

Save Time and Money with a Combination Subscription!

## SAVE up to $19 \%$

when you buy a joint subscription to the magazine and either RAINBOW ON TAPE or RAINBOW ON DISK! A one-year subscription to THE RAINBOW and RAINBOW ON TAPE is only $\$ 91$ in the U.S., \$108 in Canada, $\$ 153$ foreign surface rate and $\$ 188$ foreign airmail. A one-year subscription to THE RAINBOW and RAINBOW ON DISK is only $\$ 115$ in the U.S., \$138 in Canada, $\$ 183$ foreign surface rate and $\$ 218$ foreign airmail.*

Every month, these convenient services bring you as many as 24 ready-to-run programs. Using the current issue of the rainbow as documentation, all you have to do is load and run them. A one-year combination subscription to THE RAIN-

BOW and RAINBOW ON TAPE or RAINBOW ON DISK give you more than 230 new programs! The typing time you save can be spent enjoying your CoCo!

## RAINBOW ON TAPE For No-Fuss Fun

Back issues of rainbow on tape are available beginning with the April 1982 issue. A single copy of RAINBOW ON TAPE is $\$ 10$ within the United States; U.S. \$12 in all other countries. The annual subscription rate for RAINBOW ON TAPE is $\$ 80$ within the U.S.; U.S. $\$ 90$ in Canada; and U.S. $\$ 105$ for all other countries.*

## RAINBOW ON DISK Offers OS-9 Programs

In addition to all the programs offered on tape, part of one side of RAINBOW ON DISK is formatted for the OS-9 operating system. That means you can now get all the OS-9 programs from the magazine - programs that cannot be put on tape. Back issues of RAINBOW ON DISK are available beginning with October 1986. Subscriptions to RAINBOW ON DISK are $\$ 99$ a year in the U.S. Canadian rate is U.S. \$115. All other countries, U.S. \$130. Single copy rate is $\$ 12$ in the U.S.; U.S. $\$ 14$ in Canada; and U.S. \$16 in all other countries.*

To order by phone (credit card orders only), call (800) 8470309, 8 a.m. to 5 p.m. EST. All other inquiries call (502) 2284492.

Look for our envelope located between pages 66 and 67 for ordering individual subscriptions to the Rainbow, RAINBOW ON TAPE and RAINBOW ON DISK.

Short End of the Stick

## Editor:

I am addressing an issue that has disturbed me for most of the time I've used the Color Computer: the lack of coverage for Tandy's Color Computer.

RAINBOW Magazine is second to none in the coverage it provides every month. But it is also the only publication I am aware of for the computer. Other computers on the market have many more, although less satisfying, publications supporting them.

If THE RAINBOW printed a chart comparing feature against feature for computers in the CoCo's price range, owners of the other computers would be in for some surprises. IBM needs a CGA adapter to get 16 colors on the screen. My CoCo 3 has that built in. Commodore owners would be interested in loading programs quickly instead of timing their disk drives with a calendar. Atari owners might try to hook up an IBM drive to their computers - CoCo can already do it. Apple owners might be interested in the price of a fully configured CoCo system when they take a look at their IIE. And just try to program a Commodore 64/128 without typing POKE every other word.

I'm tired of seeing my Color Computer 3 get the short end of the stick as far as the home computer field is concerned. You have proved that the Color Computer is just as good, if not better, than the other computers in its class. Keep up the good work. Maybe Mr. Roach will take heed.

Kevin McCoy
Hayti, Missouri

## HINTS \& TIPS

## Editor:

I have been a satisfied user of Dennis Derringer's Pro-Color File database software for about two years except for one minor problem: leading zeros.

Two evenings ago I had a stroke of luck while working again on this problem. I discovered that leading zeros are not generated while calculating in the update module but are generated in the post/accounts module. A quick listing and comparison of the two modules that are almost identical showed that a 0 was being inserted in Line 810 of Post/Accounts while CHR\$ (32), a space, was being inserted in Line 1040 of Enter/Update. A simple edit solved my problem and perhaps will solve the problem for other owners of Pro Color File.

Next month marks my fifth anniversary reading THE RAINBOW, working on a fully
configured CoCo 3, and learning OS-9 and BASIC09. I find it slow going at times but very exciting and rewarding at 60 years of age.

John McKnight<br>Danvers, Massachusetts

## Interesting Poke

## Editor:

I have found an interesting poke. Most veteran CoConuts already know about POKE111,254:DIR, which sends the directory to the printer. But you can poke that address with other numbers too. Say you have a BASIC program in memory and want to save only lines 80 through 150 . You could delete all lines before 80 and after 150 and then save the program, or you could type:

OPEN"O",1,"TEST.BAS": POKE111,1:LIST80150:CLOSE

This opens a file for output, changes the active device number to 1 and then lists the lines to the file. You can do the same thing with cassette output by opening Device Number -1 and POKE111, 255 (255 is the signed two's-complement binary 8 -bit representation of -1). You can do this with the printer (POKE111, 24), but this serves no purpose as it only duplicates the LLIST command. The poke serves the input routine as well as ouput. But the input from the printer results in a End of File Error. Also, attempting to send the directory to a disk file does not work if your directory contains more than eight entries.

Carl England Calhoun, Georgia

## REQUEST HOTLINE

## Editor:

I have written concerning Sierra OnLine, Inc. Sierra has accused the CoCo community of the second highest piracy rate. The company has also refused to continue supporting the CoCounless it gets enough mail to prove that marketing CoCo software is profitable.

I particularly enjoy Sierra software on my Tandy 1000 , and I would like to use it as well on my CoCo. Please publish this letter to encourage people to take a few minutes to write to Sierra expressing this concern.

[^1]
## Convincing Sierra

## Editor:

I wrote a letter to Sierra concerning the poor quality and support of the CoCo , especially in the ROM pack versions of its games.

Sierra's letter to me stated that Sierra is pulling out of the CoCo. But if enough people show interest and support, it may reconsider the decision. This is very impor$\operatorname{tant}$ because if we can get Sierra to fully support the CoCo , others will follow.

Any readers interested in showing their support for the CoCo , please write to Sierra On-Line, Inc., P.O. Box 485, Coarsegold, CA 93614.

Scott Amendorlaro
Parsippany, New Jersey

## INFORMATION PLEASE

## Editor:

Thanks for your information on pages 138 and 139 of the rainbow, June 1989. It really was a big help.

My question is: How can I move the OS9 side of RAINBOW ON DISK each month to another disk?

I want the directory to be:
JAN89
FEB89
MAR89
etc...
JAN89 would contain the OS-9 side of RAINBOW ON DISK for January, etc.

If you could write an article to explain how to do this, I would appreciate it.

Bill Link
Route 1, Box 76
Richfield, NC 28137
To do this, you must first format an OS9 disk. Use MAKEDIR to create the directories, then load dsave. Place RAINBOW ON DISK in Drive 0 and the "save" disk in Drive 1. Type chd/d1 and ENTER, then dsave /do /d1/directory name ! shell. The files will be copied from RAINBOW ON DISK to your directories.

## Need Printer Codes

## Editor:

First let me say that I have enjoyed your magazine since 1984. I like to put programs in from the rainbow. I have a DMP-130 printer, a CoCo 2 and one disk drive. The problem is that when I enter a program not

for the DMP-130, the program says to change the printer codes to fit the printer.

I know it is impossible to give the codes to all the printers, but could you publish the printer codes and the meaning of these codes so we can compare and make the proper changes, at least for the most popular printers? I am sure many of your readers would like this information.

> Floyd J. Daigle, Sr. 630 Bayon Drive
> Pierre Part, LA 70339

See Cray Augsburg's "Printer Diversions and Conversions" (August'88, Page 142) for using the control codes to enhance your printer's capabilities.

## Choo-Choo Games?

## Editor:

I am a modelrailer and would like to know if anyone knows of any programs or games that can be run on CoCo 2 for model railroading. If so, please contact me.

Allen Galinski
1428 Huron Ave. Sheboygan, WI 53081

## Hi-Res Help

## Editor:

I would very much appreciate any help you can offer on the use of the Hi-Res screen dump program by Shane Messer (May '89 issue) on the DMP-106 from Radio Shack.

As he says, the only screen dumps around are for PMODE graphics, which does not suit anyone having the CoCo 3 with all the new colors.

I do not use PMODEs anymore - for one thing there are limited colors and it makes for rather slow animation. The CoCo 3
palette switching improves the speed but is still not fast. Going to machine language is fine, but I do not really care all that much to learn it.

Let me know if there is a disk program I can use. I have a lot of programs I would like to print out.
D. Arcy Brownrigg
P.O. Box 292

Chelsea, PQ JOX 1NO, Canada

## The Color Mouse Baffles Me. . .

## Editor:

I use 64 K Disk Extended Color BASIC CoCo with a DMP-105 printer. I am looking for a program(s) that would enable my CoCo to produce drawn-out electronic schematics and printed circuit board layouts. Can you help me?

I also have a technical question. How does a color mouse work? I know that it has a movable ball on the bottom - but how does that produce any kind of signal being sent to CoCo? I know that other types of mice for other computers consist of light, which has to cross a line/or dot on a pad. But the color mouse baffles me.

I know that the Color Computer's basic joystick consists of two potientiometers, I can see how that might work. Does the joystick send an analog or digital signal to the computer? What about the mouse? Can you tell me anything on how to increase the accuracy for a joystick so it's not so jumpy when using it with programs that produce graphics?

Last of all, I've heard of interfaces or conversion boxes that make Atari joysticks work with the CoCo. Are these any good, and how do they work? I know Atari Joysticks consist of four momentarily contact switches - one for up, down, left and right.

Bryon E. Lawrence 1223 22nd Street Granite City, IL 62040

## KUDOS

## Editor:

I have never written to a magazine before, but I had to tell you about one of your wonderful advertisers. I ordered a program from Second City Software in March. The program was mailed out, but our good old postal system managed to slice the disk to shreds. It was returned to Second City Software as undeliverable. This was the last copy in stock. Ed Hathaway wanted to make good on my order. He sent me his original disk and manual to use until Second City could provide my registered copy.

RAINBOWfest was coming up and the company was busy stocking for the show. Time went by without my original program disk. I was happy because I had a working program to use until my original arrived. Three days ago my original program arrived with a letter apologizing for the delay. It was an oversight on Second City's part. To my surprise five complimentary software programs (registered in my name) were also enclosed. If purchased, these programs would have cost me $\$ 129.75$ plus shipping. Ed also enclosed a check to cover my costs for mailing his disk and manual back to him.

I feel your readers need to know this company will go the extra mile and then some to make its customers happy. When I need new software for my Color Computer 3, Second City Software has my business.

Jo Ann Gass
Beeville, Texas

THE RAINBOW welcomes letters to the editor. Mail should be addressed to: Letters to Rainbow, The Falsoft Bullding, P.O. Box 385, Prospect, KY 40059. Letters should include the writer's full name and address. Letters may be edited for purposes of clarity or to conserve space.

Letters to the editor may also be sent fo us through our DelphicaCaSIG, From the CoCoSIG> prompt, type RAI to take you into the Rainbow Magazine Services area of the SIG. At the RAINBOWs prompt, type LET to reach the LETTERS $>$ prompt and then select Letters for Publication. Be sure to include your complete name and address.

## If you're looking for good, professional qualisy music programs, don t look any further!.

- No need to hassle with a complicated operating system
- No need for expensive hardware upgrades
- Mature programs that have undergone extensive testing, improvement, and don't skimp on features
- Graphics music editor, powerful sequencer/recorder, extensive music library, more
- Play music on any MIDI synthesizer or through the TV speaker
- Support by experienced and knowledgable personnel
- Satisfaction guaranteed!
... Just think of any word processing feature---chances arc very likely that Word Power has it ... packs a lot of features ... excellent word processor..." --- Rainbow's Word Processor Comparison Article "Deciding What's Right For You" April 1989 Rainbow: Page 26.

# Power 3.2 

More Versatile - More Powerful With Spooler •Calculator • Split-Screen • 2-Column Printing
"... friendly...amazing execution speed...much easier to use than VIP software \& 2 other word processing systems I've tried...very user-friendly...massive text storage capacity ...highest among word processors..." - Rainbow Oct. 88 Review for Word Power

Unparalleled Power packed in this $100 \%$ ML Word Processor written from scratch for the CoCo 3! No other word processor offers such a wide array of features that are easy to learn \& use.

## DISPLAY \& SPEED

Word Power 3.2 runs at double-clock speed and uses the true 80 -column display with lowercase instead of the graphics screen. The result is lightning fast screen reformatting and added speed! All prompts are displayed in plain English in neat colored windows. The current column number, line number, page number, percentage of free memory is displayed at all times. Even the page break is displayed so you know where one page ends and the other begins. The Setup program allows you to change fore/background colors as well as (in)visible carriage returns. Word Power 3.2 can be used with RGB/Composite/Monochrome monitors as well as TV.

## MAXIMUM MEMORY

Word Power 3.2 gives you over 72 K on 128 K and over 450 K on 512 K CoCo 3 for Text Storage - more memory than any other CoCo word-processor. Period.

## EFFORTLESS EDITING

Word Power 3.2 has one of the most powerful and user-friendly full-screen editor with word-wrap. All you do is type. Word Power takes care of the text arrangement. The unique Auto-Save feature saves text to disk at regular intervals for peace of mind.

Insert/Overstrike Mode (Cursor Style Changes to indicate mode);OOPS Recall during delete;Type-ahead Buffer for fast typers; Key-Repeat (adjustable); KeyClick; 4-way cursor and scrolling; Cursor to beginning/end of text, beginning/end of line, top/bottom of screen, next/previous word; Page up/down; Delete character, previous/next word, to beginning/end of line, complete line, text before/after cursor; Locate/Replace with Wild-Card Search with auto/manual replace; Block Mark, Unmark, Copy, Move \& Delete; Line Positioning (Center/Right Justified); Set/Reset 120 programmable tab stops; Word-Count; Define Top/Bottom/Left/Right margins \& page length. You can also highlight text (underline-with on-screen underlining, bold, italics, superscripts, etc.). Word Power even has a HELP screen which an be accessed any time during edit.

## SPLIT-SCREEN EDITING

Splits the screen in half so you can view one portion of your text while you edit another. You'll love it!

## MAIL-MERGE

Ever try mailing out the same letter to 50 different people? Could be quite a chore. Not with Word Power 3.2! Using this feature, you can type a letter, follow it with a list of addresses and have Word Power print out personalized letters. It's that easy!

## CALCULATOR

Pop-up a 4-function calculator while you edit! Great for tables!

## SAVING/LOADING TEXT

Word Power 3.2 creates ASCII format files which are compatible with almost all terminal/spell-checking \& other word-processing programs. Allows you to Display Free Space, Load, Save, Append \& Kill files. The ARE YOU SURE? prompt prevents accidental overwriting \& deletion. You can select files by simply cursoring through the disk directory. Supports double-sided drives \& step-rates.

## PRINTING

Word Power 3.2 drives almost any printer (DMP, EPSON, GEMINI, OKIDATA, etc). Allows options such as baud rates, line spacing, page/print pause, partial print, page numbering/placement, linefeeds, multi-line headers/footers, right justification \& number of copies. The values of these parameters \& margins can be changed anytime in the text by embedding Printer Option Codes. The WHAT YOU SEE IS WHAT YOU GET feature allows you to preview the text on the screen as it will appear in print. You can view margins, page breaks, justification \& more.

## PRINT SPOOLER

Why buy a hardware Print Spooler? Word Power 3.2 has a builtin Spooler which allows you to simultaneously edit one document \& print another.

## TWO-COLUMN PRINTING

This unique feature allows you to print all or portion of your text in two columns! Create professional documents without hours of aligning text.

## SPELLING CHECKER

Word Power 3.2 comes with spelling checker/dictionary which finds \& corrects mistakes in your text. You can add words to /delete words from dictionary.

## PUNCTUATION CHECKER

This checker will proofread your text for punctuation errors such as capitalization, double-words, spaces after periods/commas, and more. Its the perfect addition to any word processor.

## DOCUMENTATION

Word Power 3.2 comes with a well-written instruction manual \&
Esi, reference card which makes writing with Word Power a piece of cake! Word Power 3.2 comes on an UNPROTECTED disk and is compatible with RSDOS. Only $\$ 79.95$

# A New Site for RAINBOWfest 

One of our more extensive plans for the New Jersey RAINBOWfest, October 20 to 22 of this year, includes a new location for the show.
We are moving to a different hotel, the Hilton in Somerset, for a variety of reasons. First of all, it will be more convenient for most of you, whether you are driving or flying. Secondly, the hotel is nice and has a professional staff - yet it is less expensive than the hotel we have used previously.

A spirit of anticipation is something all of us have when it comes to RAINBOWfest. It is an event we look forward to each year (and for some of us, twice a year) - and there is a real effort by our crew to make it an enjoyable weekend for all of you.

In the last year or two, we found the Hyatt in Princeton (where the show has been held for quite a while now) falling short of its previous performance. Because the Princeton University Homecoming took place at the same time as our convention, most staff members at the hotel preferred attending to the "local festivities" rather than attending to business. RAINBOWfesters had what I think was the poorest service ever (with the exception of the second show in Fort Worth).

Therefore, we scouted the area for better accomodations. Ira Barsky, the RAINBOWfest coordinator, visited the Somerset Hilton just before the show in Princeton last year and gave it a grade of "A" in terms of facilities, management and - most important of all - genuine interest in hosting the CoCo Community.

There are advantages to having the show in the same place each year, assuming things are well-handled. So I did some surveying during the show last year and discovered the problems affecting us were also affecting you. If, towards the end of last year's show, you asked me if we were going to have the show again this year, then you probably heard me say we would - but somewhere else.

My decision was finalized when the Hyatt announced that it was going to charge over $\$ 100$ a night for a room this year. I find those prices unacceptable.

RAINBOWfest at the Somerset Hilton should be a wonderful time. The hotel has a computer reservation system, which means your reservations (you can make them through POSH Travel in Louisville) are confirmed in a professional and timely manner; it has food you will enjoy at reasonable prices; and, most importantly, the staff is looking forward to having the CoCo Community as hotel guests.

I have not said anything about RAINBOWfest itself - as usual there will be some great booths, exciting new products and excellent seminars. But most important of all, there will be lots of CoCo Community members there.

Join us at RAINBOWfest Somerset. I'm going to have a great time. You will, too!

## Programming Secrets Galore

Pokes, Peeks and Execs are your guides into the jungle of computer programming. These commands give you the power of Machine Language without leaving the security of BASIC. Each book is a collection of "inside" information, with explanations and examples to help you immediately put it to use. Everyone from the novice to the professional will find these handy books a wealth of information.

## 300 POKES, PEEKS, 'N EXECS for COCO III

*40/80 column Screen Text Dump *Save Text/Graphics Screen to Disk
*Command/Functions Disables
${ }^{*}$ Enhancements for CoCo3 BASIC
*128K/512K RAM Test Program *HPRINT Character Modifier Only \$19.95

500 POKES PEEKS,'N EXECS
*Autostart your BASIC programs
*Disable Color BASIC/ECB/Disk BASIC commands
*Disable Break Key/ Clear Key/Reset Button
*Generate a Repeat-key
*Transfer ROMPAKs to tape
*Set 23 different GRAPHIC modes
*Merge two BASIC programs
*And much much more!!!

SUPPLEMENT TO 500 POKES,PEEKS, 'N EXECS

200 additional Pokes,Peeks and Execs (500 Pokes Peeks 'N Execs is a prerequisite) *ROMPAK transfer to disk
${ }^{*}$ PAINT with 65000 styles
*Use of 40 track single/double sided drives *High-speed Cassette Operation
*Telewriter, CoCo Max enhancements * Graphics Dump (for DMP printers) /Text Screen Dump

For CoCo 1,2 or 3 . Only $\$ 9.95$

## UNRAVELLED SERIES

An invaluable aid for Basic and Machine Language programmers, these books provide a complete disassembly and annotated listing of the BASIC/ECB and Disk ROMs. These listings give complete, uninterupted memory maps of the four ROMs. Gain complete control over all versions of the color computer.

EXTENDED COLOR BASIC UNRAVELLED: COLOR BASIC and EXTENDED BASIC ROM Disassembly: $\$ 39.95$ DISK BASIC UNRAVELLED: DISK BASIC ROM 1.1 and 1.0 Disassembly: $\$ 19.95$

BOTH ECB AND DISK BASIC UNRAVELLED: \$49.95
SUPER EXTENDED BASIC UNRAVELLED; SUPER EXTENDED BASIC ROM Disassembly for $\mathrm{CoCo} 3, \$ 24.95$ COMPLETE UNRAVELLED SERIES (all 3 books): $\$ 59.95$

A Rainbow of colors in a flash . . .

# The CoCo Coloring Book 

By Bill Bernico

Iremember, as a kid, how I loved to color in my coloring book. It wasn't so much fun, though, when the pages got torn or the crayons got lost or I got into trouble for coloring on the refrigerator. This program eliminates all these problems and lets kids enjoy coloring pictures with the computer.

The CoCo Coloring Book is a pretty straightforward program and simple to operate, yet fun and interesting enough to keep the youngsters occupied for hours.

Once the title screen appears, you see a prompt to press the space bar to continue. A picture menu appears with eight picture choices. Selecting a picture by pressing the appropriate key causes the computer to switch to a screen showing an outline of a picture. The user's task is to color in the spaces by pressing the color keys, which in

## 

Bill Bernico is the author of over 200 Color Computer programs and is a frequent RAINBOW contributor whose hobbies include golf, writing music and programming. Bill is a drummer in a rock band and lives in Sheboygan, Wisconsin.
this case are keys 0 through 9. The following lists the numbers and corresponding colors:

$$
\begin{aligned}
& 0-\text { green } \\
& 1 \text { - yellow } \\
& 2 \text { - blue } \\
& 3 \text { - red } \\
& 4 \text { - white } \\
& 5 \text { - light blue } \\
& 6 \text { - purple } \\
& 7 \text { - orange } \\
& 8 \text { - black }
\end{aligned}
$$

The 9 key paints an area with "flash" colors. That is, the painted area alternates all of the other eight colors within its boundaries and remains that way until you paint over it.

Here's how you paint a specified area: Move the flashing cursor with your right joystick. When the cursor is within the boundaries of an area you want to paint, keep it there and hit one of the number keys. That area is painted with the corresponding
 of which keys produce which colors by the menu along the right side of the screen. If you paint an area and decide you'd like another color, simply press another color key and it paints over the old one. This works with any color except white. Once you paint an area white, it remains white until you leave the screen and start over.

The only other key with any effect is the M key, which takes you back to the menu screen and lets you either choose another picture to color or press Q to quit. It's that simple.
(Questions or comments concerning this program may be directed to the author at 16721 Lakeshore Road, Cleveland, WI 53015. Please enclose an SASE when requesting a reply.)
(For CoCo 1,2,3 RSDOS; Min 32K Unless Otherwise Specified)

## Super Tape/disk <br> Transfer

Transfers Tape-To-Disk, Disk-to-Tape,Disk-to-Disk,Tape-ToTape. Only \$24.95
Maillist Pro (Select/All), Sort Mailing Labels. Only $\$ 19.95$

## Computerized Checkbook

Add, View, Search \& Print Checkbook Entries for savings/ checking \& other accounts. Only $\$ 19.95$

## CoCo 3 Screen Dump

 32/40/80 column, PMODE 3/4 dump. Single Key Operation allows you to take snapshots of screens while program is running! For DMP \& Epson/ Gemini/ Star \& Compatibles. Only $\$ 19.95$ (CoCo 2 compatible)
## RGB Patch

Displays most graphics in Color on RGB Monitors. For CoCo 3.Only \$24.95

## FKEYS III

Create up to 20 function Keys. EPROMable. For CoCo 3.Only \$19.95

## Sixdrive

Allows use of 3 double-sided drives from RSDOS or ADOS. Disk Only \$16.95

## DISTO PRODUCTS

All Disto Products now carry a 1-Year Warranty and are shipped 2nd Day Air (at no extra charge!) within Continental US. All Disto Add-Ons (\& Super Controller II) include OS9 Drivers, unless otherwise specified.

Disto Mini Controller (with RSDOS or CDOS) : $\$ 74.95$
Disto Super Controller (with RSDOS or CDOS): $\$ 99.95$
Disto Super Controller II (with RSDOS or CDOS): $\$ 129.95$

- Mini Eprom Programmer Add On: \$54.95
- Hard Disk Adapter: \$39.95 w/ RS232: \$69.95
- RT Clock \& Printer Interface: $\$ 34.95$ (OS9 Driver: $\$ 19.95$ )
- 3-in-1 Multiboard Adapter: Parallel Port, RT Clock \& RS232 Port. \$74.95
- MEB Adapter: $\$ 34.95$
- 4-in-1 Board: Parallel Port, RT Clock, RS232 \& Hard Disk Interface: \$114.95
RS232 Super Pack: True RS232 Port for your CoCo! Compatible with Tandy(18 RS232 Pack. Includes DB25 Cable. 100\% Compatible with OS9 ACIA Software. Req. Multipak. Only $\$ 54.95$

## HARD DRIVES, Etc.

Systems w/ Seagate Hard Drive, Controller, Cables, CoCo XT Interface, Cables, Case (with fan \& 60 W Power Supply), Software (OS9 Software \& HYPERIO Software!) \& Instruction Manuals. Assembled/Tested/Formatted. Just Plug'N'Run. Req. Multipak. The Best Hard Drive Deal for the CoCo.
Seagate 20 Meg System: $\$ 509 \mathrm{SS}$ Seagate
Seagate 30 Meg System: $\$ 539$
CoCo XT: Use $25-120 \mathrm{Meg}$ Drives with your CoCo. Only $\$ 69.95$ w/ Real Time Clock: \$99.95
CoCo XT ROM: Boots OS9 from hard/floppy. Only \$19.95
HYPERIO: Allows Hard Drive use with RSDOS. Only $\$ 29.95$.
HYPERIO Disto Version (for Disto Hard Drive Interface users).
HYPERIII: Adds RAM Disk \& Spooler to CoCo 3 HYPER I/O.
Only $\$ 12.95$
HYPERIO Utilities (by Kevin Berner)
Hard Drive Utilities: MSA Backup, Copy/Kill/Rename, Hard
Disk Backup to Floppies (vica versa) \& more. Only \$21.95
Disk Doctor: Checks/locks out bad sectors. only $\$ 17.95$
Hard Drive Zap: View tracks, sectors, modify data on your hard disk. Only $\$ 21.95$

## DRIVES

There are a lot of dealers selling disk drives for the CoCo. Why buy from us? First, all our drives are BRAND NEW Fujitsu DOUBLE SIDED Drives. They are sleek, fast ( $6 \mathrm{~ms}!$ ), quiet and have a reputation of superb performance and reliability. Second, our Drive 0 \& 2 Drive Systems come with the acclaimed DISTO Controller - with gold plated contacts \& built-in ROM which allows you to access BOTH sides of our drives!. Third, our Drive 0 \& 2 Drive Systems come with the Official 200 page Radio Shack Disk Manual. Fourth, you get $\$ 50$ worth of our utility software (Disk Util 2.1A \& Super Tape/Disk Transfer). Our drive systems are head \& shoulders above the rest!

Drive 0 (with Disto Controller, Case, Power Supply, 1 Drive Cable, Manual, Software): \$209 Drive 1 (with Case, Power Supply \& Software): \$129

Bare $51 / 4^{\prime \prime}$ Drive: $\$ 89$
2 Drive System (With Disto Controller, Case, Power Supply, 2 Drive Cable, Manual \& Software): $\$ 309$
1 Drive Cable: \$16.95 2 Drive Cable: \$22.95 4 Drive Cable: $\$ 34.95$ FD501 Upgrade Kit: Bare Drive, 2 Drive Cable \& Instructions: $\$ 109$ FD502 Upgrade Kit: Call 716-383-8830 for pricing \& availability.

More Good Stuff...
DS69B Digitizer: Use your CoCo to display pictures from your VCR. Comes complete with CSEE Software. Only $\$ 149.95$. CoCo 2 Version: $\$ 99.95$

Questron Joystick (for CoCo): Atari type joystick w/ Rapid Fire. Only \$29.95
Advanced Gravis Joystick: Features tension, rotary-centering, free floating controls with 3 buttons. Only $\$ 59.95$
TRS-80 Color Mouse: $\$ 19.95$ (limited quantities) MPI Locking Plate (Specify 26-3024/3124): \$8 5 1/4" DS/DD Disks: \$. 40 each 5 1/4" Colored DS/DD Disks: \$. 89 each $31 / 2^{n}$ DS/DD Disks: $\$ 1.49$ each $51 / 4^{\prime \prime}$ Disk Case (for 70 disks): $\$ 9.95$ 3 1/2" Disk Case (for 40 disks): $\$ 7.50$

Magnavox 8CM515 RGB Monitor Razor Sharp picture quality

## \$269

 for your CoCo! Has 14" Screen, Analog/TTL RGB \& Composite Inputs for CoCo 2/3, Speaker,Text Display Switch, Tilt Stand \& 2 Year Warranty. Compatible with CoCo, IBM \& many other computers! Only $\$ 269$ (add $\$ 12 \mathrm{~S} \& H / \$ 40$ in Canada) Lowest Price in the Rainbow!Magnavox RGB Cable for CoCo 3 and Composite Video / Audio Cable Set with Purchase of Monitor: $\$ 19.95$

4II MICROCOM SOFTWARE 2900 Monroe Ave, Rochester, NY 14618.

## Rascan Video Digitizer

State-of-the-art video digitizer for the CoCo 3. $640 \times 200 \& 320 \times 200$ work area in color! Includes pop-up menu system, driver software \& print driver disk.

Only $\$ 159$
Hardware Hackers: We are interested in your projects. Excellent royalties. Call 716-383-0026.

The answer to the Hi-Res joystick adapter blues! Now there is no need to keep plugging and un-plugging Hi-Res joystick adapters when changing programs! Simply install the HAWKSoft Dual Hi-Res Joystick Adapter and change adapters with the flick of a switch! Works as.a TANDY Hi-Res adapter or a COLORWARE Hi-Res adapter; includes an eprom-able patch for basic and works as a Lo-Res joystick when called from Basic! The HAWKSoft Dual Hi-Res Joystick Adapter also allows full use of the cassette jack for a cassette player or hardwere copy-protection modules. Never change joystick cables again!! Only $\$ 30$ intro price $5 / \mathrm{H}$ included !

## BEST

WE'VE CHOSEN THE BEST OF OVER 760 PROGRAMS (OVER 6 YEARS OF ACCUMULATING FINE SOFTWARE), AND PACKAGED THEM FOR YOU. 12 PROGRAMS EACH PACKAGE. COLOR COMPUTER I, II or III. SPECIFYTAPE OR DISK. ONLY \$29.95 EACH PACKAGE! 5 NEWONES!

## BIG BASIC

Full Power for your CoCo 3! (From Danosoft)
Gives up to 92 K User Memory in 128 K CoCoand 476 K in 512 K CoCo from BASIC with any mix of program/variables. You can have one BIG program or 58 Separate ones running at once from computer memory in multiple windows! Big Basic also allows you to Disk Chain any size program. Step up to the full potential of your CoCo 3 with Big Basic. Only $\$ 39.95$

## 512K Upgrades

Fully assembled, tested and ready to be shipped NOW! Our design allows mounting chips on top to prevent any heating problems. No soldering; Full PICTURE instructions for 2 minute installation! Comes with following software (value $\$ 100$ ):
$\bullet 512 \mathrm{~K}$ Ramtest • 512 K Backup Lightning

- 512K Print Spooler
- 512K Ramdisk

- OS9 Level II Ramdisk

The absolute best 512 K Upgrade Package Available! 90 day warranty! New Low Price $\$ 149.95$
OK Upgrade Board (with 512K Ramtest/Ramdisk/Spooler): \$39.95

## Upgrades for CoCo 2

64K Upgrade (8 chip) for CoCo I, CoCo li's with Cat \# 263026/3027/3134/3136: \$29.95
64K Upgrade ( 2 chip) for 26-3134 A/B CoCo II: \$39.95
(Free 64K Software included with 64K Upgrades)

## COMMUNICATIONS EXTRAVAGANZA

(1) Avatex 1200e Modem: Fully Hayes Compatible 300/1200 w speaker, Auto Dial/Answer/Redial.
(2) MODEM CABLE (4pin to DB25; Reg \$19.95)
(3) Autoterm Software (Reg \$39.95)
(4) Free Compuserve Offer \& Access Time
(5) UPS 2nd Day Air Shipping

Only \$129.95
Avatex 1200e Modem Only : \$85
Zoom 2400 Modem Only: \$149
Communications Extravaganza 2400: Includes
Zoom 2400 baud modem, cable, software \& 2nd Day Air Shipping. Only $\$ 189.95$

All our modems carry a 2 Year Warranty!

## KEYBOARDS, ETC...

Keyboard Extension Cable allows you to move your keyboard away from the computer \& type with ease. Use your existing keyboard or leave your present keyboard intact and use a second
 keyboard. Only $\$ 39.95$
CoCo 3 Keyboard: $\$ 39.95$ w/Extension Cable: $\$ 69.95$
CoCo 2 Keyboard: $\$ 19.95$ w/Extension Cable: $\$ 49.95$ (CoCo 3 Keyboard includes free Function Keys Software)

## 

INTRONICS EPROM PROGRAMMER: Programs 2516 to 27512 \& more! Includes software \& complete documentation. Latest version. Lowest Price Anywhere. CoCo 1,2,3. Only \$137.95
DATARASE Eprom Eraser: For $24 / 28$ pin Eproms. Only $\$ 49.95$
Both Eprom Programmer \& Eraser: \$179.95
2764 Eprom: $\$ 8 \quad 27128$ Eprom: $\$ 9$ 4
ROMPAK (w/ Blank PC Board, 27xx Series): \$12.95

# 3 Fabulous Bargains! 

## These specials will be withdrawn without notice. Don't miss them!

COO MaxIII
The Famous Graphics Creator '49s

## вÖTH

CoCo Max III and Max-10 for only
5995

[^2]Max-10: the Rolls-Royce of word processors. The only one with true graphic capability and dozens of type styles. Using your dot matrix printer you get from tiny foomotes ( 6 point) to big titles ( 24 point).

The Rainbow review ( $1 / 89$ ) said: "An incredible job of providing power, flexibility and speed in a program that is as easy to use as it is to pronounce! ... Max-10 takes a back seat to none, and is beyond comparison with most." Max-10, the only word processor with "What You See is What You Get". A word processor you will love at first sight.

CoCo Max III: now a classic and probably the most popular CoCo program ever. If the price was the reason that stopped you before, this special will delight you. Listen (Rainbow $3 / 88$ ): "There are no limits to what you can do with this fabulous program. Speed, ease, animation, power and color, all in one package. CoCo Max III is the ultimate program for the CoCo 3." Check any Rainbow (up to 4/89) for complete info on CoCo Max.

To top it off, we include a free Demo Disk plus the super CoCo Show program, which lets you make your own "slide shows"

Desktop Publishing: together, CoCo Max III and Max-10 form an unbeatable system for reports, flyers, invitations, greeting cards, signs, newsletters, etc. It's far beyond anything you've ever seen on a CoCo.

Here is one of the hundreds of unsolicited letters we got: "Max-10 and CoCo Max III are wonderful. They are the first Color Computer products I have purchased that were even better than I hoped for." At Colorware, we all work hard to make you feel that way and we thrive on your appreciation.

[^3]
## CoCo Max III Add-ons

- Max Fonts disks. 95 fonts on 4 disks.

Order \#C-73......................................... \$49.95

- Max Edit Create new fonts or edit existing ones, Order \#C-16 ................................ . $\$ 19.95$
- Color Printer drivers for NX-1000

Rainbow ( $\# C-2$ ), CGP-220 ( $\# C-1$ ) or

## Perlman and his computer are back in action

# The Do-lt-Yourself Disk Database, Part 3 

## By Richard Perlman

This is the third article in a series explaining how you can create and use a full-featured disk database system, even if you're not an expert. The first two articles in the series appeared in the February and March issues of THE RAINBOW. Since that time the computer and I have been out of action, but the team is now back and ready to continue.

I left off in the midst of creating a database that helps manage money. As I go along, you'll see that with some minor changes you can use this database to keep track of almost anything.

If you have been following from the beginning, you are no longer a beginning programmer. This article contains an indepth look at the program, and you should have no trouble following it. You can skip

[^4]the next few paragraphs and begin reading at "Where We Left Off." For the rest of you, I review the highlights of the earlier articles. This should be enough to allow you to continue as I go through the code. But for a really good understanding, refer to the earlier articles.

## Important BASIC Statements to Know

If you are uncomfortable using GOSUB, RETURN, GOTO, ON GOSUB and ON GOTO, take time now to familiarize yourself with them. I use a lot of subroutines and computed GOTOs in the system because it makes the programs easier to code and faster to run. You will have problems following the program unless you know how these statements work. Other important statements include VAL, CHR $\$$, MID $\$$, LEFT $\$$, RIGHT $\$,+$, FOR-NEXT, DIM and the display statements PRINT, PRINT @ and PRINT..... All these statements are described in detail in the earlier articles, including examples of how to use them.

## Other Background Information

I explained that database is not a mysterious term reserved for use by computer gurus but simply a collection of information organized according to a set of rules. In the computerized database these rules are built into both programs and data records. I wrote the rules about what my data records would look like in a Data Dictionary, which I used as a blueprint for the system (see the March ' 89 Rainbow, Page 89). The rules state that each record in the database contains information in the format shown in the Data Dictionary. They also specify that the records are placed on the disk (filed) in a specific order, according to the values of their "keys." I defined the key as the first nine characters of each record.

According to the Data Dictionary, the first four characters contain the date (MMDD). The database is therefore said to be in date sequence. It consists of 24 data files, two for each month. The program CREATE

NEW: REMOTE A-BUSI Use the new Serial (RS-232) Adapter or Processor to control any A-BUS system. Cards can be up to 500 ft away using phone type cable, or off premises using a modem. Call or send for the new A-BUS Catalog which covers all the products.

## Classroom to advanced industrial applications.

## Be a Wizard in your Lab, Factory, College, Home...

It used to be difficult and costly to do process control, robotics, data acquisition, monitoring and sensing with your computer. Now the low-cost A-BUS system makes it easy to do almost any project you can imagine.

Versatility. A-BUS cards handle most interfacing, from on/off switching, to reading temperatures, to moving robot arms, to counting events, to sensing switches...

Adaptability. The A-BUS is modular, allowing expansion well beyond your needs. It works with almost any computer, or even as a remote data station with the new serial adapters.

Simplicity. You can start using the A-BUS in minutes. It's easy to connect, and software is a breeze to write in any language.

Reliability. Careful design and rugged construction make the A-BUS the first choice in specialized I/O.

An A-BUS system consists of: = An A-BUS adapter plugged into your computer - A cable to connect the adapter to 1 or 2 A-BUS function cards. " The same cable will also fit an A-BUS Motherboard for expansion to up to 25 cards in any combination.

Important
All A-BUS Systems: © Come assembled and tested Include detalied manuals with schematics and programming examples \& Can be used with almost any language (BASIC, Pascal, C. assembler, eec.) using simple "NN" and "OUT" commands (PEEK and POKE on some computers) - Can grow 1025 cards (in any combination) per adapter - Provide jumper selectable addressing on each card Require a single bow cost unregulated 12 power suppy * Are usually shipped trom stock. (Overnight service is available.)

## About Alpha Products

Founded in 1976 for the purpose of developing low cost VO devices for personal computers, Alpha has grown to sevve over 70000 customers in over 60 countries. A-BUS users include maty of the Fortune 500 (IBM. Hewlett-Packard. Tandy, Bell Labs, GM...) as well as most major universities. A-BUS products are U.S. designed, U.S. built, and serviced worlowide.
Overseas distrlbutors: England: Caldy Science Assoc. Ltd., Merseyside, 0513427033.
Australia: Brumby Technologies Pty. Lid., NSW, 759 1638. France: Coserm, Rungis, 46866475

## Inputs, Outputs, etc.

Analog Input: 8 analog inputs. $0-5.1 \mathrm{~V}$ in 20 mV steps 8 bits). $0-100 \mathrm{~V}$ range possible. 7500 conversionsisecond. AD-142: $\$ 142$
12 Bit A to D: Analog to dightal converter. Input range -4 V to +4 V , expandable to 100 V . On-board amplifiel. Resolution 1 mV . Conversion time 130ms, 1 channel. (Expand to 8 channels with the RE-156 card.) AN-146: \$153
Relay Card: 8 individually contronled industrial relays each with status LED's (BA at 120VAC contacts, SPST). RE-140: $\$ 142$ Reed Relay Card: 8 reed relays (20mA at GOVDC, SPST). Individually controlied and latched, with status LEDs.RE-156: \$109 D/A converter: 4 Channel 8 Bit D/A converter with output amprifiers and separgte adjustable references. DA-147: \$149
24 Ifne TIL I/O: Connect 24 input or outpot signals (TLL 0,5V levels of swithes). Variety of modes. (Uses 8255A) DG-148: $\$ 72$ Digital input: 8 optically isolated inputs. Input can be 5 to 100 V vollage levels or switch closures. IN-141: 865
Digital Output Driver: 8 outputs: 250mA at 12V. Drive relays, solenoids, stepper motors, lamps, etc. ST-143: \$78
Clock whth Alarm: Powerlul clockicalendar. Battery backup. Timing to 1/100 sec. Alerm relsy, LED and buzzer. CL-144: \$98 Touch Tone Decoder: Each tone is converted into a number which is stored on the board. PH-145: \$87
A-BUS Prototyping card: $4 \times 4.5^{\circ}$ card. Will accept up to 10 I.C.s. With power \& ground bus. PR-152: $\$ 16$
Counter Timer; Three 16 bit counterstimers. Use seperately or cascade for long (48 bit) counts.

CT-150: \$132
Call our appliction engineers o dscuss your proiect.

## Motion Control

Smart Quad Stepper Controller: The worl's finest. On board microprocessor controls four motors simultaneously. Uses simple English commands like "MOVE ARM 10.2 (NCHES) LEFT. For each axis, you control coordinates (absolute of relative), ramping, speed, units, scale factors, etc. Many inputs for limit switches, etc. On the fly reporting of speed, position... Built in divers for small motors (such as MO-103 or 105). SC-149: $\$ 299$ Options: - 5 amp/phase power booster for 1 motor: PD-123: \$49 - Remote "taach" keypad for dired motor control: RC-121: \$54

A large A-BUS system with two Motherboards Adapter in the foreground plugs info PC,XT.AT type slot.

Siepper Drlver Kit: For experimenting with stepper motors. Includes 2 MO-103 motors and a ST-143 dual driver PA-181: $\$ 99$ Stepper Motors: (4 phase, unipolar)
Mo-103: 21/4" die, $1 / 4^{*}$ shaft, $7.5^{\circ}$ /step, $12 \mathrm{~V}, 5$ oz-in torque. \$15 Mo-104: $2^{\prime \prime}$ dia, $1^{\prime \prime}$ shatt, $1.8^{\circ} /$ step, $5 \mathrm{~V}, 6002$-in torque. $\$ 45$ MO-105: 1.7" square, . $2^{\prime \prime}$ shatt. $3.75^{\circ} /$ step. 12 V .602 -in. $\$ 15$

## A-BUS Adapters

- Can address 64 ports and control up to 25 A-Bus cards.
- Require one cable. Motherboard required for more than 2 cards. A-BUS Parallel Adapters for:
IBM PCXT/AT \& compatibles. une one mant a long and AR-133: $\$ 69$
 Commodore 64,128 Pupg inte Expasion Pot on bect TRS-80 Model 102,200 unes 40 ph "Syadem bus". Model 100 (Tandy portable) Puga info socice on botiom.
TRS-80 Model $3,4,4 \mathrm{D}$ Y-cabie mainble Y 50 ph bas is uned. TRS-80 Model I Phigesitho 40 phe eqparsion bue AR-139: $\$ 48$ AR-136: \$76 AR-135: $\$ 75$ AR-131: 339 Tandy Color Computers fra rom sot untipak o Y-Cable AR-138; $\$ 49$ A-BUS Cable: Necessary to connect any parallel adapter to one A-BUS card or to first motherboard. 50 pin, 3 fl . CA-163: $\$ 24$ Special Cable for two A-BUS cards

CA-162: 534
Serlal Adapter: connect A-BUS systems to any RS-232 port. Allows up to 500 ft fom computer to A-BUS. SA-129: $\$ 149$ Serlal Node: To connect additional SA-129/A-BUS systems to a single RS232 serial port (max 16 nodes). SN-128: \$49 Serlal Processor: same as above plus built in BASIC for online montioring, logging, decision making, etc. SP-127: \$189 Use SA-129 or SP-127 with modems for remote data acquisition. Motherboard: Holds up to 5 A-Bus cards in sturdy aluminum frame with card guides. A sixth connector allows (using cables CA161: \$12) additional Motherboards to be added. MB-120: \$108 Power Supply: Power pack for up to 4 cards. PS-126: $\$ 12$

## Complete Catalog Avallable

For Orders and Info call (203) 656-1806 Weekdays from 9 to 5 EST or FAX 203 656-0756
(shown in Listing 1) creates an empty database for your use. Caution: It also removes all data from an existing database. Use it with care!

I wanted the database to be reasonably fast, easy to program and use, and difficult to mess up. To make it fast, I used a computerized index, much like the index in a textbook. The index tells me which file of the 24 to use when I want to add, change or delete a record. In this manner a lot of time is saved because I process only $1 / 24$ th of the entire database when I do an update.

To make it easy, I stuck to BASIC and used sequential files. There are no elegant programming schemes, no assembly language subroutines, no complicated disk Input/Output statements, and no PEEKs and POKEs. Using subroutines makes smaller programs that are less difficult to write and to follow. I gave examples of how subroutines can be used to create menus, to input and verify data, and to create and update the disk database.

To make errors difficult, I used the menu selection process to direct each operation. There is no need to remember special input codes or key sequences. I also check every piece of information I type in before it is added to the system. If it is a number, I check for its specific range. If it is a dollar value, I check for a decimal point followed by two numbers. If it is a name, address or character string, I check to see that it does not exceed a certain length. As a final control, each transaction goes through a Final OK procedure. The database cannot be changed until you give this Final OK.

## Programming the Menu Subroutine

Since selecting options from a menu is so important, I programmed a subroutine to do it. The MENU subroutine of ADDRECRD (March 1989, Page 92) begins on Line 9000. I place the lines I want displayed into the LI $\$$ array, the number of choices in the NL variable, and the starting location of the first line to be displayed into SL. The subroutine then allows a choice by typing any number between 1 and the number in NL. This value is put into Variable A, which is used to control where I go after the subroutine returns control to the program.

## The Data Input and Verify Subroutine

I check each data item entered with the subroutine at Line 9020. This subroutine controls the entry of all information. It allows me to place messages requesting input on any line of the screen, to input the data, and to redo the input if the information is not in range. Before I call this subroutine, I must place the message in Variable $P \$$; the starting line of the message display in Variable SL; a code for the type
of information expected (number with decimal, number without decimal, or alphanumeric) in Variable VT\$; and the high and low acceptable values in variables HV and LV. A test is then made to see if the information just input is in the correct format. If it does not pass the verification test, it is rejected and must be typed in again.

## Where We Left Off

The database was designed to store three types of records. These are billing, check and deposit records. These records provide all the information needed to manage cash. At the end of the last article I presented a program that adds check records to the database. I have since updated the code so it now can add, change and delete records, process bill and deposit records, and do a few other good things. The result is the program DATAB, shown in Listing 2. It is the complete front-end to the system. Let us see how it works by following the code as I add a check record.

When I run the program, the first menu I see is Menu a. To find it in the program, look at Line 140. All menus are identified by lowercase letters in the upper-right corner. Menu a is the starting point of the system. I begin and stop every system operation from this menu. The six numbered options on this menu allow adding, changing and deleting information; changing the workfile drive; retrieving information already on the database; or ending the session.

## Menu a Options

On this menu, as on other menus, Option 5 is Retrieve Information. The program allows choosing it, but the option does nothing. When it is chosen, control goes to Line 350 where the program stops running with an NE Error because another program, RETRV, cannot be found. This problem is eliminated in the next article, when the Retrieve program (RETRV) is presented. Do not use this option now.

There are several methods to stop a program. You can turn off the computer, press the Reset button on the back of the computer, or press the BREAK key. You can also use the BASIC END statement within the program so the program stops itself. In most cases it doesn't make any difference which method you choose, but for the database system it is most important that you let the program stop itself. This option can be selected only when all disk operations are completed. To make it quick and easy to stop the program, there is an End Session option on many of the menus.

Selecting the End Session option on any menu sends the program to Line 230 , which causes a message to display, a pause to
occur, and the program to stop itself with the END statement. You should always use the End Session option to stop the system. If you use the Reset button on the back of your computer or the BREAK key or if you turn the computer off before all disk operations are completed, you can cause some serious problems on your disk. Since using the End Session option - which appears on almost every menu - takes only a few seconds, end each session in this manner.

## What Is a Workfile?

A workfile is a temporary data file. It is created and used by a program to store information on disk not needed once the program stops working. The workfile is not part of the database and may be deleted from your disk without causing any problems. Some programs automatically delete their workfiles when they end.

As the database grows, it may become too large to share its disk space with the workfile. One solution is to place the workfile on another disk drive. If you have a second one, you can place the workfile there. If not, there are other techniques you can use, which I will discuss in the next article. In order to place the workfile on the second drive, use Option 4 on Menu a.

You can use Option 4 at any time. When you do, the program performs a GOTO to Line 270, gives you two choices for the location of the workfile (Drive 0 or Drive 1), and displays the current choice. Depending upon your choice, the variable WF $\$$ has a value of 0 or 1 . This is where the program holds the drive number for the workfile. Note that Line 110 sets this initially to 0 , so you don't have to use Option 4 at all if you don't need to.

## Using a Workfile

As I previously told you, the disk controller is a clever little gizmo that takes care of all the nitty-gritty things involved with reading and writing disk records and files. However, there is a limit to its knowledge; the disk controller simply does not know how to add, change or delete records on the database and has no idea about what is in the Data Dictionary. What I need is a procedure in the program that controls the controller.

The procedure first locates the database file to be changed. It then reads and processes the existing records of the database file. For each record processed, something happens to the workfile:

- The existing record is written to the workfile.
- The existing record is changed and then written to the workfile.
- The existing record is deleted by writing nothing to the workfile.
- A new record is added to the workfile from the information you just typed in.

When I have completed everything, the workfile contains all of the information originally in the database file plus all of the changes I wanted to make. In the final step, I replace the database file with a copy of the workfile and the update is completed.

The workfile is created by the subroutine 9200 , which also opens the database file to be changed. Using the month and day provided by the program (MM $\$+0 D \$$ ), it constructs the name of the database file to be opened in Variable SG\$. It opens this file on Line 9220 and assigns it the buffer number l. It also opens the workfile, which is always named WORK. CHK, and assigns it the buffer number 2. Part of the statement that opens the workfile adds the value in Variable WF $\$$ to the end of the filename to include the drive number selected.

The Update subroutine that uses the workfile begins at Line 9230. It reads from the database file (INPUT \#1 through Line 9240) and writes to the workfile (WRITE非2 through Line 9250) until the change is made and the end of the database file is reached. At this point control goes to Line 9290 where the workfile is exchanged for the database file.

## More Details About Adding a Record

I can add check, deposit or bill records. The method for each is about the same, so I am following the flow in the adding of a check record to show you how the program works. I started at Menu a on Line 140 and chose Option 1. This choice is made in subroutine 9000 , which is called by Line 210. The result is that the value 1 is placed into Variable A. When I have returned from the 9000 subroutine on Line 220 , the $O N$ GOTO command directs control to Line 360, which is the start of the Add section. The UPDATE subroutine 9230, which I use briefly, adds, changes or deletes records, depending upon the value it finds in Variable AD. So on Line 370 I set Variable AD to 1. This tells the update subroutine I will be using it to add a record.

I then work with Menu e, which allows me to tell the program whether I am adding a check, bill or deposit record. When I indicate I am adding a check the program directs me to Line 500, where information is entered. Line 510 is a series of GOSUBS followed by a GOTO. Each GOSUB results in the adding of a different item of information, and the GOTO 630 gets the final item. I need six items of information to complete a check record.

## Why Use Small Subroutines?

This code has a lot of GOSUBS, and each subroutine is no more than two or three lines long. The reason for this is to save lines of code. I enter many of the same data items whether I am adding a check, bill or deposit, and I may want to reenter an item if I made a mistake. Placing each type of data entry in a subroutine saves a lot of coding.

## The Final Review

When I have entered the last item needed to complete the record, the program makes us review the information by calling the Final OK subroutine 9500 from Line 650. This 9500 subroutine actually begins at Line 9520, but can be entered either at 9500 (if you are adding a check or bill) or 9510 (if adding a deposit).

The subroutine forces you to take some action before the program goes any further. Either press $Y$ to indicate all the information is correct, or type in the identifying number of any item you want to change. The choice is presented by a blinking display, altemating between inverted and noninverted (dark against light background vs. light against dark background) characters. As you are aware, the $\operatorname{CoCos} 1$ and 2 do not have a true lowercase non-graphics display and use inverse characters. They do not invert spaces, so I fudged a little to display an entire line with a dark background. The display in question is shown on Line 9580 (PRINT @32, PM\$). Variable PM\$ is initialized in Line 120, and the spaces are converted to dark background in Line 130. Note that the dark-background space character is a CHR $\$$ (128). I thought this blinking display was sort of nifty - it really gets your attention. CoCo 3 users may change this to suit their visual preference or leave it as is - it won't change the way the program runs.

To get past the blinking display, you need to make a correct response. Once you have replied, the subroutine returns you to Line 600 . If you typed an item number, you get to enter that item again. When you press Y, control goes to Line 690. The program proceeds to Line 690 where two alphanumeric variables are created. The first $O K \$$ is the key of the output record. The second $W R \$$ is the entire output record. I then proceed to Line 720 where I call the subroutine 9200, which opens the correct database file and workfile and then calls the UPDATE subroutine 9230.

The UPDATE subroutine must now find the correct place in the file to add the check record. The records on the file are written so each has a higher key than the one before. The subroutine therefore reads records from the database file until it finds

## NEVER BEFOREII <br> INTHODUCNG THE SUPEA BISK

Never before has there been a system like the SUPER DISK and it's companion manual. Here are it's main features:
THE SNOOPER Examine ALL tracks and sectors of a disk, even those meant to be HIDDEN. Read, write, copy, auto-search for file starts (even multiple start addresses). Do quick hex to decimal conversions. Find SECRET data! Auto-analyze disks to discover unusual formats, and MORE!
THE PROTECTOR Authors, protect your work! Use THE PROTECTOR to defeat PIRATES. The SECRET methods revealed allow you to create virtually unlimited protection schemes, including multiple level protection. Even protect BASIC programs!
FORMAT PLUS Custom build your own secret disk format. (Use with THE PROTECTOR)
COPY PLUS Will automatically analyze and copy virtually any disk. You'll need this to make copies of your disks made with THE PROTECTOR!
THE MANUAL contains instructions to fully utilize THE SUPER DISK. Also included are facts about copy protection NEVER BEFORE published. Learn the untold truth about disk management. Authors, you've spent days, weeks, months developing commercial software. Don't Give It Away! Protect it!

## THE COMPLETE SUPER DISK SYSTEM $\$ 49.00$ SPORTSware SUMMER SPECIALS

## SPORTSware <br> 1251 S. Reynolds Road, Suite 414 Toledo, Ohio 43615 <br> (419) $389-1515$

the first one with a key higher than that of the key of the record I want to add. It has then found the exact spot in the file where the new record is to be placed. Note that the first statement at 9230 is not an INPUT but an EOF check, and there is a very good reason for this. If you attempt to read past the end-of-file, the program stops dead in its tracks. The EOF tests to see whether the end-of-file has been reached and stops you from reading any further. I explain later more about the end-of-file.

On Line 9240 I input a record to Variable LI \$ and putits key in Variable IK\$. As long as $0 K \$$, the key of the record I want to add, is greater than IK\$, the key of the record I just read, I add the Li\$ record into the workfile (Buffer \#2) and read the next record. Once this condition no longer occurs, I go to 9310 . The key IK\$ must now be greater than $0 \mathrm{~K} \$$ or I have an error condition. I can then write the WR\$ record to the workfile, set the record-added indicator RA to 1 , write the Li $\$$ record to the workfile, then go back to 9230 to read the remaining records on the database file and write them to the workfile.

## End-of-File

I have to transfer all the database file to the workfile and insert the new check record in the correct sequence on the workfile. This means I must read the entire database file. After I read the last record, I still have work to do - the new record may not yet have been added. When EOF is reached, control goes to Line 9270. If the record I want to add has already been added, RA has been set to 1 and control goes to Line 9290 . This is where I should be if all has gone well. The database file $\mathrm{SG} \$$ is replaced by the workfile, GE is set to 1 , and I return to Line 730 . However, if the record is not yet added, RA equals zero and the next statement on Line 9270 is run. The only way I can find myself here is if the record to be added has a higher key than any record found on the file. The WRs record must then be the new last record on the file, so I add it. Then I exchange files, set GE to 1 , and press ENTER as before. Otherwise the program goes to Line 9300 , which means all is not well.

## More Control and Security

If I find $I K \$$ and $0 K \$$ are equal, $I$ have another problem. It means a record already exists with the key I am trying to add. I then have duplicate record keys on the file, which makes the data unusable. The program stops the user from doing this. I find myself on Statement 9320, where the value of 1 in AD sends me to Statement 9300 . To indicate that I did not have a "good" ending, I place the value of 2 into GE . Then,
instead of exchanging the workfile with the database file, I leave all files as they are, close them all, and press ENTER. On returning I go to Statement 730, where the value of 2 in GE causes an error message to print. At this point I can take one of the choices on Menu d.

## Is It Foolproof?

Whenever a program is supposed to do something vital for future operation, it is a good idea to put in some sort of check routine. But there can always be something I hadn't thought of or decided to ignore. This is a very good control system but not perfect. By using a lot of computed GOTOs, I created a subroutine that adds, changes and deletes the three record types and also performs error detection in 15 lines of code. But it is not a complete safeguard because it doesn't stop you from entering a duplicate check number on different dates. This isn't a serious problem because in the real world you can do the same thing, and you simply change the information in your checkbook once you notice the problem.

I tried several different solutions to this problem. In all cases the program becomes more complicated, especially in the coding involved with changing and deleting records. It takes longer to add, change and delete records. The program becomes large enough to strain the limits of the 64 K memory size. I also had to use additional disk space to keep a separate record of the numbers already used, which meant there was less space for the database. Since the cure is worse than the disease, I left the problem alone. But if you must have the program check against duplicate numbers, I'll give you some ideas in the next article.

## What Next?

When I am finished with the attempt to add a record, I am on Line 730, Menu d. This is the case whether or not the record is really added. A different message is displayed depending upon the value in $G E$, and I continue by making a choice to add more information, return to the first menu, or stop the program.

## How About Bills and Deposits?

The method of adding a bill or deposit is almost the same as adding a check. The difference is that other information is needed for these records. I must therefore use different data entry statements to get it into the program. If I select "bill" or "deposit" in Menu e, I am sent to Line 600 to add a deposit and to Line 800 to add a bill. I go through the same information check and record-add coding as before and am returned either $G E=1$ for a good ending or $G E=2$ for a bad one.

## How Do I Change and Delete?

These options are also under menu control. The program asks for enough information to build the key, then attempts to match keys with an existing record. When a matching record is found, I have several choices. I can examine the record or change as many data items as needed as many times as I like. If I don't want to continue, I can stop without changing or deleting the record. Next I must give the final OK.

In many ways the procedure is very much like adding a record. A workfile is created and records are read from the database and written to the workfile until the selected record is found. If I am changing, the record is changed and written to the workfile. If I am deleting, I simply do not write the record to the workfile. Let's follow this in the program as I change a bill.

## The Details of Changing a Record

Starting with Menu a, I select Item $2=$ Change. This puts me on Line 1800, where the $A D$ indicator is set to 2 , signifying "change." In this example I indicate that I am changing a bill, which puts a $B$ in the key I am building and puts the word "BILL" into the variable DV\$. Then I go to Line 1920, where the additional information to define the key is gathered. Again I call the OPEN subroutine 9200 and the UPDATE subroutine 9230 . If the record is found, the UPDATE subroutine returns a value of 1 in GE. The entire record to be changed is in Variable LI \$. All the records in the database file that have been read up to this point have also been written to the workfile. Now I am on Line 2020 and see Menu j.

## Can the Key Be Changed?

From Menu j I can use Options 1 through 4 to change any of four data items. However, none of them are part of the record's key. Changing a data item in an existing record does not change the position of the record in the database. Changing the key means changing the position of the record in the database, which is a much more complicated procedure. It requires both deleting the record with the old key and adding the record with the changed key in its new location. The level of complexity further increases if the changed key is of a lower value than the existing key or if more than one database file is involved. For these reasons the program has not been designed to allow for changes in the key. Please note that since add-record and delete-record capability is already built into the program, you can change the key of a record - but you have to do it in two steps.

## How Data Is Changed

Options 5, 6 and 7 give me complete
control over the change procedure．If I want to look at the current status of the record，I use Option 5．I have written a subroutine to help examine the record．If I have chosen the wrong record，I can start all over again with Option 6．If I am ready to make the change，I use Option 7．I can also signal that I am ready to make the change from Menu m ，which is displayed when Option 5 is chosen．I can change the same item again if necessary and can use Option 5 to look at the record again after I change it．Each time I change information，the LI\＄record is updated．

## When the Database Is Actually Changed

The changed record is not written to the workfile until I am finally ready to make the change．When I am，control goes to Line 2390，where the updated LI $\$$ record is written to the workfile and RA is set to 1 ． Then the 9230 subroutine is called again． As in＂add＂，once RA is set to 1 ，all records
read from the database file are written to the workfile．At the end－of－file I go to Line 9270 where the value of 1 in RA sends me to 9290 ，which is the place to be for a success－ ful update．Upon return，I go to 2420 with $\mathrm{GE}=1$ ．If a match on the key cannot be made， $G E$ is set to 2 ；upon return the test of GE on Line 2010 sends me to Line 2420，and no change is made．

## Deleting

Similar to the way the Change coding works，the program requests enough infor－ mation to build the key of the record I want to delete．It then sets $A D$ to 3 and calls the OPEN and UPDATE subroutines．When a match with an existing key is found，I have the option of deleting it immediately，examin－ ing the record to make sure it is the one I really want to delete，or returning to the previous menu without deleting anything． Once I give the final OK that I really do want to get rid of the miserable record，RA
is set to 1 and I recall the update subroutine． Nothing is written to the workfile．

When the end－of－file is reached，the entire database file，less the deleted record， has been written to the workfile．I exchange the workfile for the database file and the deletion has been completed．

## That＇s All，Folks！

As Mel Allen used to say，＂How about that？＂I have created the database and can add，change and delete three types of rec－ ords to it．In the next article I show how to get information out by using an＂Output Writer，＂explain how you can change the system to suit your special needs，and give you some ideas about using cassettes and other database packages．
（Questions or comments about this tuto－ rial may be directed to the author at 83－34 169 St．，Jamaica，NY 11432．Please in－ clude an SASE when requesting a reply．）

## MLBASIC 2.0-BASIC Compiler <br> If you want your BASIC programs to run up to 50 times faster, or want more

 programming features without learning another language, MLBASIC is for you.MLBASIC is the most compatible BASIC compiler available for the Color Computer. WHY? Because MLBASIC fully supports:

Low- and high-resolution graphics
All types of I/O (disk, screen, printer, RS232)
All available commands offered with BASIC

- Floating point functions and expressions

Integer, floating point and string type variables and arrays Use of all available 512K RAM in the COCO 3 80,40 ог 32 column text displays
MLBASIC not only contains everything that you would expect a BASIC programming language should contain, MLBASIC has features that offer flezibility of other languages like C, Pascal, FORTRAN and even assembly language. These features will allow programmers to directly access the CPU registers on the COCO, produce modular program code with SUBROUTINES, manipulate memory in blocks, and even call ROM routines in other areas of memory.

MLBASIC revision 2.0 has incorporated all enhancements that were suggested by MLBASIC 1.0 users and more. Revision 2.0 did away with all the incompatibility problems that existed with revision 1.0.

MLBASIC allows for the first time user to quickly compile a program using default compiler settings. The advanced user has the capability of controlling over a dozen settings which control where the program is compiled, which medium to compile to (memory or disk), string space, compiler listings and more.

With all this going for MLBASIC, your might expect the cost to be a little out of your budget. After looking at prices of other BASIC compilers for the COCO 3 you might be correct. But look again at this ad; for only $\$ 59.95$, you can have a programming language that will spark your interest once again in the COCO.

Before you buy another BASIC compiler for the COCO, find out if it supports everything MLBASIC supports. Then look at the price tag. We feel that it won't be long before you place an order for MLBASIC.
"MLBASIC is a fine program for any serious programmer,"
said David Gerald in the December 1987 RAINBOW.

## The Coco Graphics Designer Plus $\$ 29.95$

Super easy－to－ use point and click graphical interface，fea－ tures windows， scroll bars，radio buttons，and joy－ stick or mouse control．

The CoCo Graphics Designer Plus（CGDP）is CoCo 2 and 3 Compatible．It allows pictures，and text in up to 4 sizes and 16 fonts，per page or banner．The cards $\&$ signs fea－ ture hi－resolution borders and complete on－screen pre－ views．The CGDP comes with 16 borders， 5 fonts，and 32 pictures．It＇s $100 \%$ machine language for fast execution． Printer Support Radio Shack DMP105，106， $110,120,130,132,200,400,420,430$, 440，500，Epson FX／RX／LXIEX／LQ，Gemini 10X，Star SG10，NX10，NX1000，Panasonic KXP1080，1090，1091，1092，Prowiter，C．Itoh 8510 \＆more．．Call for complete list． Requirements： 64 K CoCo ll or lll，disk drive with RSDOS，mouse or joystick．

## Max Compatible

 Zebra＇s Picture disks 2，3， and 4 include a simple for－ mat conversion utility making them easy to use with Colorware＇s MAX－10， CoCo MAXII and III． In addition to the font，border，and picture collections that come with the CoCo Graph－ ics Designer Plus，the following optional disks are available for $\$ 14.95$ each． Border Disk \＃1 Contains 176 High resolution borders，great variety from simple to ornate． Font Disk A 10 Fonts：Western，Stencil，Banner，Shadow，Variety，Type，Stripes，Digital，Bold3，Object Font Disk B 10 Fonts：Arcade，Circle，Alien，Cube，Baroque，Deco，Block，Gray，Computer，Script Picture Disk \＃2 4 sets of 30 pictures each：Sports，America，Party，Office，Total 120 pictures． Picture Disk \＃3 4 sets of 30 pictures each：Animals，Nature，Religion，Travel，Total 120 pictures． Picture Disk \＃4 120 holiday pictures：Christmas，Thanksgiving，New Year＇s，Easter，Halloween，etc．
#  <br> <br> By John Collicott 

 <br> <br> By John Collicott}

The program Bookworm was written as a result of a math worksheet my first-grade daughter, Jenny, brought home. We originally bought our Color Computer for educational purposes and are always on the lookout for something the kids can use to develop their skills.

The objective of the program is to help develop problem-solving skills in math. The program level is for first- to secondgraders. However, you can adjust the value of V in Line 60 to raise the grade level.

A note of caution: The value of $V$ in Line 60 should always be an even value because division is used in problem solving. An uneven number produces a decimal you probably do not want. I recommend the value never be less than 20 because too low a value produces negative numbers. The title screen is displayed while the back screen is being drawn so there is a pause until the back page is scrolled onto the front page.

[^5]Because the program is in PMODE 4 graphics, the kids have a little more incentive to learn. Graphics always make our kids more eager to play. The concept of books is related to the excellent Book-It and RIF (Reading Is Fundamental) programs in the public school systems. My kids love to read and have racked up large totals. If your kids are also involved in these programs, relate the concept to them to make it more interesting.

As your child plays and tries to solve the problem, there is a computer-drawn child's face with an expression on it. When the computer receives the correct answer, the face smiles and proceeds to the next com-puter-drawn face. When the answer is wrong, the face frowns and the user remains posi-
tioned on that face. The correct total is displayed in each child's box.

It might be a good idea to have an adult stay with the child until each problem is solved. Some of the problems require reference to previous values and your child may need assistance with a particular problem.

I have used the high-speed poke for the CoCo 2 in order to speed up the graphics display process and to guarantee that the computer catches the keyboard input. If you have a CoCo 3, you may want to change lines 20 and 910 to read as follows:

```
20 POKE 64597.0
910 IF Q$="N" OR Q $="n" THEN POKE
65494,0:END
```

There are problems involved with the high-speed poke that relate to a SAVE or READ from the disk or cassette. Because it throws things out of whack, you may want to leave it out entirely or add Line 20 only after you know the program works and is saved in its working condition.
(Questions or comments concerning this article may be addressed to the author at 201 E. Morgan, Inman, KS 67546. Please include an SASE if requesting a reply.)

FINALLY ARCADE STYLE JOYSTICK FOR YOUR COCO
NOW GET THE RESPONSE YOU WANT WHILE PLAYING YOUR FAVORITE COCO GAME. MOVE THE CONTOURED GRIP A FRACTION OF AN INCH ANY DIRECTION AND INSTANTLY YOUR COCO PERFORMS YOUR COMMAND.

FEATURES:

* auto fire lockdown releases continuous stream of bullets
* dual fire buttons use either thumb or trigger finger
* suction cup base for one hand play
* 6 micro-switches for super sensttivity

To get your own Questron Joystick, send $\$ 29.95$ to

GUESTROIV

## Nine-Times

The first magazine devoted exclusively to OS-9!!!
Every other month, you will receive a disk jam-packed with programs and articles all for OS-9.

## In each issue:

$\checkmark 10$ helpful and useful programs to help build your OS-9 library.

$\checkmark$ Instructions, examples, and samples of IBasic09 procedures and subroutines to help with your own programs and your understanding of I3asicos.
$\checkmark$ Program revews, Hints, I Ielp columins, and informative articles to advance your knowledge of OS-9.

- Supplied totally on 5.25" disk
$\checkmark$ Bound manual sent to cach new subseriber for help ingetting Nire-límues up, and running as well as ups on using it with a ram disk or hard disk.
\& All graphic//oystick interface for ease of use!!

And all this for only $\$ 34.95$ a year! Most other packages offer only 4-8 programs for the same amount, while you get 60 programs plus more!

$\$ 7.00$ Postage Cunads To order, please send U.S. chesk or montry order Le:

## File System Repack

Your OS9 disks are suffering from a bad case of fragmentation, and \$29.95 we've got the cure.
Did you know that OSg gete less efficient (and just a little slower) every time you use it? It's trual As you modify or create fjles, OS9 bresks them up into smaller and smaller piece acatered randomly acrose your diske. Smalker pieces mean siowar diak accasa

Our new File System Repack program examines each file on your hard or floppy disk. It reverses the effects of fragmentation by gathering up and combining pieces of tiles. In addition to the immediate benefit of a faster aystem, our program also reduces disk head movement - in the long term, decreasing wear on your system's mechanical parts.

Real BASIC for OS9! R.S.E. V1.3 \$89.95
Burke \& Burke's R.S.B. software gives you a complete, OSe-compatible version of Disk Extended Color BASIC. We've added new soltware for OSg-style graphics, sound, printer, and disk I/O. The BASIC you know and love is now running under Lavel 2 OS9 windows!
R.S.B. loads and saves files using OS9's tile format, so we've also included utilities to transter BASIC programs and data files betwen OSS and BASIC disks. Of course, you can't use R.S.B. to run machine language programs, and some BASIC commands work slightly differently under R.S.B

Requires CoCo 3, 256K RAM, floppy controller with either Tandy Disk BASIC or DISTO CoCo 3 CDOS, and Level 2 OS9.

## CoCo-XT Hard Disk Interfaces

NO HALT • 1 or 2 hard drives - $30 \%$ faster than SASI - Uses PC-type hard disk drives \& contrallers. 5 Meg to 120 Meg per drive. Does not use interrupts . Multi-PAK recommended - Includes EZGen boot file editar for easy installation. CoCo XT-RTC includes reat-time clock
CoCo XT \$69.95 CoCo XT-RTC $\$ 99.95$
XT-ROM AUTO-BOOT ROM ... Automatically boots OS9 from your Burke \& Burke hard disk at power-up. Use XT-RON as a convenience, or for fail-safe CoCo operation in unattended BBS, home security systems, etc.
XT-ROM $\$ 19.95$
$4^{\prime}$ hard disk cable set $\$ 17.50$

## HYPER-1/Q <br> $\$ 29.95$

Modifies Disk BASIC to use hard disks (CoCo XT, DISTO LR), RAM disks, \& any mix of $35-160$ track floppy drives. Fully reset protected, 16K EFROM-able.
HYPER-III
$\$ 12.95$
RAM disk and printer apooler add-on for HYPER-I/O.
Requires 512 K CoCo 3 and HYPER-1/O.

| Kevin Berner's wildcard copy, delete, and file search utitities for HYPER=1/O HYPER-I/O Disk Doctor \$17.95 Kevin's second utility package. Find bad disk sectors, edit GAT/FATs etc. Both utility packages for \$37.95 |

# RASCAN VIDEODIGITIZER 

The Rascan Video Digitizer is a state-of-the-art image processing system designed to take advantage of your Color Computer 3's graphic capabilities.
The Rascan Video Digitizer connects easily to any color or black \& white video camera, video recorder or video disc player and captures images with precision accuracy.
Why settle for a $256 \times 256$ image area when the Color Computer can display so much more? We asked that question ourselves. Our only answer was to provide an image area of $640 \times 200$ and $320 \times 200$ : Say good-bye to those useless lo-resolution images created by other digitizers on the market.
Life is not simply black \& white, that's why we added living color to our Digitizer. Now, through the use of advanced programming techniques, 512 K Color Computer 3 owners can capture images from their video camera and display them in 4096 Super Hi-Resolution graphics!

Capture images effortlessly. Simply select the image capture option and furn your Rascan unit on. Within seconds your image will be captured and displayed on your screen. Images can be fine tuned by use of the contrast and brightness knobs found on the Rascan unit.
Rascan also features a professional pop-up menu system which will allow for easy palette manipulation and color painting of captured images.
The Rascan Video Digitizer comes complete with Rascan driver software, an easy to read manual, sample graphlc images disk and print driver disk (supporting most printers). Although no further graphic editors are necessary to produce quality images, Rascan images can be easily loaded into ColorMax and CoCo Max graphic editors.
Whether your interests are in desk-top publishing, report generation or simply for fun, the Rascan Video Digitizer will provide you with images of near photographic quality!

## NO RISK GUARANTEE

If you are not completely satisfied with the performance of your Rascan Video Digitizer, you may return it, undamaged within fifteen days for the full refund of the purchase price plus shipping costs.

A new extension to a familiar language

## Introducing

# BASIC+ 

## By Geoff Friesen

The Color Computer 3 contains a powerful but limited BASIC interpreter. Variable names are still restricted to two characters of significance and no structured looping mechanism exists (besides FOR/NEXT). You can smash the piggy bank and purchase OS-9 as well as C or Pascal09 (BASIC09 comes with OS-9 Level II), but you need to learn OS -9 before the language of your choice can be used to develop programs. It's not that I'm against OS-9, but I believe BASIC can be made more powerful - that's why I'm introducing $B A S I C+$.

BASIC + is an extension of BASIC new commands have been created to enhance what already exists. These commands are summarized in Table 1 along with their token codes.

REPEAT and UNTIL form the backbone of structured loops. Such loops can eliminate the excessive use of G0TOs, which often lead to unmanageable code. Basically you repeat zero or more statements until an expression becomes true. REPEAT loops, like FOR loops, can be nested but do not jump into or out of either loop via a GOTO. If an UNTIL is encountered without a matching REPEAT, a UR (Until without Repeat) Error occurs and ERNO (at RUNTIME) contains 40.

[^6]

The SWAP command causes the values of two variables to be exchanged. Both variables must be of the same type (string or numeric); otherwise a TM Error occurs. SWAP is useful in sorting programs.

The $0 L D$ command allows you to recover a program accidentally erased by the NEW command. The program is recovered as long as you do not create any variables, enter one or more program lines, or make any Syntax errors.

WAIT is used to insert a pause in your program. Press any key to continue. BEEP is a leftover and is essentially the same as SOUND 180.6.

Listing 1 contains a BASIC program that creates BASIC + when run Two items in this listing are worth mentioning: First, Line 135 contains a poke that corrects a
flaw in the interpreter. This flaw pertains to the octal numbering system. The octal system allows only digits 0 through 7 , but 8 is permitted by the interpreter. The poke gets rid of the 8. Second is the prompt change from OK to Ready. If you prefer OK, omit lines 650 and 655 when entering this program.

Listing 2 illustrates BASIC + commands. The program in this listing accomplishes a simple bubble sort. Every BASIC + command except OLD is shown.

BASIC + should be active before running a program written with its commands. Such programs, when listed, may cause the computer to hang. If this happens, press the Reset button on the back of the computer. Note that you will have to reload BASIC + whenever you press Reset.

BASIC + can be used in either cassette or disk environments, but a disk environment is more fun. It works only on a Color Computer 3, but in the future this may change. I plan to add new functions and am working on an ambitious project to create a facility to let variable names have more than two characters of significance. All commands except BEEP (as well as their current token values), are preserved.

So there you have it. BASIC is just beginning to grow. Keep reading the rainbow for further developments.

Questions or conments concerning this article may addressed to the author at General Delivery, Dauphin, MB, Canada R7N 2T3. Please include an SASE when requesting a reply.)

# XTEAM \& OS-9 

## XTERM

- Menu oriented

OS-9 Communications program

- Definable macro keys
- Upload/download Ascil - Works with standard serial port, RS232 or XMODEM protocol Pak, or PBJ 2SP Pack, Includes all drivers - Execute OS-9 commands • Works with standard screen, Xsereen from within XTERM

WORDPAK or DISTO 80 colu $\$ 49.95$ with source $\$ 89.95$

## ECONOMIST

Perform economic analysis to compare different cost and income alternatives! Compute present and future Life Cycle Worths for various combinations of single, series and gradient dollar amounts. Quickly edit and recompute for sensitivity analysis! Display line graphs. Printout data and results. Pull-down menus, windows and prompts. Requires os-9 level II and Basic09.
\$39.95 WITH SOURCE \$79.95

## HARDWARE

512k memory upgrade
$\$ 119.95$
Ram Software

| Ram Disk | All three for only |
| :--- | :---: |
| Print Spooler | $\$ 19.95$ |
| Quick Backup |  |

Quick Backup

## XWORD <br> OS-9 word processing system

- Works with standard text screen, XSCREEN, WORDPAK, or DISTO
- True character oriented full screen ediling
- Full block commands
- Find and Replace commands
- Proportional spacing supported
- Full printer control, character size, emphasized, itallics, overstrike, underline, super/sub-scripts
- 10 header/footers
- Margins and headers can be set different for even and odd pages
$\$ 69.95$ with source $\$ 124.95$
XMERGE Mall merge capablllties for Xword
$\$ 24.95$ with source $\$ 49.95$
XSPEL_ OS-9 spelling checker, with 40000 word dictionaries
$\$ 39.95$
XTRIO XWORD/XMERGE/XSPELL
$\$ 114.95$ with source $\$ 199.95$
XED os-9 full screen editor
$\$ 39.95$ with source $\$ 79.95$
XD|S os-9 disassembler
$\$ 34.95$ with source $\$ 54.95$
XDIR \& XCAL hierarchial directory, os-9 calculator
$\$ 24.95$ with source $\$ 49.95$

## THE DIRECTOR

Produces hires picture sound and color animation shows. Completely menu driven with full editing. Great for presentations and vcr's. Requires COCO III only.
\$39.95

SMALL BUSINESS ACCOUTING
This sales-based accounting package is deslgned for the non-accountant oriented businessman. It also contains the flexibility for the accounting oriented user to set up a double entry journal with an almost unlimited chart of accounts. Includes Sales Entry, transaction driven Accounts Receivable and Accounts Payable, Journal Entry, Payroll Disbursement, and Record Maintenance programs. System outputs include Balance Sheet, Income Statement, Customer and Vender status Reports, Accounts Receivable and Payable Aging Reports, Check Register, Sales Reports, Account Status Lists, and a Journal Posting List.
$\$ 79.95$
INVENTORY CONTROL/SALES ANALYSIS
Thls module is designed to handle inventory control, with user defined product codes, and produce a detailed analysis of the business' sales and the sales force. One may enter/update inventory data, enter saies, run five sales analysis reports, run five inventory reports, set up product codes, enter/update salesman records, and update the SBAP inventory.

## PAYROLL

Designed for maintaining personnel and payroll data for up to 200 hourly and salarled employees with 8 deductions each. Calculates payroll and tax amounts, prints checks and maintains year-to-date totals checks and maintains year-to-date totals which can be automatically transferred to od's totals for straight time, overtime and bonus pay and determines taxes to be with held. Aditional outputs include mailing list, listing of employees, year-to-date federal and/or state tax listing, and a listing of current misc. deductions. Suited for use in all states except Oklahoma and Delaware
$\$ 59.95$

## ACCOUNTS RECEIVABLE

Includes detailed audit trails and history reports for each customer, perpares invoices and monthly statements, mailing labels, aging lists, and an alphabetized cusomer listing. The user can define net terms for commercial accounts or finance charges for revolving accounts. This package functions as a standalone $A / R$ system or integrates with the Small Business Accting package.
$\$ 59.95$

## ACCOUNTS PAYABLE

Designed for the maintenance of vendor and $A / P$ invoice files. The system prints checks, voids checks, cancels checks, deletes cancelled checks, and deletes paid $A / P$ invoices. The user can run a Vendor List, Vendor Status report, Vendor Aged report, and an A/P Check Register. This package can be used either as a standalone A/P system or can be integrated with the Small Business Accounting Package.
$\$ 59.95$

## METRIC INDUSTRIES, INC.

## Model 101

## Serial to Parallel Printer Interface

* Works with any COCO
$\star$ Compatible with "Centronics" Parallel Input Printers
* Just tum the knob to select any one of 6 baud rates 300-9600
$\star$ Comes complete with cables to connect to your printer and computer
$\star$ Can be powered by most printers

## Model 104 Deluxe Interface with "Modem Switch"

$\star$ Same Features as 101 Plus
$\star$ Built in Serial Port for your Modem or other serial device

* Switch between Serial Output and Parallel Output
$\star$ Comes with cables to connect to your computer and printer
$\star$ Can be powered by most printers

## Model 105 Serial Switch

$\star$ Connects to your COCO to give you 2 switch selectable Serial Ports
$\star$ Comes with a 3 foot cable to connect to your computer

- Now you can connect your Printer (or printer interface) and your Modem (or other serial device) to your COCO and flip the switch to use either device
* Does not require power

## Cassette Label Printing Program

$\star$ New Version 2.1 prints 7 lines of information on Cassette labels

- Comes on Tape with instructions to transfer to disk
$\star$ Menu driven, very easy to use
* Save and Load Labels from Tape and Disk
$\star$ Uses the features of your printer to print standard, expanded, and condensed characters
* Automatically Centers Each Line of Text
$\star$ Allows editing of label before printing
* Program comes with 24 labels to get you started
* 16 KECB required

Some of the Printers
That Can -
Supply power for the 101 and 104 are Radio Shack, Star, Okidata, Brother, Juki, and Smith Corona.

## Some of the Printers

That Cannot -
Supply power for the interfaces are Epson, Seikosha,
Panasonic, Silver Reed and NEC. If your printer cannot supply power to the inierface you can order your interface with the "P" option or you can supply your own AC adapter. We recommend the Radio Shack 273-1431 AC adapter with a 274-328 connector adapter.

Write or call for more
information or for technical assistance.

## Ordering Info

* Free Shipping in the U.S.A. (except AK and HI) on all orders over $\$ 50$
$\star$ On orders under $\$ 50$ please add $\$ 2.50$ for shipping and handling
$\star$ On orders outside the U.S.A. please write or call for shipping charges

## Delphi Bureau

The CoCo and OS-9 SIGs now have an area for classified ads, where users can buy and sell items without the bother of leaving Forum messages. Here are the rules regarding the classified ads:

- Ads must be from individuals only. No business ads are permitted.
- Ads must be for hardware items only. Ads for software are not permitted.
- The ads must be for CoCos and related products.
- The usual guidelines regarding taste and courtesy must be observed. All ads are reviewed before being made available to the public.

Once an ad is posted, it remains visible for 60 days or until the item sells, whichever comes first. Users are asked to notify a member of the SIG staff when a sale occurs so the ad can be removed. This also saves the user from continuing Delphi Mail concerning the item.

To get to the classified section, just type CLASS at the CoCo SIG or OS 9 prompt.

Presently, classified ads can be placed into any of three groups: "For Sale," "Items Wanted" and "CoCo User Groups." Other categories may be added if there is sufficient interest.

There is also a Search feature for locating items quickly. The SEARCH command scans across all available categories in search of the user's chosen keyword, so it's a good idea to provide as many keywords as possible when you post your ad.

The classified section is designed to be easy to use. As with most sections on Delphi, simply striking the ENTER key provides the user with the most common, logical response. For example, to read the first article in a section, simply press ENTER. You can keep pressing ENTER to read the articles in order until you have read them all. You can type NO at any "More?" prompt within an article to stop reading and move on to the next article. Other commands available include:

- SCAN - Lets you list the table of

Don Hutchison is an electrical engineer and lives in Atlanta, Georgia. He works as a senior project engineer involved in the design of industrial control systems. On Delphi, Don is the Database Manager of the RAINBOW CoCo SIG. His Delphi username is DONHUTCHISON.

Classified ads, regional services, etc.

## New Horizons

By Don Hutchison Rainbow Contributing Editor

contents for this news category. Optionally includes an article number such as SCAN 50 to begin listing the contents from Item 50. SCAN, without an item number, lists the next 20 items. To continue from there, enter either SCAN, MORE or just press ENTER at the next prompt.

- READ - Lets you read one or more articles. Enter the article number(s) or ranges separated by commas as part of the command READ 2,5-7. If you want the text in the articles to be displayed continuously, without stopping when your screen is full, use
the NONSTOP command:READ 1-5 NONSTOP. If you do not supply an article number, the next article is displayed. Note: You don't need to type the word READ. You may enter the article numbers alone to read the articles you want.
- NEXT - Lets you read the story immediately following the one most recently read. (Pressing the ENTER key on a new line does the same thing.)
- BACK - Lets you read the story immediately preceding the one most recently read.
- EXIT - Lets you leave the category. (CTRL-Z works, too.)

## Ymodem Downloads

Several users have asked about the block counts Delphi displays just prior to a Ymodem download. The confusion arose because the block counts don't appear to be correct and users think they are being sent extra data blocks simply because they are using Ymodem protocol. Not so!

The normal block size for Ymodem transfers is 1024 bytes, although the Ymodem protocol also allows for 128 -byte blocks. Delphi will send data blocks to you in the larger size if there is enough data left in the file to form blocks of this size. (This results in a faster transfer because there is

## Database Report

## By Gregory A. Law CoCo SIG Database Manager

OS-9 Sig
In the General Information section Mitch Thompson (MADWAND) gave us a humorous parody of the Star Wars movies using technical and programming jargon from various mainframes.

In the Applications section Robert Thomas (BOBTHOMAS) brought us a nice game of Sokoban that plays just like the ROM Pak version, except it also loads and saves the game in progress. Paul Quinn (PQUIN) uploaded a program that simulates selective evolution, displaying a representation of the bottom of a primordial pool with white bugs and green bacterial food. Tim Koonce (TIMKOONCE) gave us a driver program for the Imagewise video digitizer written by Jim Omurá.

In the Utilities section John Beveridge (JOHNTORONTO) uploaded a disk zapper for OS-9 Level II. Pete Lyall (OS9UGVP) provided us with an excellent shareware hard-disk back up and restore program, including full documentation and tutorials. Tim

Koonce gave us a public domain clone of the OS-9 dump utility, including Assembly Source, a printer utility that allows you to change various printer features, a fairly complete command-line interface to the windowing commands, and a program to reboot the system and return to. Disk BASIC without having to reach for the Reset button. Brian Wright (POLTERGEIST) uploaded OS-9 versions of the UNIX unencode and decode utilities.

In the Patches section Mike Sweet (DODGECOLT) gave us two MODPATCH files that alter GrfDrv to display up to 25 lines of text and 200 lines of graphics.

In the Telecom section Newton White (PERFUMER) uploaded version 2.0 .7 of OSTerm written by Vaughn Cato with support for Ymodem batch file transfers. Tom Wyrick (WYRICK) submitted a BBS file lister for use with RiBBS, which allows the users to enter comments, vote on their favorites, and edit, delete and add entries. Jason Lambert (BOODOOZER) gave us a
less "handshaking" than with Xmodem.) However, near the end of the file there may not be enough data remaining to form a 1024-byte block, so Delphi will use a 128 byte block size to reduce the total number of bytes sent.

For example, if you use Ymodem to download a file that is 1250 bytes in length, you'll be sent one 1024 -byte block and two 128-byte blocks, making a total of 1280 bytes transferred to your computer. If Delphi sent only 1024-byte blocks to you, you would receive 2048 total bytes of which 798 would be "extra." The superfluous characters would be "pad" characters, usually $\$ 1 \mathrm{~A}$ bytes. By sending you the shorter 128 -byte blocks, Delphi transfers only 30 bytes more than the file actually contains.

This method is in conformance with the established standard for Ymodem. Users may become confused thinking that it is a fault with Delphi, because all systems don't handle the last block per the Ymodem specifications. Some BBSs send only $1024-$ byte blocks (a practice sometimes called " 1 K Xmodem") and call their transfers Ymodem. Delphi implements true Ymodem, which uses two different block sizes, depending upon the amount of data that must be transferred. By doing so, Delphi conforms to the standard set by the designers of the Ymodem protocol.

This also means that the Ymodem protocol can remain somewhat compatible with
the Xmodem standard. For example, if a user starts an Xmodem download on Delphi and accidentally starts his terminal program doing a Ymodem transfer, he will still be able to complete the download successfully.

## Delphi/KC

Delphi has implemented regional services recently. Delphi/Boston and Delphi/ Kansas City are the first two such areas devoted to the special interests of regional groups of users. Of the two, Delphi/KC features a CoCo users' group online.

Delphi/Kansas City started serving the greater Kansas City area in October of 1988. It was started by a young entrepreneur named John Phelan, along with a group of investors. The idea was to offer limited access to Delphi's services at a flat monthly rate, using digital private lines rather than the networks like Telenet or Tymnet. The monthly rate includes unlimited 24-hour access to Delphi's AP news wire, business and market watch, Grolier's Encyclopedia, Terra Nova and several online games such as Flipit, Scramble and the TQ Trivia Tournament. Delphi/KC features its own CoCo SIG called the Kansas City Color Computer Club SIG. The Kansas City club has about 80 dues-paying members, 22 of them active Delphi members. One of the purposes of the KC CoCoSIG is to offer services of interest to CoCousers in the midwest. It is not simply a carbon copy
of the national CoCo SIG - both SIGs are entirely separate areas with their own independent forums and databases.

Greg Wathen is the SysOp and has patterned the SIG much like the national CoCo and OS-9 SIGs, except on a smaller scale. Greg was a Delphi member for several years and has owned a CoCo for quite a while longer.

Greg invites everyone to stop by the Kansas City CoCo SIG on Delphi/KC. Just type DELPHI/REGIONAL at the main menu on Delphi.

## Rainbow Services

Have you tried the Rainbow Services area of the SIG yet? Just enter RAINBOW at the CoCo SIG or OS9 prompts to get to them. Here are some of the services available:

- Make Rainbow Address Changes
- Order Back Issues of Rainbow
- Send Letters to Rainbow's Editors
- Submit Letters to Marty Goodman and Doctor ASCII
- Order RAINBOWfest Tickets
- Report Subscription Problems
- Order Rainbow Subscriptions Online

Rainbow has tried to make it easy to handle as many RAINBOW-related items online as possible, in order to save you time and trouble. Tickets to the RAINBOWfest this fall are now available for sale.
replacement, TSMon, that detects the baud rate of the caller and then runs a user-specified program.

In the Graphics and Music section Mike Knudsen (RAGTIMER) sent us the Polish national anthem in UltiMuse format. Jim Buck (COCOROGUE) submitted "The Wind Beneath My Wings" in UlitMuse format. Jeff Blower (SEBJMB) uploaded a viewer program for VEF pictures that also includes a slide show and print options. Phil Zeigler (PHILZEIGLER) gave us a utility to view GIF images written by Vaughn Cato. It supports dithering, color addition, magnification and gray scales of eleven shades.

In the Programmers Den Brian Wright uploaded a 6809 disassembler originally for UNIX systems, a port of the ANSIC vsprintf. and y fpr intf functions written by Robert A. Larson, and a message from Greg Law explaining BASICO9's "Subscript Out of Range Error" and the use of the BASE command.

Tim Koonce gave us a text file describing one way to deal with large virtual data spaces in OS-9. Zack Sessions (ZACKSESSIONS) gave us a documentation file covering installing the Developers System and C Compiler to a single disk drive.

In the Tutorials and Education section

Mike Stite (GRIDBUG) gave us some additional chapters to Hitchhiker's Guide to $C$, a beginners tutorial to programming with the $C$ language.

## CoCosig

In the CoCo 3 Graphics section Dave Willcoxen (DAVEMAN) posted a program to show fractals by a given angle creating some very nice snowflakes. Robert Louden (KURSE) gave us a program to effectively increase the vertical resolution of the CoCo 3 so Macintosh graphics images can be viewed at half their size for use with View Master.

Erik Swenson (ERIKS) uploaded several MAX sound samples of Rodney Dangerfield. Tim Sherfy (RUSHFAN) posted some 5level digitized images of the rock group Rush. Richard Trasborg (TRAS) submitted some animated images of Terri Lynn Doss and a woman winking. Dan Shargel (TRIUMPH) posted a graphics image of the logo from "Love and Rockets."

In the Utilities \& Applications section John Beveridge gave us a utility that extracts files from several archive formats, including all CoCo archive file types and some MSDOS archive file types. Bryan Stephens
(BRSTEPHENS) posted an update or DIR2, a resident disk utility that can send a directory to either an 80 -column screen or the printer. Robert Pierce (RPIERCE) uploaded a fast variable mapper utility for use with BASIC programs. James Wilcox (2USER) posted an interesting little utility that simply clears the screen, but in a most unusual manner.

In the Hardware Hacking section Jim Pogue (JMPOGUE) uploaded a téxt file describing how to make a low-cost internal memory expansion for the MC-10.

In the Games section James Wilcox posted an arcade-type game made specifically to run on a BBS called Scrambler,

In the Music and Sound section Gary McCarty (BANDMAN) uploaded a musical rendition of "Johnny B. Goode" by Chuck Berry and "I Wanna Hold Your Hand" by the Beatles. Mike Miller (BEATER) posted "Sittin" on the Dock of the Bay" by Otis Redding and a text file detailing how to use Lyra with the PSS-480, along with two sample Lyrafiles. Donald Jereczek (DONJERE) gave us "True Colors" by Cyndi Lauper for Orchestra-90.

ค

# The Invincible Bybiligitif: 

By Marc Campbell

!have always been fascinated and impressed with the technique behind "airtight software." The term applies to any program that just can't be crashed, regardless how hard a mischievous user tries. Airtight programming gives its software the user-friendly professional touch and, if built on the foundation of a good idea, makes for a very marketable piece of software.

One of the most popular misconceptions held in the CoCo Community is that airtight code is a reserved commodity, barred to all programmers except those with errorand BREAK-trapping routines at their dis-

Marc Campbell, a self-taught programmer, is a student at Ephrata Senior High School. His computing has grown into more than a hobby, as he has seen several of his programs in print and is marketing others through his own software house.
posal (namely CoCo 3 and machine language users). Regardless of any myths you may have heard, diehard CoCo 1 and 2 Color BASIC fans can perform similar stunts. While these techniques dabble with machine language, require some technical knowledge of the Color Computer, and rely heavily upon the programmer's ability to predict the user, they occupy only a small portion of BASIC memory because CoCo's built-in ROM routines do most of the work.

The utility, The Duplicator, is a BASIC program that runs on any disk-based Color Computer with at least 32 K . This utility makes a backup copy of any formatted disk and, at no extra cost, is a full-fledged tutorial on making BASIC programs virtually 100 -percent crashproof. (I won't tell if you won't.)

## How To Use The Program

When The Duplicator is loaded and run, you are asked to input the source drive and the destination drive. Put the disk to be
duplicated in the source drive and the disk that is to be the backup copy in the destination drive. If you specify the same drive as both source and destination, you are prompted to switch disks after your CoCo's memory is filled with disk data. Press any key to continue.

The computer reads a sector of the disk and stores its contents in memory. This process continues until 90 sectors ( 5 tracks) have been read and stored. Your CoCo writes each of the stored sectors to the destination disk and then reads the next five tracks of the source disk into memory. After seven such passes, the destination disk is an exact replica of the source disk. You can either back up another disk or quit at this point.

If any errors are encountered, the program reports them and temporarily stops. You can either continue, thereby ignoring the error completely, or rerun the program. If you continue the backup process, the duplicate has the same error.

The break key does not stop the program unless it is pressed while the computer is waiting for keyboard input. In this case, a subroutine is called that lets you either rerun or exit the program.

If you exit or press Reset at any time during operation, The Duplicator cold-starts your CoCo . The program and any disk data in memory is completely erased.

Pretty impressive, huh? Sure, the idea of a disk backup utility is a CoCo cliche in its own right, but break-, Reset- and errortrapping on the Color Computer 1 and 2 are breaths of fresh air for an otherwise dull BASIC program. You'll also notice the program only takes up a little more than 1 K . Let's take a look at how it's done.

## Making Predictions

When writing airtight code, you must assume the user is going to try every method in the book to stop your program in its tracks. We all know the average Color Computer enthusiast is much too sportsmanlike to stoop to such base practices, so let's pretend we're thoroughly rotten Apple or Atari addicts for the time being.

Your task as the programmer is to determine where the user is going to strike and to provide your Basic creation with a counterattack. I reasoned that The Duplicator can be crashed when the source and destination drives are defined, when the break key is pressed, when the Reset button is pushed, and when the computer encounters an error. Therefore, I added the following traps and precautions to my program:

Disable Reset Button (Line 1): By poking 0 into Memory Location 113, the Reset
button causes a true cold start instead of a glorified break.

Disable BREAK Key (Line 1): The remaining pokes in Line 1 implement a machine language routine that bypasses a break under nearly all conditions. This routine causes the BREAK key to generate ASCII Value 3 instead of generating the value band also causing a break. It does not work, however, when a disk directory is being displayed or when the programmer uses EXEC 44539 instead of INKEY\$ to wait for a keypress. Nevertheless, I chose it anyway because I can work around the shortcomings.

> Sure, the idea of a disk backup utility is a
> CoCo cliche in its own right, but BREAK-, Reset- and error-trapping on the Color Computer 1 and 2 are breaths of fresh air for an otherwise dull BASIC program.

Trap for Illegal Drive (Lines 3 and 4): A simple IF/THEN check prevents the user from specifying an illegal drive, which eliminates potential DN Errors.

DSKCON vs. DSKI\$ and DSKO\$ (lines 7 through 11 and Line 14): The built-in machine language subroutine DSKCON performs the same function as the Disk BASIC commands DSKI $\$$ and DSKO $\$$ at about the same speed. Therefore, did I choose DSKCON to be overly technical? Not really. First of all, DSKCON can write the disk data to any accessible memory locations, while DSKI\$ and DSKO \$ are confined to available string space. Secondly, DSKCON does not stop for disk
errors unless you specifically program it to do so. (Talk about the classic turned tables.) With only one BASIC line that peeks at Memory Location 240, disk errors may be either ignored or corrected without ever leaving the program. DSKCON crushes many bugs with one stone.

Cold Start (lines 13 and 17): Since most of your CoCo's memory contains disk information, any exit triggers a cold start to completely erase memory.

InKEY \$ vs. InPut (Line 16): When you are asked to specify the source and destination drives, the computer is in an INKEY $\$$ loop instead of INPUT. (The statement POKE \&HA56A prints the cursor while in an INKEY\$ loop; \& HC1 to the same location restores INKEY $\$$ to normal.) I chose this method because of several possible problems: INPUT allows the user to enter large numbers, negative numbers, or even text strings of well over 200 digits or characters. While an OV Error, a Redo? message, or the program's own illegal device trap can catch a wild number or string, the display can be mismatched and sloppy-looking. An INKEY\$ loop only looks for one keypress before ending, and any letters or special characters are converted to zero with the VAL function.
break Trap (lines 16 and 17): If BREAK is pressed whenever the user is asked to press any key, the program jumps to a BREAKhandling subroutine that allows you to either restart the program or quit. This BREAK trap works only if the BREAK key is demoted to generate an ASCII code with the break disable routine in Line 1.

## A Poor Substitute

Just so you aren't mislead with false delusions of grandeur, using machine language ROM routines such as DSKCON is not pure, bona fide error-trapping. Clearly for all practical purposes the only way to trap errors in your BASIC programs is to have an integrated ON ERROR GOTO command. However, if you are looking for a way to bypass errors caused by poor data I/O transactions or by a malicious user, ROM routines offer an excellent solution.

DSKCON's entry address is stored in most/ least significant byte format at locations $\$ \mathrm{C} 004$ and $\$ \mathrm{C} 005$. By peeking at $\$ \mathrm{C} 004$, multiplying this number (the most significant byte) by 256 , and adding to the product the contents of $\$ \mathrm{C} 005$ (the least significant byte), DSKCON's execute address is 55135.

DSKCON accesses six other memory locations (234 through 240) for its parameters as well:

- DCOPC; PEEK (234) contains the opera-
tion code. 0 restores the head to Track $0 ; 1$ indicates no operation; 2 reads a sector; and 3 writes a sector.
- DCDRV; PEEK(235) contains the drive number ( 0 through 3).
- DCTRK; PEEK (236) contains the track number (0 through 34).
- DCSEC; PEEK (237) contains the sector number (1 through 18).
- DCBPT; PEEK (238)*256+PEEK (239) contains the memory location of a 256character disk data buffer. DSKCON returns information from the disk to this buffer or writes the information stored in the buffer to disk, depending on DCOPC's value.
- DCSTA; PEEK (240) contains the drive status. A 128 indicates a Drive Not Ready Error; a 64 indicates the disk is writeprotected; a 32 indicates a write fault; a 16 indicates an error in the Seek routine or the specified record was not found; an 8 indicates an error in the Cyclic Redundancy Check (CRC); a 4 indicates lost data; and a 0 indicates no error was found.

Programmers can change these parameters by poking a new value into the parameter's memory address. Here is how the disk backup routine uses DSKCON to perform its task:

Line 7: The Read Sector operation code is selected by poking 2 into Location 234. The source drive number, track number and sector are poked into locations 235 through 237. Finally the current buffer pointer is determined and poked into 238 and 239. Now when we execute DSKCON, it works within the parameters we have just defined.

Line 8: DSKCON is executed and we check the status of the drive by peeking at Location 240. If a zero is returned, no error has occurred. In the event that $\operatorname{PEEK}(240)$ is greater than zero, the program jumps to an error-handling subroutine at Line 14.

Line 10: The Write Sector operation code is selected by poking 3 into Location 234. All of DSKCON's parameters are set as
in Line 7.
Line 11: DSKCON is executed and the check for errors is made once again.

As you can see, it takes only a little prediction and technical know-how to write your own airtight programs in plain vanilla BASIC. Don't let those nasty Brand-X computer users tell you Disk BASIC is for the birds; they're just jealous. If you are interested in using DSKCON and other builtin ROM routines with your own programs, refer to your Color BASIC and disk drive manuals. A warning to the neophyte: Being well-versed in machine language is a definite asset when using your Color Computer's ROM routines.
(Questions or comments concerning this article may be addressed to the author at 266 Riverview Drive, Ephrata, PA 17522. Please enclose an SASE when requesting a reply.)

## V－Term Terminal Emulator

 Communicate with VAX，UNIX，Mainframe，and BBS Systems！ －VT－100，VT－52，Vidtex（includes RLE graphics display），and standard CRT emulations． －Menus can be operated concurrently with other terminal functions．（Disk Basic！）－Full 28 line by 80 column screen，with 3 bottom lines protected for menus．
－Serial port up to 2400 baud，RS－232 Pak up to 19,200 baud，DCModem Pak at 300 baud．
－XModem，XModem－CRC，Y－Modem，and ASCII file transfers directly to disk or memory．
－RAMDISK like buffer，Capture buffer，Snapshot，Conference mode，and 35／40／80 Tracks．
NEW FEATURES：15－Entry autodialer， 10 Programmable macro keys for each system，compatible
with Hyper I／O and RGBDOS harddrive systems，and baud rates up to 19，200！
Version 03．02．00 upgrade ．．．．．．$\$ 6.95$＋S8H Disk（128k or 512k CoCo III only）．．．．．．．$\$ 39.95$

## Telepak II <br> （CoCo 1／II／III）A TRULY COMPATIBLE RS－232 INTERFACEI

Now，from Orion Technologies，comes the answer to the continuing demand for an RS－232 interface． Telepak II now includes a 3 foot DB25 cable，gold card edge contacts，and low power drain（5v） components．Works on ALL Color Computers with or without a Multi－Pak interface．（MPI required on disk systems）Baud rates up to 19,200 ！（19．2 tested using V－TERM ver 3）．Only ．．．．$\$ 49.95$

# A new approach to PSETting numbers without using coordinates 

# The Graphics Corner Part II: Scrolling the Screen 

By William P. Nee

Last month we used every point on the screen as the $x$ and $y$ in an equation, and PSET the color of each point according to the results of that equation. This month we'll use a different approach, forgetting about $x$ and $y$ coordinates. Instead, we'll use numbers in a onedimensional array (a row of numbers) to generate new values for the array and PSET those numbers. As with most computer programs that use an array to store values, a second temporary array is needed to keep track of new values.

Imagine your video screen as a giant grid composed of 127 points across and an endless number going down. In the program Scroll Demo a color value of 0 to 3 is assigned to any point in the first row and the computer takes care of all the rest - permanently. The color for every point in the next row is based on two values - the total value of the three points just above it (left, middle and right) and a color code that assigns the point to a color based on the total value. The values for each point in the row then generates the values for the next row, and so forth.

A demonstration of the basic program clears everything up. Listing 1 gives you an example of how it works. The color code used is 0231123003 (Line 100). Since any

[^7]point can have a value from 0 to 3 , three points added together can have a value from 0 to 9 . Therefore, the color code must always be 10 digits long ( 0 to 9 ), with each number 0 to 3 . Some color codes only generate a few rows, some fill the screen, and some appear to go on forever. There's no way to tell how long code keeps generating, but after a while you recognize those patterns that die off quickly and those that hang around.

Try changing Line 20 in Listing 1 to FOR $V=0$ T0 191 , so the display goes to the bottom of the screen and then re-runs the program. There are two problems: It takes too long to show the entire display, and it is unclear where the display actually ends. Does it keep going and, if so, for how long? Let's solve the second problem first.

To scroll the entire screen up one row in BASIC takes forever, even with a GET-PUT, so we'll write our own machine language

program that works in any PMODE．Since we just want to move chunks of data，we＇ll do it by bytes and not worry about the individ－ ual bits．Generally，we＇ll take the first two bytes from the second row and move them up one row，move the next two bytes over up one row，etc．Lines 660 through 800 of Listing 2，SCROLL，comprise the program for this．It works quickly，even without the fast poke．

The first graphics byte begins at the address in Location \＄BA／BB，but where does the next row begin？The number of bytes／row is stored in \＄B9 so the second row must begin at the location in \＄BA／BB plus the value in $\$ B 9$ ；store this location in Register X and the \＄BA／BB location in Register U．Now load Register D with the contents of the Register X address（first two bytes，second row），increase the Regis－ ter $X$ address by two（next two bytes over）， store Register D in the Register U address （first two spaces，first row），and increase the Register $U$ address by two（next two spaces，first row）．The address in \＄B7／B8 is the end of graphics so keep scrolling until Register X equals the value in $\$ \mathrm{~B} 7 / \mathrm{B} 8$ ．

Now clear out the bottom row．Since we are at the end of graphics，subtracting the number of bytes／line from the value in Register X puts us back at the start of the last row．Load Register D with zero，store it in the location in Register X，and increase the Register X address by two．Keep re－ peating this until you＇re back to the end of graphics and have finished scrolling the entire screen up one row．

To set each point and incorporate the SCROLL routine，all in the same machine language program，take a look at Listing 2 and follow along．First start with two arrays of 128 bytes each，beginning at Location ARRAY and set all 256 bytes to zero．Next set the row counter to 0，Register U to the array location +1 ，Register X to the color code location，and the column counter to 1．Load Register B with the total value of the first three numbers in the array．Then load Register A with the corresponding color code，and store that value in the temporary second array．Increase the array counter and column counter by one，get the total of the next three array numbers，get the corre－ sponding color code，and store it in the second array．Continue doing this until you＇ve gone across the row 126 times．

Once you＇ve completed a row，go back and PSET all the points－remember this is a one－dimensional array．The row counter is still 0 ；set the column counter back to 1 ， load Register A with the first value in the second array and PSET the color．Increase the column counter，get the next value in the second array and PSET it．Continue doing this until the column counter reaches

| Ø1300 |  | END | START |  |

126．When it does，you＇re finished with that row．

Now increase the row counter by one and repeat the entire process until the row counter reaches 191，the bottom of the screen．When you＇ve PSET the entire screen the scroll portion of the program goes into affect，moving every row up one，leaving just the last row for us to PSET．So this time set the column counter to 1 and the row counter to 191．Again，get the total of the first three numbers in the array，the corre－ sponding color code value，and store it in the second array．Continue this until the column counter reaches 126 ，then go back to the start of the row，get each new color value from the second array，and PSET it．

Graphics for the last line in PMODE 3，1 must begin at $\$ 17 \mathrm{E} 0$－that＇s why PSET1 and PSET2 are different．Finally you need to give the user a chance to stop the program． Line 1230 returns to BASIC if any key is pressed；if no key is pressed，it goes back to scrolling．After you＇ve finished entering Listing 2，check for any errors by typing A／ NO／NS／WE．When it＇s error－free，assemble the program as SCROLL／BIN．

Now we need a BASIC program to run everything－Listing 3．First load the Scroll machine language program if necessary． Since the ML program starts at $\$ 7200$ ，keep all variables one below that location．Line 20 clears ARRAY1 and temporary ARRAY2 to 0 ．The first array starts at $\$ 730 \mathrm{~B}$ and your color code is stored at $\$ 7301$ ．The program reads the color code and pokes it into the proper location．Next pick the points and values you want the program to start with． In Line 40 the 63rd and 64th points in the array（corresponding to the top center of the screen）are given a value of 2 ．These points are not PSET since the ML program just uses those values to compute and PSET Row 0 ．Finally the program sets PMODE 3，1， SCREEN 1,0 ，then executes the rest of the ML program．The program keeps running
＂Assembly Language Programming for the CoCo＂（The Book）and the CoCo 3 （The Addendum）． Professionally produced（not just skimpy technical specifications）．THE CoCo reference books．

## THE BOOK－ 289 pages of teaching

 assembly language for the CoCo 1 \＆ 2. It＇s used as a school text and is an intro to Computer Science．It describes the 6809 E instructions，subroutines， interrupts，stacks，programming philosophy，and many examples．Also covered are PIAs，VDG，SAM，kybd， jystk，sound，serial port，and using cassette and disk．$\$ 18.00+\$ 1.50 \mathrm{~s} / \mathrm{h}$ ．THE ADDENDUM－Picks up where the BOOK left off．Describes ALL the CoCo 3 enhancements \＆how to use them with assembly language． The most complete GIME spec． WOW－Super－Res Graphics， Virtual Memory，New Interrupts， and more information not available elsewhere．Find out what the CoCo 3 can really do．$\$ 12.00+\$ 1.00 \mathrm{~s} / \mathrm{h}$ ．

until you press any key.
After you've typed the program, save it first as SCROLBAS before running it since it automatically loads the machine language program for you. To use the fast poke (POKE 65495,0 for CoCos 1 and 2 or POKE 65497,0 for the CoCo 3), put it just before Line 60. Put the slow poke (POKE 65494,0 for CoCos 1 and 2 or POKE 65496,0 for the CoCo 3 ) just after Line 60.

Experiment with different color codes, and try using different points with different values. After a while you get a feel for which type of display is going to end quickly; the hardest to find are those that go on indefinitely. Some color codes I use, along with array values, are shown in Table 1. The programs can be modified for PMODE 4, but most displays are not as interesting.

Next month we'll incorporate a twodimentional array and a machine language program, using the upper 32 K RAM to store array values - no small task, but it is worth it.
(Questions or comments concerning this tutorial may be directed to the author at Route 2, Box 216C, Mason, WI 54856. Please enclose an SASE when requesting a reply.)

## Window Master V2.2

The hottest new program available for the Color Computer III! Now you can have Windows, Icons, Buttons, Pull-Down Menus, Edit Fields and Mouse Functions built into your Basic or Machine Language Programs easily and quickly, without the need for OS9.
It supports up to 31 Windows on the display, multiple fonts in 54 possible sizes and styles, Enhanced Basic Editing and much more. It adds over 50 Commands and Functions to Basic to fully support the Point \& Click Window System. In fact it has so many features it would take several pages to to describe them all.
It is completely compatible with existing Basic programs and takes absolutely no memory away from Basic. It contains a built in Ram Disk which is completely transparent to Basic ( 512 k version) for enhanced operation.
It requires 1 Disk Drive, R.S. Hi-Res Interface \& Joystick or Mouse. Includes both the 128 k \& 512k versions for only $\$ 69.95$

## Window-Ware

Window Writer - A Point \& Click Word Processor, features both Mouse \& Keyboard type editing, proportional printer support, powerful formatting capability, works with any printer. On screen Italic, bold etc. WYSIWYG Requires Window Master \& 512 k - $\$ 59.95$ Window Writer/W - for non Window Master users includes all features as described above. Requires 512 K \& Disk $\$ 79.95$
Window Basic Compiler - A Basic Compiler similar to CBASIC only it compiles all the Window Basic statements to create super fast M.L. programs \& Desk Accessory programs for Window Master $\$ 99.00$
Window EDT/ASM- A full featured
Editor/Assembler and Debugger for the Window Master System $\$ 49.95$
Eont/Ieon Editors - A utility disk with the Font \& Icon Editors so you can edit or create your own, includes Basic \& M.L. versions $\$ 19.95$ Advanced Programmers Guide - A Guide for Basic \& M.L. Programmers on interfacing to Window Masters complete system including System Calls, Memory Map, Interrupt handling \& Extended Memory access. \$24.95
The Memory Game - A Concentration like game, lots of fun for everyone. $\$ 19.95$

## 512K RAM UPGRADE

Give your $\operatorname{COCO} 3$ all the power it deserves with this easy to install (no soldering/plug in) $100 \%$ Tandy compatible 512 K memory upgrade. Completely assembled and tested. Includes Ramdisk \& Memory Test software described below. $\$ 159.95,512 \mathrm{~K}+$ Window Master $\$ 199$

## 512K RAMDISK \& TESTER

RAMDISK is an ALL Machine Language program that will give you 2 ULTRA High Speed Ram Disks in you CoCo-3. Plus it allows your $\mathrm{CoCo}-3$ to run at double speed all the time even for disk access!!1 It will not disappear when you press reset like some other ramdisk programs. The MEMORY tester is a fast ML program to test the 512 K ram. It performs several bit tests as well as an address test.

Requires 512 K \& Disk $\$ 19.95$

## CBASIC Editor/Compiler

The ULTIMATE Color Computer BASIC COMPILER!!!
If you want to write fast efficient machine language programs and you don't want to spend the next few years trying to leam how to write them in Assembly language or with a cheap compiler, then CBASIC is the answerll!
CBASIC is the only fully integrated Basic Compiler and Program Editing System available for the Color Computer. It will allow you to take full advantage of all the capabilities available in your CoCo without having to spend years trying to learn assembly language programming. CBASIC allows you to create, edit and convert programs from a language you are already tamiliar with Erhanced Disk Color Basic, into fast efficient machine language programs easily and quickly.
CBASIC supports all the enhanced hardware available in the CoCo 2 \& 3 , including Hi -Res Graphics, \& Screen displays, Extended Memory and Interrupts. We even added advanced commands not available in Basic to give you a level of control only available to very advanced Macline Language Programmers. Plus we made it exceptionally easy to use, not like some other compilers. CBASIC is the friendliest and easiest compiler available for the Color Computer.
CBASIC is a powerful tool for the Beginner as well as the Advanced Basic or Machine Language programmer. CBASIC features well over 150 Compiled Basic Commands and Functions that fully support Disk Sequential and Direct access files, Tape, Printer and Screen I/O. It supports ALL the High and Low Resolution Graphics, Sound, Play and String Operations available in Enhanced Color Basic, including Graphics H/GET, H/Put, H/Play and H/DRAW, all with $99.9 \%$ syntax compatibility.
CBASIC makes full use of the powerful and flexible GIMI chip in the Color Computer 3. It will fully utilize the 128 K of RAM available and install 2 Ultra Fast Ramdisks if 512 K is available, for program Creation, Editing and Compilation. You can easily access all 512 K of memory in a Compiled program thru several extended memory commands that can access it in 32 K or 8 K blocks and single or double bytes.

CBASIC has its own completely integrated Basic Program Editor which allows you to load, edit or create programs for the compiler. It is a full featured editor designed specifically for writing Basic programs. It has block move and copy, program renumbering, automatic line number generation, screen editing, printer control and much more.

DataPack III Plus V1.1
super smart terminal program
autopilotand avto-log Command Processors $x$-MODEM DIRECT DISK FILE TRANSFER yT-100 \& VT-52 TERMINAL EMULATION

- No lost data even at 2400 Baud on the Serial port.
- 8 Selectable Display Formats, 32/40/64/80 columns
- ASCII \& BNARY disk File transfer via XMODEM.
- Directly record receive data (Data Logging).
- VT- 100 emulation for VAX, UNXX and other systems.
- VT-100/52 cursor keys ,position, PF \& Alt. Kbd. keys.
- Programmable Word Length, Parity, Stop Bits .
- Complete Full and Hall Duplex operation,
- Send full 128 character set from Keyboard
- Complete Editor, Inser, Delete, Change or Add.
- 9 Variable length, Programmable Macro Key buffers.
- Programmable Printer rates from 110 to 9600 Baud.
- Send Files from the Buffer, Macro Keys or Disk.
- Display or Print the contents of the 50 k Buffer.
- Freeze Display \& Review information On line.
- Built in Command Menu (Help) Display.
- Buill in 2 Drive RAMDISK for 512 K RAM.

Supports: R. S. Modem-Pak \& Deluxe RS-232 Pak.
Coco 1, 2 or 3 Disk - $\$ 59.95$

## "The SOURCE" DISASSEMBLER \& SOURCE CODE GENERATOR

The SOURCE will allow you to easily \& quickly Disassemble Color Computer machine language programs Directly from Disk and generate beautiful, Assembler Source code.

- Automatic label generation.
- Allows specifying FCB, FDB and FCC areas.
- Disassemble programs Directly from disk.
- Automatically locates address.
- Output listings to the Printer, Screen or both.
- Generates Assembler source directly to disk.
- Built in Hex/Ascii dump/display.
- 8 Selectable Display formats 32/40/64/80
- Selectable Foreground \& Background colors.
- Built in Disk Directory an Kill file commands.
- Menu display with single key commands.
- Written in Ulura Fast Machine Language.

Coco 1, 2 or 3 Disk $\$ 49.95$

## EDT/ASM III

DISK EDITOR ASSEMBLER
EDT/ASM III is a Disk based co-resident Text Editor \& Assembler. It is designed to take advantage of the new features available in the CoCo-3 with either 128 K or 512 K of memory. It has 8 display formats from $32 / 40 / 64 / 80$ columns. There is also a free standing ML Debug Monitor.
EDT/ASM III has the most powerful, easy to use Text Editor available in any Editor/Assembler package for the Color Computer.

- Local and Global string search and/or replace.
- Full Screen line editing .
- Easy to use Single key editing commands.
- Load \& Save standard ASCII formatted files.
- Block Move \& Copy, Insert, Delete, Overtype.
- Create and Edit files larger than memory.

The Assembler features include:

- Supports Conditional IF/THEN/ELSE assembly.
- Supports Disk Library file up to 9 levels deep.
- Supports standard Motorola directives.
- Allows multiple values in FCB \& FDB direcuives
- Allows assembly from the Buffer, Disk or both.

Coco 1, 2 or 3 Disk $\$ 59.95$

This month's program presents a way to deal with the topic of ratio, a verbal problem area most appropriate to intermediate students in grades five through eight. Verbal problems often give students an unusually difficult time until they are put into practical, real-life situations. The computer may also help your child/students deal more easily with this topic.

Ratio is a means of comparing numbers. Let's consider an example: There are two brothers - Adam is 12 years old and David is four. We can subtract the younger (smaller) age from the older (larger) age $(12-4=8)$ to conclude that Adam is 8 years older than David. On the other hand, we can divide the smaller number into the larger $(12 / 4=3)$, to conclude that Adam is three times as old as David.

When we compare two quantities using division, we are finding out the ratio. The ratio of Adam's age to David's is $12 / 4$ or $3 /$ 1. Another method of writing the ratio $3 / 1$ is $3: 1$. The ratio, therefore, of Adam's age to David's is 3:1, and the ratio of David's age to Adam's is $1: 3$.

There are two rules for computing ratio examples:

- To find the ratio of two quantities, divide the first quantity by the second.
- To compare two quantities by the ratio method, both quantities must be expressed in the same unit. Since a ratio represents a fraction, both terms of the ratio can be multiplied or divided by the same number, without changing the original value of the ratio. For example: $12 / 15=4 / 5$, or $12: 15=$ 4:5.

An imaginary school project is taking place to select the favorite fruit of the students from among apples, bananas and peaches. Rather than asking every student in the entire school, a small sample is taken. The ratio of each fruit to the small sample can then be computed. The number of students in the entire school who would have selected each fruit can then be computed from the original ratio. For example: In a group of 40 students, eight preferred apples, 20 preferred bananas and 12 preferred

## Relating problems to everyday situations

## Learning About Ratios

## By Steve Blyn Rainbow Contributing Editor

peaches. How many would prefer apples if the school population were 800 ?

Since, in this example, we are only interested in apples, we need only compute the ratio within the sample for apples, $8 / 40$ $=1 / 5$.

The ratio for apples is $1: 5$. This is the ratio figured for our sample group and it is assumed to be true, as well, for the entire school.

We can now figure out the total number of students schoolwide expected to prefer apples by solving for $X$ in the equation $1 /$ $5=X / 800$. Solving for Variable $X$, we can safely guess that about 160 students schoolwide would select apples as their favorite.

Our program proceeds in this manner: Each example chooses new amounts for the sample, the number preferred for each fruit, and the total school population. The program is carefully written to choose variable numbers that work out evenly. Our numbers reduce to eighths, but you may alter these variables to adjust for other levels of difficulty.

Problem-solving techniques should be addressed from the very beginning of the school experience. Unfortunately this is not always the case - just before standardized tests are administered, there is always a flurry of activity in the classroom to teach the children how to solve verbal math problems. Lack of experience causes many children difficulty with this area of mathematics. Relating the problems to
everyday situations is very helpful and can make the transition to the more abstract mathematics of the higher grades a great deal less traumatic.

## GRAPHICS 1-4

All you long-time hackers, get your soldering irons out - the challenge is here. This project's final product is a 256 K RAM Disk. Not only is this a big project, but it costs some cash.

Let me explain. Apart from the 10 or so support chips and protoboard, the project requires eight 41256 chips. Lately the prices have been dropping, but it will still cost you a bit. It requires a Multi-Pak and I will be giving you an RS-DOS driver for a RAM Disk. An OS-9 RAM Disk is also available.

Here is a preliminary checklist to see if you qualify to start this project. If you answer no to any of these questions, think hard before starting.

- Did you fully understand last month's article on DRAMs?
- Do you have a good knowledge of TTL logic circuits?
- Do you have access to a digital probe or an oscilloscope (for trouble-shooting)?
- Do you have a good, grounded soldering iron and can you use it?
- Do you have the patience and money to put this project together?

If you have answered yes to all the above questions, you're ready to begin. I'll start off with some basic theory, ease into block diagrams, and then start placement and construction of the board.

A prerequisite to understanding the DRAM is included in June's article. If you don't have it or haven't read it, obtain a copy and do so. (RAINBOW's publisher has back issues.) The DRAM we are using is the 41256 , which requires an 18 -bit address. Remember, two to the 18 th power is 256K. Look at Figure 1. It is a block diagram of what we are going to build.

You see the eight data lines coming from the CPU. All addressing and data transfers are done via the Data Bus. Three memory locations and latches are needed to store an 18-bit address - two times eight and two more. The CoCo can only transfer eight bits at a time. These are all stored in the latches area in Figure 1. The output of the latches is then fed to a multiplexing circuit. This circuit combines the addresses from the latches and the Refresh counter in such a way that makes it adhere to the

Tony DiStefano is a well-known early specialist in computer hardware projects. He lives in Laval Ouest, Quebec. Tony's username on Delphi is DISTO.

## A challenging project for long-time hackers

## Building

 a RAM Disk
## By Tony DiStefano Rainbow Contributing Editor

DRAM protocol. This is done in the MUX part of the circuit. Also needed in the circuit is the delay mechanism to generate RAS, CAS and the Refresh circuit. This is handled by the Delay part of the circuit.

The Refresh part of this circuit is an eight-bit counter. There are many ways to refresh DRAMS. My way is simple and requires few parts. The 6809 CPU uses a synchronous bus, which means that after every clock there is a CPU access. You know exactly when the CPU will access the bus. I used the opposite of this theory every time the CPU does not access the RAM disk, a Refresh cycle is initiated and completed. Even when the CPU is accessing the RAM disk, full-speed refresh is being done during at least one cycle out of four; even using the tightest machine code, the CPU does not use the bus 100 percent. This is enough to keep the Dynamic RAM refreshed. The minimum of 256 Refresh cycles within 4 ms is respected.

This circuit has many components, but the main theory sections are made up of the above. The actual parts making up this circuit may crisscross. This is normal in design and saves parts. The circuit consists of 18 chips, of which eight are RAM chips and the other 10 , support chips. A complete parts list follows:

## Part \# Description

| U1 to 8 | 41256 (256K DRAM |
| :--- | :--- |
|  | 150ns) |
| U9 and U10 | 74LS374 |
| U11 | 74LS244 |
| U12 | 74LS393 |
| U13 | 74LS 138 |
| U14 | 74LS 174 |
| U15 | 74LS 125 |
| U16 | 74F08 |
| U17 | 74LS32 |
| U18 | 74 LS 14 |
| C1 to C18 | $.1 \mu \mathrm{~F}$ capacitor |
| C19 | $10 \mu \mathrm{~F}, 10$ to 25 volts DC |

Concerning these parts, all LS chips cannot be replaced by another family. Delayed timings depend on the component delays in order to make this circuit work. The F chip may be subsituted for an ALS or an AS, but not for an LS - it is just not fast enough. The 41256 may come in many numbers, which work as long as they are compatible. As for speed I used 150 ns , but 120 ns also works. The capacitors used in this circuit are standard decoupling caps. The other cap is a power supply electrolytic cap. You may have to go to several electronics shops to get all the parts.

Apart from the components here, there are a few other things you need. A board is necessary for mounting all these parts. I used the CRC protoboard for the following reasons: The size is right; spacing of the holes lets you place the components anywhere on the board; and you need it for this project. A metal case is available to house the project, and the price is also right.

Next you need a lot of hook-up wire. The small stuff used in wire-wrapping is my favorite. It is small enough to get many wires placed in a tight area and rugged enough to withstand the bending and twisting of point-to-point wiring.

Figure 2 is a layout of the parts. The shortest wiring routes between the chips are achieved. After trying many times, I found that this layout has the least amount of wiring crisscross. Nevertheless, try to keep the wires as short and neat as possible. It is necessary to put all sockets where the chips go, so you will need to pick up a few of them. U1 to U8, U13 and U14 require 16-pin sockets, U9, U10 and U11 require 20 -pin sockets, the rest require 14 pins. That's 1016 -pin sockets, three 20 -pin sockets and five 14-pin sockets.

Now that we have some sockets, we must first get all of them in their proper places and soldered. When placing the

Figure 2
sockets, make sure that all the right sizes are in place as explained above. Then wire up the five volts, and ground using Number 22 solid wire. Do all the five-volt and ground wiring from the top of the board, running the wire between the sockets. Here is a pin requirement list for this step:

## Part \#

U1 to U8
U9 to U11
U12
U13 \& U14
U15 to U18

## 5-Volts Ground

Pin \#8 Pin\#16
Pin \#20 Pin \#10
Pin \#14 Pin\#7
Pin \#16 Pin \#8
Pin \#14 Pin \#7

After all the power wires are placed, insert a.$\mu 1 \mathrm{~F}$ capacitor beside each socket. Place them so that one leg of each capacitor lines up with the ground connection of each socket, and the other leg is close to the following pin number. For example, if you were placing a capacitor to U14, one leg would be next to Pin 8 and the other leg would be next to, or as close as possible to, Pin 9. Now run a wire from the free pin of each capacitor to the five-volt pin of each socket. These are known as decoupling capacitors. They prevent the supply voltage from dropping when the chip requires current. This requires the capacitor to be as
physicially close to the chip as possible.
When all the wiring is done, check your work. Make sure all the sockets have five volts and ground them. Then if your protoboard has a ground plane on the border, solder a couple of wires to the border from the common ground wires of the sockets. On the edge connector (connected to the CoCo ) are two ground pins, 33 and 34. Solder a wire from one of them to the border of your board and the other to the ground pin of a socket in the middle of the board. This ensures that ground is welldistributed. If your protoboard also has grounding tabs like the one CRC sells, make sure they are grounded as well.

Pin 9 of the CoCo edge connector is the five-volt line. Connect one wire to it and to the five-volt pin of Chip U4. Run another wire from Pin 9 to the five-volt pin at U15. Solder the negative side of the $10-\mu \mathrm{F}$ capacitor to the ground pin of U8. Solder the positive side of this capacitor to the fivevolt pin of the same chip. After you have completed this, all chips are properly powered and grounded. These steps are important since problems can develop from improper power distribution.

Next time, I will give you the complete circuit diagram for the RAM disk and how it works. I will also describe common problems and their solutions.

## Creating AIFs

I read, in your May ' 89 column, about Mr. Walter Zambotti from Perth, Australia, who wanted a way to create icons for existing programs to run under Multi-Vue. Ilearned from a phone call to Tandy about a 10-page document explaining how to create an AIF or Application Information File for existing programs. I asked for and received this document along with a BASIC09 program listing called EDIC, which is an icon editor with instructions for setting up $a$ window and other information needed to get an existing program setup to run under Multi-Vue.

Mr. Zambotti can probably get the same informationfromTandy in FortWorth. The document cost me nothing. The people at Tandy said that Multi-Vue was originally intended for program developers, but due to many requests to run existing programs, they produced this addendum.

> Jack Williamson Bellevue, Ohio

Thanks for the information.

## Installing Multi-Vue

I recently purchased Multi-Vue and wanted to install it on my hard drive. There are no instructions for how to do this and I wondered if you could help me.

David W. Meyer Moundsville, West Virginia

In order to set up Multi-Vue on a hard drive, you need to understand how to use 0S9Gen. If you list the supplied BuildMV file, you'll see that you must first take all device descriptors and drivers, and save them to the MODULES directory of the disk used to 0S9Gen a new system.

Type mdir on your hard disk system to see which ones you currently have (and still need). From the Multi-Vue disk, you need to add term_win.dt and CC3go to this directory. You must then create a text file similar to Bootlist.mv in the supplied MODULES

Richard Esposito is the principal engineer for BDM Corporation. He holds bachelor's, master's and doctorate degrees from Polytechnic Institute of Brooklyn. He has been writing about microcomputers since 1980.

Richard Libra is a simulator test operator for Singer Link Simulation Systems Division.

## By Richard E. Esposito Rainbow Contributing Editor with Richard W. Libra

directory containing a list of all files comprising your new boot (including hard disk drivers). To complete the process, run 0S9Gen /d0 < bootlist.mv.

These instructions are general and are intended to point you in the right direction. The specifics for your hard disk system must be dug out of the accompanying hard disk documentation.

## ROM to Disk

Is there a way to put ROM packs to disk using the Multi-Pak Interface without putting them to tape first?

Joseph Garness
Newell, South Dakota

There is a commercial program, MultiPak Crack, sold by Zebra Systems, that may help you.

## Wrong Prescription

Yoursuggestion to Ralph Ramhoff in the February ' 89 RAINBOW, regarding 80 -column RGB Level II boot, does not work. The modpatch script file you listed for Term is correct if you look at the term_win.dt on the config disk of OS-9 Level II, but when you run Config and request the window $V D G$, Term is replaced and the values are changed. At least, when I do a dump on Term, I get a change to the header extension
(offset $\$ 10=\mathrm{C} 0, \$ 11=24$ ), change to the line count bit (offset $\$ 1 \mathrm{~A}=13$ ), change to the parity set (offset $\$ 26=01$ ), change to column width (offset $\$ 2 \mathrm{C}=32$, not 28 ), change to foreground color (offse $t \$ 33=07$, not 02), change to back-ground color (offset $\$ 34=04$, not 03 ) and a change to the border (header $\$ 35=04$, not 03). Therefore the script file ended up as follows:

```
L Term
C 10 CO AO
C 11 24 1A
C 1A 10 18
C 26 01 80
C 2C 32 50
C 30 01 02
C 33 07 01
C 34 04 00 (or 08 same color)
C 35 0400 (or 08)
```

The CC3I0 script file worked fine.
Rodger B. Alexander Bellingham, Washington

My patch assumed you wanted a graphics system. Thanks for the VDG system patch.

## Floppy Frustration

I use OS-9 Level II exclusively and have a hardware configuration consisting of a 512 K CoCo 3, two 80-track floppy drives, one 80-meg hard drive (LR-Tech controller), a 2400-baud modem, and an RGB monitor. I am having trouble reading my floppies (drives) - errors 244 and 247. What can be done to correct this?

Daniel L. Curry
Redwood City, California

Are you using an older 12 -volt controller via the Multi-Pak Interface? If this is the case, you need a newer one, because it cannot reliably handle 2 Mhz . It is also possible that you are using low-quality floppy disks, which cannot handle the higher 96-TPI density.

## Space Mystery

I have discovered two spaces for 6264 memory chips in the Tandy DMP-132 Printer. The only uses for them, I assume, are for downloading fonts (not likely), or for a 32 K printer buffer (most likely). But I can't figure out how to use them from the service manual. All I know is that the printer
must be manufactured by Seikosha. Do you have any ideas?

Robert M. Rosenbrock<br>Bluffton, Indiana

Your guess is as good as mine. Many manufacturers of printers use one printed circuit board for many printers. This saves on production costs. Even if your guess is correct, the internal code in your printer's ROM might not recognize the extra RAM.

## Downloading Directly

How do I download a file directly to disk using a Direct-Connect Modem and MultiPak Interface? Do I need additional softwarelhardware to accomplish this?

Raymond R. Lofius
Watsontown, Pennsylvania

You need the appropriate terminal program. Many are available, both commercial and shareware.

## Several Drive Questions

I own a CoCo 2, which I was operating with two old 35-track upright, full-height drives. I recently sold my disk drives, contemplating the purchase of two half-height drives, possibly double-sided. I have several questions.

Allmy software and data disks are in $35-$ track format. Will I be able to run my disks (including OS-9) on 40-track disks? If not, how can I change my programs from 35- to 40-track? Does a double-sided drive on a CoCo mean two drives in one (i.e. Drive 0 and Drive 1, together)? Will I have, in fact, four drives ifI buy two double-sided drives, or is it like IBM compatibles? If I do have four drives, what cablelcontroller do I need? Most of my disks are punched, so I can flip them and use both sides. Will this work on these drives?

Erasmo A. Martinez Watertown, New York

Your 35-track software will run fine without modification. A double-sided drive means it has two heads, each one concurrently accessing its own side of the inserted floppy. OS-9 can access the drive similar to the IBM, in that both sides are logically accessed as one drive. Disk Color BASIC has never been upgraded by Tandy/Microsoft. Some vendors of these drives add a
hardware kludge so a double-sided drive looks like two 156 K single-sided ones.

I don't recommend this hardware kludge because it wreaks havoc with the proper operation of OS-9. You do not need a new controller, the standard Tandy one supports double-sided drives. If you have an old Tandy cable with missing teeth, you will need to get a new one or at least replace the connectors with ones with all teeth intact. The disks punched on both sides will work fine with Disk Color BASIC, just as they have with older single-sided drives.

## Fix for EDTASM+ Patch

I'm one of those people frustrated by the EDTASM+ patch. After peeking and poking around, I discovered ROM calls not applicable to my 1.1 ROM. Here is the fix I used to finally get the program to use the disk drive:

1) LOADM"filename"
2) In the command mode (don't EXEC the program) type and enter the following:

> POKE\&HE31, \&HE9
> POKE\&HE7E,\&HC9
> POKE\&HE7F, \&H52
> POKE\&HEB2,\&H8D
> POKE\&HF55, \&HCC
> POKE\&HF56, \&HAC
> POKE\&H16CD,\&HCF
> POKE\&H16CE,\&H7E
> POKE\&H1655,\&HE3

## 3) SAVEM"filename", \&HEOO, \&H37FF, \&HE00

I hope this information will help others with the patch. I don't guarantee this to be a complete fix, but I haven't experienced any problems with it, yet.

William A. Beissert
Carpentersville, Illinois
Thanks for the information.

## OS-9 Recognizing Drives

I recently acquired OS-9 Level II and would like to use my disk drive to its fullest. I own one MPI DSDD drive configured as /do and /d2. Is there any way I can get OS9 to recognize it as / d 0 and/d1? Or is this a hardware problem? If it's hardware, can you help? I don't have a 512 K upgrade yet. My controller is a Disto Super Controller. Dan L. Williamson East Canton, Ohio

You need to disable the hardware kludge that makes your drive look like two. Then OS-9 Level II can access it properly - as one 360 K drive, not two 156 K drives.

## What's a MODPAK?

Apart from mentioning that it exists, and how to X-mode it, there is virtually no documentation for the $/ \mathrm{ml}$ OS-9 device driver. How do I use it? Also, what exactly are the often mentioned MODPAK and ACIAPAK? Both questions refer to OS-9 Level II.

Philip Brown
Fal, California
$\mathrm{An} / \mathrm{m1}$ is the device descriptor and MODPAK is the device driver for Tandy's DirectConnect Modem Pack. ACIAPAK is the device driver for Tandy's deluxe RS-232 Pak and its third-party clones. Both are used by terminal programs.

## Memory Shortage

I am writing a fairly large BASIC program on my 512 K CoCo , and have run out of memory because of the number of variables, etc. Is there a poke or something to allow me to use a larger portion of memory? All I need is another 8 K. Help!

Michael R. LaCoursiere
Lloydminster, Alberta

If you are not using a Low-Res (CoCo 1 and 2) graphics screen, you can do a PCLEARO with POKE25, 14: POKE\&HEOO, 0: NEW. Also, Microcom sells 512 K BASIC and Danosoft sells Big BASIC, which may interest you.

For a quicker response, your questions may also be submitted through rainbow's CoCo SIG on Delphi. From the CoCo SIG> prompt, pick Rainbow Magazine Services, then, at the RAINBOW > prompt, type ASK for "Ask the Experts" to arrive at the EXPERTS $>$ prompt, where you can select the "Doctor ASCII" online form which has complete instructions.

## Novices Niche

## Music

## Songwriter＇s Helper By Bill Bernico

As a songwriter I know how hard it is to come up with a tune． Sometimes they come to me without thinking，but sometimes I need a little inspiration．That＇s where this program comes in handy．

When I run it，I first select the fast speed so I can sit back and try to hear a usable pattern．I usually input about 30 or 40 notes when Line 9 asks how many I want to hear．Then the music plays．

There are also medium and slow speeds available to see the names of the notes on the graphics keyboard as they are played．

## Games

## Star Defender <br> By Ralph M．Boughton

## CoCo 3

The object of Star Defender is to shoot down as many enemy ships as possible before your three bases are destroyed．Use your right joystick to control the cannon in the lower part of the screen just above the three bases．Press the fire button to fire the lasers while watching the gauge at the top of the screen．When the gauge is all black，your lasers are depleted．Scoring hits in increments of five recharges the lasers．Keeping the cannon to the far right or left kills them．No easy shots are allowed．Those of you who do not have an RGB monitor need to change the RGB in lines 4 and 47 to CMP．Good Luck！

## Mind Master <br> By Kevin Speight

Mind Master is a short program modeled on the game Mastermind. It selects a code for you to break consisting of four digits, each of which can be any number from one to six. You must make guesses about the computer's code until you get it right or run out of guesses. After each guess the computer gives your score. The first digit in the score is the number of digits you have guessed correctly and which fall in the right place. The second digit is the number of digits you have guessed that are in the computer's code but are in the wrong place. By looking at your previous scores and guesses, you can figure out the computer's code. To make the game harder, you can change the maximum number of guesses in Line 40 or the length of code numbers the computer can choose in Line 30. (You should be able to break the code in about six guesses if you're good.)

## Home Help

## Shopper Ease <br> By James S. McNeill

Have you often found, when shopping in the grocery's dairy section with a jumbled list, that you overlooked an item when you were in produce, or vice versa? Grocery List should put a bit of organization into your tour(s) and save on shoe repairs. Edit Line 20 for your desired baud rate. The printout affords you two shopping lists per page; select your number of pages at the prompt. When inserting your paper, align the top edge with the printer ribbon. Being thrifty, I print on both sides of the paper to reap four lists. If you do, be sure at each paper insertion that the right and left paper edges are positioned consistently. Warning: If you use the
"two sides" list, be sure to delete everything from this week's list; otherwise you may go back next week, reorder from the wrong side, and find yourself in big trouble when you get home!

## Education

## The Change Counter By Darren Day

Whether saving for a CoCo or your next subscription to THE RAINBOW，every penny counts．This program makes the task of counting change easier．Just type in the listing，save it，and type RUN．If you don＇t want to add to the base amount，press ENTER． Then start counting．For every quarter Press Q；every dime，D； every nickel，N；and every penny，P．After you finish counting， press 6．Then you＇ll be given the option to create a hardcopy or end the program．

One of the most useful statements in the program is PRINT USING．It＇s great for formatting numerical information into a pleasing format．I highly recommend you look it up in Tandy＇s Extended Color BASIC manual．And keep saving！

Submissions to＂Novices Niche＂are welcome from everyone．We like to run a variety of short programs that can be typed in at one screen sitting and are useful，edu－ cational and fun．Keep in mind，although the short pro－ grams are limited in scope，many novice programmers find it enjoyable and quite educational to improve the software written by others．

Program submissions must be on tape or disk．We＇re sorry，but we cannot key in program listings．All pro－ grams whould be supported by some editorial commen－ tary，explaining how the program works．If your sub－ mission is accepted for publication，the payment rate will be established and agreed upon prior to publication．

## GAME POINT <br> $S \quad O \quad F \quad$ T $\boldsymbol{S}$ W A R E

## by Steve Bjork

A hostile space fortress has been spotted at the outer edge of our galaxy. Destroy this menacing battle platform by navigating your spacecraft with the utmost skill to scale walls; dodge force fields; blow up fuel tanks; dog fight defense ships; evade comets and ultimately disable the powerful robot overlord!
Six years after this arcade hit was first released on the Color Computer 1, world renown software author Steve Bjork brings one of his most popular and most requested games to the Color Computer 3 market.
Z'89 puts your flying skills to the ultimate test in this 100\% M/L game featuring 5 Mega-Bytes of Super-Res Graphics and Digital sound! At last, a program that actually out shines the original arcade version!!! Requires a Color Computer 3128 K disk system.
REG. \$29.95 Introductory Special \$24.95!

# nowur DILEMMA 

## by Nickolas Marentes

Angry Angelo has raided Antonio's Donut Factory sending the entire complex amuck! Donuts have come alive and are jumping around in wild frenzies. Machines have gone out of control throwing cooking fat, dough and icing sugar everywhere! You must help poor Antonio climb ladders, Jump platforms and ride elevators to reach the top floor and shut down the factory's power generator which will restore law and order.
Disk. . .\$19.95

Help Rupert infiltrate "Music Box Records" and collect all of his
 stolen notes which are scattered throughout the complex. Ride the crazy elevators and beware of the security robots on patrol.
This strategy arcade game features 17 different, 16 color graphic screens and some of the hottest digitized percussion music and vocals you've ever heard. Disk or Tape. . .\$24.95

Based on a popular arcade game which we can't mention (But sounds like "Art Gannoyed"'). BASH challenges you to clear the screen by "BASHING" your ball through multiple brick layers. Of course you'll have help getting through this 20 level game by activating options like, Slow Ball, Expanded Paddle, Multi-Ball, and more!
\$24.95

Enemy alien creatures have been identified entering our solar system, their destination: our home planet! Their goal: the total annihilation of our race. They must not be allowed to land!
An action arcade game featuring high quality 16 color graphics and sound effects. $\$ 24.95$

A terrible mine disaster has just occured and it will be up to you and your talents to enter the mine, jump the pits, avoid the spikes, fight off the bats and other creepy crawlers and get air to the needy victims. Mine rescue features over 2 megabytes of arcade-style graphics, real time music and multiple mine levels. Hours of fun! $\$ 24.95$

## 

$\$ 24.95$ (Extra Glasses $\$ 2.95$ )

If you have an idea for the "Wishing Well," submit it to Fred clo The rainBow. Remember, keep your ideas specific, and don't forget this is Basic. All programs resulting from your wishes are for your use, but remain the property of the author.

Over the past nine years I have used my CoCo for a multitude of tasks. Most of them are educational in nature, but occasionally I come up with a game or utility to help in our wrestling tournaments.

In recent weeks, however, I have given my trusty CoCo an even greater task taking part in the war against drug abuse. This month's program, Just Say No, is the product of that effort.

Drug abuse is a widely publicized problem with students these days. I have tried several approaches in dealing with the problem. The best approach, however, seems to be reaching kids at a young.age.

This is why Nancy Reagan's "Just Say No" campaign is so successful. We have been able to convince a large segment of youngsters of the danger of drug abuse. But the problem continues.

In recent months, our quiet little city of North Adams, Massachusetts (pop. 12,000), was rocked by a drug-related controversy. It seems that NORML (National Organization for the Reform of Marijuana Laws) decided to pick our little community as the site of a day-long pro-pot rally.

Our city spent the final month fighting this group's efforts to stage what would amount to a mini-Woodstock. Mind you, we were not trying to block the group's right to free speech on the issue but were

Fred Scerbo is a special needs instructor for the North Adams Public Schools in North Adams, Massachusetts. He holds a master's in education and has published some of the first software available for the Color Computer through his software firm, Illustrated Memory Banks.

# The war against drug abuse CoCo Teaches Kids to "Just SayNo" 

By Fred B. Scerbo Rainbow Contributing Editor

trying to keep its efforts restricted to a rally - not a day-long rock concert on our baseball fields.

The event was finally held on May 28, 1989 , but the expected 3000 -odd spectators never showed. Instead, fewer than 150 marijuana advocates arrived at ' what the area newspapers called "a bust." Still, there were a number of us who needed to express our disagreement with the concept of legalizing marijuana smoking and sales. So we held a counter-rally of our own. And what good is a rally or protest without signs and buttons?

## A Handy Little Device

Several years ago I purchased the starter kit of a product called Badge A Minit. It costs around $\$ 30$. With it you get a small hand press, the dies needed to press your buttons, and enough blank button pieces to make 10 professional-looking buttons. Spare button parts can be obtained in bulk quantities for as little as 19 cents each.

Over the years I have used our Badge A Minit to make thousands of buttons. (I later even invested in a more expensive model.) I have made buttons out of photographs, magazine pictures and comic books. However, the most fun is designing your own.

Here's where the CoCo comes in. Using a good screen dump program and a graphics program such as CoCo Max, I have been able to come up with some clever-looking buttons.

I find the best buttons to use with younger students are hollow-letter sayings colored in with markers or colored pencils. Still, I realize many people do not own an expensive graphics program, but many do own printers and screen dump programs.

With all this in mind, I decided to create Just Say No, a BASIC program that draws out four variations of a Just Say No button.

## Using the Program

The program is designed to work with any screen dump program. The button's size is designed to work with a screen dump that does not stretch the graphics of one screen to fill a whole $81 / 2$-by- 11 -inch sheet of paper.

If your screen dump makes an elongated picture, you can still use the pictures to make buttons by cutting a circle to fit the actual size of the button. Some buttons have a black background; others have a blank background that can be colored in. In either case, youngsters or adults can get as fancy as they want.

But wait! What if you don't own a Badge A Minit or similar button maker? You can still mount these paper buttons on cardboard with a safety pin on the back and obtain colorful results.

## Where Do I Get It?

If you are interested in getting your own starter set, a rather nice tool to have if you have a CoCo and graphics program, you can order one toll-free at 1-800-223-4103. You can also write for a catalog c/o Badge A Minit, 348 North 30th Road, Box 800, LaSalle, IL 61301.

## Conclusion

You can have some fun and make an impact on young people with Just Say No. With suggestions and a little prompting from you, I might even be able to come up with some practical program or game dealing with drug abuse (an adventure game, maybe?).

You may also want to drop me a line if you know of some other use for this program with another product other than Badge A Minit. (Maybe someone could use the design to embroider a patch or something along those lines.)

You be the judge. In the meantime keep those ideas and requests coming in. er service bureau says your subscription to THE RAINBOW will expire with this issue. This is your last opportunity to renew with no interruption In services. Return this form immediately to keep THE RAINBOW coming. Or, if you prefer, call our toll-free 800 order line number and renew with your Visa, MasterCard or American Express. Shelter yourself today!

## The Biggest The Best

 The Indispensable

THE RAINBOW is the biggest, best, brightest and most comprehensive publication a happy CoCo ever had! THE RAINBOW features more programs, more information and more in-depth treatment of the Tandy Color Computer than any other source.
A monthly issue contains nearly 200 pages and up to two dozen programs, 14 regular columns and as many as 12 new product reviews. And advertisements: THE RAINBOW is known as the medium for advertisers - which means every month it has a wealth of information unavailable anywhere else about new products! Hundreds of programs are advertised in its pages each month.

Every single issue of THE RAINBOW covers the wide spectrum of interests in the Tandy Color Computer - from beginners' tutorials and arcade games to telecommunications and business and finance programs. Helpful utilities and do-ityourself hardware projects make it easy and fun to expand your CoCo's capabilities. And, monthly reviews by independent reader reviewers take the guesswork out of buying new software and hardware products.

Join the tens of thousands who have found THE RAINBOW to be an absolute necessity for their CoCo. With all this going for it, is it surprising that more than 90 percent of THE RAINBOW subscribers renew their subscriptions? We're willing to bet that, a year from now, you'll be doing the same.

## Rainbow On Tape

## \& Rainbow On Disk!

- great ways to bring THE RAINBOW into your life. Each month, all you do is pop the tape into your cassette player or the disk into your drive. No more lost weekends. As soon as you read an article about a program in THE RAINBOW, it's ready to load and run. No work. No wait.
Just think how your software library will grow. With your first year's subscription, you'll get almost 250 new programs: games, utilities, business programs, home applications. And, with RAINBOW ON DISK, you'll also get all the OS-9 programs.

RAINBOW ON TAPE and RAINBOW ON DISK they're the "meat" of THE RAINBOW at a price that's "small potatoes." And now you even have a choice about how it should be served up to you.

To get your first heaping helping, just fill out and return the attached reply card. No postage necessary.

## Window Writer

We believe this is the best word processor available for $\mathrm{OS} / 9$, and possibly the most advanced Color Computer word processor ever. A fuly modern word processor in every way:
WINDOW WRITER NOW AVAILABLE WITH SPELLING CHECKER!

## More Versatile and Powerful. OS/9 Allows you Freedom and Power. The mouse and pull-down menus give you speed and ease of use.

## Multi-Tasks

Window Writer is the first Color Computer word processor which takes full advantage of $O S / 9$. The result is a word processor which is fully as modern and professional in action as those previously available only for the IBM and Mac. The opcrating system allows true multi-tasking with other programs or itself. Not limited to just printing one file and editing another. You can print one file in one window while you edit files in other windows. At the same time you can be running a small program in another window. You can cut and paste between sections of files in different windows.

## Hi-Res Display

Window Writer uses an 80 -column monitor display screen for clarity. As shown in the above screen drawing, you can quickly see how to access the menus and help screens. You can determine the current position by page, line number, and column. The mouse can use this section to quickly change to a specific page or line in the filc. The text insert and word wrap toggles also are indicated and changeable with the mouse button.

## Ram Disk

A RAM disk is set up in Window Writer to make full use of all or a user specified portion of the memory on the 512 K CoCo 3. On the 128 K CoCo a smaller RAM disk is set up to still allow use of all available memory for file editing. For use of all features, a 512 K machine is required.

The RAM disk is used for storage of the file(s) being edited, for the clipboard for cut and paste, and as a print spooler for the file being printed. Window Writer's clipboard can be saved to disk or pasted into any file being edited because files use the same clipboard memory. The RAM disk also can be used with other OS/9 programs.

## Mail-Merge

With Window Writer you can create form letters and send them out to a list of addresses in an address file. First names or other information can be added to "personalize" these letters.
(or joystick) or can be accessed by control keys.

## Pull Down Menus and Help Screens

A full selection of pull down menus and detailed help screens make learning easy and are only a key stroke (or mouse click) away. All menus and help screens can be user configured for everything including menu colors and contents. You don't like the color of a menu? You think one menu item should be listed differently? Change them!

The menus and help screens can be reached by cursor keys or the mouse

Like most modern word processors, with Window Writer there is always more than one way to access any editing feature. You can access editing by menus using mouse, "keyboard mouse", or through control keys. Full help screens are quickly available for all editing features. A help screen can be left visible while needed and then quickly removed to get back to full screen editing.

One nice feature is the price: only $\$ 59$.

For the DynaSpell Spelling Checker by Dale Puckett:
only \$20. additional!

## NEW! Improved Hard Drive Interface

## Same Proven Performance for Demanding Home or Business Users at an Attractive Price <br> OWL-WARE has Acquired the NEW LRTech Design!

OWL-WARE has now been supplying Color Computer hard drive systems for about 4 years. We have reached our position in the hard drive market by providing our customers with a high quality product that they can be proud to own and use. These systems have been designed around the LRTech Hard Drive Interface which we belicve is superior in quality to anything else on the market. We are now pleased to announce that we have acquired the full rights to a new, improved version of this well-know product!

There are several new features with this improved interface. These include:

- Full SASI/SCSI compatible (this allows many add-ons to the versatile SCSI buss)
- Lower factory-direct prices
- Fast Delivery from factory stock
- Additional SCSI options next montl!
- Optional Real Time Clock with built in battery (3-10 year lifetime)
-With the Clock you have 240 Bytes of battery backed up RAM for password protection or data storage!
- Same super stable LRTech quality

Quality is obvious when compared to any other HD interface. Chip count with clock only 2 less than a 4 in1 board.

Interface Price only: \$85.
Real Time Clock-RAM: \$25.

SASI controller is unused surplus. Add \$100 for SCSI 20 Meg .40 Meg .80 Meg .
( $2 \times 40 \mathrm{Meg}$ )
System Prices: (Includes Hard Drive, case, \& fan, SASI Controller, LR/OWL Interface, Software. Fully assembled and tested)
\$529. \$629. \$939.

Kit Prices: (LR/OWL System as above but not assembled or tested.)

\$319/\$369

## OWL Hard Drive BASIC 3

There have been several ads in this magazine about BASIC for Color Computer hard drive systems. These ads sometimes only tell a part of the story. Our BASIC system price includes assembly, testing, and 3-day burn-in period. We do not require a Multi-pak to operate.
Our hard drive systems are fast, reliable, and reasonable in price. This has been proven by hundreds of users over the past 4 years. We do not have to turn off error checking for speed. We achieve high speed BASIC from a unique indexing method.
The table below will summarize some of the key points about our BASIC hard drive system and the B\&B system. We believe that we have the best BASIC interface for CoCo hard drives available.

| BASIC Hard Drive Systems |  |  |
| :--- | :--- | :--- |
| Feature | OWL | B\&B |

*All feature details are believed to be true at time of writing and are subject to change. We believe that our BASIC hard drives are the fastest due to our indexing method, but both systems are fast. On ours all BASIC commands work including DSKINI, DSKI\$, and DSKO\$.
Prices: With/Without Hard Drive
\$35./\$79.

## Technology

Floppy Drive Systems
The Highest Quality for Years of Service
(We have located a number of unused, surplus single sided drives for those who wish a quality, inexpensive system.)
Drive 0 Systems (Half Height, Double Sided, Direct Drives) $\$ 199$. (Same but Single sided) $\$ 185$
Drive 0 systems complete with drive, controller, legal DOS, cable, case, power supply, and manual
Drive 1 Systems (Half Height, Double Sided, Direct Drives) $\$ 129$. (Same but Single sided) $\$ 115$. New 3.5", 720K Drives for OS-9 with case \& Power Supply \$179.
Drive 1 Systems have drive, case, power supply. (You may require optional cable and/or DOS chip to use) Special for 0/1 Combos (Drives 0,1,2,3) \$295.

## HALF-HEIGHT DRIVE UPGRADES FOR RS horizontal cases

Why only donbee the capactly of yout system when you can thiple in the same case? Kil includes: double sided io fit Wour case: chip to min boll sides ol ine. dive. harimiat and detailed listrit. Hions. Easy! Thker omly 5 minites!
Model \$1 19. Model \$129. 500

501 or 502

All drives are new and fully assembled. We ship only FULLY TESTED and CERTIFIED at these low prices. We use Fuji, YE Data, and other fine brands. No drives are used or surplus unless otherwise stated to you when you order. We appear to be the one of the few advertisers in Rainbow who can truly make this claim. We have 5 years experience in the CoCo disk drive market! We are able to provide support when you have a problem,

Drives 1 Year Warranty

## OWL WARE Software Bundle

Disk Tutorial/Utilities/Games
DISK TUTOR Ver 1.1
Learn how to use your disk drive from this multi-lesson, machine language program. This tutor takes you through your lessons and corrects your mistakes for a quick, painless disk drive introduction. (This professionally written tutor is easily worth the bundle's total price.)

## OWL DOS

An operating system that gives faster disk access and allows the use of double-sided drives. Corrects a floating point number error on early CoCosys tems.

## COPY-IT

Quickly copies selected programs between disks. A wild card option selects groups of programs to copy.

## VERIFY

Verifies reading of each sector. Bad sectors are listed on the screen.

## 2 GAMES

We will select 2 games from our stock. These sold for more than $\$ 20$ each.
If sold separately this is more than $\$ 125$ worth of software!!
Do not mistake this software with cheap, non-professional "Public Domain" software which is being offered by others. All of this software is copyrighted and professional in quality. The tutor is unique with us and has helped thousands of new users learn their disk drive.
only \$27.95 (or even better) only $\$ 6.95$ with any Disk Drive Purchase!!
Our prices include a discount for cash but do not include shipping.
OWL-WARE has a liberal warranty policy. During the warranty period, all defective items will be repaired or replaced at our option at no cost to the buyer except for shipping costs. Ga! our tech number for return. Return of non-defective or unauthorized returns are subject to a service charge.

PO. BOX 116
Mertzlown, PA 19539

## Dear Larry:

Thanks very much for preparing the BASIC program Convert (May 1989. "BASICally Speaking," Page 98). However, there is an SN (Syntax) Error in Line 70. Could you please correct this?

Jesse Foster
Dear Jesse:
The listing in THE RAINBOW generates the error you pointed out. Line 70 in the magazine reads:

> 70 INPUT"ENTER THE PROGRAM NAME; "F\$

It should read:

```
70 INPUT"ENTER THE PROGRAM NAME"
```

; F

Notice the semicolon is between the ending quote and $F \$$. Remember to save the program you want to convert in ASCII format. For example, let's say the program you want to save is called WINNER.BAS. Simply load the WINNER. BAS program into memory and type SAVE"WINNER.BAS", A.

Now load up Convert and run it. When it asks for a filename, type WINNER.BAS. The program executes, and all the PRINT lines in WINNER. BAS are converted to PRINT \#-2 lines.

Line 60 is also listed incorrectly. As listed it looks like this:

60 ' 65 CLEAR 14000:DIM L\$(500)
Lines 60 and 65 should be separate like this:

```
60
65 CLEAR 14000:DIM L\$(500)
```

Now that we have cleared up the bugs, have fun using Convert. Thank you for bringing this error to my attention.

## Dear Larry:

I am using Fred Scerbo's Title Screen Maker program ("Wishing Well," March 1986, Page 157) to generate screens for my own program. His program (once screens are generated) uses a single BASIC line to

Larry Boeldt has programmed on the Color Computer for five years. He has experience with BASIC, Pascal and FORTRAN IV. He runs a software customizing business for the CoCo market.

## BASICally

## S PEAKING

By Larry Boeldt

read data statements that create the individual screen. The BASIC line reads:

$$
\begin{aligned}
& 10 \text { CLSO:FOR } I=1 \text { TO } 480 \text { READ A:PR } \\
& \text { INT CHR } \$(A+128): \text { NEXT I }
\end{aligned}
$$

My generator program uses this line followed by data statements to create a screen. Then to save the graphic screen to disk, $a$ SAVEM"SCREEN",1024.1535,1024 is used - hence my problem. All screens can be seen while they are generated. Is there any way to generate the screen "invisibly" and save it to disk? This way the screen will be a surprise when it is first run.

Jerry Crabtree
Huntington, West Virginia

## Dear Jerry:

The solution to your problem is quite simple. Type the two lines below into the listing you gave me. Of course this does not save the screen, but it is generated out of sight and pops on when the generation is complete. All you need to do is change all the CoCo 3 's palette registers to 0 and then execute the RGB command to reset the colors.

[^9]
## Dear Larry:

I have a CoCo 3, CM-8 monitor and an FD-501 disk drive. I am having a problem with the HPUT command. I took my CoCo 3 to the dealer three times for repair. The people there told me CoCo $3 s$ work that way and they could not fix it. They said some programs in the CoCo 3 manual and in RAINBOW do not work on the CoCo 3.

The following program illustrates the problem. It works the same on all HSCREENs. What is wrong with my computer?

```
10 HBUFF 1,43
20 HSCREEN 4
30 HLINE (10,0)-(20,10),PSET,B
40 HGET(10,0)-(20,10),1
50 HPUT(26, 20)-(35,30),1,PSET ' W
ORKS
60 HPUT(28,40)-(38,50),1,PSET ' G
ARBAGE
70 HPUT(400,120)-(410,130),1,PSET
    garbage
80 HPUT(540,120)-(550,130),1, PSET
    GARBAGE
90 HPUT(570,120)-(580,130),1, PSET
    WORKS
99 END
```

I have a problem with PUT as well.
Carl Fraser
Kingston, Ontario

## Dear Carl:

After reading your letter, I came to the stark realization that our CoCos have a bug. When I bought my $\operatorname{CoCo} 3$ (I had the first one available at my store), I took it home and dug right into the Hi-Res graphics. 'To my disappointment, the same type of problem occurred.

I would like to call out now for a response. I urge anyone with a fix for this problem to speak up and write a letter to THE RAINBOW. Your help will be appreciated by the whole CoCo Community.

[^10]
## RAINBOWFEST REPORTER

Reporter: Jeffrey S. Parker Editor/Photographer: Cray Augsburg

## ©Falsoft, Inc., Prospect, Kentucky. All Rights Reserved

## An Animated CoCo Crowd

Thousands of loyal Color Computer enthusiasts flocked to the 17 th semiannual RAINBOWfest to see the new introductions to the Color Computer lineup and to take advantage of fantastic bargains. CoCo 3 s were selling for $\$ 100$ by Sunday afternoon, a recordbreaking price hundreds of people took advantage of. Other bargains included CM-8 RGB monitors for $\$ 165$; tilt-andswivel monitor platforms for 75 cents; and hardware and software from Radio Shack and other vendors.

Showgoers traveled from all over the country and Canada to the most exciting RAINBOWfest yet. Door prizes included three specially-made CoCo Cats, software packages, hard-
ware prizes and a MIDI synthesizer from Rulaford Research.

Lonnie Falk, founder and publisher of the rainbow, expressed delight at the response from the crowd to the vibrant displays of music and graphics that dominated the packed exhibition halls. He indicated that this RAINBOWfest was one of the most heavily attended of all the shows, attributing its success to the terrific support for the Color Computer and the enthusiasm of people who read the rainbow.

Spirits were high and the air was buzzing as many new vendors made their debut, including DanoSoft and its powerful Big BASIC program, Oblique Triad and Ken-Ton Electronics.

Rick Adams addressed a full room at the Community Breakfast.

## Rick Adams Entertains at CoCo Community Breakfast

Rick Adams, currently known best for his DelphiTerm and GameTerm programs, as well as RickeyTerm and the infamous Doubleback game from Tandy, just to mention a few, was the keynote speaker for the Chicago RAINBOWfest. Adams gave 'festers a rollicking tour through the lighter side of computer programming and revealed how some of his most famous programs came to be. His stories of an overheated CoCo 1 on which he used to program
with a cassette deck and which he had to cool off with a can of freon (it still crashed) had people laughing so hard, they had a tough time eating the delicious eggs in puff pastry being served.

Lonnie Falk, publisher of RAInBOW, gave a strong and lasting message of support to the CoCo Community. Lonnie concluded the Community breakfast stating, "As long as there is a Color Computer out there, there will be RAinBow Magazine out there to support it."

```

```

## Delphi Hosts Saturday Nite Howler

Saturday night after the exhibit hall closed and seminars were over, Delphi members and their guests were invited to meet, relax and match faces with user names. (Although no one actually saw CoCo Yono and the Telecommunicats, we know they were there in full swing.)

With tired people gratefully reclining in chairs, many Delphi members got a chance to meet RAINBOW writers and match up unknown faces with people previously identified by username only. A good time was had by all well into the night

Rainbow Contributing Editor Marty Goodman explains the ins and outs of the CoCo Sig on Delphi.

## Prizes Galore!

## Orion Offers Free Multi-Pak

Ken Gideon, of Schaumburg, Illinois, was the happy winner of the Tandy Multi-Pak Interface given away by Orion Technology. Orion Technology is the manufacturer of Telepak II. This Deluxe RS-232 device, selling at $\$ 49.95$, features gold connectors, a three-foot cable, needs no Multi-Pak Interface, and is compatible with virtually all software for the Color Computer.

Telepak II sold for only $\$ 40$ as a RAIN BOWfest special, along with all the other show specials offered by Orion.
[THE RAINBOW wants to thank the exhibitors for displaying their outstanding and innovative products at RAINBOWfest and for their gener~ osity in donating these fabulous prizes.]

# Rulaford Research Raffles a \$275 Yamaha Keyboard 

Max Meise, a teacher from Warren Central High School in Indianapolis, won the fabulous $\$ 275$ Yamaha PSS480 keyboard with MIDI Interface (Musical Instrument Digital Interface). Max was unavailable for comment or photo, but we are sure that wherever he is, he and his students are making music with CoCo MIDI 3 from Rulaford Research.

Rulaford Research, owned and operated by the renowned Cecil Houk, is the last word on CoCo and MIDI combinations. The company entertained all the showgoers with a seemingly endless stream of professionally arranged musical masterpieces produced with a variety of programs, including Lyra, Musica II and CoCo MIDI 3. There were terrific show specials in addition to all the wit and wisdom of Cecil himself, who conducted the ongoing performance with showmanship and flair.
$\square$

## \$100 Gift Certificate Given by Zebra Systems

Mr. Allen Parker, of Grissom Air Force Base, was the lucky winner of the Zebra Systems $\$ 100$ gift centificate. The certificate was good for any product sold by Zebra Systems, including the CoCo Graphics Designer Plus banner, greeting card and sign-making program.

Allen was not sure which goodies to take back to Grissom AFB: Would it be Zebra's striking new Z-Write, or the ZSPI serial-to-parallel printer interface, or ROM Emulator package? When I last saw him, he was deep in contemplation at the Zebra booth!

## Three Lucky Winners Take CoCo Cat Home

Among the many prizes given away at RAINBOWfest Chicago, the CoCo Cats in particular stood out. There were three of these bright yellow and white furry creatures. Winners were selected at random by a drawing from those who bought souvenir RAINBOWfest photo buttons. A winner was selected for each day of the 'fest.

One of CoCo Cat's first fans, seven-year-old Shannon Fisher (above) of Indianapolis, is shown here, grinning with his newly-won CoCo Cat. Shannon enjoys CoCo Cat in the rainbow every month and likes to play games such as Downland and Dragonfire on the CoCo.

He decided to put CoCo Cat in a "place of honor" in his room at home near the computer.

I never dreamed I'd win so imagine my surprise when I was named the lucky winner in the Saturday drawing! Amy Novack, a 12-year-old from McHenry, Illinois, was the third lucky winner of the CoCo Cat on Sunday. Amy reads THE RAINBOW every month. Her favorite columns are "RAINBOW Scoreboard" and "RAINBOW Hints." She enjoys playing games on the CoCo and using educational software and says CoCo Cat will stay in her room on her bed.

# Alpha Gives Away Entire Software Library 

Mr. Andre J. Lavelle, of Torrence, California, was the winner of the Alpha Software Technologies software library that consists of one of each product made by Alpha. This array of software includes Warp One windowing terminal, Disk Manager Tree, Presto Partner, The Zapper, Multi-Menu and

OS-9 BBS, all designed to run under OS-9 Level II. With this arsenal of high-performance software, Mr. Lavelle will be an ace programmer before too long. Utility tools are also included so if Mr. Lavelle has not been an OS-9 user, he certainly will become one now.

## Seminars Educate, Enlighten, Entertain

RAINBOWfest played host to a series of seminars hailed by listeners as the most innovative, exciting and illuminating ever held at the conventions. At the Hyatt-Regency Woodfield, thousands of people filled the meeting rooms. Most of the seminars on Saturday and Sunday played to standing-room-only audiences, some members of whom spilled out into the hallways.

For those who were unable to attend the convention, here is a summary of the seminars:

- OS-9 for Absolute Beginners with Cray Augsburg: This seminar was an introduction to the OS-9 Operating System for absolute novices. Cray Augsburg, Rainbow Technical Editor, explained some of the fundamentals of the OS-9 operating system.
- BASICally Speaking with Bill Bernico: Bill is a frequent contributor to THE Rainbow and has written more than 200 Color Computer programs. This rigorous seminar was for those having programming problems, which Bill helped fix on the spot.
- Steve and Monique Bjork Discuss Writing Game Software: Steve

Bjork hardly needs an introduction, having written more than 20 games for Tandy and the Color Computer. This seminar gave insight into how such games as Zaxxon, Sands of Egypt and Super Pitfall were created. Monique Bjork, a graphics artist, discussed her contributions to Super Piffall, and both Bjorks handled numerous questions in this standing-room-only seminar.

- Chris Burke of Burke and Burke Discusses Hard Drives: This was a full-to-overflowing seminar with Chris discussing many of the important things you should know when considering the purchase of a hard drive for a CoCo. The seminar was very technical in nature, discussing the differences between disks and controllers and focusing on speed and performance. Chris brought samples to the seminar to explain the differences in controllers and drives and fielded quite a few questions.
- Kevin Darling and Paul Ward Host Overview of OS-9: This seminar addressed all levels of programmers and users in a question-and-answer format that ran for over an hour past its scheduled stopping time. The enthusi-

HD Products Fare Well

Joe Scinta, owner of Ken-Ton Electronics, explains the advantages of a true SCSI hard drive interface.

Ken-Ton Electronics was displaying its true SCSI interface, driving two hard drives at blazing speed at the same time. This show-stopper system was so fast with disk accesses that the drive could run two lists at once and still have time for more. The high-quality controller boards Ken-Ton makes are manufactured to military specifications, meaning they are tough and should last a long time with their heavy-duty components. The hard drive interface can use a Multi-Pak or a Y-cable and is compatible with most DOSs being offered for CoCo hard disks, a notable example of which is the RGB DOS (HD) from RGB Computer Systems. Also on display was the Ken-Ton dual communications board, featuring either one or two complete RS-232 ports.

Jumper-selectable for up to four ports, this high-quality product is an alternative to the RS-232 Pak from Radio Shack. This could be a very important product for multiuser OS-9 systems.

RGB Computer Systems demonstrated its RGB DOS (HD) package for the CoCo to the amazement of many showgoers. This DOS works with or without a hard drive - in fact, it can control two hard drives simultaneously. Because it can handle drives of any size, it gave some real competition to Burke and Burke products. At $\$ 29.95$ this is an extremely affordable DOS. RGB DOS (HD) offers such enhancements as an improved COPY command, a RUNM command for machine language programs and much more.
asm was such that when Kevin and company left the room, the crowd followed them. Among those in attendance were programmers from Microware.

- Art Flexser Introduces Extended ADOS-3: Art is the owner of Spectro Systems and author of the ADOS series of enhanced BASIC language interpreters for the Color Computer and CoCo 3. Extended ADOS-3 is a product that goes hand-in-hand with ADOS-3, just as BASIC goes hand-in-hand with Disk Extended Color Basic.
- CoCo Consultations Live With Marty Goodman: Marty hosted a session of CoCo Consultations live with guest speakers that included Don Hutchinson of Delphi and Rick Adams, author of RickeyTerm and DelphiTerm.
- Dr. Goodman and Surprise Guests Discuss the Color Computer: This lively and informative session went past its scheduled time as people lined the walls for a chance to get their questions answered by Marty and the other CoCo Community celebrities.
- Ed Hathaway on Computer Clubs: President of the Glenside Color Computer Club, the official hosts of

## A Look at Some Attendees

This RAINBOWfest Report brings you something new and interesting. As well as discussing the celebrities and exhibitors, the seminars and door prizes, RANBOW wants you to meet the people who come to a RAINBOWfest - some from unusual walks of life and faraway places.

Jerry Cook of Marion, Indiana, a professional with the Boy Scouts of America, uses his CoCo at work for flyers, letters and brochures. He thought the show was much better than last year's RAINBOWfest but didn't like waiting in line to buy his ticket!
Dina Phillips of Indianapolis, a retired radio and TV copy writer, uses the CoCo for spreadsheets, labels and databases. Dina has actually written a database system.
Bob Santy of Medford, Massachusetts, attended to hear the seminars on OS-9. Bob uses the CoCo at home for software development, then ports (moves) his software from the CoCo to a UNIX computer at work.
James Jones, a software engineer from Microware (makers of OS-9), came to the convention to meet people who use CoCos and OS-9, to buy some software, and to attend the seminars on OS-9.

RAINBOWfest Chicago '89, and president of Second City Software, Ed gave hands-on information on what it takes to make a Color Computer Club fly in your own community.

- Houk and MIDI: Cecil Houk of Rulaford Research talked on Color Computers, music and MIDI. Between demonstrations on a $\mathrm{CoCo} / \mathrm{MIDI}$ rig, Cecil did an entertaining job of explaining how MIDI works with the CoCo 3 and what you can do to become a successful professional with a MIDI.
- Jutta Kapfhammer: The Managing Editor of RAINBOW distributed information about submissions and writing for publication, discussing ideas individually with those interested.
- Bill Nee and Assembly Language: This discussion of assembly language programming revolved around using the Radio Shack Disk EDTASM + editor assembler.
- Dale Puckett's Overview of BA-SIC-09: In a standing-room-only crowd of eager programmers and program-mers-to-be, Puckett, spoke at length on the wonders of this "highly-structured, unstructured programming language."

He covered programming basics and focused on the power of BASIC09 compared with other BASIC language interpreters.

- Gary Robinson Discusses the Tandy Product Evaluation Process: Sporting a CoCo tee-shirt and cowboy boots, the tall, silver-haired representative of Tandy Corporation explained what Tandy looks for when software is submitted. He gave an overview of the testing and evaluation procedures and the differences between Express Order Software and Tandy "line" products.
- Dick White and CoCo Spreadsheets: Co-author of the TIMS database management program, White presented an overview of spreadsheets for the CoCo and how they can be used in homes, small businesses and organizations financial planning.
- Sister Berdelle Weise on Color Computers and the Teacher: Sister Berdelle spoke at length on why she has chosen the Color Computer for her students. She explained the many ways she has been able to integrate the Color Computer into curriculums.

Chris Burke shows off some OS9 magic. Burke and Burke introduced "Quarter Meg," a 256K upgrade for the CoCo 3.

# New Introductions Made at the 'Fest 

The latest RAINBOWfest turned out to be the greatest for new introductions. The CoCo 3 , available for nearly two years now, is gaining tremendous support, which is reflected by the many new products developed for it. Here is a sampling of introductions made at the convention:

- Arizona Small Computer Peripherals hosted a number of items for sale, including its Eagle keyboards and adapters. These allow you to use a PC style keyboard on a CoCo.
- Cer-Comp Ltd, owned and operated by Bill Vergona, introduced its latest version of Window Master, a point-and-click operating environment for Disk basic. Bill managed to program his own windowing system (not to be confused with OS-9) that truly does wonders for the CoCo .
- Game Point Software made one of the most startling introductions at RAINBOWfest with the Rascan Video Digitizer, which takes full advantage of all the CoCo 3 capabilities by actually capturing and displaying super highresolution, 4096 -pixel graphics images in full color (requires 512 K ). Images can be edited with most popular CoCo 3 graphics editing programs. Priced at $\$ 159.95$, the software features joystick or mouse control and pop-up windows. Gamepoint also introduced Bjork's Donut Dilemma and Bash for the CoCo 1,2 and 3.
- Gimmesoft introduced its new $V$ TERM Terminal Emulator Version 3.02 that emulates VT-52 and VT-100 terminals to allow communications with

VAX, UNIX, mainframe computers and BBS.

- Oblique Triad, a new exhibitor, entertained showgoers with its Seventh Link three-dimensional, three-disk graphics adventure. Partners of Oblique Triad, Jeff Noyle and Dave Triggerson, also introduced Caladuril II, a different sort of graphics adventure, and Studio Works, a powerful digital audio recorder/editor system that edits two complete samples at once with two separate clipboards.
- Owl-Ware maintained its state-of-the-art reputation with the introduction of Window Writer, a mouse-driven, pulldown menu, window-oriented word processor for the CoCo 3 that uses OS9 Level II. Owl-Ware also introduced its new SASI/SCSI hard drive interface, which has an optional batterybacked 10-year real-time clock and 240 bytes of battery-protected RAM.
- The Public Domain Software Copying Company surprised showgoers with six new CoCo disks from Australian users groups. These are high-quality programs for entertainment, productivity and utility. They are of special interest to American CoCo users because of some of the idioms and expressions native to Australians, yet foreign to Americans - "G'day, mates!"
- Second City Software introduced its all-new Ultimuse III music player/recorder/editor system for CoCo 3 under OS-9. This is the only product of its type for the Color Computer, using the power of OS-9 and a MIDI keyboard to produce professional results. Also

Jeff Noyle and Dave Triggerson brought Oblique Triad all the way from Canada for its first 'fest.

Contributing Editor Tony DiStefano, also owner of CRC/Disto, tickles the CoCo ivories. His 4-in-1 board, which includes a hard drive interface, received a great deal of interest at the show.
newly introduced was NewsArt A thru Z, for the Newspaper Plus desktop publishing system and other desktop publishing software consisting of 26 clip art disks.

- SpectroSystems introduced the amazing new Extended ADOS-3 by Art Flexser for the Color Computer 3 with $A D O S-3$. This is a powerful replacement for Extended Color Disk BASIC, is EPROMable, and adds powerful commands and features such as a RAM disk in ROM.
- Sundog Systems, owned and operated by Glen R. Dahlgren, featured its new arcade-style smash hit, Warrior King for CoCo 3 , along with other new features such as Quest for the Star Lord and PALADIN, introduced officially at RAINBOWfest.
- Zebra Systems dazzled showgoers with its brand-new Turbo-Port advanced joystick, its Z-Write word processor, the Wild Card ROM Emulator and the Z-SPI serial-to-parallel interface for printers.
-C-Bug, Inc., a new exhibitor at RAINBOWfest Chicago, featured one of the largest selections of printer ribbons in the area, with over a hundred different types of ribbons. Also offered at huge discount were disk wallets for both $31 / 2$ and $51 / 4$-inch disks in a rainbow of fashion colors. Binders, disk storage boxes, paper supplies, surge suppressors and toolkits were all on display.
- StG Computers, of Speedway, Indiana, longtime supplier of quality OS-9 software, was exhibiting its very popular Supercomm 2.0. Dave Phillipson, author of Supercomm 2.0 for OS-9 Level II, was on hand to show off the features
of his high-end communications software and to meet users and answer questions. This load-and-run program was a knockout at the 'fest with its popup windows. Also on display was StG's Login BBS system for OS-9 Level II, a full-featured system for multiusers.
- T \& D Subscription Software displayed a fantastic assortment of software in home management, education, adventures, business helpers, games, utilities, electronics and machine language. Special packages of some of T \& D's best were available for special show bargain rates. Along with the 630 current titles, T \& D also featured 81 issues of its software on tape and disk, totaling well in excess of 810 high-quality programs. Along with its CoCo software selections, T \& D also displayed PCcompatible and Tandy 1000 software at the 'fest.
- Howard Medical Computers of Chicago, long famous in the CoCo Community for its high-quality monitors, printers, disk drives and innovative accessories, had terrific specials on its Magnavox 8CM515 color monitors. Other specials included Howard/Burke hard-drive systems, coupon specials, and a scratch-and-dent table where plucky showgoers collected some real bargains. The full line of Star printers, including the NX-1000 for just $\$ 185$, was displayed as well. Of special interest to Tandy 1000 fans was the internal hard drive for the 1000 EX , the only one of its kind made.

There was a plethora of important new products for the Color Computer, showing just how much fast-growing support there is out there right now for the CoCo .

## It's Time for a Sale SALE!!

Here is what RAINBOW sald about hard drves: "Frank Hogg Laboratories has been selling hard-drive systems longer than any other RAINBOW advertiser"

FLASH! The Eliminatore is now SHIPPING!
We've put our B\&B based hard drive systems on sale too! Check out these prices!!!

|  | REG | SALE! |
| :--- | ---: | ---: |
| 20 Meg Kit Complete | 498.00 | 450.00 |
| 30 Meg Kit Complete | 548.00 | 498.00 |
| 40 Meg Kit Complete | 618.00 | 585.00 |
| Assemble fmt \& test any of the above | 50.00 |  |
| B\&B OPTIONS: |  |  |
| B\&B Real Time Clock (add to above) | 30.00 |  |
| B\&B XT ROM Auto Boot from hard disk | 19.95 |  |
| B\&B Hyper I/O DECB on hard drive | 29.95 |  |
| B\&B Hyper III Ramdisk/spooler | 19.95 |  |

Burke \& Burke based kit includes: Burke \& Burke (B\&B) XT PC interface. Hard drive with controller, 3 foot ST506 cable set. Hard Drive Case with 60 watt power supply and fan with room and power for a second hard drive! Includes OS9 LI and LII software. 1 megabyte transfer in only 45 seconds!! Twice as fast as other systems. Type ahead under OS9. (No halt) Complete instructions. Easy one evening assembly.

## Call for our:

 WEEKLY SPECIALS and OTHER SALE ITEMSWhen it comes to service, customer support, and help, Frank Hogg Labs is tops!

Give us your best: Join the ranks of these courageous CoCoists in showing the Color Computer world your high score at your favorite microdiversion. We want to put your best effort on record in THE RAINBOW's bimonthly "Scoreboard"column. All entries must be received 60 days prior to publication. Entries should be printed-legibly - and must include your fullname, address, game title, company name and, of course, your high score. Each individual is limited to three score entries per month. Send your entries to Scoreboard, c/0 THE RAINBOW.
For greater convenience, your high scores may also be sent to us through the MAIL section of our Delphi CoCo SIG. From the CoCo SIG sprompt, pick MAIL, then type SEND and address to: EDITORS.

#### Abstract

In conjuction with THE RAINBOW's Scoreboard, we offer this bi-monthly column of pointers for game-playing readers' benefit. If you have some interesting hints, tips or responses to questions, or want help yourself, we encourage you to write to the Scoreboard, c/o THE RAINBOW.

In response to questions from:

- Darrel Hoffman: In Dallas Quest, in order to bribe the parrot into helping you, examine it, then type TICRLE ANACONDA' $S$ CHIN to bribe him.

David Hohenstein Nashville, Arkansas

- Matthew Smith: In In Quest for the Starlord, at the lake type NET BLANKET. To get past the machinery type THROW bottle. Be very careful here; death comes fast and swift. Then type north.
- Greg Dorsha: In Sea Quest, to use the air tanks type fILL TANRS. To fill tanks you need the credit card.

In Lansford Mansion, how do I get past the guard?

Tony Durst Brantford, Ontario

- Scott Brady: To kill the spider in Dallas Quest, you need to have the eggs from the vulture.
- Greg Dorsha: To get past the mirror in Black Sanctum, you have to GET ROPE, then WEAR ROPE:

In Shennanigans how do I get across the ravine in the cave? Also, in Trekboer how do I get past the grate in the ravine?

## Charles Heck <br> Mt Vernon, Illinois

- Rommel Bruehl: The ring and \$100 bill are good bribes in The Interbank Incident. The high-level gold card has no money in its account. Read the postcard and look for a person with the same initials. When in doubt, identify objects, read, talk, bribe and write to THE RAINBOW.

Does anybody know what to do with the medicine, the IBC shirt, or the writer of the postcard? I need detailed instructions on how to operate the
museum and portable computers. Also, which guy do I give the dice to? Nobody wants them.

Clinton Morell Sacramento, California

- Derek Wood: The flasks in Dungeons of Daggorath give you superpowers. The Hale flask gives you mental powers and keeps you free of disease. The Thews flask gives you muscular powers. Last but certainly not least, the Abye flask causes your heartbeat to speed up, which causes a heart attack. Also, the Hale flask slows your heartbeat down to a slow pace.

In Dungeons of Daggorath, there is a ring to be found on every level: in the first level the fire ring, the second the ice ring, but in the third I don't know. I've killed every creature in the third level except the wizard's image. Does the image carry a ring, seer scroll or elvish sword? When I kill him, do I hit then run or hit then run repeatedly? How do I get to the fourth level?

Jason Hanna

> Galveston, Texas

- Peter Menning: In Madness and the Minotaur, to get the shield you must have a very low physical condition or havecertain objects. The only time you use JUMP is to jump over the pits. In the room with the pool type $L O O K$ POOL and it tells you certain objects you need to obtain.

In Dungeons of Daggorath, on the second level how do I kill the bat, which sounds like the Galdrog? How do I kill the wizard with only a bronze shield and an iron sword?

Brad Renfro Owensboro, Kentucky

- William C. Millington: In A Mazing World of Malcom Mortar, when you have been through all three mazes in one level and have collected the gold
bricks, you must use the three gold bricks to get through the levels. You eventually build up the magic bricks and trap Malcom Mortar. The gold bricks SAVE through the levels of the game.

Jason Brewer
Buhl, Alabama
Scoreboard:
In Thexder, where is the exit out of Level 5? Whenever I get to Level 5, I work my way through some of it. But after I come to a creature that gives Thexder energy and enmax points, I can't get much further. I can see a passage that may lead to an exit, but I can't get to it. There are no entrances or shootable walls. What do I do?

Steven Lipstraw
Dallas

## Scoreboard:

I just love the series Hall of Kings. I have finished both levels I and II. I have been working on the third one for a while but can't figure out what to do with the rope. I thought I might tie it to the crowbar, but the crowbar keeps slipping out of reach. Also, how do you get out of the room that has no exits the one with the pool.

Kevin Gattis Wilson, North Carolina

To respond toothers readers' inquiries and requests for assistance, reply to "Scoreboard Pointers" clo the Rainbow, P.O. Box 385, Prospect, KY 40059. We will share your reply with all "Scoreboard" readers in an upcoming issdue. For greater convenience, "Scoreboard Pointers" and requests for assistance may also be sent to us through the mall, section of our Delphi CoCo SIG. From the CoCo SIG> prompt, pick MAIL, then type sEND and address to:EDITORS. Be sure to include your complete name and address.

## CoCo

## Gallery

1 st Place

Fishing<br>Joel R. O'Rear

Enjoy a relaxing day of fishing in the great outdoors. Joel, of Tucumcari, New Mexico, created this scene with CoCo Max III.

## SHOWCASE YOUR BEST!

You are invited to nominate original work for inclusion in upcoming showings of "CoCo Gailery." Share your creations with the CoCo Community! Be sure to send a cover letter with your name, address and phone number, detailing how you created your picture (what programs you used, etc.) and how to display it. Also please include a few facts about yourself.

Don't send us anything owned by someone else; this means no game screens, digitized images from TV programs or material that's already been submitted elsewhere. A digitized copy of a picture that appears in a book or magazine is not an original work.

We will forward one first prize of $\$ 25$, one second prize of $\$ 15$ and one third prize of $\$ 10$.

Please send your entry on either tape or disk to the COCo Gallery, THE RAINBOW, P.O. Box 385, Prospect, KY 40059 Remember, this is a contest and your entry will not be returned.
-Tony Olive, Curator

## 2nd Place

## Dubuque John Murvine, Jr.

Here's a CoCo Max III file showing a view of a farm near Dubuque, lowa, with irises in the foreground. John lives in Ebensburg, Pennsylvania.

3rd Place
Imagine having your own private island for a summer getaway. From Beauport, Quebec, Pierre generated this picture with a program he designed.

$R$AINBOWfest is the only computer show dedicated exclusively to your Tandy Color Computer.

Nowhere else will you see as many CoCorelated products or be able to attend free seminars conducted by the top Color Computer experts. It's like receiving the latest issue of THE RAINBOW in your mailbox!

RAINBOWfest is a great opportunity for commercial programmers to show off new and innovative products for the first time. Somerset, New Jersey is the show to get information on capabilities for the CoCo , along with a terrific selection of the latest CoCo software. In exhibit after exhibit, there will be demonstrations, opportunities to experiment with software and hardware, and special RAINBOWfest prices.

Set your own pace between visiting exhibits and attending the valuable, free seminars on all aspects of your CoCo from improving BASIC skills to working with the sophisticated OS-9 operating system.

Many people who write for THE RAINBow -as well as those who are written about are there to meet you and answer questions. You'll also meet lots of other people who share your interest in the Color Computer. It's a person-to-person event and a tremendous learning experience in a fun and relaxed atmosphere.

As an additional treat for CoCo Kids of all ages, we've invited frisky feline CoCo Cat to join us for the show. RAINBOWfest has something for everyone in the family!

If you missed the fun at our last RAINBOWfest in
Chicago, why don't you make plans now to join us in Somerset? For members of the family who don't share your affinity for CoCo , there are many other attractions in the Somerset area.

## The Somerset Hilton - Som-

 erset, New Jersey, offers special rates for RAINBOWfest. The show opens Friday evening with a session from 7 p.m. to 10 p.m. It's a daytime show Saturday - The CoCo Community Breakfast (separate ticket required) is at $8 \mathrm{a} . \mathrm{m}$. , then the exhibit hall opens promptly at $10 \mathrm{a} . \mathrm{m}$. and runs until $6 \mathrm{p} . \mathrm{m}$. On Sunday, the exhibit hall opens at $11 \mathrm{a} . \mathrm{m}$. and closes at 3 p.m.Tickets for RAINBOWfest may be obtained directly from THE RAINBOW. We'll also send you a reservation form so you can get a special room rate.

The POSH way to go. You can have your travel arrangements and hotel reservations handled through RAINBOW affiliate, POSH Travel Assistance, Inc., of Louisville. For the same POSH treatment many of our exhibitors enjoy, call POSH at (502) 893-3311. All POSH services are available at no charge to RAINBOW fest attendees.

Mr. Puckett will talk about the people involved in the ongoing development of OS-9 and milestones in OS-9: Crazy things which happened in its devel-

opment, mistakes, highlights and its future.

## Don't forget ...

If yours is one of the first 500 ticket orders, a coupon for a complimentary issue of The RAINBOW Third Book of Adventures will be enclosed with your tickets - if yours is one of the first five orders received from your state, a coupon for a complimentary RAINBOWfest T-shirt will be enclosed with your tickets. So hurry up and place your order to take advantage of this offer.

# CoCo Starts Early 

By Linda Falge

Kinderfun is a six-part program that helps preschoolers and early elementary students become familiar with colors, letters, numbers and music. Older children and adults will also find it entertaining.

Nice to Meet You greets the child by saying hello and asking his or her name, then flashes the name at random locations on the screen, accompanied by random sounds. It then asks the child's age, and the number scoots across the screen from left to right - again with sound. The computer then responds, "Nice to meet you." It is especially useful to parents who are teaching children how to spell their names and recognize numbers.

Colors at Random is quite simple and can be mastered by very young children who are just becoming familiar with colors. Numbers (1 through 8) are used to display the colors they represent at random locations across the screen. If the screen becomes full, the child can erase it by pressing $E$.

Counting Up selects a sequence of four

Linda Falge is a sign painter and student in basic electronics. She enjoys cars and animals and still considers herself a beginning programmer. She owns a 64 K CoCo 2 .
numbers between six and 95 , then asks the user to fill in the fifth number. If answered correctly, the reward is a multicolored bar accompanied by sound. If an answer is wrong five times in a row, the computer provides the correct number and moves to the next sequence. When five in a row are answered correctly, a colorful display congratulates the user. This section is especially useful to children who are learning to count to 100 .

Letters-Letters uses the INKEY $\$$ command to display any character pressed. The character is printed in a column from top to bottom, accompanied by a delightful sound. When the screen is full, continue by pressing any key. The screen clears and the next character pressed is displayed in the first column. This helps students become familiar with letters and spelling.

Drawing Board uses the SET command and arrow keys. Some young children find
it difficult to manipulate CoCo joysticks; the arrows, though slower, provide better control and less frustration. Pressing C changes the color of the line, and pressing E erases the screen for a new drawing.

Music to Your Ears is entertaining and educational for children with musical interest. Numbers ( 1 through 8 ) represent the $C$ scale on a piano keyboard. When a number is pressed, the letter name of the note is displayed in the upper-left corner and the note is played. CLS is used with each number, assigning a particular color to each note.

Each section of Kinderfun is a program in itself and can be typed in and run individually if lines allowing you to return to the menu are removed. GOTO is used throughout for simplicity, which aids the beginning programmer in learning how the computer works. Commands such as CLS, PRINT, PRINT@, SET and INKEY $\$$ are also frequent since the entire program runs in the text mode.

Kinderfun is designed as an entertaining and educational aid for beginning programmers as well as young children and is meant to be enjoyed by all.
(Questions or comments concerning this program may be addressed to the author at Route 1, Box 704A, Astoria, OR 97103. Please enclose an SASE when requesting a reply.)

# SUNDDG SUSTEMS 

Become RASTANN, Warrior King, on the quest to regain his rightful crown, hidden deep within a sinister land. Battle monsters, gain magic and weapons, and travel through harsh wilderness and dark castle dungeons in this medieval realm. From the creator of Kung-Fu Dude comes this awesome arcade game for the CoCo III! Warrior King uses the most detailed $320 \times 20016$ color graphics and high speed machine code to vault you into a world of fantasy. Dare ye challenge the many perils ahead in order to become WARRIOR KING? Req. 128 K CoCo III, disk drive, and joystick. Oniy \$29.95.

## In Quest of the Star $\begin{gathered}\text { Iord } \\ \text { Io }\end{gathered}$

This is THE graphic adventure for the CoCo III! Unparalleled $320 \times 200$ animated graphics will leave you gasping for more! You quest for the Phoenix Crossbow in this post-holocaust world of science and fantasy. In Quest of the Star Lord is a full 4 disk sides of mind-numbing adventure! Req. $128 \mathrm{~K} C 0 C 0$ III and disk drive. Only $\$ 34.95$. Hint Sheet: \$3.95.
"A dynamite program! The best graphics I've seen to date on the CoCo III. You have to see it to bellieve it."

- 8/88 Rainbow review

An exciting arcade game. The BEST karate game ever created for the CoCo! Destroy opponents and evade obstacles as you grow ever closer to your ultimate objective. Spectacular graphics, sound effects, and animation! Req. 64 K CoCo, disk drive, and joystick. Only \$24.95.
"The CoCo karate gap has been filled and Kung-Fu Dude does it excellently. I highly recommend it!"

- 2/88 Rainbow review

All programs CoCo 1, 2, 3 compatible, unless otherwise stated

Sundog Systems
21 Edinburg Drive Pittsburgh, PA 15235 (412) 372-5674

SN
The epic adventure is back! The largest adventure campaign ever seen for the CoCo is again available! A total of six disks of intense graphic adventure will have you playing for weeks! Each section is a two-disk stand alone adventure, but all three together form an epic saga, Quest for the legendary Earthstone in the ancient dwelling of the dwarves while you enjoy the classic graphics that made this trilogy famous! Each adventure can be purchased separately for $\$ 29.95$, the lowest price ever, or you can purchase the entire set for only $\$ 74.95$ ! Req. 64 K CoCo and disk drive.
"One of the best adventures / have experienced to date!'

- 6/86 Rainbow review
"The animated graphics are dramatic, detall ed, and excellent!" -11/87 Rainbow review
"The adventure of a lifetime. Don't miss out!" - 7188 Gamer's Connection review

## GHAMMPTOL

Become a super hero in this unique 64 K ac . tion adventure. Great graphics and sound effects See 5/87 Rainbow review Disk $\$ 19.95$

## COCO3'S MISSING LINK:

## "BIG BASIC"

## BASIC USERS GET FULL POWER OF MEMORY MANAGEMENT IN WINDOWS!

Now you can access up to 472 K of memory in a 512 K CoCo or up to 92 K in a 128 K machine with any mix of programs and/or data. At last, you can do sizable basic programming with a CoCo 3. (Also offers simplified memory management for M.L. programmers.)

Magically fast, executes one big program or database in basic; or up to 58 separate basic programs running at once from computer memory in up to 58 separate windows! Saves programs or variables with their currently running parameters and loads back that way as if you never left the program.

Chain in unlimited sized programs or data from disk(s) without erasing existing programming or variables. Also works with RGB DOS and hard disk.

- Uses 3 new simple basic words to create the power.
- Provides for variable exchange between windows.
- Programs can be saved over multiple disks or use our BIG DISK Utility. (See below)
- Modifies your basic operating system in some 70 locations but does not occupy user memory.
- Includes 7 Demo Programs and Manual.
- Does not support cassette use.
- ONLY \$39.95 U.S. or \$47.00 CDN. plus $\$ 2.50$ shipping \& handling.

Ontario residents add 8\%PST.
For any CoCo (at least 64 K ) with 1.1 or 2.1 Disk Extended Basic:

> "UTILITIES PACKAGE" 6 HANDY M.L. RESIDENT UTILITIES FOR BASIC USERS !

| "BIG DISK" | Standard double-sided drives <br> converted to 360 K in drive0 ! |
| :--- | :--- |
| "DOUBLE40" $\quad$ - Sets drives for 40 tracks each side. |  |
| "CONVERT/DISK" | Formats 40 tracks on each side of a <br> disk without disturbing the first 35. |
| Instantly doubles all your present |  |
| storage. |  |

"QUIKDRIV/6MS" - Sets fast drive stepping rate.
"QUIKDRIV/30M • Fast drive shut off.
"SET FEED" - Sets line spacing for printouts.
Only $\$ 17.95$ U.S. $\$ 21.00 \mathrm{CDN}$. Plus $\$ 2.50$ Shipping. Ont. Residents add $8 \%$ PST.

## "MEMORY MASTER" OUR FAVORITE PROGRAMMING TOOL

Scan, Edit, Copy, Printout any memory in your computer or on disk. Fix disks.

Fast entry of M.L. Listings.
Dual Windows ! Run two Basic Programs at once!
Chain in large running programs and variables from disk without restarting the existing program in the computer.
Includes Demo Program and Manual.
Only \$24.95 U.S. $\$ 29.25$ CDN. Plus $\$ 2.50$ Shipping.

Ont. Residents add $8 \%$ PST.

## THE RGB HARD DISK

A warranty can replace your Hard Disk Drive, but not the valuable data it contains! Think about this BEFORE you buy a used or rebuilt hard drive.
RGB Computer Systems uses only BRAND NEW Hard Disk Drives. Controllers and Components, all with the Full Manufacturers Warranty.
Due to the unique design of our components and software. RGB also has the fastest and most reliable data transfer in the industry!
The RGB Hard Disk System fully supports both BASIC and OS-9, and provides the ability to boot up OS-9 completely from the Hard Disk without the need for special EPROMS or the loss of Disk Basic.
If you need a Fast, Reliable Hard Disk System and don't mind spending a few dollars more for Quality, please give us a call today!

The following products have recently been received by THE RAINBOW, examined by our magazine staff and issued the Rainbow Seal of Certification, your assurance that we have seen the product and have ascertained that it is what it purports to be.

1989 CoCo Tax Estimator, a BASIC09, Multi-Vue-compatible program for 512 K CoCo 3 s and OS-9 Level II that predicts the user's tax liabilities. It is based on the 1989 Form 1040 ES as printed by the Internal Revenue Service. Puritas Springs Software, The Ameritrust Building, 17140 Lorain Ave., Cleveland, OH 44111, (216) 251 8085; free - send a formatted disk, a return mailer and appropriate postage.

Auto-Park, a Hyper-I/O accessory program written in machine language that lets users specify an amount of time devices can remain idle before the resident program parks drive heads. Designed to help avoid head crashes. KB Enterprises, 435 Brightwaters Drive, Cocoa Beach, FL 32931, (407) 799-3253; $\$ 12.95$ plus $\$ 1.50 \mathrm{~S} / \mathrm{H}$.

BASIC Windows, a 100 -percent machine language program for the 512 K CoCo 3 that divides memory into six different multitasking windows so six programs can be run at once. KB Enterprises, 435 Brightwaters Drive, Cocoa Beach, FL 32931, (407) 799-3253; \$34.95 plus $\$ 1.50 \mathrm{~S} / \mathrm{H}$.

Jack Rabbit Story Writer, an educational word-processor program to help children from grades 6 to 8 learn to compose and write short stories. Includes a spelling dictionary of over 7000 elementary-level words. Requires 64 K ECB , a disk drive and a printer. E.Z. Friendly, 118 Corlies Ave., Poughkeepsie, NY 12601,(914)485-8150; $\$ 24.95$ plus $\$ 1.50$ S/H.

KJV on Disk \#40, the books of Jude and Revelation on disk in ASCII files for the CoCo 1, 2 and 3. BDS Software, P.O. Box

485, Glenview, IL 60025, (312) 998-1656; $\$ 3$.

MouseCAT, a mouseholder in the form of a cartoon cat that adheres to the side of a monitor with velcro. The mouse is cradled in the cat's arms and legs. H\&H Enterprises,Box2672,Corona,CA91718,(714) 737-1376; \$6.95.

OS-9 Pascal 2.0, a compiler and OS-9 implementation of Pascal that requires a 64 K Color Computer and two disk drives. Tandy Corporation, 1700 One Tandy Center, Fort Worth, TX 76102; \$99.95, Cat. No. 26-3034.

OS-9 Profile, a database management program featuring up to nine formats and nine sorting methods. DynaCalc files supported. Requires a 64 K CoCo , at least one disk drive, the OS-9 operating system and a printer with a serial interface. Tandy Corporation, 1700 One Tandy Center, Fort Worth, TX 76102; \$49.95, Cat. No. 263274.

The OS-9 Sourcebook 1988 Edition, a listing of OS-9 compatible hardware and software products, compiled from supplier catalogs and advertisements. Microware Systems Corporation, 1900 NW 114th St., Des Moines, IA 50322, (515) 224-1929; free.

The O.S.I.T.E. File, an Adventure program in which the player becomes a reporter snooping out suspicious goings-on at Outer Space Intelligence Transmission Enterprises, rumored to be harboring alien life forms. On tape or disk for the CoCo 3. Tothian Software, Box 663, Rimersburg, PA 16248; \$19.95 plus \$2 S/H.

Trythis, a strategy game in which players must manipulate falling shapes so they fit like puzzle pieces at the bottom of the screen. Features three levels of play. Comes on tape or disk for $32 \mathrm{~K} \operatorname{CoCos} 1,2$ or 3; joystick optional. (A joystick-driven menu program is included with purchase.) Gregory Software, Box 573, Kirkland, IL 60146, (815) 522-3593; $\$ 9.95$ for tape or disk.

First product received from this company

The Seal of Certification is open to all manufacturers of products for the Tandy Color Computer, regardless of whether they advertise in THE RAINBOW.

By awarding a Seal, the magazine certifies the program does exist - that we have examined it and have a sample copy - but this does not constitute any guarantee of satisfaction. As soon as possible, these hardware or software items will be forwarded to THE RAINBOW reviewers for evaluation.
-Lauren Willoughby

## Discover the DeskMate" ${ }^{\text {m }}$ Difference...the Friendly Face in the PC crowd.

If you've shied away from PCs because they were too intimidating, now there's good news! Say hello to DeskMate, the Graphical User Interface that replaces confusing, cryptic commands with simple, plain English. DeskMate has a friendly look and feel that guides you

through a wide variety of programs with simple "point-andclick" convenience.
Your key to "software ease." Popular programs with the DeskMate Interface include the new Lotus Spreadsheet for DeskMate, Q\&A Write, PFS:First Publisher and

Quicken. Use one, and you've essentially learned them all.

Take the Tandy "five-second test." DeskMate works with any PC compatible. But since the most popular Tandy PCs have the DeskMate Interface built in, you can be up and running in less than five seconds! You'll be greeted by the friendly face of DeskMate, complete with a neat, organized listing of all of your programs. There's simply no comparison in ease of use.

Special offer! Come in for a free DeskMate demonstration, and we'll give you a certificate for $15 \%$ off any DeskMate software!

Discover the DeskMate Difference for yourself . . . now at Radio Shack, GRiD and participating dealers.

## Color Schematic Creator 1.2 Help in Making Your Circuits Light Up

Writers have word processors to manage their words, artists have graphic editors, but what do inventive hardware hackers have? Up until now, the answer has been colored pens and pencils, a straight edge, a lot of graph paper - and plenty of erasers. Fortunately, circuit designers and schematic drafters can now join the computer age thanks to programs like Color Schematic Creator from Microcom Software.

Color Schematic Creator is designed especially for the electronics hobbyist to aid in the drawing and printing of schematics. It comes on one floppy disk for the CoCo 3. Basically, what this program does is give users a way of drawing and labelling
lines and symbols. Those of you who tune in to Tony DiStefano"s "Turn of the Screw" column every month may be quick to point out that a graphics editor, with a little juryrigging, suffices. But what sets Color Schematic Creator apart are such things as symbol tables, symbol rotation, "infinite" Undo capabilities, three circuit layers and a workspace of 640 -by- 1000 pixels (organized into 160 -by- 250 four-by-four pixel blocks).

The workspace is so large, in fact, that the screen displays only one-seventh of it at a time. Since there are three circuit layers that can be merged into one file, there are three workspaces, which makes plenty of room for most schematic work. The advan-
tage of having layers is that you can have three full workspace-sized circuits in memory at the same time and still work on them individually. (Layers are color-coded to help you remember which is which.)

One of the best things about this program is its interface. In a word, it's simple. Those familiar with Microcom's WordPower can see some similarity. Users navigate Color Schematic Creator via popup dialog boxes and a menu bar with pulldown menus. In most cases, all you need to do is tap the first letter of a command - for example, to open a file you'd press $F$ for File on the menu bar, then $O$ for Open from the pull-down menu that results from invoking File.

Color Schematic Creator passed my acid test for ease of use - if I can sit down and load and run a program without reading the manual, then it's easy to use.

Well, I admit I had to read a bit of documentation on booting the program. Color Schematic Creator is not copy-pro-
tected, so you can make backups. You are encouraged to make backups. In fact, you can't run the program unless you've made a backup - the program disk is writeprotected, and the program aborts with a WP Error if you jump the gun and try to run BOOT on the original program disk. Just making a backup is all there is to the installation process (unless you have a Tandy DMP printer, but we'll get to that later).

> Color Schematics Creator is a good companion for the electronics hobbyist. Those who draft schematics know the hassle of redrawing time and time again. With Color Schematics Creator, if you don't get it right, you can edit and re-edit until you do.

When you have made your backup and thus are successful in running B00T, you are greeted by a screen consisting of a mostly blank area (one-seventh of the workspace) and an ever-present two-line menu bar at the top, along with readings of the cursor's current $x$ and $y$ position. The $y$ coordinate ranges from 0 to 255 , but only 40 of those vertical "units" are displayed at one time. Another piece of information found on the menu bar is that Color Schematic Creator was written by Prakash Mishra, who is a computer systems engineering student. The menu bar offers 11 executable options, most of which result in pull-down menus offering yet more options: File, Mode, Zone, Text, Line, Rotate, Undo, Symbol, Part, Device and Setdot.

Again, all you have to do to execute any menu bar option is press the first letter: F for File, M for mode, etc. Setdot is a special case: Type a period as indicated on the menu bar.

The File menu takes care of disk I/O, the saving and loading of files, along with printing (either "Full Print" - all three

## The Moguls of Microcom

Manohar Santwani and his son Chris came to the United States from India in 1982. Neither knew much about personal computers, although Manohar had dealt with mainframes in his job with industrial quality control in India's government. Both came to know PCs very well when Manohar bought Chris a CoCo for his birthday in 1983. Then the Community came to know them later that same year when they launched the fledgling Microcom, now just about the largest CoCo company outside of Fort Worth.
"We were the first company to bring out a book on peeks, pokes and execs," said Manohar of Microcom's first commercial product. He and Chris wrote it because they went to local Radio Shack to ask a question, and nobody there would give them "even one poke." They compiled a list of their own peeks and pokes and advertised it for $\$ 5$ in a Color Computer magazine. The response was phenomenal.

Then they tried their hand at a utility allowing programmers to copy-protect computer cassettes - Hide BASIC. Then came another book - Utilities Routines, a book on machine language that annotated and explained 20 utility routines, describing how registers changed. Manohar said the book became a hit because assembly programmers were stingy with their routines, and beginning M/L programmers had to struggle to find information.

Microcom had produced five products and advertised them in various other magazines before the Santwanis stumbled across RAINBOW. A salesman in a local Radio Shack store asked if they subscribed to it. "RAINBOW, what's that?" They soon found out, and took out a small ad.

After this came another "Peeks, Pokes \& Execs" book, which Chris Santwani authored. Then came an anti-pirating program
for disk-based programs. Around 1985 they started a magazine on disk called the CoCo Times, which ran for two years. Next came WordPower 3.2, which Chris also wrote. That CoCo 3 word processor has become Microcom's flagship product.

After so much demand for hardware, they started making cables themselves. In 1986 they started dealing in third-party software. If you want it, chances are Microcom has it. In fact, if you want it but it doesn't exist, chances are that Microcom will contract the idea out to a programmer.

Color Schematic Creator is one of the "contracted" programs. "Basically we have a feeling for where the demand is. We see a gap and we try to fill it. That is the secret of our success." Microcom is now responding to customer demand for hard drives and OS9 software. Santwani said hard drives are now his biggest seller.

In keeping with his philosophy, Manohar often answers his own technical support line - even though he runs a computer store in Rochester, New York, builds his own line of PC XT and AT compatibles under the brand name Aristo, and has opened a software training center for heavyweight MS-DOS applications. Also, he's breaking ground in Texas for an Aristo manufacturing plant, which is to be run by his brother-in-law.

Is this beginning to sound like Microcom's getting too big for the CoCo? "No! We rely on the CoCo," Santwani said, adding that his ranks of CoCo customers are growing, and that all his success is the result of the CoCo .

What's new from Microcom? WordPower 3 looms on the horizon, with Manohar promising a July premiere, Also CIIIPages, a new kind of desktop publishing program. "There is nothing like this on the market," Santwani said.
layers and all screens; or "Part Print" only the portion of the workspace currently onscreen). Color Schematic Creator thoughtfully provides what other programs so often leave out, a directory function.

The File menu also gives you control over your layers. You can load files into the Top, Mid and Low layers and merge them into your file. When shown together, the three layers are color-coded for easy differentiation.

The Mode menu is for control of layer display and joystick/monitor configuration. The Zone menu is what you use when you want to move to a segment of the workspace that is not displayed onscreen. Under

Zone you can incrementally position yourself up or down, or you can jump to a specified coordinate. Regarding cursor control, each segment acts as if it were autonomous. It would be better if the user could scroll off the screen to reach another part of the workspace.

The Text menu yields text in three styles: normal, bold and small. Special characters are available in combination with the ALT key: Alt-o for Ohm, ALT-K for Kilo-Ohm. However, a $\mu$ is noticeably lacking. Text is treated almost as graphics; you cannot backspace to correct mistakes. Rather you must "undo" an entire line of text, then retype it. Onscreen text, however, is very

## Schematic's Creator

Prakash Mishra, author of Color Schematic Creator and a 20-year-old in his third year at Rensselaer Polytechnic Institute as a computer systems engineering major, admits the CoCo was his first love. "I bought my first Color Computer way back about six years ago, in the 16 K days."

When the first shipment of CoCo 3s arrived at his local Radio Shack, Pakrash bought the first one off the truck. Again there was an immediate affinity. "Of all the computers, the CoCo is the most well-designed," he says, "Even though Tandy never bragged about it, it was something we could brag about to our friends.

Prakash said he wrote Color Schematic Designer - "a mix of BASIC, assembly and other code" - to be easily upgradable. The printer drivers are separate from the program, which means they can be interchanged for different printers. "It would be easy to write a driver for a plotter", Prakash says, "more difficult to write one for a laser printer". He initially wrote CSC just a driver for Epson printers, particularly the Epson LX-80, LX-800 and FX-80 - those that have a "plotter mode." At Microcom's request he added a DMP driver.

Symbols can be added to the program through a file called SYMBMOD, which Prakash said is undocumented, unlicensed and basically got left on the disk by accident. "It is sort of self-explanatory," Prakash said. "All the symbols in the program are stored as DRAW strings. A person familiar with BASIC can use a text editor to open SYMBOLS SYS and add DRAW strings into empty lines. They will show up in the menu - but be sure to update the number of symbols in the data file. This is not a selling point for the program, just for those who want to try it.

Lately Prakash's course of studies has pushed him more and more into the MSDOS realm. "If I had more time I would like to write more programs for the Color Computer," he said.
readable.
The Line menu is the heart of the program, letting you connect any two points with a solid ("Normal") or "Dotted" line. The Box option under Line is similar to the Normal line option, except it allows you to draw yourself along by your bootstraps, using the last endpoint as the next beginning point.

The Undo menu lets you take back things you have drawn, from your two most recent symbols to the first line you put on the screen - it keeps track of everything. The Setdot command lets you place a dot on the screen as a marker indicating that two intersecting wires are electrically connected.

The Rotate command permits rotation of schematic symbols in 90 -degree increments.

Symbol, Part and Device finish out the list of remaining menu bar commands, and these all have to do with symbol selection. When you select one of these three options, you get menus of symbols. When you press its corresponding letter, a symbol appears and can be moved around by the arrow keys or a joystick. Press R if you want to rotate it, then ENTER to place it. The symbols look a little funny onscreen because they are squashed vertically in order to fit into the CoCo 3's 640-by-200 mode. The collection of symbols is basic, not extensive.

The Symbol menu offers general symbols for such items as terminal connectors, grounds and arrows. For parts such as resistors, capacitors, diodes and transistors you use the Part menu. Finally, the Device menu allows you to select, among other things, lamps and inductors. It also provides a basic set of logic gates.

Although you can use the joystick in addition to the arrow keys for drawing and placing lines and dots, you cannot use the joystick for selecting and executing commands. Users with two-button joysticks find it easier to set lines - the second button acts as the ENTER key for anchoring them to a point. Whether arrow keys or a joystick is used, the cursor is a little slow. It does autorepeat, however, and you can get diagonal movement by simultaneously holding down two adjacent arrows.

If you have an Epson-compatible printer running at 9600 baud, then you are ready to print. Tandy DMP owners, don't despair: All you have to do is run a program called TANDY. BAS to configure Color Schematic Creator to your printer. However, Tandy printers can carry out only the "Part Print" function; to take advantage of "Full Print," you need an Epson. If your computer runs at a baud rate other than 9600 , you can change the configuration by editing a line in the BASIC BOOT program.

Another goodie Color Schematic Creator offers is its method of saving files - as mathematical "shapes" rather than as mere graphics screens. This means Color Schematic Creator is flexible regarding printers; it prints at a quality appropriate to the printing device you use. It also means the screen spends a bit of time redrawing itself. But files stored this way take up less room on the disk. The workspace is saved to disk in two files, one to hold the shapes and the other to hold text.

Although this program fills a need, there are a few definite shortcomings. The feature I missed most was a free-floating cursor and mouse support for point-and-click command operation; it takes a bit of time for the cursor to arrive where you intended
it to be. Also, it would be nice if you could "lasso" objects, pointing to a capacitor and pulling it off to the side to make room for a resistor, etc. Pixel editing would be nice, too.

As it is, you must erase and redraw blocks or do a lot of undos to back up and fix something. The earlier the booboo, the worse the clean-up job. You might find it best to sketch out a rough version of your circuit before committing it to screen. Color Schematics Creator is geared more to printing out a final schematic diagram than for "free associating" your way to a finished product.

Prakash Mishra wrote Color Schematics Creator to be easy to upgrade. The printer drivers are written separately, not incorporated into the main program.

Color Schematics Creator is a good companion for the electronics hobbyist. Those who draft schematics know the hassle of redrawing time and time again. With Color Schematics Creator, if you don't get it right, you can edit and re-edit until you do.

## Revenge of the Mutant MinersIrradiated Radicals Strike Back

Have you ever noticed that when Hollywood makes a blockbuster movie we can always count on a sequel? JR \& JR Softstuff knows how well this works and has made a popular arcade game even better. The sequel I speak of here is Revenge of the Mutant Miners - a rewrite/update of Mutant Miners. Revenge is written just for the CoCo 3 and employs all the color and excellent graphic detail we have come to expect from this computer.

In the new version, you are again trapped in an abandoned uranium mine and must work your way through the various levels and interconnecting gridwork within the mine to your freedom. In order to do this you must travel over every square inch of the gridwork, filling it in as you go. Many areas have collapsed or have not been completed.

The game consists of 10 different play-
ing screens. If you complete all 10 screens, you are advanced to the next level of difficulty. At the top of the screen is a status line that displays your current level of difficulty, the score, screen number, a timer, the high score for the current session, and a heart with a number representing the lives (men) you have remaining. The timer is set at 7000 for each screen and begins counting down when you begin play. The number remaining on the timer is added to your score as you complete each screen.

> You can increase your
> score as you move about the mine by jumping to get picks, shovels and lanterns.

You move about the mine with a joystick. Pressing the firebutton starts the action and also allows you to jump in order to avoid obstacles or to pick up objects. In order to avoid the deadly mutants, you will make use of the various ladders, transporters and spring boards. The mutants are
guarding "urainimite," and they change colors between blue and brown during their most deadly cycles. If you get to the urainimite, you become temporarily invincible and can kill all mutants you come in contact with. In some cases their destruction creates such a blast that nearby ladders and transporters are damaged.

You can increase your score as you move about the mine by jumping to get picks, shovels and lanterns. Some screens also contain hearts that increase the number of lives you have left.

The action is fast and furious. If you want to stop and catch your breath, just press the P key; or if you have one of the newer two-button joysticks, you can press the second button to pause the game.

There is a configuration screen following the title screen that allows you to change many of the game's options: the number of players (one or two), the level of play ( 0 to 9), number of lives ( 1 to 9 ), starting screen (0 to 9), number of joysticks (one or two), and monitor type (RGB, composite or TV).

Revenge of the Mutant Miners requires a CoCo 3 with a minimum of 128 K RAM, a disk drive and a joystick. The program is 100 -percent machine language, nonprotected and fairly priced. Besides, it is warranted for a full year at a modest cost of \$5
if you want a replacement. The software is attractively packaged and well-documented with easy-to-read instructions on loading and playing the game. Revenge of the Mutant Miners is sure to be a hit with arcade game lovers of all ages.
(JR \& JR Softstuff, P.O. Box 118, Lompoc, CA 93438, 805-735-3889; \$19.95 plus $\$ 3$ S/H)

Currently, my lesson plans are created on disk using Telewriter-64. While the TW-64 word processor has worked out well, though tediously, for several years, a new program from Tothian Software, Lesson Planner, makes the creation of lesson plans a cinch by saving many keystrokes of repeated headings and listings.

Lesson Planner requires a $\mathrm{CoCo} 1,2$ or 3 with at least 32 K and one disk drive, and is a well-organized attempt at reducing the repeated tasks involved in making daily lesson plans. It is written in BASIC and can easily be modified to comply with the requirements set forth by my state of Pennsylvania. A feature not explained in the brief, three-page (but adequate) manual is the ASCII portability of the program; files can be imported into a word processor capable of pulling in ASCII. This is useful when you have to prepare extensively formatted presentations.

Lesson Planner requires customization to reflect your classes and schedule. The manual, however, recommends running the program as is so the user can get a feel of how the program functions. The simplicity of this program allows users to begin to see the modifications necessary to adapt the program for their use.

To begin you simply enter RUN "PLANNER". The initial menu lists seven options, including creation, printing and editing of lesson plans; printing a blank plan sheet; disk access functions; and exiting. Option 1, Create Lesson Plan, prompts you for the date and the day of the cycle (some schools operate on a five-day cycle, others on a sixday cycle). This is one of the customizing options.

The program remembers your daily schedule, including periods, class assignments, preparation periods, lunch and special duties. Periods that require no planning are automatically passed over. When the first period requiring planning is encountered you can either create a lesson plan from scratch or "grab" a previously saved lesson plan.

Choosing the first option steps you through the areas of a lesson plan allowing you to choose materials, objectives, procedures and evaluation methods from a menu. This list can be modified to suit your particular classroom needs. Each category menu can contain up to nine items of the user's choosing. After each selection from the menu has been made, the program allows you to add notes of explanation included in the disk file and the printout.

Saving the file breaks up the periods of the day and sends separate periods to the correct file for storage. When you request the save option, the amount of free disk space is assessed and displayed onscreen,
allowing you to change disks if necessary. Each period of the day is brought up for saving and the user must decide to which file to send the day's plan. As the file grows you will have a day-by-day account of the progress of each lesson area.

This program would have been great when my school was going through Middle States Evaluation. We were required to keep this exact information on file cards. From these cards we assembled our curriculum guides, which were presented for inspection by the visiting team. Using the computer would have saved hours of tedious work by allowing the lesson files to be brought into the word processor for proper formatting.

Printing is done at 600 baud and produces a neat, easy-to-follow format that can be used by any teacher stepping into the classroom to substitute for a day or longer.

Unfortunately, I know just enough BASIC to get me into trouble. However, I would have no trouble making the required changes in the program. The manual assumes a basic understanding of how to edit program lines and does not go into detail on how to make the changes necessary to customize the program. It does indicate where to make the changes. These changes require some thought and planning to assure a smooth and concise printout but are not beyond the skills of even a novice at BASIC programming.

At the end of the program are the DATA statements that need to be amended to reflect your day. You must input the following: period names (1, 2, 3...5AB, 5C, 6, etc.), teacher daily schedule (one line for each day containing the content of each period), materials (up to nine items), objectives (up to nine items), procedures (up to nine items), evaluation technique (up to nine items) and filenames (up to 10 names).

I feel the most important feature of any program is ease of use. Flexibility is next on my list. Both of these needs are met by this program. While Lesson Planner is intended for the classroom teacher, it is easily adaptable for any instructor or person who works on a fixed schedule. The fact that the program is written in BASIC allows creative users to add features. I already see minor changes such as selectable baud rate or the insertion of printer codes to allow highlighting of areas of the printout. At $\$ 24.95$ this program will pay for itself. However, there is no phone number available if you do require help. (When I have a question, I like a quick answer.)

To any teacher who has access to a CoCo and is facing the construction of a planned course or curriculum guide, I recommend investing the money and time it takes to use Lesson Planner. The invest-
ment will show a payback when your supervisor requests your planned course.
(Tothian Software, Inc., Box 663, Rimersburg, PA 16248; \$24.95)

## Software

CoCo 1, 2 \& 3

## Memory MasterExtending Your Horizons

CoCo users are always looking for utility programs that do a lot of tasks at bargain prices. Memory Master is a combination of useful menu-driven utilities for Color Computers using Disk Extended BASIC Version 1.1 or 2.1 . I tried it on my 512 K CoCo 3 with excellent results, and it worked fine on my old gray CoCo 1 with 64 K .

One of this software's strong points is that it utilizes dual windows, which enable the user to run two programs at once by following the specified procedures outlined in the well-documented 17-page instruction manual.

> Memory Master is a unique hacker's program offering about all you could ask for in a disk and memory utility.

The program disk contains several versions of the program specific to the various models of the CoCo. There's even a version to run with a CoCo 3 and TV rather than a monitor. An included demo program illustrates how the window features work. One of Memory Master's tricks is the way in which it gets around erasing existing memory when LOAD and RUN commands are executed. If you SAVEM the contents of Window 2 while you are in Window 1, you save the parameters of the running program and the variables in that window.

When you LOADM again and switch to Window 2, you find everything as you left it. LOADM and SAVEM do not work this way in standard BASIC because BASIC's operating system stores its stack between variable tables and string variables. When you reLOADM your program, stack conflict causes a crash. Memory Master has moved the stack and taken other necessary steps to
make LOADM and SAVEM work in a very unique and powerful way. Using LOADM and SAVEM allows you to transfer unlimited amounts of program sections or data.

Memory Master is menu-driven and contains lots of options allowing you to examine and modify memory locations, disk tracks and sectors, and it also allows you to convert Hex and decimal numbers. You can use these features as a fast way to enter machine language listings. You can also send a 256 -byte sector or a granule (nine sectors) from the disk into any area of memory you want to act as a buffer. You can reverse this process in the same manner. Using this technique, you are able to examine and repair code on the disk itself, then use the editor to change the bytes and send them back to the disk. During such data transfers the upper-left corner of the screen shows error status in bit form. Although not extremely useful, it is nice to watch, especially if you get an I/O Error. There is a printer option, too, that works in conjunction with the various memory and disk functions.

Memory Master is a unique hacker's program offering about all you could ask for in a disk and memory utility. The window feature is unusual and works well with most of the short programs I tried. However, Memory Master's features are powerful and must be used with caution. Beginners should exercise extreme care, because it's possible to lose valuable programs and scramble disk files if you are not careful.

—David Miller

Software CoCo 3

## Peninsular WarMake Napoleon Meet His Waterloo Before His Time

Peninsular War from SPORTSware is a new strategic simulation for disk-based CoCo 3 systems. Supplied on a single, nonprotected disk, it is accompanied by a five-page set of instructions. Because data (game saves) is written to the disk, SPORTSware encourages owners to play from duplicates created with the BACKUP command.

As explained in the documentation, the

scenario for Peninsular War revolves around the conflict between British and French forces during the Napoleonic War of 1805 to 1812. Historically, the British commander, Wellington, was victorious over the numerically superior French forces. (Note that Wellington did not actually face Napoleon until later, at Waterloo.)

The idea of the game is for the player to
try to duplicate British successes in the campaigns; the goal is to occupy the French base at Bayonne. Generally the British are heavily outnumbered. The CoCo takes the side of the French and attempts to take the British base at Lisbon, Portugal. The game ends when either of the above objectives is attained.

Game play begins with a title screen, followed by a prompt for the user to start a new game or load a saved game. Once the choice is made, a map of Spain is displayed. The map is made up of a series of small squares, with different colors indicating the types of terrain. Ordinary terrain is light brown, mountains dark brown, rivers are light blue and cities are yellow. British and French units and commanders are highlighted by different colors.

It is with the color scheme that I found some problems. The programmer appar-

ently assumes all users will be playing on RGB monitors. With RGB, the colors are well-defined and do the job just fine. However, on a TV (composite), some of the colors are very hard or impossible to see. Examining the code (written in BASIC), I found several calls to RGB specifically, which accounts for the TV display problems.

Playing Peninsular War is not difficult, but careful strategy is required to actually win. Each force starts off with four commanders, each having a varying degree of ability. A commander's ability must be considered when making bold moves. British commanders start off at random locations in western Spain while all of the French forces begin at Bayonne in eastern Spain.

Players move their British commanders via the arrow keys and shifted/unshifted comma and period keys. The movement distance is controlled by whether or not the commander is accompanied by troops. Movement over difficult terrain costs more in movement points than travel across ordinary land.

Options depend on current positioning of the individual commander. You can elect to pick up troops $(\mathrm{P})$ if the area has troops available. Usually you pick up troops at cities in which they were earlier detached. An onscreen message notifies the player of troop availability. Likewise, the D key is pressed to "detach" troops. In either picking up or detaching troops, the user must key in the number of troops involved.

If a commander is accompanied by troops, he may elect to attack the enemy by pressing the A key. Attacks can be made on any adjacent square, including diagonally adjacent squares. Attack results are calculated by the computer using a combination of four factors: numerical strength, commander rating, terrain and supply status. This is all explained carefully in the documentation; understanding the system is vital to playing the game with any degree of success.

Defeat always results in automatic retreat, in a direction opposite the attack. For example, a defeat by enemy forces attacking from the north results in retreat to the south. A unit forced into the sea by retreat is completely destroyed. Likewise, units forced to retreat onto a space occupied by enemy troops are obliterated, regardless of respective strength.

Attrition from starvation, disease and weather is taken into account. Units can actually be wiped out by attrition, at which time they are removed from the map. New reinforcements arrive during each turn, always at Lisbon for the British. French reinforcements are added at their head-
quarters base at Bayonne only. Troop reinforcements are increased in direct proportion to cities being held by the two sides.

The current game can be saved at any time with the press of the $S$ key, then reloaded later at the start of play. If multiple game saves are desired, separate disks must be used for each saved game. At startup, you switch disks prior to indicating that you want to reload a previously saved game. A selection of N at startup results in a new game.

Overall, I found Peninsular War to be an entertaining game for users who enjoy strategy and simulations. To run Peninsular War, a CoCo 3 with one disk drive is required. Although not required for the program to work, an RGB monitor comes highly recommended, for the reasons discussed earlier. At an advertised price of only $\$ 21$, Peninsular War is an interesting alternative to shoot-'em-up arcade games.
(SPORTSware, 1251 S. Reynolds Road, Suite 414, Toledo, $\mathrm{OH} 43615,419-389-1515$; \$21)

## Software

## Foods II-

## Find Out If You Are What You Eat

Diet conscious? Thinking of getting a new scale because the numbers on the old one are too high? Maybe you should buy Foods II instead, because that old scale is probably right!

With this program and other diet reference materials, you can maintain a proper diet. If your doctor has recommended a special diet in regard to fat, protein and carbohydrate content, you can use Foods II to see how closely you are following instructions. Others will be interested for their own reasons. Most of the above does not apply to the very young, but the information helps teach them about good nutrition.

The first step is to print a form on which to list the daily menu by running the 6 DY FORM program. At this point I have to warn you that you must have a printer that can underline and respond to reduced line spacing. The existing code is written for DMP105/106 printers; some editing may be necessary. I used a DMP-110 and with some editing I produced a nice form. Without the editing, the form was much longer, but still usable. If you need help with your
printer codes, the author is available by mail.

The sample form allows three days to be entered on each side and has a space for five supplements (you provide the statistics from the label or wherever); however, you may enter many supplements in the program.

The first thing you notice on the sample form is that the spaces are too short for words. Referring to the documentation, you find a food code list. The foods are grouped by type and are easy to find. A second set of papers has statistics of the complete list for study.

When you run Foods II, you find onscreen instructions explaining data entry - you can redo entries if necessary. The final results are not seen onscreen but rather are sent to the printer (so you must have the printer online!).

After entering the menu and any supplements, you have the choice of doing another day, starting over or ending. When you choose to end, an average of all days is printed. Since days vary, this helps you see if you have met your goal overall. The printout follows the numerical order of the codes, so you can enter a daily total of foods repeated during a day and save a line. (Note: The printout uses the names of the foods, not numbers.)

The printout shows an analysis of the food - protein, carbohydrates and fat, weight and calories, plus an overall total with percentages. Very complete.

Food II's nutritional information was taken from a health food almanac. The list includes 181 common foods. Other foods can be entered as supplements, but you must supply the statistics. Among the missing I noted cake, pie and artichokes. I only eat cake on birthdays and never eat pie, but artichokes are very popular here in California.

Look at product labels for nutritional information, but note that there probably are variations according to the way food is prepared. I do not use cooking oils, fry food or eat any fat that can be discarded. I am sure this changes the numbers somewhat. Use your good judgment. Sometimes you must compare the label with the listed amounts (e.g., hot dogs come in all-beef, chicken and turkey variations).

The documentation for Foods $I I$ is good. The program runs on any version of the $\mathrm{CoCo}-16 \mathrm{~K}$ cassette or 32 K disk. Instructions are given to print the form and run the program, plus there is nutritional information. The author will answer questions and give assistance by mail.

Foods II is for the person with a serious concern for diet analysis. It is certainly easy to use and saves a lot of time. The author provides sample printouts on request.

## NRI's new athome training gives you the computer, the soffware, and the hands. on skills to start a high:paying carreer as a computer programmer <br> Now NRI gives you hands-on experience in computer programming with a powerful IBM-compatible computer system and software you keep.

One easy step at a time, you build fullfeatured, powerful programs in BASIC, Pascal, C, and COBOL-today's hottest computer languages. One easy step at a time, you train to be a high-paid computer programmer!

Your NRI training includes a cemputer, modem, and invaluable programming software you keep
Unlike any other course, NRI's at-home training in Computer Programming gives you hands-on experience with a powerful, IBM-compatible Packard Bell VX88 computer system, including 2400 baud internal modem, 512K RAM, disk drive, and invaluable programming software-BASIC, Pascal, C, and COBOL-all yours to keep.

With NRI, you get the skills and the confidence, the computer and the software to build real-world, working programs for a wide variety of business, personal, and professional applications ... in all, everything you need to step into today's top computer programming jobs.

Ho previous experience necessary No matter what your background, NRI ensures you get the know-how you need to take full advantage of every exciting opportunity in computer programming today.

With your experienced NRI instructor always available to help, you quickly cover the fundamentals, then
move on to master all four of today's key computer languages-BASIC, Pascal, C , and COBOL -step by easy step. Before you know it, you have what it takes to handle any programming problem you're likely to encounter in your professional career.
Now, as never hefore, you can succeed as a computer programmer
The best news comes from the Bureau of Labor Statistics: As a programmer trained in a variety of computer languages you
can land the programming position of your choice-even make it on your own as an independent programmer. There's no doubt about it-with NRI's complete, at-home, four-language training in Computer Programming, you can write your own ticket to success in this high-paying, top-growth computer career field!

> See other side for highlights of your HRI hands-on training in BASIC, Pascal, C, and COBOL

CoCo 3

## Wargame Designer IIThe Battle Rages On

"Well, one day you're comp' ny commander;<br>The next day you're out on KP. So take down your service star, Mother; Your son's in the R.O.T.C."

Imagine a group of cadets singing that song, to the tune of "My Bonnie Lies Over the Ocean"; you're playing the R.O.T.C. module in Wargame Designer II, SPORTSware's latest version of invent-ityourself mayhem for the CoCo 3 with a disk drive. In that module, the Red Team is pitted against the Blue Team, but the singing comes only from yournostalgia bank, if applicable.

If you're not familiar with Wargame Designer's first version, see the review in the August 1988 RAINBOW. That review describes how you can either play the battle modules available with the designing system or totally design your own computerized wargame for one or two players. You can build your own terrain features, designate how they affect movement and combat power, plus develop your own Order of Battle and that of the enemy. Then you could play against either the computer or another person. That review also discusses the terrific graphics.

> Wargame Designer II kept the basic build-abattle capabilities, removed the two-player option, but added some new features.

Wargame Designer II kept the basic build-a-battle capabilities, removed the twoplayer option, but added some new features. First of those is the option to use either the keyboard or joysticks when de-
signing and playing the game. Plus the spacebar now controls the "Pen Up" and "Pen Down" function, also making things easier.

Next is the "Erase" command during icon design. With it, you destroy artwork but fill the designing box with whichever color is currently in use. This is a fast way to put in the background color. The similar command when designing the map is "Fill." This is very handy if most of the map you're designing is all the same terrain.

Next comes "Flip," the command used to design two armies at once. Design one unit type, flip and duplicate it in the other army in a different color. Speaking of flipping, the Z key allows you to switch from keyboard to joystick mode almost at will. This is important since the Save and Fill mode must be accomplished in keyboard mode.

## "Some mothers have sons in the Army;

 Some mothers have sons overseas. But take down your service star, Mother; Your son's in the R.O.T.C."Another extremely handy feature of WGD II is that movement costs are assigned to the already-provided terrain features. Obviously you can override them if

## KEYBOARD TEMPLATES FOR YOUR COCO

## Available Now for TW 128 and TW 64

1003 SHALIMAR DRIVE
HIGH POINT, NC 27260
you want. ("If trees were a factor of 3 , what should junkyards be?")

For those of you possessing neither the August ' 88 RAINBOW nor $W G D I$, be advised that this is one heck of a way to get around having to hunt somebody down to play a wargame with you. You play the computer, and can fiddle with its approach to things as you like by assigning different aggression factors to the computer's units. The instructions are clear, concise and complemented by menus within the program. As mentioned before, the two-player option is gone. According to SPORTSware, there just wasn't that much demand for it.

The program is not copy-protected since you have to make up a different disk each time you design a different scenario. The number of battles you re-enact is limited only by your research and how much your household chores and mundane things like school or a job get in the way of a really good war.

Something not mentioned last August is the fact that if an artillery-type unit (including archers) attacks an enemy unit alone and from long range, it cannot suffer combat casualties from that enemy unit. This is a definite advantage to the skilled artillerymen (sometimes referred to as door-closers and rope-pullers), those who believe the adage about artillery being the King of Battle. Cagey artillery use in Wargame Designer, as in actual combat, can be a vital factor in victory.
R.O.T.C., by the way, stands for Reserve Officers Training Corps, the largest source of commissioned officers the armed services have, through the country's colleges and universities. In addition to classes and drills throughout the school years, there is a six-week summer camp - a gigantic practical exercise - between the junior and senior year. This is when most cadets learn the song. They also learn that some fool dropping bags of flour from an L-19 is supposed to be treated like an enemy bomber.

The set of two disks includes four battle scenarios: Invasion North, Attack on Moscow, the infamous R.O.T.C. and Fort Apache. This set of four scenarios is also in response to customers' desires. It seems there was more demand for them than for a disk-side full of other icons. You can always order an icon disk or two, but in the meantime you can begin fighting right away. It is important to note that the commands include a game-save feature. This helps you get to bed before it's time to get up again, even though you may not sleep well due to running operations options through your head.
P.S. to any current cadets: Study hard but remember this - the non-commissioned officers are the ones who make
things happen. Without them, all of our high-falutin' plans are just so many pieces of paper.
(SPORTSware, 1251 S. Reynolds Rd. Suite 414, Toledo, OH 43615, 419-389-1515; \$25)
-John M. Hebert

## Software

CoCo $1 \& 2$

## Menu MakerSetting Up a Point-and-Shoot System

Menu Maker is a utility for any model Color Computer and a disk drive. Written in BASIC, it is not copy-protected, so you can make a backup copy for safekeeping. The purpose of this program is to allow users to create handsome menu screens that can load disk programs with a single, simple keypress.

The user types RUN "MENU" and presses ENTER to boot the program. Then the program prompts for the following inputs:

- Border Selection - You can choose from red, blue, orange, yellow or any keyboard character. You can also choose not to have a border.
- Title Lines - You can choose title lines at the top and bottom of the menu screen if you want, customizing your menu with text of your choice.
- Menu Selections - This is where you enter the names of the programs you want to access from the menu.

Menu Maker is a snap to use. After you answer the various prompts, the program writes a new ASCII file to disk under a name you assign. Whenever you want to run a particular program, you simply move the cursor up or down the menu's list of filenames, stop next to the file you want to execute and press ENTER. Because the resultant program is written in ASCII format, it takes longer to load than if it were saved in BASIC. This is easy to overcome by simply resaving the file - BASIC will save it without the ASCII option.

There are restrictions on the number of filenames that can be displayed on the menu screen. When used, borders and title lines take up space that could otherwise be devoted to menu options. With no border or title lines, the maximum number of filenames that can be displayed is 12 . Adding a border reduces this number by two. Each title line reduces the available number by
one line. Title lines and menu options, by the way, are automatically centered on the screen to give the menu a professional appearance.

Menu Maker is a useful, easy-to-run utility. The program comes with a short instruction sheet, but it's easy to use even without instructions. The disk also includes an extra bonus - a program called JOYDIR, which allows you to select menu options with a joystick if you have one connected. Menu Maker is fun to use and would be a handy addition to your collection at a price that is hard to beat. This program is worth a look, especially if you have young children or disabled computerists in the house.

CoCo 3

## Calendar <br> and ConvertMaking Dates and Translating Numbers

Have you ever been writing a program and needed to convert a number into binary, Hex or decimal? Or wanted to keep a calendar of appointments and important dates on your computer? Or even just wanted to see what day of the week June 15, 2082 might be? Then this set of programs could be for you.

Calendar and Convert are packaged together on one disk, accompanied by a five-page instruction manual. The programs are written in BASIC09 and run under OS-9 Level II. All you need torun them is a CoCo 3 ( 128 K is fine), one disk drive and OS-9 Level II.

To convert numbers, just type convert at the shell prompt. Convert opens an overlay window so none of your current work is destroyed. The user is presented with a nine-option menu:

> Decimal to Binary
> Decimal to Hex
> Binary to Decimal
> Binary to Hex
> Hex to Decimal
> Hex to Binary
> Decimal to ASCII
> ASCII to Decimal
> Quit

After selecting one of the first eight op-
tions, the user is prompted for the initial number. The equivalent in the chosen number system is then displayed. The user is asked if he wants another conversion of the same type. Answering no returns the user to the menu, while answering yes again prompts for the next number to be converted. To quit, just select Option 9 at the menu.

Convert works well, but I find it rather cumbersome to use. When programming, I convert numbers with my calculator, or, since I have Multi-Vue, I sometimes use the calculator that comes on the Multi-Vue desktop. Multi-Vue's calculator will not work with binary, but conversion from binary to Hex and the reverse is trivial - I do it in my head. However, if you don't have Multi-Vue or a converting calculator and are tired of doing conversions on paper, you might want to get Convert.

Calendar covers 800 years, from 1600 to 2400 . You boot it by entering calendar from the command line. Calendar also pops up its own overlay window to prevent work from being destroyed. When Calendar is called, it begins by asking the user for a month (January, February, etc.) and then for a year ( 1600 to 2400 ). It then displays the calendar for that month on the screen and asks if you would like a hard copy.

> Calendar covers 800 years, from 1600 to 2400. You boot it by entering calendar from the command line. Calendar also pops up its own overlay window to prevent work from being destroyed.

Along with the Calendar program go several small BASIC09 modules, including: Elongated0n, ElongatedOff and Dates. To use the hard copy feature, users must load the source for El ongatedOn and El ongated $0 f f$ and change printer control codes to match their printers. They then need to be saved and packed. The Dates module consists of a short program followed by data statements in the form of "month, day, year, message." The user can put information into this module, save it and then pack it. Then, when Calendar comes up, it will display all of the messages for the given month below the calendar. This way, the
user can keep a list of important events that are displayed each time he looks at his calendar.

This may be useful for some people, but I think it is a hassle to have to type in data statements every time I want to add something to my calendar. I prefer the Multi-Vue calendar. However, if you don't have MultiVue, or want to print your calendars, you might want to give Calendar a try.

Calendar and Convert do what they are meant to, but with just a bit more bother than I am used to. Maybe I've been spoiled by Multi-Vue. In any case, if you've been waiting for converter or calendar programs running under OS-9, here they are.

## CoCo 3 Games DiskBoard Games for the CoCo 3

George and Ellen Aftamonow are big CoCo fans and have written a number of programs for our favorite computer. Their latest venture is a disk chock-full of games written for the CoCo 3 - appropriately named CoCo 3 Games Disk. These games and puzzles take advantage of the CoCo 3 's colors and Hi-Res capabilities.

The programs are all easy to run - just enter RUN"BOOT" and the colorful main menu pops up. You select the game of your choice by moving the cursor to point to your selection and then pressing ENTER. There are 10 selections to choose from, divided up into brainteasers, puzzles and two-player games.

Swap Around is a game in which you must swap circular red markers with blue ones, and you can move only vertically or horizontally. Swap Around is fun to play and reminds me of the old-time cereal-box puzzles.

Up Top is similar; in this game you move colored markers vertically in specified steps. The object is to get all the markers to the top, but this is not easy. The rules of the game won't allow a move when a marker of the same color is in the row moved to. There are other rules to make this one a real brain-buster.

Daisy is the eternally popular "loves me . . loves me not" game in which you try to beat the computer in pulling off the last petal from the flower. Daisy's graphics are very good and interesting to watch being drawn.

Hare and Hounds is a fun game that pits two players against each other; the object is to be the first to reach the other end of the board. In this game, strategy is an important element.

Trap is a two-player game in which the game grid is laid out in an X-format. The object is to prevent your opponent from being able to move his/her colored marker. It's similar to Tic-Tac-Toe but more fun.

Switch-a-roo is a grid-like puzzle whose object is to interchange colored markers on vertical or horizontal lines. This one is a lot harder than you might think.

Colored Square is a game in which the object is to fill in grid blocks with colors so that no color is repeated vertically, horizontally or diagonally. Seventeen blocks and five colors are used. This one is tough, too.

By the Numbers is a puzzle containing eight squares interconnected with lines. The object is to put the numbers 1 through 8 into these blocks, but no sequence is allowed on interconnected blocks. This one is fun and even I could solve it after several tries.

Indian Giver is a two-player game in which each player places his marker on an unoccupied square. Then colored markers are placed next to them, which in turn removes adjacent markers. The player ending up with one marker wins. This one is really tough and quite a challenge.

Letters is a scrambled-word puzzle. The object is simply to unscramble the letters to form a word. Just to make it tougher, though, you can only move letters attached by lines. Each scrambled word is different and there are many to solve.

CoCo 3 Games Disk is a nice product at a very fair price. I liked the neat sound effects and closing graphics used on each of the games and puzzles. If you like strategy games and puzzles, you'll like this program.
(Aftamonow Software, 46 Howe St., Milford, CT 06460, 203-878-3602; \$10)

# Loose Ends and CoCo Outputs 

By William Barden, Jr.<br>Rainbow Contributing Editor

This month is the time to tie together some loose ends pertaining to the "Perplexing Puzzles" article in my June column. I'm also including some material on how to provide real-world outputs from the CoCo to match the real-world inputs mentioned in the May issue.

Judging from the mail I received, many of you are puzzle freaks. The June column of perplexing puzzles prompted many interesting responses. Let me mention a few of the solutions.

## Puzzle 1: Dice Odds

A pair of dice has six faces per die with $1,2,3,4,5$ and 6 dots per face. Provide a program that lists all of the ways to roll a 2,3 , $4,5,6,7,8,9,10,11$ and 12 ; and give the odds for each number.

If a single die is rolled, a $1,2,3,4,5$ or 6 shows. Assuming the die is legitimate and properly balanced, each of the six values have an even distribution - each value shows about one-sixth of the total number of times over the long run.

Now assume a second die is rolled. Again each value - 1, 2, $3,4,5$ or 6 - shows one-sixth of the total number of times over the long run. If we consider the order in which the dice are thrown, the permutations that come up in 36 ideal tosses of the dice are as shown in Table 1.

Counting the number of ways to make a point: There is one way to make a two $(1+1)$; two ways to make a three $(1+2$ and $2+1)$; three ways to make a four $(1+3,2+2,3+1)$; four ways to make a five $(1+4,2+3,3+2,4+1)$; five ways to make a six $(1+5,2+3,3+3,3+2$, $5+1)$; six ways to make a seven $(1+6,2+5,3+4,4+3,5+2,6+1)$; five ways to make an eight $(2+6,3+5,4+4,5+3,6+2)$; four ways to make a nine $(3+6,4+5,5+4,6+3)$; three ways to make a ten $(4+6$,

[^12]| First Second | Total <br> Points | First SecondTotal <br> Points |  |  |  |

Table 1
$5+5,6+4)$; two ways to make an eleven ( $5+6,6+5$ ); and one way to make a twelve ( $6+6$ ). The total number of ways equals $1+2+3+4+5+6+5+4+3+2+1$ or 36 ways.

The odds of making a total count of 2 through 12 are shown in Table 2.

Milt Poulos of Bound Brook, New Jersey, sent a nicely formatted version of this solution. However, one of the shortest solutions was from John Friedrich of Natrona Heights, Pennsylvania. The listing and final output are shown in Table 3.

| Total | Odds | Total | Odds |
| :---: | :---: | :---: | :---: |
| 2 | $1 / 36$ | 8 | $5 / 36$ |
| 3 | $2 / 36=1 / 18$ | 9 | $4 / 36=1 / 9$ |
| 4 | $3 / 36=1 / 12$ | 10 | $3 / 36=1 / 12$ |
| 5 | $4 / 36=1 / 9$ | 11 | $2 / 36=1 / 18$ |
| 6 | $5 / 36$ | 12 | $1 / 36$ |
| 7 | $6 / 36=1 / 6$ |  |  |

## Table 2

## Puzzle 2: Cryptarithm

Find a CoCo-related cryptarithm to fit the form:

$$
\begin{array}{r}
\text { XXXX } \\
+\mathrm{XXXX} \\
\hline \mathrm{XXXXX}
\end{array}
$$

In the original problem I used the prime numbers $2,3,5$ and 7. In the challenge I left it open just to see what readers would come up with. Puzzle Freak Paul Johnson of San Francisco came up with about 60 solutions using powers of two digits - $1,2,4$ and 8 . A typical solution is:

8228
$+4184$

12412

## A DIAMOND IN THE ROUGH

Face the challenge, experience the peril, and live the excitement in this two dlsk, PMODE 4 Graphics Adventure. BASIC with $\mathrm{M} / \mathrm{L}$ subroutines
(COCO 1.2.3) \$19.95

## BURIED BUXX

See Revlew 'Rainbow' 2/89
Fly your helicopter into enemy territory, dig up the loot and return to base.
Watch out for the ever-present patrol aircraft and ground based missiles.
100\% Machine Language (COCO 1. 2 or 3 and Joystick) \$19.95

## REVENGE of the MUTANT MINERS

CoCo 3 owners rejolce! Mutant Miners is back with game configuration mode and much more! Joystick required. \$19.95
Many more programs available. Call or write for a complete list.

## Table 3:

One person commented, "The problem in this form is not too exciting, so perhaps I am missing something in your challenge." I won't reproduce Paul's code here, but it is a succinct program of about 18 lines.

## Our acclaimed ADOS-3 has given birth! * EXTENDED *

* Built-in RAMdisk * Point-and-pick file select menu *

Not a new version of ADOS-3, but a new product that shares space with ADOS3 in a 16 K EPROM. Arrow-key selection of files to execute, LOAD, COPY, KILL or SCAN. The BACKUP command is doubled in speed for full disks, proportionately faster for partly full disks. (BACKUPs to or from the RAMdisk typically take 5 to 20 sec .) • BACKUP-with-format - Wild-card COPY and KILL. with optional prompting for individual files • Date (or date/time with hardware clock) displayed for files in the directory, printed on LLISTings - DATE\$ function - Key repeat - Block move/copy of BASIC program lines • Text screen printer dump - Auto-reboot of a BASIC program or the DOS command Parallel printing • Read/write/format $35 / 40$ tracks on 80 -track drives © Supports 3 double-sided drives plus 2 RAMdrives - Allows different numbers of tracks on different drives - Shares the original's excellent compatibility with commercial software. For 128 K CoCo 3 with ADOS-3 (RAMdisk use requires 512 K ) Includes information on having an EPROM burned (cost is \$15) after configuring Extended ADOS-3. Disk. $\$ 39.95$. Extended ADOS-3 plus ADOS-3. $\$ 64.95$. Driver for Disto real-time clock, $\$ 5$. Adapter for controllers lacking 28 pin socket, $\mathbf{\$ 1 0}$. SmartWatch real-time clock (Tandy 25-1033 equiv.), $\mathbf{\$ 3 5}$ (Driver included; for 28 -pin socketed controllers only).
ADOS-3 (reviewed July 1987)
Customize default startup message, colors, screen width, baud rate, step rates, processor speed, number of tracks ( 35,40 , or 80 ). Disk I/O and printing are reliable at double CPU speed. Extra commands such as FAST, SLOW, AUTO, RUNM, SCAN. CAT, PRT ON/OFF. Keystroke macros, arrow-key scroll through BASIC programs, edit/repeat of last command, auto-edit of error line, ML monitor, lots more. Usable as a disk utility or in EPROM. 128K Coco 3. EPROM-burning (cost is $\$ 15-20$ ) information provided. Disk, $\$ 34.95$.
ADOS for Coco 1 and 2 (reviewed June 1987)
Disk, \$27.95. ADOS plus ADOS-3, \$50.

[^13] WE CANNOT ACCEPT CREDIT CARDS

## Puzzle 3: Data Compression

In the original puzzle I gave an example of Huffman coding, a way of compressing data to about 50 percent of the length of ASCII coding. I then asked for a scheme to drastically compress a list of 4096 common words known to both sender and receiver - words such as "cat," "CoCo" and "BASIC09." Many readers got the basic idea, which is to simply assign a number from 0 to 4095 to represent each of the words. Since 0 to 4095 can be held in 12 bits, any word can be represented in about one and one-half bytes. If the average word length is $62 / 3$ characters or about $62 / 3$ bytes, the resulting data compression is about 78 percent.

Milt Poulos showed an example and said, "A scheme like this was used in telegraphy to transmit the ideograms used in Chinese and Japanese written communications. Each sending/receiving station had a copy of a dictionary in which the ideograms were assigned numbers. As the code numbers were received, a clerk translated them to the corresponding ideograms." Fascinating!

## Puzzle 4: Cubes of Digits

Are there any numbers equal to the sum of the cubes of their digits? For example, the cubes of the digits of 126 are 1,8 and 216 . The sum of the cubes of the digits is $1+8+216=225$, not equal to 126 in this case.

Gilbert Roberts of Santa Barbara, California, found four numbers - 153, 370, 371 and 407 - that met this criterion. For example, the cubes of the digits in 371 are $27+343+1=371$. Many other readers also found the answers. One of the shortest programs was from John Friedrich:

10 FOR $X=0$ T0 2916; $X \$=\operatorname{STR} \$(X): A=$ $0:$ FOR $Y=2$ TO LEN $(X \$): A=A+I N T(V A L$ (MID\$(X\$,Y,1)^3):NEXT:IF A=X THE N PRINTX:NEXT: ELSE NEXT

$$
01153370371407
$$

An interesting comment from Sir Gilbert: "I am a veteran hang glider pilot and use my CoCo to run my garage hang-gliding instrument business. CoCo drills all the PC boards (1200 holes unsupervised in three hours), then sets the instrument up. There are nine motorized screwdriver adjustments, a heater, thermo-electric cooler, strip chart recorder, five solenoid valves, two mercury columns, a master altimeter, ten relays and a programmable power supply on the output side. Miles of BASIC and machine language relate these to six-voltage measurements at strategic points in the circuit. With five PIAs . . . it's a true killer CoCo." (A description of this system would make a fascinating article.)

Thanks to all who wrote in with answers to these puzzles, and sorry I'm unable to answer everyone directly.

## The Other Side of the Story

In the May ' 89 issue of THERAINBOW, I described various ways to read real-world inputs such as switches, temperature, water level and light intensity, using inputs from the CoCo joystick. Several readers have written to ask that I provide information about the "other" direction - using the CoCo to control such things as lights, AC motors and keyers for amateur radio transmitters. It can be done, as the "killer CoCo " description above indicates. But how?

To get the answer look at the options available for real-world outputs. There are three programmable ports on the CoCo :

- serial output port
- cassette output port
- I/O port via ROM cartridge

## Serial (RS-232-C) Port

The serial port is a four-pin connector on the rear of the CoCo . It is generally used for CoCo printers - most Radio Shack printers have either serial or parallel capability. In serial communications data is sent out as a string of bits, usually seven or eight at a time, as shown in Figure 1. In addition to the data bits, a start bit and one or two stop bits are added to the string. The bit time for each bit is constant. For 300 -baud ( 300 bits per second) communications, each bit occupies $1 / 300$ second, or 3.33 milliseconds, and the total time to send a byte representing a character to be printed is $10^{*}$ 3.33 milliseconds, or 33.3 milliseconds. About 30 characters per second can be printed at 300 baud. (See Figure 1.)

The serial port is pictured in Figure 2. There are four pins. The TD pin transmits data to the printer or other serial device such as a modem. The RD pin receives data from the device. The ground pin is a common ground. The $C D$ (Carrier Detect) is a standard serial communications input (Carrier Detect) used in modems or for status indications. (See Figure 2.)

All pins are connected to a chip called a PIA (peripheral interface adapter) or equivalent in the CoCo . The PIA can be programmed on a number of individual pins. Under program control in BASIC or assembly language, a PIA pin can be turned on or off. The BASIC interpreter in the CoCo , for example, contains

Figure 1: Serial Data for One Character

Figure 2: Serial Port Connections (Shown Looking In at End of 26-3020 Cable Connector)

# Dr. Preble's Programs Since 1983 

## Pyramix

This fascinating CoCo 3 game continues to be one of our best sellers. Prrawix is $100 \%$ machine language written exclusively to take advantage of all the power in your 128 K CoCo 3 . The Colors are brilliant, the graphics sharp, the action rast. Written by Jordan Tsvetkoff and a product of ColorVenture.

## The Freedom Series

## Vocal Freedom

l've got to admit. this is one nifty computer program. Focal Freedom turns your computer into a digital voice recorder. The optional Hacker"s Pac lets you incorporate voices or sounds that you record into your own BASIC or ML programs. This is not a synthesizer. Sounds are digitized directly into computer memory so that voices or sound effects sound very natural. One "off-the-shelf" application for Vocal Freedom is an automatic message minder. Record a message for your family into memory. Set Yocal Freedom on automatic. When Vocal Freedom "hears" any noise in the room, it plays the prerecorded message! Disk operations are supported. VF also tests memory to take advantage of from 64 K up to a full 512 K . Requires low cost amplifier (RS cat. \#277-1008) and any microphone.

## Mental Freedom

Would your friends be impressed if your computer could read their minds? Mental Freedom uses the techniques of Biofeedback to control video game action on the screen.Telekimesis? Yes, you control the action with your thoughts and emotions. And, oh yes, it talks in a perfectly natural voice without using a

speech synthesizer! Requires Radio Shack's low cost Biofeedback monitor, Cat. $\ddagger 63-675$.

## BASIC Freedom

Do you ever type in BASIC programs, manually? If you do, you know it can be a real chore. Basic Freedom changes all that. It gives you a full screen editor just like a word processor, but for BASIC programs. Once loaded in. it is always on-line. It hides invisibly until you call it forth with a single keypress! This program is a must for programers or anyone who types in programs. By Chris Babcock and a product of ColorVenture.

## Lightning Scries

These three utilities give real power to your CoCo 3.

## Ramdisk Lightning

This is the best Ramdisk available. It lots you have up to 4 mechanical disk drives and 2 Ram drives on-line and is fully compatible with our printer spooler below.

## Printer Lightning

High capacity priat spooler for CoCo 3. Load it and forget it--except for the versatility it gives you. Never wait for your printer again! Printer runs at high speed while you continue to work at the keyboard! Will operate with any printer you have already hooked to your CoCo.

## Backup Lightning

This utility requires 512 K . Reads your master disk once and then makes superfast multiple disk backups on all your drives! No need to format blank disks first! Supports 35, 40 or 80 track drives.

## COCO Braille

Produce standard grade 2 Braille on a Brother daisy wheel printer. Easy to use for sighted or blind user. No knowledge of Braille is mecessary. Call for free sample. The raised dots produced are easily touch readable by the blind. The print-to-braille algorithm is robust with
errots rarely being made--and, it has the ability to learn!

assembly language code to convert a character into eight bits and then rapidly turn the PIA pin for the TD line on and off to represent the 1 s and 0 s of that character. Similarly the RD line can be read on another pin of the PIA to receive serial data.

The output on the PIA pins is about +5 volts for a one bit and about 0 volts for a zero bit - two binary levels. One problem, though, is that serial communications use different voltage levels, -3 to -12 volts for a one and +3 to +12 volts for a zero. The PIA output, therefore, is converted to these levels before appearing on the serial port TD pin. The RD and CD pins are input only as they also go through an opposite type of voltage-level conversion.

The current capability on the TD pin is limited to about 12/100 ampere because of a series 100 -ohm resistor. The resulting current is enough to trip a small DC (Direct Current) relay but not enough to do much else with unless you have specialized digital logic circuits. (We'll describe the use of a relay in a moment.)

The main problem with using the serial port TD line is that you may already have a printer connected to the line, and it's a bother to unplug the printer cable and plug in an alternate control cable.

## Cassette Port

The cassette port on the CoCo is used to read in and write out to a cassette tape recorder. The process is similar to serial communications, but a different coding scheme is used that provides from 500 to 1500 bits per second. There are five pins on the cassette port, as shown in Figure 3. The CASSOUT pin is the output to the tape recorder, the CASSIN is the input from the tape recorder, ground is a common ground, and the two REM pins control the tape recorder motor relay. (See Figure 3.)

Both the CASSOUT and CASSIN signals are controlled by a PIA in the CoCo. The CASSIN pin is input only. CASSOUT is meant to be an audio output only and does not have the current drive capacity to do useful things without specialized digital logic circuitry. This leaves us with the two REM pins. These are actually the outputs of a small relay contained within the CoCo. The relay is controlled by the PIA CASSMOT (cassette motor) pin and can be turned on or off, closing and opening the relay contacts under BASIC or assembly language. The BASIC commands to do this are MOTOR ON and MOTOR OFF.

Figure 4: Relay Operation

DPDT

NO = Normally Open
NC = Normally Closed

Figure 5: SPST, SPDT, DPDT Types

## Relay Basics

At this point, then, we have a serial port line TD and the REM outputs from the cassette relay that can be used to control two external devices. Since the TD line should be connected to a relay, let's look briefly at what a relay is and does.

Relays are generally electromechanical devices that enable a small controlling voltage or current to switch a much larger voltage or current, as shown in Figure 4.

Some good examples of relays are in the Radio Shack catalog. In the catalog you'll find several specifications for relays. As discussed in the May column, an SPST relay allows an open/close switch contact controlled by the relay. An SPDT relay connects a common line to one line when the relay is energized and to another when the relay is not energized. A DPDT has two sets of SPDT contacts. The contacts can often control AC (house wiring) leads. These types are shown in Figure 5.

## Warning

If you don't have experience handing AC power line (house wiring) circuits, don't teven think about using your CoCo to control lights, appliances or other high-voltage devices with a relay. I've nearly been electrocuted twice and it is not a comfortable experience. One of the most dangerous conditions is temporary wiring that is forgotten and suddenly frays or breaks to become a lethal, hot circuit. If you're inexperienced, use the circuits shown here for low-voltage battery-operated devices only - there's plenty of opportunity for useful applications with this approach.

The coil of a relay is designed to operate with a certain voltage and a certain current. A 5VDC relay requires 5 volts of direct current to operate, a $7-9 \mathrm{VDC}$ relay requires seven to nine volts of
direct current, and so forth. Current requirements are often expressed in $m A$, or thousandths of an ampere. A 20 mA coil in a relay requires $20 / 1000 \mathrm{amps}$ to operate.

Solid-state relays replace electromechanical relays with solid state circuitry. They are generally more reliable and less prone to deterioration.

Relays are energized when current at the proper voltage flows through the coil. The coil is basically anelectromagnet that creates a magnetic field. The magnetic field pulls an arm down, closing the relay switch contacts.

There are several problems with relays. When current is first turned on to the coil, a surge of current is produced. The power supply to the coil has to be capable of supplying this surge current. Another problem is contact arcing. When a relay is energized and the switch contacts close to a motor or other inductive device, an electrical arc occurs. This mini-lightning bolt pits the contacts. Over long use, the contacts deteriorate. Another problem is the speed of the relay. Although relays operate in a fraction of a second, it may take $1 / 20$ th of a second for the relay contacts to close, bounce and finally settle down. This is a lot of time by computer standards and means that relays cannot be used at speeds of more than about 10 or 20 closures per second. (Even at a few closures per second, a relay's contacts do not last long if run continuously.)

To use the CoCo's built-in relay, therefore, you've got to give some consideration to treating it nicely without continuous highspeed switching unless you want to perform the laborious chore of replacing it. An external relay connected to the TD line or REM pins can have heavier duty if you're willing to replace it as required.

## Protect and highlight your important magazine collection with sturdy RAIIIBOW binders

## Distinctive, Durable RAINBOW Binders

THE RAINBOW is a vital resource to be referred to again and again. Keep your copies of THERAINBOW safe in our quality, distinctive binders that provide complete protection.

These attraclive red vinyl binders showcase your collection and ensure your RAINBOWs are in mint condition for future use. Each binder is richly embossed with the magazine's name in gold on the front and spine. They make a handsome addition to any room.

## Put an End to Clutter

Organize your workspace with these tasteful binders. Spend more time with your CoCo and eliminate those frustrating searches for misplaced magazines.

A set of two binders, which holds a full 12 issues of THE RAINBOW, is only $\$ 13.50$ (plus $\$ 2.50$ shipping and handling).

## Special Discounts on Past Issues

To help you complete your collection of THE RAINBow, we're offering a special discount on past issues of the magazine.

When you place an order for six or more back issues of THE RAINBOW at the same time you order binders; you are entitled to $\$ 1$ off the regular back issue price. To order, please see the "Back Issue Information" page in this issue.

## Know Where to Look

You may purchase the "Official And Compleat Index To THE RAINBOW" for \$1 when you purchase a set of binders. This comprehensive index of RAINBOW's first three years (July 1981 through July 1984) is usually priced at $\$ 2.50$.

YES. Please send me $\qquad$ set(s) of RAINBOW binders Take advantage of these special offers with your binder purchase:
Save $\$ 1$ off the single issue cover price for back issues. Minimum order of 6 magazines. Please enclose a back issue order form from a recent issue indicating magazines wanted.
___ Purchase the "Official and Compleat Index to THE RAINBOW" for \$1. (Regular price \$2.50.)
(These offers good only with the purchase of a RAINBOW binder set)

## The Calligrapher

2Turn your CoCo or IPM PC into a calligrapher＇s guill．Make beautiful inritations， diplonas，certificates，love letters and labels．The Calligrapher can also be used for deshtop publishing to print nevsletters，flpers and ads．All this is possible with the Calligrapher which is nov arailable for both 059 or $/ 15-$ DOS systens．
The Calligrapher is a text fornatting prograt．It reads a text file vhich confains text and fornatting codes and prints the text in graphics rode on a dot－natrix printer in various fonts．
The formatting codes tell the Calligrapher which font to use，vhen to change fonts， and all about centering，left，right or full justification，line fill，wargin， line vidth，page size，page break and indentation．The ner Calligrapher Yersion 2 adds support for multiple colums（like this ad），iacros，page mubers，tenporary indents，headers and footers，interactive propting and 1ore！

## Calligrapher Fonts

The Calligrapher cones with three balf－inch fonts（quarter－inch shown here）：

## （0）d 军ngligh Gay Nineties Gartoon

The Calligrapher uses andy different fonts （type styles）in both half－inch and snaller sizes．For exanple，this ad vas foriatted and printed rith the Calligrapher using the Courrier fonts． About 150 other foots are apailable on 15 disks sets or 5 econory packages．

## The Coco Calligrapher

The CoCo Calligrapher prints the sane fonts as the 059／MS－DOS Calligrapher． Though not as poverful，the Coco

Calligrapher is an easg to use，vena driven progran for those loCo owners that don＇t use OS9．It can print lines left justified or centered and can print in condensed node on sone printers．

## Calligrapher Graphics

The popular Calligrapher prograns nor have graphics pictures，called Clipix that liay be printed．These are specified in pour text files sinilar to fonts．These clipix pictures cose about 65 to a disk．Each Clipix cones in a fer different sizes and orientations． Thile the Clipix pictures are easier to include rith the text using the OS9／MS－DOS Calligrapher，they way be printed using the Coto Calligrapher，too．

## Version 2

net version of the Calligracher is nor aqailable for OSS．Yersion 2 of the Calligrapher adds over 15 net directives over the Yersion 1．x．There is support for multiple colvans by just specifying the ridth and length of the colunins and the space betreen then． Also added are racros，terporary indents （useful around Clipix pictures）page numbers，headers and footers，and lore． Opgrade old OS9 versions for \＄12．50．

## KS－DOS Calligrapher

Calligrapher（Tersion 2）nop lets oviers of the IBM PC （and conpatibles）have the sase capabilities that the o5gers have had for gears． The MS－DOS font files are conpatible rith OSS，so if you hare the OS9 Calligrapher and font files，you can buy the nev MS－DOS Calligrapher and then simply copy your old OSS fon＇t files to your PC！llo other conversions are necessary．If you haze CoCo Calligrapher font files，you rill need to convert then to KS－LOS／OS9 fornat using the Calligrapher Kassager progran．

## Calligrapher Bassager

The Calligrapher Font Massager is a＂tool＂that allors you to do zang things to Calligrapher font files． You iay create ner fonts， rodify existing fonts，invert fonts， coupress fonts，double the height and／or vidth，halve the heipht and／or vidth and convert betreen CoCo RS－DOS and OS9／AS－DOS fornats．The Massager vas used to create Iany of the Calligrapher fonts and Clipix pictures．

## Prices

## A CoCo Relay Interface

The CoCo's built-in relay can be used easily by connecting an external device to the two REM leads from the cassette port. The easiest way to do this is to cannibalize a computer cassette recorder cable (Radio Shack Cat. No. 26-1207), changing the smallest plug (remote switch) to two alligator clips, as shown in Figure 6.

Connect the alligator clips to a second relay and battery as shown in the figure. The contacts of the second relay can then control automatic sprinklers, garage door manual switches, or AC appliances (with the cautions expressed in the warning above).

To use the circuit, just insert MOTOR ON and MOTOR OFF commands in a BASIC controlling program.

Another relay can be controlled by the TD line of the serial port. Use the CoCo serial extension cable (Radio Shack Cat. No. 263020), cutting off one end and using two alligator clips for the TD line and the ground line, as shown in Figure 7.

Connect the alligator clips to a relay as shown in the figure. A diode (Radio Shack Cat. No. 276-1101) must be placed in series with one of the relay leads so that the relay is turned on by either the positive or negative output, but not both. Without the diode the relay is on continuously (the relay is not polarized). No additional battery is needed. The contacts of this relay may now control small voltages and currents, or connect a second relay and battery, as shown in Figure 6, to control more extensive circuits.

To turn on this relay type in POKE \&HFF20.2. Reverse the diode if the relay does not turn on. To turn off the relay type in POKE \&HFF20, 0 from within a BASIC program.

## ROM Cartridge Port

There's a third way to control real-world devices from the CoCo . It's possible to buy or build a general-purpose I/O (input/

Figure 6: Using the Cassette Port REM Output

## The Rainbow Introductory Guide to Statistics

Most people have been using statistics since they learned to talk. Statistical results and concepts turn up everywhere. A large part of our daily news consists of statistics. Results of opinion polls, surveys, research studies, the Dow Jones industrial average and, of course, our sports news are all statistics. But statistics are often misused. The informed person needs to understand the basic concepts in order to judge the appropriateness of applications.

Rainbow Contributing Editor Dr. Michael Plog and coauthor Dr. Norman Stenzel have written The Rainbow Introductory Guide to Statistics just for beginners. It is an easy-to-understand guide to this sometimes mysterious area of mathematics. Their aim is to introduce readers to the realm of statistical processes and thinking, and they believe that the Tandy Color Computer is an ideal machine for the reduction of data.
Sharpen your skills with The Rainbow Introductory Guide to Statistics for only $\$ 6.95$. Included in the book is the CoCo-Stat program, a BASIC statistics program just for the Color Computer. ( 80 -column printer required.) Forget the typing hassle by ordering the accompanying Statistics Tape or Disk for only $\$ 5.95$. Spend your time learning and enjoying the new material, not debugging your typing. Just pop in the tape or disk and you're ready for action!

Save when you buy The Rainbow Introductory Guide to Statistics book together with the tape or disk. Get both for only $\$ 11.95$.

Please send me: The Rainbow Introductory Guide to Statistics Book \$6.95* The Rainbow Introductory Guide to Statistics Tape or Disk $\$ 5.95$ The Rainbow Introductory Guide to Statistics Book/Disk Set \$11.95

*Add $\$ 1.50$ per book for shipping and handling in the U.S. Outside the U.S. add $\$ 4$ per book (U.S. currency only). Kentucky residents add $5 \%$ sales tax. In order to hoid down costs, we do not bill. Please allow $6-8$ weeks for delivery.
Note: The tape and disk are not stand-alone products. If you buy either the tape or disk, you still need to purchase the book for instructions.

Figure 7: Using the Serial I/O Port TD Line

output) board that plugs into the ROM cartridge connector on your CoCo or slot in a Multi-Pak. Various rainbow advertisers offer the boards, and Tony DiStefano has covered the subject in his "Turn of the Screw" column.

Generally these boards provide 16 or so discrete Input/Output lines that can be programmed for input or output via BASIC or machine language programs. Relays or additional devices can be connected so the boards can be used to monitor real-world inputs or provide real-world control signals for many applications. A moderate amount of hardware knowledge is required to use these boards, however.

## Another Option for Real-World Control

Radio Shack giveth and Radio Shack taketh away. A great product for CoCo control applications, the Plug ' $n$ Power Appliance/Light Controller (Cat. No. 26-3142) that works in conjunction with the CoCo was discontinued by the Shack some time ago. It allows programming of the Plug ' n Power Remote Control Modules that control lamps, small appliances and dimmer switches. The controller is still available in some Radio Shack stores if you're interested (current price is $\$ 10$, quite a reduction from the $\$ 100$ original price).

With this controller you can truly program AC appliances without any fear of being electrocuted or having your Seiko watch case arc-welded to your CoCo chassis. Thanks to Zack Sessions of Castle Hayne, North Carolina, a Delphi regular, I have the programming guide to this beast. Let me know what you'd like to see here by writing to me at P.O. Box 3568, Mission Viejo, CA 92692. I'll be happy to write about how to program it.

And that's it for the odds and ends. Next month, more CoCo topics.

machine language，you can store eight characters in the space normally occupied by seven．However，this is harder to do in a higher－level language and seems too com－ plex．Also，your files are impossible to recognize．This may be a benefit if you want security but is not too helpful for typical home or office users．

Since text files contain a high percent－ age of blanks，it might be a good idea to work on removing them from a file．The difficulty then lies in putting them back． Useful compression schemes must be re－ versible．One way to note that a blank used to be at a certain location is to use the wasted bit as a flag．If the bit is on（comput－ erese for 1 as opposed to 0 ），a blank must precede or follow the current character．

After exploring the above possibility I decided to use the bit to mark that a blank should precede the current character．The decision was based on my belief that it would be easier to program the Compress and Expand tools that way．

The following listings are BASIC09 ver－ sions of Compress and Expand．While I have written versions in C，Pascal and even assembly，I believe BASIC09 has the widest appeal to other users since OS－9 Level II comes bundled with BASIC09．I keep packed versions of these in my CMDS directory and load RunB in my StartUp，so this is almost as fast as assembly language programs．

I use OS－9＇s redirection operators to connect the files to the program．To com－ press a file，enter：
compress＜bigfile 〉smallfile：de1 bigfile
To expand the file again，enter：
expand＜smallfile＞bigfile；de1 smallfile
Those of you with pipes in your system may want to accomplish nothing with the command：
compress＜bigfile！expand＞still bigfile
These programs should prove useful to you．I find files are typically compressed by 15 to 20 percent in size，which is noticeable when you are a packrat like myself．

One final word of caution is in order． Make sure the file you compress uses only values below 127．Any special（i．e．，for－ eign）characters above this number confuse the process as the high－order bit has already been set．
（Questions or comments concerning this program may be directed to the author at 8552 Huddleston Drive，Cincinnati， OH 45236．Please enclose an SASE when re－ questing a reply．）

# MaxIc in Multi-Vue 

By Dale L. Puckett Rainbow Contributing Editor

Last month we presented Robert Moody's Maxlc on Rainbow ON DISK because we wanted to get it into your hands as quickly as possible. Yet because the source code was too long to publish in one month, we needed a better way to present the actual listings. This month begins a three-part tutorial series that takes you on a step-by-step tour of MaxIc.

## MaxIc's Parts

MaxIc is an excellent example of the power you can harness using the modular programming techniques made possible by BASIC09. (The program is made up of no less than 27 modules.) This month the source code listings from seven of these files are published, along with line-by-line comments to help you understand how MaxIc works.

The seven modules featured this month are: MaxIc, Main, Menup, Setbuf, Clearbuf, Files and Showdir. Additional MaxIc modules include: Tandy, DirFiles, Geticon, GetFite, SaveIcon, LoadIcon, ReadIcon,

Dale L. Puckett, a freelance writer and programmer, serves as director-at-large of the OS-9 Users Group and is a member of the Computer Press Association. His username on Delphi is DALEP: on packetradio, KOHYD @ N4QQ; on GEnie, D.PUCKETT2; and on CIS, 71446,736.

ShowIcon, WriteIcon, WriteFile, Editor, UpdatBuf, GetDir, Mouser, GetAns, GetKey, ErrMsg, GetName, WinSet and LoadBar.

These modules were chosen so you could see some results after the first installment. After typing in the code from this month's column, you can see MaxIc's menus and much of its screen presentation. You can also see how it displays your directory icons visually, an impressive feature.

## Running MaxIc

Moody built MaxIc after studying the MVShell code from the July and August 1988 columns. It gives you constant access to the Tandy desk accessories menu as well as the standard Edit and File menus used in most Multi-Vue applications.

To run MaxIc, store the program's icon (which is included on RAINBOW ONDISK) in your /dd/CMDS/ICONS directory. Then store an AIF (Application Information File) containing the lines listed below in the directory you will be using when you run MaxIc. Name the file AIF.mic.

```
MaxIc
/dd/cmds/icoris/ticon.maxic
0
6
40
24
0
1
```

For example, this could be the directory you use to store all of your temporary icons. I store AIFs for the OS-9 applications I use the most in a directory named / dd/T00LS.

After you have clicked on the MaxIc icon to run the program, MaxIc puts up its menu bar and draws its screen. First move the mouse over the DirFiles label on the menu bar, then push the mouse button down once. As soon as you release the mouse button, you'll see a menu with eight items pop down from the menu bar.

If you maintain a directory where you store a number of icons in addition to your standard/dd/CMDS/I CONS directory, click on CHI. When it asks, give MaxIc the path list to your special icons directory. If you want to edit an icon stored in /dd/CMDS/ I CONS, simply point to Load Dir and push the mouse button down again. When you release it, you'll notice your disk drive begin to spin, and in a few moments up to 16 icons appear in the large window on the right-hand side of your screen.

To load one of these icons for editing, place the mouse pointer over the icon you want to edit and push the button down twice. Then, move the mouse pointer. You'll notice the arrow pointer has changed to the icon you pointed to when you moved the mouse. As you move across your tabletop, the icon you want to edit moves around on the screen.

If you move the icon over the MaxIc
icon at the top of the screen, it changes into a button that reads "Kill." If you push the mouse button while the Kill button is displayed, MaxIc deletes the icon file.

Now, move the pointer until your icon is located in the medium-sized box on the lower left side of the screen. When you move into the box, you'll notice the icon change into an Open button. As soon as the button reads "Open," you can push the mouse button again. When you do, you'll see the icon you want to edit pop into the small box in the upper-left hand corner of MaxIc's screen. Then a "fat bits" representation of the icon is drawn in the mediumsized window.

To edit your icon, press the mouse button while the graphics cursor is showing in the medium-sized edit window. The Open button becomes cross hairs. Move the cross hairs to where you want a pixel to appear and push the mouse button down once. The new pixel appears on your screen (in the color of your choice) in the Color Selection box above the right-hand side of the Edit window.

If you want to draw the icon with a different color, move the pointer over the Color box and press the mouse button until the color you want to draw appears in the box. Then move the cross hairs back into the Edit box and finish drawing or editing the icon.

When your icon looks the way you want it, save it. Using MaxIc, this task is very intuitive. Simply move the mouse pointer until it's over the small box displaying your icon. Click the mouse button twice and then move the pointer, which now displays your icon, into the large directory window along the right-hand side of your screen. When the pointer arrives over the box you'll notice it changes to a Save button. When you see the Save button, push the mouse button and the icon is written into a file in the directory containing your icons.

Here's an alternate method you may use to save the icon: Move the mouse pointer up to the menu bar and press the button when the pointer is over the Files label. When the menu pops down, move the pointer over the Save menu entry and push the button down again. That's all there is to it. You may also print a hard copy of the Hex codes contained in your icon file by moving the mouse pointer over the Files menu and selecting the print entry.

If you have loaded an icon and want to leave the original icon file the way it is, click the mouse button over the Save As entry in the Files menu. MaxIc then asks you for a new filename. You'll save yourself a lot of work and find it's often much easier to edit an old icon rather than create a new one from scratch.

## Looking at MaxIc's Code

If you have already typed in the MVShell program from this column last summer or better yet, DoMenu from last fall, you'll find you won't have to do too much typing to get the MaxIc module entered. I'll highlight the differences here.

The first nice touch Moody added to our MVShell code occurs at Line 0093 in the listing. First he uses $G f x 2$ and OS-9's device window end call (dwend) to kill the window that called MaxIc. Then Moody creates a window of the type MaxIc needs and a color he likes with the device window set call (dwset). When the new window appears, MaxIc uses the Gfx2 select call (select) to claim it as its own.

The next difference you'll notice appears in Line 016C where you'll see that Moody dimensioned an additional variable named mn_Dfil. This byte stores the value of MaxIC's DirFiles menu.

The _tanitms entries are identical to MVShell and the other KISSable OS-9 code. They define the menu that lets you exercise the standard Tandy desk accessories while your program is running. Moody's file menu is constructed in a manner similar to mine. However, he gives you nine choices - Clear, Open, Save, Save As . ..., Abandon, Print, Quit, Read . . . and Write . . . on his files menu.

At Line 04E8, you'll find the definition of MaxIc's DirFiles menu items. This menu's selections include Write, ReName, Delete, CHI, Load Dir, CHD, CHX and Print. The code at Line 06D3 then defines the DirFiles menu.

As you near the end of the MaxIc module, you'll notice Moody replaces BASIC09's Intercept routine with his own - beginning at Line 0921. This lets him handle signals generated by the mouse. Once he has accomplished this, he merely runs Main, the program that choreographs MaxIc's mouse-based antics. Notice he passes the value of the signal from the mouse to the procedure Main when he runs it.

## Pondering Main

Now we have our work cut out for us. It's time to study the code that makes Maxlc tick. Our first stop is at Line 00DF. Here, Moody creates a new data type, which he uses to pass data back and forth between the 20 -plus modules that make up MaxIc.

Moody has named his new bASIC09 data type Mi csys. All data dimensioned as type MicSys holds two strings, each 48 bytes long. The fields containing the strings are named Dname and Iname - for directory name and icon name.
The two strings are followed by a 144 byte array, which holds the bit map that paints the image of the icon and several
individual byte-wide variables, including Grpid, BufNo, Number, MenSel, MenNum, ErrNum, Color and Scount. Most of the latter are self-documenting, with scount being a possible exception. Scount holds the number of times you have scrolled the directory window. Two integer fields complete the definition of the data type MicSys. They hold the horizontal and vertical position of the mouse pointer.

After Moody defined the data type MicSys, he reserved memory for a variable of type MicSys named MS using BASIC09's DIM statement. (MS uses 252 bytes of storage.) Demonstrating the power of BASIC09's parameter passing, Moody easily passes 252 bytes in 13 different fields between Maxlc's procedures - and he does all this by passing just the one variable MS.

Moody comes up with a nice trick in Line 0172. Here he uses the SysCall routine to read a mouse packet, and then uses the information from the packet to set up MaxIc for the proper mouse resolution and side. It's an elegant approach I've never used.

When MaxIc returns from the GetStt system call at Line 01A2, the 24th byte of the array named pac contains the resolution, high or low, of the mouse, and the second byte of the packet contains information telling OS-9 which joystick port the mouse is plugged into.

With this information at his fingertips, Moody moved these two bytes into his simulated X register, regs . x , and used the SS. GIP SetStt call to set up the system for MaxIc. You'll notice that MaxIc is written in longhand, i.e, before Gfx3. We published Gfx3 in August 1988 to help make our code shorter and easier to understand - not to mention easier to type. MVShell, after which MaxIc is modeled, was written before $G f x 3$.

If you are typing the procedures for Maxlc from scratch and are already using Gfx3, you may want to save yourself some typing. See the column that presented $G f x 3$ for details, or take a look at DoMenu in last November's column to find out how to use Gfx3. Essentially you can replace this code:

```
regs.a:=0
regs.b:$89
regs.x:=addr(pac)
regs.y:=0
run SysCal1($8D,regs)
```

with:
run gfx3("StdIn","gs.mous", addr(pac))
Notice the Gfx3 calls are almost selfdocumenting - and much shorter. In our later KISSable OS-9 listings you'll also notice we usually create a number of vari-
ables that give us a mnemonic definition of the many obscure OS－9 SysCall values． For example，it is very hard to remember that $\$ 89$ is the value that means SS＿Mouse， but SS＿Mouse is easy to remember．

You can have these mnemonic defini－ tions at your fingertips by including a sec－ tion of standard code at the beginning of your BASIC09 programs．First you dimen－ sion the variables．Then you assign the proper value to them．If you would like to make these mnemonic substitutions in MaxIc，see DoMenu in the November 1988 column or check out the listings of Find and DirList in the July 1989 column．They are ready for you to use．

Here are several short examples of the type of definition that can save you a lot of trouble if you need to read your code six months after you write it：

DIM Grp＿Ptr，Ptr＿Arr：BYTE
Grp＿Ptr：$=202$
Ptr＿Arr：＝1
or：
DIM I＿SetStt，I＿GetStt，SS＿MnSet：BYTE I＿SetStt：＝\＄8E
I＿GetStt：＝\＄8D
SS＿MnSe1：＝\＄87
Which notation is easier to remember？
Moody gives us another good example of BASIC09 code in the line marked 01 FF ． Here he uses the OS－9 Get Process ID system call（Grpid）to find out the ID number of the process running MaxIC．He then uses this number as the GrpID for his buffers．He does this because every OS－9 process running at any time has a unique ID．A group buffer ID of the same value is always unique．This trick eliminates buffer－ numbering conflicts in your OS－9 programs．

Menup，SetBuf and ClearBuif are the first three procedures run by the procedure main． After running these procedures，MaxIc enters a continuous decision loop at Line 02B3．

Near the beginning of the loop，at Line 02EA，Moody uses the ms＿sig Setstt call to set the value of the signal the mouse will return when you push the button．He then uses the OS－9 F $\$$ S 1 eep call to put MaxIc to sleep until the mouse button is pushed． When someone pushes the mouse button， MaxIc wakes up to find it must decide what to do．

As you run down the series of OS－9 system calls MaxIc uses on the next page， you＇ll begin to understand why we like to use mnemonic names for syscalls，etc．To study Moody＇s code，use a list of OS－9 GetStt and SetStt calls arranged in nu－ meric order．Look at the value Moody puts in the field regs．b．The 6809 B register is

Editor＇s Note：The entire set of MaxIc procedures were presented on the August 1989 RAINBOW ON DISK．The files listed here are included on this month＇s RAINBOW ON DISK in source form．In addition，the AIF，mic file is stored in the SOURCE directory and the scon．maxic file is in the CMDS directory．

## MORE BAUD LESS BUCKS

## Save Time and Money with a Surprisingly Affordable $2400 / 1200 / 300$ BPS Hayes Compatible Modem for any Computer.

Don't be fooled by the low cost of these 2400 baud moderns. These are high quality modems made in the USA, with performance features unmatched by competitors costing three times as much.

This is full-featured Hayes compatible modem that works with any computer. It features superior Hayes compatibility, advanced digital signal processing, and adaptive equalization for great performance and reliability. All of this in a compact, attractive goanywhere package that's not not much larger than a paperback book.

Convenience features like call progress tone detection, auto-dial and auto-answer, a call progress speaker with'
volume control, a second jack for a local phone, on board diagnostics.

Money saving premiums for sign-up and connect time for Delphi, Thie Saurce, CompuServ, etc. Software available: ProcComm (PC) + 5; QuickLink (Mac) +5; WizPro is tree (shareware).

Backed by two year mifg. warrantee, so you can buy with confidence that comes with 11 years of telecommunication experience.

2400/1200/300 BPS modem \$125.00
(Please add 2.50 shipping and handling) Dealer inquiries welcome.

## GCS FILE TRANSFER UTILITIES

See: Review - December Rainbow. Dale Puckett - November Rainbow.

The GCS File Transfer Utilities provide a simple and quick method to transfor text and binary files from and to a variety of Hoppy disk formats.

Just place the PC (MSDOS), RSDOS, FLEX or MINi-FLEX disk into your disk drive - enter a simple command and the file is copied into a OS-9 file. File transier back is just as simple. Under Multi-Vue
version, just select command from one of three menus.
Commands Dir of PC, RS or FLEX disk
Dump disk sactor of PC, RS or FLEX Read file from PC, RS or FLEX disk
Write file to PC, RS or FLEX disk
Rename file on PC disk
Delete file from PC disk
Format PC disk
Extensive Single, Double sided disks.
Options
Single, double density disks. 35,40 or 80 track floppy drives. 8 or 9 sectors (PC)
First level sub-directories (PC). Binary files. Use pipes for direct and multiple transfers.
Requires OS-9. 2 drives (one can be hard or ramdisk - one floppy 40 T DD DS). Multi-Vue for Multi-Vue version. SDISK (SDISK3 for COCO III).

## GCS File Transfer Utilities for CoCo

| Multi-Vue version | $\$ 54.95$ |
| :--- | :--- | :--- |
| Standard version | $\$ 44.95$ |
| SDISK or SDISK3 | $\$ 29.95$ |

Standard diskettes are OS-9 format ( $5.25^{\prime \prime}$ ) add $\$ 2.50$ for $3.5^{\prime \prime}$ Orders must be prepaid or COD. VISA/MC. Add $\$ 1.75 \mathrm{~S} 8 \mathrm{H}$, COD is additional.

## GRANITE COMPUTER SYSTEMS <br> Route 2 Box 445 Hilisboro, NH 03244 (603) 464-3850

OS-9 is a trademark of Microware Systems Comporation and Motorola Inc. MS-DOS is a trademark of Microsoth Com. FLEX is a trademark of TSC, Inc.
almost always used to tell SysCa 17 what type of GetStt or SetStt call you want to make．You＇ll find a description of all OS－ 9 GetStt and SetStt system calls in the ＂Technical Reference＂section of your Tandy OS－9 Level II manual．

For example，if you look up the $\$ 89$ used in Line 034A，you find it is the SetStt call GS＿Mouse．In other words，SysCall is going to read the status of the mouse and place the information it finds in the data packet named pac．

Now let＇s take a closer look at MaxIc＇s decision－making．The process starts at Line 03 BD ．The call here is SS＿MnSe 7，telling you which menu the mouse was clicked over and which item was selected from that menu．Notice how Moody has carefully used the SS＿UMBar call to make sure MaxIc＇s menu bar is always updated．

At this point，if you move the mouse pointer over the menu bar，the value of MS．MenSel should be $0,4,5,20,21$ or 130 ． If the value is 0 ，the mouse wasn＇t over a menu selection．If MS．MenSel is 4 ，the mouse driver wants to scroll the directory window up．When MS．MenSe 1 is 5 ，the user wants to scroll down．An MS．MenSel value of 20 means someone has pushed down the mouse button when the pointer was located over the Tandy desk－accessory menu．Likewise a value of 21 means the mouse is over the Files menu．A value of 130 means the user wants to use the DirFiles menu．

Because OS－9 uses the graphics power built into Wind Int to determine the action users want to take，all you have to do is write the code performing the action．OS－9 takes care of everything else．This makes life much easier．If you had to spend all your programming time writing menu handlers，you wouldn＇t have time to write your application．

In the middle of MaxIc＇s decision loop you＇ll notice the program runs one of three other procedure files．The procedure run is determined by the location of the mouse when the button is pushed．

For example，if MS．Mensel is 20，MaxIC runs the procedure Tandy．We did not print this procedure this month because it is almost identical to the code in DoMenu． Refer to our November column if you would like to activate the Tandy menu before we publish Moody＇s code next month．

If the value of the MS．Mense 1 field is 21 ， MaxIc runs the procedure Files．We in－ cluded it in this month＇s section so you have some good examples to use when writing any Multi－Vue program that reads or writes from disk files．We also held the procedure DirFiles for a future column in this three－part series．

In addition to the menu decisions，MaxIc must make other decisions based on where

```

the mouse is pointing on the screen. It does this by reading the value of the horizontal and vertical fields from the 32-byte array or packet of information from the mouse. It compares the values returned from the mouse with the values of known locations on the screen.

For example, at Line 0627 the code takes a look to see if the mouse pointer is located in the editing box. It can determine this because it knows where the mouse pointer is located. It also knows the editing box begins 32 pixels in from the left-hand side of the screen and is 210 pixels wide.

Additionally, MaxIc knows the editing box begins 60 pixels down from the top of the screen and is 225 pixels deep. A simple IF ... THEN ... ENDIF construct can answer the question quickly, especially if you throw in a few logical AND statements.

From this point on in the program, MaxIc is made up of a series of code sequences that check the location of the mouse pointer and react accordingly. It most often reacts by running another procedure, which takes care of the job at hand.

## Putting the MenUp

The first added procedure MaxIc runs is MenUp. It creates the windows and draws the boxes that give MaxIc its visual personality. The code is straightforward and consists of a series of Gfx2 commands. The Gfx2 OWSet command is used to draw the three overlay windows used by MaxIc. Moody creates his overlay windows with a type of 0 so they remain on the screen.

After creating an overlay window, Maxlc calls the procedure Winset (to be published next month). WinSet is a short procedure that runs SysCal1 to set the type of the overlay windows. It also draws the borders or scroll bars on the overlay windows. The type of window is determined by the number or parameter Moody passes to WinSet. You may want to predefine a mnemonic variable for each window type and use the variable name here instead of a number.

When Winset has finished drawing the window borders, MenUp then closes the overlay window. But because the window was created while using the 0 byte as the first parameter, the borders remain on the screen after the window is closed. MenUp also uses the Gfx2 color, bar, box and cursor movements commands to display its titles and dress up the MaxIc screen.

## Sliding into SetBuf

SetBuf is a short BASIC09 procedure that loads several graphics images into buffers in your Color Computer's memory. The work is done by the Gfx2 GPLoad command. The data statements are a Hex representation of the graphics images.

The best source of information about building graphic icons and generating data statements to represent them can be found in the last chapter of the Rainbow Guide to OS-9 Level II: A Beginners Guide to Windows. Our co-author, Peter Dibble, also presented a BASIC09 program to generate the data statements in the same chapter. The Clear and MaxIc icons, along with the Open, Save and Kill buttons are all generated from the data statements in SetBuf.

The ClearBuf procedure writes a series of null bytes or zeros into a graphics buffer. It receives the ID number of the buffer from Variable MS, which is a parameter of type MicSys that Cl earBuf receives from Maxlc when it is run.

## FILES and ShowDir

The procedure FILES is run when MaxIc's MenSe 1 syscall returns a value of 21. Depending on the item number selected, FILES goes to and runs one of nine subroutines. Those subroutines perform the action selected from the menu. For example, if you click the mouse button while the pointer is located over the Clear item, FI LES goes to Line 1. It then runs the procedure Getans, which asks you if you want to clear the icon. If you answer yes, it runs the procedure ClearBuf.

Code in the remaining FILES subroutines opens icon files, saves them, saves them with a new name, abandons them, prints them, quits, reads them, or writes them to your screen or device. Notice how Moody has written an individual procedure to perform each of the common actions he needs.

For example, to write an icon file, MaxIc first prompts you for the name of the icon file you want to write by running the procedure Getname. Then it runs another procedure, Writeicon. When Moody writes another BASIC09 program, he is able to use some of these modules again.

Finally ShowDir is the procedure used to display the icons in your icons directory on the screen. ShowDir receives two parameters when it is called by MaxIc - MS, a variable of the type MicSys we described earlier and $D R$, a variable of type Mic. The first field of $D R$ contains a string variable called name. It is followed by select, a single-byte variable and two integer fields that hold the $x$ and $y$ location of the mouse pointer.

The procedure ShowDir ends when there are no more icon files in the directory display and because of the code at Line 00D3, Maxlc knows if you try to show the icons in an empty directory. When you do this it ends and returns you to MaxIc. At Line 0116 ShowDir enters a FOR ... NEXT loop that prints four icons on a 42-pixel-

## RGB and Disto Revisited

Last month I installed a new Disto 4-in1 interface card on my Disto Super Controller II and was planning to drive the hard disk with new drivers from Roger Krupski at RGB Computer Systems in New York.

I've been running the combination for about a month now and it's fantastic! To take advantage of RGB's software, I backed up the data on the Seagate ST-225 hard disk that I had been driving with an SASI controller card, and replaced the controller with a brand new SCSI controller from RGB. I then reformatted the drive.

This change let me set up the hard disk with 10 standard 35 -track, single-sided floppy disks and one giant OS-9 hard disk holding more than $191 / 2$ megabytes of data. Many people who buy the RGB system split the disk in half and emulate several hundred standard Tandy floppy disks on their drive. They leave the other half free

for OS-9. But, you know my priorities! I only needed 10 standard Tandy drives.

The RGB system was easy to install. Krupski's hard disk driver, hdisk.dr is installed by using 059Gen to generate a new 0S9Boot file on a fresh disk. The power of the system is unleashed later.

But before you run 0S9Gen, it's best to patch the INIT module to change the / $\$ 0$ to a/dd. Krupskisupplies a program to do this for you. Then, you patch CC3Go and change the /h0 and /h0/CMDS to / dd and/dd/CMDS.

After you have run OS9Gen and have a new OS-9 floppy boot disk, do a cold reset of your Color Computer to return to RSDOS - or RGB-DOS, to be more precise. It is located on the chip you plug into the EPROM socket of your Super Controller II. You then type RGB's DRIVE OFF command to turn off Drive 0 and Drive 1 on the hard disk. After this you are able to access floppy Drive 0 and floppy Drive 1.

Once you have access to your floppy disk drive, insert your new boot disk into Drive 0 and make a backup from Drive 0 to any one of the simulated Tandy floppy drives located on the new hard drive. I chose Drive 5. Once the backup is complete, run a program from RGB named LINK.BAS. This program calculates the absolute $L S N$ in which the bootfile resides

    and writes the information along with the boot file size to LSN 0 of your hard drive.

Once you have run LINK. BAS, you can boot OS-9 from the hard disk by typing DOS 5. Yet life can be simpler.

To take the process one step further, you may then use the RGB DRIVE ON command to turn Drive 0 and Drive 1 on the hard disk back on. Then type the one-line command above plus DOS 5 and save it in a file named AUTOEXEC. From this point on, all you need to do to boot OS-9 is turn on your Color Computer and hard disk drive. Does it get any better?

The boot file must still be contiguous, and you must always 0S9Gen on to a floppy formatted as a 35 -track, single-sided disk so it may be backed up by the Tandy BACKUP command.

If you are using the RGB / Disto system configured like this, you no longer need to worry about having Shell and GrfDrv in a CMDS directory on the boot disk. Because you patched CC3GO, OS-9 looks for those files on the hard drive - device / dd.

If you buy your hard drive from RGB, Roger will configure it before he ships it. This means you can simply plug the cable into your Disto 4-in-1 card and run it. It's fantastic.

## And, Finally!

The latest issue of MOTD from Editor Bill Brady and the OS-9 Users Group was fantastic. Brady keeps on making this publication better. The issue we just received featured Rave - a real-time audio/ video environment from Microware. It's the user interface of the future for OS-9 68 K systems and includes three packages - a graphics file manager, graphics support library and presentation editor - all implemented as extensions to Microware's OS-9 real-time operating system.

Another highly recommended article in this MOTD is Microware's "White Paper," describing OS-9 signals. Reading this article is a good way to learn about OS-9 interprocess communications. For information about the OS-9 Users Group, write them at 1715 East Fowler Ave., Suite R237, Tampa, FL 33612. Allow four to six weeks for your application to be processed.

And speaking of the Users Group, it's time to tip our hat to a new slate of officers. Your new president is Kevin Darling. Bruce Isted is the vice president. Bill Turner was elected secretary and George Dorner was elected to continue as OS-9 UG treasurer. Congratulations to one and all. Stand by you're going to see some exciting developments from these guys soon!

That's it for September. Until October and another installment of MaxIc - keep on hacking!

## NEW: Low Power 512K CoCo3 Ram Expansion Board (call for current \$)

SDISK - Standard disk driver module replacement allows full use of 40 or 80 track double sided drives with OS-9 Level I. Full compatibility with CoCo 35 track format and access all other OS-9 nonCoCo formats. Easy installation. \$29.95
SDISK+BOOTFIX - As above plus boot directly from a double sided diskette.\$35.95

LEVEL 1 OS-9 ONLY
LEVEL 2 OS-9 ONLY
SDISK3 - Level II version of SDISK driver. Same features as level I (except bootfix not required to boot from double sided). $\$ 29.95$
MSF - MS-DOS file manager. Complete file transfer capabiltites. REQUIRES SDISK3 $\$ 45.00$ or with SDISK3 for $\$ 65.00$
L1 UTILITY PAK 40 utilities including MACGEN $\$ 49.95$
L2 UTILITY PAK Level 2 Ram Disk and Printerr driver plus 10 more $\$ 39.95$ BOTH L1+L2 Paks for $\$ 75.00$
PC-XFER File transfer utilities read/write/format MS-DOS format
disks under COCO OS-9, REQUIRES SDISK or SDISK3. \$45.00 FORTH09 A FORTH-83 Standard implementation specially taylored for OS-9. Includes complete forth 6809 assembler and more. Programs written in forth can instantly be saved as compact executable machine language modules. Supplied with complete printed documentation. $\$ 150.00$ ( + \$3 S\&H) SEND S.A.S.E FOR LATEST CATALOG
All diskettes are in CoCo OS-9 format unless otherwise requested; other OS-9 formats can be supplied for $\$ 2.00$ additional charge. All orders must be prepaid or COD, VISAMMC accepted, add $\$ 2$ S\&H for first software item, + . 50 for each additional item, additional charge for COD.

"What if...
all CoCo music software programs were this good?"
UltiMusE III (the Ultimate Music Editor, CoCo III) is a MIDI 'Notation Sequencer'. It lets you write and edit sheet music on a $640 \times 192$ graphics screen using the mouse, play it on ANY MIDI-equipped synthesizer(s), and print out the score... Written by an experienced computer professional who is also a serious amateur musician and composer. With UltiMuse III, there is no more 'faking' to play what you want to hear! Perfect for the trained musician, UltiMusE III's natural notation also helps a beginner to copy a favorite piece of sheet music just as it looks. Why should your musicsound like a machine? UltiMusE III has a wide pitch range, from 4 octaves below Middle C to over 3 above. Each staff has a 4 -octave range centered on one of four clefs Treble, Guitar, Bass, and Double Bass. Staff placement, clefs, and part and MIDI channel assignments can ALL be edited... Professional software should use a professional Operating System. UlitiMusE III uses the advanced features of OS-9 Levell land does not interfere with its windowing and multi-tasking in any way.

## SYSTEM REQUIREMENTS

CoCo III with at least 256 K memory \& OS-9 Level II Mouse or Joystick. Hi-Res Joystick Adapter recommended Synthesizer(s) with MIDI-In jack, plus serial cable Tandy Dot Matrix Printer and a MIDI Interface Pak \& Multi-Pak Interface are optional
