment allocation table. It is hard coded to 80 columns, as it is primarily designed to be used with a printer. It prints the filename followed by a table showing the LSN and the number of sectors allocated in the entry.

# The Problem with BASIC09 

By Peter Dibble

BASIC is so powerful I sometimes almost forget that assembly language is the ultimate language. Getting at more than 64 K of memory on the 6809 is a challenge in any language. It's almost impossible with BASIC09.

I don't like the dummy editor/ printer program I showed you in the May 1987 issue. The only way I could find to start the printer process from a BASIC09 program was the Shell command. It worked, but it caused trouble. The programs had to look foolish as they chased around patching the parameters so the shell wouldn't laugh at them changing them back into poetry.

I didn't need the shell. The OS-9 F\$Fork system call woul」 have done exactly what I wanted. The problem is that there's no way to issue the F\$Fork system call from bASIC09. Or is there?

There are two ways to do a fork from basic09. The easiest way is to use the SysCall procedure. (It's on Delphi and in the OS-9 Users Group software library. It also comes with Level II.) It's a little harder to write a special procedure to do a fork, but it will be clean and efficient.

I'll show you how to use an assembly language procedure to make the editor/ printer pair from May work much more smoothly.

Peter Dibble has a bachelor's degree in chemistry and is currently a graduate student in computer science. He has worked as an applications programmer, systems programmer and as the user services assistant director for the University of Rochester Computing Center. With Dale Puckett, he is the co-author of The Complete Rainbow Guide to OS-9.

## The Programs

Even when it isn't run from the shell, BASIC09 can't deal with carriage return characters on the command line. However, it treats line feeds like any other character. Since a line feed generates a new line when basic 09 prints it, I put line feed characters, $\operatorname{CHR\Phi }(10)$, in the text wherever I want a new line.
The BFork procedure is an assembly language procedure meant to be called from BASIC09. It can be called using:

```
run BFork (command_ _ line)
or
run BFork (command _ line, op-
tional _memory)
```

In both cases, BFork starts a process running BASIC09 with the specified command line. If you give BFork a second parameter, it acts like the $\square$ option on a shell command line, e.g., you can give BASIC09 more memory with it.

BFork starts a BASIC09 process without using the shell. This means that the command line parameter goes directly to BASIC09. For our purposes, that is a good thing. It means that we can be less careful about what we put in the command line. For instance, if the shell were involved, an exclamation point in the command line would have caused the shell to try to set up a pipe. That's not what we want at this point!

## What's Going on in BFork

The first section of BFork is all definitions. We set up the page headers and the module header and define a symbol for the Parameter Error code. Exceptf or the page header inf ormation, identical lines will appear at the beginning of any subroutine module.

After the module header, we set up
symbols for the values BASIC09 will pass in the stack. BASIC09 puts lots of information in the stack. Starting from the bottom ( 6809 stacks grow down) we have:

- The return address.
- The number of parameters BASIC09 is passing us. This had better be one or two.
- The address of the command line.
- The length of the command line.

If the caller included an optional memory parameter:

- The address of the amount of extra memory.
- The length of the amount of extra memory ( 2 , if this is an integer).

The next part of BFork is constant values. There's the name of the program (for the module header to refer to), BFork's edition number, the string "Basic 09 ," and a constant zero.

Next, we get to the program itself. If we were only passed one parameter, we pretend that we were passed an optional memory parameter of zero - that's what the constant zero is for. If there are two parameters, we use the second one as the optional memory. At this point we don't do anything with the optional memory, just leave the X register pointing at it.

Now we worry about the length of the command line. If it's zero, we have problems. There has to be at least the name of the BASIC09 procedure to run. If it's non-zero we put it into the $Y$ register. It looks like it would have been better to put the length of the command line directly into Y , but we're about to use it again.

OS-9 doesn't allocate extra space to
hold a process's parameters. Since parameters are usually shot, this isn't a problem. BFork could be passing a long command line, so we worry about it. Optional memory is given in pages, so we have to convert the length of the command line (which we cleverly left in D) to pages and add it to the optional memory.

From here we just set up the rest of the values F\$Fork needs and do the fork. The process that F\$Fork starts is called a child. BFork waits for the new child to end.

BFork returns with the most pessi-
mistic value it canfind. If anything went wrong in BFork, that error code is returned. If BFork runs smoothly, it returns whatever the child returns.

## How Does This Fit in?

Editor and Printer together are tiny. There is obviously no need for BFork. The programs are supposed to represent much larger programs. I gave them dignified names to support the fiction that they are large and complicated.

Imagine complicated programs hooked together by BF ork. BASIC09 uses
almost 24 K of memory, leaving 40 K for your program and data. A 56 K program won't fit in memory. If you can divide the 56 K program into a 40 K part and a 16 K part and connect them with BFork, Level II will go into action and give you the memory you need.

Remember that we are still working on the second simplest way to access extra memory. The simplest way was to use processes that have nothing to do with each other. This way uses BFork (or Shel1) like a procedure call that can only send values to the called procedure. Values can't be returned.

## Still pounding away on that old keyboard?

Give it, and yourself, a break! Subscribe to RAINBOW ON TAPE or RAINBOW ON DISK today! Every month, these convenient services bring as many as two dozen ready-to-run programs right to you. Using the current issue of the Rainbow as documentation, all you have to do is load and run them. Just a one-year subscription gives you more than230 new programs!

The typing time you save is time that you can spend enjoying your CoCo! Back issues of RAINBOW ON TAPE are available beginning with the April 1982 issue, so there's no need to miss out on any of our great offerings. A single copy of RAINBOW ON TAPE is $\$ 10$ within the United States; U.S. $\$ 12$ in all other countries. The annual subscription rate for Raingow on tape is $\$ 80$ within the U.S.; U.S. $\$ 90$ in Canada; and U.S. $\$ 105$ for all other countries. U.S. currency only, please. In order to hold down costs, we do not bill.*

## RAINBOW ON DISK Offers OS-9 Programs

In addition to all the programs offered on tape, part of one side of the disk is formatted for the OS-9 operating system program. That means you can now get all the OS-9 programs from the magazine programs that cannot be put on tape. And, with the introduction of the CoCo 3, OS-9 programs will become more and more prevalent. Back issues of RAINBOW ON DISK are available beginning with October 1986. Subscriptions to RAINBOW ON DISK are $\$ 99$ a year in the U.S. Canadian rate is U.S. $\$ 115$. All other countries, U.S. \$130. Single copy rate is $\$ 12$ in the U.S.; U.S. $\$ 14$ in Canada; and U.S. $\$ 16$ in all other countries.*

## Look for our order envelope between pages 34 and 35

RAINBOW ON TAPE and RAINBOW ON DISK are not stand-alone products, but are intended as adjuncts and complements to the magazine. You will need the magazine for loading and operating instructions. - Kentucky residents add $5 \%$ sales tax. Please allow 6 to 8 weeks for first copy.

To order by phone (credit card orders only), call (800) 847-0309, 8 a.m. to 5 p.m. All other inquiries call (502) 228-4492.

## BARDEN'S BUFFER

# Learning the Lingo 

By William Barden, Jr. Rainbow Contributing Editor

Sorry about the recent lapse in "Barden's Buffer." I've been trapped in the internals of OS-9 trying to figure out how things work. In any event, I'm back and ready to use the CM-8 Color Monitor I purchased at RAINBOWfest-Chicago. I highly recommend the RAINBOWfests, by the way. There's something for everyone, the prices are excellent, and there are plenty of free seminars. I've attended the last few RAINBOWfests and have given seminars on CoCo languages, a subject dear to my heart. Not only does the CoCo support a new version of BASIC under OS-9, called BASIC09, but it also supports two of the most popular computer languages ever: PASCAL and C. I want to look at computer languages in general and some of the philosophy behind them. In addition, there are some interesting things about using languages under OS-9 on the CoCo.

## In the Beginning Was Machine Language

By now, you all know about the 6809 microprocessor in the CoCo. In the CoCo 3 , it's the 6809 E , which is simply a faster version of the 6809. Both microprocessors use the same instruction set. The instruction set of the 6809 is thought by many programmers to be better than the instruction set of the 8088/8086/80286/80386 microprocessors used in MSDOS systems (like the Tandy 1000 or 3000 ) because it's more of a "classical" set of instructions - more general purpose instructions that can use a variety of addressing modes.

Machine language instructions perform very primitive operations when compared to high-level languages. A typical instruction sequence is shown below, which adds the numbers from 1 to 10 with the result in the $A$ register.

```
A}<--
B<-..-10
Store (9) in $30p0
Add (A) and ($3090)
B<--- B - - 
store B in $309g
Back 3 instructions if <> }
```

Bill Barden has written 27 books and over 100 magazine articles on various computer topics. His 20 years'experience in the industry covers a wide background: programming, systems analysis and managing projects or computers ranging from mainframes to micros.

Instructions operate at a byte or word level - eight or 16 bits of data - rather than in the floating-point format of BASIC. Consequently, you've got to implement your own floating-point subroutines and even design your own printer or I/O drivers in many cases.

Machine language refers to writing sets of instruction sequences in binary ones and zeroes, the only language that a microprocessor really recognizes. Although it's certainly possible to write code that way, it's very tedious. Chances are that, in a string of ones and zeroes that represent the "add the numbers from I to 10" code, you've made one or two data entry or logical errors. Deleting, modifying or inserting instructions means a tedious rehash of the ones and zeroes.

Assembly language is a way to make that coding less tedious. Instead of just ones and zeroes (or the hexadecimal equivalent), programmers write down instruction mnemonics. These are abbreviations for what the machine language instructions really do, such as ADDA $\$ 3 E 04$ for, "Add two onebyte operands, one from the $A$ register and the other from memory location $\$ 3 \mathrm{E} 04$, and put the results in the A register." An assembler program takes the assembly source code and translates it into those ones and zeroes in "object code." The object code is what is loaded and executed in the microprocessor. The assembly language version of the "add the numbers" code is shown in the listing. Everything to the right of the $00 x x x$ line numbers is written and edited by the programmer. The line numbers, and everything to their left, are spewed out by the assembler program.

|  |  |  |  | *ADD TH | NUM | RS FRO | TO 19 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 992F | $4 F$ |  | 9\%119 | A DDNUM | CLRA |  | ZERO TOTAL |
| 9929 | C6 | 9A | \$1012\% | LDB | \#10 |  | COUNTER |
| 9922 | F7 | 3090 | 90139 |  | STB | \$3900 | STORE |
| 9925 | BB | 399\% | 90149 | ADD919 | ADDA | \$3900 | ADD 18+9+ |
| 9928 | C 9 | 91 | 99156 |  | SUBB | \#1 | COUNT - |
| 992A | F7 | 3000 | 9月16 6 |  | STB | \$3000 | SAVE CNT |
| 9920 | 26 | E6 | ¢8179 | LOPEND | BNE | ADD $101 \varnothing$ | IF $\langle>\rho$ |

The CoCo has several assemblers available. Some are "foreign assemblers," including the excellent Micro Works assembler, but the most popular assembler is Radio Shack's EDTASM ${ }^{+}$on cassette or disk. This is a highly interactive assembler written by Microsoft. It combines the assembler proper, an editor similar to the BASIC editor and a debug package called ZBUG, which allows you to execute and find errors in the assembled program under programmer control.

The whole package allows in-memory assembly, editing and debugging in a nice, interactive environment.

Radio Shack no longer markets the EDTASM ${ }^{+}$disk assembler, even though it is ind ispensable for CoCo assembly language. (The cassette version is still around, at $\$ 39.95$.) Why no EDTASM ${ }^{+}$disk assembler? Radio Shack is driven by what sells. If a product falls below a certain sales level, they pull it from the catalog. There are many copies of disk EDTASM + floating around, however.

One reason for EDTASM ${ }^{+}$'s demise is the availability of the OS-9 assembler. The OS-9 assembler has many of the features of $E D T A S M^{+}$, especially in the editing and assembling area. However, it does lack the interactiveness of EDTASM ${ }^{+}$- it's much harder to edit, assemble and debug an OS-9 assembly language program.

The philosophy of OS-9 assembly language is different, as well. EDTASM ${ }^{+}$assembly language programs run "standalone" without any operating system. OS-9 assembly language programs, or modules as they are called, run under the watchful eye of OS-9. This is a mixed blessing. Under OS-9 you can use many of OS-9's operating system calls to perform tasks such as reading a character or writing to the screen. On the other hand, all assembly language code under OS-9 must be position-independent.

Position-independent code means that references to absolute addresses in memory, such as the $\$ 3 \mathrm{E} 04$ reference above, are verboten. Instead, an instruction-addressing type called program counter relative (PCR) must be used. Instructions are referenced to the current program location rather than fixed locations. The reasons for this are wellfounded. OS-9 loads all types of program modules into memory at one time and keeps track of where they are. Modules must be able to operate anywhere in memory because there are no fixed locations.

Writing code in PCR addressing format is not that difficult (compared to normal assembly language code), but is rather limiting and just another complexity for a beginner to contend with. Coupled with the fact that you must know how to use OS-9 to run the assembler, using the OS-9 assembler is is no easy chore.

Assembly language, although difficult to learn and a tedious language in which to program, has one great virtue. It's extremely fast - up to hundreds of times faster than interpretive BASIC. It will always be the language of choice for powerful commercial applications that are meant to sell in large volumes.

## CoCo 3 BASIC

CoCo 3 BASIC is mostly interpretive BASIC with a few Microware add-ons for the high resolution modes of the CoCo 3. HCIRCLE, HCLS, HCOLOR, HDRAW, HGET, HLINE, HPAINT, HPOINT, HRESET and HSET are like the counterpart commands for the CoCo 2, as are LPEEK and LPOKE (the latter are for extended memory). Other goodies allow errortrapping (ERLIN, ERNO, ON ERR GOTO, ON BRK GOTO) and additional screen control (WIDTH, LOCATE).

Interpretive BASIC for the CoCo 3 is every bit as powerful as Microsoft GW-BASIC for the IBM PC Compatible (MSDOS) crowd.

## Structured Languages

What is OS-9 BASIC (BASIC09) like? Before answering that, let me tell you about a controversy that's raging. There are computer science professors who literally hate BASIC. One of the chief reasons for this is its lack of structure. Industry and
academia realized that something had to be done about all that "spaghetti code." One proposed answer was structured programming.
In structured programming, code is broken up into nice, neat modules. Each module performs a well-defined function, say, calculating a monthly payment given a principle amount, an interest rate and a time period. There is one entry point for each module and one exit point. Loops are indicated by indentations of code, and there are generally no GOTOs or their equivalents.
How is it possible to write a program without GOTOs? One way is by providing enough commands for loops. After all, most programs are one big loop with smaller loops inside and nested loops within loops. Another feature is the use of procedures. Procedures are simply the modules we've been discussing and are very similar to subroutines. However, procedures use parameters that are passed from a main program or another procedure. Variables are used in the procedure locally and may not be available outside the procedure.

## Loops

Here's an example of a loop in BASIC09:

```
SUM = \varnothing
I = 1
WHILE I <> 1øø1
    SUM = SUM + I
    I = I + I
ENDWHILE
Here's another:
SUM = }
FOR COUNTER = l TO 1\emptyset\emptyset\emptyset
    SUM = SUM + COUNTER
NEXT COUNTER
```

Both loops do the same thing: compute the sum of the numbers from I through 1000. Notice one thing about this code - it doesn't have line numbers! None of the structured languages, including BASIC09, require line numbers, although some, including BASIC09, may allow optional line numbers.

## Procedures

Structured languages get around the lack of line numbers and subsequent lack of GOTOs not only with loops, but with procedures. There is usually one main procedure that calls many other procedures in a program. Sub-procedures may call other procedures and so forth. Here's a typical sequence in BASIC09:

```
PROCEDURE COMPUTEA
    PARAM B,H
    TEMP = "5 * B * H
END
PROCEDURE COMPUTET
    PARAM B,S
    TEMP = B + 2, S
    PRINT "Perimeter="; TEMP
END
REM MAIN
    INPUT SIDE, BASET, HEIGHT
    RUN COMPUTEA ( BASET, HEIGHT )
    RUN COMPUTET( BASET, SIDE )
```

The first two modules are procedures, called by the two RUN statements in the main body of code. Each procedure has variables that are used within the procedure $-\mathrm{B}, \mathrm{H}$ in the first procedure and $\mathrm{B}, \mathrm{S}$ in the second procedure. These parameters (PARAMs) are used within the procedure and are not recognized within the MAIN program. The ' B ' in the first procedure is a different, local ' B ' from the one used in the
second procedure. Parameters are passed between procedures by the CALL statements. In this example, the values of BASET and HEIGHT are passed to the COMPUTEA procedure and become B and $H$. The values of BASET and STDE are passed to the COMPUTET procedure and become B and S. Because each procedure uses local variables, there is no confusion about using variable names more than once in different parts of the program. However, global variables are still possible and can be used in any procedures if necessary.

## The Controversy

One of the first structured languages to be widely used was PASCAL, which was designed by a Swiss computer scientist, Nik las Wirth. It was developed for computer science use and, presumably, was easy for students to use. An example of PASCAL code to do the "add numbers" problem is:
var
sum, $I$ : integer;
begin
$r:=1$;
while $I<19 \varnothing 1$ do begin
sum := sum + I;
I $:=I+1$;
end;
writeln ('The sum of 1 to $1 \varnothing \varnothing \varnothing$ is ", sum ); end.

You can see that PASCAL is somewhat "BASIC-like" but uses many of the elements of a structured language - indented code, WHILE loops, etc.

Another characteristic of structured languages, whether BASIC09 or others, is that the variables are strongly typed. In interpretive BASIC, you can use any name for a variable and really don't have to be concerned about whether the values held in that variable are integer ( -32768 to 32767 ) or floatingpoint (values such as -87.88 or 564.002 ). In most structured languages, however, variables must be declared according to type, i.e., whether they are integer variables, single-precision, character or string variables, and so forth.

## BASIC09

All of this sets the background for a description of BASIC09, the BASIC language used with OS-9. BASIC09 is definitely a structured language; it has optional line numbers, WHILE loops, procedures and data types, and it supports indentations. In addition, it has its own built-in editor, which is both line- and string-oriented.

BASIC09 is a compiler rather than an interpreter. The Extended BASIC interpreter used in the CoCo 3 processes BASIC programs a statement at a time. Each time through a statement, the interpreter asks, "What is this statement?" and "What are the variables?" Then it goes through methodically to search for the variables, compute expressions, and implement the BASIC statement before moving on to the next statement. If two more statements are processed and a return is made back to the original statement (as in a loop), the processing starts over from the beginning as if the interpreter had never seen the statement before. All of this processing of the BASIC text takes a great deal of time, so interpretive BASIC is fairly slow.

Compiled BASIC, however, operates differently. Rather than processing each statement every time it is encountered, the BASIC compiler makes one pass through all the statements from beginning to end (not as the program flows). At the end of this pass, the compiler has decoded much of the code into an assembly language or machine language form. This object code now executes much more rapidly than the interpretive
version because much of the processing has already been done.

In general, compiled BASIC is much faster than interpretive BASIC. Under OS-9, though, BASIC09 is a lot slower than you would expect - only three or four times faster than interpretive BASIC in many cases. Why? The overhead of OS9 has a lot to do with the speed - there's a lot going on in OS-9 and some of it is not done efficiently.

Running the BASIC 09 compiler requires a different approach from CoCo Extended BASIC. Instead of being able to immediately edit and execute a line of BASIC code, a program under BASIC09 must first be recompiled. This makes debugging much more tedious - the quick interactiveness you find with Extended Color BASIC is not there, nor are the debugging tools, although BASIC09 has a trace mode and some interactive hooks.

On the other hand, because BASIC09 is a structured language, it offers certain advantages. It's easy to read and maintain code, has modules (procedures) that can become part of a library of modules to be used at will, and has some compatibility with other structured languages.

It's interesting to note recent developments of BASIC in the MS-DOS world that point to how structured languages are being received. Microsoft developed GW-BASIC, a version of interpretive BASIC that runs on MS-DOS systems and includes just about every convenient command that is possible to stick into a BASIC interpreter (including software interrupts for keys, communications data and errortrapping).

Microsoft also has a BASIC compiler that is compatible with the commands found on their BASIC interpreter. It allows you to write a program in interpretive BASIC, use the great interactiveness of the interpreter to debug the program, and then compile the program for high-speed operation.

Not too long ago, Microsoft also introduced a new compiler called QuickBASIC for MS-DOS machines, which not only recognizes GW-BASIC commands, but also provides structured programming commands, such as WHILE/WEND (looping, also in GW-BASIC), IF /THEN/ELSE IF (a type of CASE statement), and DO UNTIL (another type of loop). The result is a BASIC language very similar to BASIC09 in a highly interactive environment.

Just a few months ago, Borland International brought out its version of a structured BASIC called Turbo BASIC. This BASIC also recognizes the GW-BASIC commands, but provides a structured programming format and commands as well.

With premier developers like Microsoft and Borland making these efforts, it seems structured programming for BASIC is alive and well. BASIC is changing to be competitive with the current structured languages like PASCAL and C!

## More on PASCAL

We've seen a brief example of PASCAL, but let's look a little further into it. PASCAL has achieved a great deal of interest as a language because of its use in computer science curricula, but it is not widely used in industry. Languages such as COBOL (Common Business Oriented Language) and FORTRAN (Formula Translator) both see a great deal more use than PASCAL. Interestingly enough, both are almost 30 -year-old languages, which says something about being there first.

PASCAL is widely used on micros, though. One of the reasons for this is the huge success of Borland International's Turbo PASCAL. This is a PASCAL compiler for MS-DOS systems such as the Tandy 1000 or IBM series. Two reasons for Turbo's success are the high degree of interactiveness in
the compiler - it has a built-in editor - and the raw speed of compiled programs.

Unfortunately, there is no Borland equivalent for OS-9. The PASCAL compiler under OS-9 is certainly adequate, but not exciting. It's a compiler like many compilers: no builtin editor, no interactive debugging tools, and cryptic error messages. Also, there's a great deal of overhead to compile even short programs under OS-9. Whereas Borland's Turbo compiles in a few seconds, OS-9 PASCAL requires a few minutes. As I say, though, this is typical for most compilers.

Here's another sample of a PASCAL program. This one computes the area and perimeter of a triangle in similar code to the preceding BASIC09 example.

```
{ program to compute area and perimeter of a triangle}
Program Triangle
Var
    Side, Base, Height : real;
Procedure ComputeA;
var
    Temp : real;
begin
    Temp := Ø.5 * Base * Height;
    writeln ('Area=', Temp);
end;
Procedure ComputeP;
var
    Temp : real;
begin
    Temp := Base + 2 * Side;
    writeln ('Parimeter=', Temp);
end;
{maan}
begin
    writeln ('Enter Side, Base, Height');
    readln (Side, Base, Height);
    ComputeA;
    ComputeP;
end.
```

## The C Language

C is another language of the same ilk as BASIC09 and PASCAL. It's highly structured and has many of the same commands and capabilities as PASCAL. C has a reputation as a systems programmer's language because it gets down to the nitty-gritty, allowing programmers to perform bit operations. It has become very popular on micros, and many applications that would formerly have been done in assembly language are now being done in C .

Here's a sample program in C - the same application as previously illustrated:

You can see from the example that $C$ has the same general appearance as PASCAL. Also obvious is that $C$ has "type

```
/* Program to compute area and perimeter of triangle */
```

/* Program to compute area and perimeter of triangle */
float Side;
float Side;
float Base;
float Base;
float Height;
float Height;
compute_area ()
compute_area ()
( float Temp;

Sugar Sottware Trig Attock S20
variables" - variables must be explicitly declared as int (integer), float (floating-point), char (character), and others. In C, a program is subdivided into procedures that are called from the main program or from other procedures. No line numbers are used, and there is no GOTO command in the language. Although not obvious from this example, C has the same type of loop control as in other structured languages - WHILE loops, FOR loops, and DD/WHILE loops. The scanf and printf commands take the place of PASCAL READ and WRITE commands and use special characters for formatting action, reminiscent of some of the formatting in FORTRAN programs.

C is so popular that both Borland and Microsoft are rushing to put out high-speed C compilers for MS-DOS systems. The only version of C we have available for the CoCo is the Microware C compiler. Like the PASCAL compiler, this is a typical C compiler - it operates from a previously edited source file, contains most of the standard features found in C, and is somewhat slow in compilation. Still, it works well in the OS-9 environment, and we can thank Radio Shack that it is available.

## Other Features of BASIC09, PASCAL, and C

All three languages allow numeric, string and multidimensional arrays. Arrays in BASIC09 and PASCAL must be fixed in size. In C, the arrays may be dynamic. The size of the arrays may change as the program requires it.

User-defined (enumerated) variables can be used in PASCAL and C. Suppose you wanted to define computers of a certain type. You could define a set of variables called COMPUTER that included the items Tandy_1000, IBM-PC, Apple_IIGS and Cray_XMP.

Linked lists and trees may be processed in PASCAL and C by the use of a special data format called pointers. Linked lists are advanced data structures that build a list of data elements, each element having data and a pointer to the next data element in the list. The pointers may be easily changed to insert, delete or modify items in the list.

Functions or procedures can have local variables, as mentioned before. This makes each procedure in the three languages a stand-alone module that does not have to be rewritten with new variable names for a new program. Another related feature found in all three languages is recursion, the ability of a procedure or function to call itself. Recursion can produce elegant code, as in this C example to find factorials:

```
long int factorial (x)
    int n
    (
        long int answer;
        if ( }x==\emptyset\mathrm{ )
            result = 1;
        else
            result = x * factorial (x-1);
        return (answer);
    \square
```

Here, the function factorial calls itself from within the function. (You might look upon this as a picture of a man reading a newspaper, which contains a picture of a man reading a newspaper, etc.) Is recursion useful? Not nearly as useful as you might think, because it consumes huge quantities of memory in building a stack of return addresses and data. On top of that, it has a great deal of overhead. However, the code is elegant.

## OS-9 Language Documentation

Microware documentation on PASCAL and C is terrible. It's
summed up in these words from the OS-9 PASCAL reference manual: "Either you know PASCAL, or you don't." The reference manuals don't claim to be courses in PASCAL or C programming, and I can understand why tutorial information isn't included. However, operating information is of a more generic nature and does not address the problem of

## "Should you use a structured programming language or interpretive Microsoft/ Microware BASIC?"

using the compilers on the CoCo. Useful information is hard to find or nonexistent.

The BASIC09 portion of the Color Computer 3 operating system reference manual, however, is another story. Written by Radio Shack's R. Bartly Betts, formerly a RAINBOW contributing editor, it does an excellent job covering BASIC09. You should have a much easier time learning this language than stumbling through the forests of PASCAL or C.

## Conclusions

If I sound a little tough on the compilers for the CoCo , I really don't mean to be. Here's a truly inexpensive machine capable of multitasking with relatively high resolution graphics and with three of the most popular higher-level languages available for it at rock-bottom prices. Since I love the CoCo, I only wish we had the equivalent to Turbo PASC AL, QuickBASIC and Turbo C to run on the system. An easy-to-use compiler would make the task of coping with OS-9 a great deal less frustrating.

However, we don't have these products and must use the existing BASIC09, PASCAL or C compilers. The fact is, once you've cut through all of the preliminary procedures to assemble a working disk for compilations, learned the quirks of the system, and put in some time studying the language, you have the ability to compile some pretty neat programs in the language of your choice.

I think the crux of the problem here is this: Should you use a structured programming language or interpretive Microsoft/Microware BASIC? Certainly, if you're going into computer science or business applications programming, you'll have to know a structured language like PASCAL or C. On the other hand, it's possible to use "street BASIC" with line numbers and still crank out some pretty good, efficient programs. Anyone capable of writing large programs in nonstructured BASIC should be capable of using the structured languages, as well. Writing programs in structured languages seems to produce very "wordy" programs that often are slower than they should be. BASIC 09 may be a good compromise between the ease of use of some of BASIC commands and functions, and a well-structured language.

In any event, BASIC09, PASCAL and C are inexpensive and available on the CoCo under OS-9. Try your hand at these languages and find the one that appeals to you. Don't forget assembly language, either - it's worth the grief and agony to get the high speed. In future columns, we'll try to provide coverage of not only PASCAL, C and BASIC09, but assembly language on the CoCo as well. Believe it or not, there's a lot of common ground among all these languages.

## Where to Find Rainbow

# Revicon Info 

## How To Read Rainbow

Please note that all the BASIC program listings in THE RAINBOW are formatted for a 32 -character screen - so they show up just as they do on your CoCo screen. One easy way to check on the accuracy of your typing is to compare what character "goes under" what. If the characters match - and your line endings come out the same - you have a pretty good way of knowing that your typing is accurate.
We also have "key boxes" to show you the minimum system a program needs. But, do read the text before you start typing.
Finally, the little disk and/or cassette symbols on the table of contents and at the beginning of articles indicate that the program is available through our RAINBOW ON DISK or RAINBOW ON TAPE service. An order form for these services is on the insert card bound in the magazine.

## What's A CoCo?

CoCo is an affectionate name that was first given to the Tandy Color Computer by its many fans, users and owners.
However, when we use the term CoCo , we refer to both the Tandy Color Computer and the TDP System100 Computer. (While many TDP-100s are still in service, the TDP Electronics division of Tandy no longer markets the CoCo look-alike.) It is easier than using both of the "given" names throughout THE RAINBOW.
In most cases, when a specific computer is mentioned, the application is for that specific computer. However, since the TDP System-100 and Tandy Color are, for all purposes, the same computer in a different case, these terms are almost always interchangeable.

## Rainbow Check Plus

The small box accompanying a program listing in THE RAINBOW is a "check sum" system, which is designed to help you type in programs accurately.
Rainbow Check PLUS counts the number and values of characters you type in. You can then compare the number you get to those printed in the rainbow. On longer programs, some benchmark lines are given. When you reach the end of one of those lines with your typing, simply check to see if the numbers match.
To use Rainbow Check PLUS, type in the program and save it for later use, then type in the command RUN and press ENTER. Once the program has run, type NEW
and press ENTER to remove it from the area where the program you're typing in will go.
Now, while keying in a listing from THE RAINBOW, whenever you press the down arrow key, your CoCo gives the check sum based on the length and content of the program in memory. This is to check against the numbers printed in THE RAINBOW. If your number is different, check the listing carefully to be sure you typed in the correct BASIC program code. For more details on this helpful utility, refer to H . Allen Curtis' article on Page 21 of the February 1984 Rainbow.

Since Rainbow Check PLUS counts spaces and punctuation, be sure to type in the listing exactly the way it's given in the magazine.

## OS-9 and RAINBOW ON DISK

The OS-9 side of RAINBOW ONDISK contains two directories: CMDS and SOURCE. It also contains a file, read.me.first, which explains the division of the two directories. The CMDS directory contains executable programs and the SOURCE directory contains the ASCII source code for these programs. BASIC09 programs will only be offered in source form sothey will only be found in the SOURCE directory.
OS-9 is a very powerful operating system. Because of this, it is not easy to learn at first. However, while we can give specific instructions for using the OS-9 programs, you will find that the OS-9 programs will be of little use unless you are familiar with the operating system. For this reason, if you haven't "learned" OS-9 or are not comfortable with it, we suggest you read The Complete Rainbow Guide to OS-9 by Dale Puckett and Peter Dibble.

The following is not intended as a course in OS-9. It merely states how to get the OS-9 programs from RAINBOW ON DISK to your OS-9 system disk. Use the procedures appropriate for your system. Before doing so, however, boot the OS-9 operating system according to the documentation from Radio Shack.

1) Type load dir 11st copy and press ENTER.
2) If you have only one disk drive, remove the OS-9 system disk from Drive 0 and replace it with the OS9 side of RAINBOW ON DISK. Then type chd/d0 and press ENTER. If you have twodisk drives, leave the sytem master in Drive 0 and put the RAINBOW ON DISK in Drive 1. Thentype chd/dl and press ENTER.
3) List the read.me. first file to the screen by typing list read.me.first and pressing ENTER.
4) Entering di $r$ will give you a directory of the OS-9 side of RAINBOW ON DISK. To see what programs are in the CMDS directory, enter dir cmds. Follow a similar method to see what source files are in the SOURCE directory.
5) When you find a program you want to use, copy it to the CMDS directory on your system disk with one of the following commands:

One-drive system: copy /d0/cmds/filename/d0/ cmds/ filename-s
The system will prompt you to alternately place the source disk (RAINBOW ON DISK) or the destination disk (system disk) in Drive 0 .
Two-drive system: copy /dl/cmds/filename/d0/ cmds/filename
Once you have copied the program, you execute it from your system master by placing that disk in Drive 0 and entering the name of the file.

## The Rainbow Seal

The Rainbow Certification Seal is our way of helping you, the consumer. The purpose of the Seal is to certify to you that any product that carries the Seal has actually been seen by us, that it does, indeed, exist and that we have a sample copy here at THE RAINBOW.
Manufacturers of products - hardware, software and firmware - are encouraged by us to submit their products to THE RAINBOW for certification. We ascertain that their products are, in actuality, what they purport to be and, upon such determination, award a Seal.
The Seal, however, is not a "guarantee of satisfaction." The certification process is different from the review process. You are encouraged to read our reviews to determine whether the product is right for your needs.
There is absolutely no relationship between advertising in THE RAINBOW and the certification process. Certification is open and available to any product pertaining to CoCo . A Seal will be awarded to any commercial product, regardless of whether the firm advertises or not.
We will appreciate knowing of instances of violation of Seal use.

# Save \$200 on Magnavox Monitors Magnavox 8CM643 RGB Analog only \$385!! 

## MONITORS <br> 

This $12^{\prime \prime}$ green screen high resolution monitor offers 80 column capability, Zenith quality and a 30-day warranty valid at any of Zenith's 1200 locations.
Retail \$199
Our price
$\$ 125$
( 57 shipping) BRAND NEW
All monitors require an amplifier circuit to drive the monitor and are mounted inside the color computer. They attach with spring connectors with two wires extending out of the computer, one for audio and one for video. CoCo 3 does not require an amplifier circuit.
VA-1 for monochrome monitors only, fits all color computers
(s2 shipping)

## Dr. Preble's Programs Striking A Blow For <br>  <br> ". . . Freedom is nothing else but a chance to be better . . ."

for The Color Computer 3
(with versions for CoCo 1 \& 2)
A Full Screen Editor for BASIC Programming
We call it EDITOR 3. Chris Babcock wrote a pure, efficient Machine Language program to open a new dimension of ease and power for anyone typing in a BASIC program.

## Here are your BASIC Freedoms!

FULL CURSOR MOVEMENT - Use the arrow keys to move anywhere on a screen. If you are using a Color Computer 3, then even the 40 or 80 column screen is supported!

INSERT, CHANGE or DELETE CHARACTERS anywhere on the screen. Simply move to what you wish to change, change it and continue working!
LOWERCASE COMMANDS are OK! EDITOR 3 lets you type in lowercase any time or all the time. Lowercase command words are automatically translated to uppercase for BASIC. Of course, lowercase text within quotes stays lowercase. This is great when typing wint the CoCo 3 's 40 or 80 column mode with true lowercase!
MERGE LINES within a program with just a few keystrokes! AUTO KEY REPEAT - Hold down any key and it will repeat. INVISIBLE - Once EDITOR 3 has been loaded in, it is activated with a single keystroke! It hides itself out of the way of other programs and can be turned off any any time. Pressing RESET will not hurt EDITOR 3!
EASY TO USE - Installation takes seconds! Well-written goof-proof manual included.
COCO $1 \& 2$ - Yes, even though this program was conceived for the powers of the new CoCo 3, we still support the previous Color Compl'ters. They too, need their BASIC Freedom!
EDITOR 3 - So easy and handy, you'll never want to run your CoCo without it!
Available on DISK only for CoCo $3 @ \$ 29.95+$ s/h
CoCo 1/2 version can not support 40 or 80 column screens. CoCo 1/2 version is available on TAPE for $\$ 27.95+\mathrm{s} / \mathrm{h}$ or DISK for $\$ 29.95+\mathrm{s} / \mathrm{h}$.

For CoCo 1, 2 and 3!
Disk Directory Dazzler - Dress up your disk directory with colorful messages,
notes and graphics - only $\$ 14.95$.

## Also Availiable for CoCo 1 \& 2 only:

VDOS. the UnDISK: Save multiple programs in memory' Works with or without a disk drive. TAPE $\$ 27.95+\mathrm{s} / \mathrm{h}$. DISK $\$ 29.95+\mathrm{s} / \mathrm{h}$
