## OS-9 Happenings

## Editor:

I have had OS-9 Level II for eight months and got nowhere with it until I bought Dale and Peter's latest opus - then it happened!

It is as if someone turned on a switch in my head! Having bought the book a week ago, I am now going back to the original manual and actually understanding it!

I cannot stress the importance of Level II on the CoCo 3 highly enough. I have seen a Hi-Res game and a complex database running concurrently on my $\$ 200$ box - I can really see what all the excitement is about. Although my experience with computers stretches back to the early days of minicomputers, I have always been a bit of a computer oaf - strictly an "I don't care how it does it" type of person. So, if I can figure Level II out, anyone can.

My brother is a long-time CoCoist (got me interested), but lately he's been thinking about buying MS-DOS. But on my recommendation, he now wants to see some of the new applications under Level II.

A friend of mine bought Data Master from Computerware. I got to play with it briefly. At first glance, the program is a great example of the raw speed and power available using Level II and the windowing environment. One thing I loved was the manual - if they can cram everything you need to read into 43 pages, including six pages of index and introduction, it has to be the most user-friendly system I've ever seen. (I am currently saving up the $\$ 70$ to buy it myself, but have already spent my December computer allowance!)

## Ivan Scanlow-Carling

## The Year's Best

## Editor:

Approximately one year ago, I unpacked my CoCo 3 and went into business. Since then, I have subscribed to RAINBOW and RAINBOW ON DISK and have had one solid year of enjoyment. I would like to start the "Program of the Year" contest by selecting my three favorites from 1987.

3rd Runner Up - DU-3 by Mike Jorgenson, February '87. This program has been transferred to every one of my disks and is a super utility, better than any I could have purchased for $\$ 50$ and up. Thanks, Mike, for helping us novices.

2nd Runner Up - Write III by Bill Cook, April '87. I am writing this letter right now on this word processor galore. Don't have to buy one now, Bill. You could have marketed this baby, but you chose to share it with your fellow CoCoholics! What a guy!

Program of the Year - City Sun by Greg Hall, November '87. If there's one thing I
can't stand, it's a 13-year-old kid who can write better programs than I can! All joking aside, I still can't believe what this program does. Congratulations, Greg! You have a tremendous future ahead of you, and thanks go to your parents for encouraging your talents.

> Bernice M. Shoobs
> Clifton, NJ

## Positive Reaction?

## Editor:

Although I am totally against software piracy, whether it be for profit, trading, or just giving, I have my own views on how the problem might best be handled.
Of the many programs I have purchased, most are in some way copy-protected. However, three of them (including the one I am using to write this letter) are not only unprotected, but come with manuals that encourage the user to make a backup copy and save the original. Cognitec (Telewriter64), Sierra On-Line (Winnie the Pooh in the Hundred Acre Wood) and Island Graphics (Micro Illustrator) are all to be commended. They obviously trust their customers enough to make it easy for them to ensure the longevity of their purchase. You've got to feel good about dealing with people like this.
I am certain that there are some people who take advantage of these companies, but they would probably steal from the Salvation Army. I couldn't violate this trust and still sleep at night, and I think the vast majority of home computer users feel the same way. Many people in the software business would think I'm naive, but this is not guesswork on my part. It is a considered opinion based on experience.
I work in the car business. Our dealership is rather unique in one surprising respect. We maintain an inventory of some 300 cars and trucks, and they all are kept unlocked with keys in the ignitions all day long. And they are never locked! All night long, and on Sundays (when we are closed) customers can get in the cars, lift the hoods and inspect them all they want. The keys are removed, but no other form of protection is used. Foolish? I don't think so. We experience no more vandalism and theft than any other dealership I have worked in.

Now granted, Maine is not exactly the crime hotbed of the nation. Nevertheless, people are people and we are all subject to temptation. But a surprising number of us react positively when shown that we are trusted.
My message is simple. Assume a little integrity in your customers and let them know it. You just may find it to be the best form of copy protection yet.

Incidentally, RAINBOW's product reviews motivated me to buy all three of these excellent programs, along with several other
pieces of software and hardware. Even if there were nothing else of any consequence in your superb magazine, these unbiased, informative reports would in themselves be more than worth the price of the subscription. You haven't steered me wrong yet.

Paul Fullerton
Gardiner, ME

## REVIEWING REVIEWS

## Editor:

I would like to correct Mr. Augsburg's statement in the October issue in which he reviews Color Max 3. He states that the printer support includes "even a version that produces 16 -color printouts of the screen on a CGP-220." This is untrue. The CGP-220 Ink Jet Printer has the information contained in its ROM to print a total of seven colors, six of which are produced by the subtractive coloring system, as the manual states. Any two of the colors (yellow, magenta and cyan) can be paired to produce three more colors: red, green and violet. Black, though technically not a color (the absence of all color being black) reflects some light, so in practice qualifies as color Number 7.

The Color Max 3 software uses a technique called dithering, where colors are "meshed" together but not mixed in order to produce a simulation of a desired color on the CGP-220, not an actual color for color representation. This I was told by a representative of Computize.

I would like to add that I have seen actual CGP-220 color prints made with Color Max 3 and was very impressed. But will there ever come a time when the CGP-220 is permitted to "grow up," as it were, to fully implement the abilities of this machine? This printer could, with the correct software/hardware, faithfully reproduce any of the 64 colors the CoCo 3 can show on its screen. When will it be realized that this printer can be the perfect mate to the CoCo 3? After all, it is a "color" computer, so don't you think it would be logical to have at its side a "color" printer?

If this issue were left up to Tandy, I would have no hope. But what I do have is pride in a strong CoCo Community that is ready to support its third-party developers. Tandy no longer markets this fine printer even though Canon USA, Inc., still manufactures it as the PJ-1080A Ink Jet Printer. Come on, all you programmers and developers, how about a real challenge . . . or maybe we should just be content and not worry about such a trivial thing as color, and we'll all "upgrade" to a black-and-white CoCo to match our black-and-white printers!

Charles R. Womble
Wilmington, NC

## EASY COMMUNICATION

Full prompting and error checking. Step-by-step manual has examples. Scroll text backward and forward. No split words on screen or printout. Save, load, delete files while on line. Print, save all or any part of text. 300 or 1200 baud. All 128 ASCII characters. Works with D.C. Hayes or any modem. Screen widths of 32,40 , 42, 51, 64.
DISK VERSION SUPPORTS RS232 PAK, XMODEM and SPLIT SCREEN FOR PACKET RADIO.

Please hire the mentally retarded. They are sincere, hard working and appreciative. Thanks!

Phyllis.

## + WORD PROCESSING

Editing is super simple with the cursor. Find strings instantly too! Insert printer control codes. Specify page size and margins. Switch quickly between word processing and intelligent terminal action. Create text, correct your typing errors; then connect to the other computer, upload your text or files, download information, file it, and sign-off; then edit the receive data, print it in an attractive format, and/or save it on file. Compatible with TELEWRITER.

CASSETTE \$29.95 DISKETTE \$39.95<br>Add $\$ 3$ shipping and handling<br>MC/VISA/C.O.D.

+ TOTAL AUTOMATION
Advanced system of keystroke macros lets you automate any activity, such as dial via modem, sign-on, interact, sign-off, print, save. Perform entire session. Act as message taker. At start-up, disk version can automatically set parameters, dial, sign-on, interact, read/write disk, sign-off, etc. Timed execution lets AUTOTERM work while you sleep or play. No other computer can match your COCO's intelligence as a terminal.

PXE Computing<br>11 Vicksburg Lane<br>Richardson, Texas 75080<br>214/699-7273

## HINTS AND TIPS

## Editor:

To make my Genealogy programs [September and October ' 87 issues] work with a DMP-130 printer, these lines must be modified in the PRGE program: 380,400 , $440,460,490,530,550,580,660,740,770$, $850,870,900$ and 980 .
These lines must be modified in the FAMILY program: $3780,3800,3840,3860$, $3890,3930,3950,3980,4020,4040,4070$, $4110,4130,4160$ and 4200.

The lines will have to changed from PRINT H-2,CHR\$(27);CHR\$(90); CHR\$(12) to PRINT $\#-2$, CHR\$(27); CHR\$(64);CHRS(24).

No lines have to be modified in CHART, as the PRINT commands do not appear.

Brian Le Blanc
Digby County, Nova Scotia
( $\$ 10.00$ ) is for newer CoCos (U14 through U21 are not "the same size.") Older CoCos use the part No. TRS-64K-2 (\$8.95). U14 through U21 are "the same size" to use this one.

My machine had eight 8040517 RAM ICs, so I needed the TRS-64K-2 kit. I removed the eight RAMs, put in the ones from Jameco and soldered the WI jumper into place (it's marked " 64 K " on the board!), and nothing could be easier. Do use static precautions: Don't stand on a rug while handling the computer or ICs. Ground yourself on the kitchen faucet before touching anything. Don't bend the pins. Touch the tip of the soldering iron to ground before touching the board. Don't touch any ICs unnecessarily. Use a small screwdriver to very gently pry an IC out of its socket.

James English
Kansas City, KS

## Inexpensive Upgrades

Editor:
I recently read a letter concerning the expense of upgrading a 16 K or 32 K CoCo 2 to 64 K . I became aware that many of your readers are paying large amounts of money to make the upgrade. There is a much cheaper way.
Jameco Electronics, 1355 Shoreway Road, Belmont, CA 94002 (415-592-8097), offers two kits for making the conversion easily and cheaply. Part No. TRS CoCo

## A New Year

## Editor:

Here is a change to the program New Year by Carmie A. Thomas [January '87, Page 29]:

60 DRAW"BM24,20;55L2R2D20L4R日B R10U20L5DSR5BR10U5020R5U11L5U 10R5D10BR 7 U10D20R5U11L5U10R5D 10

This modification will adapt the 1987 graphics display to 1988 .

Shawn Robb
Amarillo, TX

## INFORMATION PLEASE

## Editor:

I am looking for people willing to exchange software they have written concerning quality control or assurance, and statistics.

I have written several programs in BASIC and have started to convert them to run under basic 09 , using many of the enhancements available to me on the CoCo 3 and OS-9 Level II.

I am hoping to hear from interested readers, especially from those who are members of the American Society for Quality Control.

Charles Blair 5820 Balmoral St. Brossard, Quebec

## CoCo Carrier

## Editor:

I deliver papers and am very interested in being able to put my route on my computer. I have to bill my customers once a month, so I need a way to do this. Also, I need to keep track of names and addresses because I need to run this off, and I would like to keep track of the payments as they come in.

We also have a list of customers who pay directly to the office and their expiration dates. Does anyone know of a program to help me?

> Sindy Shields
> Rt. 6 Box 362
> Rocky Mt., VA 24151

## KUDOS

## Editor:

I have wanted to brush up on statistics for some time, but could not find the right book. At the RAINBOWfest in Princeton, I picked up a copy of The Rainbow Introductory Guide to Statistics and the disk that goes with it. Let me say that brushing up has been easy, as the book is well-written, and the program is very good.

Thanks for a job well done.
Douglas F. Woolley, Jr.
Convent Station, NJ

## Brush With Celebrities

## Editor:

On the few occasions I have gone online with Delphi, l've managed to "bump" into a few of the more notable CoCo users.

While in conference, $I$ have found that these individuals are quite tolerant, courteous and helpful to newcomers - even when the first-time user jumps into the middle of their conversation.

Jim Reed, Don Hutchison, Rick Adams and a host of other contributors deserve all the support and acclaim the CoCo Community can give them.

Charles A. Grossman
CAG
Farmington, $N M$

## PEN PALS

- I am 15 years old and would like a pen pal. 1 have a CoCo 2, disk drive, CGP-220 Color Ink Jet Printer and joystick.

Kevin Cain 12506 NE 142LN \#C203 Kirkland, WA 98034

- Lakeland Communications, International Student Penfriends is the largest student pen pal organization in the world for all students who are 7 to 18 years of age. We have thousands of members who like computers, sports and many other interests! We have monthly pen pal book listings, newsletters and monthly contests. All students 7 to 18 years of age who would like to join may write to us and we will send complete details! Please send a \#10 business size SASE to: Lakeland Communications, International Student Penfriends, 7430 Antebellum Blvd., Fort Worth, Indiana 46815.
- I am a 15 -year-old looking for a pen pal. I own a 64 K CoCo 2 , with a cassette recorder.

> Sherree Connelly 79 Edna Ave.
> Mechanicville, NY 12118

- I am 16 years old and looking for pen pals from anywhere. I have a $64 \mathrm{~K} \operatorname{CoCo} 2$ with two joysticks, disk drive (RS-DOS), DMP105 printer and a DMC-3 modem. I have solved Black Beard's Island, as well as Dragon Blade and a few others. I am most interested in high action arcade games.

Jesse Sanders
P.O. Box 84

Chimney Rock, CO81127

- I am 14 years old and have a CoCo 3 and two drives, which I use mostly for graphics. I enjoy listening to music, especially Whitesnake and Led Zeppelin. I would like to hear from girls over 14 or guys with the same interests, from anywhere. Will answer all letters.

Greg LeMar
315 Smimer Blvd.
Phillipsburg, NJ 08865

- I am 14 years old and have a CoCo 2 and 3, DMP-105 printer, disk drive, cassette recorder and Speech/Sound Pak. I am mostly interested in Adventures and games. Anyone from anywhere can write.

Marianne Torraco 804 Eagle Street
Utica, NY 13501

- I am 13 years old and have a 64 K ECB CoCo 2 , disk drive, and a DMP-130 printer. If you want a pen pal, please write me. I'll answer all letters!

Chris Casson
3 Channing Lane
Camillus, NY 13031

- I am 21 years old and I am looking for pen pals who run Color Computer bulletin board systems. I have a CoCo 2 , modem, printer, cassette and a disk drive.

John Peavy
1617 Savage Rd. NE
Salem, OR 97301

- I'm interested in writing to and hearing from CoCo addicts from all over the world. I have about 20 pen pals I write to on a continual basis, and I'm always looking for more. I have a CoCo 2, CoCo 3 (just got it!), DMP-130 printer, DCM-5 modem, two disk drives and lots more. All letters will be answered, so please write.

Erick Molnar<br>P.O. Box 4616<br>Sparks, NV 89432

- I am a 17-year-old male looking for a pen pal. I have a CoCo 2, a single-sided and a double-sided disk drive, Multi-Pak, tape drive and a DMP-130A printer. Everyone who reads this qualifies. If we don't talk CoCo then we can just talk. I especially enjoy Adventure games. I guarantee all letters will be answered.

Matt Fumich
P.O. Box 1346

the rainbow welcomes letters to the editor. Mail should be addressed to: Letters to Rainbow, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. Letters should include the writer's full name and address. Letters may be edited for purposes of clarity or to conserve space.

Letters to the editor may also be sent to us through our Delphi CoCo SIG. From the CoCo SIG $>$ prompt, type RAI to take you into the Rainbow Magazine Services area of the SIG. At the RAINBOW $>$ prompt, type LET to reach the LETTERS> prompt and then select Letters for Publication. Be sure to include your complete name and address.

# $\boldsymbol{N}^{\mathcal{C}^{e^{e s t}}}$ Word Power 3 <br> (The Ultimate Word Processor for the CoCo 3) 

Are you still using your CoCo 2 word processor on the CoCo 3 with patchwork? You don't have to any more. With Word Power 3, Microcom answers the challenge of word processors for the CoCo 3. It bridges the gap between "what is" and "what should be" in word processors. No other word processor offers such a wide array of features that are so easy to learn and use. Check out the impressive features:

## DISPLAY

The 80 -column display with true lowercase lets you view the full width of a standard page. All the prompts are displayed in plain English in neat colored windows. The current column number, line number, page number and the percentage of memory remaining is displayed on the screen at all times. The program even displays the bottom margin perforation so you know where one page ends and the other begins. You can also change the foreground/background color of the screen to suit your needs!

## AVAILABLE MEMORY

Unlike most other word processors, Word Power 3 gives you 80 K of memory with a 128 K CoCo 3 and more than 460 K with a 512 K CoCo 3 to store text.

## TYPING/EDITING

Word Power 3 has one of the most powerful and user-friendly fullscreen editors with wordwrap. All you do is type; Word Power 3 takes care of the text arrangement. It even has a built-in Auto-Save feature which saves the current text to disk at regular intervals; so you know that your latest version is saved on disk. Here are some of the editing features of Word Power 3:

Auto-repeat; Key-Click; Cursor up, down, left, right, beginning of line, end of line, next word, previous word, top of text, end of text; page forward, backward; 4 -way scrolling; block copy, move, delete;
global search and replace (with wild-card search); line positioning (left, right or center); insert/ overstrike modes; delete to heginning/ end of line, next/previous word; and tabs. You can also embed printer codes in text to take advantage of underlining, sub/superscript and other printer functions. Define left, right, top and bottom margins, and page length.

## MAIL MERGE

Ever try mailing out the same letter to 500 different persons? Could be quite a chore. Not with the Mail Merge feature of Word Power3. Using this feature, you can type a letter, follow it through with a list of addresses and have Word Power 3 print out personalized letters. It's that easy!

## LOADING/SAVING FILES TO DISK

Word Power 3 creates ASCII format files which are compatible with almost all terminal, spell-checking, and other word-processing programs. It allows you to load, save and kill files and also to create and edit Basic, Pascal, C and Assembly files. Supports double-sided drives and various drive step rates.

## PRINTING

Word Power 3 drives almost any printer (DMP series, EPSON, GEMINI, OKIDATA, etc.). Allows print options such as different baud rates, line spacing, page pause, partial print, multi-line headers/ footers, page numbers, page number placement, and right justification. You can also change the values for these print options within the text by using embedded printer option codes.

## INSTRUCTION MANUAL

Word Power 3 comes with a well-written and easy-to-comprehend instruction manual that makes writing with Word Power 3 a breeze.

Word Power 3 comes on disk for only $\$ 69.95$.

## How To Read Rainbow

Please note that all the BASIC program listings in the rainbow are formatted for a 32－character screen－so they show up just as they do on your CoCo screen．One easy way to check on the accuracy of your typing is to compare what character＂goes under＂what． If the characters match－and your line endings come out the same－you have a pretty good way of knowing that your typing is accurate．
We also have＂key boxes＂to show you the minimum system a program needs．But，do read the text before you start typing．
Finally，the little disk and／or cassette symbols on the table of contents and at the beginning of articles indicate that the program is available through our RAINBOW ONDISK or RAINBOW ON TAPE Service． An order form for these services is on the insert card bound in the magazine．

## What＇s A CoCo？

CoCo is an affectionate name that was first given to the Tandy Color Computer by its many fans，users and owners．
However，when we use the term CoCo ，we refer to both the Tandy Color Computer and the TDP System－ 100 Computer．（While many TDP－100s are still in service，the TDP Electronics division of Tandy nolonger markets the CoCo look－alike．）It is easier than using both of the＂given＂names throughout THE RAINBOW．
In most cases，when a specific computer is men－ tioned，the application is for that specific computer． However，since the TDP System－100 and Tandy Color are，for all purposes，the same computer in a different case，these terms are almost always interchangeable．

## Rainbow Check Plus

The small box accompanying a program listing in THE RAINBOW is a＂check sum＂system，which is designed to help you type in programs accurately．
Rainbow Check PLUS counts the number and values of characters you type in．You can then compare the number you get to those printed in THE RAINBOW． On longer programs，some benchmark lines are given． When you reach the end of one of those lines with your typing，simply check to see if the numbers match．
To use Rainbow Check PLUS，type in the program
and save it for later use，then type in the command RUN and press ENTER．Once the program has run，type NEW and press ENTER to remove it from the area where the program you＇re typing in will go．
Now，while keying in a listing from THE RAINBOW， whenever you press the down arrow key，your CoCo gives the check sum based on the length and content of the program in memory．This is to check against the numbers printed in THE RAINBOW．If your number is different，check the listing carefully to be sure you typed in the correct BASIC program code．For more details on this helpful utility，refer to $H$ ．Allen Curtis＇article on Page 21 of the February 1984 RAINBOW．
Since Rainbow Check PLUS counts spaces and punctuation，be sure to type in the listing exactly the way it＇s given in the magazine．

## OS－9 and RAINBOW ON DISK

The OS－9 side of RAINBOW ON DISK contains two directories：CMDS and SOURCE．It also contains a file， read．me．first，which explains the division of the two directories．The CMDS directory contains executa－ ble programs and the SOURCE directory contains the ASCII source code for these programs．BASIC09 programs will only be offered in source form so they will only be found in the SDURCE directory．
OS－9 is a very powerful operating system．Because of this，it is not easy to learn at first．However，while we can give specific instructions for using the OS－9 programs，you will find that the OS－9 programs will be of little use unless you are familiar with the operating system．For this reason，if you haven＇t＂learned＂OS－9 or are not comfortable with it，we suggest you read The Complete Rainbow Guide to OS－9 by Dale Puckett and Peter Dibble．
The following is not intended as a course in OS－9．It merely states how to get the OS－9 programs from

RAINBOW ON DISK to your OS－9 system disk．Use the procedures appropriate for your system．Before doing so，however，boot the OS－9 operating system according to the documentation from Radio Shack．

1）Type load dir list copy and press ENTER．
2）If you have only one disk drive，remove the OS－9 system disk from Drive 0 and replace it with the OS－ 9 side of RAINBOW ON DISK．Then type cha／d0 and press ENTER．If you have two disk drives，leave the sytem master in Drive 0 and put the rainbow ON DISK in Drive 1．Then type chd／dl and press ENTER．
3）List the read．me．first file to the screen by typing list read．me．first and pressing ENTER．
4）Entering dir will give you a directory of the OS－9 side of RAINBOW ON DISK．To see what programs are in the CMDS directory，enter dir cmds．Follow a similar method to see what source files are in the SOURCE directory．
5）When you find a program you want to use，copy it to the CMDS directory on your system disk with one of the following commands：

One－drive system：copy／dø／cmds／filename／do／ cmds filename－s
The system will prompt you to alternately place the source disk（RAINBOW ON DISK）or the destination disk（system disk）in Drive 0 ．
Two－drive system：capy／d1／cmds／filename／d0／ cmols／filename
Once you have copied the program，you execute it from your system master by placing that disk in Drive 0 and entering the name of the file．

## Using Machine Language

The easiest way to＂put＂a machine language program into memory is to use an editor／assembler，a program you can purchase from a number of sources．All you have to do，essentially，is copy the relevant instructions from The rainbow＇s listing into CoCo．
Another method of putting an ML listing into CoCo is called＂hand assembly＂－assembly by hand，which sometimes causes problems with DRIGIN or EQUATE statements．You ought to know something about assembly to try this．
Use the following program if you want to hand－ assemble ML listings：

```
10 CLEAR200, &H3F00: I=&H3F80
20 PRINT "ADDRESS:";HEX$(I);
30 INPUT "BYTE";日$
40 POKE I, VAL ("&H"+8$)
50 I=I+1:GOTO 20
```

This program assumes you have a 16 K CoCo ．If you have 32 K ，change the 8 H 3 F 00 in Line 10 to $\& H 7 F 00$ and change the value of I to $\& \mathrm{H} \geqslant \mathrm{FBO}$ ．

FOR THE TRS-80 COCO

NEVER BEFORE has this information of vital significance to a programmer been so readily available to everyone. This book will help you 'GET UNDERNEATH THE COVER' of the Color Computer and develop your own HIQUALITY Basic and ML programs. SO WHY WAIT??
This 80 -page book includes POKEs, PEEKs and EXECs to:

- Autostart your basic programs
* Disable Color Basic/ECB/Disk Basic commands like LIST, LLIST, POKE, EXEC, CSAVE(M), DEL, EDIT, TRON, TROFF, PCLEAR, DLOAD, RENUM', PRINT USINO, DIR, KILL, SAVE, LOAD, MEROE, RENAME, DSKINI,
BACKUP, DSKI\$, and DSKO\$.
* DIsable break key, CLEAR KEY and RESET BUTTON.
$\star$ Generate a Repeat-key.
* Transfer ROMPAKS to tape (For 64 K only).
* Speed Up your programs.
* Reset, MOTOR ON/OFF from keyboard.
* Recover Basic programs lost by NEW.
* Set 23 different ORAPHIC/SEMIGRAPHIC modes
* Merge two Basic programs.
* AND MUCH MUCH MOREII COMMANDS COMPATIBLE WITH $16 \mathrm{~K} / 32 \mathrm{~K} / 64 \mathrm{~K} /$ COLOR BASIC/ECB/DISK BASIC SYSTEMS and COCO 1, 2, \& 3.

## SUPPLEMENT to

 500 POKES. PEEKS'N EXECS ONLY $\$ 9.95$200 additional Pokes, Peeks'n Execs to give you MORE PROGRAMMING POWER Includes commands for.

- Rompak Transfer to disk
- PAINT with 65000 styles
- Use of 40 track singlef double sided drives with variable slap-rates
- High-Speed Cassefte Operation
- Telewriter $64^{\oplus}$, Edtasm+ ${ }^{\text {® }}$ and CoCo Max ${ }^{\text {® }}$ Enhancements
- Graphics Dump (for OMP printers) \& Text Screen Dump
- ano much much morel
- 500 POKES, PEEKS 'H EXECS is a prerequisite

## * 300 POKES PEEKS 'N EXECS FOR THE COCO III

Get more POWER for your COCo III. Includes commands for.

- 40/80 Column Screen Text Dump
- Save Text/Graphics Screens to Disk
- Command/Function Disables
- Enhancements for CoCo 3 Basic
- $128 \mathrm{~K} / 512 \mathrm{~K}$ 月am Test Program
- HPRINT Charectar Madifier

- ano many more commands

## Some Random Thoughts . . .

 ou, as a member of the CoCo Community, are far luckier than I am. As I write this, the sun is positioned exactly over the Tropic of Capricorn, which means that (except for our friends in the Southern Hemisphere) it is the first day of winter and the shortest day of the year. Consider that when you actually read this it will be six weeks hence and the groundhog will be about to pop out of his burrow in Pennsylvania and, hopefully, forecast an end to winter.It certainly is something to think about. Maybe that's why I am always behind the times.

Tandy's new flight simulator for the CoCo 3 is one of the all-time best. It is adapted from Microsoft's Flight Simulator, which has been in release in the MS-DOS market for some time.

As many of you know, I have a private pilot's license and fly a Cessna 172. The program is based on a Cessna 182, which is a little more powerful than my plane - but the feeling of flying is about the same.

For just about anyone who is learning to fly - or is just thinking about it - this flight simulator has all the goodies, including VOR receivers so you can practice instrument flying and approach techniques. It "behaves" like a real airplane in the air and is a great deal of fun to fly.

If you're looking for a shoot-'em-up in the air, forget it. But if you want, instead, to brush up on some techniques, this program is a safe, inexpensive and very realistic way to do all that and more.

It is probably as good a time as any to introduce you to Steven and Cheryl Walbutton of Broadmeadow, Australia.

As a number of you are aware, one of the first "overseas" locations in which the CoCo and THE Rainbow thrived was the land "down under." A fine chap by the name of Greg Wilson called me one evening and asked to be able to reprint most of the "Yank" version of the magazine with some special "Aussie"

## COCO 3 UTILITIES GALORE

(All utilities support 40/80 columns for CoCo 3 )
(CoCo2 versions are available for most utilities)

## SUPER TAPE/DISK TRANSFER

- Disk-to-Disk Copy (1-3 passes) - Tape-to-Disk Copy - Tape-to-Disk Automatic Relocate - Disk-to-Tape Copy - Tape-to-Tape Copy
Copies Basic/ML programs and DATA files CoCo $1,2 \& 3.32 \mathrm{~K}$ Disk System (Disk to Disk Copy requires 64 K). Disk Only $\$ 24.95$

## OS9 LEVEL II RAMDISK

Lightning Fast Ramdisk with Auto Formatting A must for any 0S9 Level II User. Req 512K \$29.95. (Only $\$ 14.95$ with the purchase of 512K Upgrade \& Ramdisk!!).

## HI-RES JOYSTICK SOFTWARE

Wish you could use the hi-res joystick interface from Basic? You can now. This program will let you access $640 \times 640$ pixels from your joystick for extra precision CoCo 3 Disk $\$ 14.95$

## COCO NEWSROOM

Now available for the CoCo III! You can design your own newspaper with Banner Headlines/6 articles using sophisticated Graphics, Fonts and Fill Patterns. Comes with22 fonts\&50 pictures! Over 140 K of code Disk only $\$ 49.95$

## MAILLIST PRO

The ultimate mailing list program Allows you to add, edit, view, delete, change, sort(by zipcode or name) and print labels. Its indispensible! Disk Only $\$ 19.95$ (CoCo 2 version included)

## DISK LABEL MAKER

Allows you to design professional disk labels! Allows elongated, normal and condensed format for text, double-strike, border creation and multiple-label printing Its a MUST for any user with a disk drive. Disk Only $\$ 19.95$. Supports DMP 105/110/120/130/430, GEMINI, STAR, EPSON and compatibles. (CoCo 2 version included)

## COMPUTERIZED CHECKBOOK

Why bother with balancing your checkbook? Let the CoCo do it for you! Allows you to add, view, search, edit, change, delete and printout (in a table or individual entry format) checkbook entries Updates balance after each entry. Allows files for checking saving and other accounts. Disk Only $\$ 19.95$ (COCO 2 version included)

## BOWLING SCORE KEEPER

An excellent utility to keep track of your bowling scores. Allows you to save scores under individuals or teams. You can edit, change, delete and compare scores. A must for anyone who wants to keep track of his or her bowling performance. Disk $\$ 19.95$ (CoCo 2 version included).

## VCR TAPE ORGANIZER

Organize your videocassettes with this program! Allows you to index cassettes by title, rating, type, play time and comments. Also allows you to sort titles alphabetically and view/print selected tapes. If you own a VCR this program is a must Disk Only $\$ 19.95$ (CoCo 2 version included).

## 512K RAMDISK/SPOOLER

Turns your 512 K RAM into super-fast in-memory disk drives. Reduces chances of 10 errors and disk access is lightning fast 512 K Spooler keeps your computer free for programming when printing documents to the printer. A must for 512 K users. CoCo 3 Disk Only $\$ 24.95$

## ADOS3

Advanced Disk Operating System for CoCo 3. $\$ 34.95$ ADOS: $\$ 27.95$

## COCO UTIL II

(Latest Version): Transfer CoCo Disk files to IBM compatible computer. Transfer MS-DOS files to CoCa $\$ 39.95$

SPIT 'N IMAGE
Makes a BACKUP of ANY disk $\$ 32.95$

## RGB PATCH

Displays most games in color on RGB monitors. For CoCo 3 Disk $\$ 24.95$

> "For just about anyone who is learning to fly - or is just thinking about it - this flight simulator has all the goodies."
news as well under a royalty agreement. I told him to go ahead and a friendship was born.

Greg met an untimely end several years ago and others became involved with the Aussie edition. Then, just a few months ago, we reached an agreement with the Walbuttons to continue on in the same sort of tradition that Greg started. We've been quite pleased here and, from the way things are going "down there," it seems that much more than the kangaroos, koala bears and wombats are interested, too. We're glad that we are now able to provide a quality Australian version of THE RAINBow again.

As a matter of fact, Steven and Cheryl have gone far beyond the call of duty. I'm fascinated with folk songs of other lands, and find the folk songs in Australia perfectly delightful. I even have a favorite singer, Slim Dusty, who has done some absolutely incredible songs that - at least to my mind capture the feel and heartbeat of Australia.

I became "acquainted" with Dusty through a tape that included two terrific songs, "The Man From Snowy River"
and "The Ballad of Henry Lawson." I asked the Walbuttons if there were any Slim Dusty tapes and have been happily playing them ever since. Seems I'm not the only one who likes him: He is supposed to be one of the top folk/ country singers in Australia.

Dusty really captures the spirit of the land of which he sings through his lyrics. Here in the United States it is, of course, late December as I write this and, so, perhaps, it is fitting to quote a short passage from "The Man From Snowy River" in which Dusty sings of a place...

## Where the air is clear as crystal

 And the white stars fairly blaze At midnight in the cold and frosty skiesI can just see Santa headed for my chimney through a night like that - an occurrence that is due the end of this week (provided that I've been good).

I hope 1988 will be good for all of you.

- Lonnie Falk
"RAMDisk - Speedy File Handling" (Review, January 1988, Page 138): The RAMDisk review incorrectly stated that the product is available from Spectrum Projects. This product is available from Cer-Comp, 5566 Ricochet Avenue, Las Vegas, NV 89110, (702) 452-0632, for \$19.95.
"The BASIC Versions" (Doctor ASCII, January 1988, Page 155): In his answer to Josh Abrams' question regarding the use of $E D T A S M$ on the CoCo 3, Richard Esposito presented a program, Patch,
which was written by Roger A. Krupski. The last line of Patch was inadvertently left out of the listing. Just add the following line and Patch should work properly:
G10 DATA "END", "END"
"Making an Address List" (December 1987, Page 66): George F. Saunderson has written to indicate his phone number was incorrectly listed at the end of the article. The correct phone number is (713) 781-8984.

For quicker reference, Corrections will be posted on Delphi as soon as they are available in the Info on Rainbow topic area of the database. Just type DATA at the CoCo SIG $>$ prompt and INFO at the TOPIC $>$ prompt.

## ALL HARDWARE COMPATIBLE WITH COCO 1, 2 \& 3

## DISK DRIVES

Double Sided, Double Density 360K 40 track disk drives for the Color Computer 1, 2 and 3. Buy from someone else and all you get is a disk drive. Buy from us and not only do you get a quality disk drive, you also get $\$ 60$ worth of disk utility software (Super Tape/Disk Transfer and Disk Tutorial) and our DISKMAX utility which allows you to use BOTH sides of our disk drives. It's like buying TWO disk drives for the price of ONE!!

DRIVE 1 (Completely Assembled) \$149.95
urive 0 (With J\&M Controller \& Cable) $\$ 229.95$
( 90 day warranty on all drives)
J\&M CONTHOLLER (With RSDOS) $\$ 79.95$
DISTO SUPER CONTROLLER: $\$ 99.95$
drive cables: 1 drive cable: $\$ 19.952$ dRive cable: $\$ 24.954$ DRIVE CAble: $\$ 39.95$
(For Drives, add $\$ 7.00$ S\&H in USA/CANADA)

## COMMUNICATIONS EXTRAVAGANZA <br> CABLES/SWITCHERS/ ADAPTERS

UPGRADES

## 512 K UPGRADE FOR COCO III

Fast 120 ns chips. Fully tested Easy installation No soldering Comes with complete documentation and RAM test program on disk
(With purchase of our 512 K RAMOISK program belom 512 K Upyrade without chips $\$ 44.95$

## 512 K RAMDISK

Have 2 superfast RAMDISKs \& a print spooler. $\$ 24.95$
64K Upgrade for $26-3134 \mathrm{~A} / \mathrm{B}$ CoCo II: $\$ 39.95$
64 K Upgrade for CoCo P's, CoCo Il's with Cat \#26-3026/7, 26-3134 \& 26-3136: \$29.95

RS232 Y CABLE: Hook 2 devices to the serial port ONLY\$18.95
Y CABLE: Use your Disk System with CoCo Max, DS69, etc. ONLY \$24.95
15' PRINTER/MODEM EXTENOER CABLE: ONLY \$16.95
MODEM CABLE: 4 pin to DB 25: $\$ 19.95$
15" MULTIPAK/ROMPAK EXTENDER
CABLE: \$29.95
3-POSITION SWITCHER: Select any one of three RS232 devices (printers/modems) from the serial port $\$ 37.95$

WICO TRACK BALL: $\$ 29.95$
WICO ADAPTER: Use Atari type Joysticks with your CoCo: \$29.95
RS HI- RES JOYSTICK INTERFACE: $\$ 11.99$
MAGNAVOX 8505/8515/BCM643 Analog RGB Cable: $\$ 24.95$
CM-8 RGB Analog Ext. Cable: \$19.95
SONY Monitor Cable: $\$ 39.95$

## VIDEO

UNIVERSAL VIDEO DRIVER: For
monochrome or color monitor. $\$ 29.95$
VIIEO CLEAR: Reduce TV interference. $\$ 19.95$

## PRINTER INTERFACES

SErial to parallel interface: With 6 switch selectable baud rates (300-9600) Comes with all cables. $\$ 44.95$

INTRONICS EPROM PROGRAMMER: Best
EPROM Programmer for the CoCo.
Lowest Price Anywhere \$137.95
EPROM ERASER (Oatarase): Fast erase of 24/28 pin EPROMs. \$49.95
EPROMS: 2764-\$8.00, 27128-\$9.00
Call for other EPROMs.
BOTH EPROM PROGRAMMER and ERASER: $\$ 179.95$
ROMPAK w/ Blank PC Board 27 xx Series: $\$ 12.95$

## KEYBOARDS/ACCESSORIES

KEYBOARD EXTENSION CABLE: Why break your back when typing on the CoCo? Our keyboard extender cable allows you to move your keyboard away from the computer and type with ease You can use your existing keyboard with this cable or leave your present keyboard intact and use a second keyboard. A MUST for all CoCo Users. Only $\$ 39.95$. Cable with CoCo II keyboard: \$49.95
COCO 3 KEYBDARD (includes FREE FUNCTION KEYS software value \$19.95): \$39.95

CHIPS, ETC.
Disk Basic Rom 1.1 (Needed for CoCo III): \$29.95

Multi- Pak PAL Chip for CoCo 3 (Specify Multipak Cat \#): \$19.95 PAL Switcher: Now you can switch between the CoCo II and CoCo III modes when using the Multi-Pak You need the OLDER and NEW PAL chip for the 26-3024 Multipak Only $\$ 39.95$ / With NEW PAL Chip $\$ 49.95$
P.O. Box 214

Fairport, N. Y. 14450
Phone (716) 223-1477

All orders $\$ 50$ and above(except Disk Drives) shipped by UPS 2 nd Day Air at no EXTRA charge We accept VISA/MC/AMEX, Check or MO. Please add $\$ 3.00$ S\&H(USA/CANADA; other countries $\$ 5.00$ ), except where otherwise mentioned NYS Residents please add sales tas Prices are subject to change All products are covered by manufacturer's warranty.

## About Your Subscription

Your copy of THE RAINBOW is sent second class mail. You must notify us of a new address when you move. Notification should reach us no later than the 15 th of the month prior to the month in which you change your address. Sorry, we cannot be responsible for sending another copy when you fail to notify us.

Your mailing label also shows an account number and the subscription expiration date. Please indicate this account number when renewing or corresponding with us. It will help us help you better and faster.

For Canadian and other nonU.S. subscribers, there may be a mailing address shown that is different from our editorial office address. Do not send any correspondence to that mailing address. Send it to our editorial offices at Falsoft, Inc., The Falsoft Building, P.O. Box 385, Prospect, KY 40059. This applies to everyone except those whose subscriptions are through our distributor in Australia.

Building February's Rainbow

## The Ultimate Utility

Ifyou are one of the thousands who've just received a new Color Computer for Christmas, congratulations, and welcome to the rainbow. Our magazine is devoted to helping you learn all you can about how to get the most from your CoCo (short for Color Computer). If you missed our January beginners issue, don't worry, because every issue of RAINBOW has lots of material for beginners. In fact, in one aspect or another of the CoCo's many uses, all of us are beginners. And few of us will ever forget that thrill of discovery and feeling of control we experienced when we first powered up our CoCo and played with those short sample programs in the manual.
Today's Color Computer is a very powerful machine despite its very modest price. The fact is, thousands of us, when we bought our first Color Computer, paid four or five times as much for a machine that had only 4 K of memory. Now the standard is a 128 K machine that can easily be upgraded to as much as 512 K . There's a lot of computer in that little white box.
In many ways, we'd love to be right there with you as you get to know your CoCo. Do you have your new machine hooked to the TV in the living room? That's how most of us started. But we soon found out that CoCoing there was not very convenient, so we took over the "spare" TV in the bedroom only to find out it really couldn't be spared after all. So, we purchased a TV or monitor just for the CoCo.
Are you using a non-Radio Shack cassette recorder? If so, you'll discover that while your old tape recorder will probably work, it won't work as well as the computer cassette recorder. Whatever the brand or model, do turn up the volume! We find that is one of the most common problems encountered by new users yep, they just forgot to turn up the volume (set it on 3 ) so that the computer could "hear" the incoming data.

Have you bought a multi-plug "power strip" yet? Might as well get two to start with; you'll need the other one soon enough as you begin to develop your "computer corner," if not an entire room. Is your printer cable too short? You'll find a wide variety of cables, extensions and switch boxes of all types in the pages of Rainbow. In fact, since the CoCo is now in its ninth calendar year, just about everything you discover you need will be readily available when you want it. Many of our advertisers have built their companies on anticipating the needs of CoCo users and then developing products to answer those needs. You'll learn a lot just by reading the ads!
One of the needs that is never fully satisfied is the need for utilities, the focus of this month's issue. A utility is a program or routine that is used as a tool in computing. It seldom has an end use in itself, but is used to help make other programs easier to use, faster executing and more efficient. As you "get into" computing, you'll discover why utilities are so popular.

For now, though, we want to welcome you to one of the most important "utilities" any Color Computer user can have: THE RAINBOW. Now that you've discovered the rainbow, do consider a subscription to keep the information coming all year long. Together, we'll explore to the fullest the potential of our Color Computer.

## SUPER MAX III INTERFACE

* Compatible with POPULAR CoCo III graphics software programs that use HARDWARE JOYSTICK interfaces! Bring your CoCo III to the MAX!

## THE NEWSPAPER

Compose your own "CoCo Newspaper" with BANNER HEADLINES and six articles using a SOPHISTICATED graphics editor with importing of PICTURES, FONTS \& FILL patterns from disk, 22 Fonts \& 50 Pictures! Over 140K of code! CoCo ITII DISK
$\$ 49.95$

## COLORMAX DELUXE - betten than coco max III

It's here! The COCoIII BREAKITROUGH PRODUCT everyone was waiting for! $320 \times 200$ graphics, pull down menus, icons the choice of 16 colors fram the Coco IIT's 64 color palette plus RGB support! 11 fonts are included for hundreds of lettering styles and painting is a breeze with 16 colors and 32 editable patterns!!! Color Max Deluxe requires a 512 K CoCo III and Hi-Res Joystick interface. (Specify printer!) \$69.95. Hi-Res Interface $\$ 14.95$. Color Max Deluxe Font Editor create and modify fonts for use with color Max Deluxe \$29.95. Font Disk\#l \$19.95
$\square$ SPECIAL BONUS - BUY ABOVE 4 for only $\$ 99.95$ ! $1!$ (SAVE $\$ 35$ )

## TVT-80-80 - 0 -

It's finally here! An 80 column version of Telewriter-64 for the CoCo III with TELEPATCH features plus much, much more! Includes PRINT SPOOLER \& (2) ultra-fast RAM DISKS for 512 K users, plus changeable CHARACTER FONTS \& a setup OONFIG program. Req. TW-64 DISK \& I28K COCO III \$24.95/ SPECIAL BONUS OMBO - TW-64 \& TW-80 \$79.95

## SUPER TALK ST2 - DIGITAL VOICE FOR CDCD II

Turn your 5l2K CoCoIII into a Digital Voice Recorder! Not synthesized speech, but $100 \%$ reproduction of your own voice! Create BIG MESSAGES, up to 32 blocks of 16K each. Req. 512K CoCoIII DISK. From Dr.Preble $\$ 39.95$

## 512K UPGRADE (\$49.95*) ${ }^{\text {LOWEST }}$

OS9 Lev.ll Ramdisk

Easy installation with a superior design for a reliable upgrade (*\$49, 95 when purchased RAMDISK RAMDISK for $\$ 24.95$ and our $\frac{0 S 9}{}$ Lev.II RAMDISK for $\$ 29.95$ ). Or $\$ 79.95$ with either RAMDISK program! Plus, FREK

## HI-RES JOYSTICK utlity software bonanza:

## New useful programs for the Tandy Hi-Res Joystick Interface! Get Full 640x640 mouse \& joystick resolution from

 BASIC or run CoCoMaxII on the CoCoIII w/o the CocoMax Cartridge $\$ 24.95$ w/Hi-Res Interface $\$ 34.95$
## 

Did you buy an expensive RGB monitor (CM-8) just so that you could see your Hi-Res artifacting CoCo 2 gannes in BIACK \& WHITE ? ?? RGB PATCH converts most games to display in COLOR on an RGB monitor. 128K DISK \$29. 95

## WARP FIGHTER 3-D вy steve bjork:

The BEST COCo III game of 1988 has arrived! A CoCo III Space Fighter simulation with "3-D GLASSES" by the \#1 CoCo programer of all time - Mr . Steve Bjork!!! CoCo III Disk $\$ 39.95$

## 

DO NOT be FOOLED! The CM-8 has a dot-pitch of .52 nm \& will not work with any other computer or VCRI The '8515' has a SHARP . 42 mm dot-pitch, will work with IBM PCs/Tandy 1000 and its OOIOR OOMPOSITE input displays PMODEA artifact colors unlike the CM-8! *\$299.95 when purchased with a $\$ 24.95$ CoCoIII cable - Add $\$ 14$ shipping.
CoCo III 512K RAM sticker $\$ 4.99$

300 COCOITI POKES .......... $\$ 19.95$
$\qquad$ Guide to CocoIII Graphics.$\$ 21.95$

$$
\text { Guide to CoCoITI Graphics } . \$ 21.95
$$

$$
-
$$

Level II Basic09 binder .. $\$ 9.95$

Better CoCoIII Graphics $\$ 24.95$
CoCo III Unraveled ......\$29.95
CoCo III Service Manual $\$ 39.95$

FASIDUPE 512 Format \& Backup up to 4 single-/double-sided, $35 / 40$ trk disks in 1 PASS! Even OS9 Lev.II! \$19.95 BIG BUFFGR - 437,888 byte spooler for a 512K CoCoIII! Print up to 200 text pages while using your CoCo! \$19.95

## CoCo Gallery

Keith used CoCo Canvas, a program he wrote, to design this inscrutable depiction. He lives in Merritt Island, Florida.

James, of N. Charleston, South Garolina, used Color Max 3 to display this view of planetary combat.

This image of a ship salling into the sunset was originated with Cofor Max 3. Brad lives in Wyomissing. Pennsylvania.

Dragon
Stu Scott

Stu, of Sandyhook, Connecticut, used BASIC to develop this animated scene. His hobbies include drawing, playing Adventure games and Shotokan karate.

This unexpected, horrendous-looking character was brought into being through Color Max 3. Richard lives in Boucherville, Quebec, and works for a telecommunications firm.

SHOWCASE YOUR BESTI You are invited to nominate original work for inclusion in upcoming showings of Coco Gallery, Share your creations with the CoCo Community! Be sure to send a cover letter with your name, address and phone number, detailing how you crated your picture (what programs you used, etc.) and how to display it. Also, please include a tew facts about yourself:

Don't send us anything owned by someone else; this means no game screens, digitized imagas from TV programs or material that's already been submitted elsewhere. A dfgitized copy of a picture that appears in a book or magazine is not an original work.

We will a ward two first prizes of $\$ 25$, one for the $\operatorname{CoCo} 3$ and one for the CoCo 1 and 2; one second prize of $\$ 15$ and one thfre prize of $\$ 10$. Honorable Mentions may also be given.
Please send your entry on either tape or disk to the COCo Gallery, THE RAINBOW, P.O. Box 385, Prospect, KY 40059 . Remember, this is a contest and your entry will not be returned.

- Angela Kaplhammer, Curator

# BASIC for Beginners Lesson III 

By David W. Ostler

Sofar in this series we have talked about commands that allow you to do some fairly impressive programming. But by no means can we cover all the commands utilized by the Color Computer BASIC language in only four installments

We have already covered many common BASIC commands, giving you a solid base of programming skills to expand upon. You will eventually need to know how to make a program accessible to disk and tape input/output, so that you can save your results, but we'll cover disk and tape input/output in detail next month.

This month we will cover the commands necessary to determine whether a disk drive or cassette recorder is present. We will also discuss variable memory allocation and how to do logical comparisons of variables. In addition to a few new commands, we are presenting some variations on commands described in previous installments.

## DIM

The DIM command sets up memory for use by predefined variable arrays.

An array is a group of variables with attached labels that relate them to a particular label. An example is an array that has 10 parts, all labeled M. The variables have these assignments: $M(1)$, $M(2), M(3), M(4), M(5), M(6), M(7)$, $M(8), M(9), M(10)$.

Please note that each variable is unique and can be manipulated independently of the others. To display or manipulate the variable, you must access its label and assignment. The proper syntax for the command that lets you enter a new amount in a variable is DIMx $(y y y)$, where $x$ is the variable

Dave Ostler is an IC layout designer arod the systems manager for a CAD mainframe system. He teaches CAD and electronics at Guilford Technical Community College. Dave is married and has three children, Avis, Chuck and Erik.

# The Amazing A-BUS 

An A-BUS system with two Motherboards A-BUS adapter in foreground
The A-BUS syatem works with the orlginal CoCo, the CoCo 2 and the CoCo 3.

## Plug into the future

With the A-BUS you can plug your PC (IBM, Apple, TRS-80) into a future of exciting new applications in the fields of control, monitoring, automation, sensing, robotics, etc.

Alpha's modular A-BUS offers a proven method to build your "custom" system today. Tomorrow, when you are ready to take another step, you will be able to add more functions. This is ideal for first time experimenting and teaching.

A-BUS control can be entirely done in simple BASIC or Pascal, and no knowledge of electronics is required!

An A-BUS system consists of the A-BUS adapter plugged into your computer and a cable to connect the Adapter to 1 or 2 A-BUS cards, The same cable will also fit an A-BUS Motherboard for expansion up to 25 cards in any combination.

The A-BUS is backed by Alpha's continuing support (our 11th year, 50000 customers in over 60 countries).

The complete set of A-BUS User's Manuals is available for $\$ 10$.

## About the A-BUS system:

- All the A-BUS cards are very easy to use with any language that can read or writs to a Port or Memory. In BASIC, Use INP and OUT (or PEEK and POKE with Apples and Tandy Color Computers)
- They are all compatible witheach other. You can mix and match up to 25 cards to tit your application. Card addresses are easily set with fumpers. - A-BUS cards are shipped with power supplies (except PD-123) and detailed manuals (including schematics and programming examples).

## Relay Card

RE-140: $\$ 129$ Includes eight industrial relays, (3 amp contacts. SPST) individually controlled and latched. 8 LED's show status. Easy to use (OUT or POKE in BASIC). Card address is iumper selectable.

Reed Relay Card RE-156: $\$ 99$ Same features as above, but uses 8 Reed Relays to switch low level signals
(20mA max). Use as a channel splector, solid state relay driver, etc.

## Analog Input Card AD-142:\$129

 Eight analog inputs. 0 to +5 V range can be expanded to 100 V by adding a resistor. 8 bit resolution (20mh). Conversion time 12Ous. Perfect to measure volitage, temperature, light levels, pressure, etc. Very $\begin{aligned} & \text { easy to use. }\end{aligned}$12 Bit A/D Converter AN-146: $\$ 139$ This anaiog to digital converter is accurate to $025 \%$. Input range is -4 V to +4 V . Resolution: 1 millivolt. The on board amplifier boosts signals up to 50 times to read microvolts. Conversion time is 130 ms . Ideal for thermocouple. strain gauge. etc. 1 channel. (Expand to 8 channels using the RE-156 card).

## Digital Input Card IN-141:\$59

 The eight inputs are optically isolated, so it's safe and easy to connect any "on/off" devices, such as switches, thermostats, alarm loops, etc. to your computer. To read the eight inputs, simply use BASIC INP (or PEEK).
## 24 Line TTL I/O

DG-148: $\$ 85$ Connect 24 input or output signals (switches or any TLL device) to your computer. The card can be set for: input, latched output, strobed output, strobed input, and/or bidirectional strobed $1 / 0$. Uses the 8255 A chip.

## Clock with Alarm

CL-144: \$89 Powerful clock/calendar with: battery backup for Time, Date and Alamm selting (time and date); built in alarm relay, led and buzzer, timing to $1 / 100$ second. Easy to use decimal format. Lithium battery inctuded.

Touch Tone Decoder
PH-145: $\$ 79$ Each tone is converted into a number whilith is stored on the biaard sintinty read the number with INP or PoKE. Use for remole control projicita, eic.
A-BUS Prototyping Card PR-152: $\$ 15$ $31 / 2$ by $41 / 2$ in. with power and ground bus. Fits up to to I.C.s

$\mathrm{Cl}-144$

RE-140

Smart Stepper Controller sc-149: \$299 World's finest stepper controfler. On board microorocessor controls 4 motors simultaneously. Incredibly, it accepts plain English commands like "Move arm 10.2 inches left". Many complex sequences can be defined as "macros" and stored in the on board memory. For each axis, you can control": coordinate (relative or absolute), ramping, speed, step type (half, full, wave). scale factor, units, holding power, etc. Many inputs: 8 limit \& "wait untif" switches, panic buitton, etc. On the fly reporting of position. speed, etc. On board drivers ( 350 mA ) for smail steppers (M0-103). Send for SC-149 fyer. Remote Control Keypad Option RC-121: $\$ 49$ To control the 4 motors directly, and "teach" sequences of motions. Power Driver Board Option

PD-123: $\$ 89$ Boost controlier drive 105 amps per phase. For two motors (eight drivers). Breakout Board Option BE-122: \$19 For easy connection of 2 motors 3 ft . cable ends with screw terminal board.

## Stepper Motor Driver ST-143:\$79

 Stepper motors are the utimate in motion control. The special package (below) includes everything you need to get familiar with them. Each card drives two stepper motors ( 12 V , bidirectional, 4 phase 350 mA per phase). Special Package: 2 motors (M0-103) + ST-143: PA-181; \$99Stepper Motors M0-103: \$15 or 4 for $\$ 39$ Pancake type, $21 / 4^{\prime \prime}$ dia, $1 / 4^{\prime \prime}$. shaft, $7.5^{\circ} /$ step, 4 phase bidirectional, 300 step/sec, $12 \mathrm{~V}, 36$ ohm, bipolar, 502 -in torque, same as Airpax $\mathrm{K} 82701 \cdot \mathrm{P} 2$.

## Current Developments

Intelligent Voice Synthesizer, 14 Bit Analog to Digitai converter, 4 Channel Digital to Analog converter Counter Timer, Voice Recognition.

## A-BUS Adapters for:

IBM PC, XT, AT and compatibles. Uses one sthort slat AR-133.. $\$ 69$ Tandy 1000,1000 EX\& SX, 1200,3000 . Uses one short stot AR-133.. $\$ 69$ Apple 11 , IIt. Ile. Uses any slot. TRS-80 Model 102, 200 Plugs into 00 pint "systern buss" AR-136..\$69 AR-134... $\$ 49$ Model 100 . Uses 40 pin socket. (Socket is duplicated on adapter) AR-135... 569 TRS-80 Mod 3,4,4D. Fits 50 pin bus. (With hard disk. use Y-cable) AR-132.. $\$ 49$ TRS-80 Model 4P. Includes extra cable (50 pin bus is recessed) AR-137...562
 A-BUS Cable ( 3 f. 50 cond.) CA-163: $\$ 24$ Comeents the A EUS sudeter to one A-BUS card or to first Motherboard. Special cable for two A-BUS cards: CA-162: $\$ 34$

## A-BUS Motherboard <br> M8-120:\$99

 Each Motherboard holds live A-BUS cards. A sixth connector allows a second Motherboard to be added to the first (with connecting cable CA161:\$12). Up to five Motherboards can be joined this way to a single $A$ BUS adapter. Sturdy aluminum frame and card guides included. - The A-BUS is not a replacement for the Multi-pak
## NEW

## MAKE YOUR OWN CUSTOMIZED

T-SHIRTS SWEATSHIRTS UNDERWEAR CAPS JACKETS TOTE-BAGS PILLOW CASES

Special
introductory offer:

Enough for 8 T-Shirts, etc.

## MAXWEAR

- Patented new washproof process allows transfer of anything you print.
- Create your own artwork with CoCo Max (or ANY other graphics program).
- Print it with any Dot Matrix printer.
- Optionally add colors with crayons or markers.
- Transfer the picture on your item (T-Shirt, etc.) with an iron.

Optional
Continuous Feed Attachment (Fits most Printers) \$3991.26
While supplies last!

## INTRODUCING THE NEXT GENERATION: <br> C6B Max III <br> More Resolution

## "The best program ever written for the Color Computer"

That's how thousands of enthusiastic users rated the CoCo Max II drawing program. With CoCo Max III we are ready to amaze them again. Instead of "patching" CoCo Max II, we rewrote it from scratch to take advantage of the CoCo Max III hardware. The results will knock your socks off! Below is a brief list of some of the new features, but some, such as animation, color sequencing, or the slide show, have to be seen. Send for the Demo Disk, and see for yourself.

## Everybody's favorite drawing package features:

- A 50\% larger editing window. - Zoom area 400\% larger. - New drawing tools: rays, 3D cubes, arcs,... New editing tools: shadow,text size,... - Rotate by $1.5^{\circ}$ steps - Select any 16 of the 64 possible colors (all 64 colors displayed at once!) - Powerful colormix: additive, subtractive, overlay,... - Full color editing of patterns and color changing patterns. - Incredible special effects with color cycling up to 8 colors with variable speed. Animation adds the dimension of motion to your image. (Must be seen.) - Sophisticated data compression saves up to $70 \%$ of disk space when saving pictures.
In addition, there are dozens of enhancements to the multitude of features that made CoCo Max II a best seller.

## More about CoCo Max III

- CoCo Max III is not an upgrade of CoCo Max II. It is entirely rewritten to take advantage of the new CoCo 3 hardware (More memory, resolution, colors, speed,...)
- The new CoCo Max III Hi-Res Interiace and the CoCo Max II Hi-Res Pack are not interchangable.
- The new interface plugs into the joystick connector.
- The CoCo Max III disk is not copy protected.
- CoCo Max III only works with the CoCo 3.
- A Y-Cable or Multi-pak is not necessary.
- Colors are printed in five shades of gray.
- CoCo Max III can read CoCo Max II pictures.

Note: CoCo Max II (for the CoCo 2) is still available on disk (\$79.95). CoCo Max I is still available on tape (\$69.95). For details, refer to our double page ad in any Rainbow from January '86 to July '87

Toll Free operators are for orders only, If you need precise answers, call the tech line. (Detailled CoCo Max specs are included with the Demo Disk.)

Mien $x .00$ per orfiter fer thipping Visa, MC, chacks, M.0. wolcome. CT rualdants add sules tox. C.0.0. add $\$ 3.00$ extre.

Technical info: (203) 656-1806
 Connecticut orders: (203) 348-9436 All lines open weekdays 9 to 5 Eastern time

* Beware of inferior imitations that DO NOT include a Hi-Res Interface or charge extra for each utility.

Imagine this picture in sixteen colors !

$$
\left\{\begin{array}{l}
\text { Guaranteed Satisfaction } \\
\text { Use CoCo Max for afull month. } \\
\text { if you are not delighted with it, } \\
\text { we will refund every penny. }
\end{array}\right.
$$

## System Requirements:

Any CoCo 3 disk system with a Joystick or a Mouse.
We apologize to tape users, CoCo Max IIf needs the flexibility of a disk. The CoCo Max III system includes: The special Hi-Res interface (for your mouse or joystick) - The CoCo Max Ill disk - Many utilities: (Toconvert Max II pictures, Max colors, etc.) - Adetailled User's Manual. Complete system; nothing else to buy. CoCo Max III: \$79.95*

the array sets up (also called the label) and $y y y$ is the number of variables in the group to be defined. The DIM command must always take place early in the program, before use of the CLEAR command.

## PEEK

The PEEK command allows you to look at memory locations and determine various function values in the computer such as printer baud rate, disk or tape I/O, whether LIST and LLIST are disabled, etc.

The proper syntax for this command is PEEK $(x x x)$, where $x x x$ is the location to be examined or "peeked." Also, the value returned can be viewed only when used in conjunction with a variable, as in these lines:

$$
\begin{aligned}
& 10 \mathrm{~A}=\text { PEEK }(x x x) \\
& 20 \text { PRINT } \mathrm{A}
\end{aligned}
$$

## Logical Comparisons

A valuable function of the BASIC language, for the Color Computer as
well as other computers, is the ability to compare variables in a logical manner. Logical comparison determines whether variables are generated by program manipulation or entered by an external source by comparing the results of two variables. The logical comparison operators are AND, NOT, OR. Here is an example of logical comparison:

```
10 IF ( A = X AND B = Y) THEN
GOSUB 1000
```

This line is basically an IF/THEN command, but with something extra the logical comparison operator AND. The command line reads: If $A$ equals $X$ and $B$ equals $Y$, then jump to the subroutine at Line 1000 . Try this one:

$$
\begin{aligned}
& 10 \text { IF NOT ( } A=X \text { AND } B=Y \text { ) THEN } \\
& \text { GOSLB } 1000
\end{aligned}
$$

This line is also basically an IF/THEN command, but uses the logical comparison operator NDT. This command line reads: If $A$ does not equal $X$ and $B$ does
not equal $Y$, then jump to the subroutine at Line 1000. Try another:

$$
\begin{aligned}
& 10 \text { IF }(A=X O R B=Y) \text { THEN GOSLB } \\
& 1000
\end{aligned}
$$

Again, the line is basically an IF/ THEN command, but it includes the logical comparison operator OR. The command line reads: If $A$ equals $X$ or $B$ equals $Y$, then jump to the subroutine at Line 1000.

These examples cover some of the ways to use the logical operators. The commands can be combined to obtain very elaborate logical comparisons of variables and are invaluable in programming.

## LINEINPUT

The LINEINPUT command is exactly like the INPUT command covered in Lesson 1 (September 1987, Page 27), but with one exception: Where the INPUT command restricted the entry of variables to characters without punctuation, the LINEINPUT command al-

| Line | Description | Line | Description |
| :---: | :---: | :---: | :---: |
| 0 | a remarked line. |  | rs found in the variables entered in lines |
| 10 | clears 1,000 bytes for variable storage, sets $T$ equal to 100 , sets $N$ equal to 0 , and dimensions variables $\mathrm{B} \Phi, C \Phi, D \$$ and $E \$$ to the size of 10 variables each. | 200 | 140 to 170. <br> adds one count to the variable label $N$ and checks the value of N - if N is equal to 10 , it forces the program to Line 6000. |
| 20 | a remarked line. | 210 | clears the screen and prints the text at the |
| 30 | sets $A$ equal to the value peeked at location 188. | 220 | desired locations. <br> sets I\$ to an INKEY $\$$ function and tests the |
| 40 | a remarked line. |  | keyboard for the conditions found in this line. |
| 50 | sets $B$ equal to the value peeked at location 116. | 300-330 | the error correction lines for the INKEYs function called in lines 180 to 190. After the |
| 60-80 | test the values of $A$ and $B$ and steer the program to the proper location after these tests. | 900 | corrections are made, the line forces a jump to Line 140. <br> sets up a FOR/NEXT value for B. Note: When |
| 85 | forces a jump to Line 2000. |  | displaying variables entered in arrays, you |
| 95 | a remarked line. |  | ust use the variable label used in increment- |
| 100 | clears the screen, prints text and the value of N , prints a blank line, and allows the entry of variable $\mathrm{B} \mathrm{\Phi}$ as related to the dimensioned variable label, N . |  | ing the array (at this time we are using $N$, as a label), minus 1 to count down the variable. Remember, the computer always counts - in this case, from 0 to 10. |
| 110 | prints a blank line and allows the entry of variable $[\$$ as related to the dimensioned variable label, N . | 910-940 | display the text with its associated variables that are related to the variable array labe value, B . |
| 120 | prints a blank line and allows the entry of variable $D \$$ as related to the dimensioned | $\begin{aligned} & 950 \\ & 960 \end{aligned}$ | prints the text at the location. <br> sets I\$ to an INKEY\$ function and, if any key |
|  | variable label, N . |  | is pressed, will continue on with the program. |
| 130 | prints a blank line and allows the entry of variable E\$ as related to the dimensioned | 1000-2010 | subroutines called by previous lines. The subroutine starting at Line 1000 identifies the |
|  | variable label, N . |  | type of computer system that the program has |
| 140-170 | clear the screen and print the text with the |  | detected. The subroutine starting at Line 2000 |
|  | variables entered in lines $100,110,120$ and 130, respectively. | 5000 | is the menu for the data entry of the program. terminates the program. |
| 180 | prints the text at the desired locations. | 6000 | prints the message that the maximum file size |
| 190 | sets I $\$$ to an INKEY $\$$ function and tests the keyboard for the conditions found in this line. |  | for the array defined has been reached, and then sends the program to Line 900. |

lows punctuation in the variables en－ tered．That＇s the only difference between the two commands．

## Programming Exercise：

Using the methods presented in this article and the listing，write a program that will allow you to enter items you would want to list or find later in the program into arrays．

It is often difficult for new pro－ grammers（and，sometimes，old pro－ grammers，too！）to decipher the mean－ ing of a line of BASIC code．I have embedded remark statements in the program shown in the listing to help． Refer to the chart on Page 24 for a line－ by－line description．

In the final installment，Lesson IV， we will take this month＇s program，add data I／O，and enhance it further to allow easier data entry and correction．

## Hints and Tips

Nothing puts a damper on a strug－ gling beginner more quickly than trying to edit a program with BASIC＇s built－in editor．I find it cumbersome and diffi－ cult to use．
To make programming easier，you can use word processors such as VIP or Telewriter to write your programs．Save these programs in ASCII（SAVE＂ filename＂， A ）with the proper exten－ sions，etc．It may take longer to load and save，but the editing capabilities of these
programs make this a minor inconven－ ience．
Those of you who want to know more about the commands available for your computer can purchase the TRS－80 Pocket Handbook from Radio Shack （Cat．No．62－2024）．It is one of the best investments you can make to assist you in learning programming．And if you＇re interested in learning more about the peeks and pokes available for the Color Computer，I recommend you read 500 POKES，PEEKS＇N EXECS for the $T R S-80 \mathrm{CoCo}$ ，marketed by Microcom Software．
Remember：Work smarter，not harder！

## The listing：DATABASE

$\emptyset$＇BASIC NAME DATABASE PROGRAM． THIS PROGRAM IS TO BE USED WITH THE BASIC PROGRAMMING COURSE WRITTEN BY DAVID W．OSTLER，COPY RIGHT 1987
$1 \varnothing$ CLEARI $\varnothing \varnothing \varnothing: T=1 \varnothing \varnothing: N=\varnothing: D I M B \$(1 \varnothing)$ ：DIMC（1申）：DIMD\＄（1申）：DIME（1申）
 either one or two lines．This means a new dimension and new opportunity for those who have＂really neat＂programs that simply just won＇t fit in one line．

Here are the guidelines：The program must work in Extended BASIC，have only one or two line numbers and be entirely self－contained－ no loading other programs，no calling ROM routines，no poked－in machine language code． The program has to run when typed in directly （since that＇s how our readers will use it）．Make sure your line，or lines，aren＇t packed so tightly that the program won＇t list completely．Finally， any instructions needed should be very short．

Send your entry （preferably on cassette）to：

THE RAINBOW＇s One－Liner Contest has now been expanded to include programs of

## CoCo IIII Software Library

Create an instant library of Spectrum Projects ToP
CoCoIII software! Get FONT BoNANZA, FONT DISK CoCoIII software! Get FONT BONRNZA, FONT DISK \#1, FASTDUPE II (a $\$ 150$ plus value) for only $\$ 49,95$

## CoCo III Utilitities <br> Terrific utility programs for the Color Conputer III! Includes a CoCoII to CoCoIII Converter, 32 K III! Includes a CoCoII to CoCoIII Converter, 32 K Hi-Res screen saver, RAM tester, DEMO BAL, generator, SMOOIH Scrolling

## CoCo III Secreis Revealed

An introduction to the Color Computer III that compares the differences between the CoCoI/II and
the NEW CoCoIII. Includes: GIME chip specs, CoCoII the NEW CoCoIII. Includes: GIME Chip specs, CoCoIl
to CoCoIII converter and a $128 / 512 \mathrm{~K}$ RAM test. "Offers some very qood information to pro-

## CoCo IIII Screen Dump

This is the program for HARDCOPY GRAPHICS for Radio Shack bit-image, dot-matrix printers (DMPMicronics, Panascnic, etc.). Will print HSCREEN I$\frac{4}{}$ and PMODE $0-4$. 16 patterns can be CUSTOMIZED for

## Fkeys IIII

A productivity enhancement that gives you the capability to add twenty (20) predefined functions
to the CoCoIII by $u$ using the CIRL, F1 and F2 keys! $\$ 24.95$ "Get more from your keyboard with FKEYS
III" - Rainbow review $4 / 87$

## C III Graphics

A drawing program for the CoCoIII using the new any 64 colors, plus the ability to SAVE and LOAD 32 K screens. "Paint pretty pictures on the CoCo3."

- Rainbow review $12 / 86 \$ 19.95$

## OS-9 Solution

NOW, a program that creates a "USER FRIENDLY" environment within 0S-9. The OS-9 SOLUTION
replaces 20 of the old "USER HOSTILE" commands replaces 20 of the old "USER HOSTIE" commands
with single keystroke, meanu driven commands. No ing complicated symtaxes! $\$ 29.95$

## Telepatch IIII

All the FEATURES of TEUEPATCH pius the classically
proportioned characters of the WIZARD with TRUE proportioned characters of the WIZARD with TRUE
lowercase! Now CoCoIII compatible! (Upgrade $\$ 15$ lowercase! Now CoCoIII co

## Tape/Disk Uuility

A powerful package that transfers tape to disk and
disk to tape autamatically. Does an automatic copy $\frac{\text { disk to tape automatically. Does an automatic copy }}{\text { of an entire disk of programs to tape. Ideal for }}$ $\frac{\text { Rainbow }}{\text { \& prints }} \frac{\text { On }}{\text { tape }} \frac{\text { Tape }}{}$ to disk directories. Alo copies tape to tape

## Mulli-Pak Crak

Save ROMPARS on your 64K Disk System using the RS in of RQMPAKS by keeping all PAK software on disk. ncludes POKES for "PROBLEM" ROMPAKS \& the NEW 16K PAKS (Demon Attack, Dragons Lair..) $\$ 29.95$ NOW
CoCo3 compatible! Upgrade $\$ 15 \mathrm{w} /$ proof of purchase
Disk Uitility 2.1A
A multi-featured tool for USER FRIENDLY disk handing, Utilize a directory window to entries. Lightning fast Disk I/O for format, copy $\&$ backup. Single execution of both Basic $\& \mathbb{M L}$ programs: $\frac{64 \mathrm{~K} \text { DISK } \$ 29.95 \text {. NOW also CoCoI立 }}{\text { compatible! Upgrade only } \$ 15 \text { w/proof of purchase }}$

CoCo IIII Font Bonanza
Replace the 'PLAIN' COCOIII text characters from a menu of INCREDIBLE fonts or use the hi-res editor
to modify or create your own 111 128K DISK $\$ 29.95$. NEW! FONT DISK \#1 with over 25 more FONIS! $\$ 19.95$; Rating - Rainbow review 4/87

## Spectrum Font Generator <br> Eliteword, etc.) and convert them to Highly Detailed character sets! Some of the character $\frac{\text { Futuristic }}{\text { \& supports most dot matri\% printers } \text { ! } \$ \$ 29.95}$

## Schematic Drafting Processor

Save time and design pro looking diagrams using a
 (Even Logic gates \& MuIt ipin chips!) print hard
copy \& Save to disk. 64 K DISK $\$ 29.95$

## CoCo Checker

Something possibly wrong with your CoCo? CoCo Checker is the answer! Will test your ROMS, RAMS, Disk Drives \& Controller, Printer, Reyboard,
Cassette, Joysticks, Sound, PIAs, VDG, Internal Cassette, Joysticks,

## Rickeyiterm 2.0

Supports $40 / 80$ column mode, ASCII or XMODEM
uploads \& downloads, Deluxe RSZ32 PRK or Serial 'BITBANGER' port, 30071200 Baud! Plus 'STRINGS' (predefined sequences of test) can be read into ahead \& auto-repeat are also supported. 128 CoCOIII DISK $\$ 39.95$ (see 9/87 Rainbow review)

## 64K Disk Utilily Package

Take advantage of an expanded 64K machine. Make an Ext Basic ROM from $\$ 8000$ to $\$ D 800$. Copy ROMPAKs to disk (even "protected" PAKs) and create a 32 K SPOOL buffer for printing. \$24.95

## EZ Base

A truly friendly data base program at an afford able price! Keep inventories, habby collections, up to 500 records with $\frac{15}{\text { fields, record or field }}$

## Blackjack Royale

A Hi-Res graphics casino blackjack simulation and card counting tutor. Fully realistic play ance, 1-8 decks, burnt cards, shuffle frequency amd more! "This fine program is a must for the
Coco Blackjack player." - Rainbow review $\$ 24.95$

## Specirumm Adveniure Gonerator

 games that are $\frac{1008}{} \mathrm{ML} \&$ very fast 10 Up to 99 ronditional flags can be used. 64K DISK $\$ 29.95 \frac{755}{}$
## CoCo Calendar

Get organized for 365 days today with the Coco
Calendar! Designed for recording the entire year's occasions and daily appointments so you can plan ahead. You can store HUNDREDS of entries and our
GRAPHIC calendar will show all MEMOS! $\$ 19.95$

## THE KITCHEN SINK ... <br> Everything but the KITCHEN SINK!!! Receive all twenty-three (23) Colorful Utilities fram top to twenty-three (23) Colorful bottom, the $\frac{\text { Software Bonanza }}{\text { Pak to }}$ from top to (a $\$ 500$ plus coco calendar value) for a SPECIAI price $\$ 149.951$ !!

# Still pounding away at that keyboard? 

Save Time and Money with a Combination Subscription!

## Subscribe to RAINBOW ON TAPE or RAINBOW ON DISK Today!

Every month, these convenient services bring you as many as 24 ready-to-run programs. Using the current issue of THE RAINBOW as documentation, all you have to do is load and run them. A one-year subscription gives you more than 230 new programs! The typing time you save can be spent enjoying your CoCo!

## RAINBOW ON TAPE For No.Fus Fun

Back issues of RAINBOW ON TAPE are available beginning with the April 1982 issue. A single copy of RAINBOW ON TAPE is $\$ 10$ within the

United States; U.S. \$12 in all other countries. The annual subscription rate for RAINBOW ON TAPE is $\$ 80$ within the U.S.; U.S. $\$ 90$ in Canada; and U.S. $\$ 105$ for all other countries.*

## RAINBOW ON DISK Offers OS-9 Programs

In addition to all the programs offered on tape, part of one side of RAINBOW ON DISK is formatted for the OS-9 operating system. That means you can now get all the OS-9 programs from the magazine - programs that cannot be put on tape. Back issues of RAINBOW ON DISK are available beginning with October 1986. Subscriptions to rainbow on DISK are $\$ 99$ a year in the U.S. Canadian rate is U.S. \$115. All other countries, U.S. $\$ 130$. Single copy rate is $\$ 12$ in the U.S.; U.S. $\$ 14$ in Canada; and U.S. \$16 in all other countries.*

## Now, SAVE up to 19\%

 when you buy a joint subscription to the magazine and either RAINBOW ON TAPE or RAINBOW ON DISK! A one-year subscription to the rainbow and RAINBOW ON TAPE is only $\$ 91$ in the U.S., $\$ 108$ in Canada, $\$ 153$ foreign surface rate and $\$ 188$ foreign airmail. A one-year subscription to THE rainbow and rainbow ON DISk is only $\$ 115$ in the U.S., $\$ 138$ in Canada, $\$ 183$ foreign surface rate and \$218 foreign airmail.*To order by phone (credit card orders oniy), call (800) 847-0309, 8 a.m. to $5 \mathrm{p} . \mathrm{m}$. －calculates 1040，2441，2106， 6502
－calculates schedules A－F，SE
－computer generated substitute forms
－ 1040 done by line numer for easy transfer

## Let CoCo calculate friendship compatibility

## Compur Miatch

## By Robert Rogers

Compu Match is a program designed to match people who give similar responses to a questionnaire, and is aimed especially at clubs and organizations that want an interesting project or a way to raise money without selling trinkets or candy.
My high school computer club had good results using a similar program called Computer Friendship Matching Service, which I wrote for the IBM. We gave it the long name to convey that the program was just for fun, and to avoid the problems and negative connotations of a dating service.
Participants fill out questionnaires by answering multiple-choice questions about their personality, lifestyle and interests. Each person's data is entered into the computer. Then the program prints, for each participant, a list of five people of the opposite sex who had the

Robert Rogers is a self-taught programmer who is currently attending Florida Atlantic University, majoring in computer science. His interests include model railroading and playing the organ professionally.
highest percentages of similar responses.

I have included a five-question sample questionnaire, which you can use for a test run (five males and five females are needed in the file to avoid errors when matching). More questions are needed for the "real" run.

Upon running, you are asked what filename you are using. You must use the same filename when adding additional data. In order for the program to work on a 16 K machine, the CLEAR 10000 and LM $=500$ statements in Line 10 require some modification - lower values. LM is the number of participants. If memory is limited, you could divide up the pool of participants by age or grade and use separate files. (Note: Participants can be matched only with others in the same file.)

A good promotion for your matching service is having the faculty participate (in a separate file) - this will yield hilarious results.
Next you are asked how many questions are on the form (maximum of 25) and the largest number of response choices for any one question (maximum of nine). A menu of six options appears.

Function 1 allows initial data to be entered and new data to be added. Enter the person's name, sex (M or F) and code number (we used homeroom numbers). Then, in sequence, type the responses. Use numbers, not letters. You won't need to press ENTER after each response. You can back up to correct a mistake by pressing the up arrow; the prompt includes the response number, so you will always know which one you are entering. No correcting is allowed after all the responses are entered.

Function 2 is the actual matching process. It prints to the screen or printer the top five match-ups and corresponding percentages for each participant. If you use the printer, the printouts can be delivered personally. To speed the process, males and females are done separately - you can select which to print first. So, to cover everyone, use Function 2 twice, selecting "female" first, and "male" next. You also have the option of starting with a specific "match position." Pressing enter begins printing the results for the first male or female in the file.
To have printing begin elsewhere in the file, enter the desired record number obtained with Function 3. The match position option enables you to print out a partial listing of participants and then continue where you left off later (this is

harder to explain than it is to see in operation). The disk containing the data file must remain in the disk drive.

Function 3 lists to the screen or printer all the participants' data and file record numbers. These are not needed to use Compu Match unless you use the "match position" option previously described or need a file dump for debugging.

Function 4 allows you to print results for the person whose name you input. This could be used if a printout is lost or if you decide to have people line up at the computer to watch the results appear on the screen.

Function 5 is an extra feature that will compute for each question the percentage of participants that choose each response - it can be computed for males, females or both combined. These statistics can then be announced or printed in a newsletter or school newspaper for the general interest. This function could be used by itself (without using the matching process) as a quick questionnaire tabulator.

Function 6 should be used to end operation and ensure proper file closing.
(Questions or comments about this program may be directed to the author at 10228 Anthony Groves Road, West Palm Beach, FL 33414. Please enclose an SASE when writing for a reply.)

# The Vote Is In 

## By Cray Augsburg Adventure Contest Judge

Ladies and gentlemen! Your attention please! The scores have been tallied and the results are in. The winner of The Fourth Rainbow Adventure Contest is. . .

Hold on there, not so fast! In the tradition of Adventures, there is no instant gratification, no easy win. Judging this contest was much like playing an Adventure - many things to explore and no obvious solutions. So why should I tell you right off the bat who won? We'll get around to it.

After a considerable amount of time and effort, I finally reached my decisions, which weren't easy to make. Each Adventure had its own unique and interesting aspects, and it was really easy to like them all. So, I had to force myself to consider each entry as a complete package.

In judging the contest, I knew the winner would be the person who sent in the most well-rounded entry. The use of graphics was not a requirement. However, the winning entry would be comprised of complete documentation, an original concept or theme, and logical design and organization. It would be a testament to the author's programming skills, yet be easy for the user to operate. I feel the winner of The Fourth RainBow Adventure Contest came through with flying colors on all counts.

Cray Augsburg is RAINBOW's technical editor and has an associate's degree in electrical engineering. He and his wife, Ruth Ann, have two children and live in Louisville, Kentucky. His username on Delphi is CRAY.

## What's an Adventure?

It's simply a game, but not necessarily a simple one. Playing an Adventure requires a certain level of skill and cunning. Since the concept of the game is not grounded in reality, you must be ready for the unexpected to pop up at any time. It all depends on the author's understanding of how the average human mind works. Just when you think you've got it solved, you find something else is required of you something that makes the least (or, depending on how you look at it, the most) sense. Adventures can be quite frustrating.

The goal in writing an Adventure is to capture the Adventurer and take him right to the frustration threshold where he's just about ready to put his foot through the keyboard - and then give him a faint glimmer of hope. Let him gain a little, then start the process again. This is what keeps Adventurers coming back for more, and is also a sign of a well-written Adventure.

Obviously, programming an Adventure takes quite a bit of effort. The author must be knowledgeable and clever, and must understand programming concepts and skills; otherwise, you might find the solution just by looking at the program listing. The good Adventure writer will invent a story line that stretches the imagination.

I am proud to say the level of quality in the entries we received was unbelievably high. However, this only made the decisions that much harder to make. So many people deserved to win, but only one could take home the grand prize. In the spirit of competition, though, everyone was a winner. If you sent in an entry, give yourself a pat on the back for a job well done - you deserve it.

## The Entries

What kind of Adventures did we see? We saw plenty of graphics! As a matter of fact, most of the Adventures submitted utilized graphics in one way or another. Of the many CoCo 3 entries, nearly 90 percent were graphics Adventures - and most were darn good, too! Creative use of graphics never fails to please people. The CoCo 1 and 2 graphics Adventures were something to behold, as well. It never fails to amaze me what can be done with a simple PMODE 4 screen and a few artifacted colors.
Now, lest we concern those who did not use graphics, remember that the "original" computer Adventure game had text only. The use of graphics has never been necessary to an Adventure's
success. It is true that graphics enhance a program, but they are not necessary. In many cases, it is better to let the Adventurer's imagination create the scene. In fact, graphics can sometimes distract the player. Often it is best to let the readers' impressions of the events help them create mental pictures.

As far as equipment requirements, the entries varied. Some Adventures ran in 4 K without Extended Color basic, and others squeezed every available byte out of a 128 K CoCo 3 . We did not receive any entries written under OS-9, which is somewhat surprising considering BASICO9's power and flexibility. Oh well, that's a story for another day.
Some entries used music and sound effects. Being musically inclined, I had hoped to hear some fancy 12 -voice music. It wasn't to be. (Maybe we can have a music programming contest someday). For the most part, though, the music and sound effects used were very appropriate.
The level of programming found in the entries was really amazing. It is fascinating to see a skilled programmer's work. I can imagine the programmer hovering over his keyboard like a concert pianist. And mastery of the CoCo ivories has certainly been evidenced by the compositions I "heard."
While most of the commands used in the entries we received would be familiar to even the most inexperienced Adventurer, some programmers broke new ground. Along with the old faithfuls (GO and INVENTORY) were SAY, SPEAK, GOe日LE and COMPUTE. In addition, some programmers abandoned the old "type-it-in" approach for the new "point-and-click" powers of the joystick and mouse. Our grand prize winning entry utilizes icons in a very easy-tounderstand and realistic way and requires keyboard entry only when absolutely necessary.

From the standard tricks of using hundreds of GOSUBs to poking the key routines in machine language, no holds were barred as the entrants scrambled to keep their secrets intact. And what is their motivation? While they would never admit it, they just want to make you work. I think that's fair - they worked hard to bring you the best they had to offer, and they want to make sure you enjoy it!

In relation to this, I must give advance notice: RAINBOW is not in any way, shape or form going to give you the solutions! That would just be the easy way out. Hints may be offered in
"Scoreboard Pointers," but the brunt of the work remains with you, the Adventurer. That, after all, is the whole point. Try to outguess the author in each case. He does have the upper hand, but he hasn't made the game impossible. I guess what I'm really saying is: Enjoy! And now for the winners.

## CoCo 3 Graphics Best of Show and

 Grand Prize is presented for the second consecutive time to Dr. Bruce Bell, an optometrist from Rockmart, Georgia. Dr. Bell's work has graced the pages of THE RAINBOW several times in the past. And each time he has done himself a little better. Dr. Bell did a professional job with this year's winning entry, The Controllers (see Page 42). His organizational and programming skills do not go unnoticed.The Controllers is set "slightly" into the future. Your character is a scavenger in a time when technology has been banished from the Earth - the planet was overtaken by an alien race that uses thought control to reduce humans to primitivism. Your goal is to free the human race from this control.

Dr. Bell's entry is written for the CoCo 3 and will work with color composite or RGB monitors, as well as tape or disk. A mixture of graphics, text and sound gave this entry an edge in the competition. More importantly, the use of a joystick / mouse user interface gave it the final push into the winning position. While the use of such an interface is not unique in itself, the appropriate manner in which it is implemented here must be seen to be appreciated.

The Controllers is comprised of two BASIC programs, one of which "sets up" the system. The other program is the main body of the Adventure, which features games within itself. To achieve a fine balance between program features and efficiency, Dr. Bell utilized many techniques, including some dabbling into the "deep, dark world" of machine language. We commend Dr. Bell for his excellent work and hope to see more programs from him in the future.

Non-Graphics Best of Show goes to Jeff Hillison, of Blacksburg, Virginia, for his entry, Intrigue. This Adventure casts you as an allied spy stuck in Berlin in the midst of WWII. Your mission is to find the plans for the impending German invasion of Britain.

Clues in the form of a letter and burlesque show guide accompanied this entry; these clues are required to solve
the Adventure, and add a certain sense of realism to the game. Jeff also uses several interesting commands. Never before have l seen SHAKE and FLUSH used in an Adventure, but they are here.

This Adventure is not an easy one to solve. (OK! Yes, I had to cheat and look at the solution.) With 60 rooms, nearly 90 different objects and over 30 commands at your disposal, the play can get quite complex. l thoroughly enjoyed this Adventure.

Jeff is a freshman at Virginia Tech, where he is majoring in accounting. He has been working with the CoCo since 1983, and wrote his first Adventure in 1985.

CoCo 3 Graphics Runner-Up and Second Place go to Charles Farris. His entry, Term Paper, had a very interesting story line: You are a student at CoCo State University and someone has stolen your term paper. You must search the campus and retrieve all 30 pages of the paper before it is due.

1 really empathized with the character in this Adventure. I don't know how many times "the dog ate my term paper, honest!" The play was enjoyable and interesting, incorporating levels of ability within the character: Fighting Factor, Health Points, Personality Points and Money Amount.

The University is shown in the form of an onscreen map, but the locations of the pages are not given. As you move around the campus, you will be struck by the realism of the game.

Charles is a self-taught BASIC programmer who has enjoyed programming his CoCo for the last three years, and is currently with the U.S. Air Force, stationed overseas in Europe.

Third Place goes to Dr. Eugene A. Carver, from Galena, Ohio, for SDI Countdown to Doom: A criminal mastermind has overtaken NORAD at Cheyenne Mountain, and you must stop his native country from demolishing civilization as we know it. You think
you are alone in your mission, but are you? The solution requires a great deal of thought, and the game never fails to twist and turn just when you feel the end is near.

An efficient, yet sometimes evasive, programming style combined with a great deal of thought earns this entry its proper place in the contest. l especially liked some of the references to real-life current events. Everyone who liked Wargames will certainly find themselves easily caught up in this one.

Dr. Carver is an editor at Chemical Abstracts Services, wherė he translates chemistry articles from Russian and German to English. He received his doctorate in physical chemistry from the University of Chicago in 1974.

CoCo $1 / 2$ Graphics Best of Show goes to Mike Cooney, of Mansfield, Ohio, for his entry, The Eye of the Opal. You, Lwither, must find the special opal ring in order to make a proper proposal to Penelope. This requires what looks like an ordinary trip through an average sewer system (oh, boy!).

This Adventure is much more difficult than it might seem, but if you catch on to what Mike is doing, you will find it is really quite straightforward. The graphics are appropriate and some quite ornamental.

The Eye of the Opal starts out much like most other Adventures, but soon takes on its own character as surprise after surprise comes your way. And many aspects of the game are random, which always makes for fun, if frustrating, play.

Mike is a self-taught programmer and a junior in high school. In addition to his enthusiasm for computers, Mike's hobbies include art and music.

CoCo 1/2 Graphics Runner-Up goes to Paul Ruby, Jr., of Beeville, Texas, for Foundation of Failure. This 32 K Adventure utilizes colorful PMODE 3 graphics to illustrate the rather large labyrinth in which your character travels. Each of
the 250 caverns is shown in perspective and may or may not contain one of the treasures you are seeking or an enemy you are trying to avoid.

The programming and presentation style is fairly original and lends itself well to this particular game. As you travel through the caverns in an attempt to save your village on the surface, you will learn to accept failure as well as triumph.

Paul is the founder of Ruby Software and Consulting, and he works with BASIC, $d B A S E$ and assembly language. His company, consults with businesses about the creation and installation of accounting systems.

16K Best of Show goes to Chinarut Ruangchotvit, a 14-year-old from Ramsey, New Jersey, whose entry, The Castle of Death, can be found on Page 65. The complexity of this Adventure is hidden. Only as the game progresses do you begin to realize how lost you can get. Those of you who don't believe in mapping your travels, be warned. The programming style of this Adventure is typical of its size, but includes some new twists that other programmers can appreciate.

The story involves (as do many other Adventures) finding lost jewels. The solution is not readily apparent, but is, in fact, quite simple. Many traps await the Adventurer who becomes too greedy or obsessive.

1 especially liked the addition of a descriptive term in some of the command lines. For example, since any room may have a door or window in several directions, the user can enter OPEN LEFT DOOR to open the door leading to the left. The Castle of Death serves as a useful model for those interested in learning how to create their own Adventures.

16 K Runner-Up goes to Richard John Kottke, of Madison, Wisconsin, for his entry, Captain Rodgers. This two-part Adventure involves quite a bit

## A Sticky Problem

Are you having problems with disk labels that come loose from the disk or don't want to stick at all? I was until I started using a thin film of rubber cement. Just apply it carefully to the area where you want to affix the label. Let the rubber cement dry and, when it has done so, put your label on. The rubber cement provides a good bonding surface for the "sticky" already on the label.

Ron Hemenway Tacoma, WA

## Color Connection

by BJ Chambless

This is the most comprehensive modem package for the Color Computer
All are Protocols Supported including Compuserve Protocol B, XMODEM protocol, and XON XXOFF. Auto dial feature for both Hayes compatible and some Radio Shack modems. You can use all baud rates when using the Radio Shack Deluxe RS232 program pack! Printer baud rates are selectable.
You can print from the buffer and files bigger than the buffer can be uploaded and downloaded. Download direct todisk with automatic XONIXOFF protocoll Single key macros allow easy entry of often-used passwords and iD's.
H-Res screens with a choice of colors are used. All printable characters available and all control characters are supported.
RSDOS Version includes two sets, one for CoCo 1 and COColl, the other for COCO 3.

## OS-9 Connection 3.0:

The package includes all of the features of the RSDOS version plus runs on OS-91 Versions for both Levell and Level II are included. RS232 pak is required.

## RSDOS Disk

$\$ 49.95$
OS-9 Dlsk
$\$ 49.95$
Also availiable from Radio Shack through Express Order Software

Screen Star

## by Scott Cabit

Also available from Radio Shack through Express Order Software
Screen Star implements the popular WordStar editing capabilities. If you know Wordstar you aiready know how to use Screen Star!

- Edit filles larger than memory since Screen Star uses the disk as an extension of memory.
- Block Commands - with a keystroke you can mark the start and end of a block, then move, copy, or delete the block.
- Cursor Movement is easy with an array of commands to move left or right one character, or one word, or one line; scroll forward or back one line, one screen, one block; jump to the start or end of the line or the screen, block, or file.
- Find \& Find/Replace Commands make mass changes and searches a snap.
- Pop-Up Help Menus are as close as a keystroke.

## 512K COMBO Package

We've put together a combination package of everything you need to expand to 5I2K and priced it special to make it impossible to resistl The package includes:

- 512K Memory Board with prime, 120 ns memory chips and easy instructions.
- 512K Ramdisk \& Diagnostics Software package for RSDOS.
- Specificatlons on the important GIME chip |plus a number of additional pages of CoCo 3 technical details that we think you'll find interesting.)

## OK Combo Package

## Display \& Entry Screens

Design up to 9 different screen formats for data display and data entry for each data base. This is helpful for accessing your data for different purposes.

## Sorts \& Selections:

Up to 9 different access keys can be defined. These are used for displaying data on the screen or selecting data for printing. You may use several levels of sorts as well as iogical operators to select just the right data. A powerful generic search is also available.

## Reports:

See your data any way you want by designing your own reportsl Data Master offers easy-to-use tools to design professional reports including report headings, titles, column headings, automatic page numbers, column totals, and more. Store up to 9 report formats for each data base.
File Management
Built-in file management capabilities allow easy file manipulation for transferring data files, renaming data files, expanding data files, and more.

## Upload/Download

Data Master can read and write standard sequential files which aids in data transfer between DynaCale and many others.

## Full keyboard ease

taking full advantage of the COCO 3 's cursor and function keys.

## OS-9 accessible

Even while operating within Data Master
Requires OS-9 Level II,
CoCo 3, 512K
$\$ 64.95$

## OS-9 Text Formatter

Also available from Radio Shack through Express Order Software

An easy way to get beautiful documents and letters with OS-9, Text Formatter interfaces with any editor that produces standard ASCII text files.
Features include left and right justification, page breaks, special spacing, automatic pagination, automatic page numbering, centering, Indenting, tabs, and sending escape and control codes to your printer as well as sophisticated headers and footers. Special functions include macros for often used sequences, relative arguments, upper and lower case modes, nonprintable remarks, and more!

Requires 05-9
$\$ 34,95$

## Call or Write to:

but save and can import or export files whenever you need them.

- Smart Speller is included.
- Parameter commands personalize your environment.
- Access the OS-9 Shell.
- Up to 10 functions keys can be defined by CoCO 3 users for fast, repetitive functions.
- Use with the Text Formattee for a full word processing team. Simply imbed the Text Formatter commands in your Screen Star file and it will be printed in stylel
- Level $1 \&$ Level 2 are supported and both versions are included.

Requires OS-9 Disk
$\$ 49.95$
\$74.95

of detail and realism. While it requires careful, logical thought on the part of the Adventurer, the play is very straightforward. The game takes you from a swamp to a space station if, of course, you manage to survive the little surprises along the way.

Richard is a midshipman in the naval ROTC unit at the University of Wisconsin, where his major course of study is electrical engineering. He aspires to join the Navy's nuclear power program upon graduation.

Non-Graphics Runner-Up goes to Stephen Berry, of Lake Jackson, Texas, for Life: An Everyday Adventure. The amount of work put into this large entry is quite obvious. And the goal of the Adventure, making your way through life, really hit home; it impressed upon me the things we take for granted and the work we do each day that we don't even recognize.

Life: An Everyday Adventure was designed for the CoCo 3 and requires a disk drive, but it certainly uses every bit of the resources available in such a system. The program represents an undertaking worthy of praise.

In real life, Stephen is a 17 -year-old senior at Brazoswood High School.

Best in a Continuing Series goes to Fred D. Provoncha, of Lynbrook, New York, for Aandark II. (His original Adventure, Aandark, was a winner in The Third Ralnbow Adventure Contest.) This 32K Disk program details the continuing saga of the planet Aandark and its attack and occupation by the Dorax. You must disable the cannon in order for the Terran fleet to get through. I liked the first entry in this "series," and Aandark $I I$ provides the same level of enjoyment. It is well-written and welldeserving of our attention.

The Chase in the Park Award goes to Mike Anderson, of Tucson, Arizona, for The Park of Mystery, a 32 K Adventure. In this Adventure, you have overheard a discussion between shady characters that "describes" where they have hidden their loot. You must find the money before they find it . . . or you. You must keep your "happy face" on while playing. Getting too serious just might spoil your chances for success. I believe The Park of Mystery exemplifies a programming style and efficiency we all could strive for. Mike is a return winner. His entry, The Adventure of Johnny Zero, was a winner in The Third Rainbow Adventure Contest.

The Halloween Revisited Award is won by David Bartmess, of Fayetteville, Pennsylvania, for Ghost House. David must have a passion for haunted houses and those neat little scares. This 16 K text Adventure invites you to try to find various treasures located in the ghost house. A very handy and unique aspect of the game is its ability to accept multiple commands on one line. I thought this ability was interesting - it is good to see novel ideas incorporated into such software.

The Sleeper Award goes to Tio Babich, of Miller Place, New York. His entry, The Parlog Building, is a 32 K text Adventure in which you are trapped on a military base. Your only goal is to escape unharmed. It is just a little trickier than imagined, though. The input routine on this game allows you to enter fully descriptive commands or shorten them to a simple noun/verb combination. The Parlog Building is a good warm-up Adventure for the hardy Adventurers and an excellent learning tool for novices.

The Space Wars Awards goes to Andre Needham for his work on General Panic. Andre, who lives in Renton, Washington, has put together quite a sophisticated 16 K text Adventure in this entry. Your goal is to retrieve some antimatter necessary for the Earth's power. This is a "typical" Adventure with a good story line. It is wellwritten and should be enjoyable to most any Adventurer.

The Architect of the Year Award goes to Eric Santanen, of Stanhope, New Jersey, for House Adventure. Essentially, you are stuck in an old, abandoned house and must find a way out. But this house is quite a bit more complex than it seems. Eric took special care in writing this 32 K text Adventure to make sure the solution could not be discovered before the game was played (unless you had the solution sheet, like me!). This game is rather involved, but once you discover the solution, the trials and tribulations begin to make sense.

The Flipper Award goes to Ken Lie, from Gates Mills, Ohio. Ken's entry, Operation: Ocean Master, involves quite a bit of "spook" stuff (I do love the underworld and the enchanting image of intrigue offered by "special operations"). In this 32 K text Adventure, you are a special operations agent assigned to uncover the mystery of
recent underwater volcanic activity and how it is related to changes in the songs of humpback whales. Sounds simple, doesn't it? Try again. This is just the tip of the iceberg. I really appreciated the sudden twists in the plot of this Adventure. Also, Ken has done an excellent job of hiding the "real" objective beneath a web of mystery.

Honorable Mention goes to Chris Cuthill for his work on Power Search. In this Adventure you are leading an expedition to find the last remaining sources of uranium. It is vital you succeed, since the Earth has become totally dependent on nuclear energy (the year: 3010).

The realism of this Adventure is such that you must enter actual coordinates (latitude, longitude and altitude) in order to travel during your search. Your success is based on your ability to calculate locations. Chris included several global maps and a scaled ruler for this purpose.

Unfortunately, the requirement of the detailed maps makes this excellent Adventure unfeasible as a candidate for publication. However, it by no means lessens the entertainment or educational value of the game.

Chris is 15 years old and is currently attending Grimsby Secondary School in Ontario, Canada.

Honorable Mention goes to Jeff Johnson, of Orlando, Florida, for Superspy. This 32K Adventure is by no means easy. The player must infer several "normal" daily activities throughout the game. Perhaps the most frustrating, yet captivating, aspect of Superspy is that the objective is unknown at the start of the game. This one is definitely not for the light-hearted Adventurer.

The winning Adventures represent only a small sampling of the entries we received in The Fourth Rainbow Adventure Contest. They represent what I see as the "cream of the crop." The winners will be further honored by being published in The Fourth Rainbow Book of Adventures, which will be available in the near future.

While I would like to mention each and every Adventure, it would not be possible. And to list some of the "better" entries isn't really fair in my mind. Each Adventure had its own special quality I was drawn to. No one has "lost" - we have all gained.

# The Professional Color Computer 

Enhancements for Productivity from HJL Products

For peak performance with any computer, you have to get information into and out of the system as easily as possible.

This is the purpose of the HJL family of professional enhancements for ALL MODELS of the Color Computer, including CoCo 3.

The Self-contained
ProCase-57 Keyboard - $\$ 79.95$
It's the popular HJL keyboard perfectly fitted into its own sleek, low-profile case. Put your CoCo on a shelf or hang It on the side of your desk. ProCase-57 comes with 5 -foot cable; installs in just a few minutes with no soldering.

## The HJL- 67

Keyboard KIt - $\$ 59.95 / 69.95$
Overwhelming favorite of serious CoCo users worldwide, the HJL-57 keyboard provides the smooth consistent feel and reliability you need for maximum speed with minimum input errors. Installs in your color computer without soldering. Just $\$ 59.95$ for Original or F-version. Kits for CoCo 2 and CoCo 3 are $\$ 69.95$.

The Numberdack Keypad - $\$ 59.95$ A self-contained numeric keypad for serlous number-crunching. Besides the
numbers, it has all the cursors, symbols and math keys, Including autoshlfted ADD and MULTIPLY. Includes cable and connectors for solderless installation.

The Monitor Adapter - \$25.95
This universal driver works with all monochrome monitors. Easily Installed without cllps, jumpers or so|dering (except some COCO $2 s$ with soldered-In video chips). Here's crisp, flicker-free monitor output with all the reliability you've come to expect from HJL. Products.

## The Monitor - $\$ 99.95$

Our high-resolution amber monltor glves you the display preferred by most computer pros. Once you've used It, you'll never go back to the TV set. 12-Inch CRT has etched non-glare faceplate. (Requires adapter sold above)

## Quick Basic Plus : \$18.95

High-performance programming ald works With any CoCo that has 4 function keys. 26 one-touch BASIC statements, 10 userdefined macros at a time (save as many sets of macros as you like), auto linenumbering, instant screen dump to printer, and global search, make this software Ideal for any BASIC programmer. Speclify disk or cassette.

[^1]The SoltSwlich - $\$ 89.85$
Connect any two parallel printers to one computer; select printers manually or Insert a simple printer code in the text to be printed for fully-automatio, all solid-state switching. Complete with three cables and operating instructions.

## The HJL Warranty

Every HJL product comes with a full, one-year warranty and the exclusive HJL 15-day unconditional guarantee (except software).

## Plck a Palr and Save 15\%

Take 15\% off the price of any two or more products shown here. Just mention this ad when you order.

Div. of Touchstone Technology Inc. 955 Buffalo Road • P.O. Box 24954 Rochester, New York 14624

rom the crest of the hill you can see the deserted city ahead. It is hard to imagine that only four years ago the city teemed with human life. But that was before the Controllers came.

Banning all men to rural life -- for their own good, of eourse - the Controllers systematically destroyed, all of Farth's eities. This city was one of the last to be eliminated. Industrious as you are, you want to scavenge for artifacts to sell to collectors, an activity tolerated by the . ruling race.

You respect the wisdom of the Controllers - after all, they traveled halfway across the galaxy to make all mankind understand that the old way of life, spent in corrupt pursuit of technologieal advances, threatened the Plan.

Bruce Bell practices optometry in his homerown of Rockmart, Georgia. He spends hours using programs he finds in TIIE: R.AINBOH and programming his CoCo for use in his office and at home.

After having put up an initial show of resistance, most people understood that they were better off under the rule of the new masters.

There has been some talk of a resistance group, but you rather doubt it. After all, who would want to revert to a primitive and heretical way of life? Just the same, you are curious to sec for one last time the remnants of a civilization you only vagucly remember.

As you search the ruins, you find an odd-looking shutte barely large enough to hold one person. Looking in, you sec an old mugasine on the seat with the word "RAINBOW" printed on the front. Immediately you recognize this as the technological poison of which your masters have warned you. But, surely, it would not hurt to look - after all, you would not suceumb to primitive heresy. You reach for the magazine and flip through it. You see that someone or something named Falsoft had established a West Coast branch in this city.

Pressed between the pages is a small booklet - a manual of some sort. At once, you recognize it as an operations manual for the shuttle. Curiosity overtaking you, you climb in for a closer look, and the door accidentally shuts behind you. You become dizzy and your vision grays. Minutes later your senses return. .

It is clear to you now that the Controllers are able to manipulate the human will and that the shuttle somehow shields you from their influence. You realize you cannot leave the shuttle. And you wonder if there are others who know what you do. This you must find out and, if any way possible, destroy the Controllers!

As the sun sets over the bent city, you pore over the shuttle's manual

Looking the shuttle over, you notice all holding tanks are empty. The gun is gone! You must do your best in spite of all odds. Your mission is clear!

## Setting Up for Game Play

You need a Color Computer 3 ( 128 K minimum) and a joystick or a mouse. Type in both listings and save them. If you are saving on cassette, save CONTROL first and CNTRL immediately following. You will need to enter PCLEAR1 before typing in CNTRL.

To load the game on a disk system, just enter RUN "CONTRDL". On a tape system, enter CLDAD "CONTROL". After the program has loaded from tape, enter RUN. When prompted to press the firebutton, do so and also depress the Play button on the tape recorder. The tape should already be positioned just before the main program, CNTRL. This program will automatically be loaded for you. When it has finished, simply enter RUN a second time and the game will start.

Either the right or left joystick may be used, but use the same one throughout the game.

## Hints

Examine every location and identify every object. This is an advanced Adventure requiring wit and skill to complete. Therefore, save your place often! The object of the Adventure is twofold: trying to destroy the Controllers, and accumulating as much wealth as possible. You'll need it in the aftermath of the Controller's defeat. As much as $\$ 2,101,000$ in treasure lies hidden in the landscape of the Adventure.

Should you accidentally press BREAK during game play, type GOSUB 295:HSCREEN2:CONT to reset.

In this battle you have become a soldier - a soldier of fate and fortune! Good luck - you'll need it!
(Questions or comments regarding this Adventure may be directed to the author at 137 Samanda Circle, Rockmart, Georgia 30153. Please enclose an SASE when requesting a reply.) $\square$

## Operations

The ATS-CC5 All Terrain Shuttle is designed for maximum maneuverability over all types of earthen terrain, as well as in water. The ATS-CC5 employs a unique electromagnetic shell that eliminates any threat of being overtaken by the Controllers via thought control.
The various background and tracking control functions of the ATS-CC5 are maintained by the powerful Color Computer 5 , which was developed just prior to the original Controller invasion. Operator control of the ATS-CC5 is also carried out through this system.
The main console of the ATS-CC5 allows the single occupant complete control of all shuttle operations. The individual controls are described starting from the upper-left corner and proceeding in a clockwise fashion around the panel.

## Digital View Screen (DVS)

The large view screen displays a digitized video image of the forward surroundings exterior to the shuttle. It is important to note that the image you see is a digital representation and therefore caution must be used in placing objects outside the craft. Objects that are similar in color to the exterior background may be difficult to see later.

## Command Center

The 10 function buttons (two rows of five) on the right side of the control panel are used to engage the shuttle's inherent commands. Moving the joystick (or mouse) selects the function marked by a small blue light in the upper lefthand corner of the button. The light glows red
when the function is engaged by pressing the firebutton. These buttons are described below.
Examine (magnifying glass) gives you a brief description of the area immediately outside the shuttle.
Lights On/Off (light with rays) toggles the shuttle's lights on and off. A blue light on this button indicates when the lights are on. Note that one unit of power from the battery is expended with each move of the shuttle while the lights are on.

Retrieve/Get (up arrow) transfers joystick control to a small blinking cursor in the DVS. Move the cursor over an object you desire to retrieve and press the firebutton. The object will appear in the holding tanks below. To leave this mode without getting an object, move the cursor to an area of the DVS containing no obtainable object and press the firebutton.
Release/Drop (down arrow) selects the target for release from the craft. When you press this button, you will see a small blue light appear on one of the holding tank monitors in the lower part of the control panel. Move the joystick and press the firebutton and the object will appear in the DVS.

Use (hand with index finger extended) analyzes a target to determine its purpose. Press this button and then select the object in the holding tanks you want to use (as described under Release). Use is a multipurpose function and therefore quite powerful. Since the shuttle is controlled by the powerful Color Computer 5, analyzing a target is simple. Therefore, to USE SANDWICH will result in the sandwich being eaten. USE BAT is synonymous with swinging the bat. USE GAS to fill your tanks or USE

BATTERY to restore your power systems. The USE function is limited only by your imagination.

Identify (question mark) describes an object in the holding tanks. Since all images in the holding tanks are digital images, low relative resolution may make an object unidentifiable by sight alone. Using the power of the CoCo 5, you can select an object in the holding tanks (by pressing the? switch) and it will be described.

Score (double arrows) displays your current score and assets. The score represents the number of moves you've made from one location to another. Other commands do not add to your score. Of course, the lower your score and the higher your assets, the better you've played.

Map (diamond shape) displays a map of your travels on the screen. In each position you've been, a hexadecimal number from $\$ 1$ to $\$ F$ appears. Each number represents the exits available from that position. A legend below the map describes this directional code. Your current position blinks on the map. Using your joystick, you may move the line cursor around the map. The location and any objects left in that position (of only the locations you've been) appear below the map. To exit the map, press the firebutton.

Save/Load saves your place. Prepare the tape or disk and answer the prompts, pressing S or L for Save or Load, respectively and T, D, or A for Tape, Disk or Abort, respectively.
Quit (hexagon) allows you to end your travels in the ATS CC5 (i.e., quit the game).

## Locomotion

The ATS-CC5 is moved by pressing the large
rocker switch below the command center. The letters $N, S, E$ and $W$ light up, signifying which of the four directions (North, South, East and West) you may go. Move the blue indicator to the desired direction and press the firebutton.

## Fuel and Battery Indicators

One unit of fuel is used with each move. The ATS-CC5's battery is used to power the exterior lights as well as its laser gun and force field. Depending on the laser intensity, the gun uses one or two units of power with each firing. The laser's intensity is automatically set and may not be adjusted manually. The force field (engaged automatically) uses one unit of power for each hit it receives, and one unit of power is expended with each move while the shuttle's lights are on.

## Holding Tanks

There are five holding tanks for objects brought into the ATS-CC5. Digital images appear on the miniature DVSs below the screen. Indicator lights glow blue when selected and red when engaged (firebutton is pushed). The smaller button to the right of Tank 5 is for exiting without selecting one of the monitors.
There is a separate holding tank for any treasures you may find. These are not displayed on the control panel. Hence, you may retrieve treasure even when your holding tanks are full.

## Laser Gun

The laser gun may be held in any of the five holding tanks. When there is danger, the gun is automatically engaged. It may also be engaged manually with a USE GUN command.
ve the shuttle! Are there oth ers who know what you do? Theset hings you must find out and if a ny way possible - destroy..."

## J\＆RELECTRONICS

Easy，Solderless Installation ＂JramR＂
512 K COCO 3 Memory Expansion Board．Upgrades stock 128K COCO 3 to full 512 K for OS9 Level II．Similar to RS upgrade．

Now pardner．．．reach for your

With purchase of a BANKER II or JramR you can have a \＃9008 SIXDRIVE

## for only

SXOAIVE is a machine language utility that modifies Disk Extended Basic 1．0，1．1，or FKEYS III to allow the use of 3 double sided drives as 6 single side drives without ANY hardware modifications． FEATURES two difterent drive select assignments： （1）$[0,2][1,3][4,5]$ （2）$[0,1][2,3][4,5]$ Ramdisk is compatiolo with GIMMESOFT＇s SIXDRIVE Made in U．S．A． Complete Hardware \＆Soltware

## COCO 3 ONLY

## $\$ 1010 \quad \$ 39.95$ JramR bare board plus connectors and sot

$\$ 1011$ \＄79．95 JramR kit includes all parts plus memory chips and software
$\$ 1012$ JramR assembled and tested plus memory chips and software
ramdisk utility programs．Compatible with all CoCo 3512 K ．
1014 J49．95 JramR $\phi \mathrm{K}$ byies（ 11012 less memory chips）
Readily available：User Replaceable Socketed Memory Chips，no hard－to－find SIP memories． To place an order，write to JaR Electronics，P．O．Box 2572，Columbia，MD 21045，OR call（301） 987．9067－Jasse or（301）780－0861—Ray．
HOURS：Weekdays 7 p．m．－9 p．m．：Sat．Noor－5 p．m．EASTERN TIME，usuelly，if no answer try later Add $\$ 4.00$ shipping \＆handling（FOREIGN ORDERS 57.00 ），COD charge $\$ 3.00$ ．Maryland residents add 5\％state tax．Foreign orders must include payment on U．S．bank．
CHECKS，MONEY ORDERS OR COD＇s only plaase（personal check－2 weeks for clearance）．IMMEDIATE DELIVERY．Give COCO Redio Shack model（i．e．26－3136）．Disk or Tape when ordering．
QUANTITY DISCOUNT AVAILABLE．For information on shipping or previously placed orders call（301） 788－0861．COCO \＃1 26－31XX owners call（soldering experience may be pequired）．

# Tandy Computers: Because there is no better value."' 

## Tandy Color Computer 3 Disk System

## Superb graphics and uncompromising performance at an incredible price.

Here's a powerful, low-cost system that does it all. The Color Computer 3 (26-3334, \$199.95) is a computer you can put to work right away for word processing, creating graphs and illustrations, spreadsheet analysis, budgetingeven writing your own programs! And it's expandable, too.

## Disk drive power and flexibility

Get the most out of your Color Computer with the Color Computer Disk Drive (26-3133,

\$299.95). With this easy-toconnect drive, you can write your own sophisticated disk applications or utilize ready-to-run software on popular $51 / 4^{\prime \prime}$ diskettes. We offer a wide selection of software-the number of applications is almost limitless.

DeskMate $3^{\text {mM }}$ seven-in-one software

Best of all, we've got a lowpriced software package that may be all you ever need: DeskMate 3 (26-3262, \$99.95). It's easy to use because there are no complicated commands to memorize, and the program itself actually guides you along with prompts at each step.
DeskMate 3 is an integrated program including Text word processing, a general-purpose text-entry and editing program. Text performs search and replace, file merge, and block select, copy and delete. Ledger is a simple spreadsheet which includes an easy-touse menu and automatic column formatting. Index Cards filing comes in handy as a personal filing system-it actually eliminates mounds of paperwork and records. Index Cards also allows you to enter and edit data and perform sorts and searches. Using Paint, you can create colorful charts, graphs and designs. Calendar is a simple monthly planner that allows you to list "to do's" for any date. Calculator has four functions for quick and easy calculations. With the included Telecom telecommunications program, you can access national information banks or send messages to other computers.

See what you've been missing
The Color Computer 3 offers better graphics than any previous

Color Computer. Simply connect the Color Computer 3 to the CM-8 high-resolution monitor (26-3215, \$299.95), and you can create incredibly detailed charts and graphs, make engineering drawings in vivid colors, or form simple sketches. Choose $160 \times 192$ or $320 \times 192$-resolution with 16 colors, or display $640 \times 192$ graphics and 4 colors. Extended BASIC language commands let you alternate screens, colors and backgrounds at a higher resolution, and you can choose from a palette of 64 colors.

## Come in today!

Stop by your local Radio Shack and get the power of a full, diskbased system. The Color Computer 3 delivers professional performance-for less.

# SUINDOG SUSTEMS 

## Kung-Fu Dude

An exciting new arcade game by Glen Dahlgren. This is the long-awaited response to the huge demand for a Kung-Fu program for the Coco. The graphics and sound effects are spectacular. The actlon and animation will please even the most die-hard arcade enthusiast. Destroy your opponents and evade obstacles with over ten different moves as you grow ever closer to your ultimate objective. This is the BEST karate game ever available for the color computer. Req, 64 K , disk drive, and joystick. Introductory price: only $\$ 24.95$.

CHAMPION. Become a superhero in your fight to rid the wofld of the evil forces of Mr. Blgg in this action adventure. The combat is hot ond heavy and requires a fast joystick. The graphics and sound effects are sensationai. "This is a fascinating game and a difflcult one to master. You'll get a blast out of (Champion)!" says the Rainbow review of $5 / 87$. Defend the innocent and defeat the villoinous: be a frue Champion! Rea. 64K, disk drive. and joystick. Only $\$ 19.95$.

WhITE FIRE OF ETERNITY. Enter the age of monsters, magic, and adventure. Here you will search for the legendary power of White Fire throughout the Forbldden Wood and dark coverns of the Mount. The Rainbow review of $12 / 86$ says, "Visually, White Fire is quite an achieverment. The graphics are excellent1" Discover what adventuring on the Coco is all obout. Req. 64 K and disk drive. Only $\$ 19.95$.

All programs Coco 1, 2, 3 compatible.

## Coco Graphics Designer Only $\$ 29.95$

The Coco Graphics Designer produces beautiful Greeting Cards, Banners, and Signs for holidays, birthdays and other occasions.

The program features picture, border, and character font editors, so that you can modify or expand the already built in libraries. Plus a special "grabber" utility is included to capture areas of high resolution screens for your picture library.

Requirements: a Coco I, II or III with at least 32 K , one disk drive, BASIC 1.0/1.1,ADOS 1.0/1.1 or JDOS. Printers supported include: Epson RX/FX, Gemini 10X, SG10, NX10, C-Itoh 8510, DMP

100/105/110/130/430 CGP220 many Okidata (check with Ze bra), Seikosha GP100/250, Gorilla Banana, Legend 808. \#C323 Coco Graphics Designer

## Picture Disk\#1

This supplementary picture library diskette contains over one hundred additional pictures. \#C333 Picture Disk \#1 \$14.95

## Colored Paper Packs

150 sheets ( 50 each red, yellow, blue) with 60 matching envelopes. Perfect for making your productions outstanding. \#C274 Paper Pack
\$19.95

It's fun making your own Greeting Cards, Signs, and Banners with Zebra's Coco Graphics Designer.

## WICO TRACKBALL Only \$29.95 Order Cat\#TBRSO1

 (Originally \$69.95)WICO designed these trackballs specifically for the Radio Shack Color Computer joystick port.

WICO is the largest designer and manufacturer of control devices for commercial arcade video games. If you've ever played an arcade video game, chances are you've used a WICO joystick or trackball and experienced its superior control, pinpoint firing accuracy, and exceptional durability.

Includes one-year limited
Ordering Instructions: All orders add $\$ 3.00$ Shipping \& Handling. UPS COD add $\$ 3.00$. VISA/MC Accepted. NY residents add sales tax.

warranty. Phoenolic ball offers 360 -degree movement. Two optical encoders provide split-second response. Quick-action fire button for smooth, two handed arcade response and feel. Long 5" computer connection. Heavy duty plastic case for long hard use. Compatible with all color computer models.

We also have trackballs for Atari, Atari ST, Commodore 64, Amiga, Macintosh, Apple II/IIC, and T199/4A computers.

## The Biggest The Best

 The Indispensable
## Th HE COLOR COMPUIER MONTHIY MAGAZINE

THE RAINBOW is the biggest, best, brightest and most comprehensive publication a happy CoCo ever had! THE RAINBOW features more programs, more information and more in-depth treatment of the Tandy Color Computer than any other source.

A monthly issue contains nearly 200 pages and up to two dozen programs, 14 regular columns and as many as 12 new product reviews. And advertisements: THE RAINBOW is known as the medium for advertisers - which means every month it has a wealth of information unavailable anywhere else about new products! Hundreds of programs are advertised in its pages each month.

Every single issue of THE RAINBOW covers the wide spectrum of interests in the Tandy Color Computer - from beginners' tutorials and arcade games to telecommunications and business and finance programs. Helpful utilities and do-ityourself hardware projects make it easy and fun to expand your CoCo's capabilities. And, monthly reviews by independent reader reviewers take the guesswork out of buying new software and hardware products.

Join the tens of thousands who have found THE RAINBOW to be an absolute necessity for their CoCo. With all this going for it, is it surprising that more than 90 percent of THE RAINBOW subscribers renew their subscriptions? We're willing to bet that, a year from now, you'll be doing the same.

## Rainbow On Tape

## \& Rainbow On Disk!

- great ways to bring THE RAINBOW into your life. Each month, all you do is pop the tape into your cassette player or the disk into your drive. No more lost weekends. As soon as you read an article about a program in THE RAINBOW, it's ready to load and run. No work. No wait.
Just think how your software library will grow. With your first year's subscription, you'll get almost 250 new programs: games, utilities, business programs, home applications. And, with RAUNBOW ON DISK, you'll also get all the OS-9 programs.
RAINBOW ON TAPE and RAINBOW ON DISK they're the "meat" of THE RAINBOW at a price that's "small potatoes." And now you even have a choice about how it should be served up to you.
To get your first heaping helping, just fill out and return the attached reply card. No postage necessary.

## Use our 800 number!

For credit card orders, you may want to phone in your subscription. Our credit card order number is (800) 847-0309, 8 a.m. to 5 p.m. EST. All other inquiries please call (502) 228-4492.
We accept VISA, MasterCard and American Express.
Subscriptions to the rainbow are $\$ 31$ a year in the United States. Canadian rate is $\$ 38$ (U.S. funds only). Surface rate elsewhere is $\$ 68$ (U.S.). Airmail is $\$ 103$ (U.S.). All subscriptions begin with the current issue. Please allow 6 to 8 weeks for the first copy. Kentucky residents add $5 \%$ sales tax. In order to hold down non-editorial costs, we do not bill.

## Our 800 number is also good for ordering RAINBOW ON TAPE Or RAINBOW ON DISK!

Just call (800) 847-0309 anytime from 8 a.m. to 5 p.m. EST. Credit card orders only. Subscriptions to RAINBOW ON TAPE are $\$ 80$ a year in the United States, $\$ 90$ (U.S. funds) in Canada and $\$ 105$ (U.S.) in all other countries.

rainsow on disk is $\$ 99$ a year in the United States, $\$ 115$ (U.S.) in Canada and $\$ 130$ (U.S.) in all other countries.

Individual issues of RAINBOW ON TAPE are $\$ 10$ in the U.S., $\$ 12$ (U.S.) in Canada and all other countries. Individual issues of rainbow on disk are $\$ 12$ in the U.S., $\$ 14$ (U.S.) in Canada, and \$16 (U.S.) in all other countries. Kentucky residents please add $5 \%$ sales tax.
RAINBOW ON TAPE and RAINBOW ON DISK are not stand-alone products; you need the magazine for loading and operating instructions and the necessary documentation. THE RAINBow magazine is a separate purchase.

# VIP Writer III 

## WORD PROCESSOR • SPELLING CHECKER • PRINT SPOOLER

"..Nearly every feature and option possible to implement on the Color Computer. The design of the program is excellent; the programming is flawless." --The RAINBOW OCTOBER 1983
That's what they said about VIP Writer. Wait until they review VIP Writer III! We've added even more features and options to make the VIP Writer III the BEST word processor for the CoCo 3 !

## SCREEN DISPLAY OPTIONS

VIP Writer III has a screen of $32,40,64$ or 80 characters wide by 24 lines using the CoCo 3's hardware display with actual lower case letters. You can choose foreground and background colors from up to 64 different hues. Color can be tumed ON or OFF for the best possible display using a color or monochrome monitor or TV set. VIP Write III has a built in on-line context sensitive help lacility which displays command usage in easy to read colored windows. VIP Writer III also runs at double clock speed!

## TEXT FILE STORAGE

There is a 48 K text buffer and disk or cassette file linking allowing virtually unlimited text space. In addition, there is a 48 K print spooler to allow you to print one document while editing another.

## EDITING FEATURES

VIP Writer III has a full featured screen editor which can be used to edit text with lines up to 240 characters long with or without automatic word wrap around. You can select type-over mode or insert mode. There is even an OOPS command to recall a cleared text buffer. Other editing features include: Type-ahead, typamatic key repeat and key beep for flawless text entry, end of line bell, full four way cursor control with scroling, top of textilie, bottom of textile, page up, page down, top of screen, bottom of screen, beginning of line, end of line, left one word, right one word, DELETE character, to beginning or end of line, word to the left or right, or entire line, INSERT character or line, LOCATE and/or CHANGE or DELETE single or muttiple occurrence using wildcards, BLOCK copy, move or delete with up to TEN simultaneous block manipulations, $T A B$ key and programmable tab stops, three PROGRAMMABLE FUNCTIONS to perform lasks such as auto column creation and disk file linking for continuous printing.

## TEXT FORMATTING

VIP Writer III automatically formats your text for you or allows you to formal your text in any way you wish. You can change the top, botiom, left or right margin and page length. You can set your text flush left, center of flush right. You can furn right hand justification on or off. You can have headers, footers page numbers and TWO auxiliary lines which can appear on odd, even or all pages. You can also select the line on which they appear! You can even change the line spacing! All of these format parameters can be altered ANYWHERE within your text file.

## TEXT FILE COMPATIBILITY

VIP Writer III creates ASCII text files which are compatible with all other VIP Programs as well as other programs which use ASCII file format. You can use VIP Writer il to create BASIC, assembly, PASCAL or C files. VIP Writer III also allows you to save and load files using DISK or CASSETTE in the case of an emergency. You can even read disk directories, display free space on a disk and kill disk files.
SD Enterpirises
Ph. (503) 663-2865

## PREVIEW PRINT WINDOW

The VIP Writer III features an EXCLUSIVE format window which allows you to preview your document BEFORE SENDING IT TO YOUR PRINTER! You are able to see margins, page breaks, orphan lines etc. This feature makes hyphenation a snap!

## PRINTING

VIP Writer ill supports most any printer serial or parallel using the parallel interface described in Nov-Dec. 87 RAINBOW magazine, or an external serial to parallel interface, and gives you the ability to select baud rates from 110 to 9600 . You are able to imbed printer control codes anywhere in your text file EVEN WITHIN JUSTIFIED TEXT! VIP Writer III also has iwenty PROGRAMMABLE PRINTER SEQUENCES which allow you to easily control all of your printers capabilities such as underline, bold, italics, superscript and subscript using simple keystrokes. Additional printer features include: single sheet pause, print pause, word length and line feed selection.

## PRINT SPOOLING

VIP Writer III incorporates a built in print spooler which allows you to print one document WHiLE you are editing another. You no longer have to wait until your printer is done printing before starting another job!

## DOCUMENTATION

VIP Writer Ill is supplied with a 125 page instruction manual which includes a tutorial, glossary of terms and a complete index. The manual is well written and includes many examples 10 aid in understanding and application.

## SPELLING CHECKER

VIP Writer III includes VIP Speller for NO ADDITIONAL COST! VIP Speller automatically checks text files for words to be corrected, marked for special attention or even added to the diclionary. You can even view the misspelled word in context VIP Speller comes with a specially edited 50,000 word dictionary, and words can be added to or deleted from the dictionary or you can create one of your own.

## THE ORIGINAL VIP WRITER

VIP Writer is also available for CoCo 1 and 2 owners and has all the features found in the VIP Writer III including VIP Speller except for the following: The screen display is $32,51,64$ or 85 columns by 21 or 24 rows. Colors other than green, black or white are not supported. Help is not presented in colored windows. Double clock speed is not supported. Parallel printer interlace is not supported. Printer spooler is not available. Even so, the VIP Writer is a CoCo 1 or 2 owners best choice in word processors.

| VIP Writer III | Disk | $\$ 79.95$ |
| :--- | :--- | :--- |
| VIP Writer | Disk | $\$ 69.95$ |
| VIP Speller | Disk | $\$ 34.95$ |

Please add $\$ 3.00$ for shipping and handling. COD orders add an additional $\$ 2.00$. Personal checks allow 3 weeks for delivery. All orders shipped the same day.

UP, DOWN, LEFT and RIGHT. Obviously, there is more than one floor to this castle. When referring to a door or window, you must specify its location. For example, to open a door on your left enter OPEN LEFT DOOR. Any time you open a door or window, you automatically go through it to the next room.

When the Adventure starts, you will have 40 strength points. If, during the course of your travels, your strength should drop to zero, you will lose one of your two "lives." (You are given a second chance.)

Many dangers lurk within the walls of the castle. You will have to fight many foes. Upon entering a room that con-
tains an enemy, you will be forced to fight at least one round (a round consists of each combatant having one turn to hit the other). After each round, you will be given the option of continuing the fight or trying to escape. Make your decision carefully as some foes carry objects of great importance to your success. If you don't try to escape, the fight will continue until one of the combatants dies.

As you travel through the castle, be sure to use the SEARCH command to find any objects hidden in a particular room. Of course, many rooms will not contain any such items.

The STATUS command is used to determine your general condition and
keep track of your current possessions. Enter SCORE to get a report on the number of moves you have made.

To save a game in progress, enter SAVE, then follow the prompts. When prompted for a filename, make sure your tape or disk is ready before pressing ENTER. The LDAD command works in the same manner.

One final word: The Castle of Death can be solved many different ways. The object is to complete the Adventure in as few moves as possible. Good Luck!
(Questions or comments concerning this program may be directed to the author at 242 Davidson Avenue, Ramsey, NJ 07446. Please enclose an SASE when writing for a response.)

## Submiting Material To Rainbow

Contributions to THE RAINBOW are welcome from everyone. We like to run a variety of programs that are useful/helpful/fun for other CoCo owners.

Program submissions must be on tape or disk and it is best to make several saves, at least one of them in ASCII format. We're sorry, but we do not have time to key in programs. All programs should be supported by some editorial commentary explaining how the program works. Generally, we're much more interested in how your submission works and runs than how you developed it. Programs should be learning experiences.

We do pay for submissions, based on a number of criteria. Those wishing remuneration should so state when making submissions.

For the benefit of those who wish more detailed information on making submissions, please send a self-addressed, stamped envelope (SASE) to: Submissions Editor, THE RAINBOW, The Falsoft Building, P.O. Box 385 , Prospect, KY 40059. We will send you some more comprehensive guidelines.

Please do not submit programs or articles currently submitted to another publication.

Last month we visited a fast-food restaurant and worked on estimating expenses. This month, we ask the children to actually calculate the same expenses.

The program sends us back to our fast-food restaurant. Again, we see only part of the menu on our screen, where four food items are visible: a chicken sandwich, a salad, a soda and coffee. The computer chooses two of these items for each example, and the prices are randomly selected within a reasonable range of values.

Last month, the students were asked whether or not a certain random sum of money was enough for these two purchases. This month, they are asked for the correct amount of money they will need to make the combined purchase.

There are several alternatives in computing the amount. Using pencil and paper is the way that first comes to mind. If this program is used in a classroom, one or more students could work simultaneously at the blackboard on the same example. Alternatively, since there are only two values to be added, more advanced students could be taught to do the addition mentally. Lastly, a combination of two of the preceding might be a possibility. For instance, try the example first mentally and then check it on paper or the blackboard before entering the answer on the computer.

This program is very similar to last month's program. Lines 40 through 110 draw the menu and then select food prices for each example. The variables $\mathrm{CH}, \mathrm{SA}, 5 \mathrm{D}$ and CO determine the prices for each item. Line 130 sends the program temporarily to lines 250 through 300 , where the two items highlighted in this example are chosen.

Line 150 asks the student to enter the total amount of the bill he or she must pay for the two items. Lines 160 through 190 calculate whether the response is correct. If it's incorrect, the correct answer will be displayed. The variable

Steve Blyn teaches both exceptional and gifted children, holds two master's degrees and has won awards for the design of programs to aid the handicapped. He owns Computer Island and lives in Staten Island, New York.

## Expense estimating,

 Part II
## Restaurant Reckonings

By Steve Blyn Rainbow Contributing Editor

FZ becomes the child's answer. The computer determines the correct answer by adding the variables $A R$ and $B B ; A R$ represents the price of the food item selected and $B B$ represents the price of the drink.

After studying the answer, the student presses the ENTER key to call up two more randomly selected food items and their prices.

After the student has gone through 10 trials, a scorecard is presented. Ten points are counted for each correct trial. Then the student is asked if he or she wants to try the program again. The program may now be ended by pressing the N key or started again by pressing the Y key.

We hope this program, in combination with last month's program, helps your students to become more adept at calculating purchases.

# VCR Tapes Update 

By Randy Mayfield

After my program, VCR Tapes (December 1987, Page 92), was submitted for publication, I purchased a new video cassette recorder. The digital counter display on the new model did not increment at the same rate as the old model. This made all counter records on the printouts and labels meaningless when using the new recorder. Since I did not envision this problem when I wrote the program, there was no provision in VCR Tapes to change an entry. I have a patch, however, 'and would like to share it with any readers who are experiencing the same problem.

The following changes and insertions will allow the user to change a title, tape number or counter number individually. The Change function is added as part of the Work in a File option and allows scrolling through an existing file to find the entry to change. Press the C key and you will be given four choices: 1) Change title; 2) Change tape number; 3) Change counter number; and 4) Return to work menu. Just enter the appropriate new data when prompted.

Make these changes to existing lines:
Line 110: after the word DELETE insert, CHANGE
Line 340: after the number 3 insert CHANGE": PRINT"4 Line 360 : change the number 3 to 4
Line 370: change the first number 3 to 4
Line 460: remove the apostrophe and insert
L\$=MIDs(T\$(X);1,L): Q\$=MID\$(T\$(X), $L+1,3): T \$(X)=L \$+Q \$+R \$$ : GOTO 340
Line 920: before the ELSE 110 at the end of the line, insert ELSE IF R $="$ " ${ }^{\prime \prime}$ AND $W=3$ THEN 452

And add the following new lines:

```

## 10105 nole

THE RAINBOW is a teaching environment and we realize that the majority of our readers will always be beginners. In our continuing effort to always keep the new user in mind, and in addition to the many beginner feature articles and programs published in every issue, "Novices Niche" contains shorter BASIC program listings that entertain as well as help the new user gain expertise in all aspects of the Color Computer: graphics, music, games, utilities, education, programming, etc.

## Lite in a Fish Bowl <br> By Sandy Tadman

Are you looking for a maintenance-free pet? Here's one for you - a blinking, bubble-burping fish. Not only do you not have to feed it, you can send it back to tape or disk whenever you're tired of $i$.

Electronic Aquarium is an exercise in simple animation using PMODE4 and nested loops to achieve the appearance of motion. If, after typing in and running the program you find you aren't satisfied with your pet, you can customize him (or her) - after all, you have to live with it.

Try altering some of these variables. For example, the step rate of variable $M$ (Line 15) controls the distance the fish moves; R determines where on the screen the fish, bubbles and eye are drawn; $x$ controls the movement of the bubbles; and $E$ controls the blinking of the eye. Alter the value $Z$ in Line 22 to change how often the filter bubbles. Add color, if you own a CoCo 3. You can even change the shape of the fish as set in $F \$$ (Line 14).

# A CoCo Pop-Up Calculator <br> By FankTuner 

A friend of mine is always extolling the virtues of his new Macintosh. I enjoy demonstrating that almost anything his high-priced computer can do, my CoCo can do, also. So, when I saw what a neat graphic calculator he had, I thought I would write a CoCo version for myself.

Calc draws a calculator on the screen and allows you to perform ordinary four-function mathematical operations (addition, subtraction, multiplication and division.) Just enter a number, an "operator" ( $+,-, *, /$ ), another number and the "equals" sign ( = ), and your answer will be displayed on the calculator screen.

Press C to clear the display for another operation. If you are finished, press the space bar, and the calculator will erase itself from the screen. As programmed, pressing the space bar also ends the program. But you can easily adapt Calc to become a subroutine of one of your larger programs with an INPUT or INKEY loop. In fact, the numbering of the program starts at Line 5000 to aid you in its transferal to a subroutine.

Just imagine - you're in the middle of a database program and need to do some calculations on your raw data. You won't have to waste time away from the keyboard hunting for your pocket calculator; you can quickly call up Calc, get your answer and return to the database where you left off!

Note: If you are using Calc as a subroutine, make sure that its variable names are not duplicated in the main program. Also, the DIM statement ought to go at the beginning of the main program.

The values required for the calculator display, or, in fact, any other display you may desire to construct, can be looked up in tables. In practice, it is easier to let the computer do the work. Just type in and run this one-line program:

```
1000 FORX=1TO12B:PRINT@170,X:"=;":POKE1200,X
:FORY=1TO200:NEXTY:NEXTX
```

This mini-program lets you pick out the correct values to use to generate the character.

# The ABCs of Organization 

## By Andre Needham

This short program alphabetizes the directory entries on your disks，which makes keeping track of programs much easier．

To use DIR Alpha，just put the disk to be alphabetized in Drive 0 and run the program．That＇s all there is to it！

## The listing：DIRALPHA

## Hard Copy Your Directory <br> By Jim Knoppow

If you＇re as tired as I am of rooting through a pile of disks in order to find a particular file，here comes some rapid relief．

Pop a roll of $31 / 2$－by－ $15 / 16$ inch labels into your Epson－ compatible printer，run DIR Print，and－voila！－out comes a neatly printed label showing every entry in the directory．Each label will hold up to 36 names and extensions．

In my filing system，I place my disks into categories（e．g．， graphics，games，utilities，word processing text files，etc．）． When a disk is reasonably full，it goes into a permanent filing system，a backup is made，and two DIR Print labels are printed－one for the main disks and one for the backup．

I also like to run DIR Print using ordinary computer paper （instead of labels）so that I can have an index of all my programs on one page．

All the printer codes are commented in the listing；so，if your printer is not Epson－compatible，you should be able to substitute the correct codes．Incidentally，until you reset the CoCo ，directories will be printed to the screen in two columns for easier reading．

On some printers，the code in Line 40 that selects condensed type may be canceled by the code in Line 50，which selects elite type．You may need to put a REM marker at the beginning of Line 50．On my Epson LX 86 printer，the four columns of directory information fit on the label with plenty of room．On other printers，such as the Epson FX，however， the condensed mode is larger，and fitting the columns on a standard label is a tight squeeze，requiring a few trial runs． If you have problems，please feel free to contact me at 15355 SE 307 St．，Kent，WA 98042.

## Reading Word Processing Files

## By Chris Steele

This program allows you to read a text file without having to load a word processor. After running, enter the filename with its proper extension. ASCII Read asks if you want the file output to the screen or to the printer, giving you a selection of printer baud rates to choose from. Note: If the file contains embedded control codes, the program might not work.

Give us your best: Join the ranks of these courageous CoCoists in showing the Color Computer world your high score at your favorite micro-diversion. We want to put your best effort on record in THE RAINBOW's "coreboard" column. All entries must be received 60 days prior to publication. Entries should be printed For greater convenience, your high scores may also be sent to us through the MAIL section of our Delphi CoCo SIG. From the CoCo SIG> prompt, pick MAIL, then type SEND and address to: EDITORS.

## SCOREBOARD POINTERS

#### Abstract

In conjunction with the rainbow's Scoreboard, we offer this column of pointers for our game-playing readers' benefit. If you have some interesting hints, tips or responses to questions, or want help yourself, we encourage you to write to the Scoreboard, c/o The rainbow.

## Feedback

In response to questions from:

- Tim Collett: In Raaku-Tu, when you get to the south end of a great hallway, go north and you will be at the north end of the hallway. Once you get there you will need to go east to find the lamp. Next, you will need to go west back to the north end of the hallway, and go west again to find the candle. Then you will need to go to the petite chamber and light the candle with the lamp, and attack the gargoyle with the candle and then put it out.

A word of warning: If you get to the room with the vault and pull the lever, you will be killed.

Bryan Tucker Pine Bluff: AR

- Jared Brookes: Don't use any rings until you have accomplished killing all the creatures on levels 1 through 3 in Dungeons of Daggorath.
- John Barsh: I shall make you a deal. I will tell you where the torch is if you tell me where the grapes and the scepter are in Sands of Egypt. The torch is two steps south of the cliff, then dig.
- Steven Kaschimer: Get away from all Abye flasks in Dungeons of Daggorath. They will kill you if you use them. Save all your Hale and Thews flasks.
- Jason Jasmin: In Sands of Egypt, I don't know where the dates are, but the pool I do know. When you are at the cliff, go down, then go west three times, then south and then east.

Eric Reitz
Mendham, NJ

- Richard Deane: To get past the tunnel in Dragon's Blade, go into the east room and get a boulder, then come back out. Type THROW BOULDER and when it asks where, type $N$. Now you can go safely through the tunnel (only if you have the sword from the mine!).
- Robert Taylor: To get the flashlight in Dallas Quest, try pulling the curtain.
- Fallon Yager: As far as I know, you do not go across the rug in Raaku-Tu. You can solve the game without going to that door.

To kill the wizard's image in Dungeons of Daggorath, make sure you have a Hale flask in one hand and either of the two rings in the other. Hit once with the Fire ring, drink a Hale flask, hit with the Ice ring, Hale flask, etc. It takes four shots to kill him.

- Rick Kelton: To find the amulet in Trekboer, look around where you found the Roman numerals . . . especially up.
- Chris Casey: To get out of the dark in Hitchhiker's Guide to the Galaxy, wait until it does not list one of the five senses, then use that sense. This works for all the darks.

In Hitchhiker's Guide to the Galaxy, how do you get the real tea or common sense?

How do you stop the boat from leaking in Blackbeard's Island?

Tom Lawrence
Middlesex, NJ

## Scoreboard:

In Dungeons of Daggorath, what is the incantation for the Supreme ring?

David Wurmstein
Del Rio, TX

## Scoreboard:

In Dungeons of Daggorath, to reveal a ring you may want to look the word up in a dictionary and the definition will give you a clue.
D.J. Massa

Linton, IN

## Scoreboard:

l've finally become almost invincible on the first level of Dungeons of Daggorath, but when I climb to the next level, the ogre fellow of the giant knight's kills me. On Level 1, I get a lot of things hoarded around the ladder, such as a
shield, wooden sword and a bundle of torches. Once, I got a ring and an iron sword, but I can't get them anymore. What do I do now?

Mike Snyder
Allen, OK

## Scoreboard:

In Dallas Quest, to get the shovel, first drop the owl. Before you go down the ladder, put everything you have (except the flashlight) into the knapsack. Drop the knapsack, turn and go down the ladder with only your flashlight, then drop the flashlight and return to the trading post. Now get the knapsack and go down the ladder.

In Sands of Egypt, the torch is buried in the sand. To ride the camel you must first go to the tree and get the dates. Feed the camel the dates and ride the camel. The scepter is hidden in the carving and the ax is on top of the pyramid. You cannot get the rope; you must make your own by getting the palm fronds from the tree and braiding them.

When you are in the treasure room, type GO CRACK. Get back on your boat and float back until you are under the hole. Drop and climb the ladder.

Warning: Never drink the water that is underground.

Philip Manwarren
Harrington, ME
To respond to other readers' inquiries and requests for assistance, reply to "Scoreboard Pointers," c/o THE RAINBow, P.O. Box 385, Prospect, KY 40059. We will immediately forward your letter to the original respondent and, just as importantly, we'll share your reply with all "Scoreboard" readers in an upcoming issue.

For greater convenience, "Scoreboard Pointers" and requests for assistance may also be sent to us through the MAIL section of our Delphi CoCo SIG. From the CoCo SIG $>$ prompt, pick MAIL, then type SEND and address to: EDITORS. Be sure to include your complete name and address.

# Bring the CoCo 3's palette to PMODE 3 and 4 graphics 

# The Color Gallery 

By Eric White

Just as the autumn leaves were beginning to introduce new colors to nature's palette, Tandy was introducing the CoCo 3 to the world of computer enthusiasts. With its new color abilities, the CoCo is now a real color computer. We now have the creative power of choice.

When we select the palette for our graphics, we can actually use color theory techniques such as analogous, monochromatic, secondary and tertiary color schemes. Imagine, purple mountains surrounded above by light, airy blue sky, a valley of golden flowers, and maybe a blackbird flying above.

All this and more! The CoCo 3 is a new beginning, but what happens to the old pictures we created on the previous CoCos? Are they stuck with the old palette of colors? No, Color Change will help you fix them.

Color Change allows you to load old Graphicom or CoCo Max pictures and change their color palettes. The program's menu is controlled with the four arrow keys and the space bar. You'll need a backup disk of Hi-Res (Oh, excuse me, they now call it "Lo-Res") PMODE 3 or PMODE 4 pictures. The pictures will not be harmed, and they will be saved as a standard 6 K binary

Eric White is a self-taught programmer with a graphic arts background, who has been writing software for five years. He lives in Altamonte Springs, Florida, and has coauthored many programs in association with WHITESMITH.
file, to remain compatible with most commercial software.

Load a picture by selecting the Load option. Once the picture is loaded, select either the upper or lower screen, which will be the picture screen saved back to the disk as a 6 K binary file (addresses \& H0E00, \& H25FF and \& H0006).

Make changes to the palette by moving the "change" bar over the colored square you want to modify and press the space bar. The picture will appear; to change the color, press the up or down arrow keys. When finished, press the space bar to accept the color change or press the BREAK key to abort the change. To see the picture at any time, press the Fl key.

When finished with your palette changes, select the Save option to save the currently selected picture area (upper/lower), and the new palette will be coded and stored in the last part of the file's directory entry (bytes 16 through 31). Once you have colorized all your pictures, you will be ready to run the Color Gallery program, which displays the "colorized" standard LoRes PMODE $3 /$ PMODE 4 pictures on the CoCo 3 in a "gallery."
To use Color Gallery, type in the program and save it to a picture disk (disk containing Lo-Res pictures colorized with Color Changer), and then run.
The program loads and searches the disk directory for any file with the extension that matches the variable FE\$ in Line 100. Next, it will load and display each picture in the palette that
is stored on the file's directory entry. If the picture file has no palette or if the computer being used is not a CoCo 3, the default palette of "black/red/blue/ white" will be used.

Each picture remains on the screen for a few seconds; the time is controlled by variable TM in Line 110. To go to the next picture without waiting, just press the space bar and the program will continue.

Color Gallery can be put on almost any disk of pictures, since it loads the disk directory each time it is loaded and run. Just be sure the extensions of the pictures match the gallery extension variable.

Pal Print is a utility program used to decode and print the palettes of Lo-Res pictures. The output can be directed to the screen or printer. Enter the filename of the picture you want to decode, or press ENTER to decode all the pictures on the disk.
'Sitting in front of the CoCo screen is a far cry from walking down the marble hallway of a New York art gallery, yet we can capture some of that awe and appreciation as we view the colorful pictures created by family and friends. Our computer galleries house the artistic creativity enhanced by this electronic age. Color, shape and texture are all there for the artist to control and mold into his own world of expression.

## Hint

## High－Speed Hijinx

If you want to include the high－speed poke in a program that performs printer output，keep in mind you don＇t have to turn off the high－speed poke．Just issue a baud rate poke at the beginning of your program that uses a baud value half that which you would normally use．For example，instead of using POKE 150,1 to set your computer for 9600 baud printing，use POKE 150,7 to set it to 4800 baud．

## PROGRAMS FOR PEOPLE

CoCo CHECKBOOK

More than a checkbook maintenance program. Handles budgeting, Customizash and teller machine transactions and automatic bank payments. Customizable with up to 64 expense accounts of your own choosing. Reconciles your checkbook with your bank statements; surmarizes transactions up to by account, month or YTD, and permits searches on every field. Up to 1,500 transactions on a single disk system.
An easy to use menu driven program $\$ 25.00$ plus $\$ 2.50$ shipping and handling. See review in December 1987, Rałnbow Magazine.

## CoCo ADDRESS BOOK

A mailing list manager, a personal phone book and an address book all in one program.
The address book will store, sort, retrieve or print mail labels, efther the whole file or one at a time, for friends, family or acquaintances, A year round help but especially heipful during holiday seasons. You can search the flie on the last name, city, state/province, zip code, telephone area code or remarks.
Up to 100 name/file and 78 files/disk. An easy to use menu driven program. A printer is recommended but not required.
$\$ 20.00$ plus $\$ 2.50$ shipping and handifing.

## MASTER DISK VERSION 2.1

A computerized catalog of program names and disk names.
Each entry in the catalog has the program name, extension and a 9 character disk name.
To find that special program look it up in the alphabetized listing on the screen or a printout or have your Co Co search for tt by name Program names can be loaded by the disk full or entered 1 at a time An easy to use menu driven program A printer is optional. An easy to use menu driven program A printer is optional
See review in January 1988 Rainbow Magazine

ALL PROGRAMS REQUIRE $32 \mathrm{KCOCo} 1,2$ or 3 and 1 DISK DRIVE
SEND CHECK OR MONEY ORDER TO: BOB'S SOFTWARE P.O. BOX 391 CLEVELAND, OHIO 44107

Iwas thumbing through the September issue of THE RAINBOW and idling away the time in my hotel room, waiting to compete in the 1987 Florida Star Ball, a dance competition. I plopped down on the bed and flipped to the contents page to see the latest offerings.

The article "Not Just Child's Play" by Ann B. Mayeux caught my eye. Working as a volunteer with learning disabled children at the Lakeview School in Hernando, Florida, I was tempted by the program. I wondered if it might be of value to "my kids."

Upon reading the text and noting that a $32 \mathrm{~K}, \mathrm{ECB}$ CoCo was required for either tape or disk, I turned to the listing.

It was a daunting listing, running for about seven or eight tightly formatted pages. It was the kind of graphics program, loaded with oodles of DRAW, CIRCLE, PAINT and LINE statements, that is near and dear to my heart. The illustrations for the $\mathrm{A}, \mathrm{B}$ and C panels were intriguing. How would they look on my CoCo? Dare I copy the listing? Would the ultimate users - the students - find it to be fun and entertaining?

My gaze turned dreamily to the ceiling and I speculated - if I usurped a few panels and put them on tape, I could bring them to Ms. Hudson's class at Lakeview. If they liked the panels, I'd break down and copy the entire program!

Upon returning home with my trophies, I unpacked and wandered into my computer nest.

One tutorial coming up!
Please open your personal copy of the September '87 issue of THE RAINBOW to pages 60 and 61 . (Refer to this month's listing if your copy is lost, has strayed or was stolen). The first question is where the first panel, $A$, is located. The clue is in the routine from Line 130 to Line 400 . Line 140 , letter A , sent me searching for Line 410 . Line 150 , letter B, referred me to Line 510 . Ergo, between lines 410 and 510 lay nestled the A panel.

Checking out the lines in question revealed a lot of closely packed, multi-

[^4]
## A tutorial on typing in programs

## Previewing a Program

## By Joseph Kolar Rainbow Contributing Editor

line statements. I drooled in anticipation because closely packed, multi-line statements are a good indication of lots of goodies waiting to be revealed.

## Suggestions at the Starting Gate

Instead of mindlessly typing away to reproduce this lengthy program, get out the old ECB manual and reacquaint yourself with DRAW, PAINT, CIRCLE and LINE statements. Get their formats straight in your mind. As you key in a statement, try to visualize what you are asking CoCo to do.

After you complete a program line (if you are a conscientious copier), check the characters at the right end of each row with the listing. If they are not the same, you might have left out a character, added unnecessary, though harmless, spaces, or inadvertently slipped in an extra, uncalled-for character. We all do it, so join the club!

Also, check to see under which character the final character in the line falls.

Don"t be "smart" and anticipate what you think the author intended or correct what seems to you to be an error in the listing. You will be sorry!

The first thing you know, you become engrossed in seeing each new unit of the program emerge, and you happily clack, clack away far into the night.

After tap, tap, tapping for a few hours
at the keyboard, you may get an SN, FC or other error message. Checking and rechecking the listing and the program line does not divulge the error. If it is a multiple-statement program line, perform a little surgery and edit out the last statement and run. Keep it up! Lop off the last statement and run until CoCo doesn't produce the message. Then retype the balance of the line that must have contained the elusive error.

A second way to combat an obstinate gremlin is to rekey the entire line.

If you are still perplexed and unable to discover the boo-boo, ask a disinterested spectator in your household to compare your work with the listing.

A final ploy is to make a few copies of your work in progress and shut down for the day - or night - and sweep out the cobwebs in your mind to get a fresh perspective on the morrow.

## Targeting the Listing

My object was to yank out the A panel and display it on the screen.

Beginning at Line 410, I copied and ran the listing up to Line 500. I got the black screen and the sound. Now, PCLS2 calls for a yellow screen. A PMODE was needed. I noticed a PMODE3, 1 in Line 130 and copied this line. Then I copied Line 140, as it directs CoCo to Line 410, the target area.

I ran this three-liner and it became evident that a stop-the-action line would be useful. I settled on 510 GOTO 510.

Line 510 is the start of the B panel in Ann Mayeux's program. If and when I get to it, I can key in the true program line (which deletes my false Line 510) and continue keying in lines through 580 for the B panel. I can then use Line 590 , the beginning of the C panel, as my temporary perpetual loop.

What did I accomplish? I found the first part of the panel. Evidently, an ' $A$ ' was printed on a blue background. By running my working program, I found I had no error message to warn me of impending doom. Whew! What a relief! Now, if I had an SN, FC, TM or BS Error, etc., I could search out and correct it as I went along.

I added Line 430 and ran the program. Naturally, I got an FC Error. A quick check proved that I had mis-typed a 9 for a ). I edited out the boo-boo and was pleased to see the airplane pop up on the screen.

When typing in Line 440, I got an SN Error message. No big deal! I found I spelled FIR for FOR (note tonguetwister), one of my common garden variety boo-boos. Note: You could go right into the EDIT mode. Upon isolating the SN Error, correct it and move on. I prefer to be more relaxed about it and enjoy weeding out my inevitable errors. I begin by entering LIST 440. After I pinpoint the error, I get into the EDIT mode.

I have found that after many hours at the keyboard, there is a tendency to become weary, and, when in the EDIT mode, I usually compound the boo-boo instead of eradicating it. So, like they say, "Slow, but sure."
After all this work, CoCo added what proved to be an alligator's tail to the display.
Adding LINE 450 drew in the foot. The line was too long; something was missing. A close check revealed that the X motion command was missing. Spelling out the $\mathrm{XAL} \$$; variables extracted AL-I-R-P-L-AL-N-E. AL must be the designation for the character A.

Since the alphabet variables must be made known to CoCo before they can be called, a program line with AL\$ must have been created someplace in front of Line 130.

Line 80 started with AL $\$$, and a quick review of AL\$="U6E3F3D3NL6D4 BR5" proved that it was a 9-by-6 unit sized A.

Since the lack of variables for the substrings, $X A L \Phi ;$, etc., didn't hurt the flowering program displayed, it was onward and upward!

Line 460 produced more of the alligator without any further error mishaps on my part.

Remember, after each additional line, the extant program is run - first, to see what is what, and second, to correct as
many mistakes as possible that crop up. The alligator was fleshed out and colored green.
Line 480 was a "word" line, so I didn't expect to see anything new. What I did find out was that, so far, there were no FC and SN Errors - which, being a careless typist, I am an expert at invoking.

Soon I got the drift of Ann Mayeux's programming style. I paid more attention to each line and what it signified. Line 490 was a couple of painted, partial circles. I ran it to verify what I had mentally conjured. I repeated the error where I keyed in a 9 for a ) in the CIRCLE statement. Being aware of the kinds of errors I am prone to make causes me to focus automatically on likely problem areas.
Line 500 looks like it made the apple stem, spelled out the word "apple" and returned to the panel choice routine at Line 130.

When I ran this, CoCo raced through the program, and I hardly saw what happened. An easy solution would have been to temporarily edit out GOTO130 from Line 500 to hold the display.
Better still, adding the line 400 GOTO 130, which closed out the INKEY\$ letterpanel choice routine (lines 130 through 400), gave me the excruciating task of tapping the A key to get the A panel. 1 could delete Line 510 as being redundant.
At this point, I could take a breather and double-check to see if my numerical values were keyed in correctly. CoCo is not likely to complain if you use an incorrect value. It will show up on the screen by distorting the display in some manner. Thus, if you check each line as you add it to your copied program and correct errors you are alerted to (such as SN or FC errors), you can inspect the display for an incorrectly located,
drawn or painted item.
If you do these things, you will be correcting a major portion of your errors and have a relatively error-free expanding program.

Suppose Line 500 ended in GOSUB1000 instead of GOTO130. If you ran it, you would get a UL Error.

What happened was that CoCo was directed to a program line that started a subroutine you hadn't yet reached. A temporary solution would be to key in 1000 RETURN. But this would result in an RG Error. The solution to hold the display is to put something in LINE1000 that will take it out of its RG Error condition.

Entering 1000 GOTO130:RETURN works. We used the INKEY\$ routine to exit the GUSUE routine.
This should hold everything until you rekey Line 1000 when you finally get to it. But this is only one ploy you can use.

As it stands now, we have the panel complete except for the lettering. In order to present a properly finished display panel to the children, it is a prerequisite to key in lines 80 through 110.

After keying in Line 80, I ran the program and saw that the A's and E's were OK. After keying in and running the next line, Line 90 , the G's and L's appeared. Upon keying in Line 100, 1 was delighted to see "airplane" and "apple" come out perfectly. The ' $t$ ' was missing in "alligator," but in a few minutes that would be taken care of. After completing Line 110 and running the program, I got the ' $t$ ' inserted in its rightful place.

I ended up with a complete, and I might add, impressive, panel that I plan to use to amuse and educate the children.

At this time, we might as well verify that all the letters we used and didn't use

were created without mishap．Tempo－ rarily insert these lines：
120 PMODE3， 1 ：PCLS2：SCREEN1， 0 ：DRAW＂C4BM10，20＂＋AL $\$+B \$+C \$$
＋D\＄＋E\＄＋F\＄：DRAWG\＄＋H\＄＋I\＄＋J\＄＋K\＄
＋L\＄：DRAWM\＄＋N\＄＋ロ\＄＋P\＄＋Q\＄：DRAWR\＄
$+S \$+T \$+U \$+V \$$
121 DRAW＂BM10，40＂$+W \$+X \$+Y \$$
＋2\＄
129 GDTO130
Running this verifies that all letters are OK and the spacing between letters is adequate．Now，pressing the A key gives the A panel．

Let us give credit where credit is due ．．．to Ann Mayeux．Key in lines 10 through 30.

The following are the lines we left out． Line 40 looks like the＂BREAK key disable＂routine．Lines 50 through 70 throw up the title with some musical accompaniment．Line 120 gives a few instructions，and lines 150 through 390 direct CoCo to the B through Z panels． Later，we will add them to our complete program．

All we need is the time and patience to forge onward．This method I have shown you is helpful when keying in
long，complex，mind－boggling pro－ grams．You can alter it to work with other programs．

## Review

First，take a sampling of the program． Who wants to key in a program that takes days of effort and debugging，only to find out it is disappointing？
Second，we debug as we go along， ensuring accurate，error－free work．

Third，as we become familiar with the author＇s techniques，we can study， absorb，anticipate and appreciate the program lines and the plot as it unfolds．

How would you like to type in the entire program and then drive yourself nuts trying to debug all the errors you keyed in？For instance，take the listing， which is the dollop usurped from Ann Mayeux＇s original program．Key it in entirely before running it．Then run it and see how difficult it is to track down the errors，even in a straightforward program like this one．

A helpful hint to aid you in your debugging efforts is to become aware of the typing errors you customarily make． If you make a mental list of the kinds of errors you tend to make in DRRW
statements，for example，you know what to look out for．In my case，I have a tendency to leave out the opening quote mark，omit the comma between the $h, \cup$（horizontal，vertical）values and type a 4 instead of a $\$$ ．In the LINE statement，I often omit the－or type in $=$ by mistake．Also，I must watch the parentheses，which I am apt to make into an 8 or 9.

Everybody has his or her own set of idiosyncratic mistakes．Become aware of yours and you will be able to make rapid corrections．

On your own，add only the necessary lines to compose the B panel．Delete lines 120 through 129 and add 590 GOTO 590.

Correct as you go along．By now you must be eager to undertake keying in the rest of this delightful program．

Moral of this tutorial：Read，enjoy and，above all，utilize the programs presented for your pleasure in THE RAINBOW．They are a fine learning experience．

Editor＇s Note：To utilize a Speech／ Sound Pak with Ann Mayeux＇s ABC program，refer to John Linge＇s＂Sound－ ing Out the ABCs＂on Page 142.

## AND FOR RS DOS

SMALL BUSINESS ACCOUNTING
This sales-based accounting package is designed for the non-accounting oriented businessman. It also contains the flexibility for the accounting oriented user to set up a double entry joumal with an almost unlimited chat of accounts. Includes Sales Entry, transaction driven Accounts Receivable and Accounts Payable, Joumal Entry, Payroll Disbursement, and Record Maintenance programs. System outputs include Balance Sheet, Income Statement, Customer and Vendor status Reports, Accounts Receivable and Payable Aging Reports, Check Register, Sales Reports, Account Status Lists, and a Joumal Posting List.
\$79.95
INVENTORY CONTROL/SALES ANALYSIS
This module is designed to handle inventory control, with user defined product codes, and produce a detailed analysis of the business' sales and the sales force. One may enter/update inventory data, enter sales, run five sales analysis reports, run five inventory reports, set up product codes, enter/update salesman records, and update the SBAP inventory.

## PAYROLL

Designed for maintaining personnel and payroll data for up to 200 hourly and salaried employees with 8 deductions each. Calculates payroll and tax amounts, prints checks and maintains year-to-date totals which can be automatically transferred to the SBA package. Computes each pay period's totals for straight time, overtime and bonus pay and detemines taxes to be withheld. Additional outputs include mailing list, listing of employees, year-todate federal and/or state tax listing, and a listing of current misc. deductions. Suited for use in all states except Oklahoma and Delaware. $\$ 59.95$

## PERSONAL BOOKEEPING 2000

Handles 45 accounts. Enters cash expenses as easily as checks. Handles 26 expense categories. Menu driven and user friendly. \$39.95

## ACCOUNTS RECEIVABLE

Includes detailed audit trails and history reports for each customer, prepares invoices and monthly statements, mailing labels, sging lists, and an alphabetized customer listing. The user can define net terms for commercial accounts or finance charges for revolving accounts. This package functions as a standalone A/R system or integrates with the Small Business Accounting package.
$\$ 59.95$

## ACCOUNTS PAYABLE

Designed for the maintenance of vendor and $A / P$ invoice files. The system prints checks, voids checks, cancels checks, deietes cancelled checks, and deletes paid $A / P$ invoices. The user can run a Vendor List, Vendor Status report, Vendor Aged report, and an A/P Check Register. This package can be used either as a standalone A/P system or can be integrated with the Small Business Accounting Package.
$\$ 59.95$

Visa, Mastercard, COD (add $\$ 2.50$ ), personal checks.

For over a year now I have been putting off the inevitable. I knew when the CoCo 3 came out I would eventually have to buy one, but I just kept putting it off. Well, I finally succumbed.

Some readers have asked when I would start writing programs for the CoCo 3, but I feel I have some legitimate reasons for putting it off. First, although many people have been buying this dandy, improved model, the overwhelming majority of RAINBOW readers still have CoCo 1s or 2 s. The last thing I want to do is write programs that would be useless to the majority of my readers. Second, I was a little too cheap to put up the money for a whole new system. However, when the price of the full system finally dropped below $\$ 300$, the time seemed right to make the move. It also gave me an extra system (my old one) to bring to school and use with my students. (More on that later!!)

## New Worlds to Conquer

Needless.to say, it didn't take me long to fall in love with the CoCo 3 , which is everything the original CoCo wasn't. My first reaction was, naturally, to come up with a program to celebrate my new purchase. However, I made a pledge to myself and to all my readers: Unless I am using CoCo 3 graphics (which will be some time to come, at least in this column), any program I write for the CoCo 3 will include changes that allow it to work on a CoCo 1 and 2.

## Once Upon a Time

Many moons ago, when I first started writing the "Wishing Well," I presented a program called Multiple Choice Quizmaker. There were two versions of that program, a Hi -Res version that used real upper- and lowercase letters and a Lo-Res version that used the CoCo's text characters. I later listed a hard copy

Fred Scerbo is a special needs instructor for the North Adams Public Schools in North Adams, Massachusetts. He holds a master's in education and has published some of the first software available for the Color Computer through his soft ware firm, Illustrated Memory Banks.

# The <br> Ultimate Testing Programs 

By Fred B. Scerbo Rainbow Contributing Editor

version that would create paper tests with a line printer.
For several years, I have been tempted to combine the two programs into one so they could use the same DATA statements. Normally, I would just merge the data from one program to the other; however, that is not the best way to have new readers accomplish the task. Owning the new CoCo 3 provided a perfect excuse to make a new version and to throw in speech from the Speech Pak, as well. Besides, many readers still ask me for copies of old programs or reprints of old articles, which I have neither the time nor resources to provide! Making a whole second genera-
tion of these programs would solve this problem very easily.

## The Program

SuperTest will take a set of phrases you generate in BASIC DATA statements and turn them into a random quiz on the screen or on paper. Every time the program is run, the results are different. In fact, it's a different test each time you run it.

In order to create any quiz or test, you need to match two pieces of information, such as a question and an answer, or a sentence with a blank and information to fill it, synonyms (two words that mean the same thing) and so on. You would need at least five groups in order to make a quiz on SuperTest.

All information is stored in DATA statements at the end of the program. Super Test can easily be rewritten to use disk files; however, when I write an educational program for my students, I like to have the program free-standing so that no information needs to be loaded into it. Besides, it is so much easier to edit a line in the program using BASIC's EDIT command than it is to try to edit a file.

There are great advantages in using this type of program, whether with students in school or with your own youngsters at home. Reviewing material with a computer makes it easier to strengthen many skills, including foreign language translations (bon jour: good day).

In order to put your own DATA into my program, you must first type DEL1000-5000 and press ENTER. This dumps the sample data I have put in. Let's say you want to do synonyms; your data would start in Line 1000 and

```
NRME
                                    DRTE
TEST ON: EXPLORING OUR SOLAR SYSTEM
1. GALILEO
    (1) VEHICLES SENT TO JOUIAN FLANETS
    (2) DISTANCE FROM THE EARTH TO THE SUN
    (3) NUNHEF OF EAFTHS THAT WOULD FIT INSIDE JUFITEF
    (4) WHAT THE SURFACE OF MARSS IS CDUERED WITH
    (5) HOT GIVEN
2. PIONEEF
    (1) DISTANCE FROM THE EAFTH TO THE SUH
    (2) FIRST VEHICLE SENT TO JUPITER AND SATUFH
    (3) WHAT THE SUFFACE OFF MAFS IS CQUERED WITH
    (4) VEHICLES SENT TO JOUIAN FLANETS
    (5) NOT GIVEN
```

look like this:

## 1000 DATA HAPPY, GLAD <br> 1010 DATA LOUD,NOISY

Your last data line should be Line 5000 and have END as a flag and the title of your program separated by a comma.

## 5000 DATA END,SYNDNYMS 1

The comma must be placed between each of the two pieces of data you want matched. If your statement needs to include a comma, wrap each segment in quotation marks, like this:

1000 DATA "ABRAHAM, MARTIN AND JOHN", "BY DION"

Without the quotation marks, BASIC would assume that the comma after ABRAHAM was the end of our first statement. When in doubt, wrap in quotes or put each statement into a separate line:

> 1000 DATA "ABRAHAM, MARTIN AND JOHN"
> 1005 DATA "BY DION"

In this case, no comma is needed between statements, and all information is wrapped in quotes.

The program is designed to hold 50 DATA statements. You may increase the number, if you wish, by changing the value of NM in Line 180, which presently reads $180 \mathrm{NM}=50$. This would change all other values such as the DIM statements for our arrays.

## Changes for CoCo 1 and 2

This program will work very easily on a CoCo 1 or 2 but will not have some extra screens the CoCo 3 version uses. If you use the program on a CoCol 1 or 2 , you must delete the following lines:
$9,315,320,325,330,335,340,410$ and 535. You should add the following lines:

```
315 SW=31
410 REM
535 REM
```

Rather than delete the above lines, you could insert REM at the beginning of each line except the new Line 315. This way, if you upgrade to a CoCo 3 , you won't have to add these lines back in later. Either way, the program will run much like the original. The only difference is the lack of real upper- and lowercase letters. This is not that serious a drawback; however, if you have small pieces of information, such as single words, the regular 32-character screen of the CoCo is much better - you won't have much blank screen area.

## A New Feature

Besides speech, I have added one new feature to both the paper and screen quiz parts of the program. The original programs allowed for four choices plus 5) NOT GIVEN. I put this option into the original program because some of the standardized tests that our students take include "not given" as a choice. However, in the past few years I have found that many of my students have a rough time with the "not given" category. (Also, my special needs students are usually exempt from taking group tests.) Therefore, the screen will allow you to choose whether or not you want the "not given" category included.

## Running the Program

There is really not too much more to say about the program, since it is selfprompting. Pressing the @ key during a question allows you to check your score. Pressing $C$ continues the program where you left off.

If you use the HARDCOPY section, you
may use either standard or doublewidth characters, selectable from the keyboard. As the test is printed, the printing will stop as you approach the bottom of the page. You may print the next line of text by pressing $N$. This helps prevent the choices of a question from being printed on different pages. You may then advance the paper to the next page and press ENTER to continue printing.

The listing printed here has no bugs. If you get an OD Error, you probably made a mistake in the DATA statements at the beginning of the listing. You may even get an FC Error as a result of having made a mistake in the data as you typed it in. Make sure to correctly type in every comma and number as they appear in these opening lines, or the program will crash.

Try this program with your own data. I think you will find it very useful when working with your children or students. SuperTest can be useful even to college students. It gives you a real hand with controlled learning via computer.

Be sure to let me know if you have other ideas for CoCo 3 programs that won't cast our CoCo 1 and 2 owners adrift.

## Help Me, Please!

At this point I would like to make a personal pitch to you, my reading audience, who have been so supportive. This year I received some of the toughest special needs students I have ever had to work with. While, in recent years, only a few of my students in a given class period have worked on the CoCo, this year I have groups as large as eight students needing computer time.

Fortunately, I have been able to expand the number of CoCo stations in

## LOWEST PRICES EVER FOR COCO 3 PRODUCTS!

No-Halt DMC Floppy Disk
Controller for your Coco1, 2, or 3 (not currently certified)
my room to five. Some friends donated old silver case CoCos they no longer use since upgrading to a CoCo 2 or 3 . That's when this idea hit me.
I am sure there are many of you out there who have old 16 K or 32 K silver body CoCos that are now collecting dust. If you do, and would be willing to donate them, the students in our program would benefit greatly.
Any such donation to a school can be claimed as a tax deduction, but you would have to consult your tax preparer to determine how to go about it. I can easily supply you with a receipt for tax purposes should you make such a donation.

So, how about it? If you have any CoCos you can spare, you can contact me at (413) 663-9648 most evenings between 9 and $11 \mathrm{p} . \mathrm{m}$. I can't promise to reimburse you for shipping; however, I will promise that any machines, drives, tape players or other CoCo accessories you donate will be put to use helping either my special needs students or special needs students in the middle and elementary school levels. (We can even use old ROM-Pak versions of Color Scripsit.)

CoCos may be sent either to Fred B. Scerbo, 60 Harding Ave., North Adams, MA 01247 or to Drury High School, Special Needs Department,

South Church St., North Adams, MA 01247, Attn: Fred B. Scerbo.

Any help will be greatly appreciated, and all donations will be put to extremely good use. Thank you.

## If you have an idea for the "Wishing Well," submit it to Fred c/o THE Rainbow. Remember, keep your ideas specific, and don't forget this is basic. All programs resulting from your wishes are for your use, but remain the property of the author.

## An electronic Valentine's card for the one you love

# Wear Your Heart on Your Screen 

## By Brian Catlett

Valentine's Day is fast approaching - it's time to throw off your shyness and let that special person know how you really feel. But if the words get in your way, let Valentine and the CoCo speak for you.

In order to use a fancy script type for the words, for visual appeal, I had to resort to writing a long series of DATA statements to print the words to the screen. In fact, the DATA statements take up more than one-third of the program and were laborious to write, let me tell you!

But love's labor is not lost! If, for some reason (extremely unlikely), your beloved is not bowled over by the expression of your sentiment, merely show him or her a listing of the program, pointing out that you had to exercise Herculean precision to ensure that every number in those DATA statements was copied accurately. That should do it.

After you have typed in and saved the program, run it. The screen should be red; if it is not, press the reset button and run again. And if anyone out there knows a way to make love's labor less tedious (how to get around all those DATA statements) without losing the .effect, please write and let me know.
(Questions or comments about this program may be directed to the author at 6801 Mountain Rd., NE, Albuquerque, NM 87110. Please enclose an SASE when writing for a response.)

Brian Catlett holds a degree in computer science from Widener University in Chester, Pennsylvania. He enjoys working with computer graphics and animation and is presently working for a drafting company.

## ACCESSORIES!

## CLOSEOUT* \$29.95

SP-2 INTERFACE for EPSON PRINTERS:

- 300-19,200 BAUD rates
- Fits inside printer - No AC Plugs
- Optional external switch ( 5500 extra) frees parallel port for use with other computers
*While Supplies Last

SP-3 INTERFACE for MOST OTHER PRINTERS:

- $300-19,200$ BAUD rates
- Extemal to printer - No AC Plugs
- Built in modem/printer switch-no need for Y-cables or plugging/urplugging cables

## DISK DRIVE SYSTEMS!

ALL $1 / 2$ HEIGHT DOUBLE SIDED
Drive 0 (addressed as 2 drives!) .................................. s ${ }^{235}$
Drive 0,1 (addressed as 4 drives!) ................................ s350

# SUPER 

## COCO'S MOST ADVANCED SPEECH SYNTHESIZER.

## IT TALKS, SINGS AND MORE.

 only . . . \$79.95
## WITH EARS PURCHASE

 only . . . \$59.95SUPER VOICE is no ordinary speech synthesizer. It uses Silicon Systems, Inc. SSI-263, the most advanced speech/sound chip available. SUPER VOICE is not only capable of highly intelligible speech, sound effects, and singing over a 6 octave range, but now we have turned SUPER VOICE into a monophonic Super Music Synthesizer with our PIANO KEYBOARD.

IT TALKS. A free TRANSLATOR text-to-speech program makes writing your own talking program as easy as SAYING "HELLO."

SUPER VOICE works in any 32 K or 64 K computer. A disk system requires a Y-Cable or Multi-Pak.

Here are the facts;
the decision is yours.

# FREE 

## SUPER TALKING HEADS

Paul and Pauline, our talking heads program is normally $\$ 24.95$. Until Dec. 15 we will include them with each SUPER VOICE order.

##  <br>  <br> 38W 255 DEERPATH ROAD BATAVIA, ILLINOIS 60510 (312) 879-6880 (TO ORDER)

Illinois residents add $6 \% \%$ sales tax

Two Years In the Making. Speech Systems was formed to develop new and innovative speech products. After 2 years of intensive Research and Development, we have created a truely sophisticated speech recognition device. Recognition rates from $95 \%$ to $98 \%$ are typical. Until now, such a product was outside the price range of the personnel computer market, and even small businesses.
EARS is trained by your voice and capable of recognizing any word or phrase. Training EARS to your particular voice print takes seconds. Up to 64 voice prints may be loaded into memory. You may then save on tape or disk as many as you like so that your total vocabulary is virtualiy infinite.

Speech and Sound Recognition. EARS is really a sound recognition system, so it really doesn't matter whether you speak in English, Spanish, or French. In fact you do not have to speak at all, you can train EARS to understand sounds such as a musical note or a door slamming.

Hands Off Programming. Imagine writing your own BASIC programs without ever touching the keyboard. Everything that
you would normally do through a keyboard can now be done by just speaking.

Programming EARS Is Easy. LISTEN, MATCH and other commands have been added to BASIC so that programming EARS is a piece of cake! The single BASIC line: 10 LISTEN: MATCH will instruct EARS to listen to you and return the matching phrase.
It Talks. EARS is also capable of high quality speech. We mean REALLY high quality. The speech is a fixed vocabulary spoken by a professional announcer. Speech Systems is currently creating a library of thousands of high quality words and phrases. For a demonstration call (312) 879-6844, you won't believe your ears or our EARS.

DISK OWNERS. EARS will work with any disk system with either a MULTI-PAK or Y-CABLE. Our new Triple Y-CABLE was specifically developed for those wishing to add SUPER VOICE as a third device.

You Get Everything You Need. You get everything you need including a specially designed professional headset style noise
cancelling microphone. The manual is easy to use and understand. Several demonstration examples are included so you don't have to write your own programs unless you want to. EARS will work in any 32 K or 64 K Color Computer.

## SUPER VOICE $\$ 20$ OFF

Imagine talking to your computer and it talking back to you. When you need an unlimited vocabulary, you can't beat SUPER VOICE. For a limited time, we will give you the SUPER VOICE for $\$ 59.95$ with your EARS purchase. Even if you already have another speech unit, here is your chance to buy the best and save $\$ 20$.

## VOICE CONTROL

Applications for EARS are astounding. Here is our first of many listening programs to come. VOICE CONTROL is a program specifically designed to allow you to control any appliance in your house with your voice and our HOME COMMANDER (sold separately) or the Radio Shack Plug ' N ' Power controller. For example, you can control your TV by saying "TV ON" or "TV OFF". . \$24.95

Now your COCO can talk to your MID music synthesizer. Whether you have a Korg, Roland, Casio, Yaniaha, pr Moog, it doesn't matter as long ass it's MIDI equipped. Choose from our
$\checkmark$ Supports 16 Trackrecording and playback
$\checkmark$ Adjustable tempo.

- Over 45 Kbytes available
(Over 15,500 MIDI events possible).
$\checkmark$ Record to any track
L Low Level track editing
- LYRA editing. (one voice per track)
- Playback from any number of tracks.

$\checkmark$ Dynamic memory allocation
entry level MUSICA MIDI system that plays MUSICA files or our Professionat COCO M $10 P^{2}$ system. If

Control Change

- Many songs included.

Includes MIDI hardware interface, $2 \mathrm{MIDI} \mathrm{ca}-$ bles, detailed manual, and software Requites 64 K CoCo, Y-Cable or Multi-Pak.
COCO MIDI 2 (disk only) \#CM147 $\$ 149.95$
DOUBLE Y.CABLE \#DY181 ...... \$28.95
TRIPLE Y-CABLE \#TY173 ....... \$34.95

## DX LIBRARIAN ${ }^{\text {TM }}$

Save and load voice parameters for the Yamaha DX series of synthesizers (DX-7, DX-100, DX-21 etc.). Save sounds individually or as a group letting you load the entire synthesizer in seconds.

Comes with professionally developed voices for the DX-7 worth 10 times the price. Requires COCO MIDI hardware interface. DX LIBRARIAN (Disk only) \#DX143
$\$ 39.95$

## CASIO LIBRARIAN

Save and load voice parameters for any Casio synthesizer (CZ-101. CZ-1000, CZ-5000 etc.) You can save from the: presets, cattridge,
memory or buffer. Requires COCO MIDI hardware interface.
CASIO LIBRARIAN (Disk only) \#CL169

MUSICA MIDI takes any MUSICA 2 music file and plays it through your MIDI synthesizer. We offer you over 800 tunes from our MUSIC LIBRARY series (sold separately) or create your own music
using MUSICA 2 . Inlcudes: documentation, plenty of music, and the cable to connect between the COCO and your synthesizer. MUSICA MIDI Complete (Disk Only) \#CM126
\$39.95

## MIDI KEYBOARD

If you own the Casio CZ-101 or similar MIDI synth, you know that the mini keys and the short 3 or 4 octave, keyboard is limiting. MIDI KEYBOARD when used with our full size 5 octave keyboard
gives you the flexibility you need. Comes with cable to connect the COCO to your MIDI synth.
MIDI KEYBOARD (Disk only) \#MK 167
$\$ 29.95$

## LYRA OPTIONS

These LYRA options are not required. They are provided for those wishing additional flexibility.

## LYRA CONVERT

A program to convert MUSICA 2 files to LYRA files.
(Disk) \#LC164
$\$ 14.95$

## VERSION UPDATE

To receive the latest version of LYRA return your original disk. \#UP162
$\$ 10.00$

## LYRA MIDI CABLE

A cable to connect your computer to your MIDI synthesizer.
\#MC158
$\$ 19.95$

## LYRA SYMPHONY 12 ENHANCER

Lets LYRA play all 8 voices through SYMPHONY 12.
(Disk) \#LS177
$\$ 19.95$

## LYRA LIBRARY

A collection of 50 songs ready to play for hours.
Most have 7 and 8 voices. \#LL 137
$\$ 39.95$

## SYMPHONY 12

A real hardware music synthesizer, lets LYRA play all 8 voices in stereo.
(T or D) \#SY149

COCO MID Seq/Editor
A professional quality MIDI interface for MIDI synthesizers.
(Disk only) \#CM147
$\$ 149.95$

## MUSIC LIBRARY

A collection of over 900 songs. When used with CONVERT, it gives an incredible LYRA library. Each volume 100 songs.
(T or D) \#MLXXX
$\$ 29.95$

# Follow the Bread Crumbs 

## By Dennis H. Weide

since the publication of my article "The CoCo Writes A Program" (July 1987, Page 84), many people have written to me with questions. Some say they have machine language programs on disk, but don't have the addresses of the programs. Well, believe it or not, Tandy left you some bread crumbs on disk (just like in the fairy tale) that will lead you to the addresses you want.

On cassette-based systems, the addresses are stored in RAM. Load the ML program into memory and use the following PEEK commands to find the required addresses:

## Start Address

PEEK (487)*256+PEEK (48日)
End Address
PEEK(126)*256+PEEK (127)

## Exec Address

PEEK (157)*256+PEEK (158)
Disk Extended basic doesn't store all the addresses in memory after loading the program. They're stored in the file on disk as shown in Figure 1. The top part of the figure shows a machine language program file in its

[^5]binary format, as it is stored on disk. The bottom part shows a BASIC program file in its tokenized format. We'll be using the top part of the figure for this discussion. The bottom portion is included for reference. Note that Figure 1 represents the program file on disk, and byte numbers are determined by the length of the file.

The first byte (Byte 1) of an ML program file is always zero - this is how Disk BASIC determines whether the file specified in the LOADM command is a machine language program file. For a BASIC program, Byte 1 is always 255 .

The second and third bytes (bytes 2 and 3) of the ML program file are the most significant byte (MSB) and least significant byte (LSB) of the file size. These two bytes tell Disk Basic how many bytes of program code are actually stored in the file.
The fourth and fifth bytes (bytes 4
and 5) are the MSB and LSB of the start address pointer. These two bytes point to the start address of the ML program, where Disk BASIC will load the first byte of program code.

The sixth byte (Byte 6) is the first byte of the program code that will be loaded into the start address, indicated by the start address pointer.

Disk BASIC continues to load each successive byte into memory until it reaches the end of the program file. In Figure 1, the last byte of program code is Byte 11. The last five bytes (bytes 12 through 16) of an ML program file contain the end-ofprogram marker and the execute address. The fifth, fourth and third bytes (bytes 12, 13 and 14) from the end of the file always contain 255-00 , indicating the end of the binary file.

Figure 1: Disk file storage

The last two bytes（bytes 15 and 16 ）are the MSB and LSB of the execute ad－ dress pointer．This is the address the processor jumps to when the program is executed from BASIC using the EXEC command or USR function．The pro－ grams in listings 1 and 2 follow the bread crumbs for you．

The program in Listing 1 is a BASIC program that prompts you for a file－ name and then reads the first byte of the file to determine if it＇s an ML program file．If it＇s not，the program jumps to Line 7000 and prints＂Not a binary file．＂ If it is an ML file，the program reads the file length in bytes 2 and 3 and the start address in bytes 4 and 5 ．Then it per－ forms the following calculations to determine program size and the start， end，and execute addresses：

```
Program Size
    BYTE2 * 256 + BYTE3
Start Address
    BYTE4 * 256 + BYTES
End Address
    START ADDR + PGM SIZE -1
Exec Address
    (PGM SIZE + 9)* 256 + (PGM
    SIZE + 10)
```

When all these calculations are com－ plete，the results are printed on the screen in decimal and hexadecimal format．The last line，＂Total bytes，＂is the program size－not the file size．The program size is always smaller than the file size，because the pointers and end－ of－file（EOF）markers are not loaded into memory．

The program in Listing 2 is the PAS－

CAL source code for the same program． It was written using Deft PASCAL and compiled into a machine language program．The addresses of the version provided for RaINBOW ON TAPE／DISK are as follows：

| Function | Dec | Hex |
| :--- | :---: | :---: |
| Start Address | 20000 | 4 E 20 |
| End Address | 24980 | 6194 |
| Exec Address | 20000 | 4 E 20 |

The ML code produced by the Deft compiler is fully relocatable，so you can load it into memory anywhere you want．It＇s always a good idea to protect memory where an ML program is loaded by using the CLEAR command．

Each version has its own advantages and disadvantages．The basic version will be erased from memory each time another BASIC program is loaded．But it can be appended to other BASIC disk utilities．The Pascal version can be loaded into protected memory and executed whenever it＇s needed，but it executes slower than the BASIC version because PASCAL doesn＇t allow direct reading of disk tracks and sectors as BASIC does．

Both programs contain remarks to help you understand how they function， but it＇s not necessary to type in these remarks in either listing．After you＇ve chosen the version you will use and have saved it to disk，you can test the pro－ gram by entering the filename of an ML program stored on disk for which ad－ dresses are known．Be sure to include the drive name in the filename if you have more than one drive．You can
create a dummy test file by entering the following：

```
SAVEM"JUNK/BIN:0",5000,6000,
5500
```

This is not a working program but a dummy file to verify that your program works properly，so be sure to kill it after you＇ve completed the test．When you enter JUNK／日IN：0 at the filename prompt，the following screen message should be displayed：

## JUNK／日IN：O

| FUNCTION | DEC | HEX |
| :--- | :---: | :---: |
| START ADDRESS | 5000 | $138 B$ |
| END ADDRESS | 6000 | 1770 |
| EXEC ADDRESS | 5500 | $157 C$ |
| TOTAL BYTES | 1001 | $03 E 9$ |

If other addresses are displayed， check the program for typing errors．

The information I＇ve provided here should come in handy for those who want to expand their programming knowledge or better understand how files are stored on disk．This informa－ tion applies to Radio Shack Disk Ex－ tended Color basic versions 1.0 and 1．1，and any RS－DOS compatible op－ erating system．It will not work on OS－ 9 operating systems．

It＇s always a pleasure to hear from people who find my articles interesting． So，if you have any questions or sugges－ tions，please feel free to write me．
（You may write to Dennis Weide at 14201 Marquette N．E．，Albuquerque， NM 87123．Please enclose an SASE when requesting a reply．）

## A patch to display CoCo 1 and 2 colors on the CM- 8 monitor

Because of all the concern over artifact colors not being displayed on the CM-8 monitor when the CoCo 3 runs older machine language programs, I decided to create Patch. This BASIC program, along with

Steve Ostrom is a 38 -year-old father of two girls who love the CoCo, He has written numerous programs, including the Adventure SHIPWREK, the :ML game STYX, and a variety of BASIC games and utilities, both commercial and in the public domain.
its three machine language subroutines, helps display color on the CM-8 monitor.

Patch modifies the existing machine language program that uses artifact colors, searching the program for all occurrences of the sequence FF22. It then checks to see if the STA or STB commands precede this reference to the PIA register. If so, Patch then inserts a call to a small routine placed in upper memory that checks to see if the PMODE being attempted is either 2 or 4 .

What this routine does is change the

PMDDE to either 1 or 3 , which will let you see the game in full color. The graphics may appear slightly coarser, though. The program is not foolproof. It works in most cases, but sometimes the patch just won't work. In a few instances, however, when it appeared to fail, a press of the reset button started everything up and the program ran fine with color.
Patch is self-explanatory, Just load it and run. It first initializes the proper color slots for the RGB monitor and sets up the machine language routines.

You are then told to load your artifacting machine language program (do not type EXEC), and to type GOTO 290. You will be prompted to press the ENTER key, and you might notice three values displayed briefly in the upper left-hand corner of the screen. These are the number of occurrences found in the ML program of a possible PMODE change.

The value next to the question marks represents the occurrences of references to \$FF22, without either STA or STB just prior. These may need to be examined further using the Look program. Patch modifies all occurrences of STA and STB whenever MODEs 2 and 4 are called. You must do this every time you want to load an ML program.

Patch will not work if the programmer did some unusual things while setting up the PMODE screens. Also, it wont work on BASIC programs, copyprotected programs or ROM packs. It
works only on machine language programs that load between \&H1900 and \&H7FE0. This is a range large enough that it should include most programs.

My second program to help in artifasting colors for RGB monitors is Look. It's a BASIC program that scans machine language programs and prints out the locations of all possible writes to Register \$FF22. You can examine these locations in more detail with an editor/assembler/debugger utility.

If you are proficient in using a debugging utility such as $Z B U G$, you can also make permanent changes to many machine language programs that work with Patch. When you find the areas that store a number into $\$$ FF 22, just replace this number with the same number ANDed with \& HEF. This sets Bit 4 of Register \$F F22 to zero, and changes the PMODE from 4 to 3 or from 2 to 1 . All you need to do then is save
this copy. It will now always run with color on your CM-8 without needing to run Patch each time.
(Questions or comments regarding this program may be directed to the author at 12612 Cedar Lake Road, Minnetonka, MN 55343. Please enclose an SASE when requesting a reply.)

Editor's Note: The following machine language programs from $T \& D$ Subscription Software have been tested with Patch to display colors when run on a CoCo 3 and CM-8 monitor: Panzer, Mrs. Pac, Foot Racer, Raider, Fire Runner, Flippy and Able. If you find other ML programs to work properly with Patch, please send us a list of the program names, along with the companies presently selling the program. We will print updated lists for our readers in upcoming issues.

## Hint

## Taking Care of CoCo 3 Bugs

In theory, when you specify a value greater than 23 and less than 256 to the vertical coordinate of the HPRINT command, the COCO 3 BASIC should draw the characters on Line 23 on the screen (the bottom line). In practice, however, a value greater than 23 but less than 127 causes BASIC to draw the characters on the first (top) line. Further, when the value is greater than 151 (which, by the way, is equal to $128+23$ ), the characters are drawn right off the displayed screen, causing BASIC to crash randomly.

What is happening is that BASIC is taking the entered eight-bit value and performing a signed comparison on it to determine whether or not it is lower than the maximum allowable value. As a result, any integer greater than 127 is considered negative and, therefore, passes the range test. When the value goes over 151, BASIC starts to draw the characters into the RAM space reserved for BASIC code, which causes the system to crash.
The solution to this problem is simple: Convert the signed comparison to an unsigned comparison. To do this, just issue POKE \&HEF 92 , \&H24 from BASIC.

# HOW DO YOU GIVE A RAINBOW? 

It's simple - Give a RAINBOW gift certificate . . .

Let a gift subscription to THE RAINBOW carry the premier Color Computer magazine right to your friends' doorsteps. THE RAINBOW is the information source for the Tandy Color Computer.

Each month, your friends will enjoy the intelligent programs, reviews and articles written exclusively for their CoCo.

First, your gift will be announced in a handsome card. Then, all year 'round, they'll remember you and your thoughtfulness when they get each edition of THE RAINBOW - more than 200 pages loaded with as many as 24 programs, 15 regular columns and lots of helpful hints and tips.

Generosity benefits the giver, too. There'll be no more tracking down borrowed copies of THE RAINBOW. Your collection will be safe at home.

Give a RAINBOW gift certificate and let your friends in on the fun. THE RAINBOW is the perfect companion for the Color Computer!

Get your order to us by February 25 and we'll begin your friends' subscriptions with the April issue of RAINBOW.

## Please begin a one-year (12 issues) gift subscription to THE RAINBOW for:

The hazards of spending long hours at the computer

# A Healthy Interface Body Maintenance and Computing 

By Laurence D. Preble

What began as a trickle in the late 70 s has now become a flood. I'm talking about the increasing flow of patients who come to me with complaints directly attributable to long hours spent in front of a computer.

At first, "computer casualties" came mainly from the work place. But more and more often now I see problems stemming from long hours of computing in the home.

I admit it. There have been occasions when I actually spent more time at home in front of the computer than I did at work. (Thanks, Peg, you're a sweetheart to put up with it all.) Some of my most creative work comes at $2 o^{\circ} \mathrm{clock}$ in the morning. Those "simple" programming problems always take at least five times longer than expected to debug. But I am not the only guilty one - home computing has become a serious business.

[^7]The consequences of long hours at the computer are also serious business. Essentially, computing stresses three systems: the eyes, the spine and the nervous system.

## The Eyes

Perhaps the best-known consequence of long computing sessions is eye strain. Some display devices are notoriously hard to read. Many LCD Screens (Liquid Crystal Displays) fit this category. Computers that use a TV as a display device can also strain the eyes if the characters displayed are too small.

Several popular programs for the CoCo try to squeeze up to 85 columns of characters across and 24 lines down a TV screen! The problem is that TV sets and even composite video monitors have very limited resolution capacities. If more than 40 columns of characters are displayed across the screen, the letters and numbers begin to blur. CoCo 3 circumvents this problem by allowing the use of a high resolution $R G B$ monitor. Good quality RGB monitors easily handle 80 columns across and 24 or more lines down the face of the tube, even displayed in color.

If it is necessary to use composite video, a high resolution monochrome monitor will give the best results for text-oriented applications.

If the only display device available is the venerable television set, here are a few actions you can take to reduce the chance of eye strain: Limit the display to 40 characters across and no more than 16 lines down. If you want to push this limit a bit, turn the color control on the TV all the way down so that the display is black and white. By removing the color (or by using a black-and-white TV), you will notice that the text display appears sharper. With a very good TV set, you may be able to display up to 51-by- 24 characters with relative viewing ease.

Inadequate lighting can also play a role. Computing usually involves reading, from both a VDT and hard copy, or paper printouts. The lighting in the work area should be bright enough to provide good contrast when reading paper printouts. If the display device is an LCD screen, the lighting is vitally important as the screen emits no light of its own. More commonly, a CRT (Cathode Ray Tube) is used as a display device. It is important to shield this kind of display from too much light. Light reflected from the CRT can decrease contrast or wash out the display and also produce a distracting glare. Glare shields and proper arrangement of the lighting can help.

Some recent visual research has sug-
gested another potential problem. It appears that hour upon hour of reading provides inadequate stimulation to the peripheral vision (side vision). The fovea centralis (center area of vision on the retina) is, however, highly stimulated by reading. The consequences of this limited stimulation actually affects the growth of the eye! The eye lengthens and causes light to be focused in front of the retina rather than precisely on its surface, resulting in myopia or nearsightedness. Have you ever noticed that people who are avid readers seem to wear glasses more often than not? There is a developing body of evidence to lend credence to this observation.

Unfortunately, the studies I read merely reported their findings without recommending any solutions to the problem. Until more research is completed, we are left with "common sense" suggestions. So take frequent breaks from reading and computing. A walk outdoors provides excellent peripheral vision stimulation and is a wonderful stress reducer, as well.

It is best to act quickly if you discover any visual problems. Consult a vision specialist on a regular basis. Your optometrist or ophthalmologist may have specific suggestions for reducing eye strain during your long hours at the keyboard.

The seat of this kneeling chair tips the pelvis forward to help maintain good sitting posture.

Photo 1
Photo 1 shows the natural curve of the cervical spine. Photo 2 shows degeneration of cervical dises and vertebrae (spondylosis) due to poor posture.

## The Spine

Computing normally requires a sitting posture, a position that can have serious consequences for your back and neck. The quality of your sitting posture can affect your computing endurance and, ultimately, your health. Often, 40 hours of sitting puts more strain on the spine than 40 hours of standing.

Good sitting posture supports the three natural curves of the spine (cervical, thoracic and lumbar) in their normal, balanced alignment. When you slouch, the induced strain can lead to stiffness, backache, muscle fatigue, headache and even degenerative changes. The lumbar curve (lower back) bears most of the strain of sitting and requires the most support.

Vertebrae are the bones of the spine that provide a framework and protection for the spinal nerves. Discs are the pads of cartilage between vertebrae and act primarily as cushions for the vertebrae. Ligaments act like very strong rubber bands, connecting and stabilizing the vertebrae. The muscles of the back and abdomen help maintain the natural curves of the spine.

Slouching greatly alters the natural alignment of the spine. With postural muscles no longer doing their work, ligaments take up the load, becoming overstretched. This leads to stiffness, fatigue and backache.

Even more serious is the compression of discs resulting from poor sitting posture. When the spine curves forward, pressure within the dises soars. Years of poor posture often lead to a
gradual deterioration of the lower cervical (neck) discs and of the lower lumbar (lower back) discs.

A common result of cervical disc degeneration is a mixture of pain, numbness and tingling in the neck, shoulder, arms and hands, due to compression of the network of nerves (brachial plexus) leading from the neck

The "Nada-Chair Back Sling" cradles the lowerback in a "sling" that is anchored at the knees by padded loops of webbing.
and upper back into the arms and hands. Common symptoms of lumbar disc degeneration are lower back pain, muscle spasms and sciatica (leg pain due to compressed and inflamed nerve roots). Again, the injured disc compresses delicate nerve structures to produce the symptoms.

Spinal degeneration due to poor sitting posture is entirely preventable. There are four simple things you can do to save your back and neck from the rigors of computing: maintaining good sitting posture, shifting position frequently, moving safely in your chair and performing simple back exercises.

## Rx for a Healthy Spine

Support your lumbar: It can be helpful to use a cushion to support the lower back - a towel rolled to about 6 inches in width or a premade support can fit the bill. Alternately, a seat wedge that tips the pelvis forward can help to restore the lumbar curve; you may either sit on a folded towel a few inches thick or use a premade seat wedge.

Sit close to your work: Keep your chair close to the desk so that you won't strain to reach your work materials. Also, a detachable keyboard can go a long way towards alleviating back strain while computing. When the keyboard is movable, you can select the ideal position for typing. Check the ads in The rainbow - keyboard extender cables are available.
"Prop" your materials: Try propping the work materials up vertically to prevent slumping over the desk. Professional typists often use "copy stands" to hold their papers upright. You might find one at an office supply store.

Use special support helpers: I use two special devices to help maintain good posture for the long haul: a special kneeling chair and a "back sling." The chair is available from office furniture stores. The seat tips your pelvis forward with the legs placed below and the knees are given padded support. The configuration appears rather unusual, but it is really quite comfortable.

The other support device, called the "Nada-Chair Back-Sling" cradles the lower back in a "sling" that is anchored at the knees by padded loops of webbing. The Mayo Clinic has used the Nada-Chair to train their back patients in good sitting posture. A nice feature of the Nada-Chair is its total portability. It can be taken camping, even canocing.

Shift position frequently: You can diminish the strain and fatigue of sitting by finding a few alternate sitting posi-
tions and switching among them during the day.

Move safely in your chair: Staying active in your chair can help prevent fatigue. Sudden motion should be avoided, however. When turning the body, avoid sudden twisting motions; instead, turn the body as a unit. When bending to pick up something from the floor, support your upper body with one hand on the desk and one foot in front of you.

## Simple Back Exercises

Head Press: Place the palms of your hands on your forehead and press firmly for several seconds, then release. Repeat five to 10 times. Likewise, press the back and sides of the head.
Neck Roll: Gently and slowly roll the neck in circles, pausing at places where you feel tension. Breathe deeply to help release the tension. Roll to the left and right alternately. Go slowly! Repeat five to 10 times.
Shoulder Shrug: Bring the shoulders to the ears and press tightly. Release gradually. Next, press shoulders down firmly. Release. Work the shoulders forward and backward in a circular motion. Repeat five to 10 times.
Mid-back Press: With your arms at your side, clasp your hands behind you. Push backward while inhaling deeply to expand the chest. You should feel as if you are pressing your shoulder blades together behind you. Repeat five to 10 times.
Mid-back Stretch: Press one arm above your head, one arm down behind your back. Keep both elbows bent. Try to touch your ear with the upper arm. Stretch and then release. Repeat five to 10 times.
Lower Back Stretch: Stand upright. Place the palms of your hands on your lower back for support. Gently and slowly bend backward. Stretch for a moment and then release. Repeat five to 10 times.
Abdominal Strengthener: Sit straight with your posterior firmly against the back of the chair. Exhale and tighten your abdominal muscles for a count of 10. Release and repeat five to 10 times.

Years of personal experience have shown that it is far easier to prevent back problems than it is to treat them once an injury has occured. Take the time to develop good habits of spinal hygiene.

## The Nervous System

Computing is, of course, a thoughtintensive activity. And, while complet-
ing a successful computing project is rewarding and satisfying, the process of programming and debugging can be extremely stressful and frustrating.

There is a growing body of knowledge indicating the harmful effects of too much stress. Júst recently I heard about some research concerning the immune system. It was determined that high levels of stress produce a hormone called A.C.T.H. (Adrenocorticotropic Hormone, also known as Corticotropin). This hormone, in turn, depresses the functioning of the immune system. In other words, too much stress can get you an infection for your trouble. I can believe it. I used to catch the "flu" with great regularity around final exam time in college. (It helps to do your studying in advance rather than try to cram the night before the exam.) I survived the "flu bugs" during eight years of college - now I have to watch out for "Compu-Crud"!

I have found it useful to take occasional breaks to practice what some researchers call the "Relaxation Response." A simple method of focusing the attention can result in reduced stress and enhanced function. To use the "response," sit in an upright posture with the eyes closed and turned gently upward. But do not force them upward. Select a word of your choice to act as a point of focus. It could be the word "One," or the word "Relax," or any other word of your choice. Imagine the sound of that word being spoken, just as you would imagine the sound of a symphony being played. This is a bit more subtle than just mentally repeating the word.

As you sit, the body becomes more relaxed, the thoughts more subtle. This process is not an attempt at fantasy, escape or self-hypnosis - there should be no attempt to "blank" the mind. By listening to the inner sound you have selected, you offer the mind a simple point of focus. Random thoughts will continue for a time, but become less intrusive. If the mind wanders, gently return to your point of focus.

If you sit like this for several minutes, your brainwaves will become smooth and regular. If an EEG were connected to you, it would indicate brainwaves of 8 to 13 cycles per second, a state called the Alpha Rhythm, associated with relaxed awareness.

Allow this restful state to continue for 15 to 20 minutes. There is no need to time the session - your body clock will let you know when enough time has elapsed.

A biofeedback instrument can be useful in early training for achieving the Relaxation Response. Radio Shack sells a simple device for measuring the Galvanic Skin Response, which operates on the relationship of the electrical resistance of the skin to the amount of stress in the system. The Radio Shack Biofeedback Monitor (Cat. No. 63-675) takes readings of skin resistance and converts them into a variable pitch tone. The more relaxed you become, the lower the pitch of the tone. (The same principles are used in a polygraph or "lie detector" test.)

Reams of information have been written on relaxation. It is certainly not new, and the benefits are many. People who practice in this way on a regular basis are found to have much lower levels of stress in their bodies. Their ability to concentrate is improved. Even high blood pressure can be reduced through relaxation techniques.

Over the years I have come to think of the computer as an extension of me, a sort of "mind amplifier." With the advent of room temperature superconductors, it is quite possible that our
future will bring computers so small, yet so capable, that they can be worn as jewelry and controlled by voice or even by brainwave interpretation. Until that time arrives, we must put up with an imperfect human-to-computer interface. Also, like any mechanical device, our bodies, too, must be carefully maintained.
(Questions or comments regarding this article may be directed to the author at 6540 Outer Loop, Louisville, KY 40228. Please enclose an SASE when requesting a reply.)

A machine language subroutine to help you program the Interface

$\sqrt{N}$ith the advent of Tandy's HiRes Joystick Interface, CoCo 3 owners now have the means to access all of the 640 by 192 pixels that comprise a Hi-Res graphics screen, and at a cost of only $\$ 9.95$.

For this price, however, no software is provided - not even a hint on how to program it. My solution to the problem is a simple machine language subroutine, shown in Listing 1.

The interface accomplishes with hardware what is otherwise done with software. The joystick input is compared against a rising ramp. When the ramp voltage reaches the input voltage, the output goes high. The ramp is started by making the cassette output low.

The ramp is a smooth, continuous sawtooth rather than the staircase normally generated by the digital-toanalog converter in the CoCo , which permits a resolution more than 10 times greater than the 64 steps possible with the DAC.

Use of the subroutine is illustrated by the basic program in Listing 2. This program draws circles but can easily be enhanced to draw any figures. The ML program is poked into memory, then a Hi-Res screen appears with cross hairs pointing to the pixel selected by the right joystick or mouse. Select the center of the circle and press the firebutton. As long as the button is held, a spot appears at the selected location. Release the button and select any point on the circumference. Press the button again and the circle will be drawn.
(Questions or comments about this program may be directed to the author at P.O. Box 255, Mt. Grema, PA 17064. Please enclose an SASE when writing for a reply.)

[^8]

## Reversing a PMODE 4 graphic

# A Picture Is Worth 6,144 Bytes 

By Dennis H. Weide

Last week a friend called and invited me over to watch her transfer a CoCo graphics printout from paper to a T-shirt by ironing it on.

She had bought a special printer ribbon for heat transfers from Diversions, Inc., 1550 Winding Way, Belmont, CA 94002. The ribbon is guaranteed for at least 20 transfers. Ours came out quite well on the second try, and has been washed twice without any apparent fading.

## A Backwards Picture

The only problem we had was that the image on paper had to be reversed from the image on the screen in order to print correctly on the T-shirt. Otherwise, all printing would have been backwards.

What seemed easy at first turned out to be more complicated as we attempted to reverse the screen image for printing. Fortunately, I still have my old CoCo manuals, which explain how graphics modes work in the computer. So, with the help of the manuals and Bill Barden's book, Color Computer Graphics, we went to work.

Dennis Weide is a communications technician for AT\&T communications in Albuquerque, New Mexico, where he programs AT\&T and IBM PCs. He enjoys making toys and teaching computer programming.

## Understanding Graphics

The picture we wanted to transfer was saved on disk from a PMODE 4 graphics screen, so we set out to write a program that would reverse a PMODE 4 graphics image.

In this mode, there are 192 rows of picture elements, called pixels, which are numbered from 0 through 191. Each row contains 256 pixels numbered from 0 through 255. Each pixel is represented by one bit of one byte of video RAM (graphics memory). Each row of graphics on the screen is made up of 32 bytes of video RAM ( 256 bits / 8 bits per byte $=32$ bytes). Since there are 192 rows displayed on the screen and each row consists of 32 bytes, a full screen of

PMODE 4 graphics requires 6,144 bytes of video RAM ( 32 bytes X 192 rows $=$ 6144 bytes).

To reverse the video image (but not the colors) on the screen, it is necessary to reverse the bit pattern of each byte as well as the bytes themselves. To help you better understand, look at Figure 1.

Note in Figure 1 that the bit images and byte addresses are actually turned end over end. While this may seem a little complicated at first, once you view the graphics page as a binary picture, you can readily see how to reverse it.

The program Listing 1 is a short BASIC program that lets you see the bits as they are set and reset. To use the program, key it in and run it. The

The screen dump shown on the left is of a normal graphics image. The reversed image is shown on the right. While color is not indicated here, the program switches red and blue artifact colors as the image is reversed. This should not affect black-and-white printing.
graphics screen for PMODE 4 will be displayed.

Type in any number between 0 and 255 (you won't see the text screen until' you press the reset button) and watch the bits as they are set on the screen. You can actually see the binary image for each number. The small line you see on the screen is for reference. That byte, Address 4010, has been loaded with 255 to set all 8 of its bits. The address you will be loading, 4042 , is directly below that one.

## Reversing the Image

To help us reverse the image, we'll use BASIC's powerful AND statement. AND allows you to determine which bits in a byte are set and which are reset. The AND statement takes two binary values and produces a result whose binary value represents only those bits that are set in the first and second binary number.

Look at Figure 2. Notice that only the leftmost bit of the results is set (equal to 1), because this is the only bit set in both $A$ and $B$.

To see how the BASIC AND statement works, run the program in Listing 2. Enter a number from 0 to 255 to see which bits are set and which are reset. In each pass through the loop, a logical AND is performed on the value of $A$ and the bit position determined by the

| BYTE \# | \#1 | $\# 2$ | $\ldots$. | $\# 31$ | \#32 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| NORMAL IMAGE | 11000000 | 11111111 | $\ldots$. | 10011100 | 00000000 |
| REVERSE IMAGE | 00000000 | 00111001 | $\ldots .$. | 11111111 | 00000011 |

NOTE: The above binary values are arbitrary figures chosen at random for this example. The actual values will depend on the graphics image displayed.

Figure 1

| DECIMAL $192=$ | BINARY | 11000000 | BINARY VALUE A |
| :--- | :--- | :--- | :--- |
| DECIMAL $129=$ | BINARY | 10000001 | BINARY VALUE B |
| DECIMAL $128=$ BINARY 10000000 | RESULT OF LOGICAL AND |  |  |

Figure 2
formula $2^{\wedge} C$. The results are then printed on the screen. This short program is the foundation for reversing bit images on the graphics screen.

The complete BASIC program for reversing the graphics image is shown in Listing 3. In order to accomplish the task, each of the 32 bytes in Line 1 of the screen is read, its bit image reversed and the results stored in an array. When all 32 bytes have been read and stored, the array is read backwards and placed back in the row. This procedure continues until all of the 192 rows displayed on the screen have been reversed.

The BASIC program takes about 31 minutes to reverse a PMODE 4 picture, which is quite a long time. So, I wrote a PASCAL version (Listing 4) to accom-
plish the same task in about one minute.
After you've loaded your picture file, run the BASIC version (by entering RUN) or the PASCAL version (by entering EXEC) to reverse the image. When the image has been reversed, load your screen print program and install the special printer ribbon. Once printed, your picture is ready for heat transfer.

The next time you have a family gathering, you can pass out T-shirts decorated with your family crest. Or, your club can design their own logos for hats and shirts.
(Questions or comments may be directed to the author at 14201 Marquette N.E., Albuquerque, NM 87123. Please enclose an SASE when writing for a reply.)

Editor's note: The PASCAL source presented here will work on a CoCo 3 if it is entered and compiled on a CoCo 3. You could use the version of Deft PASCAL for this. However, the binary file which will appear on RAINBOW ON TAPE and RAINBOW ON DISK this month was compiled on a CoCo 2 and will not run on a CoCo 3.

## "I cannot dmagine the CoCo 3 without ADOS-3;

 it would not be a complete machine." The RAINBOW, July 1987You've moved up to a CoCo 3. A powerful new machine. Now, it's time to give BASIC a shot in the arm, with ADOS-3. Wouldn't it be nice to turn on your machine and be greeted by an 80 -column display, in the colors of your choice, with your own custom starfup message? To run routinely at 2 MHz (double speed) without having to slow down for disk and printer operations? This and much, much more is possible with ADOS-3, our CoCo 3 adaptation of the acclaimed original ADOS, which shares the original's virtual $100 \%$ compatibility with commercial software. Atter customizing ADOS-3 using the provided configuring utility, you can have it burned into an EPROM that plugs into the Disk BASIC ROM socket, or just use it in RAM as a disk utillty. (EPROM + burning will cost $\$ 15-20$; we provide information concerning how you can have this done.) Supports double-sided drives ( 35,40 , or 80 tracks). FAST and SLOW commands, auto line number prompts, RUNM command, keystroke macros, arrow-key scroll through BASiC programs, auto-edit of error line, and many more valuable features.
"ON A SCALE OF 1 TO 10, I RATE ADOS-3 A SOLID 15." RAINBOW, $7 / 87$

## Software

## Kung-Fu Dude Combat Evil With Karate Action

I hate to mention this fact, but we in the CoCo Community have been living with a serious software void for the past several years. Every other type of computer has had this particular type of software, but we, the CoCo users of America, have had to hide our faces in shame because of this great deficiency. But no longer!
What we have been missing is a great Kung Fu-type arcade game. But Glen Dahlgren of Sundog Systems has come to every CoCo owner's rescue. He has given us Kung-Fu Dude. We now have our own great karate arcade game.

With a 64 K CoCo , one disk drive and a joystick, you learn that you were born to the royal house of Kilachi and that as a child you were foreordained to destroy the dark temple of evil that ruled the land of your birth. To carry out this life mission, your parents sent you far away to the Orient to learn the ancient mysteries of Kung Fu. Later, you learned that the evil rulers of the dark temple had your parents killed because they refused to reveal your location.

After 19 years of study, you learn that the dark temple has kidnapped your
prearranged mate, Princess Trinsim. You decide that now the time has come to seek the destruction of the dreaded dark temple. When you return to your land of birth, you discover that the temple has been moved to a secret location in New York!

Boarding a flight to New York, you soon arrive and begin your search for the evil rulers of the dark temple. Your starting point is the dock area of New York. Almost as soon as you begin your search, you are besieged by hordes of evil henchmen from the dreaded temple. You must call on every skill you have learned of the ancient art of Kung Fu. It is at the New York dock area that the hunt begins.
I had only two problems with KungFu Dude. The first stems from the fact that my 9 -year-old son, the "Hi-Tech Kid," got the game and the CoCo before I did. After several hours of threats, promises and bribery, I was finally able
to regain control of my CoCo (bear in mind that he does have a CoCo of his own, but for some reason would prefer to pound away at Dad's). The net effect of this problem was that he had run up the high scores and it took me days to even make the high score list, let alone beat him. I'm not saying the game is easy by any means, just that he is tough.
The second problem I had with the program (one I have with all programs) was that it is copy-protected. I realize there are many who feel this is a necessary evil in order to prevent software piracy. However, I feel that it does work a decided disadvantage to the legitimate user, as there is no provision for making a working backup copy. I have been using personal computers for over 10 years now and I have seen more than my share of crashed disks, so the first thing I always do, after making sure a program works, is to make a working backup copy for everyday use and store the original away for safekeeping. You cannot do this with Kung-Fu Dude.
In all fairness, I must state that Sundog Systems does offer a limited one-year warranty on the program, guaranteeing that the disk will load or they will replace it free. This is certainly much fairer than those companies offering only a 30 -, 60 - or 90 -day warranty.

Kung-Fu Dude is well-written in 100 percent machine language and is a challenge. After several weeks of use, I still haven't made it to the dark temple.

The graphics in the program are done in artifacted colors. And while the program does run on a CoCo 3, you must use a color composite monitor or color TV set. (On an RGB monitor, all you get are black and white stripes.) The program takes advantage of the high speed mode of the CoCo 3 . In fact, once the program boots up, you are asked if you want to play in the CoCo 3 high speed mode. Don't try this with a CoCo 1 or 2 or, as the Kung-Fu Dude author puts it, "The video will attempt to fry itself."

If you are playing on a CoCo 3 , I suggest you follow the author's further recommendation of playing the game at the slower speed the first few times to get the feel of the game. The high speed mode makes this mode look like slow motion. And you are going to need every advantage you can get to survive in Kung-Fu Dude.

You control the Dude with your joystick. There is a set of moves that occurs with the firebutton on, and another set of moves that occurs with the firebutton off. Sometimes it is hard
to keep track of which is which. To assist you in helping to remember which move goes with which direction and firebutton position in Kung-Fu Dude and other games like it that use complicated joystick movement, I would like to pass on a little tip that has helped out quite a bit in the Armstrong household.
We use a small 3-by-3-inch square notepad of paper that you can tear off and stick to any surface, and draw a small circle on it to represent the control radius of the joystick. Then we mark the positions of the joystick as they relate to the various movements in the game, noting what movement each joystick position causes. In the case of Kung-Fu Dude, we made two such diagrams one for firebutton-on movements and one for firebutton-off movements. Because these stick-on notes can be removed and replaced many times, we store them with the instructions to the particular game. Then when we decide
to play that particular game, we simply take them out and stick them near the face of the computer screen for quick reference. It is a real help.

Notwithstanding the fact that the program is copy-protected and the HiTech Kid makes it tough for his old Dad to catch up with him, I highly recommend Kung-Fu Dude. It is not a game that you will master easily, so it is one that you'll be playing for a long time to come. And if complexity and challenge are a criteria of worth, you'll certainly get your money's worth on this one.
Now the CoCo karate game gap has been filled, and Kung-Fu Dude does it excellently: CoCo users of America, hold your heads up high!
(Sundog Systems, 21 Edinburg Drive, Pittsburg, PA 15235, 412-372-5674; \$24.95: First product review for this company appearing in the rainbow.)

- Kerry Armstrong

## Software <br> CoCo $1,2 \& 3$

## Disklock - <br> Put a Padlock on Your Data

Having just read a novel about a criminal who kept a journal of his misdeeds on a disk (alas, not a CoCo ) and was caught because of it, I looked forward to reviewing Disklock by Brian Rodia. Computer security has become a very important issue in the last few years, and even though the criminal aspect is not what RAINBOW readers are interested in, most computer users have some files they would like to keep private.
Disklock and its manual come on an unprotected disk. That means you must have a printer and a word processor to print out the instructions. The manual was written with VIP Writer but doesn't cause any problems, even with Scripsit. If you don't have a printer but have ADOS, the manual can be read on the screen using the SCAN command.

The purpose of the program is to deny anyone but yourself information from your disk files. It does this very well. The author states he has had Disklock tested for some time and no one has been able to break the protection. I made a nominal effort to disable
it using a disk zapper and wasn't successful, even though it was obvious the program writes code to the first two sectors of Track 17.

The program is very simple to operate. Put the disk in Drive 0, type LDADM DISKLOCK and at the OK prompt type EXEC. Then remove Disklock and place any disk in Drive 0 and press ENTER. You are given the status of the disk, locked or unlocked, and prompted for a password. When you are returned to the title screen, pressing break returns you to BASIC.

When you type in a password to unlock a disk, the characters are masked on the screen so as not to make it apparent to kibitzers. If you lock a disk and then issue a DIR command from BASIC, all you get is LDCKED! If you try to unlock a disk without the password, you get three tries and, if unsuccessful, are thrown back to BASIC. A password can be up to 14 characters long, allowing the user a lot of latitude for exotic combinations.

As it is, I think Disklock is a valuable utility if you need the security it provides. Brian Rodia is issuing it as a shareware program, so payment is whatever you feel it's worth. It is advertised to work on all three Color Computers. I tested it on both the CoCo 2 and 3 and the performance was identical.

The only criticism that could be made is that there are no screen prompts and no provision is made for multiple drive
operation. Considering the simplicity and price of this program, that may be the ultimate in nitpicking. The last caveat, which the author stresses, is don't accidentally lock your Disklock disk unless you have a backup!
(Brian J. Rodia, 6593 Redcoach Ln., Reynoldsburg, $0 H$ 43065, 614-868-0216; Shareware: First product review for this company appearing in the rainbow.)

## Software <br> CoCo 1, 2 \& 3 OS-9

## Robot Odyssey Adventures in Robotropolis

You have fallen into Robotropolis, an underground city populated by robots. Your mission is to escape back to civilization, with a little help from the robots. Robot Odyssey combines a fivelevel Adventure game with a set of problem-solving tutorials designed to help you complete the journey. This is not your typical Adventure game. Plan on spending weeks (if not months) completing this one. Fortunately, games can and should be saved as you go along.

Section One involves a robot anatomy course, which takes about 20 to 30 minutes to complete. The player gets a detailed look at how robots behave and what equipment they have. This knowledge helps get you through Level 1 . Before moving on to the next level, it's necessary to learn about wiring and robot circuits. In the higher levels of the game, learning chip design and doing some experimentation is essential for success.

The Learning Company has gained a reputation for developing excellent educational software, and this program is no exception. Contained within the program is a mini-course in electronic engineering, design and problemsolving skills. In a way, it's a logical sequel to Rocky's Boots, an earlier program they developed. If you aren't acquainted with Rocky's Boots, I'd suggest that you start with it first. Not only will the experience be fun and educational, it will help you with Robot Odyssey.

This program is a natural for teachers who want to teach problem-solving or the Scientific Method. The Learning Company has additional classroom materials available to accompany the program. Vocational, electronics and electrical engineering instructors should also look closely at its possibilities. It would make an excellent introductory project.

Recommended age for this Adventure is 13 and up. I agree. The tutorials are deceptively easy, but looking at the program as a whole can be a mindboggling experience that would be better handled by teens and adults. The tasks become increasingly more complex at the higher levels of the game. To make things more interesting, obstacles such as power-sucking 'Ampire bots and invisible mine fields appear. There are so many variations in Robot Odyssey that it can be used over and over again, which is a definite plus for both home and school use.

The graphics are excellent, the educational goals sound, but some aspects of the 70 -page manual bugged me. It has directions for the IBM PC and Apple, along with the CoCo . When reading for information, you have to wade through three different sets of commands to figure out how to perform a particular operation. I would gladly pay extra to
have a separate Color Computer version. Also, it is interesting to note that certain "extra" sections, such as a Robotropolis Preview and Robot Teamwork were conspicuously absent from the CoCo version of the program.

Robot Odyssey is designed primarily for the CoCol or 2 , and uses artifact colors that don't show up on the CoCo 3 when used with an RGB monitor. CoCo 3 users need a composite monitor or TV to take advantage of the color capabilities. I hope The Learning Company will consider adding an RGB/ composite option on start-up like some of the newer OS-9 software that is currently available.

Robot Odyssey deserves an ' $A$ ' for both its novel approach and educational value. Although the manual is a bit awkward in some respects, it is obvious that the authors put a lot of care and planning into the program itself. I'm glad that excellent software such as this, once only available for the Apple and PC Compatibles, is now available for the Color Computer.
(The Learning Company, 6493 Kaiser Drive, Fremont, CA 94555, \$49.95. A vailable in Radio Shack stores nationwide)

## Color Max 3 Font Editor - Add Characters to Your Creations

Color Max 3 Font Editor is a useful addition to your ColorMax 3 package. With this program, you can load various print fonts into your Color Max 3 creations, then edit them or create custom ones to suit your own tastes.

Color Max 3 Font Editor was written by Eric A. Wolf. It requires a 128 K CoCo 3, a disk drive, and a joystick or mouse. The program is loaded in with a simple BASIC loader that calls the main machine language program. The disk is not copy-protected, so backup copies for your own use are not a problem.
After loading the program and answering prompts concerning RGB or composite monitors and type of joystick in use, you are presented with the main operating screen. This screen consists of a grid and a point-and-shoot menu that allows you to examine each character in detail or to modify it.

At the bottom of the menu is a number that ranges from 032 to 127 representing the ASCII value of the character. This number is toggled with the joystick or mouse firebutton to select the character you want to examine or modify. The view font option allows you to see all the characters of a particular font at the same time. The disk contains the following fonts: Crystal, Downhill, Film, Glyphic, Old English and Stripe.
Glyphic is a neat collection of 70 small pictures and symbols that can be added for some nice effects with Color Max 3 pictures. Downhill has a slanted effect, and Crystal looks like the LCD characters on your wrist watch. The Film font looks like the standard block letters, except they are in negative form and have little sprocket holes at the top and bottom of each character font frame. The others speak for themselves and are equally well done.
The fonts can be edited or new ones created by simply clicking the firebutton at the cursor position pointed to by the movable arrow. The grid is done in typical "fat bit" style, providing the opportunity to easily modify or create special characters and symbols.

A second disk containing 11 other
fonts is available for $\$ 19.95$. The fonts contained on this disk include Lined, USA, Cameo, Potted, July 4, Bells, Roadsign, ASCII-SM, Tech-Lg, Banner and Large.

Color Max 3 Font Editor is a good program and is sure to enhance Color Max 3. I found it both easy and fun to use.
(Spectrum Projects Inc., P.O. Box 264, Howard Beach, NY 11414, 718-835-1344; $\$ 29.95$ plus $\$ 3 \mathrm{~S} / \mathrm{H}$ )

- Jerry Semones

## Software

## Currillian Cruiser The World's Last Hope

"The year was 2584 . Four hundred seventy-two years after the unification of the Earth-born galaxies. The largest and most terrible war was just beginning to dawn, a war with little warning and relentless fighting. Many people lost their lives, whole planets were shredded without the Earth-men ever having a hint what had or could have done something of this magnitude. This is the tale of the Skirum War and the Currillian Cruiser."

You are the sole pilot of the ship and the last hope for Earth. In your journey to complete the defense systems of the Currillian Cruiser, you will travel to distant planets and encounter many enemies. While traveling to the planets Elleval, Ita-Falac, Scmea, Denrael and Alpha Centuri you fly head-on into a hazardous meteor shower, face merciless unmanned Skirum interceptor attack vehicles, and enter the hulls of military and scientific research vessels to obtain a missing weapon system, a fission laser system, warheads and a guidance system.

Currillian Cruiser is an arcade-type Adventure game that has good game play and a brilliantly written scenario.
The copy-protected disk comes with a four-page manual featuring a detailed drawing of the Currillian Cruiser on the front. The second page of the manual contains information on loading, playing (a note to remove the disk during game play since the computer accesses the disk many times) and saving the game. The last two pages give the story of Currillian Cruiser.

The game can be used on a Color Computer 1, 2 or 3 and requires a joystick. I recommend a self-centering joystick since you must make fast and difficult maneuvers during most of the game.

Currillian Cruiser has some nice features. The main menu has options to start the game, go to the title screen, see the high scores and quit the game, which requires you to shut off the computer.
After choosing the start game option, you are prompted to type in your name for a new game or to choose a number from one of the maximum nine game saves. The high score screen lists up to 12 scores. In this game, scoring goes by the number of the board you survived through. Between boards, you are prompted with options to continue to the next board, save the game or quit the current game.
The PMODE graphics come out in

## Software

CoCo 1, 2 \& 3

## Master Disk Catalogs Your Disks

Master Disk is a disk cataloging program that works on any version of the CoCo having at least 32 K . The program is written in BASIC and is not copy-protected. Master Disk works with a single disk drive and, therefore, may be of interest to beginners.

Master Disk is very colorful and, I might add, somewhat noisy. I mention this only because while the program is well-structured, the continued call to the sound subroutines does slow down overall program execution speed.

Master Disk is menu-driven and very easy to use. A single page of instructions comes with the disk, but the program contains onscreen help. You can create, sort, print and save to disk up to 18 disk directories with up to 250 program names in each directory. This provides a sufficient number of disk categories for most users, and with 250 program names in each category, the program will handle most CoCo user applications.

Master Disk lets you look at all entries by a specific searched-for name, or an entire disk directory. In addition to saving and displaying program names and extensions, the name of the disk containing the program is saved and displayed. This name is assigned by the user and is limited to nine characters.

This offering from Bob's Software is worthy of your consideration. The price won't make a big dent in your wallet and you can put Master Disk to practical use organizing your disks.
(Bob's Software, P.O. Box 391, Cleveland, OH 44107, 216-871-8858; \$15 plus $\$ 2 \mathrm{~S} / \mathrm{H}$ )

CoCo $1,2 \& 3$

## CAIS - <br> Check Account Information System

I used to have a pathological hatred of the simple act of balancing my checkbook. It's not that I was afraid of the work, I just didn't like to spend the time doing it. Now the hard part is done for me, thanks to CAIS.

CAIS stands for Check Account Information System. And before you let fly that groan of, "Oh no, another checkbook program!" let me tell you that CAIS is not run-of-the-mill. It is a fast, simple, accurate and yet very detailed way of handling up to eight different accounts.

CAIS was written for the disk-based CoCo 1, 2 and 3 using RS-DOS l.I. I used ADOS-3 and had no problems with any functions.

The only command to remember is the one that starts the program (RUN "CAI5.BAS"). After that, there are extensive onscreen prompts, as well as full menus wherever possible. On startup, all you need to do is enter the current date, and the main menu appears.

The first time you use this program, you will need to define the account information. This is where you enter the name of the bank, account type (regular or interest-bearing), what drive you want the information stored on, and the account number and balance. And for once, here is a program that stores your number exactly as you enter it - regardless of how many digits it contains. This has been a problem with every other checking program I have seen.

You may continue to enter information about other accounts you want to track. I have three checking accounts (one account for my wife, one for me and one for business). As I wanted to use the program as much as possible, 1 also added my two savings accounts to the batch.

After you have entered this information (along with the account balance the program tracks each account individually), you may either edit the information or return to the main menu to begin the processing.

When you select an item from the main menu other than the account control (the setup option), you are presented with another menu to help you select which account you want to access. Your other main menu choices are Post Account, Reconcile (balance) Account, Display Account, Print Account, Purge Account History and Exit.
Post Account means just what the name implies. This option allows you to make deposits, debit the account, and otherwise manipulate the figures. And

## Vidicom Corp's Cocoworks Group Proudly Presents Solld

[^9]for each expense or credit, an option is given to apply the amount to an expense category you previously defined (up to 36 definitions per account). I said before how easy it was to use this program to track savings, as well - all I did was define a category as "Withdrawal" and one as "Deposit." I used the "Payable to" field to explain the transaction.

Flexibility is the key in posting transactions. You may enter codes for deposit, checks (it keeps track of the numbers, unless you override it), ATM withdrawals and any automatic deposits/withdrawals you care to define. The autos use the date you enter both at the beginning of the program and in the definition of the automatic transaction to make the change at the appropriate
time. And it notifies you of that change. This is a real "set and forget" feature.

Reconcile Account provides a detailed balance report with a minimum of work on your part. Pick a starting check number, and the program steps through each transaction with you to see if the statement covers it. If not, the information is added to the stack and the selection process continues.

When presented with the balance, all you need to do is compare it with the bank's statement. If it is not correct, press BREAK and research the problem. If it is correct, you may then print the statement. The cleared transactions are moved to a history file, and you may then print the updated check register or return to the main menu.

Visa \& MasterCard
within the continental U.S.

Display Account and Print Account are essentially the same. One shows the information onscreen only, and the other prints both to the screen and the printer (the baud rate you want is poked in for you, since you set this option way back at the beginning). At this point, you can literally see any combination of information needed either between two dates, or from all the information on file.

The final option is Purge Account History. Here is where you can delete older information by date. All you do is enter the beginning and ending dates, and all information between those dates is purged. The rest remains intact. If you print a copy of the file before you purge, you can save disk space and still have the information handy.

The manual that comes with the program is very detailed and extremely easy to follow. It is laid out in the same order as the main menu. Each option is explained in depth, and the information necessary to use each option is readily available on that page. The only other thing I would like to have seen is one page devoted to the one-letter codes used throughout the program ( $\mathrm{D}=$ Deposit, C=Check, etc.). Then I could set this page next to my CoCo and get into high gear.
The nice thing about CAIS is that one version fits all. It doesn't matter whether you have a CoCo I or 3, one disk drive or two, or even whether you have a printer. The program is flexible enough to handle whatever system you have. The manual (70 pages) tells you how to configure to your system, all within the program (no editing required).

Overall, CAIS performs well beyond the advertised limits. I found it both easy to use and flexible enough to handle whatever my financial situation required. The manual is detailed without being dry. And the price is low enough to put it within reach of virtually anyone. In short, if you have a checking or savings account, CAIS should be in your library.
(After Five Software, P.O. Box 210975, Columbia, SC 29221, 803-788-5995; $\$ 34.95$ plus $\$ 3 \mathrm{~S} / \mathrm{H}$ )

## Software

## Video Cards/Keno - Play the Odds

Video poker machines are found in a lot of places outside of Nevada where gambling on them is legal. In some areas they are regular fixtures in local bars and lounges. For some, they are a kind of adult video game. For others, they are another opportunity to gamble. If you play them or if you have always wanted to, Video Cards/Keno from Tom Mix Software may be for you.

Video Cards / Keno is designed for the Color Computer 3 with disk drive. The instructions are simple and the disk loads easily. After a title page the screen presents a menu. Your choices are Poker, Joker's Wild, Blackjack, Keno and Quit. After you make a choice, the screen asks if you are using a composite or RGB monitor. The next screen asks the number of credits you want to start with, and then your game begins with a prompt asking you how much you want to bet. You bet and the cards are dealt. (Or, in Keno, the numbers are chosen.) If you win, your credits are increased. Unless your credits are down to zero, you again return to the bet prompt. You can play as long as you have credits to bet. (If you do run out of credits, you can always get more.)

Poker and joker poker are fun to play. (The difference between the two games, for those unfamiliar with poker machines, is that the deck used in joker poker contains a joker that can be used as a wild card. Because it is easier to draw a winning hand, the payoffs are reduced.) As with the real machines, the deck is stacked against you. Payoffs do not reflect the true odds - the longer you play, the more likely you will lose. Trying to overcome the laws of probability can be enjoyable and maybe even educational.

I found blackjack to be even more fun. (I find that competing against someone, even if it's the computer as dealer, makes a game more interesting.) The game is not much different from the game played in a casino. Thus, learning the right blackjack moves can significantly reduce the computer's advantage. The blackjack game was fast and entertaining.

Keno allows you to pick numbers from 1 to 80 and then the computer chooses the winning numbers. Payoffs are based upon how many numbers match. (State lotto-type games work in a similar fashion.) Keno/lotto games have never fascinated me. Predictably, I found this game to be the least interesting of the games.

This package has two strong points to recommend it. The first is its outstanding graphics. Each program makes use of the Color Computer 3's added graphics capabilities. I own other programs that use playing cards in the program. In terms of resolution, Video Cards/ Keno is the best.

Sccondly, I liked the speed of the programs - cards are dealt and results
are computed very quickly. Additionally, each game allows for a maximum bet key that saves the time of pressing the C (for coin) key over and over again.

If I could have asked for more from

## Color Math Reinforces Math Skills

Color Math is an educational program that lets your child practice the four basic math skills (addition, subtraction, multiplication, division) he or she is learning at school. It requires at least 16 K and a cassette recorder.
The option screen allows you to choose one of the two options in that part of the program (each part has either addition and subtraction, or multiplication and division). You then choose the maximum number of programs the child will practice, and then select one of the four options: Placement, Lessons, Tests or Change maximum problems.
The first option allows you to find the most appropriate skill lesson for your child to start his or her lessons. The second option uses skill building to increase math skills and has automatic promotion as each lesson is mastered. The third option tests your child on any lesson in the program to evaluate proficiency at that level. The fourth option allows you to change the number of problems that your child will do.
After you choose the option you want, the child starts working the problems. The addition/subtraction lessons have 70 different mastery levels, the multiplication has 50 mastery levels, and the division has 37 mastery levels.
In the early mastery levels, the child is shown when to carry or borrow numbers, and in the higher levels the child can use the letters ' C ' or ' B ' to perform these functions. In addition and subtraction, the child has two chances to answer a question correctly.

After the second try, the correct answer appears, and the problem is repeated until it is solved correctly. In multiplication and division, the computer checks each digit as it is typed. The child gets two opportunities to enter each number correctly. If both tries are wrong, the correct digit appears and the cursor moves to the next digit. After each lesson is completed, you see the report screen, which shows if the child is promoted to the next level or demoted to the previous level.

Color Math is a good program. It not only helps the child to improve his/her math skills, but provides the needed reinforcement of those skills. This is also a good program if you want to monitor your child's progress as he or she goes through each lesson.
(Tandy Corporation, 1700 One Tandy Center, Ft. Worth, TX 76102; \$19.95. Available in Radio Shack stores nationwide.)

## Software

CoCo 3

## Backup Lightning Faster Than A Speeding MS-DOS

Backup Lightning is a handy utility for the 512 K equipped Color Computer 3. As the program name implies, this software is used to duplicate disks.

In developing Backup Lightning, Color Venture has made full use of the capabilities of the 512 K CoCo 3 . It will copy 35 -, 40 - or 80 -track disks. The entire disk is copied into memory as a
first step, then duplicates are written as requested. Both RS-DOS and OS-9 format disks are copied with ease. The speed at which the duplication is done is remarkable.
Using Backup Lightning is as simple as typing LOADM "BACKUP" and answering a few prompts. The user can then load a previously saved configuration or may choose to input the few pieces of data needed for a new configuration. One- or two-sided drives may be selected. Drive speed may be maximized up to 6 ms and up to four drives ( $0, \mathrm{I}$, 2,3 ) are supported.
The display screen keeps the user informed of what the parameters selected are, and what is currently going on. The program name and copyright information appear at the top. Just below that, a configuration screen displays the parameters (number of sides and drive designations for read and write, setup rate, etc.) currently being used. A menu/status area occupies the major portion of the screen, telling the user what actions are taking place. Along the bottom of the screen is a help message area.
I had no difficulty at all in duplicating either RS-DOS or OS-9 disks, with either formatted or non-formatted target disks. As a believer in the precaution of backing up all of my software, I found the program invaluable. Copyprotected software, however, cannot be duplicated with Backup Lightning.
If you have a 512 K CoCo 3 and want to protect yourself from disk crashes, Backup Lightning is a very handy tool and an excellent value.

# Education Breakthrough 

## New interactive CoCo software makes learning easy,

 fun. Kids love it!NEW LOW PRICE - 16 lessons for the price of 8! Educational Software for kids from 6 to 18.

Parents are depending more and more on supplemental education for their children. Educators know that the most effective teaching is done one-to-one. Through individual attention and self-paced progress, students learn more and retain more.

## BETTER THAN A PRIVATE TUTOR

The Compass Education Software LOOK/ LISTEN/LEARN approach is the next best thing to a private tutor. Unlike other educational software the Compass Library also talks to the student - not in synthesized speech, but in a real human voice. With on-screen textual information and attention-getting graphics, students of all ages actually enjoy learning!

## SELF-PACED FOR BETTER RETENTION

The lessons advance only after the student has correctly answered the questions throughout the programs assuring that the material has been thoroughly absorbed.

## SIMPLE EQUIPMENT REQUIREMENTS

All you need is the TRS-80* Color Computer (any model), computer cassette recorder and TV set. Once the cassette is loaded you need only enter two simple commands . . . and then press any key to start the lesson.

Of course you can stop the lesson at any point to study information on the screen. Just push the pause button on the cassette player. Push it again and lesson resumes.

To answer questions throughout the lesson simply press the appropriate number on the computer keyboard, type in the correct answer, or follow other easy instructions. And to go back and review, just rewind the cassette. It's that simple.

## CHOOSE FROM 9 SUBJECTS

There is not sufficient space in this advertisement to list all lesson titles, but here is a sample:

## MATHEMATICS

In today's advanced, HiTech world, understanding and working with numbers is essential. Compass has developed three comprehensive series of math programs. From basic numerals for the very young, to algebra and higher mathematics for the older child. In between, there are programs for everything from addition and subtraction to practical everyday percentage problems.
*TRS-80 is a registered trademark of The Tandy Corporation.

MF 1 - Numerator, denominator, bar
MF 2 - Multiplication of fractions
MF 3 - Factors and prime numbers
MF 4 - Reducing fractions, reciprocals
MF 5 - Reducing fractions, lowest terms
MF 6 - Proper fractions, mixed numbers
MF 7 - Multiplication-division of fractions
MF 8 - Addition-subtraction of fractions
MF 9 - Addition of mixed numbers
MF 10 - Changing fractions to decimals
MF 11 - Converting decimal numbers
MF 12 - Word problems using percents
MF 13 - Additional problems using percents
MF 14 - Word problems using percents
MF 15 - Finding circle area using pi
MF 16 - Using a ruler to measure fractions

 SCIENCE/PHYSICSFor all grades
Sixteen lessons: SP-1 to 16

## HISTORY AMERICAN HISTORY

For grades 4 to 12
Sixteen lessons: AH-1 to 16

So there it is . . . no-nonsense subject matter presented in a way that maximizes understanding and retention.

## SPECIAL PRICING

YORK 10 is now offering, for a limited time, a complete set in any subject, 16 cassettes, one lesson on each cassette, for only $\$ 49.95$. We originally offered only 8 cassettes for the same amount so now it's twice the value. The same 16 cassettes are sold elsewhere for over $\$ 150$.

To order, send your check or money order for $\$ 49.95$ (CA residents add sales tax) for each subject you wish, plus $\$ 3.50$ shipping and handling (any quantity). For immediate shipment, call collect the number below and charge your VISA or MASTERCARD.

#### Abstract

The following products have recently been received by THE RAINBOW, examined by our magazine staff and issued the Rainbow Seal of Certification, your assurance that we have seen the product and have ascertained that it is what it purports to be.

CCRAM, a software-only implementation of a RAM disk. The program requires OS-9 Level I Version 2, 512 K and single disk drive. For the CoCo 3. Dime-A-Byte, 116 Webster Avenue, Bangor, ME 04401, (207) 942-0739; \$28 plus \$2 S/ H.

Chemistry Tutor, an educational learning aid for high school or college level chemistry principles. Text lessons are combined with high resolution graphics. For the CoCo 1 and 2. A to $Z$ Unlimited, 901 Ferndale Boulevard, High Point, NC 27260, (919) 882-6255; $\$ 42$ plus $\$ 3$ S/H.

CoCo Max III, a graphics drawing system with animation and color sequencing. Includes Hi-Res interface for your mouse or joystick, CoCo Max III disk and several utilities. For the CoCo 3. Colorware, 242-W West Avenue, Darien, CT 06820, (800) 221-0916; \$79.95.

Grand Prix Challenge, a high-speed racing game that lets you compete against the computer or a friend. Includes detailed 320 -by- 200 graph-ics, realistic driving conditions and different race tracks. For the CoCo 3. Diecom Products, Inc., 6715 Fifth Line, Milton, Ontario, Canada L9T 2X8, (416) 878-8358; $\$ 28.95$ U.S.; $\$ 38.95$ Cdn.

Lightning RAM Disk, a utility for your 512 K CoCo 3 that allows the simultaneous use of up to four mechanical drives and two RAM drives. Dr. Preble's Programs, 6540 Outer Loop, Louisville, KY 40228, 502-969-1818; \$19.95.

MPI-CoCo Locking Plate, an accessory that protects your CoCo 3 and multipack interface. Installs on the bottom of both units and prevents bumping of the multipack interface from the ROM slot of
your CoCo. For the CoCo 3. Gimmesoft, P.O. Box 421, Perry Hall, MD 21128, (301) 256-7558; \$9.95.

Printer Lightning, a ColorVenture print spooler which gives a 44 K print buffer from a 128 K CoCo and up to 438 K from a $512 \mathrm{~K} \mathrm{CoCo}$. Owl-Ware, P.O. Box 116 A, Mertztown, PA 19539, 800-245-6228; in Penn., 215-682-6855; \$19.95.

The Rat Graphic Design Package, a graphics program that supports 320 -by200 Hi -Res graphics made with a 16-color, user-definable palette. The package is complete with screen print routines, a mouse and mouse pad. For the CoCo 3. Diecom Products, Inc., 6715 Fifth Line, Milton, Ontario, Canada L9T 2 X8, (416) 878-8358; $\$ 69.95$ U.S.; $\$ 99.95$ Cdn.

Sixdrive, Version 1.0 A , a machine language utility that modifies Disk Extended BASIC 1.0 or 1.1, FKEYS III, or ADOS to allow the use of three double-sided drives as six single-sided drives. For the CoCo 1, 2 and 3. Gimmesoft, P.O. Box 421, Perry Hall, MD 21128, (301) 2567558; $\$ 16.95$.

Super-Graphics 16, a graphics program that lets you create art using every color of the rainbow. Draw and paint lines, boxes, circles, etc., and make a printed copy with a Radio Shack DMP-105 or similar dot matrix printer. For the CoCo 1, 2 and 3. E.Z. Friendly Software, Hutton and Orchard Streets, Rhinecliff, NY 12574, (914) 876-3935; $\$ 16$ plus $\$ 1.50$ S/ $H$.

TX-80, a printer page editor with 5,280 print positions. The program allows global editing and uses a WYSIWYG format. For the CoCo 3. Kolesar B/S, 7 Ladd Road, Westfield, PA 16950, (814) 367-5384; \$39.95 plus \$2 S/H.

TEXTFORM, a menu-driven program designed to format ASCII text files into two-column format. Output may be directed to either a printer or disk file. For the CoCo 1, 2 and 3. R.A.D. Products, 194 Hotchkiss Street, Jamestown, NY 14701, (716) 665-2124; $\$ 34.95$.

First product received from this company

The Seal of Cerification program is open to all manufacturers of products for the Tandy Color Computer, regardless of whether they advertise in THE RAINBOW.

By awarding a Seal, the magazine certifies the product does exist - that we have examined it and have a sample copy - but this does not constitute any guarantee of satisfaction. As soon as possible, these hardware or software items will be forwarded to THE RAINBOW reviewers for evaluation.

- Judi Hutchinson

# OWT-WARE <br> Proven Technology New CoCo 3 Utilities <br> Great for 512K Systems! From Color Venture and OWL-WARE 

## PRINTER LIGHTNING

A great print spooler which gives you 44 K print buffer from a 128 K CoCo and up to 438 K ( 200 pages!) from a 512 K CoCo. With this spooler you can run a program while you are printing a file. The spooler does not slow down the computer to any noticeable extent while you are running a second program and no lost characters arise. Baud rates selectable. Printer Lightning can reside in memory along with RAMDISK!

## -NEW.NEW.

## RAMDISK

Using 512 K CoCo 3 you have access to 2 additional disk drives in RAM. All disk commands are supported, and the data are Reset button protected. You can now have up to 5 disk drive capacities on line at once and can assign the ram disks to any drive number. By making the ramdisk Drive 0, all programs which require a lot of drive access will run much faster. You can have the RAMDISK in memory at the same time as the Printer Lightning!

## BACKUP LIGHTNING

This program is the fastest way to make backup copies of your files using a 512 K CoCo. You can backup 35, 40, or 80 track disks single or double sided. Both RS and OS-9 disks may be backed up. The original disk is saved to memory and a copy can be made on an unformatted disk every 45 seconds! The lightning read, write, format, and verify routines that were developed make this program much quicker that RSDOS or OS-9 for backups. This will become one of your most used programs!

Announcing:
The finest graphics/drawing program for the COCO 3 !

## Da Vinci 3

- 16 colors on screen at one time - Modify each color from 64 available colors - Use composite or RGB monitor - Draw with custom paintbrushes
- Full resolution $320 \times 192$
- Picture converter for conversion of COCO 2 pictures to $\mathrm{COCO}_{3}$
- Multiple text fonts
- Accepts input from joystick, X-pad, mouse, or touch-pad
- Boxes, circles, line, paint generation
- Screen dump for Tandy mono and color ink-jet printers, (NX-10 and others pending)
- Sensible price
- No additional hardware required because of course/fine joystick movement modes
- Zoom mode for individual pixel editing
- Great on screen menu which is removable at the touch of a key to allow full screen edit

128 K or 512 K COCO 3
\$37.95

## Super I/O Board for OS-9

Each Board Provides 2 Serial Ports and Centronics Parallel Port First Board has Real Time Clock and Beeper... With Second Board up to 5 Users
The serial ports are usable up to $\mathbf{1 9 , 2 0 0}$ Baud, and the parallel port is a true Centronics standard. Plug into your multi-pak. On CoCo 3, multi-pak must be upgraded. You will have a multi-user system with additional computers or terminals plugged into the serial ports. An OWL hard drive and 512 K upgrade are stronglv recommended for multi-user systems.
mato pico... $\$ 165$.

## Proven Technology

## On the Razor"s Edge of the Color Computer Frontier

## OS-9 Hard Drive Systems

## Proven Performance for Demanding Home or Business Use Drive Access is at Least 8 Times Faster than Floppy Drives Control up to 2 Drives per Controller each as Continuous Storage

Every hard drive system is complete with software hard drive, controller, heavy-duty power supply, and LR Tech Interface. When a complete drive system is ordered, the drive is fully assembled, tested, and burned in for 3 full days. This ensures dependability and optimum performance.

We have now been supplying CoCo hard drive systems and parts for systems for more than 2 years. This is the longest history in the CoCo market of any available drive system. About $3 / 4$ of all hard drive systems currently in use in the CoCo market use the LR Tcch/OWL-WARE sysiem. We have reached this position in the COCO hard drive market by providing our customers with a quality product that they (and ive) can be proud to own and use.

## System Prices:

New!
\$759. 40 Meg

A number of drive systems were in the market place when the LR Tech Interface was introduced and 2 have been introduced since. Most of these are no longer available. We provide the only system which provides a combination of standard interfacc (SASI), rugged unit construction (not hacked to a floppy drive controller), high speed, and reasonable price. These systems are even several times faster than the standard XT hard drive system. Ideal for multi-user system because processor does not stop for hard drive access.

Dealer's Inquires Invited!

## Hard Drive Interface <br> (Includes Software)

For those who want to put together their own system, we have an exclusive arrangement to distribute the LR Tech Interface. Please note that an interface is not a controller. A Xebec, WD, or Adaptec SASI controller are required for a drive system.

To assemble a hard drive system yourself requires some reasonable knowledge of OS-9 and electronic construction and a hard drive that works. CoCo 3 users will have to upgrade their Multi-pak.

Only \$119.
Xebec Controller \$139.

## CoCo 3 512K Upgrade

The LR Tech 512 K upgrade uses all gold contacts and 120 nanosecond 256 K chips. Provides large system memory from OS-9 Level 2.
Without
Mem Chips $\$ 59 . \quad$ With
Special! See software offer on previous pag

## Hard Drive Basic

New For the CoCo 3!
In Answer for the Many Reqests to Run BASIC from a Hard Drive

With the development of the CoCo 3, OWL Ware has been able to provide a truly professional Hard Drive System using OS-9. There has not, however, been a method of running your programs from the standard BASIC. With this latest development of the CoCo software aces, it is now possible to partition your hard drive into RSDOS and OS-9 sections. The OS-9 partition runs your OS-9 normally. The RSDOS section is further divided into a number of floppy sized units to run RSDOS programs. The familiar RS disk commands work normally

There is little more that must be learned.
All of these RS drive sections are available at all times. It is not necessary to use assign commands and get access to only a few of these sections. Programs that use RS-BASIC should work as will all programs which do not force their own disk drivers.

Call about prices. This should be availabile by the time you read this ad!

OWL-WARE PHONES
ORDERS
(800) 245-6228 PA (215) 682-6855 TECHNICAL HELP (215) 433-8695 Call for advice

Ask for the WHISPER DRIVE for the finest, quietest drive available! Drive 0 Systems (Full Hgt) 189

Drive 0 systems complete with drive, controller, legal DOS, cable, case \& power supply, and manual.

# Drive 1 Systems (Full Hzt) $\$ 95$. <br> (Half Hgt - DS) 35. 

New! New! (3.5" 720K Drive for OS-9) $\$ 195$.
Drive 1 has drive, case \& power supply, and instructions for use with your drive.

Bonus! Special Bundled Software with Disk Drive Purchase!

## OWL-WARE Software Bundle

## Disk Tutorial - 3 Utillites - 2 Games

## DISK TUTOR Ver. 1.1

Learn how to use your disk drive from this multi-lesson, machine language program. This tutor takes you through your lessons and corrects your mistakes for a quick, painless disk drive intoduction. (This professionally written tutor is easily worth the bundle's total price.)

## OWL DOS

An operating system that gives faster disk access and allows the use of double-sided drives. Corrects a floating point number error on early CoCo systems.
COPY-IT

Quickly copies selected programs between disks. A wild card option selects groups of programs for copy.

> VERIFY

Verifies reading of each sector. Bad sectors are listed on the screen.

## 2 GAMES

We will select 2 games from our stock. These have sold for more than $\$ 20$ each.
If sold separately this is over $\$ 125$ worth of software!!
Do not mistake this software with cheap, non-professional "Public Domain" software which is being offered by others. All of this software is copyrighted and professional in quality. The tutor is unique with us and has helped hundreds of new users learn their disk drive.

> only \$27.95
(or even better) only $\$ 6.95$ with any Disk Drive Purchase!!
the letter he or she pressed "is for" the graphic shown on the screen. For example, when the child presses $A$, the computer says, "You pressed A. A is for airplane. A is for alligator. A is for apple." I attempted to have the program identify the object as closely as possible
to the drawing of the object without rewriting the drawing routines, which were programmed very well by Mrs. Mayeux.

When Regina asks to type on "Daddy's computer," we load the modified program. She still enjoys the color and
immediate feedback of her actions, and she also hears the "robot" speak to her.
(Questions or comments about this modification may be directed to the author at 27 Apple Lane, Commack, NY 11725. Please enclose an SASE when writing for a reply.)

Editor's Note: The modified ABC program will be placed on this month's RAINBOW ON TAPE and RAINBOW ON DISK instead of ABCMRG.

The listing: ABCMRG

## DMC "No Halt" Disk Controller

Did you know?
. that all the older floppy disk controliers for the CoCo completely tie up (and even halt) the 6809 processor during disk reads and writes? No wonder your keyboard is constantly "losing" characters! Or that your serial port often gives you garbage. OS. 9 disk accesses.

Unleash your CoCo's potential!
Our new Dual Mode Controller (DMC) Implements a new "no halt" mode of operation so it can read from or write to disk all by itself. The 6809 is freed to process other tasks and respond to interrupts. This is how OS-9 was meant to run! But the Radio Shack "halt" mode of operation is also retained to maintain full compatibility with existing non-OS-9 software.
Freel Disk caching software included can speed up

2261 East 11th Ave., Vancouver, B.C., Canada V5N $1 Z 7$

Other DMC features:

- works with original $\mathrm{CoCo}, \mathrm{CoCo} 2$, or CoCo 3 (Multl-Pak required)
- no adjustments - all-digital data separator and write precompensation
- gold plated card-edge connectors for reliability
- ROM socket takes 24 pin or 28 pin chip; dual DOS capability - Radio Shack DOS 1.1 ROM installed
- 8K bytes cache memory on board (32K optional)
- D.P. Johnson's SDISK package (specially modified for DMC) is included at no charge ( $\$ 30$ value)
- atuminum case
- fully assembled and tested; 120 day limited warranty

To order: DMC controller with RSDOS 1.1 and SDISK (specify OS-9 Level I or II) $\$ 149.50$ plus $\$ 5$ S/H (\$12 overseas). Add $\$ 16$ for 32 K RAM option. Terms (prices in \$US); check, money order, VISA. U.S.A. orders shipped via UPS from WA state.
(Also ask about our ST-2900 6809 based expandable single board computer)

9 Hi-Res Displays from 58 to 212 columns by 24 lines in 225 Res. Screen Display of Bold, Italic, Underline \& Double Width print. 9 Proportional Character Sets Supported with full Justification. 80 Programmable Function Keys \& Loadable Function key sets. Three Programmable Headers and One Programmable Footer. Automatic Footnote System places lines at the bottom of a page. 7 Tab Commands, with: Center, Left, Right and Decimal align. Autoexecute Startup files for easy printer \& system setup. 8 Pre-Defined \& 10 Programmable printer function commands. Supports Library files for unlimited printing \& configurations. Disk file record access for Mail Merge \& Boiler Plate printing. Complete Automatic Justification, Centering, Flush left \& right. Change indents, margins, line length, etc. anytime in the text. Create and Edit files larger than memory, up to a full disk. ' Easily imbed any number of printer format and control codes. : Compatible with all printers including Laser printers. : Built in Ultra Fast 2 drive RAMDISK for 512K support.
TEXTPRO IV is the most Powerful Word Processing System available for the ZOCO-3, designed for speed, flexability and extensive document processing. It is ot like most of the other word processing programs available for the Color yomputer. If you are looking for a simple word processor to write letters or other hort documents, and never expect to use multiple fonts or proportional printing, hen most likely you'll be better off with one of the other simple word processors. 3ut, if you want a powerful word processor with extensive document formatting eatures to handle large documents, term papers, manuals, complex formatting roblems and letter writing, then TEXTPRO IV is the answer. It works in a otally different way than most word processing programs. It uses simple 2 haracter abbreviations of words or phrases for commands and formatting nformation that you imbed directly in your text. There are over 70 different ormatting commands you can use without ever leaving the text your working on. Chere are no time comsuming and frustrating menu chases, you are in total ontrol at all times. You can display the formatted document on the screen before isingle word is ever printed on your printer. Including margins, headers, footers, sage numbers, page breaks, column formatting, justification, and Bold, Italic, jnderline, Double Width, Superscript and Subscript characters.
TEXTPRO IV can even support LASER PRINTERS with proportional fonts, ake a good look at this AD? It was done with TEXIPRO IV on an OKIDATA ASERLINE- 6 laser printer!!! All of the character sets used on this AD are oroportional, all centering, justification, font selection, and text printing was erformed automatically by TEXTPRO IV.

## What you see is what you get!

TEXTPRO IV has 9 Hi-Resolution screen fonts to choose from, with 58 to 212 tharacters per line in 225 Resolution, for the best display possible. You can easily natch the width of your printed page to the screen and you can have it iutomatically change display widths as you change printer fonts so you can even lisplay the "fine print". All of the screen fonts can display, Bold, Italic, Underline, Superscript, Subscript and Double Width characters. When you you want to see what your printed document will look like, TEXTPRO IV will let you see it on the screen in all its glory, so that, "What you see is what you get".

## Standard Commands

TEXTPRO IV has all the document formatting commands you expect in a word processor and then some. The setup commands include: line length, top nargin, bottom margin, page length, page numbering on/off, page format on/off, zutomatic word fill on/off and justification left, center, right or full. Some of the Vertical control features include: Test for a number of lines left on a page, skip to hext page, set page number, page pause, single and multiple line spacing.
TEXIPRO IV features 3 programmable Header lines that can be centered, left or right justified and one programmable Footer line. There are 3 commands for continious, single and paragraph indenting, Center Text, Center Line and Right Iustify text with character fill.

## Printer \& Special Commands

TEXTPRO IV has 8 pre-defined printer \& screen commands for Bold, Italic, Double Width, Underline, Subscript, Superscript, Condensed and Double Strike print. It also has 10 programmable functions that you can use to access intelligent printer features like: Graphics, variable line spacing, half line feed, horizontal \& vertical positioning. There are also 3 other printer commands that allow you to mbed control code sequences anywhere in the text.
There is a Footnote command that will automatically place footnotes at the pottom of the page. Another command allows you to display a message on the screen and input text from the keyboard, to be included in your printed document. There is also a repeat command that allows you to repeat an entire document or part of one, up to 255 times.

## Tab Functions

TEXTPRO IV features an elaborate system of tab commands for complete control over column formatting. There are 10 programmable tab stops that can be defined and re-detined at any time. They can be used to: Center over Tab column, Right Justify to Tab column, Decimal Align over Tab column, Left Iustify to Tab column (Normal Tab) and Horizontal Tab. They can also be used with a numeric column position for maximum flexibility.

## Proportional Fonts \& Printing

TEXTPRO IV is the only Color Computer III Word Processing system that gives you Justified Proportion Printing, which can give your documents and letters that professional touch that just isn't obtainable with fixed or mono spaced printing. And just about all printers today support proportional fonts, and with Laser Printers you can get typesetting quality output for just pennies a page. TEXTPRO IV supports up to 9 proportional fonts, with full justification. And, you can even mix mono spaced and proportional fonts for maximum flexability. Even if you don't use proportional printing, you can select between Pica, Elite and Condensed fixed width fonts to get fully justified printing.

## Mail Merge and Text Processing Disk Functions

TEXTPRO IV supports several commands that allow you to import data or text from other disk files. They allow you to include information like names and addresses for Mail Merge capability, Import standard paragraphs or other information for Boiler Plate type functions and more. Some of the commands include: Open a file, Field a Record, Read a Record into fielded variables, Read single or multiple lines and Trim spaces from the trailing end of fielded variables.

Another powerful disk function not to be overlooked is the "LIBRARY" command that allows you to include the entire contents of a file in your text. This can be very useful for a great many applications. You can use a Library command to automatically include a standard or optional printer setup command file, or to include standard paragraphs, headers or information created from a spread sheet or any other program. And, for printing very large documents that consist of several files linked together.

## Autoexec Startup Files

TEXTPRO IV will automatically load and execute a command text file when it first executes. This allows you to customize the program configuration for your system and printer whenever you startup TEXTPRO IV. You can setup the screen display format, colors, adjust automatic key repeat, printer baud rate, load a set of function keys, load your printers control codes and more.

## 80 Programmable Function Keys

TEXTPRO IV allows you to have up to 80 function keys with just about any kind of information or command sequences you can imagine. Once programmed, you can have a command sequence execute using a single function key. You can also Save and Load function key sets at any time. So, you can have several sets for different writing tasks or projects, the possibilities are endless. Just think, with a single function key you could, load a disk file, search for and replace all the occurances of a phrase, save the file back to disk, have it processed and printed!

## Text Editing

TEXTPRO IV has a powerful, full featured, line oriented screen editor that is faster and more efficient then most editors you've ever worked with. It supports single or multiple line copy and move, global or local search and replace, word and character insert/delete, block delete and much more. It features adjustable automatic key repeat, selectable display foreground and background colors, screen line width and more.

TEXTPRO IV uses fully compatible ASCII formatted files. You can even direct formatted output files to a standard ASCII disk file. It will Load, Save, Append, Kill, Text Process files from disk, Roll part of a file to disk, Get next portion of a file, display a Directory and Backup Ramdisk to \& from Floppy disks.

TEXTPRO IV's files are also compatible with spelling checker programs like Spell 'n Fix from Star Kits, a shareware program, available with TEXTPRO IV for your evaluation, just for the asking.

## Fully Buffered Keyboard

While many word processing programs are slow and often lose keystrokes. TEXTPRO IV has a fully buffered keyboard that is virtually impossible to out type. Even when it's busy, it will still remember the keystrokes entered. You can enter in commands or whatever, even during insert mode you'll never lose a key.

## Professional Word Processing Power

TEXTPRO IV is a powerful tool for both the Casual and Professional Word Processing user. It offers a wide range of features and functions that can satisfy even the most demanding writer. Even though you may not need all of TEXIPRO IV's power and flexability right now, its not a program that you can easily outgrow. As your needs and skills improve, you'll discover that you won't need to go out and buy another word processing program, TEXTPRO IV will already be ready and waiting. No Text Processing program available for the Color Computer III gives you more Text Processing Power than TEXTPRO IV. It can make your writing appear more professional than you ever thought possible. Check around, see what other word processing programs have to offer in terms of power, speed and flexability. When your finished comparing them against TEXIPRO IV, you'll see that it's the only real choice for the Color Computer III.

Coming Soon: CoCo $1 \& 2$ versions of TEXTPRO IV

BattleLine Topic No. 1 was announced in mid-October by Greg Miller (GREGMILLER) with this question: Does the high cost of software make piracy just? Several people took the opportunity to put in their two bits, and it is interesting to note that few users took the position that high software prices justify piracy.

For those new to the game, "BattleLine" refers to the discussion of controversial topics on Delphi. These topics are chosen and announced about once a month, and all users are invited to join in and let their opinions be known. To participate, send your messages in Forum. Also, stick around for the open conference that's held toward the end of the BattleLine period.

If you missed anything, don't worry - all Forum messages and a complete $\log$ of the resulting conference will be placed in the Archives area of the database for later perusal by any SIG member. The archive of the piracy BattleLine is there now. Be forewarned, however, that the information is over 100 K in size. The main archive file has been broken into several smaller files, which should help those whose terminal programs don't support direct-to-disk file transfers.

As the size of the archive file implies, the first BattleLine seemed to go quite well. Several users responded to the chosen topic and aired their thoughts and feelings. All in all, not too many low blows were thrown (although it might help to see more of these!).

If the topic interests you, download the appropriate files. You can still respond to the issue - kick it around some more and see what you come up with. Nothing says we can't pick the same (or a closely related) topic twice.

We expect the number of users to increase as BattleLine continues. It is part of human nature to want to join in. And the best part of the "battle" is that if you disagree with someone else, you can't get punched in the nose! BattleLine won't leave any casualties; rather,

[^10]
# Dephisis Onine Delate Team 

By Cray Augsburg Rainbow Technical Editor

it can help us all to understand the impact of certain topics.

By the way, BattleLine topics are not limited to computer-related discussion only. If you have ideas for BattleLine, any "hot" thoughts in your heart or mind, let them be known. Send a Forum
message to Greg Miller, who will spread the word among the staff, which will then choose a topic. You should keep in mind that in these infant stages of BattleLine we are learning to better serve you as members of the SIG. We need your feedback to make this work.

## Resource to Delphi

We just received our copy of the new book DELPHI: The Official Guide. This book, written by Michael A. Banks (KZIN) of the Science Fiction SIG, is 487 pages long and literally jammed with information about Delphi. The information contained in the book is broken into four parts:

Getting Started covers the basics of telecommunications. It also details the basics of the Delphi menu and command systems, ending with a presentation and discussion of the Delphi Main Menu selections.

The DELPHI Member Handbook explains in its 16 chapters major aspects of how to utilize Delphi to the fullest. Topics covered include Business \& Finance, Conference, DELPHI Mail,

# Database Report <br> By Don Hutchison 

Rainbow's Delphi Database Manager

Both OS-9 Online and the CoCo SIG have been very busy since the October Princeton RAINBOWfest. Many users purchased software at the 'fest and are now using it to produce utilities, pictures and other programs that they wish to share with the CoCo population. Our uploading activity following the "fest was extremely lively! We even uploaded one very popular file, CoCo3FIX. BAS, from the 'fest!

## OS-9 Online

In the General Information topic area, Jim Johnson (REINDEER) uploaded a "typewriter graphic" file that describes

Don Hutchison is an electrical engineer and lives in Atlanta, Georgia. He works as a senior project engineer involved in the design of industrial control systems. On Delphi, Don is the Database Manager of the RAINBOW CoCo SIG. His Delphi username is DONHUTCHISON.
how to convert $31 / 2$-inch disk drive connectors to the type used by $51 / 4$-inch drives. This file is of importance to OS-9 users because his modifications will allow $31 / 2$ inch drives of the 720 K double-sided, $80-$ track variety to be used with the existing CoCo disk controller circuitry. Jim Manning (JIMBM) uploaded a program that enables booting with 80 columns and using the VDG screen in another window. Greg Law (GREGL) sent us a shell script file to merge BASIC09 and RUNB with SYSCALL, INKEY and GFX2 to alleviate the popular Error \#043. Rix Seacord (RIX) gave us a review of the new "no halt" DMC controller from Sardis Technology.

In the Programmers Den topic area, Greg Law uploaded a total of eight routines. Included are a CRC checksum calculation routine for Xmodem/Ymodem, a day of the week calculator, a reverse string routine, a Julian date calculator, integer to ASCII (and vice versa) routines, an ASCII to double precision routine, and a C program for executing any OS-9 system call directly from the command line. The

## CBASIC III EDITOR/COMPILER

## The ULTIMATE Color Computer III BASIC COMPILER!!!

If you want to write fast efficient machine language programs and you don't want to spend the next few years trying to leam how to write them in Assembly language or with a cheap compiler, then CBASIC III is the answer!!!

CBASICIII is the only fully integrated Basic Compiler and Program Editing System available for the Color Computer 3. It will allow you to take full advantage of all the capabilities available in your CoCo-3 including 512 K RAM, without having to spend years trying to learn assembly language programming. CBASIC III allows you to create, edit and convert programs from a language you are already familiar with Enhanced Disk Color Basic, into fast efficient machine language programs easily and quickly. CBASIC III supports all the enhanced hardmare available in the $\mathrm{CoCo}-3$, including Hi-Res Graphics, \& Screen displays, Extended Memory and Interrupts (Keyboard, Timer, Serial \& Clock). We even added advanced commands not available in Basic to give you a level of control only avialable to very advanced Machine Language Programmers. Plus we made it exceptionally easy to use, not like some other compilers. CBASIC III is the exceptionally easy to use, not like some other compilers. CBASII

CBASIC III is a powerful tool for the Beginner as well as the Advanced Basic or Machine Language programmer. You can write progrants without having to worry about the Stack, DP Register, memory allocations and so on, because CBASIC III will handle it for you automatically. For Advanced users, CBASIC III will let you control every aspect of your program, even generating machine code directly in a program easily.
CBASIC III features well over 150 Compiled Basic Commands and Functions that fully support Disk Sequential and Direct access files, Tape, Printer and Screen I/O. It supports ALL the High and Low Resolution Graphics, Sound, Play and String Operations available in Enhanced Color Basic, including Graphics H/GET, H/Put, H/Play and H/DRAW, all with $99.9 \%$ syntax compatibility. CBASIC III also supports the built in Serial I/O port with separate programmable printer \& serial I/O baud rates. You can send and receive data with easy to use PRINT, INPUT, INKEY, GETCHAR and PUTCHAR commands.

CBASIC makes full use of the powerful and flexible GIMI chip in the Color Computer 3. It will fully utilize the 128 K of RAM available and install 2 Ultra Fast Ramdisks if 512 K is available, for program Creation, Editing and Compilation. You can easily access all 512 K of memory in a Compiled program thru several extended meniory commands that can access it in 32 K or 8 K blocks and single or double bytes.

CBASIC has its own completely integrated Basic Program Editor which allows you to load, edit or create programs for the compiler. It is a full reatured editor designed specifically for writing Basic programs. It has block move and copy, program renumbering, automatic line number generation, screen editing, printer conirol and much more
The documentation provided with CBASIC III is an $81 / 2$ by 11 Spiral Bound book which contains approximatly 120 pages of real information. We went to great lengths to provide a manual that is not only easy to use and understand, but complete and comprehensive enough for even the most sophisticated user.

CBASIC III is the most expensive Color Basic Compiler on the market, and well worth the investment. You can buy a less expensive compiler for your $\mathrm{Co} \mathrm{C} 0-3$, and then find out how difficult it is to use, or how limited its features are. Then you'll wish you had bought CBASIC III in the first place. Dollar for dollar, CBASIC III gives you more than anyother compiler avaijable. If you can lind a better $\mathrm{CoCo}-3$ Basic Compiler then buy it!!!

## Requires 128 K \& Disk $\$ 149.00$

## DATAPACK III PLUS V1.1

SUPER SMART TERMINAL PROGRAM AUTOPILOT \& AUTO-LOG PROCESSORS X-MODEM DIRECT DISK FILE TRANSFER
VT-100 \& VT-52 TERMINAL EMULATION

- No lost data even at 2400 Baud on the COCO-3 Serial I/O port
- 8 Display Formats, 32/40/64/80 columns at 192 or 225 Res.
- 50k Text Buffer when using the Hi-Res Text Display \& Disk
- ASCII \& BINARY disk file transfer support via XMODEM.
- Directly record receive data to a disk file (Data Logging).
- VT-100 terminal emulation for VAX, UNIX and other systems.
- VT-100/52 cursor keys, position, insert/delete, PF \& Alt. keys.
- Programmable Word Length, Parity, Stop Bits and baud rates.
- Complete Full and Half Duplex operation, with no garbled data.
- 9 Variable length, Programmable Macro Key buffers.
- Programmable Printer rates fröm 110 to 9600 baud.
- Send Files directly from the Buffer, Macro Keys or Disk.
- Display on Screen or Print the contents of the Buffer.
- Frecze Display \& Review information On Line with no data loss.
- Buill in Command Menu (Help) Display
- Built in 2 Drive Ramdisk for S12K RAM support and much more.

Supports: R.S. Modem-Pak \& Deluxe RS-232 Pak, even with Disk.
Requires 128 K \& Disk, $\$ 59.95$

## EDT/ASM !!!

$128 / 512 \mathrm{~K}$ DISK EDITOR ASSEMBLER
EDT/ASM III is a Disk based co-resident Text Editor \& Assembler. It is designed to take advantage of the new features available in the $\mathrm{CoCo}-3$ with either 128 K or 512 K of memory. It has 8 display formats from $32 / 40 / 64 / 80$ columns by 24 lines in 192 or 225 Resolution, so you use the best display mode whether you are using an RGB or Composite monitor or even a TV for your dispiay. Plus you can select any foreground or background colors or even monochrome display modes. It will even support 512 K by adding an automatic 2 drive Ultra Fast Ramdisk for lightning fast assembly of program source code larger than memory. There is also a free standing ML Debug Monitor, to help you debug your assembled programs. EDT/ASM III has the most powerful, easy to use Text Editor available in any Editor/Assembler package for the Color Computer,

- Supports Local and Global string search and/or replace
- Fupports Local and Global string search and/or repla
- Easy to use Single keystroke editing commands.
- Loasy \& Save standard ASCII formatted file formats.
- Block Move \& Copy, Insert, Delete, Overtype.
- Create and Edit files larger than memory.

The Assembler portion of EDT/ASM III features include:

- Supports the full 6809 instruction set \& cross assembles 6800 code.
- Supports Conditional IF/THEN/ELSE assembly.
- Supports Disk Library file (include) up to 9 levels deep.
- Supports standard Motorola assembler directives.
- Allows multiple values for FCB \& FDB directives (unlike R.S. EDT/ASM)
- Allows assembly from the Editor Buffer, Disk or both.

Requires 128 K \& Disk $\$ 59.95$

## TEXTPRO IV

## "The ADVANCED COCO-3 Word Processing System"

- 9 Hi-Res Displays from 58 to 212 columns by 24 lines in 225 Res. - On Screen Display of Bold, Italic, Undlerline \& Double Width print. - Up to 8 Proportional Character Sets Supported with Justification. - Up to 80 Programmable Function Keys \& Loadable Function key sets. - Fully Buffered keyboard accepts data even duiring disk access.
- Autoexecute Startup files for easy printer \& System configuration.
- 8 Pre-Defined Printer function commands \& 10 Programmable ones.
- Supports Library files for unlimited printing \& configurations.
- Disk file record access for Mail Merge \& Boiler Plate printing.
- Completely Automatic Justification, Centering. Flush left \& right.
- Chapictely Automatic Justification, Centering. Fush left \& rind
- Create and Edit files larger than menory, up to a full disk.
- Easily imbed any number of printer format and control codes.
- Built in Ultra Fast 2 drive RAMDISK for 512 K support.

TEXIPRO IV is the most advanced word processing system available for the COCO-3, designed for speed, flexability and extensive document processing. It is not like most of the other word processing programs available for the Color Computer. If you are looking for a simple word processor to write letters or other short documents, and never expect to use multipie fonts or proportional spacing. short documents, and never expect to use multipie fonts or proportional spacing.
then most likely you'll be better off with one of the other simpler word processors. then, most likely you'll be better off with one of the other simpler word processors.
But, if you want a powerful word processor with extensive document formatting But, if you want a powerful word processor with extensive document formatting
features to handle large documents, term papers, manuals, complex formatting problems and letter writing, then TEXIPRO IV is what your looking for. It works in a totally different way than most word processing programs. It uses simple ? character abbreviations of words or phrases for commands and formarting information that you imbed directly in your text. There are over 70 different formatting commands you can use without ever leaving the text your working on. There are no time comsuming, and often frustrating menu chases, you are in total control at all times. You can see what the fornatted document will look like before a single word is ever printed on your printer. Including margins, headers, rooters, page numbers, page breaks, column formatting, justification, and Bold, Italic, Underiine, Double Width, Superscript and Subscript characters right on the screen.
TEXTPRO IV can even support LASER PRINIERS with proportional fonts, take a good look at this AD? It was done with TEXTPROIV on an OKIDATA proportional spaced characters, all centering, justification, and text printing was performed automatically by TEXTPRO IV.

Requires 128 K \& Disk $\$ 89.95$

## HI-RES III Screen Commander

The DISPLAY you wanted but didn't get on your CoCo-3

- 54 Different Character Sizes available from 14 to 212 cpl .
- Bold, Italic. Underline, Subscript, Superscript and Plain character styles.
- Double Width, Double Height and Quad width characters.
- Scroll Protect form 1 to 23 lines on the sereen.
- Mixed Text \& Graphics in HSCREEN 3 mode
- PRINT @ is available in all character sizes \& styles.
- Programmable Automatic Key repeat for fast editing.
- Full Control Code Keyboard supported.
- Selectable Character \& Background color.
- Uses only 4K of Extended (2nd 64K) or Basic RAM.
- Written in Ulita Fast Machine Language.

HI-RES III will improve the standard display capabilities of the Color Computer 3, even the 40 and 80 column displays have several features missing. For example, you can't use PRINT @ or have different character sizes on the same screen, even when mixing text and graphics with the HPRINT command. Hi-RES Ill can give you the kind of display you always dreamed about having on your $\mathrm{CoCo}-3$, with a wide variety of display options that you can easily use with your Basic or ML programs.

HI-RES III is totally compatible with Enhanced Color Basic and its operation is invisible to Basic. It simply replaces the normal screen display with an extremely versatile display package. With the full control code keyboard, you can control many of HI-RES III extended functions with just a couple of simple keystrokes.

## Requires 128 K Tape or Disk $\$ 34.95$

## 512K RAMDISK \& MEMORY TESTER

RAMDISK is an ALL Machine Language program that will give you 2 UliTRA High Speed Ram Disks in you CoCo-3. It does not need or require the OS-9 operating system. It works with R.S. DOS VI. 0 or V1.1 and it is completely compatible with Enhanced Color Disk Basic! Plus it allows your CoCo - 3 to run at double speed all the time even for floppy disk access!!! It will not disappear when you press reset like some olher ramdisk programs. The MEMORY tester is a fast ML program to test the 512 K ram. It performs several bit tests as well as an address test so you know that your 512 K of memory is working perfectly.

Requires 512 K \& Disk $\$ 19.95$

## The SOURCE III"

## DISASSEMBLER \& SOURCE CODE GENERATOR

The SOURCE III will allow you to easily Disassemble Color Computer machine language programs Directly from Disk and generate beautiful, Assembler compatible Source code.

- Automatic label generation and allows specifying FCB, FDB and FCC areas.
- Disassemble programs Directly from disk, unlike other disassemblers.
- Automatically locates Begin, End and Execution address.
- Output Disassembled listing with labels to the Printer, Screen or both.
- Generates Asscmbler source Eiles directly to disk or printer.
- Built in Hex/Ascii dump/display to locate FCB, FCC \& FDB areas.
- 8 Selectabie Display fornats 32/40/64/80 columns in 192 or 225 Res.
- Selectable Foreground \& Background colors \& Printer Baud rates.
- Built in Disk Directory an Kill file commands.
- Menu display with single key commands for smooth, Easy operation.
- Written in Ultra Fast Machine Language.

Requires 128 K \& Disk $\$ 49.95$
To order products by mail, send check or money order for the amount of
purchase, plus $\$ 3.00$ for shipping \& handling to the address below.
To Order by VISA, MASTERCARD or COD call us at (702) 452-0632
(Monday thru Saturday, 8am to 5pm PSI)
CER-COMP LTD.
5566 Ricochet Avenue
Las Vegas, Nevada 89110

Electronic Mail, Entertainment, Groups and Clubs, People on DELPH1, Workspace, Using DELPHI, HELP and Using the OnlineText Editors.

DELPHI Users Guide describes various shortcuts you can use to maximize the benefits of using Delphi. Applications of Delphi to your personal and business life are covered, as well.

Reference contains four appendices: Index to DELPHI Services, DELPHI Membership Agreement, Troubleshooting and Dial-Up Guide (access numbers for Tymnet, Telenet and Datapac).

DELPHI: The Official Guide is wellwritten and well-organized. The information is presented in a logical manner and is, therefore, very useful for the beginning, intermediate or advanced user. The book, which can be ordered online, costs $\$ 19.95$. To order online, first go to the Delphi Main Menu. Select Using-DELPHI and then Manuals. Finally, choose Order DELPHI Guide and answer the questions appropriately. We think you will appreciate the value of the book as well as the effort Mr. Banks has put forth to ensure the clarity, accuracy and completeness of the information it contains.
program will perform the system call requested, give a dump of all the registers, and then exit with the status code indicated from the system call itself.

In the Users Group topic area, Dennis Weldy (OS9ER) provided DL. ASM, a deleting utility that accepts names from a pipe; DISKID, which allows the user to rewrite the disk name and date on a disk after BACKUP has overwritten it; DISKCAT. B09, a BASIC09 utility to print a hierarchical directory of a disk to the printer; DIRW.C, for providing directories with wild cards; and DIR.ASM, a directory utility for 64 column screens.

In the Utilities topic area, Greg Law provided ECH, a slightly different version of ECHO that accepts control characters on the command line. Rick Adams (rickADAMS) provided an updated CC2 command for use with the C compiler package that combines the C. PREP, C.PASS1, C. PASS2 and C. OPT steps via pipes.

In the Telcom topic area, Bob Montowski (GRAPHICSPUB) uploaded the basic 09 BBS package that he used formerly. Bill Brady (WBRADY) sent us BT, a simple terminal program written in BASIC for those who have an Atari ST and only the personal pak.
In the Graphics \& Music topic area, Pat Abramovitch (HUBBS) uploaded a program that draws a " 512 K on board" sign
on a 40 -column graphics screen. (He says he was inspired by Rick Adams' Rickeyterm macros.) Toni Ryan (TNTRHODAN) sent us a new 512 K version of his popular BDraw program, written in BASIC09. Steve Clark (STEVECLARK) provided us with his MacPaint picture display and print utility for Level II. He included documentation as well as the C source code. Rick Adams gave us a WLABEL command that will put a Macintosh-style window label at the top of all your windows. Rick also uploaded a COLOR command for Level II, including C source code.

## CoCo SIG

In the General Information topic area, Kevin Nickols (NICKOLS) posted the Tandy newsletters for September and October. Marty Goodman (MARTYGOODMAN) posted his report on RAINBOWfest. I provided a patch for the CoCo 3 demo program from Spectral Associates that provides enhanced disk performance for those with high-performance drives.

In the CoCo 3 Graphics topic area, David Mills (Davidmills) uploaded his picture of the White House, which won first prize in November's CoCo Gallery. Mark OPella (MDODELPHI) sent us his KALISCOP. 日RS program. David Tilman (DAVIDTILMAN) provided us with some nifty palette animation and preset motion

Model 101
Interface $\$ 39.95$

- Serial to parallel interface
- Works with any COCO
- Compatible with "Centronics" parallel input printers - 6 switch selectable baud rates $300-600 \cdot 1200-2400$ -4800-9600
- Small size $4.5^{\prime \prime} \times 2.5^{\prime \prime} \times 1.25^{\prime \prime}$
- Comes complete with cables to connect to your computer and printer

## Other Quality Items

High quality 5 screw shell C10 cassette tapes. $\$ 7.50$ / dozen

Hard plastic storage boxes for cassette tapes. \$2.50/dozen

Pin-Feed Cassette Labels White $\$ 3.00 / 100$ Colors $\$ 3.60 / 100$ (specily red, blue, yellow, tan)

Model 104 Deluxe
Interface \$51.95

Same features as 101 plus

- Built in serial port for your modem or other serial device
- Switch between parallel output and serial output
- Size is $4.5^{\prime \prime} \times 2.5^{\prime \prime} \times 1.25^{\prime \prime}$
- Comes complete with cables to connect to your computer and printer

## NEW! Cables for your COCO

- U.L. listed foil-shieided cable - 2 Types: male/female extension cables (used between a serial device and existing cable) male/male cables (used between two serial devices such as a modem and one of our switchers).
- $3 \mathrm{ft} / \mathrm{/} \mathrm{\$ 3.95}, 6 \mathrm{ft} . / \$ 4.49$, 10 ft . $/ \$ 5.59$ Specity M/M or M/F and length.

## Model 102 Switcher \$35.95

- Connect to your COCO serial port and have 3 switch selectable serial ports
- Color coded indicator lights show switch position
- Lights also serve as a power on indicator for your COCO
- Heavy guage blue anodized aluminum cabinet with nonslip rubber feet

The 101 and 104 require power to operate. Most printers can supply power to your interlace. (Star, Radio Shack and Okidata are just a few that do - Epson and Seikosha do not). The intertaces can also be powered by an AC adaptor; Radio Shack model 273 1431 plugs into all models. If you require a power supply, add a " $P$ " to the model number and add $\$ 5.00$ to the price. (Model 101P \$44.95, Model $104 \mathrm{P} \$ 56.95$ ).

- Connects to your COCO to give you 2 switch selectable serial ports
- 3 foot cable to connect to your COCO's serial port
- The perfect item to use to connect a printer and a modem to your COCO
- Small in size, only $4.5 \times 2.5$ x 1.25

The Model 101, 102, 104 and 105 work with any COCO, any level basic and any memory size. These products are covered by a 1 year warranty.

The Model 101 and 104 work with any standard parallel input printer ineluding Gemini, Epson, Radio Shack, Okidata, C. loth, Seikosha, Panasonic and many others. They support BASIC print commands, word processors and graphic commands.

We manufacture these products - dealer inquiries are invited.

## Cassette Label Program \$6.95

- New Version - tape transferrable to disk - save and load labels from tape to disk
- Prints 5 lines of information on pin-feed cassette labels
- Menu driven, easy to use
- Standard, expanded and condensed characters
- Each line of text automatically centered.
- Label display on CRT, enabling editing betore printing
- Program comes on tape and is supplied with 24 labels to get you started - 16 K ECB required

## Ordering Information

Free shipping in the United States (except Alaska and Hawaii) on all orders over $\$ 50.00$. Please add $\$ 2.50$ for shipping and handling on orders under $\$ 50.00$. Ohio residents add 6\% sales tax.
Call (513) 677-0796 and use your VISA or MASTERCARD or request C.O.D. (Please add $\$ 2.00$ for C.O.D. orders). If you prefer, send check or money order; payable in U.S. Funds to:
Metric Industries
P.O. Box 42396

Cincinnati, Ohio
45242
utility programs．I uploaded MGE pictures of two lovely ladies，and a picture of Lonnie Falk for contrast．Jason Forbes （COCO3KID）gave us some more converted Atari ST pictures and a program to display two－dimensional fractal designs．Jeff Butler（JEFFBUTLER）sent us his MGE－to－ CM3 converter utility．Bruce Farrington of Computize（BFCOMPUTIZE）kindly pro－ vided the Color Max Deluxe cycling demos that he used at RAINBOWfest （these were uploaded at the request of several＇fest－goers）．Bob Montowski （GRAPHICSPUB）became very popular with the male SIG members this month by providing 24 digitized Playmate pictures． Ana Landa（ANA）provided several Hallo－ ween pictures that were converted from her original PMODE 4 drawings．Craig Luecke （LUECKE）uploaded two pictures in the new GIF format，since Color Max is now capable of reading this format．Craig also sent us his clip set of vegetables and fruits and a 21 Jump Street calendar．Richard Trasborg（TRAS）uploaded a Playmate picture，the entire CoCo Max III demo disk，his first cycling picture（called ＂Snake＂）drawn under CoCo Max III，and the second in his series of＂Coloring Book＂ pictures．Richard also uploaded an erotic picture called＂Marabel，＂which was originally drawn by Mike Trammell． Michael Schneider（MSCHNEIDER）pro－
vided MAX．MEE，a few adult MGE pictures， and a picture of Albert Einstein．

In the Classic Graphics topic area，Jason Forbes uploaded a program that displays two－dimensional fractal designs．

In the Source for 6809 Assemblers topic area，Roger Krupski（hardwarehack） uploaded a CoCo reader for the Speech and Sound Pak，and a＂remote host＂ utility．I provided a high－speed utility for comparing two machine language disk files．

In the Utilities \＆Applications topic area，Michael Schneider uploaded the Spell＇n Fix programs．Kurt Stecco（high－ RAILER）uploaded a program for the CoCo 3 that will print gift certificates on a DMP printer．I uploaded a program of patches for the CoCo 3 DOS that was given to me at RAINBOWfest by its author，Vernon Nemitz．

In the Hardware Hacking topic area， Randy Poppe（RPOPPE）provided us with the schematic diagram for the Hi－Res joystick input module used by CoCo Max III．The file is in the form of a CoCo Max III picture file．Paul Schmidt（Paulk9ps） sent us instructions concerning converting the Deluxe RS－232 pack to modem pack addressing．Jim Johnson provided two informative hardware articles．The first one described how to convert the data and power connectors for $31 / 2$－inch disk drives
to the type of connectors used by the older $51 / 4$－inch drive systems．This information is of particular value because once the matter of the different connectors is fixed， $31 / 2$－ inch drives of the 720 K double－sided， $80-$ track variety will work with the existing CoCo disk controller circuitry．Jim＇s second article provided information con－ cerning the new model No．26－3124 multi－ pack in the form of a＂typewriter graphic＂ schematic．I provided a file that describes some cautions and advice for those who may be considering installing a second phone line for exclusive use with their computer．

In the Music \＆Sound topic area，Mark Raphael（MARKRAPHAEL）sent us two more Musica files，Sunny Side and Rainy Day．

In the Games topic area，David Tilman sent us two games，HAVA1 and HAVA2．

In the Data Communications topic area， Mike Andrews（Mandrews）uploaded a patch for Version 2.0 of Rickeyterm that provides Ymodem downloading capabili－ ties．Delphi supports the efficient Ymodem protocol，so this patch is sure to be popular among Rickeyterm users．Gerry Thomas （INET 191）uploaded the documentation file for Ultimaterm．

As you can see，we have a lot of new and very good material online for our CoCo users．See all of you online on Delphi！

# Hardware Special 

 Communications Package 300／1200 baud Fully Hayes compatible Modem－ 2 Year Warranty \＄129．00［Modem \＆Cable］ 300／1200／2400 baud Fully Hayes Compatible Modem－CCITT 2 Year Warranty $\$ 249.00$ ［Modem \＆Cable］ THE OTHER GUYS COCO回： 55 North Man Street Suite 3ロ1－ロ PO Box H Logan Utah 84321

Inthe September 1987 issue of Rainbow (Page 150), I wrote an article on how to build an EPROM emulator using a RAM chip backed up with a battery. That was all well and good, and I thought that was the end of that. But it wasn't. A reader called me up and told me about his problem with the emulator - he had a problem erasing it.
A regular EPROM has a specific method of erasing - you need an EPROM eraser. All EPROMs have a window on top that allows you access to the chip's memory cells. Exposing that window to ultraviolet light erases all data in the EPROM.
When an EPROM is new, and every time you erase it, the EPROM memory cells contain "logical 1 "; or, in the case of an eight-bit EPROM, a Hex value of \$FF (that is, eight logical high levels). When you program an EPROM, the logical 1 changes to a logical 0 . And there is only one way the programmer can change that cell back to a logical 1 - use an eraser.

Since the chip I used was a RAM instead of an EPROM, my EPROM emulator had no window. You could not erase it with an EPROM eraser, but that did not seem to be a problem. Unlike an EPROM, a RAM chip cell can be changed to a logical 1 just by writing to it. In most cases, all you had to do was plug the RAM-based EPROM emulator and run the programmer software. No problem, the emulator was programmed.
There are always exceptions to the rule. In sync with today's world of "faster is better," the people who wrote EPROM programmer software were looking for faster ways to program an EPROM, each cell of which has to be programmed separately. Each EPROM cell takes a small fraction of a second to program, which does not seem like a very long time; but with EPROMs getting bigger and bigger, those "fractions" add up, and it takes longer and longer to program them.

The software experts thought of one way to shorten the programming time: Since an EPROM contains all \$FFs when it is new and just after it is erased,

Tony DiStefano is a well-known early specialist in computer hardware projects. He lives in Laval Ouest, Quebec.

# Build an . . . <br> <br> Electronic <br> <br> Electronic EPR0M Emulator Eraser 

By Tony DiStefano Rainbow Contributing Editor

why not use that fact when programming? So, when the software is programming an EPROM, it first checks to see if the present data byte to be programmed is $\$ F F$. If it is, the software doesn't bother to program that byte, as it is already an $\$ \mathrm{FF}$ on the EPROM. Instead, it goes on to the next byte. The more $\$$ FFs there are in the data to be programmed, the faster it goes. Makes sense, doesn't it? Right! To further aggravate the problem, some EPROM programmers check for \$FFs and won't even start if your EPROM isn't right.

Now, that is a problem. You can't erase the EPROM emulator with an eraser, and you can't program \$FFs into it. You can't even unplug the battery to let the memory "forget"; that would make the EPROM emulator all zeros. What are you to do? Well, here is the answer. Build an Electronic EPROM Emulator Eraser. Wow, what a mouthful! But it will solve your problem.

## Building It

To start with, you will need the standard tools you usually use on a project: soldering iron, solder, cutters, screwdrivers and the like. The parts list shows you what you will need. Some of these parts are not available at your local Radio Shack store, but they
should all be available at a good electronics store.

Note that this project does not have to be plugged into a CoCo to work, and is completely self-contained. However, it does need a 5 -volt supply. If you build it on a CoCo-compatible proto-board, you can get 5 volts from the CoCo's power supply. The 5 -volt supply is available on Pin 9, and ground is on Pin 33.

First, let's start off with some theory. The EPROM emulator is mainly a RAM chip, so let's review our knowledge of RAM chips. Basically, this RAM chip has 13 address lines (A0 to A12), eight data lines (D0 to D7), one read/write line and some ChipEnable lines. Since this chip is emulating an EPROM, all lines are about the same except for the read/write line. It changes to the program (PGM) line. What we have to do is program the chip for $\$ \mathrm{FF}$ s, so all DATA lines are tied to Vcc, which is 5 volts and logical 1, using the PGM pin (See Figure 1) to strobe this data (always \$FF) to the chip.

Every memory location has to be programmed this way. The easiest way to access every location is to do them in sequence, one at a time. For that you need some binary counters. Two of them will have enough bits to cover all addresses. In fact, if you study Figure 1, you will see the counters I am using are 74LS393. Each of these packages have two 4 -bit counters. I am using two chips to give us a total of 16 bits. That is more than enough for us to use.
Setting up these counters is quite easy. The last bit of the first counter, QD (most significant bit), connects to the clock of the next, and this is repeated two more times to include all counters. The clock to the counter comes from a free-running clock. The LM555 is a versatile timer that can be used as a "one shot" or resettable timer, but I am using it as a free-running timer. That means that the output clocks high and low continuously, which is necessary in our case.

So, the output of the 555 is connected to the clock of the first counter. The clear (CLR) of the counters and the reset ( R ) of the 555 are connected together to an RC constant, which is just a capacitor that charges through a resistor. When you first turn the power on, the cap is discharged. Therefore, the

Figure 1

555 and the counter are held inactive. When the cap charges to 5 volts, it activates the 555 and counters. This is done in order to give the power supply time to stabilize and to make sure that all the chips are properly powered before starting. It also clears all the counters to zeros.

Once the power is stabilized and the reset releases, the 555 starts to clock. That starts the counters. If you notice, the first bit is connected to the PGM pin of our 2764 socket. That programs (or pulses) the data (\$FF) into each chip. The next 13 bits of the counter are connected to address lines. It should be clear to you by now that all address lines have to be used.

The next bit on our counters is connected to an LED and a resistor. Last month I covered the theory on LEDs, so everyone should be up on it. This LED is used as an indicator to tell you that the process is finished. If you let the process continue, the LED will go off again and then on again. This will not hurt the chip, but it is not necessary to do it twice - once is enough.

Constructing the project is not too hard. It is recommended that you use sockets for all the chips. Use a 28 -pin, ZIF socket for the 2764 . If your budget does not allow for one, use a good quality socket, at least. Some of the cheap sockets are good only for one or two insertions. Figure 1 shows all connections except power and ground.

The following is a power and ground connection list for this project:

| Chip Number | Power (5v) | Ground |
| :---: | :---: | :---: |
| U1 | 14 | 7 |
| U2 | 14 | 7 |
| U3 | 8 | 1 |
| 2764 | 28 | 14 |

It would be a good idea to run a few tests before you plug the EPROM emulator into the eraser. Turn the power on and check with a digital probe or meter to see if the 555 is working and if all the address lines are clocking. You should also see if the LED lights up after a while. Check for the proper 5 volts and ground on the 2764 socket. That should be all there is to it.

Erasing an EPROM emulator is simple. With the power to the eraser
turned off, insert the EPROM emulator. Turn the power on until you see the LED go on. Then turn the power off and remove the EPROM emulator. And that's that.

| Part | Description |  |

# A first look at Tandy's user-friendly interface for OS-9 Level II <br> The Impact of Multi-Vue 

## By Cray Augsburg Rainbow Technical Editor

0ver the years we have seen quite a few changes in the Color Computer. Some changes have been superficial, while others were somewhat drastic design changes made in line with Tandy's commitment to provide a truly powerful machine at the lowest price possible.

The changes made in the software area have been obvious, as well. How many can remember not having Extended BASIC? What about Disk BASIC? Then, to top things off, Tandy licensed OS-9 Level I from Microware. Now, with the advent of the CoCo 3 , we have OS-9 Level II. This operating system, complete with windows, has brought a power to the CoCo that few of us could have foreseen.

The problem with such power is that it often involves a great deal of complexity. Let's face it, OS-9 is no breeze to learn and understand! For some time now, we have needed a way to organize all of that power in order to utilize it to its fullest. The latest entry in the progression toward a powerful but easy-touse system, Multi-Vue, provides us with that organizational ability.

Multi-Vue is an environment within an environment. Most people refer to programs of its nature as a "user interface," which is simply the method we use to interact with the computer. We have gone from toggle switches to keyboards, from joysticks to mice. But the computer presents information to us in much the same way it has throughout the personal computing era - via a video display. However, the format in which the data is displayed has changed. With pull-down menus and a "point-

> Cray Augsburg is RAINBOW's technical editor and has an associate's degree in electrical engineering. He and his wife, Ruth Ann, have two children and live in Louisville, Kentucky. His username on Delphi is CRAY.
and-click" interface, the machine becomes easier to understand and control. This is what Multi-Vue is all about.

## Multi-Vue as a System

Multi-Vue utilizes the general structure of OS-9 along with the windows from Level II to provide an easy method of user interaction with the Color Computer. It is a system that keeps track of where you are and allows for a sensible organization of the data you want to use. And, by its design, it allows the user to alter or customize the system to suit his or her particular needs. Mark Siegel, Tandy product manager for Software Engineering, says, "MultiVue will let the user build his own custom DeskMate out of stand-alone applications."

Multi-Vue doesn't include a word processor or a spreadsheet, or anything else we consider an application. Rather, it provides an environment for us to easily set up and operate the applications we choose to purchase.

It accomplishes its chores through a series of system files. As you probably have surmised, each application is associated with its own icon on the screen. When you select a particular icon, Multi-Vue doesn't directly run the application. Instead, it checks what is called an Application Information File (AIF). This system file contains information about which program it is to run, what parameters to use, which palettes to use, what minimum size window the application will run in and some other control information. MultiVue then executes the requested application based on this AIF file. Each application is associated with its own icon and AIF file.

The user simply creates an AIF file and icon for any application he or she wants to introduce into the system. Also, the AIF file for any application can easily be edited. Simply doubleclick the mouse button on the appropriate icon.

Multi-Vue also utilizes an Environment File. This user-created file contains information about your particular system. It knows how many drives you have and what their capacities are, and contains information about the printer you are using. All of this system-specific information can be used by application programs. Assuming a given application is written for the Multi-Vue environment, it can query the Environment File all by itself and configure itself for your particular system.

Many new users have a hard time moving through OS-9's directory structure and understanding just how, why and when to use the chx and chd commands. Multi-Vue eliminates this by offering a point-and-click alternative. When you boot the system, you'll notice that the screen contains icons for the various files and directories within the root directory.

To move into a given directory, just click on its associated icon. Then the screen will show the icons for all files and subdirectories within your current directory. In this manner, you can move down the "tree" as far as you need to go. Simply click on a small box in the upper left-hand corner of the screen and you will move one "place" backward.

When I say, "you will move one place backward," I mean you will return to the point from which you entered your current position. If you are within an application, it closes and you will find yourself back on the graphics screen pointing to the icon for that application. If you are not within an application or command, clicking the box takes you one level higher in the directory structure. This makes movement through the system much easier for newcomers.

Originally, it was rumored that Multi-Vue would not be able to run on a 128 K system. This is not the case. However, since Multi-Vue runs in a graphics shell (a shell running in a graphics window), the memory restrictions of a 128 K system do impose on the
performance of the environment. For instance, whenever the user chooses to do anything, the function he or she selects replaces the graphics shell in memory. The user cannot press the CLEAR key to return to the graphics shell; the graphics window and shell "come back to life" as soon as the user closes the application.

Performance on a 512 K system is much more appreciable. The user simply clicks on the appropriate icon and a box appears in the current window. This box will be the same size as the minimum window size dictated by the AIF file. To set the box at a particular location, simply click the button again. The user can move the mouse (or joystick) to enlarge the box if desired. When the user clicks the button again, the system builds the application in this box (window) and starts it according to the information contained in the AIF file. This allows for a very smoothrunning, user-friendly environment.

In its standard configuration, MultiVue seemed fairly fast. It is easy to imagine the power of this system running at 6 ms on 80 -track drives. Or, better yet, how about running it on a hard drive? The power of the environment would be enhanced that much more due to the storage capacity and speed allowed by such setups.

## Additional Features

Across the top of the Multi-Vue "home screen" are several pull-down menus. These menus offer selections that allow you to control the system setup. One selection allows you to switch between the 40 - and 80 -column modes ( 512 K system only). Another lets you add temporary devices to the environment. Let's say you have a RAM disk partitioned in memory and want to be able to access it. All you have to do is tell Multi-Vue that it exists. When you do, another device image appears on the left side of the screen with all the preconfigured device images.

One of the more esoteric, but very useful, features of the Multi-Vue environment is the Tandy icon. In the upperleft portion of the screen you will see a Tandy icon (an object shaped like an hourglass). This icon controls a menu that offers several goodies, including a pop-up calculator, a clock complete with alarm, system utilities and a clipboard function. The clipboard function can be used with properly written applications to "import" and "export" text you can transfer sections of text between documents.

The utilities include a port option and printer configuration section. The printer section is fairly self-explanatory. The port option "replaces" the Xmode and Tmode commands used in OS-9. This selection allows you to change the various settings used for the serial port and the terminal.

A final option from the Tandy menu is the shell selection. After making this selection, you find yourself in a new bordered window from which you may execute various OS-9 system commands. Simply press the CTRL-BREAK combination to exit the shell and return to Multi-Vue.

What does all this mean? Tandy has made a "standard" out of OS-9 in the CoCo Community by moving to full support of it. Now they have introduced a standard-setting environment for OS9 Level II on the CoCo 3. In other words, we should see Mulii-Vue become a common point between applications written by the users, Tandy and third-party software houses. These applications would be written first to take advantage of the flexibility of the environment. They would be allowed to "interrogate" the system by reading the Environment File and then know how to configure themselves. Some programmers may include AIF files for their applications, eliminating the need for the end user to create such a file.

We will also see third-party applications taking advantage of the pop-up features such as the calendar and calculator. Also, the ability to import and export text will be utilized. Finally, we may see commercial software that includes "install" programs. The programs will automatically build the AIF file, read the Environment File, configure the application accordingly and install it on the system disk.

The most important aspect of the introduction of Multi-Vue is that OS9 now has a very user-friendly interface. OS-9 novices will be able to run OS-9 without having to face the system itself. This may lead to a better understanding of the system in the long run because they will have a better feel for the environment before having to delve into the "how." Also, those who are already comfortable with OS-9 will find Multi$V$ ue makes their work that much easier and more enjoyable.

We are certainly excited about MultiVue and feel you will be, too. It opens up possibilities many people never thought of and will fill a strong need within the CoCo OS-9 Community. $\cap$

## Debugging with Wordfind <br> 16K ECB <br> EDTASM + <br> By Donald Sapello

Have you ever tried to translate a program from one CoCo to another? If you have, you know how tedious it is to track down all occurrences of specific pokes and commands that would prevent the program's operation on the other machine. The program shown in Listing 7 can help.

Word Find is a machine language program that searches for any word or string of characters that is printed to the screen. To use the program, enter LOADM"WORDFIND" and then EXEC. Next, enter the word or string you want to find, then run or list a BASIC program; your program or listing will stop when the word is printed. Press any other key to continue, except BREAK or ENTER.
spaces betwe
after REMS.
 the the program numb
it prints the line (unless
it was remo to $\$ B D C$
and EXEC.

## Still keeping the books the way Grandpa did?

 Then you need CoCo-AccountantTired of scrounging through old shoeboxes full of receipts, canceled checks and bills? Looking for an easy way to organize your finances when the tax man calls? Then you need CoCo-Accountant, the bestselling home and small business accounting program for the Color Computer. All you have to do is set up a chart of accounts and begin entering transactions. Checks, credit card expenses, income. In any order. Just toss it in and CoCo-Accountant sorts it out. No fuss, no muss, no mess.
When you're through, CocoAccounfant will dazzle you with an array of reports that will answer the three basic questions we all ask about our finances: Where did it come from? Where did it go? And what can I deduct from my taxes?
Here's what it can do for you:
$\triangle$ List and total expenses and income by month.
$\rightarrow$ List and total expenses and income by account, for any month or the whole year. $\Rightarrow$ List and total expenses or income by payee or income source for any month or the whole year.
$\Rightarrow$ Track, list and summarize taxdeductible expenses.
$\Rightarrow$ Track, list and summarize expenses subject to sales tax. Even calculates total sales tax you paid!
$\Rightarrow$ Produce a printed spreadsheet showing activity by month and account for the whole year! $\propto$ Balance your checkbook, of course!

- Sort entries by date and store files on tape or disk.
$\Rightarrow$ Up to 900 entries in a single file.
$\Delta$ Requires 64 K CoCo or Coco 3.

Coco-Accountant is $\$ 34.95$ on tape or disk. Be sure to specity which you want when you order. We accept VISA and MasterCard. COD orders, add $\$ 3.00$. Send check or money order to the address below or call our toll-free order line. For information, call 301-521-4886.

Federal Hill Software 8134 Scotts Level Rd. Baltimore, Md. 21208. Toll-free orders 800-628-2828 Ext. 850

## 1988 -- The Year of the Hard Disk!

The CoCo XT hard disk interface from Burke \& Burke lets you connect up to 2 low cost, PC compatible 5-120 Meg hard drives to your CoCo. You buy the Western Digital WD1002-WX1 or WO1002-27X (RLL) controiler, a case and a drive from the PC dealer of your choice. Just plug them into the CoCo XT, and you have a 20 Meg OSS hard disk system for under $\$ 450$ !

CoCo XT (with anodized housing, 50 page user manual, hard disk back-up utility and drivers for both OS9 \& HYPER-//O) -- $\$ 69.95$. CoCo XT-RTC (includes real-time clock / calendar with battery backup) $-\$ 99.95$

NEWII! XT-ROM -- Installs in the ROM sociket of your CoCo XT hard disk controller Boots OS9 from your hard or floppy disk - $\$ 19.95$.
64K COCO OR COCO 3 \& MULTI-PAK REQUIRED FOR ALL VERSIONS. HYPER-I/O REQUIRED FOR USE WITH RS-DOS.

## Make Tracks . . .

Got the 35 -track floppy disk blues? Burke $\&$ Burke's HYPER-I/O program modifies the RS-DOS BASIC in your COCO 1, 2, or 3 to provide a "Dyramic Disk Interlace" that works with the CoCo XT hard disk. It also lets you use any mix of single-sided and double-sided floppy disk drives in your system - even those 720 K floppies

HYPER-1/0 (64K, includes 50 page user manual and uibities) - \$24.95. HYPER-III (RAM Disk and Print Spooler for CoCo 3 HYPER-IO) -\$19.95

## Directory Assistants

Here are two real time savers for OS9 users. WILD lets you use wild cards with OS9's commands. MV rapidly moves files, and even entire directories, from place to place on your hard or floppy disks. WILD \& MV - one disk, two great utitities, oniy $\$ 19.95$ !

OS9: wild asm/d0/src/* are oo/da/abs/releaso/*, abs osg: my /di/abs/reiease /di/release

ILLINOIS RESIDENTS PLEASE ADD 7.0\% SALES TAX, COD's add $\$ 2.00$. Shipping (within the USA) $\$ 2.00$ per COCO XT; $\$ 1.50$ per disk or ROM. Please allow 2 weeks for delivery (ovemight deliven also available for in-stock items). Telephone orders accepted.

## ERINA－Symbolic User Mode Debugger for OS9

ERINA is a must for all serious assembler and C software developers．It lets you find bugs quickly by displaying the machine state and instuctions being ex－ ecuted．You can set address and register break points，dump，search and change memory，assemble and disassemble code and many other things to numerous to mention．This program will pay for itself over and over by the time you save solving your bugs．
Requires 80 column display，OS9 L1／2
$\$ 69.00$

## SERINA－System Mode Debugger for OS9 L2

SERINA is a debugger for OS9 system modules （device drivers，file managers，etc．）．It allows you to trace execution of any system module，set break points，assemble and disassemble code and examine and change memory．There are special provisions for executing code with critical timing loops and for ac－ cessing I／O registers．A must for system programmers．
Requires CoCo3，OS9 L2，$\quad \$ 139.00$
80 col．terminal connected to $/ \mathrm{T} 1$ or $/ \mathrm{T} 2$
MSF－MSDos File Manager for CoCo 3／OS9 Level 2 MSF is a file manager which allows you to use MSDos disks directly under OS9．You don＇t have to change the format of the data before using it！
Requires CoCo 3，OS9 L2，SDISK3 driver $\$ 45.00$

## Computer Island Educational Software

## ARROW GAMES

32K Ext. - \$21.95 tape/\$26.95 disk Six menu driven games for young children (ages 3-6) to teach directions. All games involve using the arrow keys ONLY. Games include: LADYBUG, BUTTERFLY, ARROW MATCH, KALEIDOSCOPE, RABBIT, and DOODLE Colorful graphics.

## FIRST GAMES

32K Ext. - $\$ 24.95$ tape/ $\$ 29.95$ disk First Games contains 6 menu driven programs to delight and teach your early learners (ages 3-6). These games enrich the learning of colors, numbers, lower case letters, shapes. memory, visual discrimination and counting.

## CLOZE STORIES

32K Ext - $\$ 19.95$ Tape/\$24 95 Disk These programs give students practice using the popular CLOZE reading technique. Each program contains grade appropiate short stories with key missing words to be deduced by the student. Availabie for grades 3, 4, 5, 6, OR 7 , Please specify.

## DRAWING CONCLUSIONS

32K Ext - tape $\$ 19.95 /$ disk $\$ 24.95$ These programs contain short stories. Each story has two accompanying questions that ask the student to draw conclusions from the text. Available for grades 3-4 OR 5-6. Please specify.

## LOCATING STORY DETAILS

32K Ext - disk only - $\$ 24.95$ These programs contain short stories. Each has an accompanying picture. Questions about story details refer to either the text or pictures. The disk generated graphics are an integral part of these attractive programs. Available for grades 2-3 OR 4-5. Please specify.

## FOREIGN LANGUAGE GAMES

32K Ext - $\$ 19.95$ tape $/ \$ 24.95$ disk (500 words)

## French or Spanish Baseball

Score base hits or home runs for correct answers. You're out if wrong. Correct answers supplied. Fun way to learn and practice vocabulary. PLEASE SPECIFY LANGUAGE

## PUNCTUATION PRACTICE

32K Ext - tape $\$ 19.95 /$ disk $\$ 24.95$ On screen practice in proper usage of the familiar punctuation marks: Grades 3-7.

MATH TUTOR SERIES
16 K Ext
These tutorals take the child through each step of the example. All programs include HELP tables, cursor and graphic aids. All allow user to create the example, or let the computer choose. Multilevel. Great leaching programs

## LONG DIVISION TUTOR \$14.95 tape/\$19.95 disk MULTIPLICATION TUTOR $\$ 14.95$ tape/\$19.95 disk FACTORS TUTOR

 $\$ 19.95$ tape/\$24.95 disk FRACTIONS TUTOR (addition) $\$ 19.95$ tape/\$24 95 diskFRACTIONS TUTOR (subtraction) $\$ 19.95$ tape/\$24.95 disk FRACTIONS TUTOR (mult.) $\$ 19.95$ tape/\$24 95 disk

## COMPUTER LITERACY

32K Ext $-\$ 19.95$ tape/ $\$ 29.95$ disk A computer literacy quiz exclusively for the Color Computer. Tests and scores from over 60 questions on a H-res upper and lower case screen. Reviews computer literacy and beginning programming knowledge. Ages 10 and up.

# Telewriter-128 the Color Computer 3 Word Processor 

For over 5 years now, Telewriter has been the \#1 Color Computer word processor, both in popularity and in performance. Telewriter's near perfect mix of sophisticated professional features and a very natural user interface, has earned it the highest praise in numerous magazines, and an intensely loyal following among tens of thousands of Color Computer users all over the world.

## HISTORY

Throughout the history of the Color Computer, Telewriter has pioneered software breakthroughs that set the standards.
In 1981, it was Telewriter 1.0 that first took the Color Computer's inadequate 32 X 16 alluppercase display, and replaced it with a graphics-based 51X24 upper and lowercase display.
A few years later, Telewriter-64 added high density 64X24 and 85X24 displays and access to the full 64 K of the newer Color Computers.

## THE NBW AGE

Today, Telewriter-64 is recognized as the standard Color Computer word processor. It runs on all Tandy Color Computers - from the original Color Computer 1, to the Color Computer 2, and 3.
But the Color Computer 3 brings a whole new level of power to low cost computing and, so, a new Telewriter is here to put that power towork for you. We call it Telewriter128.

## TELEWRTTER-128

You don't mess with a good thing, so Telewriter-128 is still Telewriter-64 at heart. The commands, and the user interface are essentially the same. If you know Telewriter-64, then you already know Telewriter-128. And, if you don't know Telewriter-64, you'll still have an easy time learning and using Telewriter-128.

## SO COIDMNS

But there are major differences as well. First, Telewriter-128 uses the Color Computer 3's new 80 column screen display.
This means, simply, that using Telewriter128 on alow cost Color Computer 3 will look a lot like using a more expensive word processor on a much more expensive IBM PC, PS/2, or clone.

## SPEED

Second, Telewriter-128 is lightning fast. Telewriter-64 was fast in its own right, but, by accessing the Color Computer 3's video hardware directly, and by running the machine in double speed mode, Telewriter128 is able to provide extremely fast scrolling and instant paging - functions whose speed is crucial to serious word processing. In this department, Telewriter-128 doesn't simply keep up with IBM-based word processors - it generally surpasses them!

## EASE

Third, Telewriter-128 adds a host of new features big and small, that make it even easier to use.
Features like: Quick function key access to the editor or the menus - an instant on-line help screen summarizing all Telewriter commands and special characters - an option file where you store your personal set of format and screen settings so you only have to set them once!
Then, there's a quick save feature which allows you to save all your current work without leaving the editor. There's a simple way to cursor through the disk directory and read in a file by just hitting ENTER. And there's more.

## NEW POWER

Telewriter-64 always had the power to handle any kind of serious writing, from letters to textbooks. But, here too, Telewriter-128 adds major features.

Like Macros - which let you insert whole words or phrases (even sets of control codes or format commands) into your text, with a single keypress. And every time you power up Telewriter-128, the macro definitions are automatically loaded", so they're always there
Then there's a Print Preview feature that shows you, on-screen, the way your printed text will look - with margins, headers, centering, justification, page numbering, and page breaks. This guarantees letter perfect documents every time, and makes tasks like widow/orphan line elimination, a breeze.

## TELEWRITER-64 OR TELEWRITER-128

We could go on listing features, butthe point is this: If you own a Color Computer, you already have the hardware for the most powerful, low cost word processor in town. All you need now is to add the heart and soul:

Telewriter-64, for the Color Computer 1 and 2 , costs $\$ 59.95$ on disk, $\$ 49.95$ on cassette.
Telewriter-128 for the Color Computer 3 costs $\$ 79.95$ on disk, $\$ 69.95$ on cassette.
To order by Mastercard or Visa call (619) 755-1258 anytime, or send check or money order plus $\$ 2$ shipping (Californians add $6 \%$ sales tax) to:

## COGNITEC

704 Nob Ave.

$$
\text { Del Mar, CA } 92014
$$

To upgrade from Telewriter-64 to Telewriter-128, return your original disk or cassette with $\$ 39.95$. (Add $\$ 10$ if you're also upgrading from cassette to disk. Deduct $\$ 10$ with proof of Oct ${ }^{8} 87$ - Feb ' 88 , purchase of Telewriter-64.)

When I first got Telewriter-64 last year, I was in beaven. I couldn't believe the program's versatility and ease of use.
-The RAINBOW, Oct. 1985

TELEWRITER-64 FEATURES: Compatibility with any printer that works with the Color Computer; embedded control codes for underlining, boldface, sub/ superscript, variable fonts; format commands for headers, centering, margin and spacing changes anywhere in the document; Format menu to set margins, spacing, page numbering, BAUD rate, lines per page, justification; Chain printing for one shot printing of multi-file documents. Fast, full-screen editor with wordwrap, block copy/move/delete, global search and replace, wild card search, fast 4-way auto-repeat cursor, fast scrolling, forward and backward paging, text alignment, tabs, error protection, word and line counter. Insert or delete text anywhere on the screen. Simple, easy to remember commands. Optional ASCII files for compatibility with spell checkers, terminal programs,

> and BASIC. Load, save, append, partial save files to disk or cassette. Kill, rename and list disk files. Cassette verify and auto-retry on error.
> TELEWRITER-128 - ADDITIONAL FEATURES: Print preview from editor; multiple copy print; footers; hanging indents; cursor thru disk directory to load, append, rename and kill files; quick file save from editor; keyclick; key repeat; true block move; 24,25 , or 28 line screen; 40 or 80 column screen; dual speed cursor; on-line help; overstrike mode; word delete; wordwrap at margin; user definable macros; nested macros; instant status window for information on cursor position, word count, etc.; instant function key access to menus or editor; options menu for setting character and screen colors, key repeat and delay rates, definable foreign symbols.

## Disk Transfer

䟺I would like to run Radio Shack's Ernie's Magic Shapes, Cookie Monster's Letter Crunch and Grover's Number Rover from disk. However, these programs were written to run from cassette only, and conflict with address assignments for the DOS. They were also written in absolute reference code and are not readily relocatable. Is there a way to transfer the code?

John W. Hefler Sausalito, CA

RI wrote a program called TAPEFIX that automatically modifies tape programs by appending a machine language loader. The program was published in the September 1983 issue of HOT CoCo in the article "Disk Utilities." For reprints, write CW Communications, 80 Pine St., Peterborough, NH.

## Controlling Plug ' N Power

I seem to remember reading in RAINBOW some instructions for controlling Radio Shack's Plug 'N Power Remote Control modules directly from BASIC. Could you tell me what issue this was in or where else I can find this information?

> Fred Kaplan
> Topeka, KS

RA.B. Trevor wrote four articles on the original Plug ' N Power (X10) system for the CoCo : "Let CoCo Control Your Home Power Units," February 1983; "CoCo Clock, An Accurate Timepiece," April 1983; "X10 Protocol Theory, Home Power Control," June 1983; and "Keep Your Home On Schedule," August 1983.

Richard Esposito is a senior project engineer with Northrop Corp. He holds bachelor's, master's and doctorate degrees from Polytechnic Institute of Brooklyn. He has been writing about microcomputers since 1980.

Richard Libra is a simulator test operator for Singer Link Simulation Systems Division.

By Richard E. Esposito<br>Rainbow Contributing Editor with Richard W. Libra

## Mitsubishi Drives on CoCo 2B

8I have a CoCo $2 B$ with HDS controller and one MPI 51 drive, running BDOS. I recently got a great deal on two Mitsubishi 80 -track drives (double-sided). They won't work at present. Will my controller handle these drives and, if so, is there a DOS available to run them? I have a friend who says that patched ADOS will work. Is this true, and how is the patch done?

James L. Pogue
Marietta, GA

RADOS comes with a configuration program, and 80 -track drives is one of the options.

## Altering BASIC

${ }^{1}$I have heard about the "all-RAM mode, " which puts BASIC into RAM. How do you edit BASIC with the allRAM program, to change BASIC commands, for example.

> Daniel L. Miller
> Oregon, OH

ROn boot-up with the CoCo 3 , or after running a ROM-to-RAM program on a $64 \mathrm{~K} \mathrm{CoCo}$, poke or use a machine language program to modify BASIC (addresses \$A000
through \$BFFF), Extended BASIC ( $\$ 8000$ through $\$ 9$ FFF) or Disk BASIC ( $\$$ C000 through \$DFFF).

## CoCo and Commie Compatibility

I was wondering if there is a way that the CoCo can run Commodore 64 software.

Alvin Malone
Diaz, AZ

ROnly if the program is in BASIC and you transfer the ASCII code. It will also most likely require some modification since the two BASICs are not totally compatible.

## Color Blind Software

BIs there a way to cause the correct color to come up in high resolution screens with software instead of by constantly pressing the reset button?

Richard Schultz Carmichael, CA

RThe four-plus color, 256-by-192 mode on the CoCo 1 and 2 machines is not officially supported in the 6847 SAM chip's documentation. The red/blue interchange on these machines cannot be controlled by software to automatically start the same way all the time.

## OS-9 BBS Software

"I'm looking for information on where to get BBS software that runs under OS-9 for our CoCo club in York, Pennsylvania. Can you help?

Christian B. Lutz
York Haven, PA

RAn OS-9 BBS program called PBBS 5.0 is available for $\$ 50$ from Steve Roberson, (602) 884-7840. He recommends that the user have doublesided, 40 -track drives at a minimum to use it. The source code is also available for an additional $\$ 50$.

## Botched Communications

䀧I have tried and tried to communicate with my friend's OS-9 system using my modem, but each time I attempt to send underlines, boldface

## INTRODUCES

 THE FANTASTIC SUPER CONTROLLER II POWER BEYOND BELIEF

Radio Shack/Tandy controller compatible.

- Works on all COCOs! 1, 2 or 3, with or without Multi-pak interface.
- One 24/28 pin socket, for 8K ROM, 2764, 27128 or 27256.
- Internal Mini-Expansion-Bus Connector for one DISTO Super Adapter board.
Low Power draw; Within COCO's power requirements.
Gold Plated edge connectors.
Under OS-9:
- Buffered Read/Write sector achieved without halting the CPU.
- Continual use of keyboard even while Reading or Writing to disk.
- System's Clock no longer looses time during Read \& Write.
- NMI is blocked and transferred to IRQ in software for low CPU overhead.
- Completely Interrupt driven for fast and smooth Multi-Tasking operations..
- Drivers (written by Keven Darling) for Level 1 and 2.

## Suggested Fetail Pice $\quad \$ 150$. Introductory Price $\$ 130$

## 口IST\SUPER CONTROLLER I \$99.95

A superb controller. Along with the included C-DOS, plug-in three more software selectable 2764 or 27128 EPROMs burned to your liking.

The internal Mini Expansion Bus lets you add some incredible features to the controiler. Disto Super Add-Ons were designed to fit neatly inside the Super Controller case.

\section*{| $\square$ SUPER RAM | Zero K | $\$ 29.95$ |
| :--- | :--- | :--- |
|  | Full 512 K | $\$ 79.95$ |}

Now is the time to upgrade your COCO 3 to 512 K of memory. Available with or without memory chips, the Super Ram 3 board is easily installed inside the COCO. It is fully compatible with OS-9 Level 2 and is delivered with a software package (for BASIC) that includes: a printer spooler, a ramdisk, a memory test and an installiconfigure program for your system.

REAL TIME CLOCK AND PARALLEL PRINTER INTERFACE Have the Real Time, date and year displayed on your screen at a simple command.
$\$ 39.95$
MINI EPROM PROGRAMMER
A low cost EPROM programmer that attaches directly to your Disto Super Controlier to program those often used utilities.
$\$ 54.95$

## HARD DISK INTERFACE

A hard disk interface fully compatible with S.A.S.I.controller. Fits inside the Super Controliers, Ramdisk or MEB adapter. OS-9 Drivers are included.
$\$ 49.95$
SUPER RAMDISK 512 K
Imagine having access to 512 K of virtual disk memory in close to no time. Upgradable to One Megabyte
\$119.95

## MEB ADAPTER

A Stand-Alone Mini-Expansion-Bus in which you can plug any other DISTO Adapter directly in a Multi-pak without the need for a Super Controller or Ramdisk
\$24.95

## SEND FOR FREE 1988 WINTER CATALOG

 OC CRC COMPUTERS inc. 10802 Lajeunesse, Montreal, Quebec, Canada, H3L 2E8[^13]characters, blinking characters, etc., all he gets is a homed cursor, and the rest of the special codes are ignored. Is this a bug or am I doing something wrong?

Tom Sanders
Parma, MI

RThanks to Kevin Darling for coming up with a patch. Using Modpatch $-s$, patch CC3IO:
c 778 a7 12
c 779 c8 12
c 77a lf 12
c 79 f 4 b 4 e
c 9ef c8 12
c 9 f0 If 12
c a2d bd c0
v
Then use Save to make a new module or Cobbler a new patched disk.

CoCo 3 Keys
I just would like information on the CoCo 3 keyboard, specifically the FI, F2, CTRL and ALT keys. The CoCo manual doesn't cover them at all.

Kenneth Allen Leap Norfolk, VA

RThe ALT, CTRL, F1 and F2 keys occupy addresses 341,342 , 343 and 344 of the keyboard rollover table. When any one of these keys is pressed, the value at its corresponding address in the keyboard rollover table changes from 255 to 191. You can use this information in writing your own programs to detect when one of these keys are pressed.

## Old Controller, New CoCo

(I have an old silver-case CoCo (F board - 1982) and a silver-case upright disk drive, which connects to the CoCo by means of a black controller. I would like to upgrade to a CoCo 3, but don't want the expense of a new disk drive and controller. Can I use my old disk drive and controller on a CoCo 3? Would a Multi-Pak interface solve my problem?

Charles Waldron<br>Fairfield, CT

RYour current controller, if it requires 12 volts, will not work with a CoCo 3 unless it somehow gets the required 12 volts (the use of a Multi-Pak is one way to supply the necessary 12 volts). OS-9 Level II runs at 2 MHz , which cannot be handled by most of the 12 -volt controllers. If you plan to use OS-9 Level II, I'd suggest getting a new
controller. But, before you purchase either a Multi-Pak or a controller, check to see if you already have a 5 -volt controller, for some of the earlier ones came with black housings.

## Of Modem Paks and DeskMate 3

Do you know of a way to use Radio Shack's Direct Connect Modem Pak (Cat. No. 26-2228) through the "Telecom" section of DeskMate 3 for the CoCo 3?

A.M. Fransen<br>Calgary, Alberta

R. After you swap disks and select telecommunications, specify /M1 as your serial port.

## 64K Programs on 512K

,I'm thinking about selling my 64 K CoCo and buying the CoCo 3 with the 512 K upgrade kit. If I do, will I be able to run my 64 K programs on it with no problems?

Michael Duvall Zanesville, OH

RYes and no. Many of your 64 K programs will work without modification, some will work with minor fixes, and some may not be worth the time or trouble to fix. The two major areas of problems are those programs that interfere with the GIME chip and Super Extended BASIC. The former problem is usually with a 64 K boot routine messing up the GIME (e.g., the VIP series programs have this problem); it is relatively easy to fix. The latter problem can be more difficult since code may have to be extensively modified.

## The Power of the Pins

The disk controller shipped with the original CoCo drives required a-5volt supply from the CoCo to operate. The CoCo 2 does not have this source available on its cartridge connector. It is not possible to solve this problem using a Multi-Pak interface, since they are no longer available in Europe. Using some elementary electronic components, one can generate a -5-volt output coming from a l0-volt (or more) source. The only problem is the pin number on the cartridge connector. Would it be possible for you to inform me on this subject?

Dirk Vandekerckhove B-8600 Menen, Belgium

RThe power supplied at the ROMpack port on the original CoCos was at 1$)-12 \mathrm{~V} .(100 \mathrm{MA}), 2)+12 \mathrm{~V}(300$ $\mathrm{MA})$, and 9$)+5 \mathrm{~V}(300 \mathrm{MA})$. There was no external -5-volt supply.

## Mac Hard Drives

Tan you make use of all the keys on the CoCo 3 keyboard on a CoCol (F board)? If so, how complicated would it be? Could I hook up a Corvus 5 Mb hard drive, last used on a Macintosh, on my CoCol?

## Rod Reinemer Leaburg, OR

RThe CoCo 3 keyboard is available from Radio Shack National Parts (Part No. AXX-0245). It should plug right in. With the proper interfacing hardware and software, you could use the drive. For starters, contact OwlWare and Burke \& Burke, both advertisers in this magazine.

## CoCo's British Brothers

I am likely to move to England soon and would like to know if my CoCo would work there using a locally bought TV. I know that they use a 220 volt, 50 Hz electrical system and a TV system called PAL instead of our NTSC. Is there a British computer similar to the CoCo? Would it run all the CoCo's programs?

Zafer Deeb
Toledo, OH

RThere is a PAL version of the CoCo sold in Europe that is software-compatible with the NTSC versions sold here. Also, there is a CoCo clone called the Dragon sold there that will run some of the CoCo's software. See the recent article "CoCoing Abroad," in the November 1987 RAINBOW, Page 32, by Marty Goodman and Don Hutchison.

For a quicker response, your questions may also be submitted through Rainbow's CoCo SIG on Delphi. From the CoCo SIG> prompt, pick Rainbow Magazine Services, then, at the RAINBOW $>$ prompt, type ASK for "Ask the Experts" to arrive at the EXPERTS $>$ prompt, where you can select the "Doctor ASCII" online form which has complete instructions.

## Barden's Buffer

# An A'maze'ing Adventure 

By William Barden, Jr. Rainbow Contributing Editor

TThe Winchester Mystery House, found in Silicon Valley, California, started as a basic three-story Victorian home. Lucy Winchester, widow of the arms manufacturer, kept adding to it - as long as she kept building, she believed, she would never die.
There are stairways in the house that go nowhere, doors that open to sheer three-story drops, and doors that don't open at all. I was reminded of the house when writing this column - the maze game presented here is similar, and some of the problems I ran into while writing the program are analogous to those fake doors and empty rooms.

In this column I'll describe the maze game and its development and suggest ways you can add to it for your own version. You won't have to add much, though; by itself it's an interesting game, relying heavily on three-dimensional arrays and string processing, among other things.

## The Scenario

It's like this: Lucy Winchester has kidnapped you. Groggily, you awake (with a nasty headache) to find yourself in an interior room of the house. In order to find your way out, you'll have to negotiate the various rooms, floors and dead ends. (If you don't like that one, another scenario involves an abduction by aliens that look like clones of CoCo Cat - I'll leave it to you to establish your own fantasy.) In any event, you're in the middle of a three-dimensional box, as shown in Figure 1, and must find your way out to one of the four sides, the top or bottom.
Within the maze is a series of rooms. Each room can have a door on the left, a door on the right, a door in front of you, a door behind you, an opening in the ceiling to the floor above (no staircases here) or an opening in the floor to the floor below. Rooms may have any combination of these doors and openings - one room may have no doors, but another may have two doors and a ceiling opening. A room with every door and opening is presented in Figure 2.

Bill Barden has written 27 books and over 100 magazine articles on various computer topics. His 20 years'experience in the industry covers a wide background: programming, systems analysis and managing projects for computers ranging from mainframes to micros.

## Game Play

By pressing keys you can move to adjacent rooms and go up or down one floor. When you go through a door, you may change directions. If you select the door to the right, for

Figure 1: Three-Dimensional Box or Maze (Cut-Away View)

Figure 2: Room in Maze
example, you'll be facing the new room at a right angle to the old direction. Pressing these keys takes you from room to room:

$$
\begin{array}{ll}
\text { S through the door straight ahead } \\
\text { B } & \text { through the door behind you } \\
\text { through the door on your left } \\
\text { R } & \text { through the door on your right } \\
\text { U through ceiling opening to floor above } \\
\text { D through floor opening to floor below }
\end{array}
$$

## Designing the Maze Game

Let's start off by assuming that the maze is a box, consisting of height, width and depth. We'll assume that the height must be greater than one story and the width and depth greater than two.

We could number each of the rooms, as shown in Figure 3 , starting at the upper-left corner of the box and working down toward the lower-right corner. Numbering might work like the numbering of hotel rooms, which use the floor number as their first number - rooms 401 through 412 for rooms on Floor 4, for example.

This is a cumbersome way of identifying the rooms, however. Is Room 412 toward the front or back of the building? Is Room 401 on the left or right side? Another way to define the rooms is to use a three-dimensional array. An array is defined by the dimension statement (DIM) in Extended Color BAsic.
$100 \operatorname{DIM} \mathrm{R}(2,3,4) \quad$ 'height, width, depth
The DIM statement above defines a box that is two stories high, three rooms wide, and four rooms deep, numbered as shown in Figure 4. The box is called R. Actually, there's another floor, the "zero" floor, as well. The DIM statement allocates an array starting with 0 for all dimensions, so the height is 0 to 2 , the width is 0 to 3 , and the depth is 0 to 4 , making the total number of rooms 3-by-4-by-5, or 60 rooms. However, in a lot of programs, the "zero" index is not used, because numbering often starts from 1 and not from 0 . We'll do that here.
Variables can be used in place of numeric constants in the DIM statement, as in this example:

```
100 INPUT H 'get height
1 1 0 ~ I N P U T ~ W ~ ' g e t ~ w i d t h ~
1 2 0 ~ I N P U T ~ D P ~ ' g e t ~ d e p t h ~
130 DIMR(H,W,DP) 'allocate array
```

Once the array has been defined, you can refer to any room in the array with its coordinates, or indices:

```
140 C=R(2,1,3)
```

The statement sets variable $C$ equal to the room on the second story, the first row, and the third column. What is "in" $R(2,1,3)$ is another problem, which we'll discuss shortly.
Instead of using stories, rows and columns, however, let's use the $\mathrm{X} / \mathrm{Y} / \mathrm{Z}$ scheme, shown in Figure 5. Here the height is equivalent to the Z dimension, the width is equivalent to the X dimension, and the depth is equivalent to the Y dimension. A room is defined by R (height, width, depth) or R(Z,X,Y).

Figure 5: X/Y/Z Scheme

# Z 1 <br> TOM MIX COMPANIES 

FLIGHT $16{ }^{*} \dagger$ - This is the very finest flight simulation program on the market today. Flight 16 will work with all color computers. Flies very much like a Cessna 150. Is a full instrument aircraft with sound effects and out-the-window graphics. As a REAL bonus feature, you may design your own airports and flight areas.
\$34.95
WORLDS OF FLIGHT* $\dagger$ - A real-time flight simulation of a sophisticated uitra-light aircraft which generates panoramic 3-D views of ground features as you fly in any of nine different "worlds." The manual included explains the instrument panel, the basis of flight control, etc. For the serious simulation buff!
\$30.95
32K
P51 MUSTANG ATTACKFLIGHT SIMULATION $\dagger$ - The ultimate video experience! For the first time ever, two CoCo's can be linked together via cable modem. (If playing via modem, both computers require a copy of the program.) Or play alone and sharpen your skills against a non-combatant computer drone.
\$30.95
32K
APPROACH CONTROL SIMULATION* - "Caught in a blinding snowstorm, two jet airliners are on a collision course. Hundreds of lives are at stake! A high-speed disaster is inevitable unless you act fast. . "This and many other scenarios await you as the Air Traffic Controller. Experience firsthand challenges, frustrations and pressures felt by all Air Traffic Controllers!
\$25.95
32K
THE KING* $\dagger$ - This is a color computer classic! Looks and plays like the popular arcade game. Contains the same four screens as the original: barrels, pins, jacks, and conveyors. Super graphics!
\$25.95
32K
TRAPFALL* $\dagger$ - The "pitfalls" in this game are many. Fight your way through the jungle collecting hidden treasures as you go.
$\$ 20.95$
16K
KATERPILLAR II* $\dagger$ - The CoCo has needed a perfect centipede-type game since day one. You will throw all imitations aside when you see this.
$\$ 20.95$
16K
BUZZARD BAIT* $\dagger$ - We've done it again. Outstanding high resolution graphics and sound make this "joust" type game, a must for your software collection. One or two players.
$\$ 20.95$
32K
MS. MAZE* $\dagger$ - Ms. Maze combines brilliant color, high resolution, detailed graphics and music to make it look and play like the arcade version. It is the closest thing to the arcade Pac games that we've seen for the CoCo! Arcade Aces - this one's for you!
\$20.95
32K
CUBER* $\dagger$ - The hazards faced by Cuber are many! Help him change the colors of the pyramid while avoiding the many dangers always present.
$\$ 20.95$
32K
FANGMAN* $\dagger$ - Based on the Dracula legend, you are Dracula, stalking, invading villagers. Several levels of difficulty and a Bonus Clock make it fun!
$\$ 20.95$
DRAGON SLAYER* - Save the villagers of Pendor from Icarus, the bloodthirsty dragon! He lives in a cave way up in the mountains, which is a treasure chest full of gems and cashbags. Be on the lookout for enemies and barriers at all times! Ten levels with sixteen rooms per level; over 160 exciting screens.
\$20.95
32K Disk only
THE SAILOR MAN* $\dagger$ - Avoid the punches of the Bigfatbadguy and the flying bottles thrown by the Olduglyseawoman to rescue Elsie and win her heart! One or two players. More great sound and graphics from the author of "The King!"
\$25.95
64K

GOLD FINDER* $\dagger$ - Here's the quality you have come to expect from TOM MIX! While avoiding enemies, pick up all the pieces of gold along the way; then ride, the elevator to the top to solve each level. Sixty-nine levels. PLUS now you can create your own levels.
\$20.95
32K Disk only
DONUT DILEMMA * - Angry Angelo has raided Antonio's
Donut Factory sending the entire complex into a frenzy! Donuts have come alive and all the machines are out of control. Hurry! Time is running out!
\$20.95
32K
NEUTROIDS - Fast-paced action, super graphics and, above all else, sound from your CoCo like you've never heard before! Complete each grid quickly before the particle vault reaches the meltdown state!
\$20.95
16K
MONEYOPOLY* $\dagger$ - Now you can play the popular board game on your color computer! Probably the most realistic computer board game simulation ever. Contains all the features of the original game. Two to four players.
$\$ 20.95$
32K
BATTLE STATIONS. Here is another realistic and fun remake of a popular board game! Place your ships for battle and pit your skill, strategy and luck against the cunning logic of the computer.
\$20.95
32K

## SPECIAL OFFER:

## Order two, take $\$ 5.00$ off total <br> Three or more, take $\$ 8.00$ off total

WAREHOUSE MUTANTS* $\dagger$ - Journey through the warehouse seeking out the invading mutants who are out to destroy you. Watch out! They will break out of their crates and push them at you in the hopes of crushing you!

## $\$ 20.95$

16K
DRACONIAN* $\dagger$ - Your mission is to destroy all of the enemy bases within each sector, rescue as many astronauts as possible and dock with the friendly base at the top of the sector. Your spaceship can move in eight different directions. An exciting program with outstanding graphics and sound!
\$20.95
32K
THE FROG* - Cross the busy highway to the safety of the median and rest a while before you set out across the swollen river teaming with hidden hazards. Super graphics and sound.
$\$ 20.95$
16K
THE MARTIAN CRYPT* - A graphic adventure with sound effects and over 30 screens of animated hi-res graphics! Man discovers that life once existed on Mars! \$20.95 32K

VEGAS SLOTS - CoCo III Only - Seven of the most popular slot machine games found in Vegas are yours for the price of one: MultiBars, Fruit MultiBars, Right-Left/Left-Right, Lucky Dollar, Melons and Bars, Fruit and Bar 5. Designed to be as real as being there. One of the most outstanding programs we have ever offered.
\$29.95
Disk only
VIDEO CARDS \& KENO - CoCo III Only - Play Video Poker, Jokers Wild, Blackjack, and Keno. These games are so real you expect to see Wayne Newton walk by! Outstanding graphics and movement. Wanna Bet?
$\$ 29.95$
Disk only

VEGAS GAME PAK * $\dagger$ - Now you can bring Las Vegas home with you! This package contains six different games: Video Keno, Video Poker, and Video Blackjack, plus three slot machine lookalikes, Bar 5, 3 Line, and Right/Left.
elec*TRON* $\dagger$ - Patterned after the popular arcade game, there are four men on your team and four subgames to complete.
$\$ 20.95$

## 16K

THE WILD WEST - CoCo III Only - The notorious desperado Black Bart has escaped from jail and is on his way to Dry Gulch to recover his hidden fortune. Can you capture him? Four voice music and sound effects and a vocabulary of over 100 words!
\$20.95
Disk only
WIZARD'S DEN* - Another of our outstanding graphic adventures! You must recover the Gem of Damocles, stolen by the Evil Wizard. His magic is strong and he can make you see things that don't exist!
\$20.95
64K Disk only
LUNCHTIME* $\dagger$ - Your chef, Peter Pepper, is surrounded! Dodge pickles, hot dogs and eggs while building hamburgers. Fast paced action for either one or two players. \$19.95

32K
BREWMASTER* $\dagger$ - Move along the end of the bars serving beers to your thirsty customers, but watch out for falling glasses and rowdy customers!
$\$ 15.95$
32K
MAUI VICE ${ }^{*} \dagger$ - Step into the shoes of Crock and Bubbs in this graphic adventure and gather evidence. A new story generated each time you play!
\$20.95
64K extended basic, Disk only
CHAMBERS* $\dagger$ - Loosely based on Cosmic Chasm, in each level you must destroy all of the evil creatures. In all there are 20 series of chambers with 20-35 interconnected rooms.
$\$ 15.95$
32K
FOURCUBE $\dagger$ - Fourcube is a 3-dimensional extension of standard tictactoe. Be the first to get four cells of your color in a straight line.
\$15.95
32K
QUIX* $\dagger$ - Fashioned after a popular arcade game with a similar name, it is simply frustrating. Fill in the screen without the Quix's, sparklers or wicks touching you!
\$19.95
32K
CO CO CROSSWORDS* - Attention all crossword puzzle addicts! Now you can solve them on your color computer! Master set contains 27 puzzles with four levels of difficulty.
$\$ 19.95$ 32K Disk only Each additional set \$9.95; Sets \#2, \#3, and \#4 available.

GOLD RUNNER* - Travel the maze in your never-ending search for gold, but be careful! Clear the first screen and 32 more await you!
$\$ 15.95$
64K
TEACHERS DATABASE II* - Allows teachers to keep computerized files of students. Up to 100 students, 24 items per student • Statistical analysis of scores • Grades can be weighed, averaged, percentaged - Test result graphs/grade distribution charts
$\$ 59.95$
64K TDBII Disk Only
32K TDE
More educational software available.

## What＇s in a Room

What is in a room？We know that the array R is a numeric array and each room or element contains a numeric value． How does that numeric value represent the doors and openings of the room？One way is to use a string array and then form a string of words to define what the room looks like．The string could be＂left door，right door，ceiling opening＂，for example．To be more concise，we could say ＂LRU＂for＂Left door，Right door，and Upper opening＂．

Another way of representing the room，though，is with bits －binary digits．We know that there are only six possible doors and openings in a room（right door，left door，the door in front，the door behind，the ceiling opening，and the floor opening）．These six doors and openings can be represented in six bits，as shown in Figure 6．A bit with a value of 1 indicates that the door or opening is present，while a 0 bit indicates that the door or opening is not there．
The six bits always have the same meaning as shown in the figure．They occupy the same position in the value．A value of 100101 ，for example，means $U$（upper），L（left），and $R$（right）．
To calculate the decimal value for each bit，just add 32， $16,8,4,2$ ，or 1 together，depending on which bit is present． In the example of 100101 ，you＇d have $32+4+1=37$ decimal． For this room，then，the value that represents an upper opening，left door and right door could be set by this line：

$$
200 R(2,1,2)=37
$$

The 2，1， 2 indices for $\mathrm{Z}, \mathrm{X}$ and Y （height，width and depth） are just three arbitrary values we happened to choose．）
The value used for a room could range from 0 （no doors or openings）to 63 （all doors and ceiling and floor openings）． Another way of specifying this value is in hexadecimal or Hex，which is a shorthand way of representing binary．In this case，decimal values of 0 through 63 are represented by Hex values of 0 through \＆H3F，as shown in Table 1.
The numbers in the first column of the table are the decimal numbers；the numbers in the second column，with the \＆ H prefix，are the hexadecimal equivalents；and the numbers in the last are the binary equivalents．

## Drawing the Rooms

At this point we have a three－dimensional box or array， with each element of the array containing a value from 0 to 63 that indicates the doors and openings．To draw any room from the room value，we first check each bit of the value and then draw the appropriate door or opening．But before that， we have to draw the outline of the room，since that stays constant for any room．The BASIC code for drawing a room is found in lines 220 through 470 of Listing 1，but here is a condensed presentation of those lines to provide a clearer understanding：

```
100 SCREEN 1,0
110 PMODE }
120 COLOR 2,3
130 PCLS
140 LINE (0,0)-(255,191),PSET,日
150C=R(Z,X,Y)
160 GOSUE }71
170 IF (C AND 32)0 THEN GOSU日 1310
1B0 IF (C AND 16) 0 THEN GOSUB 1030
190 IF (C AND 4)0 THEN GOSUB 790
210 IF (C AND 2) 0 THEN GOSUB 950
220 IF (C ANO 1)0 THEN GOSUB 870
```

## Calligrapher New Fonts

Sugar Software's popular CoCo Calligrapher program now has a new set of 5 fonts. The text of this ad was printed with the 0S9 Calligrapher and the condensed ROMAN font.
Like all of the current 54 fonts, these are variable width for a more pleasing oppearance. The new fonts are the smallest of all (less than 2 inches tall) and are more useful for Desktop Publishing:

> Roman
> Ytalco Mulation

These fire new fonts are available in either RSDOS or oss format. The introductory price for the set on disk or tape (RSDOS) is $\$ 18.50$, good through March 31st. The font set requires that you have the CoCo or 059 Calligrapher ( $\$ 24.95$ ).

## TIMS

The Information Management System, TIMS, is a very easy-to-use databose program. TIMS is used to ereate files of things. You decide what you want to file; it could be articles, collections (coins, stamps; video tapes, etc.), ongthing you might put into an index card file. The advantage to computerizing your files is that you can quickly search the entire file in a fraction of a second; sort the file on ong of the fields (up to 3) in a few seconds; easily update gour fields or records; and print your file, or a portion of it is a format you design.

## TIMS MAIL

TIMS Mail is a special version of TIMS that is tailored to maintaining a file of names and oddresses and printing mailing labels instead of reports. Many of the standard label sizes are supported including 2 or 3 across. TIMS Mail nddress files may be used with TIMS.

## TIMS UTILITY

The TIMS Utility program enhonces the other programs. It allows multi-term searches of your files, global modification and deletion of records and file splitting.

## TIMS COMBO

Your best value is to purchase the entire TIMS library on a single disk. All three programs are included olong with a sample TIMS bibliography file of all orticles written about the CoCo in 1981 and 1982!

All the TIMS programs run on either tape or disk. The tape TIMS programs may be moved to disk when you do.
TIMS and TIMS Mail are $\$ 19.95$ each. TIMS Utility is \$14.95. The TIMS Combo Package is \$34.95, saring you about \$20! At Sugar Software, tape and disk prices are the same.

[^14]The Calligrapher Programs - Both the OS9 and CoCo Calligrapher come with three $1 / 2$-inch fonts: Old English, Gay Nineties and Cartoon. Both come with support for Epson, Gemini, Radio Shack, Okidata 92A, Banana and Prowriter printers. Both print the same fonts.
CoCo Calligrapher - Tape or Disk; \$24.95. OS 0 Calligrapher - Requires OS9 Level I or II; Disk only; \$24.95.

[^15]This ad was composed using $1 / 2$-inch Reversed Old English for the headline, $1 / 2$-inch Block for headers and .2 -inch Roman for the body. A $2 \not 2$-inch column was printed and cut to three columns. Specify OSS or COCO (RSDOS) when ordering Calligrapher or fonts.

## SUGAR SOFTWARE

P.O. Box 7446

Hollywood, Florida 33081
(305) 981-1241

The subroutine at Line 710 of Listing 1 draws the room outline as if you were looking into the room from the doorway you've just passed through. The other subroutines draw individual doors or the ceiling and floor openings. The room outline is always drawn, but the other subroutines are called only if the proper bit is set in the value. The bit for each is tested by ANDing the room value with the value of 32 , $16,4,2$, or 1 . The AND returns a non-zero result if the bit is set and a zero result if the bit is not set. The door "behind" the observer is not drawn, because it is not visible in the view of the room. It's still always there, however, because it's one of the ways to get into the room.

The code for drawing the doors and openings uses a series of LINE statements. A CIRCLE statement in the door subroutines draws a doorknob, and PAINT colors the doorknob black. Ceiling and floor openings are painted black, as well. The code for drawing the shapes is shown in lines 700 through 1700 of Listing 1.

## Moving From Room to Room

The code in lines 700 through 1700 draws a single room, but what about moving through the maze? One way to move through the maze is to use a single key press to go either up, down, back, left, straight ahead or right; keys U, D, B, L, S and R are used to move in those directions. An INKEY\& command allows you to read in a key, as shown in lines 480 through 500 of Listing 1 :

```
480 A$=INKEY$: IF A$="" THEN GOTO 4日0
490 A=INSTR("UDBLSSRH", A$)
500 IF A=0 THEN GOTO 480
```

The code loops at Line 480 until a key is pressed. The INSTR statement then looks at the string UDBLSRH to find the key letter in $A \$$. If the letter is found, variable $A$ is set to the position in the UDELSRH string of 1 through 7. If the letter is not found, A is set to 0 and the key press is ignored.

There's a big problem, though, in moving from room to room. The values in the elements of each array are based on an observer facing "north" - right really means east, left is west, and so forth. However, when you're moving through the rooms, you're turning right or left to go through the right or left doors, or turning completely around to return through the door you just entered. (In going through the door in front of you, you keep the same direction, as you do when going up or down.) When you turn and walk through the door, you may be facing another direction. If the room were drawn from the original data, the view would always be the one you see facing north and not the one you see walking through the door (see Figure 7).

The answer to this problem is a conversion of the original room doors and openings to those corresponding to the observer's view. To do this, a direction variable has to be maintained. Let's use variable $D$ to represent the direction. Again, we could have used $N, E, S$ and $W$ in a string variable, but our choice was:

$$
\begin{aligned}
& 0=\text { North } \\
& 1=\text { East } \\
& 2=\text { South } \\
& 3=\text { West }
\end{aligned}
$$

The conversion is common sense. If an observer enters a room and faces north, the right and left sense of the original room values apply. However, if an observer enters a room
facing east, the door straight ahead is actually the "right" door of the original value; the door to the right is actually the "back" door of the original value, and so forth. Facing south and west requires the same type of conversion. Here's a conversion table:
$С \$=" 20154130540235431254$ "
This "table" requires some explanation. It's divided into four parts for north, east, south and west:

| 20154 | 13054 | 02354 | 31254 |
| :---: | :---: | :---: | :---: |
| $\mathbf{N}$ | E | S | W |

The single digit represents the bit that should be tested for the door or opening - Bit 5 (most significant) through Bit 0 (least significant). The order of the string is LRSUD, for left, right, straight, up or down. Facing north, for example, Bit 2 should be tested for the left door. Facing south, however, Bit 0 should be tested for the left door, as the original right door is now viewed as the left door. Confused? It is confusing and there's probably no way to simplify it unless you sit down and draw some sample cases yourself.
Using the C\$ "table," the direction variable D and the code for the movement key (U, D, B, L, S, or R), it's easy to go through the conversion to draw the room as it appears to an observer in the doorway. Lines 360 through 390 of Listing 1 do this:

```
360 C=R(Z,X,Y)
370 GOSUB 710
380 M=INT(2^VAL(MID$,C\Phi,(D*5)+1,1)))
390 IF (C AND M) < O THEN GOSUB 790
```

This code accomplishes the same thing as the previous code - it draws the left door of the room, but it first converts what the observer sees as the left door to the original door. The MIDS portion of the statement gets the bit position; the

VAL portion converts the single character to a numeric value; the $2^{\wedge}$ portion changes this numeric value to a power of 2 ( $32,16,8,4,2$, or 1 ); and the INT portion makes certain that the power of 2 is an integer value. The result is put into variable M, a "mask" variable with a value of $32,16,8,4,2$, or 1 . The modified code for drawing the room is found in lines 310 through 500 of Listing 1.
Once the room is drawn, the player can input a key to determine which direction he wants to go - U, D, B, L, S or $R$. One problem with this, however, is that the player can input a direction that isn't allowed. He may try to go through a left door where there isn't a door (on the left), for example. This cannot be allowed. To prevent it, a check must be made of allowable directions based on the current direction, the intended direction and the openings that are present. The code in lines 480 through 590 accomplishes the conversion.

The value C in Line 590 is the value of the current room in the array. Variable $A$ is a mask value of $32,16,8,4,2$ or 1 derived from the "543 ... 321" string by the current direction D (1, 1, 2 or 3 ) and the $A$ code. If the AND of $X$ and $A$ is zero, there is no corresponding bit in the array value and the key is ignored. If the AND is non-zero, then the direction the player wants to move is valid.

If the player has entered a valid direction, the next step is to change the current direction in the variable $D$. This is done by adding 1 for a move to the right, adding 2 for a move backward, or subtracting 1 for a move to the left. Moving up or down does not alter the direction. The second thing done is adjusting $Z, X$ or $Y$ to reflect the move. Moving up subtracts 1 from the current $Z$ value, and moving down adds 1 to it. If the direction is north ( $\mathrm{D}=0$ ), 1 is subtracted from $Y$. If the direction is east $(D=1), 1$ is added to $X$. If the direction is south $(D=2), 1$ is added to $Y$. If the direction is west $(D=3)$, 1 is subtracted from $X$.

A check is then made of the current $Z, X, Y$. If any of the three variables is equal to 0 , the player has moved out of the "box" and the game is over. If any of the three variables is equal to a value one greater than the dimension limit height, width or depth, the player has moved out of the box, as well. If the player is still within the box, the process repeats. The code for these actions is shown in Listing 1, along with the code described above.

## How to Generate a Maze

The above discussion assumes that a maze exists. But who created it? Not me - you'll have to create your own.
One way to create a maze is to sit down with paper and pencil and draw one out, adding a random number of doors and openings in each room. A better way, and the way I opted for, was to have the CoCo generate a three-dimensional maze!

The resulting FINDMAZE program shown in Listing 2 uses the same structure we've been discussing above, an array of three dimensions with a height $(Z)$ greater than 1 , a width $(X)$ greater than 2 , and a depth $(Y)$ greater than 2 . The first portion of code defines an array R of dimensions height, width and depth.

The next portion of code fills all of the "rooms" of the array with a random arrangement of doors and openings. Since this value is from 0 to 63 , an RND (64)-1 expression produces the proper random value.

The rooms are now filled with random doors and openings. However, there's a slight problem. Because adjacent rooms - rooms next to each other - are created randomly, there may be a door that leads into an adjoining room, but no door

THE COLOR COMPUTER MONTHLY MAGAZINE

## Back Issue Availability

BACK ISSUES STILL AVAILABLE

Have you explored the wealth of information in our past issues? From our very first, four-page issue to many with more than 300 pages of material, it's all just for CoCo users - a great way to expand your library!

## A WORLD OF INFO AT A BARGAIN PRICE

All back issues sell for the single issue cover price. In addition, there is a $\$ 3.50$ charge for the first issue, plus 50 cents for each additional issue for postage and handling if sent by United Parcel Service. There is a $\$ 5$ charge for the first issue, plus a $\$ 1$ charge for each additional issue on orders sent by U.S. Mail. UPS will not deliver to a post office box or to another country.

## MOST ISSUES STILL AVAILABLE

Issues July 1981 through June 1982 are available on white paper in a reprint form. All others are in regular magazine form. VISA, MasterCard and American Express accepted. Kentucky residents please add 5 percent state sales tax. In order to hold down costs, we do not bill, and no C.O.D. orders are accepted.

Due to heavy demand, we suggest you order the back issues you want now while supplies last.

To check availability and order, review and fill out the form on the next page and mail it with your payment to:

> THE RAINBOW The Falsoft Building P.O. Box 385 Prospect, KY 40059

going back into the original room．Imagine this scenario：The player presses R for right to go through a door．Upon entering the room he sees no doors or openings（a random value of 0 ）．Thinking he＇ll go back the way he came，he presses B， which should return him to the previous room，but facing the opposite direction．Instead，he can＇t get back because there is no door！

To solve this problem，a scan is made of all rooms．If there is a door to the right but no door to the left in the adjoining room，one is added．Conversely，if there is a door to the left but no door to the right in the preceding room，one is added． The same actions are taken for＂up＂and＂down＂openings and for doors that are straight ahead and behind．

Next，the center room is found by setting $Z, X$ and $Y$ equal to the integer value of the dimension divided by 2 ．Variable $N$ is then set to 0 ，for north．

The coding at the heart of FINDMAZE does a＂random walk＂ through the maze．Starting at the center，a direction $N$ is chosen at random，including an up／down direction．How－ ever，if the direction represents a return back to a room it was in previously，the direction is discarded and a new direction found（travel through the maze doesn＇t reverse itself）．

Variables TZ，TX and TY are set equal to $Z, X$ and $Y$ ．These variables represent a＂trial room．＂Based on the current direction of travel $(N), Z, X$ or $Y$ is adjusted for the direction． The adjustment defines a new room．A check is made of all the old rooms（stored in Array S）to make certain that the path does not come back to a previous room．If it does，a new direction is taken and the trial room discarded．

If the trial room represents a room that is out of the maze $(Z, X$ or $Y=0$ ，or $Z, X$ or $Y=$ dimension +1 ），the trial room is also discarded，providing that less than 30 percent of the rooms have been used in the path of travel．

If the trial room is OK，then a doorway or opening is ＂blasted through．＂Of course，one might exist without having to set a new one，but an $Q R$ of the proper bit sets one， regardless．

There＇s a problem with blasting a new doorway similar to that of the generation of random rooms，however．If no doorway or opening exists on the other side，the player will not be able to reverse himself in going through the maze path． The corresponding door or opening on the new room is therefore blasted through as well by a second $O R$ ．

If the outside of the maze is not reached，the process is repeated－the program wends through the maze in erratic fashion，blasting a path through random rooms until the outside is reached．Each time a new room is computed，it is added to the＂previous rooms＂Array S，so that a check may be made of trial rooms．Also，a record of the direction taken is recorded in string $\mathcal{A} \$$ ．At the end of the random walk，$A \Phi$ holds the sequence to follow to get out of the maze，such as ＂DLLSSULSRULDDSS＂．

At the end of the FINDMAZE program the complete room array is saved to a disk file，along with the array dimensions and path sequence．This disk file is read into the NEWMAZE program to＂initialize＂the maze．

## Using FINDMAZE and NEWMAZE

To play a game，first run FINDMAZE to define a maze．A good height，width and depth to try is 5－by－5－by－5－about 38 rooms will be present in the maze path．You＇ll see the room coordinates displayed on the screen as they are calculated． The program will then ask you for a disk filename for the maze data，after which the maze data will be written out．Any filename will do．

Next, run NEWMAZE and reply with the filename just created. The program loads the maze file and displays the center room. Use the U, D, B, L, S and R keys to move through the maze. Any direction that is not possible will be ignored. If you're stuck, use the H key to list the directions to travel - it displays the AS string from FINDMAZE.
There are about $3,800,000,000,000$ combinations for a 5 -by-5-by- 5 maze, so the game is not easy. You might try making a map as you travel through the maze!

FINDMAZE and NEWMAZE are "core" programs that do the job, but there is room for embellishments. How about a way
of marking a wall with a paint that remains visible, but only for 10 moves? What about a monster pursuing you through the maze, with a heartbeep sound that gets more frequent, louder and higher-pitched as it approaches?

Another thing that could be added is a "vanish button"that transports you to another room if the monster appears to be too close - maybe a "button" with a battery that takes 20 moves to recharge? How about adding some of those "trap" rooms that have no way out? Some rooms might open out onto sheer drops, just like the Winchester House. The possibilities are endless.

\section*{KISSable OS-9}

\title{
Using a Fourth-Generation Database Language
}

\author{
By Dale L. Puckett \\ Rainbow Contributing Editor
}

Isaw the future at RAINBOWfest Princeton. Unfortunately, I still haven't had a chance to attack Multi-Vue with my own mouse and keyboard - but it looked very nice under the command of Mark Siegel, Tandy's software product manager. It may be just what we need to get more people on the OS-9 team.

This month we'll take a look at Sculptor, a fourth-generation database application. We will also spotlight the first user contribution to KISSDraw, our CoCo community OS-9 programming project. But first we'll share a few tips from readers and look at the new enhanced CoCoBin standard proposed by Wiz author Bill Brady.

We received a helpful hint from Jay Truesdale on RaInBOW's Delphi OS-9 Online SIG, who writes:
"I ran across this gem in the OS-9/ 68000 manual at work, so I ran home and tried it with OS-9/6809. It worked beautifully. There is a reference to this technique on Page 3-9 of the OS-9 Level II manual, but it is vague and obscure. If you are pretty far down in a directory tree and want to change to another working directory temporarily, try this.

Dale L. Puckett, who is author of The Official BASIC09 Tour Guide and coauthor, with Peter Dibble, of The Complete Rainbow Guide to OS-9, is a free-lance writer and programmer. He serves as director-at-large of the OS-9 Users Group and is a member of the Computer Press Association. Dale is a U.S. Coast Guard lieutenant and lives in Rockville, Maryland.

Instead of typing two long paths to change your working data directory with chd, try this line:

059: (chd/newworkingdirpath)
"This OS-9 command line creates a new shell, which uses newworkingdirpath as its current data directory.
"To return to your previous directory, press CTRL-ESC on the Color Computer 3. This action will kill the new shell and return you to the shell using your original working directory."

Good research! Neat trick! Thanks, Jay! Another helpful hint for beginners was contributed by Brian Wright POLTERGEIST on Delphi. "If you know someone who wants to get started with OS-9 Level I or Level II, list the file named Helpmsg in the SYS directory to your printer and give the person the hard copy. This file pretty much describes the command syntax for all OS9 utility commands. Also, if your friends want to know more about device descriptors and drivers and other things OS-9, have them take a look at the files in the HELP directory on their Level II Config disk." Another good tip! Thanks, Brian!

\section*{New CoCoBin Standard}

Bill Brady, author of the OS-9 terminal program Wiz, has upgraded his proposed CoCoBin standard to handle ICONs and AIFs - application information files - supported by Multi-Vue and the new WindInt manager. We print it here with the hope that its automatic operation will make it easier for everyone to receive and enjoy the many
public domain OS-9 fonts, picture files, etc., bound to follow. Brady proposed that a binary protocol be created and that it be defined as follows:

One or more blocks would be sent as a preface to binary - Xmodem transfers. These blocks shall contain information for the purpose of transferring the FD information, the ICON and the AIF, and for removing the fill at the end of the file transmission. On uploading, the operator will be given a choice of Upload or CoCoBin upload. If CoCoBin is selected, the sending software will preface the actual file data with block(s) that contain the information shown in Figure 1.

All undefined bytes in the block should be set to \$C9. All sizes are equal to the number of bytes in the data item. ICON \(=144\) bytes.

It is the intent of this standard to apply, and be usable with, transfer methodologies other than Xmodem hence the use of offsets. Offsets are relative to the first data byte, not (Xmodem) blocks. It is also the intent of this standard not to preclude compression-decompression "on the fly."

After this block is sent, data transfer will continue in the customary fashion, with the next block labeled as Block 2. If ICON data is present, ICON data may or may not start at Block 2. AIF data can start at any point after the ICON, so the ICON will usually be transferred first, AIF next, starting at the beginning of Block 2.

After all ICON and AIF data is sent, it is recommended that data begin on the next block boundary for Xmodem. However, it may begin at any point.

This method, although requiring previous knowledge on the operator's part for uploading, is transparent to the host computer.

On downloading, the receiver may know in advance that the file is in the CoCoBin format, or the software may detect the transfer as CoCoBin as shown in Figure 2.

The receiving Xmodem will then decode the file size (which is the most useful piece of information) and use it in the following ways:
a) display to the operator the number of blocks forthcoming in the transmission
b) use the total blocks/received blocks to drive a \(\%\) complete indicator
c) discontinue writing data to the incoming file when bytes received equals the filesize (FD.SIZ), effectively "stripping the fill"

The software will place the ICON and AIF data in the appropriate directory on the appropriate volume. At this time the author is unsure as to the exact use of ICON and AIF data. If the execute bit is set, the data portion of the file may be placed in the current execution directory.

After this use, the receiving Xmodem shall discard the CoCoBin block Block \#1 - the ICON and AIF data, and save all subsequent blocks/data to the file.

The opportunity exists for other information to be included in the not yet defined bytes of this block. Responses to this proposed enhancement of the Xmodem transfer methodology should be addressed to William L. Brady, 1503I Flanders Lane, Harwood MD 29776, CIS 70126,267, Delphi WBRADY, GEnie W.BRADY, or 301-952-1761.

This CoCoBin revision will be used in future releases of Wiz -gWiz - and various public domain packages released by the author.

\section*{Wood Adds Color to KISSDraw}

Tom Wood at 1973 Fairgrounds Road, Burton, SC 29902, is the first one out of the gate with an addition to KISSDraw, our OS-9 shareware programming project. The BASIC09 procedure KISSColor listed this month does the work. Wood modified several other KISSDraw4 procedures to add color. We'll outline his changes here.

Wood beat us to a project we have wanted to do for a long time. He has definitely inspired me to add code that determines if you are running KISS-

XMODEM 132 byte Block \#1 CoCoBin OS9 FD Definition
```

Offset
-3 Xmodem byte 1 SOH (01)
-2 Xmodem byte 2 Block \# (01)
-1 Xnodem byte 3 Block MOD(256)
Xmodem byte 4 ATTR byte (usually (07)) FD.ATT
Xmodem byte 5 OWNER msb (usually (00)) FD.OWN
Xmodem byte 6 OWNER Isb (usually (00))
FD.OW
Xmodem byte 7 YEAR (87)(\$57) Date FD.DAT
Xmodem byte 8 MONTH (03) Last Modified
Xmodem byte 9 DAY
Xmodem byte 10 Hours
Xnodem byte 11 Minutes
Xmodem byte 12 FILE SIZE mmsb FD.SIZ
Xmodem byte 13 FIIE SIZE msb
Xmodem byte 14 EILE SIZE Isb
Xmodem byte 15 FILE SIZE 1lsb
Xmodem byte 16 CoCoBin Revision Xmodem byte MUST be SFE
Xmodem byte 17 Size of filename
Xmodem byte 18-49 File Name (ASCII) Not Pathname or \$C9
Xmodem byte 50 Offset to ICON data (Normally 129 in xmodem... 2nd block)
Xmodem byte 51 ICON size
Xmodem byte 52-53 Offset to AIF data
Xmodem byte 54-55 AIF size
Xmodem byte 56-57 Offset to Start of file data.
54 Xmodem byte 58-62 reserved for compression flags $00000=not a compressed
file
            Xmodem byte 63-130 NOT YET DEFINED ($C9), reserved for expansion of
CoCoBin.
127 Xmodem byte 131 CoCoBIn Revision byte MOD(256)
128 Xmodem byte 132 Checksum

```

Figure 1

Draw in a four- or 16 -color window and reacts accordingly. You could really draw some nice pictures with Wood's addition installed in a copy of KISSDraw running in a 16 -color window. I'll try to make that my next project.

You change KISSDraw's current drawing color by clicking on the color you want in a bar of 16 equally spaced boxes along the bottom of the screen. When you are running in a four-color window - as in all versions of KISSDraw to date - only four of the boxes will be colored. A larger box on the left end of the bar always displays the current drawing color.

You can change the current drawing color to any of the 64 hues available on the Color Computer by pointing to the large box, holding down the mouse button and dragging the mouse from left to right. When you release the button, the color value remains at the currently displayed hue.

To use the KISSColor procedure, you must modify several of the KISSDraw procedures and add a color variable to the type stats in all KISSDraw
procedures. Changes (Figure 9) required are summarized here:

KISSdMenu - add routine to draw colored boxes
GetkISSMouse - add check to see if ButtanEvent.Mouse.AcY>180 and set InToolBox to TRUE if so

WhichTool - add check to see if mouse.AcY>1日0 and set status.color to TRUE if so
DoEvent - add RUN KISSColor(ButtonEvent)

KISSDraw4 - add code to set ButtonEvent. Pointer.Coulor to 1 and the statement Run GFX2("color", 1) so the program always starts with color Number 1

KISSColor simply checks AcX sequentially from left to right and either changes the current palette value or the current foreground color. ButtonEvent.Pointer.Coulor always contains the current drawing color.
"It really looks like KISSDraw is headed directly for animation creation," Wood said. "With multitasking
and a little sound thrown in, we should be able to beat the other computers to it at this rate - with your object oriented art and some timed sequences and SS. Tone - it's all there."

Thanks for the KISSColor procedure, Tom! Who's next?

\section*{FHL and Sculptor team help OS-9 \\ Users Group}

Color Computer OS-9 users stand to benefit greatly from a change in proce-
\({ }^{2}\) dures made by Dave Kaleita, the new president of the OS-9 Users Group. Frank Hogg at FHL is now distributing the 56 disks in the group's software library directly.

You no longer need to be a member of the group to buy a disk of programs. And you should now get your disks in a few days, instead of the few months it once took, because your order no longer needs to be sent through the group's notoriously slow mail relay system. The group benefits, too, because FHL pays a royalty fee for each disk mailed.

When a massive undertaking like the OS-9 Users Group Software Library moves from a volunteer effort to a commercial enterprise, many potential problems surface. For example, prospective buyers expect to be told which programs they can find on a disk - and they want an answer now!

On the surface, this doesn't sound like much of a problem. But when you consider the OS-9 Users Group software library features more than 340 programs squeezed onto 56 disks, you begin to get a clear picture of the problem. Even though the group's librarian has divided the programs into categories, it is difficult to keep track of \(340+\) programs - in both source and binary versions - and all the files that hold the documentation.

In the Users Group's early years, Dave Kaleita kept the information in an RMS database. He then used OS-9's redirection capability to send the output of his RMS report program to a text file. After that, the file was updated using DynaStar - an OS-9 word processor.

The information was all available, but it was stored in a format that was almost impossible to search quickly. To solve the problem, Hogg converted the DynaStar text file to a Sculptor database that could easily be manipulated and maintained. He also added keyword searching so his telephone operators could quickly find the programs his customers wanted.

Title: REMOTE From: SEATON, WM. GLENN

-end-

```

Figure 4
```

For each field enter:
name, heading, type\&size,format;validation
Type $h$ for help.
Field name must be unique using A-Z a-z 0-9 -- only.
Valid field types are:
$\mathrm{a}=\mathrm{alphanumeric(maximum} 255$ bytes)
1 = integer(size 1, 2 or 4 bytes)
$r=r e a l(s i z e ~ 8 ~ b y t e s) ~$
$\mathrm{m}=$ money(size 4 or 8 bytes)
$d=$ date(size 4 bytes)
Single byte integers are always positive. Data fields may be dimensioned.
Both format and validation list are optional. The validation list may
contain both single values and ranges of values. Examples:
Item, Item Code, al2
Unit, , a 5 ;each, gross, doz, box[Heading defaults to name]
description, ,a20[No heading]
stklev, Stock Level,14, \#\#
price,Sale Price,m4(3), \#\#\#\#,\#\#
cat, Category, 11, \#\#;1-10,50,90-99

```

Figure 5

Since we have long wanted to introduce you to the power of today's new fourth-generation databases like Sculptor, we asked Hogg to show us how easy it would be to accomplish a rather complex task - managing the OS-9 Users Group software library, for example.

\section*{Converting a Database}

An example of a record in the original DynaStar file is given in Figure 3. Further study of the file reveals that the records contain from \({ }_{r}\) one to three lines under Function. It also shows the maximum length of each field in a record.

Hogg's first step was to use the Umacs text editor - available from the Users Group Library - to delete words like "Title:" and "From:" from each field. This editor's extensive macro capabilities made the job easy.

Hogg put each field on an individual line and added the line "-done-" before the "Program Type:" field. He also added the line "-end-" between records.
and added a last line, "-fin-", so he could test for the end of the file. He named the new file convRecird. A record in convRecord looks like that shown in Figure 4.

After Hogg finished processing the raw DynaStar text file with Umacs, he had to describe his new data file for Sculptor. He used the Sculptor deseribe utility to do this job. He named the file containing the description, disk. Figure 5 is a snapshot of the help screen displayed by describe. To see this screen while running describe, you must press H .

Here is how Hogg described the OS9 Users Group software library file:

\section*{KEY FIELDS}

1:u_title,TItle, a20,u

\section*{DATA FIELDS}

2:u_size,\#Sectors, a4,;0-9999
3:u_from, From, a30,u
4:u ver, Version, al2,u
5:u_language, Language, al6,1
6:u_format, Format, a16,1
7 :u_function, Function, a73(3), 1
8:u_type,Program Type, a24,1
9:u_volume, Volume \#, a2,
0:u_used,Already Used?, al, u; \(\mathbb{Y}, \mathrm{N}\)

Line 1 is the key field. You can define more than one key, but there is no need to do so here. Hogg used the name of the program described in each record for the key. Since he decided that none of the other information in the record was useful as a key, he described the rest of the fields as data.
It's a Sculptor convention to use a prefix like \(u-\) to name the file in which a variable is found. The word Title here is the default text string Sculptor will use if you don't override it. The a20 describes a text field containing 20 characters. Hogg's analysis of the data had shown this was the longest field needed. The u means to force uppercase on input. Experienced Sculptor users suggest it is wise to force either upperor lowercase on key fields to prevent confusion during a search.

Line 2 is a field Hogg reserved for future use. The data for this field will need to be added manually, because it does not exist in the original database. However, he knew he needed this information later to determine how many programs will fit on a disk.

Notice the end of Line 2. Hogg used a text field instead of an integer here so he would be able to upload his data files after running them through the OS-9 public domain archiving program ar. He had learned earlier that ar works only with text files, and he hoped to upload the Users Group Software Library file to many computer bulletin board systems. The ;0-9999 at the end of the line means that Sculptor will allow only numbers from 0 to 9999 . This demonstrates how Sculptor does input validation.

Line 5 is unique because it converts uppercase letters to lowercase automatically when it reads a data file. This makes the text easier to read. Line 7 holds the one- to three-line description of the function of each UG program. Line 9 , the volume number, must be defined as a text field, because an integer field here would default to zero when the field is blank. The field containing the volume number is blank until the program that the record describes has been assigned to a disk in the library.

On describing the data in his new file, Hogg created a program to read the text file he'd prepared with Umacs and inserted it into the database. The code in Figure 6 took care of the job.

Here's what happens when you run this program. First, Hogg has told Sculptor to reference a filename disk with the word ug. He then defined some
```

Figure 6

temporary variables and a scroll window. That done, he set up the screen form and told Sculptor where to put each field on the screen.
The heart of the program follows the screen form definition. The first two lines clear the last two lines of the function array. Then, data is input into all of the fields. When a line begins with (bw) the string -done-, Sculptor moves on to the next field. If all three lines are input, a fourth line containing the string -done- is ignored. The rest of the fields are then read and inserted into the database.
Since U_title forces uppercase, Hogg had to do the end and fin tests in uppercase. The ct means contains.

You can read the program line like this. If u_title contains the string -ENDthen go to the beginning and start again.

You use OS-9's redirection operators when you run this program.

OS9: sage convUGdisk <convReport
A few minutes after typing this line, Hogg had 339 records inserted into a new database - ready for manipulation. He then let Sculptor write a program to manipulate the new database, by typing two lines:
```

0S9:sg disk
OS9:sage dlsk

```

Sculptor came alive with a screen that looked like the one shown in Figure 7.
```

```

The program Sculptor wrote looked like that shown in Figure 8 - almost. Frank added the code between each new. code and new code end later to give the program the ability to search on a key field.

Hogg's additions work by letting Sculptor know about the file DiskKey with the command ! file dkey diskkey. The program will know it as Dkey, and it will store keys in 12-character ASCII fields. The keys are followed by 20 -character titles. A match in Diskkey returns the title for the main database so that any number of keys may be inserted for any title.
> "One person using Sculptor can perform a task that required a systems analyst and a gang of programmers several years ago."

The +k_keyword, ,5,33 adds the keyword field to the screen format at Line 5, Column 33. ik inserts a key into the DiskKey file after making sure that a record has been selected. Keys are inserted until you type a backspace.

To find a title record, you type a keyword. If a key is found, a search is made in Disk using the key K_title from the key file. The record is displayed, and the entire process takes less than a second.

That's all it takes to add a sophisticated keyword search to a Sculptor program. There are some problems, however. The program above works fine until somebody changes the title in the main file or deletes a record. There are no provisions in the program to change or delete keys when this
```

(* Add to KISSdMenu procedure

```

Figure 9: These additions should be made to the existing programs

\footnotetext{
L2 UTILITY PAK - Contains a Level II "printerr" function that also showe the pathname being searched for when "not found" or permission type errors occur. Also contains level II software ram disk driver. Other included utilities can be used on either level I or II including UNDELeting to recover files. \$39.85

L1 UTILITY PAK - Contalns 40 useful utilities that run under both level 1 and II OS-9. Included are a complete set of "wild card" file handling utilities, a disassembler, a disk sector editor, and the MacGen command language complier. MacGen will allow you to generate many useful command macros in minutes, much more useful than procedure flles. Macro source is induded for a macro to implement an archival backup type function. \(\$ 49.95\)
L1+L2 COMBINATION PAK both of above together for \(\$ 75.00\)
SDISK - Standard dlsk driver module replacement allows full use of 40 or 80 track double sided drives with OS-9 Level I. Retains full compatibility with CoCo 35 track format and allows accessing all other OS-9 non-CoCo formats. Easy installation.
\$29.95
SDISK+BOOTFIX - As above plus boot directly from a double sided diskette. \(\$ 35.95\)

SDISK3 - Level If version of SDISK driver. Same features as level I (except bootix not required to boot from double sided). \$29.95

PC-XFER UTILITIES - Programs to format and transfer files toffrom MS-DOStm diskettes on CoCo under OS-9. (Requires either SDISK or SDISK3 to run depending on which level of OS-9 you are using) \(\$ 45.00\)
CCRD 512K byte RAM DISK CARTRIDGE - Operates faster than similar device sold by others. Requires RS Muitipak interface, two units may be used together for 1 MB Ram Disk. OS-9 Leved I \& II drivers and test software included. \(\$ 169.00\)
All diskettes are in COCO OS-9 format; other OS-9 formats can be supplied for \(\$ 2.00\) additional charge. All orders must be prepaid or COD, VISA/MC accepted, add \(\$ 1.50 \mathrm{~S} \& \mathrm{H}\) for software, \(\$ 5.00\) for CCRD, additional charge for COD.
D. P. Johnson, 7655 S.W. Cedarcrest St., Portiand, OR 97223 (503) 244-8152 (For best service call between 9-11 AM Pacific Time)

OS-9 is a trademark of Microware and Motorola Inc., MS-DOS Is a tradernaik of Mcrocoft, inc.
}
happens. Hogg fixed that problem by rewriting the amend code:
*amamend
check disk
goto al a0
title - u_eitle
input \(u\) title bs = END
if \(u\) titie \(>\) title then flag=2
al
gosub GET_DATA
if BS then goto a0
prompt "All corract" no = al
write disk
If flag - 2 then gosub CHANGE_KEYS
clear : display date
message "Record amended"
end

\section*{CHANGE KEYS}
rewind dkey
ch1 next dkey nsr = ch_return
ifktitle \(>\) titl \(\overline{0}\) then goto chl
\(k\) tftle \(=t 1 \leftarrow 1 e\)
wite dkey
goto chl
ch_return
flag-0
return
CHANGE_KEYS
k_keyword - n"
k_title=title
ch1 readkey dkey nsrmch_return
read dkey
delete dkay
goto chl
Hogg then wrote the following code to delete all keys referring to a main record after that record has been deleted. It is almost the same as the amend code, but this time he wrote it in-line rather than as a subroutine:
*d-del
check disk
prompt "Are you sure" no = END
eftle - u_title
delete disk
rewind dkey
next dkey nsr = di2
if title \(\diamond k_{-} t i t l e\) then goto dll
delete dikey
goto dll di2 clear : display date end
If Hogg had been working with a larger database - or had thought about it sooner - he would have written the Users Group Software Library database program differently. The sequential method used here would be too slow to manipulate huge databases. However, this month we have only set out to show you how one person using Sculptor can perform a task that required a systems analyst and a gang of programmers several years ago.

Planning how the data in your various databases interacts is probably the most important step when you start to program with a database language like Sculptor - even when you're writing a small program. We'll look at this and a few other database programming considerations next month when we continue to explore the OS-9 Users Group Software Library with this fourthgeneration language. Until then, Happy Groundhog's Day!

\title{
The Best Money Can Buy . . . HDS Floppy Drive Controller Board
}

Reduce your I/O errors with the Hard Drive Specialist Floppy Drive Controller for the Color Computer. Gold edge card connectors, advanced design, and the absence of potentiometers make it the best available. Our newest version controller allows the use of either (two 24 pin ROMS), or (one 24 pin and one 28 pin ROM). Using this board with the standard Radio Shack ROM gives you \(100 \%\) compatibility with all Radio Shack software.
Completed and Tested Boardwith Radio Shack ROM\(\$ 99\).
(Includes Case, and DOS Instructions)
Completed and Tested Board without ROM ..... \(\$ 79\).

\title{
DIGISECTOR DS-69B GIIGIIIZER FOR THE coco 3
}
(AND ALL OTHER COCOS . . .)

COCO 3 SCREEN

USE YOUR COCO 3 TO ITS FULL POTENTIAL Use The Micro Works' DIGISECTOR \({ }^{\text {tM }}\) DS-69 or DS-69B and your COCO 3's high resolution graphics to capture and display television pictures from your VCR or video camera. The DIGISECTOR \({ }^{\text {™ }}\) systems are the only COCO video digitizers available that accurately capture and reproduce the subtle shades of gray in TV pictures!
- COLOR: Add color to your screen for dramatic special effects.
- HIGH RESOLUTION: 256 by 256 spatial resolution.
- PRECISION: 64 levels of grey scale.
- SPEED! 8 images per second on DS-69B, 2 images per second DS-69.
- COMPACTNESS: Self contained in a plug-in Rompack.
- EASY TO USE: Software on disk will get you up and running fast!
- COMPATIBLE: Use with a black and white or color camera, a VCR or tuner.
- INEXPENSIVE: Our low price puts this within everyone's reach.

\section*{POWERFUL C-SEE 3.3 SOFTWARE}

This menu-driven software will provide 5 and 16 shades of gray to the screen and to the printer with simple joystick control of brightness and contrast.
Pictures taken by the DIGISECTOR \({ }^{\text {M }}\) may be saved on disk by C-SEE 3.3 and then edited by our
 optional MAGIGRAPH, or by COCO MAX or GRAPHICOM. This versatile new software is included in both DIGISECTORS \({ }^{\text {™ }}\)

DS-69B and C-SEE 3.3 \$149.95
DS-69 and C-SEE 3.3
\$ 99.95
TRADE IN YOUR OLD DIGISECTOR \({ }^{\text {w }}\)
If you already have one of The Micro Works' DS-69 or DS-69A DIGISECTORS \({ }^{\text {™ }}\), you may return it to us and we will upgrade your unit to a DS-69B.

UPGRADE DS-69A to DS-69B
\(\$ 49.95\)
UPGRADE DS-69 to DS-69B
\(\$ 69.95\)
The DS-69B comes with a one year warranty. Cameras and other accessories are available from The Micro Works.

\section*{NO RISK GUARANTEE}

If you are not completely satisfied with the performance of your new DS-69B, you may return it, undamaged, within ten days for a full refund of the purchase price. We'll even pay the return shipping. If you can get any of our competitors to give you the same guarantee, buy both and return the one you don't like. We know which one you'll keep.
