#  EO SENINUA 

Something is killing off the members of the legendary order of Kyum-Gai. In desperation, its laaders have called upon the powers of the ilfe stone to resurrect you, thair greatest hero: the NINJA GA1-DAN. Now, you must find and destroy the evil forces behind this dark plot. Use a multitude of martial arts moves to deteat your enemies, obtain treasure and weapons. and evade obstacles. Kyum-Gai; to be Ninja uses the most detailed $320 \times 200$ resolution, 16 color graphics, the highest quality digital sound effects. and spectacular animation to bring you the greatest martial arts game your coco III has ever seen. Created by the author of Warrier King, this incredlble arcade game is a definite must for your coco ill sotiware collection. Join the ranks of the Kyum-Gai and find out what it means to be Ninja! Req. 128 K CoCo ili, disk drive, and joystick (2-bution joystick supported)

SoundTrax is an unprecedented sound sequencing system for the CoCo ili. It requires no extra hardware (i.6. midi keyboards, cables, etc.). All of it is contained in your CoCo This amazing program will read in a digitized sound and play back all of the notes in the octave in which it was recorded And it's POLYPHONICI You can sequence up to four voices at one time, and not only the same sound! With as many voices as can be held in your memory, depending on the song, you Can create a score of up to THREE DAYS in length using drums, horns, strings, even your own voice! And you can play tham all together! Using the bulit-in windowing point-and-click editor, you can cut, paste, even synchronize the score to just the way you like it. Use the pre:sampled sounds from tha disk included, or make your own by importing them from some of the more popular digitizers available. Also CALL for the availability of extra sound sample disks! Get it today: you won't belleve your ears: heq. 128 K CoCo III. mouse/joystick, and disk drive.

## Correction

An error in production resulted in an incorrect photo placement on Page 76 of the December 1989 issue. The photo appearing on that page was of UlitiMuse 3, not Lyra as the text implies. The correct photo appears below. We apologize to both Rulaford Research and Second City Sofiware for this mistake.

## The Old Kid on the Block Editor:

I was really impressed with my first issue of THE RAINBOW a couple of years ago. It has been more than a year since I bought your magazine so I picked one up at the bookstore. Reading through it, I was a little disappointed that it contains so little about the CoCo 2 . I realize the CoCo 3 is the new kid on the block, but there are still a lot of CoCo 2 lovers out here.

I hope THE RAINBOW remembers not everyone can afford to run out and buy the latest version of a good thing. I really enjoy your magazine, and I realize it's hard to please everyone, but keepupthe good work and don't forget the CoCo 2 s .

Linda Sigite Alton, Illinois

## Help a Possibly Distant Relative

## Editor:

I'm looking for a program for the CoCo 2 that I can use to create a family tree. I've seen one for the CoCo 3 but nothing for the CoCo 2 . If someone has such a program, please contact me.

James L. Mollman

## Inspiring Authors

## Editor:

When are we going to see some more additions to the Rainbow Bookshelf? I would
like to see something along the lines of "The Completely Official Rainbow Beginner's Tour Guide Through OS-9 Level 2 Assembly Language Programming Techniques, Procedures, Practices and Methods." The book would help those of us who know a little about assembly language to gain the skills we need for turning our ideas into completed programs that run in the OS-9 environment. This can only be good for the CoCo community and consequently for THE RAINBOW.

> Robert W. Kemper
> Hinesville, Georgia

## Blaster Alteration

## Editor:

Congratulations on your Blaster program. I was writing a similar one, but I don't need to any more - thanks.

Since I am using the new Extended $A D O S-3$, which starts in lowercase, it was necessary to place a POKE 282.255 : at the start of Line 20. The 34 in lines 810 and 830 was changed to 39 to permit access to 40track disks.

Line 850 had to be changed because the sectors above ES and those below SS are never accessed in the multiple-track search. Lines 842,844 and 846 are also added:

```
842 LOCATE5.22:PRINT"S E A R C H
    I N G"::FORTR-ST TOET
844 TFTR<ET THEN NS-18 ELSE NS-E
S
846 IFTR>ST THEN MS-1 ELSE MS-SS
850 FORSC-MSTONS:GOSUB40:GOSUB28
0:PA=INSTR(1.A$,MD$):PB-INSTR(1,
B$.WD$):PC=0:1F (LEN(WD$)-2)AND(
RIGHT$(AS,1)=LEFT$(NDS,1)) AND(L
EFT$(B$.1)=RIGHTS(MO$.1))THENPC=
1
```

I think the above atterations will help other users.

> Eduardo S. Prado, Ir. Sao Paulo, Brazil

## A Thousand Words Without a Picture Editor:

Will someone please help me? I have a Color Computer 3, FD-502 disk drive, DMP132 printer and DeskMate 3.

DeskMate 3 has a Paint application as well as a Print command for any graphics you create with it, and the DMP-132 printer has graphics capabilities. The problem is, the printer won't print graphics.

I consulted the folks at my local Radio Shack several times, and they suggested that I did not have the DIP switches set in the correct position. They said that I must have had Switch 1-8 in the Word Processing mode instead of the Data Processing mode. Life should be so easy.

Most recently I was able to take my printer to Radio Shack so the manager could hook it up to his CoCo 3 and disk drive. I had the same results, and it did no better when he connected a new DMP-133 and tried to print graphics from the DeskMate Paint application on it. All I get on either printer are continuous lines of dot matrix.

## Hard Drives Versus Floppies

## Editor:

I recently acquired a MiniScribe Model $342525-\mathrm{Meg}$ hard drive. This drive was originally configured in a TallGrass case with a TallGrass controller and used on an IBM PC. If the controller was stripped off and a CoCo controller (such as the type used with the Seagate drives) purchased, could this drive be made to work with a 64 K CoCo 1 or 2 with OS-9?

Can you give all of us hard drive neophytes a clear and detailed explanation of how a hard drive works and the differences and similarities between hard drives and floppies?

Keith Abbott
Urbana, Illinois
See the March 1989 issue (Page 44) for a comparative look at hard drive systems for the CoCo.

## Tazman Fix

## Editor:

Two of our customers recently reported experiencing problems while attempting to load our newest game, Tazman. After typing in TAZMAN to load the game, they both received Error 214, No Permission. After investigation, it was discovered that the cause of the error was a missing window server. If windows are not opened after booting OS-9, an Error 214 occurs. Otherwise the game loads and runs perfectly.

Only those copies of Tazman sold during the Somerset RAINBOW fest last month seem to be affected. We have already be-

by Walter Bayer

The ultimate desktop publishing program for the CoCo 3 . Allows COMPLETE CONTROL of all the elements in the page! Features pull-down menus, icons \& diaiog boxes, drawing tools (create boxes, polygons, rays, circles, elipses, brush shapes), cut, copy, stamp, paste, zoom, flip horizontal/vertical, enlarge/reduce, rotate at 45 \& 90 degrees, stretch, undo, import any ASCII text (even CoCo Max $1 / 2$ Creations \& Fonts!), create $2 / 3$ columns, change fonts/invert text \& page preview. Includes 14 fonts \& 60 pieces of clip art. No other desktop program comes even close. Req. CoCo 3, RGB/ Monochrome Monitor, Min 1 drive, Tandy Hi-Res Interface, Joystick/mouse \& DMP 105/106 or Epson/Gemini \& Compatible Printer. Only \$49.95. w / Hires Inteface Only \$59.95. w/ Hires Interface \& Mouse: \$79.95

## Color Schematic Designer Ver 2.0

The best Circuit Designer for the CoCo 3. Pull Down Menus, hi-resolution symbol sets, Keyboard / Mouse / Joystick (with proportional cursor speed system), lightning fast multiple UNDOs, Symbol Add / Modify/Rotate/Line/Box Draw, Hi-res Fonts, workspace of $640 \times 1000$ pixels, 3 layers, font styles (fancy, thalic, block, computer, etc). Supports DMP/ EPSON / GEMINI \& compatible printers. Supports near laser quality printouts on almost all EPSON Compatibles! Only \$39.95. CSD 1.1/ 1.2 owners can upgrade to version 2.0 by sending $\$ 10$ with proof of purchase. (See Review in September 1989 Rainbow)

By Kevin Berner
Best BBS for CoCo 3. Features Xmodem Up/Downloading, unlimited menus, login, message base, built-in clock/calendar, execution of external programs. ## Xenocopy

An amazingly versatile program that allows you to format/ duplicate / read/write disks between 300 different computers. For ex. you could transfer files between $\mathrm{CoCo}, \mathrm{IBM}, \mathrm{NEC}$, Model 3, etc. Requires an IBM Compatible with 2 drives. Only $\$ 79.95$
gun contacting every customer who purchased Tazman to alert them to this problem and to supply them with the fix.

In order to get Tazman running, do the following: While your system disk is still in Drive 0, type INIZ W6. Then put in your Tazman disk and follow the instructions in the manual from Step 5. When distributing disks at RAINBOWfest, Eversoft Games did not take into account the people who start their systems up without any windows initialized. We apologize for this problem and will supply an updated disk free of charge for anyone who mails the master disk back to us.

I can be contacted on Delphi (username JEMGE), or by writing directly to Eversoft Games, Lid.

Judith A. Emge
Eversoft Games, Ltd.
P.O. Box 3354

Arlington, WA 98223

## Michigan Squinter

## Editor:

Each month I eagerly await my precious copy of the rainbow. When my November issue arrived, the first thing that caught my eye was a game of checkers for the CoCo 3, but the listing's type size had been reduced so much that it is impractical to type in.

Although I noticed in the Reader Survey a few lines for comments, I didn't see any questions pertaining to the change in type size. Type size is very important in listings. The smaller the type, the greater the risk of errors, and the less interest one has in typing in the listing. I only hope enough readers write in and complain to change your mind.

## Harold R. Burchett LeRoy, Michigan

The fact is, we simply cannot maintain the current volume of material with wider listings. A wide listing 90 inches in length takes up four andone-half magazine pages, while a narrower listing of the same length takes up only three. Still. we always keep an open mind where reader opinions are concerned. Thank you for sharing yours.

## Looking for Improvements

## Editor:

I am using a CoCo 3 with VIP Desktop. It's a great program, but I need more. Has anyone written a program to enhance the database program? Some of the improvements I'm looking for include being able to use a RAM disk with the program for faster access, run databases larger than the current 550 records (select drive capacity). and change and add fields to the database.

If someone can help in any of these areas, I would appreciate it.

Todd Conkey 1090383 rd Ave. Delta, BC V4C 2E9 Canada

## Unshaky Bob

## Editor:

After reading the software review of Notes in the July 1989 issue of THE RAIN. Bow, I sent for a copy of the program from Robert Pori. The program I received loaded easily and the documentation made editing a song simple. When I tried to print it out on my printer, it wouldn't run.

A letter to Bob Pori brought a quick. responsive phone call in which we discussed possible corrections. These suggestions got the printout working, but there remained one small bug. I contacted Pori again, and - in spite of his house being badly damaged during the recent California earthquake - he managed to correct the bug and to send me a revised program on disk.

If anyone is interested in printing out music scores on a computer, I recommend Notes and the services of Bob Pori.

Deane Milliken
Spartanburg, South Carolina

## Inserting a Caret

## Editor:

In your recent One-Liners for the Color Computer, I noticed the use of the caret ( $\wedge$ ) symbol as a type-in requirement. Neither my Color Computer 2 keyboard nor my Brother portable has that symbol, and I am not sure what key to use.

> LJ. Busching
> Port Hueneme, California

To generate the caret, press the uparrow key. You will see an up-arrow on your screen, which is the $\mathrm{CoCo}^{\prime}$ s representation of the caret character.

## My Son Needs Games

## Editor:

I would like to express my concem about the future of RAINBOW magazine. You have given your readers constant affirmation that the CoCo and therefore THE Rainbow continue to thrive, but when I look at the dwindling size of my magazine, I can't help but wonder. I would like to see more games published. Personally I am impressed by the amount of assistance provided to CoCoers by your regular and guest columnists, but it is the games that keep my son interested in learning about computers.

Now I would like to praise Cer-Comp's TextPro IV. I purchased the program and
when it arrived in the mail (three days after I phoned in my order), the disk did not function properly. I called Cer-Comp and Bill Vergona patiently went over the loading and operating procedures with me to make sure the problem was not from my end. He finally suggested I send the disk back to him to be checked out. The disk was faulty and was replaced immediately. All of this took less than a week. After using the program for several months, I find that it is all that I could have wanted. My thanks to Mr. Vergona for an excellent program that is worth the investment.

> Andrea Lee Stevens Suisun City, California

## Preparing for a Purchase

## Editor:

I am going to buy a Tandy Color Computer 3 in the near future. For my own purposes I do not need a full-size printer. The least expensive Tandy printer is the DMP-107, which lists for $\$ 279.95$ - more than the Color 3.

I contacted Tandy in Texas, and the representative said your magazine had information on less expensive printers for the Color Computer 3.

Could you please help me out? I need something small, such as the TP-10 printer.

Ray Roberts
New York
Several of our advertisers offer featurepacked printers in a price range you may find more suitable.

THE RAINBOW welcomes letfers to the editor. Mail should be addressed to: Letters to Rainbow, The Falsoft Building. P. O. Box 385, Prospect, KY 40059. Letters should include the writer's full name and addrese. Letters may be edited for purposes uf clarity or to conserve space.

Letters to the editor may also be sent to us through our Delphi CoCo SIG. From the CoCo SIG; prompt, type RAI to take you into the Ralnbow Magazine Services area of the SIG. At the RAINBOW> prompt, type LET to reach the LETTERS> prompt and then select Letters for Publication. Be sure to include your complete name and address.

## MEMORY

Word Power 3.3 allows 72K of workspace on a 128 K CoCo and

460 K on a 512 K CoCo. More memory than any other word processor. Period.

## EDITING

Powerful full-screen editor w/ word-wrap. 4 -way cursor,scrolling; Line Positioning; Block Commands; Search, Replace; OOPs recall during delete, adjustable keyrepeat, key-click, typeahead, Tabs, Word-Count and much more! . Buill-in extensive HELP screen can be accessed anytime during edit.

## SPLIT-SCREEN EDITING

Freeze a portion of text and edit another. IIs fantastic!

SPOOLER
Print and Edit documents at the same time!

## SORTING

Sort lists in a flash!

## GRAPHICS

 Insert graphics in your documents! Allows you to import PMODE 3/4, HSCREEN and CoCo Max II/III pictures!

## SAVING / LOADING

Creates ASCII files that are compatible with other word-processors, terminal programs, etc. Allows directory point \& select for easy loading/saving, Automatic Backup, file erase, free space display. ARE YOU SURE? prompts prevent accidental deletes. The Auto-Save feature automatically saves text to disk during user-defined intervals for peace of mind. Supporis double-sided drives.

## MACROS

Playback
up to 250 keystrokes with a single key! Automate multiple tasks with a single key! You'll love it!

## PRINTING

 Works with all printers that work with the CoCo. Allows options such as baud rates, spacing, page/print pause, partial print, page numbering/ placement, linefeeds, multi-line headers/footers, right justification and number of copies. The values of these options can be changed in the text by embedding Printer Option Codes. The WHAT YOU SEE IS WHAT YOU GET feature allows you to preview the text on the screen as it will appear on the printer. You can view margins, page breaks, justification and more.

DOCUMENTATION
Word Power 3.3 comes with a well-written instruction manual \& reference card which makes writing with Word Power as easy as pie. Word Power 3.3 comes on an unprotected disk.

## FREE T-SHIRT

with full order of
Word Power 33.
(Specify Size)

## DISPLAY

Choice of $\mathbf{4 0}$ or $\mathbf{8 0}$ columns with your choice of colors. Can be used with RGB Composite/Monochrome Monitors and TV. Pull down menus, plain english prompts, on-screen underlining and page break display make it a breeze to use!

CALCULATOR
Built-in 4 function calculator!

Align your text in 2 columns with a few keystrokes!

MAIL MERGE Type a letter, follow it with a list of names \& addresses and have Word Power print out personalized letters. Its that easy!

SPELLING CHECKER Word Power 3.3 include a $\mathbf{8 0 , 0 0 0}$ word spelling checker which finds and corrects mistakes in your text.

## PUNCTUATION CHECKER

This checker will proofread your text for punctuation errors such as capitalization, doublewords, a/an usage, spaces and more. Its the perfect addition to any word-proccessor.

Upgrade Policy: Word Power 3.2 owners can get Word Power 3.3 by sending original Word Power disk and $\$ 15$ to the address listed below. All Word Power 3.2 orders shipped by UPS 2nd Day Air at No Extra Charge in Continental US. For Detailed Order Information, refer to Page 17 of our 6-page Ad series(Pgs 7-17). To Place Credit Card Orders Call Toll Free 1-800-654-5244 (9am-8pm 7 days/week) Technical Support (4-8pm), Order Status, Info, Technical Info; 716-383-8830

## Print\#-2

## History in the Making

Iam just back from RAINBOWfest with some of the most exciting news we have had in a while - the final agreement has been reached to allow us to publish a history of our Color Computer.

As far as I know, no single computer has a book about its history. This is probably because few computers are as long-lived or have attracted such a following as has our own Color Computer.

The working title for this book, which we expect to publish in late summer, is CoCo - An Affectionate History of the Tandy Color Computer. The authors will be Dale and Esther Puckett.

Dale, as many of you may know, has served for more than two decades as an officer in the United States Coast Guard. Esther has served along with him in a number of places and in a wide variety of locations. Dale's personal computer experience goes back as far as it can - to the Altair kit.

Dale brings the seriousness of the scholar and the care of a programmer to the team. Esther, as all of you who are fortunate enough to know her know, provides wit and wisdom as well as excellent insights to just about everything. They will, I believe, make an excellent team.

Dale and Esther plan to get started slowly as they wind up their tour of duty with the Coast Guard. Once that happens (around the first of February), they plan to move back home to Kansas and work on the book full-time.

Production for the book was planned a couple years ago with former Rainbow editor Jim Reed as the author. Jim, however, did not feel capable of writing a history to the extent I wanted, and we suspended the project. Now it is active again and, I feel certain, on its way to completion!

CoCo will, most significantly, be about people like you. I have stressed to Esther and Dale that they must, of course, give full and in-depth information, including anecdotes and stories, about every person who was part of the CoCo Community - even before there was a CoCo Community. As an "affectionate history," this is important if we are to demonstrate in print the affection so many of us feel for our favorite computer.

Beginning in February, Dale and Esther will be doing a lot of traveling and telephone calling, interviewing hundreds and hundreds of people for hours on end. Their result will be an entertaining and factual account of how one computer attracted a huge following totally beyond the expectations of its developers and how it affected and changed so many of our lives.

We project that CoCo will be between 200 and 300 pages, including photographs, and will sell for about $\$ 15.95$. It will be the paperbound book, like the others in our Rainbow Bookshelf collection, with an attractive cover.

In addition, we plan to publish a hardcover special limited edition that includes the gold-foil stamped name of the person who buys the book. We will take advance orders for these and they will sell for $\$ 45$. I am not going to hype the phrase collector's irem, but this would be a perfect gift for any member of the CoCo Community.

Either this month or next month we will be offering the soft-cover version of CoCo on an advance basis, at a discount of $\$ 13.50$. Gift certificates will be available for this holiday season.

I am very excited about this project and I think you will be, too. After all, I think the computer that has made history deserves a history book of its own!

## Programming Secrets Galore

Pokes, Peeks and Execs are your guides into the jungle of computer programming. These commands give you the power of Machinc Language without leaving the security of BASIC. Each book is a collection of "inside" information, with explanations and examples to help you immediately put it to use. Everyone from the novice to the professional will find these handy books a wealth of information.

## When that one little error threatens to ruin your day

# Save the Variables! 

## by Mike Moore

This handy program enables you to chain BASIC programs or keep all the variables while you edit a program. I find BASIC's habit of erasing all variables during EDITS or PCLEARs to be very annoying. When you are debugging a program and have entered lots of data, it is very frustrating to lose it all because of a small error that needs correcting. I used to wonder why it happened, and in writing this program I think 1 found out.

The idea sounds simple enough. To save the variables we move the bytes that BASIC has stored into free memory and later bring

Mike Moore is a math professor who divides his spare time between soccer and working on his CoCo. Address questions and comments to him at 2 Aurora Circle. Nepean, ON, Cdn. IK2G $0 Z 7$.
them back again. With numeric variables this is easy enough, but string variables present a challenge. This is because some strings are stored in the BASIC program itself and might be moved or changed during editing.

For such strings, the first seven characters are also copied into free memory so they can be checked later. If you have plenty of memory available, you can increase this by changing the 7 in Line 100 of the listing to a larger value. Strings of up to six characters are stored in full.

The code is position-independent and can be stored anywhere in memory. Users with only 16 K of memory should change the 32261 to 15877 in lines 10 and 20. Make sure you have saved the loader program before you try to execute the code because an error in typing in the data might cause you to lose everything.

MEBCM EXPRESE

Tech. Info (Between 4-8pm), Order Status, Info: 716-383-8830. Fax: 716-383-0026.

Once the code is installed, you can type EXEC 32261 to see how it works. If there are no variables because a program has not been run, you get the message Nothing Saved. But if all is well, you simply get the message Saved. You are now free to change your program to see if you can restore the variables. If there is not much free memory (typing PRINT MEM tells you how much), you get either Not Enough Memory or Some Strings Lost as your message.

In the first case there is not enough space in memory, and the variables have not been saved. In the second case the numeric variables should be OK, but some of the strings may be lost. They might be recoverable, but there is no guarantee that all your original strings will come back when you try to restore the variables.

If you edit, delete or insert a line, you will find that basic no longer has any of your variables. Try adding the new line 0 REM NEW LINE to your program and then check any variable. Nothing there? Try a second EXEC, and you should get the Restored message. You can check by printing any variable. If the memory area to which
the variables were moved has been disturbed, you get a Cannot Restore message.

When you have typed in and run the loader program, save the code produced as a machine language program. For 32 K users,

> The most useful function this program serves is that it enables you to chain programs.
(C)SAVEM"VARKEEP", 32261, 32767, 32261 does this, while 16 K users should type (C)SAVEM"VARKEEP", 15877,16383,15877.

Perhaps the most useful function this program serves is that it enables you to chain BASIC programs. That is, you can get one program to run another from disk and passits variables to the new program. As an example, type in and save the following short program as PRINTIT:

10 EXEC32261
20 PRINT I : FOR I-0 TO 9 : PRIN
TA(1): : NEXT
30 PRINT : PRINT C\$
Next, type in and run:
10 C $\$$-"CHARACTER"+" ${ }^{*}$
20 FOR 1-0 TO 9 : A(I)-2*I : NEX T
30 EXEC32261 : LOAD "PRINTIT".R
You get the Saved and Restored messages, and the values of the variables are displayed. Note that although PRINT IT does not define any variables, executing VARKEEP to keep and restore the variables allows their values to be passed to the second program.

I have one word of caution here: Notice that $C \$$ is defined in a seemingly odd way. This is to force BASIC to store CHARACTER in the string space. If you leave out the $+^{--}$, then Cs is kept in the program. Loading in PRINTIT overwrites the original and produces a Strings Lost message when VARKEEP tries to restore the variables.

## DISTO PRODUCTS

All Disto Products now carry a 1-Year Warranty and are shipped 2nd Day Air (at no extra charge!) within Continental US. All Disto Add-Ons (\& Super Controller II) include OS9 Drivers, unless otherwise specified.

Disto Mini Controller (with RSDOS or CDOS) : \$74.95
Disto Super Controller (with RSDOS or CDOS): $\$ 99.95$
Disto Super Controller II (with RSDOS or CDOS): $\mathbf{\$ 1 2 9 . 9 5}$

- Mini Eprom Programmer Add On: \$54.95
- Hard Disk Adapter: \$39.95 w/ RS232: \$69.95
- RT Clock \& Printer Interface: \$34.95 (OS9 Driver: \$19.95)
-3-in-1 Multiboard Adapter: Parallel Port, RT Clock \& RS232 Port. $\$ 74.95$
- MEB Adapter II: \$34.95
- 4-in-1 Board: Parallel Port, RT Clock, RS232 \& Hard Disk Interface: \$129.95
RS232 Super Pack: Truc RS232 Port for your CoCo! Compatible with Tandy ${ }^{16}$ RS232 Pack. Includes DB25 Cable. $100 \%$ Compatible with OS9 ACIA Software. Req. Multipak. Only $\$ 54.95$ HARD DRIVES, Etc.
Systems w/ Seagate Hard Drive, Controller, Cables, CoCo XT Interface, Cables, Case (with fan \& Power Supply), Software (OS9 Software \& HYPERIO Software!) \& Instruction Manuals. Assembled/Tested/Formatted. Just Plug'N'Run. Req. Multipak.

## Disto Hard Drives Systems Also Availablo!

Seagate $\mathbf{2 0 ~ M e g ~ S y s t e m : ~} \mathbf{\$ 5 0 9}$
SY Seagate
Seagate 30 Meg System: $\mathbf{\$ 5 3 9}$

CoCo XT: Use $25-120$ Meg Drives with your CoCo. Only \$69.95 w/ Real Time Clock: $\$ 99.95$
CoCo XT ROM: Boots OS9 from hard/floppy. Only $\$ 19.95$
HYPERIO: Allows Hard Drive use with RSDOS. Only \$29.95.
HYPERIO Disto Version. Only \$29.95
HYPERIII: RAMDisk \& Spooler to CoCo 3 HYPER I/O. \$12.95
HYPERIO Utilities (by Kevin Berner)
Hard Drive Utilities: MSA Backup, Copy/Kill/Rename, Hard Disk Backup to Floppies (vica versa) \& more. Only \$21.95
Disk Doctor: Checks/locks out bad sectors. only \$17.95
Hard Drive Zap: View tracks, sectors, modify data on your hard
disk. Only \$21.95

There are a lot of dealers selling disk drives for the CoCo. Why buy from us? First, all our drives are BRAND NEW DOUBLE SIDED Drives. They are sleek, fast ( $6 \mathrm{~ms}!$ ), quiet and have a reputation of superb performance and reliability. Second, our Drive 0 \& 2 Drive Systems come with the acclaimed DISTO Controller - with gold plated contacts \& built-in ROM which allows you to access BOTH sides of our drives!. Third, our Drive 0 \& 2 Drive Systems come with the Official 200 page Radio Shack Disk Manual. Fourth, you get $\$ 50$ worth of our utility software (Disk Util 2.1A \& Super Tape/Disk Transfer). Our drive systems are head \& shoulders above the rest!

Drive 0 (with Disto Controller, Case, Power Supply, 1 Drive Cable, Manual, Software): $\$ 199$
Drive 1 (with Case, Power Supply \& Software): \$129
Bare $51 / 4^{\circ}$ Drive: $\$ 89$
2 Drive System (With Disto Controller, Case, Power Supply, 2 Drive Cable, Manual \& Software):
$\$ 299$
1 Drive Cable: $\$ 16.952$ Drive Cable: $\$ 22.954$ Drive Cable: $\$ 34.95$ FD501 Upgrade Kit: Bare Drive, 2 Drive Cable \& Instructions: \$109 FD502 Upgrade Kit: Bare Drive, 2 Drive Cable, Power Cable \& Instructions: \$119

## MAGNAVOX 8CM515 RGB <br> Monitor

Razor Sharp picture quality for your CoCo! Has $14^{\prime \prime}$ Screen, Analog/TTL RGB \& Composite Inputs for $\mathrm{CoCo} 2 / 3$, Speaker, Text DisCoCo2/3,Sperill play Switch, Tilt Stand \& 2 Year Warranty. Compatible with CoCo, IBM \& many other computers! Only \$278 (add \$12 $\mathrm{S} \& \mathrm{H} / \$ 40$ in Canada)

Magnavox RGB Cable for CoCo 3 and Composite Video / Audio Cable Set with Purchase of Monitor: $\$ 19.95$

## More Good Stuff...

DS69B Digitizer: Use your CoCo to display pictures from your VCR. Comes complete with CSEE Software. Only \$149.95. CoCo 2 Version: $\$ 99.95$

Advanced Gravis Joystick: Features tension, rotary-centering, free floating controls with 3 buttons. Only $\$ 59.95$
Rascan Color Video Digitizer w/ Software: \$159.95
MPI Locking Plate (Specify 26-3024/3124): $\$ 8$
5 1/4" DS/DD Disks: $\$ .40$ each
5 1/4" Colored DS/DD Disks: $\$ .89$ each
3 1/2" DS/DD Disks: \$1.49 each
$51 / 4^{\text {" }}$ Disk Case (for 70 disks): $\$ 9.95$
$31 / 2^{\text {" }}$ Disk Case (for 40 disks): $\$ 7.50$

NX1000 Color Ribbon:\$12.95
NX1000 Black Ribbon: $\mathbf{\$ 8 . 5 0}$
Seikosha, EPSON, DMP,Panasonic, Okidat Gemini Ribbons: Only $\$ 8.50$ each

## 512K CoCo 3

Brand new Color Computer 3 with 512 K Installed and tested! Comes with complete manuals and $\$ 100$ worth of software!

Only $\$ \mathbf{2 3 9}$
Please Add $\$ 10$ S\&H
512K Installat. Voids Warranty

## Studio Works

Superb Digital Audio Sampler. Great for special effects. Only \$39.95. w/Cable: $\mathbf{5 5 4 . 9 5}$

## How To Read Rainbow

When we use the term CoCo ，we refer to an affection－ ate name that was first given to the Tandy Color Computer by its many fans，users and owners．
The BASIC program listings printed in THE RAIN－ BOW are formatted for a 32－character screen－so they show up jusl as they do on your CoCo screen．One easy way to check on the accuracy of your typing is to com－ pare what character＂goes under＂what．If the charac－ ters match－and your line endings come out the same －you have a pretty good way of knowing that your typing is accurate．
We also have＂key boxes＂to show you the minimum system a program needs．But，do read the text before you start typing．
Finally，the little disk and／or casselte symbols on the table of contents and at the beginning of articles indicate that the program is available through our RAINBOW ON DISK or RAINBOW ON TAPE Service．

## Using Machine Language

The easiest way to＂put＂a machine language program into memory is to use an editor／assembler，a program you can purchase from a number of sources．All you have to do，essentially，is copy the relevant instructions from the rainbow＇s listing into CoCo．
Another method of putting an ML listing into CoCo is called＂hand assembly＂－assembly by hand，which sometimes causes problems with ORIGIN or EQUATE statements．You ought to know something about assembly to try this．
Use the following program if you want to hand－ assemble ML．listings：

10 CLERR200， $8 \mathrm{H} 3 \mathrm{~F} 00: \mathrm{I}=8 \mathrm{H} 3 \mathrm{~F} \mathrm{~B} 0$
20 PRINT＂RDDRESS：＂；HEXS（I）：
30 INPUT＂BYTE～；日末
40 POKE I，VAL（ ${ }^{*} 8 \mathrm{H}^{2}+$ 日 E ）
$50 \mathrm{I}=\mathrm{I}+1$ ： GOTO 20

This program assumes you have a 16 K CoCo ．If you have 32 K ，change the 8 H 3 F 00 in Line 10 to $\& H 7 F 00$ and change the value of I to sHPFBO．

## OS－9 and RAINBOW ON DISK

The OS－9 side of RAINBOW ON DISK contains two directories：CMDS and SOURCE．It also contains a file， read．me．First，which explains the division of the two directories．The CMDS directory contains executa－ ble programs and the SOURCE directory contains the ASCII source code for these programs．BASIC09 programs will only be offered in source form so they will only be found in the SOURCE directory．
OS－9 is a very powerful operating system．Because of this，it is not easy to learn at first．However，while we can give specific instructions for using the OS－9
programs，you will find that the OS－9 programs will be of little use unless you are familiar with the operating system．For this reason，if you haven＇t＂learned＂OS－9 or are not comfortable with it，we suggest you read The Complete Rainbow Guide to $0 S-9$ by Dale Puckett and Peter Dibble．
The following is not intended as a course in OS－9．It merely states how to get the OS－9 programs from RAINBOW ON DISK to your OS－9 system disk．Use the procedures appropriate for your system．Before doing so，however，boot the OS－9 operating system according to the documentation from Radio Shack．

1）Type load dir list copy and press ENTER
2）If you have only one disk drive，remove the OS－9 syslem disk from Drive 0 and replace it with the OS－ 9 side of RAINBOW ON DISK．Then type chd／de and press ENTER．If you have two disk drives，leave the sytem master in Drive 0 and put the RAINBOW ON DISK in Drive 1．Then type chd／dl and press ENTER．
3）List the read．me．First file to the screen by lyping list read，me．first and pressing ENTER．
4）Entering dir will give you a directory of the OS－9 side of RAINBOW ON DISK．To see what programs are in the CMDS directory，enter dir cmds．Follow a similar method to see what source files are in the SOURCE directory．
5）When you find a program you want to use，copy it to the CMDS directory on your system disk with one of the following commands：

One－drive system：copy／de／cmds／lilename／der cmds－filename－s
The system will prompt you to alternately place the source disk（RAINBOW ON DISK）or the destination disk（system disk）in Drive 0.
Two－drive system：copy／d／／cmds／filename／de／ conds／filename
Once you have copied the program，you execute it from your system master by placing that disk in Drive 0 and entering the name of the file．

The Rainbow Seal

The Rainbow Certification Seal is our way of helping you，the consumer．The purpose of the Seal is to certify to you that any product that carries the Seal has actually been seen by us，that it does，indeed，exist and that we have a sample copy here at THE RAINBOW．
Manulacturers of products－hardware，software and firmware－are encouraged by us to submit their prod－ ucts to THE RAINBOW for certification．
The Seal is not a＂guarantee of satisfaction．＂The certification process is different from the review process．You are encouraged to read our reviews to determine whether the product is right for your needs．
There is absolutely no relationship between advertis－ ing in THE RAINBOW and the certification process． Certification is open and available to any product per－
taining to $\mathrm{COCO}_{0}$ ．A Seal will be awarded to any com－ mercial product，regardless of whether the firm adver－ tises or not．
We will appreciate knowing of instances of violation of Seal use．

## Rainbow Check Plus

The small box accompanying a program listing in THE RAINBOW is a＂check sum＂system，which is designed to help you type in programs accurately．
Rainbow Check PLUS counts the number and values of characters you type in．You can then compare the number you get to those printed in THE RAINBOW． On longer programs，some benchmark lines are given． When you reach the end of one of those lines with your typing．simply check to see if the numbers match．
To use Rainbow Check PLUS，type in the program and save it for later use，then type in the command RUN and press ENTER．Once the program has run，type NEW and press ENTER to remove it from the area where the program you＇re typing in will go．
Now，while keying in a listing from THE RAINBOW， whenever you press the down arrow key，your CoCo gives the check sum based on the length and content of the program in memory．This is to check against the numbers printed in THE RAINBOW．It your number is different，check the listing carefully to be sure you typed in the correct BASIC program code．For more details on this helpful utility，refer to H ．Allen Curtis＇article on Page 21 of the February 1984 RAINBOW．
Since Rainbow Check PLUS counts spaces and punctuation，be sure to type in the listing exactly the way it＇s given in the magazine．

[^0]
## BIG BASIC

Full Power for your CoCo 3 !
(From Danosott)
Gives up to 92 K User Memory in 128 K CoCo and 476 K in 512 K CoCo from BASIC with any mix of program/variables. You can have one BIG program or 58 Separate ones running at once from computer memory in multiple windows! Big Basic also allows you to Disk Chain any size program. Step up to the full potential of your CoCo 3 with Big Basic. Only $\$ 39.95$

## 512K Upgrades

Fully assembled, tested and ready to be shipped NOW! Our design allows mounting chips on top to prevent any heating problems. No soldering; Easy instructions for 2 minute installation! Comes with following software (value $\$ 100$ ):

- 512K Ramtest
- 512K Backup Lightning
- 512K Print Spooler
-512K Ramdisk
- OS9 Level II Ramdisk

The absolute best 512 K Upgrade Package Available!
90 day warranty! New Low Price \$ioa.
OK Upgrade Board (with 512K Ramtest/Ramdisk/Spooler): $\$ 39.95$ Upgrades for CoCo 2
64K Upgrade (8 chip) for CoCo I, CoCo ll's with Cat \# 26 3026/3027/3134/3136: \$29.95
64K Upgrade (2 chip) for 26-3134 A/B CoCo II: \$39.95 (Free 64 K Software included with 64 K Upgrades)

## COMMUNICATIONS EXTRAVAGANZA 2400

(1) ZOOM 2400 Modem: Fully Hayes Compatible 300/1200 /2400 w speaker, Auto Dial/Answer \& Seven Year Warranty!
(2) MODEM CABLE (4pin to DB25; Reg $\$ 19.95$ )
(3) Autoterm Software (Reg \$39.95)
(4) Free Compuserve Offer \& Access Time
(5) UPS 2nd Day Air Shipping

Only $\$ 189.95$
Zoom 2400 Modem: \$149 Avatex 1200 e Modem Only: $\$ 85$
Communications Extravaganza 1200: Includes Avatex 1200e modern w/ 2 Year Warr., cable, Compuserve Offer, software \& 2nd Day Air Shipping. Only $\$ 129.95$

## KEYBOARDS, ETC...

Keyboard Extension Cable allows you to move your keyboard away from the computer \& type with ease. Use your existing keyboard or leave your present keyboard intact and use a second
 keyboard. Only \$39.95
CoCo 3 Keyboard: $\$ 39.95$ w/ Extension Cable: $\$ 69.95$
CoCo 2 Keyboard: $\$ 19.95$ w/ Extension Cable: $\$ 49.95$
(CoCo 3 Keyboard includes free Function Keys Soltware)

## EPROM

INTRONICS EPROM PROGRAMMER: Programs 2516 to 27010 \& more! Includes software \& complete documentation. Latest version. Lowest Price Anywhere. CoCo 1,2,3. Only $\$ 137.95$
DATARASE Eprom Eraser: For 24/28 pin Eproms. Erases up to 4 EPROMs at a time. Only $\$ 49.95$
Both Eprom Programmer \& Eraser: \$179.95
onemase 1 2764 Eprom: \$8 27128 Eprom: \$9 .
ROMPAK (w/ Blank PC Board, 27xox Series): \$12.95
BLANK CARTRIDGE (Disk Controller Size): $\mathbf{\$ 1 0 . 9 5}$

## CABLES, Etc.

Magnavox 8505/8515/8CM643 Analog RGB Cable: $\$ 24.95$ Serial-to-Parallel Interface: Use your parallel printer at high speed (300-9600 baud) with the CoCo. Comes with all cables. No software compatibility problems. Only $\$ 44.95$
15" Shielded Multipak Extension Cable: \$36.95
Y Cable: Use your disk system with Speech/RS232 Pack, DS69 Digitizer, etc. Only \$27.95
RGB Analog Extender Cable: $\mathbf{\$ 1 9 . 9 5}$
SONY Monitor Cable: $\$ 29.95$
MODEM Cable: 4 pin to DB25. Only $\$ 19.95$
2 Position Switcher: Hook 2 devices to serial port. \$29.95 HI-RES Joystick Interface: \$11.99

## CHIPS, Etc. $1 \rightarrow$

Genuine RS Disk Rom 1.1 (Needed for CoCo 3): $\$ 29.95$
ECB Rom 1.1: \$29.95
68B09E Chip: $\$ 14.95$ 68B21 Chip: $\$ 5.95$
GIME Chip for CoCo 3:\$39.95
Genuine RS Multipak PAL Chip (Specity 26-3024 / 26-3124): \$19.95
PAL Switcher: Allows you to switch between CoCo $2 \& 3$ modes when using the Multipak. You need the OLDER \& NEW PAL Chip for the 26-3024 Multipak. Only $\$ 39.95$. With NEW PAL Chip Only $\$ 49.95$

 mant Ph: 07. 341.0051

Alone, they're simply amazing. Together these two make an unbeatable team. CoCo Max III and Max-10: there's strength in numbers. Thousands of Color Computer enthusiasts the world over agree: this must be seen to be believed. CoCo Max has been
used to draw so many pictures in Rainbow magazine that we've lost count of them all. And Max-10 is just the tool to write the thousand words that you know your CoCo Max picture is worth.

# Have a Super CoCo Christmas ! With these great bargains: 

Max-10:the Rolls-Royce of word processors. The only one with true graphic capability and dozens of type styles. Using your dot matrix printer you get from sny toonnter ( 6 point) to big titles ( 24 point).

The Rainbow review ( $1 / 89$ ) said: "An Incredlble job of providing power, flexibility and speed In a program that is as easy to use as it is to pronouncel ... Max-10 takes a back seat to none, and ls beyond comparison with most." Max-10, the only word processor with "What You See is What You Get". A word processor you will love at first sight.

## CoCo Max IIIs, iow a classic and probably the most popular CoCo pro-

 gram ever. If the price was the reason that stopped you before, this special will delight you. Listen (Rainbow 3/88): "There are no limita to what you can do with thls fabulous program. Speed, ease, animation, power and color, all in one package. CoCo Max ill is the ultimate program for the CoCo 3." Check any Rainbow (up to $4 / 89$ ) for complete info on CoCo Max.To top it off, we include a free Demo Disk plus the super CoCo Show program, which lets you make your own "slide shows".
Desktop Publishing:together, CoCo Max III and Max-10 form an unbeatable system for reports, flyers, invitations, greeting cards, signs. newsletters, etc. It's far beyond anything you've ever seen on a CoCo.

Here is one of the hundreds of unsolicited letters we got: "Max-10 and CoCo Max III are wonderful. They are the first Color Computer products I have purchased that were even better than I hoped for."

At Colorware, we all work hard to make you feel that way and we thrive on your appreciation.

## FREE CHRISTMAS BONUS

Get any one of the "Add-Ons" below free with CoCo Max III or Max 10.
Select one of these: Max Fonts, Max Edit, the Color Drivers, the Spellchecker, the Max-10 Fonts, or the Hi-Res Pack. If you get both Max -10 and CoCo Max III. select any two free add-ons!

## About Max-10

What the CoCo Community needs is a word processor that's rock solid, blindingly fast, feels like a Macintosh, makes all the others look boring, and does not cost $\$ 80$.
Max -10 is just that and more. It allows on screen mixing of graphics and text, large headlines, multiple columns and full page preview (with graphics).
We swear that Max-10 will add excitement to your word processing, and that's no small task!
PRINTERS SUPPORTED: EPSON FXMXRXUX AND COMPATIBLES: OMP $105.106,110,130$; C3P220
(ESW) OKI 182.92 .192 STAR NX $-10, \mathrm{NX}-1000$ (E8W): OKI 182.92,192: STAR NX-10. NX-1000.

## Max-10 Add-ons

$\$ 29.95$

## System Requirements

Max-10 and CoCo Max III Require: any CoCo 3; 1 or more disk drives: joystick or mouse; Radio Shack Hi Resolution joystick interface: a video or RGB monitor or a TV.

## About CoCo Max III

Whether you doodie for fun or do graphics for a living. CoCo Max will amaze you, It's a promise.
Its major features include: Huge picture area (2 full hi-res $320 \times 192$ screens). Large editing window. Zoom mode for detail work. 28 point and click drawing tools. Shrink and stretch. Rotation at any angle ( $1.5^{\circ}$ steps). 512 K memory support (all features work with 128 K too). Undo (Oops) feature to fix mistakes. Animation. Special effects. Color sequencing ( 8 colors, variable speed). 13 fonts (more available). Each font has 8 sizes and 5 styles for thousands of possible combinations. Translate program to convert most types of pictures. CoCo Show "slide show" program. Minitoad program to help use pictures with your software. Color editing of patterns. Prints in single or double size. Select 16 of 64 available colors, all 64 colors are shown at once for easy selection. Pull-down menus. 40 palnt brush shapes. Two color lettering. Spray can. Amazing "flowbrush". AGB and composite monitor support. Colors print in 5 shades of gray.
PRINTERS SUPPORTED: EPSON RXPXXMXUX AND COMPATIBLES; STAR/GEMINI NX-10.NX-1000: DMP100, 105. 108,110.120.130.200: OK1 82A. 182.192: CGP-2zo(BAW)

## CoCo Consultations

# The Disk System That Lied 

by Marty Goodman<br>Contributing Editor

MyFD-501 drive system has been intermittently, falsely telling me my disk is writeprotected and refuses to write to the disk. I sent the controller and drive to Radio Shack. They rested it and said it was OK. What should I do?

Douglas Paulson<br>Richfield, Indiana

Until the system "stays broken" and until it always gives you a WP Error, it may be tough to fix. However, there are some things you can try: Borrow another drive and controller, and run your CoCo with your controller but with another drive and cable. Then try it with your drive and cable but with another controller. See if the problem occurs only in one combination of hardware, but not another. This allows you to narrow down the problem to which component it resides in. The problem could be a faulty write-protect sensor on the disk drive - perhaps cold solder connections for that sensor or dirty contacts for the cable. It could also be a defective cable or a bad junction between the cable and its connectors, or, less likely, a faulty chip or cold solder joint in the disk controller. Tracking down such intermittent problems requires a lot of time and patience - time that repair techs, who may charge $\$ 50$ an hour, could only fix for several hundred dollars.

Martin H. Goodman, M.D., a physician trained in anesthesiology, is a longtime electronics tinkerer and outspoken commentator - sort of the Howard Cosell of the CoCo world. On Delphi, Marty is the SIGop of rainbow's CoCo SIG and database manager of OS-9 Online. His noncomputer passions include running, mountaineering and outdoor photography. Marty lives in San Pablo, California.

#### Abstract

Modem Vs. Printer I've been told on Delphi that it is impossible to write terminal programs that use the internal serial port with a modem at over 2400 baud and over 300 baud under OS-9. Yet I know a CoCo 1 or 2 can talk to a printer through the serial port at 9600 baud, and a CoCo 3 can do so at 19,200 baud. Why is the speed at which the inter-

nal serial port can be used with a modem so different?

## Doug Fischer

(COCONAUT)
Hempstead, Maryland
When the CoCo talks to a printer, data is flowing in only one direction - from the computer to the printer. It's true that the

## GIME the Interrupts

In the November 1989 issue we published the article "The OS-9 *CART Interrupt Fix," by Marty Goodman. Shortly thereafter we received news from Tandy claiming the information in that article was untrue. According to Tandy, the GIME chip contains a very sophisticated interrupt handler utilizing a state-of-the-art interrupt polling methodology used by mainframes and real-time robotic control processors. By definition, an interrupt is an asynchronous process, meaning there is no way to determine when such an event will occur. Therefore, if you can't anticipate an event, you can't judge when to select a slot for the event to come in on. Instead, you must predefine the slot and make all interrupts channel through a single slot.

The theory behind the GIME chip allows it to detect and react to simultaneous interrupts from multiple sources with relative ease. When an interrupt is detected, the proper method of handling it is as follows:
> 1. Read the GIME to find the source.
> 2. Reset the GIME for next interrupt.
> 3. Poll all potential interrupt devices.
> 4. Retum from interrupt.

When you reset the GIME, any additional interrupts are held in a pending state. If additional interrupts are generated, they will either be picked up as you poll the device or become pending and will trigger an active interrupt as soon as you retum from the current interrupt routine. With this technique, you can handle interrupts from multiple sources without performing any modifications to your system.

The modification presented in the November article merely provides a means of getting around a problem with OS-9 Level II's interrupt-handling routines. A better solution is to use software that properly handles the interrupts. Tandy advises against any intemal modifications to the Color Computer 3 as this can cause failure to comply with FCC Class B specs, damage to the unit, and possible injury to the user.

We will soon feature an in-depth article in which we will cover the ins and outs of handling interrupts with the GIME chip and the methods used by OS-9 Level 2 that differ from Tandy specifications.

- RainBow staff
printer communicates its busy status to the computer via a busy line, but the computer needs to check the status of that line to see if it is high or low. There is no interpretation of incoming serial data. This one-way communication is called half duplex.

When using a terminal program with a modem, you need to be able to send and receive serial data at the same time. This is called full duplex communication. Coding the serial port to do this is much trickier than coding it for outgoing half duplex communication. It takes more of the computer's processing time. Note that when the internal serial port is programmed to receive data, this task is especially demanding of processor time - one has to poll the port (check it repeatedly) for new data all the time.

The designers of the CoCo 3 realized that this polling made coding for the internal serial port a problem, so they built a serial data input interrupt into the gIme chip, intending the code to be interruptdriven, and thus easier and faster. Also both the higher processor speed of the CoCo 3 and its internal timer allow for somewhat faster operation of the serial port on the CoCo 3 than is possible on the CoCo 1 and 2.

OS-9 Level 2 cannot support full duplex on the serial por because OS-9 is doing too many other things at once (as a multitasking system) to be able to devote constant attention to the serial port. Thus under OS-9, use of a hardware RS-232 port is required for full-duplex communication.

## Managing Memory

I have three questions: How does the memory management unit (MMU) of the CoCo 3 work? When you alter the contents of \$FFAO through \$FFA7, why are you likely to crash programs running under BASIC or OS -9? Whot other registers are involved in memory managemen?

Matthew James Randall Calgary, Alberta.

The best technical references for the functioning of the MMU is Tandy's service manual for the CoCo 3 and Spectral Associates' Super Extended BaSIC Unravelled. (Both are available from Rainbow advertisers.) Bit 6 of Register \$FF90 enables the MMU. Bit 3 of $\$$ FF90 determines whether or not \$XFEXX is constant or
varied by the MMU registers. Bit 0 of \$FF91 is the task register select bit that selects between the memory scheme represented by \$FFA0 through \$FFA7 and the memory scheme represented by \$FFA8 through \$FFAF. The first six bits of registers \$FFA0 through \$FFA7 represent what portion of the actual 128 K or 512 K of physical RAM will be mapped into the address space of the 6809 for Task 0 . Similarly the first six bits of SFFA8 through SFFAF determine memory mapping for Task 1. Note that (though this is not documented anywhere) the MMU registers have an effect not only on memory mapping but also on the mapping of the BASIC ROMs. More details are provided in the two references I mentioned.

## Need to Make Some Repairs

How do I go about fixing a Radio Shack disk controller?

Duane Fair
Joshua, Texas

WD1773 (28-pin) disk controller chip.
Apart from these tips repairing the controller is like repairing any other electronic circuit: You get a schematic, examine it, then use test equipment to help find the trouble and fix it.

## Hooking Up Floppies

Can I connect a $51 / 4$-inch floppy drive to my CoCo as Drive 0 and a $31 / 2$-inch floppy drive as Drive 1 ?

Toby Johnson<br>New Albany, Indiana

Yes. Electrically $51 / 4$-inch 360 K drives are identical to $31 / 2$-inch 720 K drives. Your problems will be making proper data cables (the 34-pin connectors on the two drives are physically different, even though the lines are the same), making proper power connectors ( $31 / 2$-inch drives use a different type of power connector, even though they take the same voltages) and setting up the software to use both sides and all tracks of

The most common problem with CoCo disk controliers is that the 7416 or 7406 chip connected to the *HALT and *NMI lines go sour. Controllers with this problem usually lock up the computer when plugged in. The cure is to desolder the defective chip, replace it with a socket, and put a new 7406 in the socket. I suggest replacing an old 7416 with a 7406, which is a more rugged chip.

Sometimes the problem is in other logic chips connected with the *HALT and *NMI circuitry. Rarely does the disk controller chip go bad. If it does, you can get replacement chips from Tandy National Parts. For the newer CoCo controllers, Disto/CRC offers the Adds many new commands. Best compatibility with Basic and M/L. Works on any COCO, FREE Ramdisk for 512K COCO-3 included!
OS-9 Hard Diak Drivers PuS Hard Disk Boot
$\$ 19.95$
Run your Hard Disk under OS-9 Level 2. Boot up OS-9 directly from Hard Disk. Supports up to 16 Hard Drives. FREE utililies.
Ulire Bessic 3
Adds many new commands and functions to the Color Computer 3 including support of Real Time Clocks such as the KEN-TON. DISTO and TANDY SmartWatch, RS Catalog \# 25-1033

20 Meg Hard Disk system, complete
$\$ 629.95$
Fast, Reliable SCSI hard disk system. Complete, ready to run. No setup is required. Just plug and go. Completely Brand New components. No refurbs or scrap. Full manufacturers warranty. Supports your choice of Disk Basic, OS-9 or BOTH!
30 Meg Hard Disk system, complete $\mathbf{\$ 6 6 9 . 9 5}$
40 Meg Hard Disk system, complete $\mathbf{\$ 6 9 9 . 9 5}$
Ker-Ton SCsI Hard Disk interface
The only TRUE SCSI interlace available for the Color Computer. Low power draw, very high speed. Compatible with Basic and OS-9 No multi-pack required. Jumper selectable options.
Ken-Ton SCSI Intertace PLUS RTC \$119.95 Same as above, with battery backed Real Time Clock, perfect for OS-9, Basic or a Bulletin Board Sysiem.
Ken-Ton RSS-232 Pack
Direct repiacement for Tandy RS-232 pack. No multi-pack or soltware patches required. Very low power draw. Supports the TANOY SmartWatch Real Time Clock. Add Real Time to your BBS!

## Ken-Ton RS-232 pack, DUAL Chennel

Same as above, with two RS-232 ports. Perlect for OS-9, remote terminals or multi-line Bulletin Board Systems.

Please add \$4 shipping per item. (Hard Drive Systems, add \$20)
RGB COMPUTER SYSTEMS 294 Stillwell Avenue Kenmore, N.Y. 14217 Phone (716) 876-7538
the drives in question. Under OS-9 this is easy. Under Disk Extended Color BASIC (also called RS-DOS), I recommend buying $A D O S$ or $R G B$ DOS and burning it into an EPROM. Note that under Radio Shack's Disk BASIC you must define one side of a double-sided drive as one virtual drive and the other side of it as a different virtual drive.

## Memory Upgrade

How do I upgrade a CoCo 2 Model 26 3134 10 64K?

James L. Fisher Laurel, Missouri

I suggest reading an article I wrote in the March 1989 issue of THE RAINBOW called "Upgrading the Color Computer's Memory" (Page 34). To upgrade that model of computer, you need eight 4164-type DRAM chips ( -20 or -15 speed). Just replace the eight socketed $16 \mathrm{~K}-$ by-1 RAM chips with those eight $64 \mathrm{~K}-$ by- 1 DRAM chips, and solder the two 64 K jumper pads located in the front left part of the motherboard to each other. You may have to upgrade the ROM to go from Color BASIC to Extended Color basic. Several rainbow vendors sell the needed Extended Basic chip. My article describes exactly what chip to get and how to install it . Before you do all these things, you might want to look for a 64 K CoCo 2 at local flea markets. Often these used machines sell for less than the cost of the individual parts needed to upgrade a 16 K machine.

## McGinnis Asks About Bradley <br> Can I use an Allen Bradley Cat. No. LI745-MC EPROM memory module with a 512 K Color Computer? <br> B. McGinnis <br> Wentzville, Missouri

Probably not. Only EPROMs specifically designed electrically for the Color Computer with programs specific to the Color Computer will work with it.

## Downloading With the DCM Pak

How can I download with my Direct Connect Modem Pak, CoCo 2, disk drive and Multi-Pak? I have Videotex Software. Wes Day Willard, Missouri

You can use the DCM Pak with other software, such as MikeyTerm. The Videotex software is worthless for downloading, as is the intemal software in the DCM Pak. MikeyTerm can be ordered for $\$ 10$ from its author, Mike Ward, at 1807 Cortez, Coral Gables, FL 33134. Once it is up and
running, you will find other CoCo 2 terminal programs for downloading.

I also suggest reading "Working Together: Delphi and Tape I/O" by Don Hutchison on Page 156 of the August issue. It discusses how to download with the Direct Connect Modem Pak.

Finally, if you plan on doing much downloading, let me advise you to get rid of the DC Modem Pak and invest in a 1200 baud modem.

## Looking for an Address

I'm having trouble finding the end address of disk-based machine language programs. I need this to back up some disk programs to tape.

## Donald Kempton <br> Athens, Ohio

The end address is not stored in memory when you load a disk-based machine language program into memory. Rather, it is determined by the length of the program. Some programs in THE RAINBOW assist with the transfer of machine language programs from tape to disk and disk to tape, such as the one found in the article, "The Limosine Utility: A Tape to Disk Transfer Vehicle" by Roger Schrag (Rainbow, February 1987, Page 73). In any case it is a waste of time to back up disks to tape. The sensible way to back up information on a floppy disk is to put that information onto another floppy disk. There is no advantage to using tape.

## Cabinet Query

I was trying to add a second disk drive to my FD-502 Radio Shack disk drive cabinet, but the power supply connectors used on the FD-502 drive inside the cabinet are non-standard. What should I do?

Walt Jones
Georgetown, Delaware
I believe the power connector used by the FD-502 51/4-inch drive is actually the same as the standard power connector for $31 / 2$-inch disk drives. In any case disk drives require regulated +5 , regulated +12 volts and ground. You need to buy a standard 51/4-inch-drive-type, Amphenol 4 -pin female connector (the type used to hook to the power connector of most older $51 / 4$-inch drives). Cut off the old connector that came on the FD-502 system for its spare drive, and solder the wires to the normal Amphenol power connector. Radio Shack does not sell such connectors, but many other electronic supply houses do. Try Jameco in Belmont, California, or JDR in San Jose.

Be sure to hook the power up correctly.

The two middle wires are ground. If you look at the standard female power connector (the one that will plug into the drive) head on (into the end that mates with the connector on the drive), it must be wired as follows:

Use a voltmeter to be sure of the voltages on the wires coming from the FD-502's power supply.

## How Compatible is Commodore?

Is it possible to hook up a Commodorecompatible printer (one with a six-pin serial port) to a Color Computer 3's built-in serial port?

Wayne Smith<br>Winnipeg, Manitoba

No. The Commodore computers use a non-standard serial port operating at differing voltage levels from those of the CoCo 3 (which are within the industry standard for RS-232 signals.) Offhand I know of no commercially available converters. A hacker might try to rig up something using 1488 and 1489 level converter chips or a MAX232 level converter chip, assuming there are no other incompatibilities (such as timing).

## Do I Have 64K Memory?

I have a Radio Shack Color Computer 2 with Extended Color BASIC. How much memory do I actually have? What chips do I need to upgrade my CoCo 2?

Sabine Foulds
Quadra Island, British Columbia
Most CoCo 2s with Extended Color BASIC come with 64 K . After powering up the computer, type PRINT MEM and press ENTER. If the result is 22823 with a disk controller plugged in or 24871 without a disk controller plugged in, you have a 64 K machine. BASIC is able to use less than half the total amount of RAM in a 64 K machine for its programs and data.

Many commercial and shareware programs, however, use all of the 64 K available RAM. If you get a much smaller number as free memory, you can upgrade your machine to 64 K . The exact procedure and chips required vary with the particular issue of CoCo 2 . I gave a complete guide to all such upgrades on Page 34 of the March

## A new generation of Color Computer products

#### Abstract

V－Term Terminal －Vax，Unix，Mainframe，and BBS systems ．Vt－100，Vt－52，Vidtex \＆Ascil emulations －Serial port to 2400 ，RS－232 to 19,200 baud －XModem，XModem－CRC，YModem，ASCII －15 entry autodial， 10 programmable macros Disk（ 128 k or 512 k CoCo 3 only）．．．．$\$ 39.95$ Telenak IT RS－232 A Truly Compatible RS－232 Interfacel It comes with a 3 foot DB25 cable，gold edge contacts，and low power drain（ 5 v ）components． Telepak il \＆Manual 

The replacement for the Multi－Pak Interface is here！Xport is just that，an extended port interface that is buffered （unlike a Y－Cable），has 3 ports（2 switchable），and has it＇s own 12 v supply for those devices that require it．Xport is made with the same quality \＆workmanship as Telepak II

## New Drives, Old Case

What are the power requirements for $31 / 2$ inch drives, and will theyfir in an old Radio Shack full-height case? Could the power supply in that case drive both of them without being overloaded?

Doug Fischer
Hempstead, Maryland
$31 / 2$-inch drives require regulated +5 and +12 volts. Just like $5^{1 / 4}$-inch drives, they tend to draw somewhat less current on both of those lines, especially when compared to the ancient full-height $51 / 4$-inch klunkers. This is due to the use of LSI circuitry and more efficient motors. The exact power requirements vary a bit from brand to hrand, and there are several different power supplies used in old RS full-height drive cabinets, so I cannot give you a precise answer. It seems likely that the power supply designed to drive a single full-height $51 / 4$-inch drive will drive two $31 / 2$-inch drives. You need adapters for the power connectors. though, because $31 / 2$-inch drives use a different connector for their power supply. Adapters going from a $5^{1 / 4}$-inch drive power connector to $31 / 2$-inch-type power connectors are sold by JDR Microdevices of San Jose, Califonia. The $31 / 2$-inch drives also use different data connectors, though the required connector is sold by Radio Shack stores. The data and control lines are identical to those of comparable 51/4-inch drives. There is far less standardization of size and mounting hole positions with $31 / 2$-inch drives, so you will probably have to drill custom mounting holes and use metric screws to mount the drives. Many $31 / 2$-inch drives are half-height (by the old 51/4-inch standards), but some are third-height, especially those intended for mounting in laptop/portable computers. You might want to use a bit of black plastic or paper to plug the hole between the drives and the top of your old case at the front of the case.

## CoCo With DOS on It

Can I run MS-DOS programs on a CoCo? Can I use a DC Modem Pak for downloading ASCII graphics?

Reuben Rivas Ontario, California

Generally speaking, you cannot run programs written for MS-DOS systems on a Color Computer. The CoCo uses a different central processor and different operating system and has utterly different keyboard and screen characteristics from MS-

DOS machines. Usually the DC Modem Pak is a bad choice for any sort of telecommunications. If you have one, don't use the program that comes with it, but get other terminal programs to use with it, such as MikeyTerm. (See my response to James Fisher for more information.)

With MikeyTerm you can download other shareware terminal programs from Delphi. Or as you become more skilled at using such programs, you may prefer to buy one of the excellent and relatively inexpensive commercial CoCo terminal programs like $V$-term (for the CoCo 3 ) or Autoterm.

## Attention, All 40-Tracks

How can I address all 40 tracks (not just the first 35) of my FD-501 drives under Disk BASIC? Is there some simple poke I can use with Disk BASIC in the all-RAM mode? What about 80 -track drives and hard drives?

Timothy G. Fultz
Summerville. South Carolina
There is no simple modification or poke to convert to a greater number of tracks. But alternate DOSs such as $A D O S$ and RGB-DOS give you the option of using higher-capacity drives. These DOSs can be bumed into an EPROM and substituted for your Disk BASIC ROM once you have customized them to your liking. For general information about hard drives, I encourage you to read "A Hard Drive for Your CoCo" (March 1989, Page 44).

## Mixing CoCo with Apples?

Can I use programs written in Apple BASIC on a CoCo?

> Alan Pilon
> Brossard, Quebec

BASIC on all microcomputers is similar but not identical. It is very unlikely that a program of any complexity written in BASIC for one type of computer will run without modification on another. The main problems tend to be due to the fact that the graphics display capabilities of personal computers are quite different. Hence, programs with graphics display (as opposed to text-only display) often require considerable rewriting when being ported over to another type of computer.

## Maybe If I Took It to an Arcade

Is there anything I can do to a CoCo to enable it to play Nintendo games?

Rolf Schlup
Beausejour, Manitoba
There is no way to make a CoCodirectly
compatible with Nintendo cartridges. The two machines are different in almost every aspect of their design. However, you might see Nintendo software written for ROM Paks for the CoCo.

## Alignment Problems

I just installed a second, double-sided disk drive in my FD-501 case along with the original FD-501 single-sided drive. It seems to work, but disks formatted and written with it cannot be read on the original drive and vice versa. What is going on here? Also, how can I address the other side of this double-sided drive?

Jason A. Weinstein Martinez, Georgia

It sounds like one or both of the disk drives have serious head alignment problems. The two drives are writing tracks in somewhat different places on the disk, so one cannot read what the other has written and vice versa. Both need their alignment checked and adjusted. This requires an alignment disk, either an oscilloscope or a digital alignment adjustment program such as Memory Minder by J\&M systems of Albuquerque, and some experience with aligning disk drives. As for accessing the back side of the drive, I recommend purchasing $A D O S$ from SpectroSystems. Among many other things $A D O S$ gives access to the back side of double-sided disk drives under Disk BASIC.

Your technical questions are welcomed. Please address them to CoCo Consultations, THE RAINBOW, P. O. Box 385, Prospect, KY 40059.

We reserve the right to publish only questions of general interest and to edit for brevity and elarity. Due to the large volume of mail we receive, we are unable to answer letters individually.

Questions can also be seat to Marty through the Delphi CoCo SIG. From the $\mathrm{CoCo} \mathrm{SIG}>$ prompt, pick Rainbow Magazine Services. Then at the RAINBOW $>$ prompt, type ask (for Ask the Experts) to arrive at the EXPERTS> prompt, where you can select the ${ }^{\circ} \mathrm{CoCo}$ Consultations" online form, which has complete instructions.

# Free VIP Disk-ZAP With Every Order! 

## AUTOMATIC TEXT FORMATTING

## VIP Writer-VIP Writer III

VIP Writer ill offers screen widths of $32,40,64 \& 80$ - all with 24 lines and actual lower case letters using the CoCo 3's hardware display. It runs at double clock speed and has 4 color menus making VIP Writer ilI FAST and EASY to usel You can choose foreground, background, hilite and cursor colors from up to 64 hues. Color can be turned ON or OFF for the best possible display using a monochrome monitor or TV set. VIP Writer lil has a context sensitive help tacility to display command usage in easy to read colored windows.

## CUSTOMIZER \& PRINTER INSTALLER

VIP Writer III comes with a configuration / printer instalation program which lets you customize VIP Writer ill to suit your own liking. You can set screen width and colors as well as margins and more. You can also install your own printer and set baud rate, line feeds, etc. Onco done, you never have to enter these parameters again Y|P Writor III will load $n$. go with your custom configuration every timel

## MORE TOTAL TEXT STORAGE

VIP Writer III has 106 K total lext storage in a $128 \mathrm{~K} \operatorname{CoCo} 3$ ( 495 K in 512 K ). VIP Writer III creates ASCII text files which are compatible with all other VIP Programs as well as other programs which use ASCII files. You can use YIP Writer III to even type BASIC programs There is a 48 K text buffer ( 438 K in a 512 K CoCo 3 ) and disk file linking allowing virtually unlimited text space. VIP Writer III works with up to four disk drives and lets you display directories and free space as well as rename or kill disk files. In addition VIP Writer Ill is $100 \%$ compatible with the RGB Computer Systems Hard Disk,

## POWERFUL EDITING FEATURES

VIP Writer Ill has a full featured screen editor which can be used to edit text with lines up to 240 characters long with or without automatic word wrap around. You can select type-over mode or insert mode. There is even an OOPS command to recall a cleared text buffer. Other editing features indude: Type-ahead - typamatic key repoat and key beep for flawiess text entry * end of line bell - full lour way cursor control with scrolling * top of textifle - bothom of textfile $~$ page up * page down - lop of screen • botipm of screen beginning of line * end of line * laft one word * right one word. DELETE character, to beginning or end of line, word to the lett or right, or entre line - INSERT character or line - LOCATE and/or CHANGE or DELETE single or multiple occurrence using wildcards. BLOCK copy, move or delete with up to TEN simultaneous block manipulations - TAB koy and programmable tab stops , word count - line restore * three PROGRAMMABLE FUNCTIONS to perform tasks such as auto column creation and mulfipie copy printing.

## VIP Database III

VIP Database ill features selectable screen displays of 40,64 or 80 characters by 24 lines with choice of 64 foreground, background, hilite and cursor colors for EASY DATA ENTRY. It uses the CoCo 3's hardware screen and double clock speed to be the FASTEST database availablel VIP Database ill will handle as many records as will fit on your disks and is structured in a simple and easy to understand menu system with full prompting for easy oporation. Your data is stored in records of your own design. All files are fully indexed for speed and efficiency. IN-MEMORY SORT of records is LIGHTNING FAST and provides for easy listing of names, figures, addresses, etc., in ascending or descending a/phabetical or numeric order. Records can be searched for specific entries using multole search criteria. The buitt-in mail-merge lets you sort and print mailing lists, print form letters, addross envelopes - the list is endless. The buill-in MATH PACKAGE even performs anthmetic operations and updates other fields. VIP Database III also has a print spooler and report generator which uses print forms you create. DISK $\$ 69.95$ * VIP Database for CoCo 1 and 2

DISK $\$ 49.95$

## VIP Database owners: Upgrade to the VIP Database III for $\$ 39.95+\$ 3$ SH. Send ORIGINAL disk and $\$ 42.95$ total.

## VIP Library \$149.95

The VIP Library for the CoCo 1 and 2 combines all six popular VIP application programs - VIP Writer, Database, Calc, Speller, Terminal and Disk-ZAP - into one program on one disk called VIP Desitop. Incluides 430 page manual. For VIP Library shipping please add \$4 USA. $\$ 5$ Canada. $\$ 20$ Foreign.

## VIP Library /WDCE $\$ 179.95$

The VIP Library WOCE (Writer Database Calc Enhanced) combines all six popular VIP application programs - VIP Writer III, Database III, Calc ill, Speller, Terminal and DiskZAP - into one program on one disk called VIP Deskiop.
For VIP Library shipping please add \$4 USA. \$5 Canada. \$20 Foreign
VIP Library owners: Upgrade to the VIP Library WDCE for $\$ 99.95$ $+\$ 3$ S/H. Send ORIGINAL disk and $\$ 102.95$ total.
SD Enterprises info line (805) 566-1317 P O Box 621 Carpinteria, Ca. 93013
Non VIP Library orders add $\$ 3$ for shipping and handling in USA. Canada $\$ 4$. Foreign $\$ 6$. COD orders add an additional $\$ 2.75$. Chocks allow 3 weeks for delivery. California residents add $6 \%$ sales tax. ${ }^{\circ} \operatorname{CoCo} 182$ versions support 51,64 and 85 Cols.

VIP Writer ill automatically formats your text lor you or allows you to lormat your text in any way you wish. You can change the top, botiom, left or right margin and page length. You can set your lext fush left, center or flush right. You can furn right hand jusification on or off. You can have headers, footers, pege numbers and TWX auxilary lines which can appear on odd, even or all pages. You can also select the line on which they appear! You can even change the line spacing! Parameters can be altered ANYWHEREI

PREVIEW PRINT FORMAT WINDOW
VIP Writer III features an exclusive format window which allows you to preview your document BEFORE PRNTING ITI You are able to move up, down, left and right to see centered and justified text, margins, page breaks, broken paragraphs, orphan lines etc.

## PRINTING VERSATILITY

VIP Writer Ill prints TWICE as fast as any other CoCo word processorl it supports most printers and gives you the ability to select baud rates from 110 to 19,200. You can imbed printer control codes anywhere in your text fle EVEN WITHIN JUSTIFIED TEXTI VIP Writer Ill also has TWENTY programmable printer macros which allow you to easily control all of your printers capabilifies such as bold, underline, italics and superscript using simple key strokes. Other features include: multiple copy printing * single shee! pause - line feeds.

## BUILT IN PRINT SPOOLING

VIP Writer III has a print spooler with a 57,000 character buffer which allows you to print one document WHILE you are editing another. You don't have to wait until your printer is done belore starting another jobl VIP Writer DOES NOT include this feature.

## 50,000 WORD SPELLING CHECKER

VIP Writer Ill includes VIP Speller (not FREEWARE) to check your text for missoelled words it has a 50,000 (not 20,000 ) word dictionary that can be added to or edited.

## QUALITY DOCUMENTATION

VIP Writer III comes with a well written 125 page manual which is Laser printed, not dotmatrix like the competition, It includes a tutorial, glossary of terms and examples for the beginner as well as a complete index! VIP Writer Ill is truly the BEST you can buy. VIP Writer III includes VIP Speller

DISK $\$ 79.95$

- VIP Writer for CoCo 1 \& 2 includes VIP Speller

DISK $\$ 69.95$

## VIP Writer owners: Upgrade to the Writer III 2.0 for $\$ 49.95+\$ 3$

 SH. Send original disk and $\$ 52.95$ total.
## VIP Calc III

FAST 4-color POPUP menus - PRINT SPOOLER 32, 40, 64 and 80 Column HARDWARE display! Runs VERY VERY FAST at double clock speed!
Now every CoCo 3 owner has access to a calculating and planning tool better than VisiCalc ${ }^{\text {Th }}$, containing all its features and commands and then some. VIP Calc III allows a large worksheet with up lo 512 columns by 1024 rowsI In addition, VIP Calc III has up to 16 windows which allow you to compare and contrast results of changes. Other features include 8 AND 16 digit precision * trig, functions * averaging * algebraic functions * column and row ascending and descending SORTS * locate formulas or tites in cells * block move and replicate * global or local column width * limitless programmable functions * create BAR charts. Embed printer control codes for customized printing, Combine sproadsheet data with VIP Writer documents to create ledgers, projections, statistical \& financial budgets and reports.

- VP Caic for CoCo 1 and 2

DISK $\$ 59.95$
VIP Calc owners: Upgrade to the VIP Caic III for $\$ 29.95+\$ 3 \mathrm{~S} / \mathrm{H}$. Send original disk and $\$ 32.95$ total.

## VIP Library Trade up offer!!

 Trade in any VIP Product and get VIP Library for only $\$ 99.95$ plus shipping!!- OR -

Trade in VIP Writer III, VIP Calc III or VIP Database III and get VIP Library NDCE for only $\$ 99.95$ plus shipping!!
Just send in the original diskette only (do not send the manual) and $\$ 99.95$ plus shipping to receive your very own VIP Integrated Library.

SD Enterprises credit card / COD order IIne. 1-800-322-9873

## Feature

A keyboard supercharger that helps make CoCo user-proof

## Harness Those Keys

by Mike Dalene

Have you ever wanted to write a game or word processing program? If so, you know how frustrating it can be when your computer has a BREAK key that halts everything you do. Even the best programmers and users press it by accident. I experienced a similar problem and so tried to figure out how to turn off and redefine the BREAK key. KeyEdit provides a simple but powerful way to shut off the BREAK key and any of the keys in Figure 1.

## How It Works

Through the BASIC machine language loader at the beginning, this program puts the ROM data into RAM, then looks at the keyboard table for the "control" keys shown in Figure 1. It lets you redefine them for

Mike Dalene uses BASIC and OS-9 on his CoCo 2 . He is currently studying COBOL, FORTRAN and C, while living at home. He may be contacted at 39 Upland Rd., Winsted, CT O6098, (203) 379-0178.
your own uses. For example, when I wrote this program, I changed the shifted left arrow to 8 instead of the original 21 . That way I could not erase the entire line if I pressed SHIFT and the left arrow. (Instead, it now only deletes like the unshifted key.)

The program is very easy to use and

|  |  |
| :--- | :--- |
| Up Arrow | SHIFT-Up Arrow |
| Down Arrow | SHIFT-Down Arrow |
| Left Arrow | SHIFT-Left Arrow |
| Right Arrow | SHIFT-Right Artow |
| Space Bar | SHIFT-Space Bar |
| 0 | SHIFT-0 |
| ENTER | SHIFT-ENTER |
| CLEAR | SHIFT-CLEAR |
| BREAK | SHIFT-BREAK |
| @ | SHIFT-@ |

Figure 1
should not take too long to understand. Most of the commands are simple, although they may look awesome at first. KeyEdit is written in the form of subroutines, and it accesses these from the main menu. Most of the routines do not require much explanaiton,
except for the Edit Keycodes and Print New Codes options. Edit Keycodes uses some strange-looking CHR $\$$ values for the cursor key controls. I wrote it like this because some users may have defined the cursor keys for values other than the original defaults. The values are obtained from the key redefinition area of memory instead of assuming their original values. These are the lines, with explanations as follows:

> 290 checks for up arrow 295 checks for SHIFT-down arrow 297 checks for SHIFT-up arrow 300 checks for down arrow 330 checks for ENTER

All of these codes are in the table starting at 41582 and ending at 41601.

The Print New Codes section has none of the confusing codes, but the printer configuration codes may need to be changed. They were supposed to configure the Big Blue printer for auto-linefeed, since the CoCo only sends carriage returns to the printer. Therefore, in Line 410 you can delete the PRINT-\#2 or replace my codes with your own. Line 10 sets the serial port at 1200 baud; you may need a different baud rate so check your printer or interface manual for the proper rate.

Load the listing from disk and type RUN. The menu of six choices is displayed as follows:

```
(1) EDIT KEYCODES
(2) PRINT NEW CODES
(3) SAVE NEN CODE TO OISK
(4) LOAD FILES
(5) PLACE DATA IN MEMORY
(6) EXIT
```

Selecting 1 places you in the editor. Use your up, down and SHIFT-up and -down keys to select one of the keycodes appearing at the top of the screcen. The shifted keys quickly bring you to the top or bottom of the list. Once you find the key you want to change, press ENTER. The name of the key and the code are shown, and you are asked to enter a new code. Pressing only ENTER sets that key at 0 and makes it completely useless unless you change it again. Your new codes do not become active until you select 5 from the main menu. Once you have made changes, press ENTER. The computer asks if you want to make more changes. Pressing N returns
you to the main menu，where you can perform another operation such as saving your work to cassette or loading other work．

LOAD and SAVE allows you to save the work in two forms：text and binary．Most of

the time you want text．But when all your code is ready，save it in binary form for later use without the editor．I have tested the SAVE and LOAD binary commands under the editor，and it seems to work fine；however， you must have the ROM－to－RAM section in lines 20 through 70 already in memory to allow you to use your predefined codes．Of course， CoCo 3 users don＇t need this por－ tion of the code as the CoCo 3 is always in the all－RAM mode．

## Cassette Modifications

To be able to load and save the redefined codes with cassette，make the following changes：

## 210 PRINT＂（3）SAVE NEW CODES TO

 DISK＂490 CSAVEMFS． $41582,41601,8$ HB4F4：
RETURN
500 OPEN＂ $0^{\prime \prime}$ ， 1 －FS：FORC＝1T020：PR INTH－1，AS（C）．X（C）：NEXTC：CLOSEA－1 ：RETURN
580 CLOAOMFS：RETURN
590 OPEN＂I＂， 1 －1．F
610 INPUT（N－1，A $\$(\mathrm{C}), \mathrm{X}(\mathrm{C})$
620 NEXT：CLOSE 1 － 1 ：RETURN

## Using Your New Codes

You can use your new codes from BASIC simply by using INKEY \＄and checking for the new codes placed in a CHR\＄function．

Suppose you want to use BREAK to retum to a menu and you have set it up as a value of 128．All you have to do is have the com－ puter check to see if CHR $\$(128$ ）has been
entered．If so，go to your menu．It＇s that simple．However，do not press RESET or you will have to reload the ROM－to－RAM loader again．

64 K Disk

## What Day? by Rebecca Kastack

Monday's child is fair of face. Tuesday's child is full of grace, Wednesday's child is full of woe, Thursday's child has far to go, Friday's child is loving and giving, Saturday's child has to work for its living. But the child that is born on the Sabbath day Is fair and wise and good and gay.

Most of us know what day of the week we were bom on. But if you had to say what day of the week your friend's birthday or wedding day was on, would you know? Probably not. So what do you do? Ask CoCo!

Just run What Day? and provide CoCo with the month and year in question. (To indicate the month, press any key until the desired month is highlighted, then press ENTER.) CoCo instantly produces a calendar for that time, showing the correct weekdays.

By trial and error WhatDay can also be used to find the year in which a specific date, month and day of the week would occur. The program allows for leap years and special tum-of-the-century leap years. It is accurate to 1770, when the Gregorian calendar (the current system) was adopted in most countries except for Russia and parts of Asia. WhatDay is also accurate for any year in the future.

## Disk Copy Utility by William F. Medlock

Everyone likes a program that takes minutes to enter and is useful. This one is both short and useful. It copies every file from one disk to another, one file at a time - unlike BACKUP, which copies the whole disk, trash and all. It reads the directory and executes COPY commands just as you do.

One of the best uses for the program is the elimination of file fragmentation. File fragmentation happens when disk files are broken up and spread all over the disk. You can tell this is happening when the drive heads move back and forth excessively while reading or writing files. It usually happens on a disk with a variety of files that are constantly being saved and killed.

PC owners have eliminated file fragmentation by copying everything to a fresh disk using a wildcard copy. A wildcard copy is a command syntax that tells the computer to copy every file in one directory to another directory or another disk. To do the same thing on a CoCo has, until now, been laborious. Every file had to be copied one at a time, which meant typing every filename twice. Now you can throw out the trash, just like the big guys. It can be done on any model CoCo with two disk drives.

Using Copy is simple; I recommend using it after a hard Reset. Either turn the computer off and on again, or type in POKE113.0. Then push the Reset button at the right rear of the computer. Next load the program, put the source disk in Drive 0 and the destination disk in Drive 1, turn on verification if wanted, and run it.

The program loadseach disk sector of the directory one at a time and extracts the filenames contained in those sectors. It inserts a period to separate the filename from the extension, then uses the filename with the COPY command. The program does not overwrite existing files on the destination disk.

Box Menu by Bill Bernico

This short subroutine spices up your menu screen and makes item selection less ordinary.

Substitute your own menu choices for these, but use the same procedure for placing the box around the chosen selection. It's all done with PRINT@ statements. Variables $W, X, Y$ and $Z$ define the four areas where the character string is drawn to surround the menu choice.

Instead of RUN at the end of a line as in lines 7 through 10, your program actually branches off to do the task described in that selection. Scroll the menu up by starting the print on the bottom line of the screen. As more choices appear, the previous choice scrolls up until all choices are in place, ready for you to select a number and branch off.

## Moonscape by Jim Forster

## CoCo 3

You have a view of the moon almost every night. Have you ever wanted to see the earth hanging in the sky instead? This program was written for the CoCo 3 with an RGB monitor. If you do not have an RGB monitor, some of the colors may be different.

You just might see an eclipse because each view is different. So take the place of Neil Armstrong and voyage to the moon!

## New Tites!The Best in Color Computer Software.

# Radio Shack has a library of programs for entertainment, education and productivity 

At Radio Shack, we're dedicated to making sure that you never run out of ways to use and enjoy your Color Computer. We've got a terrific line of software of all types.

Let your Color Computer open the door to a world of fun. Choose from a dazzling selection of popular and challenging games, including popular Nintendo ${ }^{04}$ titles.

One of the most valuable potentials of your Color Computer is in providing your children a head start in their education. We've got
learning programs for children of all ages that will provide hours of productive fun! With this selection, you'll find programs that help develop hundreds of useful skills.

No matter what your personal needs, we've got programs that'll put your Color Computer to work where you need it most-like personal filing, word processing, spreadsheets and communications.

Send in the coupon for a free copy of our 1990 Software Buyer's Guide. Or pick one up at any

Radio Shack-your one-stop neighborhood software center.

## The Base Converter by James Stakelin

Have you ever had the task of converting \$F1 in Base 16 to Base 2? Or have you wondered just what a hexadecimal number should mean to you? Well, worry no more. Here is The Base Converter, the program that takes the job off your bands.

To put it simply, The Base Converter translates or converts any number in any number base to any other base. If you have ever tried to do this, you know how much time a large number can consume, especially when a base higher than 10 is used. Finally you can do it electronically with your Color Computer.

To use the program, simply follow the three input prompts. Enter the number and its base, then enter the base to which you want it converted.

The listing: COnvert

## COCO 3'S MISSING LINK:

## "BIG BASIC"

## BASIC USERS GET FULL POWER OF MEMORY MANAGEMENT IN WINDOWS!

## "Danosoft has a winner in Big Basic, and I would recommend it to anyone wanting to get the most out of a Color Computer 3." - Rainbow, Oct./89.

Now you can access up to 472 K of memory in a 512 K CoCo or up to 92 K in a 128 K machine with any mix of programs and/or data . At last, you can do sizable basic programming with a CoCo 3. (Also offers simplified memory management for M.L. programmers.)

Magically fast, executes one big program or database in basic; or up to 58 separate basic programs running at once from computer memory in up to 58 separate windows! Saves programs or variables with their currently running parameters and loads back that way as if you never left the program.

Chain in unlimited sized programs or data from disk(s) without crasing existing programming or variables. Also works with the RGB-DOS Hard Disk system.

- 3 new simple basic words create the power.
- Provides for variable exchange between windows.
- Programs can be saved over multiple disks or use our BIG DISK Utility. (See below)
- Modifies your basic operating system in some 70 locations but does not occupy user memory.
- Includes 7 Demo Programs and Manual.
- Disk use only; any version RS-DOS.
- ONLY \$39.95 U.S. or \$46.35 CDN. + \$2.50 S \& H Ontario residentsadd8\%PST.
"BIG RAMDISK" ( $512 \mathrm{k} \operatorname{CoCo3} \mathrm{V} .2 .0$ or V.2.1)
- Copy or backup your programs or data to "BIG RAMDISK and get the speed of program/data saving or loading to an "in memory" device. ("COPYDISK" Utility included.)
- Great for use with all other programs on this page and most commercial software.
- You can install, re-install, format and reformal from direct mode or from a program without erasing programming or variables. It's in machine language, does not occupy user memory, but can be user located elsewhere if needed.
- Your choice of one big 158 granule ramdisk ( 80 tracks- 360 k ) or two 68 or 78 granule ramdisks ( $35-40$ tracks to 360 k total), depending on your DOS. (i.e. RS-DOS, "BIG DISK". "DOUBLE40", etc.)
- Ramdisk files and directory do not erase with a reset coldstart (ALT/CTRL), and are preserved if a program crashes. This lets you use some programs that need a Coldstart to exit.
- "BIG RAMDISK" with "BIG DISK" or "DOUBLE40" (see below) \& two double-sided drives $\Rightarrow 1$ MEG. on line.

ONLY $\$ 12.95$ US or $\$ 14.95 \mathrm{CDN}+\$ 2.50 \mathrm{~S} \& \mathrm{H}$. Ont Residents add 8\% PST

For any CoCo (at least 64 K ) with 1.1 or 2.1 Disk Extended Basic:

# "UTILITIES PACKAGE" 6 HANDY M.L. RESIDENT UTILITIES FOR BASIC 

"Must - have software for the

- Rainbow, Nov./89
- Rainbow, Nov./89.
"BIG DISK" - Makes computer see double-sided drives as one 360 K (80tk) drive; 158 granules.
Sets drives for 40 tracks each side.
ans each side of a disk without disturbing the first 35 . Doubles all your present storage.
"QUIKDRIV/6MS" - Sets fast drive stepping rate.
"QUIKDRIV/30M • Fast drive shut off.
"SET FEED" - Sets line spacing for printouts.
Only $\$ 17.95$ U.S. or $\$ 20.80 \mathrm{CDN} .+\$ 2.50 \mathrm{~S}$ \& H . Ont. Residents add 8\% P5S.

## DANOSOFT

Box 124, Station "A"
Mississauga, Ontario L5A $2 Z 7$

10\% Discount on purchase of 3 or more items at the same time.
"MEMORY MASTER" OUR FAVORITE PROGRAMMING TOOL
"Memory Master is a unique hacker's program offering about all you could ask for in a disk and memory utility." - Rainbow, Sept/89.

Scan, Edit, Copy, Printout any memory in your computer or on disk. Fix disks.
Fast entry of M.L. Listings.
Dual Windows! Runs 2 Basic Programs at once!
Disk chains unlimited amounts of program sections or data.

Includes Demo Program and Manual.
$\$ 24.95$ U.S. or $\$ 28.95$ CDN. + $\$ 2.50$ S \& H. Ont. Residenu add $8 \%$ PST

## The Memo Maker by Darrin Seats

This program takes what is typed in and saves it to the disk. To load the screen back later, simply type LOADM"FILENAME", and the text pops up on the screen. Every computer owner has tidbits of information written on pieces of paper. Now all you have to do is load the program and run it. It will not erase a program already in memory. Instead of scraps of paper lying around, I now have a disk that holds all my miscellaneous notes.

The listing: MEMOMAKE

## Gopher Smash by Thomas Wong

Have you ever tripped over a hole in your yard and discovered that gophers are inhabiting your property? If so, you probably won't be happy when the time comes to repair damages. While you're taking a break from your inevitable battle with the gophers, load Gopher Smash into your CoCo 3 and take out some of your frustrations.

After the program has initialized, you see nine boxes, each with a letter defining it. When a gopher pops up, press the key corresponding with the box containing the gopher, for as many times as the gopher is visible. The higher the gopher is above the ground, the more points you receive. Watch out for the surprise bombs. The bombs are the same point value as the gophers except they subtract, rather than add, from your score. The main goal is to gain

THE SUPER DISK
14 separate disk utilities on 1 disk and a 30 plus page manual! Learn the secrets of copy protection. Ulilities to help you create your own unique protection schemes and examine other. Read \& write entire tracks, including the unseen secret information between sectors. There's never been anything like it! SALE PRICED NOW AT JUST $\$ 39$

## WARGAME DESIGNER II

It's the conflict simulation creation system that destroyed the comperition "It's sure to become a standard..." JC, CO You get 4 ready to play scenarios. Easily create your own units, maps, complete scenarios. JUST \$24
Get the WGD II ICON DISK too with over 500 ready to use icons. ONLY $\$ 15$

## WEEKLY WINNER 3

Due to many changes in lottos, we had to update Weekly Winner. It now will allow you to play $3,4,5,6$ and 7 digit lottos. It also is easier to edit your database and gives more info when you do a printout. We hit 4 out of 6 in the Ohio Super Lotto the first time we tried the new versionl Don't play the Lotto without it! STILL ONLY $\$ 15$ or upgrade for just $\$ 9$.
GRIDIRON STRATEGY
This is PRIME football time. Get a friend over and enjoy some pig skin fun of your own. GS is still the best strategy football game for the COCO 3 and is SALE PRICED at JUST \$18

## CCI FLACS

The BEST "Risk" play alike available for the COCO 3. ONE SALE NOW for $\$ 18$.
AIR WARS PLUS
Challenge a friend to a dog fight in mid air or in space with AIR WARS PLUS. 3 exciting, easy to play arcade style games for 2 piayers. A BARGAIN AT $\$ 15$.
ELDUS

Expiore the multi level world of ELDUS in this $100+$ screen, all joystick graphical adventure. STEAL THIS GAME FOR ONLY $\$ 16$. RORKES DRIFT

A FAST action simulation of one of Britain's most famous battles. No need for a game save leature, the ZULUs come at you from all sides. Can you survive until reinforcements arrive? ONLY \$15
2 FOR 1 SALE
Historic butfs will appreciate this one. Buy PENINSULAR WAR and get THE RUSSIAN CAMPAIGN FREE! Both are strategic level military campaigns of the Napoleonic era. One on the plains of Spain, one in the Russian steppes. You could lose playing but you can't lose buying! BOTH for ONLY \$15.
MORE 2 FOR 1
Buy MASTER DIR, the fastest disk cataloging program around and get CC3CRAM, a picture compression utility, FREE. A $\$ 30$ value for JUST $\$ 18$.

## EVEN MORE 2 FOR 1

Buy the ever popular COCO 3 WHEEL and get BLACK GRID FREE! WHEEL is the word game that could make you a fortune, recently updated too. BLACK GRID is a mind wrenching graphic puzzie guaranteed to have you pulling your hair out! Great multi player fun for the holidays! A $\$ 38$ value for ONLY $\$ 19$ VOCAB
SCRABBLE fans, get ready! This play alike is for 1 to 6 players and is great party fun. Beautifully executed by R. Cooper. You can even take on the computer opponent, Mr. Vocabl IT's NEW, IT's FUN, IT's ON SALE FOR $\$ 19$ Our CATALOG ON DISK is still JUST \$3. See before you buy. If you order from the CATALOG ON DISK, deduct $\$ 3$ from your order \& recover the cost! NOT TO WORAY! All orders are shipped within 24 hours of receipt by FIRST CLASS mail FREE enywhere on this planet! You'll have it in time for the holidays. But, don't delay, OROER NOW!
We accept mail \& phone orders with payment by check, money order, vISA and MASTER CARD, COD's add $\$ 3$.
the highest possible score in 60 seconds. When your time is up, you are asked if you want to try again or stop.

The game can be modified in several ways. For those who want customized keyboard layout, change every third value of the data statement in Line 1 with the ASCII equivalent of the keys you want to use. Also, if the gophers pop up too fast, delete the high-speed poke in Line 1. These are just a few examples of what you can do to change the program. Good luck smashing gophers!

## Quickgrass <br> by Joshep Pendell

Quickgrass is a game where you must move your lawn mower over grass blades that are really growing fast. The object of the game is to prevent the grass from reaching the top line for as long as possible. The grass will grow faster and faster, the longer you play. When a blade of grass finally reaches the top, a score is given based on how long you survived.

The lawn mower is controlled with the right joystick. The game operates more smoothly if the high-speed poke is used, and the variable SC holds the score. OLD is the last $x$ position of the lawn mower stored for erasure later. $J$ is how much higher the grass will rise when it grows. 0 is the rate at which $J$ increases to make the game harder. Array $A$ holds the image of the lawn mower, while Array B holds a block of the background color to erase the lawn mower when moved. A simple modification would be to set D (initialized in Line 130) to a higher number than 10 to make the game a little easier.

Submissions to "Novices Niche" are welcome from everyone. We like to run a variety of short programs that can be typed in at one screen sitting and are useful, educational and fun. Keep io mind, although the short programs are limited in scope, many novice programmers find it enjoyable and quite educational to improve the software written by others.

Program submissions must be on tape or disk. We're sorry, but we cannot key in program listings. All programs should be supported by some editorial commentary explaining how the program works. If your submission is accepted for publication, the payment rate will be established and agreed upon prior to publication.

## Gibralter Software Presents <br> A BASIC UTILITIES DISK FOR YOUR COC03

FILE EDITING utliity with 36 search/replace patterns quickly edits BASIC files. Inservdelete mode tool Block loading handles files larger than memory. Auto-backup of original file.
DESKTOP environment for your BASIC program disks. Run programs from an on-screen directory. Point and click to copy, rename, kill files. Disk memos remind you of file contents. Supports 1-4 drives under standard Radio Shack DOS. A must-have utility.
INTERACTIVE GRAPHICS with Rubber band lines, rays, boxes, circles, ovals, arcs, polygons, starbursts, connect-the-dots, freehand drawing, variable lext sizes, horizontalvenical llips, more! USERFRIENDLY. Seli-centering joystick required (Pmode4).
SUPER-CALCULATOR has inverse trig functions, pi, int, +1=1/x, square, cube, roots, 10 memories and more! Plus bonus calculator subroutine (9 functions) uses only 4 screen lines.

NOTEPAD allows simple text editing from within your BASIC program. Insert, overwnte, delete, word-wrap, print and disk functions.

HIRES UTILITY subroutines display input in HSCREEN graphic modes and transfer numeric/string variables to your program. Time your routines with our on-screen countdown timer. Demo included. BEST for adventure and arcade-lype games where leaving the hires screen is inconvenient.

# Disk Track Tracer 

by Tony DiStefano<br>Contributing Editor

The other day I was visiting a friend who showed me a new toy for his Atari ST computer. There was a device hooked up to his disk drive - a small box with two LED displays. When I first saw it, the displays read 00. "So what!" I exclaimed. "What does it do?"

He demonstrated it by accessing the drive. It whirred a litte, then the LED display started to change. In fact, every time the disk drive stepped, the display changed. Upon further investigation of the new gadget, I leamed that it was a track tracer. The LEDs always display the track number on which the disk drive's head is sitting. What a novel idea! Of course I had to have one for my computer as well. So after my visit I went home with one thing on my mind - the track tracer. He had spent a good sum of money for it and waited weeks for it to arrive from England. I didn't want to pay that much, nor did I want to wait that long. But I really wanted it, and once I get an idea in my head, there isn't much I can't do. I sat and thought, grabbed a sheet of paper and a pencil, and came up with something.

I looked in my trusty TTL manual (The TTL Data Book Volume 2), and a project began to grow into two sections - the counter and the display driver. Since I wanted a project with as few parts as possible, because fewer parts mean less wiring and less cost, the first thing I came across was a typical display chip, the 74LS48 or 7448. It is a BCD (Binary Coded Decimal) to seven-segment display decoder driver with built-in resistors.

[^1]Look at Figure I. There are two 74LS48s that serve to drive two seven-segment displays. This type of chip requires a display that has a common cathode. In Figure 1 I left out the pin numbers for the display because there is no standard for display pin-outs. When you use them, make sure that the pin-out comes with it. The important thing is that the segments are labeled with letters A through G. Then the only other pin you need will be ground, which is what the diagram shows.

If the display is too dim, you may want to add a few 1 K resistors. You need seven resistors for each display. Tie one side of each resistor to +5 volts and the other side toeach of the outputs, labeled A through G.

There are four inputs to the 74LS48 for the digits. Remember, you want to display the numerical digits 0 through 9 for each display, and three bits give you only eight combinations. A fourth bit is needed, which gives you 16 combinations - a few too many, I know. Just make sure you don't output a number greater than nine.

For your own interest, try inputting a higher number. The display shows garbage. There are other display chips that display numbers 10 through 15 as letters A through $F$, which could be good for projects requiring displays in hexidecimal. For now, you need only decimal. The other inputs of the 74LS48 are not used in this case. Refer to your TTL manual for a description of these pins.

That takes care of the display side of things - now let's look at the other side. To choose the chip, I took a look at what signals were available. The tracks are accessed by a stepper motor, which needs two signals - a step signal and a direction. In digital terms you need a chip that is able to count up and down - an up/down counter. After studying the TTL index, I came up with the 74LS 190, which is a synchronous
up/down counter. It's just what you need, and it's all in one chip. Remember, there is always more than one way to do any given thing in TTL. I used the easiest way.

Let's go through this chip one pin at a time. There are four outputs, otherwise known as the count number, that feed the display driver. Look at Figure 1, UI. Pin 14 is the CLK, or clock input. Every time a pulse appears on this pin, the counter counts by one. The direction it counts depends on the $\mathrm{D} / \mathrm{U}$ (down/up) pin, which is connected to the direction pin on the disk drive - one pulse, one count. When the count goes up to and passes 9, the RCO (Ripple Count Overflow) clocks the next digit. In the other direction, when 0 goes down to 9 , the RCO substracts from the next digit.

Next is Pin 4, an enable pin (G for Go). This pin is connected to the drive enablepin of the drive and is necessary because the circuit can keep track of only one drive. If your system has more than one drive, the counter is only activated when the appropriate drive is accessed. You must connect this pin to whatever drive you want to keep track of. The pin numbers for each of the four drives accessible on the CoCo are as follows:

| Drive | Pin Number |
| :---: | :---: |
| 0 | 10 |
| 1 | 12 |
| 2 | 14 |
| 3 | 32 |

Connect the DR0 pin to whatever drive you want to keep track of.

We now have an up/down counter with direction. The next problem is that the circuit must have a point of reference. When you first turn on the computer and drive, the circuit does not know what track the drive is sitting on - it could be on any track. The only reference point is another available

pin on the drive, the Track 0 detector. I used this pin to load the counters with a preset number, which in this case is 0 . Examine Figure 1 again and look at the four inputs, A through D. They are used to load a number into the counter. In our case we need a zero, so all four inputs are soldered to ground. Pin 11 is used to load the value of A through D into the outputs of the counter. The TRK0 signal is active as long as the drive heads sit on Track 0. As soon as the stepper motorhits Track 0 , a logical low is seen on TRK0. This causes a pulse to be carried through C1. A short pulse is all that is needed to load the 74LS190 with 0 . It is important to note that this counter does not properly display the track number until the first access to Track 0. You can easily force this by doing a DIR with the drive door open. Disk BaSIC tries to read the disk, gets an error and seeks to Track 0 . Then bingo, our circuit is now also calibrated.

In theory, the track tracer works well. But when I tried it, noise on the drive line made the counter unreliable. The two inverters to the step input are used to clean up that signal.

## Construction Notes

There are many ways to put this project
together. I'll give you some hints and leave it up to you to decide what is best for you. The simplest way is to build it inside your drive case if you have room. The circuit is built on a small proto-board; mount all components using sockets because it's safer. Not shown in Figure 1 are the +5 volts and ground for the ICs- U1, U2, U4 and U5. The +5 -volts pin is 16 ; Ground is $\operatorname{Pin} 8$. For U7, +5 -volts is on Pin 14 and ground is on Pin 7. Capacitors C3 and C4 should be phyically close to U1 and U4. You can position C2 just about anywhere, using the +5 volts available from the power supply of the drive.

If you want to get fancy, mount the circuit inside a small utility box, build a +5 volt power supply and connect it to your drive cable using another 34 -pin connector. A four-position switch can also be used to select the drive you want to keep track of, or you can even double this circuit and watch two sets of digits. Since all the signals needed are inside your disk controller, you can mount the circuit inside your controller, cut a hole in the cover, and mount the display on the outside. You can use big or small displays, depending on where you want to mount them. I won't detail how and where to mount this; if you understand the
circuit and can build it, you know enough on how to mount $i$. Here is what you need for this project:

| Part | Description |
| :--- | :--- |
| U1,U4 | 74LS190 |
| U2,U5 | 74LS48 or 7448 |
| U3,U6 | 7-segment display, |
|  | common cathode |
| U7 | $74 \mathrm{LSO4}$ |
| C1 | 10 pF capacitor |
| C2 | 10 uF capacitor |
| C3,C4 | .1 uF capacitor |
| R1 | 3.9 K resistor |

Misc. Parts: Proto-board, 14 - IK resistors, power supply, utility case and 34-pin connector.

After it is built, tested and rumning well, what do you use it for? The original track tracer my friend has is advertised as a tool for tracing what track software has accessed. The reason I built it is because I thougbt it was a neat conversation piece. I like things that flash and blink. When people come over and look at my set-up . . . well, you know!

# Learn to Give and Take 

by Fred B. Scerbo<br>Contributing Editor

#### Abstract

If you have an idea for the "Wishing Well," submit it to Fred c/o The rainsow. Remember, keep your ideas specific, and don't forget this is basic. All programs resulting from your wishes are for your use, but remain the property of the author.

Coming very soon is the tenth anniversary of the introduction of the Color Computer by Tandy. Some CoCo loyalists may even remember when it was called the TRS-80 Color Computer. Over the years it has been known by different names. Still the one I most like to call it is practical.

When it comes to using a BASIC language that is easy to manipulate, nothing beats the CoCo's Extended Color basic. The ease of using this language made this month's program a breeze to write. The program is called Primary Math Driller, and it is the newest version of a program called Multi Math Driller, which appeared previously in this column.

Several years ago I wrote a program called Multi Math Driller to help students drill math tables in multiplication. Driller was so popular that I created a new version with division drills called Driller 2. Recently, however, many readers have suggested educational programs for younger CoCo users, particularly primary school

Fred Scerbo is a special needs instructor for the North Adams Public Schools in North Adams, Massachusetts. He holds a master's in education and has published some of the first software available for the Color Computer through his software firm, Illustrated Memory Banks.
students. Multiplication and division drills are of little use to a child who has not yet mastered addition or subtraction.

Now there is Driller 3, a program that drills the child in both addition and subtraction. I have also added some new features to the subroutines that create this program. The first two versions give only a raw score (i.e., five wrong out of 25 tries). The new version includes the standard score card, a feature that appears in many of my educational programs.

The score card may be activated by pressing the @ key. I must warn you, however, that it may not respond the first few times you press it. (Jiggle it a few times.) The reason for this has to do with how INKEYS works. Usually you can use a line such as XS-INXEYS: IF Xs-. (If you use this method, the keyboard may get a few steps ahead of you.) Therefore, pressing the space bar too many times might give you a false response as the keyboard gets ahead of itself. Instead I used IF INKEY S - to check the keyboard so no false responses are recorded. At the same time, however, you must do a little jiggling to make it recognize the @ key. It is a small trade-off to ensure no unnecessary responses are recorded. Believe me, there is nothing more frustrating for some children than to have the computer misread a response.

## Using the Program

The program is easy to run. and you can also tailor it to meet your needs without too much trouble.

There is a slightly different title card than usual on this program. Throughout the entire program Driller 3 uses the letter set that the CoCo TitleMaker program uses. Pressing any key sets up your choices. Press A for Addition or S for Subtraction. The next choice asks you to pick the speed of the program. The fastest is I while 9 is
the slowest. I suggest that anyone trying the program for the first time start with 9 . The next question asks you to pick the desired tables from one to nine. The number you select is added to or subtracted from a random number from I to 9 .

Next the screen asks if you want the tables assorted. Answering Yesmixes in all tables lower than the number you have selected for the tables. Selecting No gives you only the table number you selected. Using the Assorted option is really best, especially when using subtraction. In subtraction, if you select nine (9) and No for assorted, you only get the same problem over and over again ( $9-9=0$ ). This is because only one number (9) is either equal to or greater than the selection you chose. For example, selecting eight ( 8 ) with no assorment only allows two problems ( $9-8=$ ? and $8-8=$ ?). Therefore, use the assorment when using subtraction.

## Drilling

The rest of the program is very much like Driller 1 and 2 - the screen displays a colorful oil rig; the top of the screen displays a problem in large numbers and letters; and at the bottom of the screen a field of answers runs by. When you see the correct answer come under the rig, press the space bar or the fire button on the right joystick. You may want to press it just before the answer comes under the rig. If some of the answer goes by, the program records a miss instead of a hit.

If the answer is correct, the screen shows a colorful display and the entire problem at the top of the screen. If you score a miss, the screen says YRONG and TRY AGAIN. If the user gets 20 consecutive correct answers without an error, the oil well erupts in a geyser. It is a very nice display when you hit pay dir!

As I mentioned earlier. jiggling the @
key during a problem advances you to the scorecard.

## Custom Changes

Notice I have included the old MC. 10 routines for those of you who still use the machine. Some of you may find that 20 problems are too few. If that is the case, you can change Line 25 , which reads 25 $B R-30: Y S-20$. The variable $B R$ is the maximum number of tries; $Y S$ is the number of problems. You may increase these values to any number and save the program. For example, 25 BR -60 : Y $5-50$ allows up to 60 tries of 50 different problems. I thought it was much easier to have the value set in the program rather than add another option at the beginning of the program. Too many options tend to scare the user.

Driller 3 or Primary Math Driller is colorful. interesting and can have an impact on your child's leaming process. Let me know what other types of programs you would like to see in coming months.

The listing: DRILLER3

## Dedicated to computers and music -

- A full range of well supported music programs that are compatible with with each other. Most run on CoCo's 1, 2, or 3 with 64 K of memory.
- Good programs that don't skimp on delivering what counts the most--performance and sound!
- Knowledgable and friendly sales personnel who can give you help after the sale.

Lyra, the full featured music editing program. Enter and hear music you never thought you could play! Super easy to use. Put notes on a music score with a mouse. Play 8 voices on your TV or connect to your MIDI synthesizer (comes with a MIDI cable). Print program included. See Nov. 1989 review. Only $\$ 59.95$
Lyra Lybrary, a full featured collection of music for Lyra. 18 disks (over 375 titles) for $\$ 125$ or $\$ 14.95$ per disk, or $\$ 20.00$ per disk, your choice of titles. Send SASE for list of titles.
The Lyra Companion, a 100 page book filled with everything you wanted to know about Lyra. See November 1989 Rainbow review. Just \$9.95
CoCo MIDI 3, the pro quality MIDI sequencer that lets you record from your MIDI synth and edit the music. See the October 1989 Rainbow review. Works with any CoCo with 64 K memory. $\$ 150.00$ complete (program and MIDI interface pak)

Rulaford Research
P.O. Box 143

Imperial Beach, CA 92032
(619) $690-3648$ (evenings 6-10 PT)

Hot $\mathbf{C o C o}$, a 45 minute professionally recorded audio tape of original compositions by CoCo artists. You'll love it! \$9.95
Play music on your CoCo with Musica. Only $\mathbf{\$ 2 4 . 9 5}$

# Do You Have The Time? 

## by Jonathan Saksa

You were one of those lastminute Christmas shoppers who were slowly convinced that the season to be jolly was someone's idea of a cruel joke. The past couple of months have magnified your procrastinating tendencies and overall disorganized way of life. And you actually believe a new year's resolution will change things. Get a grip. You probably don't even have time to organize your time - but Calendar does.

Calendar is a BASIC09 program written to run under OS-9 Level II. To run the program, make sure you are operating from an 80 -by- 24 text or graphics screen. Before starting the program, use the cha command to select the directory in which the calendar file will be stored. Make sure $\mathbf{g f x} \times 2$ is in the current execution directory or loaded into memory.

The program itself is menu-driven and uses arrow keys to make selections. Each selection is described as follows:

Jon Saksa uses the CoCo to write software for his dairy farm as well as for personal use. Since 0S-9 Level II became available, he uses baSic 09 exclusively. He can be contacted at Rt. 1, Box 86, Annandale, MN 55302

Load file - Used to load the current month's date file so you can enter or edit Calendar information.

It provides an easy way to see the upcoming calendar for the next two weeks from the current date set when booting OS-9. It also looks back several weeks in your calendar to see if there were any reminders that you still want called up.

##

Send check or money order to: Alpha Softwere Technologies, 1500 I-10 Service Rd, 161, SLIdell, LA. 70461 (con)eny.517t (mate)

makes it easy to edit records but clumsy to type them in the first time because any wrong character must be deleted before being retyped. The end of the record is cut off if more than 45 characters are forced into the record.

Save file-Must be used after editing to save any changes made. It saves only that portion of the file loaded previously.

Change month - Lets you select any month of the year to load in for editing.

Coming events - Provides an easy way to see the upcoming calendar for the next two weeks from the current date set when booting OS-9. It also looks back several weeks in your calendar to see if there were any reminders that you still want called up (more on that later).

Quit - Exits the program and returns you to the OS-9 command line.

One special feature of the program is that when you load a file for a current month. it also loads the last two weeks from the previous month and the first two weeks from the upcoming month. This provides a total of 60 days that can be edited from one loading, which is especially nice since some events such as paying bills occur close to the same day each month.

The reminder feature is also interesting. By inserting an asterisk (*) anywhere in the record for any day, you can call up a record in the reminders section when using the Coming Events selection. This happens only if the event occurs in the previous two weeks from the current day. For example, the option can be used when you want to be continually reminded to buy a birthday present for someone - procrastinators will love this.

The calender_file is an empty file except for the first five bytes of each record that contain the date in the format 01/01. The record is 50 bytes long with 45 bytes available for the user.

The curr_cal program can be used in the startup file or as a stand-alone program to display the previous seven days for any reminders activated with an asterisk. It also looks ahead seven days. No editing can be done with this program.

The createfile_cal program creates the original empty calendar_file in the current directory. This sets up all the month/ day records with 45 bytes of space reserved for the user.

One extra benefit is that the menu portion can be used in other BASIC09 programs by following the same parameters I've used here.

## Submitting Material To Rainbow

Contributions to mie ranbow are welcome from everyone. We like to run a variety of programs that are useful, helpful and fun for other CoCo owners.

WHAT TO WRITE: We are interested in what you want to tell our readers. We accept for consideration anything that is well-written and has a practical application for the Tandy Color Computer. If it interests you, it will probably interest lots of others. However, we vastly prefer articles with accompanying programs that can be entered and run. The more unique the idea, the more the appeal. We have a continuing need for short articles with short listings. These are especially appealing to our many beginners.

FORMAT: Program submissions must be on tape or disk, and it is best to make several saves, at least one of them in ASCII format. We're sorry, but we do not have time to key in programs and debug our typing errors. All programs should be supported by some editorial commentary explaining how the program works. We also prefer that editorial copy be included in ASCII format on the tape or disk, using any of the word processors currently available for the Color Computer. Also, please include a doublespaced printout of your editorial material and program listing. Do not send text in all capital letters; use upper- and lowercase.

COMPENSATION: We do pay for submissions, based on a number of criteria. Those wishing remuneration should so state when making submissions.

For the benefit of those wanting more detailed information on making submissions, please send a self-addressed, stamped envelope (SASE) to: Submission Guidelines, the rainbow, The Falsoft Building. P.O. Box 385, Prospect, KY 40059. We will send you comprehensive guidelines.

Please do not submit material currently submitted to another publication.

## XTEAM \& OS-9

## XTERM

OS. 9 Communications program

- Menu oriented
- Upload/downioad Ascil or XMODEM protocol - Execute OS-9 commands from within XTERM

Definable macra keys
Worte with standard serlal pori, RS232 Pak, or PBJ 25P Pack, Includes all drivers Works with standard screen, Xscreen WORDPAK or DISTO 80 column board

## ECONOMIST

Perform economic analysis to compare different cost and income alternatives! Compute present and future Life Cycle Worths for various combinations of single, series and gradient dollar amounts. Quickly edit and recompute for sensitivity analysis! Display line graphs. Printout data and results. Pull-down menus, windows and prompts. Requires os-9 level II and Basic09.

SMALL BUSINESS ACCOUTING
This sales-based accounting package is designed for the non-accountant orlented businessman. It also contains the flexibility for the accounting oriented user to set up a double entry journal with an almost unlimited chari of accounts. Includes Sales Entry, Iransaction driven Accounts Receivable and Accounts Payable, Journal Entry, Payroll Dlsbursement, and Record Maintenance programs. System outputs include Balance Sheet, Income Statement, Customer and Vender status Reports, Accounts Recelvable and Payable Aging Reports, Check Register, Sales Reports, Account Status Lists, and a Journal Posting List.

INVENTORY CONTROL/SALES ANALYSIS
This module is designed to handie inventory control, with user defined product codes, and produce a detailed analysis of the business salea and the sales force. One may enter/update inventory datu, enter anles, run five sales analysis reports, run five inventory reports, set up product codes, enter/update salesman records, and updite the SBAP inventery.
$\$ 59.95$

## ACCOUNTS RECEIVABLE

Includes detalled audit trails and history reports for each customer, perpares inreports for each customer, perpares in-
voices and monthly statements, mailing invoices and monthly statements, mailing la-
bels, aging lists, and an alphabetized cusbels, aging lists, and an alphabelized cus-
lomer lisilng. The user can define net tomer lisiling. The user can defline net termis for commercial sccosnts or finance charges for revolving accounts. This pack age functions as a standalone A/R system or integrates with the Small Business Aceling package.
$\$ 59.95$
ACCOUNTS PAYABLE
Designed for the maintenance of vendor and $A / P$ invoice files. The system prints checks, voids checks, cancels checks, deletes cancelled checks, and deletes paid A/P involces. The user can run a Vendor List, Vendor States report, Vendor Aged report, and an A/P Check Reglater. This package can be used either as a slandalone AAP sys. tem or can be integrated with the Small Businuss Accountling Package.
$\$ 59.95$

Designed for maintaining personnel and payroll dats for up to 200 hourly and salarled employees with 8 deductions each. Calculates payroll and iax amounts, prints checks and maintains year-to-date totals which can be autamatically transferred to the SBA package. Computes each pay perlod's totals for straight time, overlime and bonus pay and determines taxes to be with. held. Aditional outpuls include mailing list, listing of employees, year-fo-date federa and/or state tax listing, and a listing of eurrent misc. deductions. Sulted for use in all states except Oklahome and Delsware
$\$ 59.95$

PERSONAL BOOKKEEPING 2000 easily as cheeks. Hiandles 26 expense categ easily as checks. liandles 26 expense
riesk. Menu driven and user friendly.
$\$ 39.95$

## About Your Subscription

Your copy of the rainbow is sent second class mail. You must notify us of a new address when you move. Notification should reach us no later than the 15th of the month prior to the month in which you change your address. Sorry, we cannot be responsible for sending another copy when you fail to notify us.

Your mailing label also shows an account number and the subscription expiration date. Please indicate this account number when renewing or corresponding with us. It will help us help you better and faster.

For Canadian and other non-U.S. subscribers, there may be a mailing address shown that is different from our editorial office address. Send your correspondence to our editorial offices at Falsoft, Inc., The Falsoft Building, P.O. Box 385, Prospect, KY 40059.

## The Complete Rainbow Guide to OS-9

Authors Dale Puckett and Peter Dibble show how to take advantage of OS-9's multitasking and multiuser features. An easy-to-read, step-by-step guide packed with hints, tips, tutorials and free software in the form of program listings.
Book \$19.95, Disk Package \$31 (2 disks, book not included)

## The Complete Rainbow Guide to OS-9 Level II Vol. I: A Beginners Guide to Windows

Puckett and Dibble have done it againl They uncover the mysteries of the new windowing environment and demonstrate clever new applications. More hints, tips and plenty of program listings. Book \$19.95, Disk \$19.95

## The Rainbow Introductory Guide to Statistics

Dr. Michael Plog and Dr. Norman Stenzel give a solid introduction to the realm of statistical processes and thinking for both the beginner and the professional. ( 80 -column printer required.) Book $\$ 6.95$. Tape or Disk $\$ 5.95$, Package $\$ 11.95$

## The First Rainbow Book of Adventures

Contains 14 winning programs from our first Adventure contest. Includes Sir Randolph of the Moors, Horror House, One Room, Dr. Avaloe and more. Plus hints, tips on solving Adventures.
Book $\$ 3.50$, Tape $\$ 3.50$

## The Second Rainbow Book of Adventures

Featuring 24 of the most challenging Adventure games ever compiled. Meet the Beatles and battle the Blue Meanies, find a hidden fortune, or win the heart of a mysterious princess. Ring Quest, Secret Agent Man, Dark Castle, Curse of Karos and more! Book $\$ 13.95$, Tape $\$ 13.95$

## The Third Aainbow Book of Adventures

The excitement continues with 19 new Adventures. Discover backstage intrigue at the London Theatre, attempt a daring space rescue, or defeat evil in the year 2091 as a genetic android. Evil Crypt, Spymaster, Time Machine, The Amulet, and thet's only the beginning! Book \$11.95, Tape \$9.95, Two-Disk Set \$14.95

## The Fourth Rainbow Book of Adventures

Fourteen fascinating new Adventures from the winners of our fourth Adventure competition. Rely on your wits to escape a hostile military installation, try to stop the Nazi plan to invade Great Britain, manage to reinstate our defense system before the enemy launches a massive missile attack, and more!
Book \$10.95, Tape \$9.95, Two-Disk Set \$14.95

## The Rainbow Book of Simulations

20 award-winning entries from THE RAINBOW's first Simulations contest. You are a Civil War Commander, an air traffic controller, a civil defense coordinator, or a scientist on Mars . . . your wits are on the line.
Book \$9.95, Tape \$9.95

## The Second Rainbow Book of Simulations

The 16 winners from our second Simulations contest. Fly through dense African jungle, bull your way down Wall Street, lead a bomb squad, or try your hand at Olympic events. Test your skills and talents. Book $\$ 9.95$, Tape $\$ 9.95$, Disk $\$ 10.95$

## Corrections

"Hi-Res Graphics Utility" (November 1989, Page 41): Some of the characters were inadvertently deleted from the end of three of the lines. In Line 170 add 140, in Line 180 add 187, and in Line 190 add A8B.
"Diary" (June 1989, Page 91): To be able to load the diary once it is saved, change Line 55 to read:

```
55 IF LOF(1) \I THEN 60 ELSE GET/
1,2:INPUT #1.15: LAGS=LS:GOTO 40
```

"Letter Carrier" (October 1989, Page 20): The author has recently moved. His new address is 118 Corlies Ave., Poughkeepsie, NY 12601.
"Donut Dilemma Review" (November 1989, Page 102): Because of a production error, the reviewer, Linda Manning, was not properly credited as having reviewed the product. We apologize for this oversight.

## Breakpoint

# Lost and Found 

by Greg Law<br>Technical Editor

Have you ever spent one of those dreary days looking for a particular disk that you just couldn't find? If you are anything like me, you tend to have hundreds of mostly unlabeled disks scattered about that contain remnants of zillions of pieces of data. To say the least, trying to find anything is like trying to find the proverbial needle in a haystack. This month has been particularly interesting since I have just moved and everything is still lying around in boxes. With that in mind, I thought this would be the perfect time toget organized. I started out with box after box of unknown disks and a handful of freshly formatted disks. I painstakingly copied each of the files to empty disks organized in such a way so that similar files are on the same disk. Then I attached disk labels to each. After a few days of moving files around, I finally had everything organized properly so that I could more easily find the files 1 needed. I quickly realized that disk labels tend to stick to everything with the exception of the disks they are intended for.

I then came across the perfect solution: vol, written by Joseph Cheek. This handy little utility allows you to view or change the volume name on any disk, even a hard drive. It is also very easy to use. Just load the source code into BASIC09 and execute the pack command to create the executable program. From then on, type vol and the program will guide you through by issuing several prompts.

The program is broken down into three procedures: vol, 1 tou and printdate. The

In addition to being OS-9 Online SIGop, Greg Law enjoys programmingonall rypes of computers and has worked on systems ranging from the CoCo to the Burroughs B6700 super mainframe. He lives in Louisville, Kentucky.
first procedure, vol, begins by declaring the variables and two structures used. The $i d$ structure contains the date and time the disk was formatted along with the volume name of the disk. The r structure contains the 6809 microprocessor registers that are used to perform OS-9 system calls. The procedure obtains your user ID and the process ID with the statement RUN syscall (ccode, $r$ ), using a calling code of 12 (F\$10), and stores the user ID into the uid variable. It then prints a short introduc-
tion followed by your user ID. If your user ID is zero, it also prints (Superuser) in reverse video.

The REPEAT loop at Offset 0189 first prompts you for the drive name. If you press ENTER, it will use either /DO or the last drive name you selected. This makes iteasy to change the volume label on several disks since you don't have to type in the drive name every time. At Offset 01FC it opens the drive in Update mode and seeks to Byre 11 of LSN 0, which contains the user ID of

the person who formatted the disk, and reads it into the did variable. Next it seeks to Byte 26, reads the date and time the disk was formatted and the volume name into the id structure, and closes the disk. The volume name has a maximum length of 32 characters, and the last character has the most significant bit set. That is, if the volume name of the disk is "Utilities," then the volume name contains the values shown in Figure 1.

The REPEAT loop at Offset 0242 copies the volume name from id.name into diskname, stopping at either the character with the most significant bit set or at the 32nd character in the string. It also clears the most significant bit so that when it is printed on the screen, the last character will be printed as a printable character instead of some Greek value as shown above in the dump of the volume name.

The IF statement at Offset 027F compares the disk ID with your user ID. If they are not the same and you are the superuser,

Figure 1
you are asked if you want to change the volume name anyway. If the disk ID is not the same as your user ID and you are not the superuser, you are not allowed to change the volume name; vol is set to FALSE.

According to the BASIC09 manual, you can print a quotation mark by placing two quotation marks within the string to be printed. This is what has been done in the PRINT statement at Offset 02FD. The end result is that it prints the volume name of the disk contained in quotation marks. For example, if your volume name is Utilities, Volume: "Utilities" is printed on the screen, followed by the date and time the
disk was formatted. If vol is TRUE, you are asked if you want to change the volume name. If you do, the cursor is moved up one line, that line is erased, and you are prompted for the new volume name.

The REPEAT loop at Offset 03A1 reads the volume name you type in by executing the syscall module to perform the I $\$$ ReadLn system call. It was designed so that if you press ENTER without typing a volume name, it performs the loop again until you type in a volume name. It should copy the last character you typed in diskname to key and set the most significant bit. It should then strip off that char-

acter from diskname and append the same character with the most significant bit set in key to diskname.

However, there is one minor problem with this approach. The I $\$$ ReadLn system call reads each keystroke as you type it and terminates the string with a carriage return when you press ENTER. The statement at Offset 03E9 copies the last character in the string into key, which should be the character immediately preceding the carriage return. Unfortunately this is not the case because Bastc09 expects the string to be terminated with SFF (Decimal 255). It actually searches all of memory until it finds \$FF and then returns the character immediately preceding it. The author was attempting to get around a minor problem with BASIC09 where it writes the string, including the string terminator, to the disk. Although this is true, it writes only the maximum length of the string as it is dimensioned - 32 characters - so no harm is done.

Ascurrently written, the program writes the volume name you typed in. However, the 32nd character has the most significant bit set, though it is not necessarily the last character you typed in. While this is harmless, it does write some very interesting volume names on the disks. I suggest replacing the line at Offset 03CE with INPUT diskname. The volume names written to disk are properly terminated when this is done.

Once the volume name is written, the disk is closed. You are asked if you want to view or change the volume name on another disk. The entire loop is repeated if you press $Y$, and the program ends if you press any other key.

The itou procedure is used throughout the program to convert your yes or no responses into uppercase. It works by receiving the string to be converted into the parameter named answer. The FOR statement loops through each of the characters in answer, placing the ASCII value of each of the characters into char. If it is a lowercase character, it is converted to uppercase and appended to the end of workstring. If it is not a lowercase character, it is appended to the end of workstring without any conversion. Finally, the converted string is copied from workstring into answer, which is then retumed to the procedure that called it.

The printdate procedure is fairly straightforward. It receives the date and time the disk was formatted into the parameters year, month, day, hour, and minute. It then prints the date and time so that each value has a leading zero if it is less than 10. This prints the date and time in a manner similar to 89/10/04 at 09:05.

## Color Computer Sofunare ffrom Cerr-Comp Lutd.

## Window Master V2.2

The hottest new program available for the Color Computer IIII Now you can have Windows, lcons, Buttons, Pull-Down Menus, Edit Fields and Mouse Functions built into your Basic or Machine Language Programs easily and guickly, without the need for OS9.

It supports up to 31 Windows on the display, multiple fonts in 54 possible sizes and styles, Enhanced Basic Editing and much more. It adds over 50 Commands and Functions to Basic to fully support the Point \& Click Window System. In fact it has to many features it would take several pages to to describe them all.
It is completely compatible with existing Basic programs and takes absolutely no memory away from Basic. It contains a built in Ram Disk which is completely transparent to Basic (512k version) for enhanced operation.
It requires 1 Disk Drive, R.S. Hi-Res Interface a Joystick or Mouse. Includes both the 128k \& 512 k versions for only $\$ 69.95$

## Window-Ware

Window Writer - A Point \& Click Word Processor, features both Mouse \& Keyboard lype editing, proportional printer support, powerful formatting capability, works with any printer. On screen Italic, bold etc. WYSIWYG Requires Window Master \& 512 k - $\$ 59.95$ Window Writer/W. for non Window Master users includes all features as described above. Requires 512 K \& Disk $\$ 79.95$
Window Basic Compiler - A Basic Compiler similat to CBASIC only it compiles all the Window Basic statements to create super fast M.L. programs \& Desk Accessory programs for Window Master $\$ 99.00$
Window EDT/ASM- A full featured
Editor/Assembler and Debugger for the Window Master System \$49.95
Eont/Icon Editers - A utility disk with the Font \& Icon Editors so you can edit or creale your own, includes Basic \& M.L. versions \$19.95 Adyanced Programmers Guide - A Guide for Basic \& M.L. Programmers on interfacing to Window Masters complete system including System Calls, Memory Map, Interrupt handling \& Extended Memory access. $\$ 24.95$
The Memory Giame - A Concentration like game, lots of fun for everyone. $\$ 19.95$

## 512K RAM UPGRADE

Give your COCO 3 all the power it deserves with this easy to install (no soldering/plug in) $100 \%$ Tandy compatible 512 K memory upgrade. Completely assembled and tested. Includes Ramdisk \& Memory Test software described below. $\$ 159.95,512 \mathrm{~K}+$ Window Master $\$ 199$

## 512K RAMDISK \& TESTER

## RAMDISK is an ALL Machine Language

 program that will give you 2 ULTRA High Speed Ram Disks in you CoCo-3. Plus il allows your CoCo-3 to run at double speed all the time even for disk access!!! It will not disappear when you press reset like some other ramdisk programs. The MEMORY tester is a fast ML program to test the 512 K ram. It performs several bit tests as well as an address test.Requires 512 K \& Disk $\$ 19.95$

## CBASIC Editor/Compiler

The ULTIMATE Color Computer BASIC COMPILER!!!
If you want to write fast efficient machine language programs and you don't want to spend the next few years trying to learn how to write them in Assembly language or with a cheap compiler, then CBASIC is the answerlll
CBASIC is the only fully integrated Basic Compiler and Program Editing System available Ior the Color Computer. It will allow you to take full advantage of all the capabilities available in your CoCo without having to spend years urying to learn assembly language programming. CBASIC allows you to creale, edit and convert programs from a language you are already tamilisa with Enhanced Disk Color Basic, into fast efficient machine language programs easily and quickly.

CBASIC supports all the enhanced hardware available in the CoCo 2 \& 3, including Hi-Res Graphics, \& Screen displays, Extended Memory and Interrupts. We even added advanced commands not available in Basic to give you a level of control only available to very advanced Machine Language Programmers. Plus we made it exceptionally easy to use, not like some other compilers. CBASIC is the friendliest and easiest compiler svailable for the Color Computer.
CBASIC is a powerful tool for the Beginner as well as the Advanced Basic or Machine Language programmer. CBASIC features well over 150 Compiled Basic Commands and Functions that fully support Disk Sequential and Direct access files, Tape, Printer and Screen 1/O. It supports ALL the High and Low Resolution Graphics, Sound, Play and String Operations available in Enhanced Color Basic, including Graphics H/GET, $\mathrm{H} / \mathrm{Put}, \mathrm{H} / \mathrm{Play}$ and H/DRAW, all with $99.9 \%$ syntax compatibility.
CBASIC makes full use of the powerful and flexible GIMI chip in the Color Computer 3. It will fully utilize the 128 K of RAM available and install 2 Ultra Fast Ramdisks if 512 K is available, for program Creation, Editing and Compilation. You can easily access all 512 K of memory in a Compiled program thru several extended memory commands that can access it in 32 K or 8K blocks and single or double bytes.

CBASIC has its own completely integrated Basic Program Editor which allows you to load, edit or creale programs for the compiler. It is a full featured editor designed specifically for writing Basic programs. It has block move and copy, program renumbering, automatic line number generation, screen editing, printer control and much more,

## Coce 1,2 or 3 Disk $\$ 149.00$

- Send full 128 charicter set from Keyboard
- Complete Editor, Inver, Delece, Change or Add.
- 9 Variable length, Programmable Macro Key buffers.
- Programmable Printer rates from 110 to 9600 Baud.
- Send Files from the Buffer, Macro Keys or Disk.
- Display or Prina the contents of the 50k Buffer.
- Freeze Display \& Review information On line.
- Built in Command Menu (Help) Display.
- Built in 2 Drive RAMDISK for 512 K RAM.

Supporix: R. S. Modem-Pak \& Deluxe RS-232 Pak.
Coco 1, 2 or 3 Disk $=\$ 59.95$

## "The SOURCE" disassembler \& SOURCE code generator

The SOURCE will allow you to easily \& quickly Disassemble Color Computer machine language programs Directly from Disk and generate beautiful, Assembler Source code.

- Automatic label generation.
- Allows specifying FCB, FDB and FCC areas.
- Disassemble programs Directly from disk.
- Automatically locates address.
- Output listings to the Printer, Screen or both.
- Generates Assembler source directly to disk.
- Built in Hex/Ascii dump/display.
- 8 Selectable Display formats 32/40/64/80 .
- Selectable Foreground \& Background colors.
- Buila in Disk Directory an Kill 厄̈le commands.
- Menu display with single key commands.
- Written in Ulura Fast Machine Language.

$$
\text { Coco } 1,2 \text { or } 3 \text { Disk } \$ 49.95
$$

## EDT/ASM III

DISK EDITOR ASSEMBLER
EDT/ASM III is a Disk based co-resident Text Editor \& Assembler. It is designed to take advantage of the new features available in the CoCo- 3 with either 128 K or 512 K of memory. It has 8 display formats from $32 / 40 / 64 / 80$ columns. There is also a free standing ML. Debug Monitor.
EDT/ASM III has the most powerful, easy to use Text Editor available in anty Editor/Assembler package for the Color Computer.

- Local and Global string search and/or replace.
- Full Screen line editing .
- Easy to use Single key editing commands.
- Load \& Save standard ASCII formaued files.
- Block Move \& Copy, Insert, Delete, Overtype.
- Create and Edit files larger than memory.

The Assembler features include:

- Supports Conditional IF/THEN/ELSE assembly.
- Supports Disk Library file up to 9 levels deep.
- Supports standard Motorola directives.
- Allows multiple values in FCB \& FDB directives
- Allows assembly from the Buffer, Disk or both.

Coco 1, 2 or 3 Disk $\$ 59.95$
. . and other one-liners.

## Did You Hear the One About Hints and Tips?

Many computer newcomers have little idea what to do with their new purchases once the excitement of 10 PRINT"HELLO ": :GOTO 10 wears off. Many have only a small idea of what their CoCos can do. Then there are those who want to accomplish a task not documented in Tandy's Extended BASIC manual - and they just can't seem to find a good way to go about it. Have no fear, beginner. Help is on the way.

Over its eight-and-a-half years of publication (and counting), THE RAINBOW has amassed a wide variety of hints and tips and one-line programs. These little words of wisdom and programming examples are sprinkled throughout past issues of THE RAINBOW, and readers consider them prizes.

Now, in the interest of sparking your interest, we have scoured our back issues for these all-important CoCo tidbits. We have grouped the most basic yet most meaningful items here for easy reference.

Of course if you are not a beginner (don't worry, we welcome all readers), you may have already seen many of these. Perhaps it is time for a review.

Whatever the case, you will enjoy these laughably easy CoCo shorts. Use them as you build your own CoCo repertoire.

## Putting on the Brakes

When using the STOP command to debug your program, ask for the information you want before you request the STOP action. For instance:

```
10 1NPUT"NUMBER", A
20 IF A-3 THEN Y=10:X }=3
30 IF A=4 THEN Y-20:X=40
4O PRINT X;Y:STOP
```

Line 40 shows the format used. It saves typing in the print request after the STOP command functions. It's a little thing, but it has saved me many finger strokes.

## Having RFI Problems?

If you are receiving interference in the CoCo's video display on your TV, there may be a simple answer. If the set has a 75ohm input connector (for cable TV), you can use a phono jack to F-connector adapter (Radio Shack 278-255) to plug the CoCo directly into the TV without using the switch box. Check your TV's instruction manual for any special switches or jumpers that may have to be changed.

## Format Your Printouts

Ted Cizadlo Selig, of Omaha, Nebraska, writes that this is "a utility I developed to generate a 32 -column LLIST of a program. I find this helpful in locating typing errors in listings from the rainbow. The pro-
gram must have an ASCII file ready and generates a listing of the program with your specified line width." The program requires a disk drive.

## The listing:

```
5 CLEAR500:CLS:INPUT"NUMBER OF C
HARS/LINE":CL
10 INPUT"FILE NAME WITH EXTENTIO
N(MUST BE IN ASCII FORMAT)";NS
\(20 \mathrm{C}-0: \mathrm{F}=1\)
30 OPEN"I". 11. Ns
50 LINEINPUT HI,N\$
60 IF EOF (1)--1THEN F-O
70 X -LEN(AS)
75 IF \(\mathrm{X}<-\mathrm{CL}\) THEN 150 ELSE IF \(\mathrm{X}=0\)
    THEN 50
\(90 \mathrm{~N}-1\)
100 FOR J=1 T0 INT(X/CL+1)
110 PRINT\#-2.MID\$(A\$,N,CL):C-C+1
\(120 \mathrm{~N}=\mathrm{N}+\mathrm{CL}\)
130 NEXT J
140 IF F THEN 50 ELSE CLOSER1: EN
D
150 PRINT*-2,AS:C \(\omega \mathbf{C}+1:\) IF F THEN
160 ELSE CLOSE 1 : ENO
160 GOTO 50
170 CLOSEP1: END
```

but it often causes confusion when someone who doesn't know about it types in a program from a printed listing; if you cram too many additional characters into a line, you may also find that they will not list properly even though they are actually present. Finally, packed listings will not save in ASCII format properly. Because of these problems we don't recommend using this technique in programs intended for publication.

Disk or Cassette and I/O Errors?
Make sure that the disk drive(s) and cassette recorder are not on the left side of the TV set (or if they are, that they're at least half a foot or so away). This is because the flyback transformer (which is almost always on the left side of the TV) puts out a great deal of RFI that can interfere with cassette or disk operation.

## Upside-Down Loading

If you're having problems with I/O Errors when loading programs from cassette, try reloading with the cassette recorder placed upside-down. It may not be technically refined, and it may not work, but when you're faced with the dreaded

## Line Too Long?

If you find that a line in a listing you're typing in is too long, the reason might be that it was packed. When you type in a BASIC program line, the computer watches the length of the line; when the line is 240 characters in length, the computer refuses to accept more characters.

If you need to get a few more characters on the line, press ENTER to place what you've already typed into memory, then type EOIT and the line number followed by enter. Press $X$ to move the cursor to the end of the line. Now you can type some more characters into the line. The Edit mode has its own length limit, so the computer will take a few more characters and stop again.

This trick does let you stretch your lines,

I／O，it＇s worth a try．Rick Bullon，who sug－ gested this method，says it works forhim 90 percent of the time．

## Undocumented Commands

Here are a few EDIT subcommands that are not documented in the Extended BASIC manual．I found these when going through a Model I quick reference card and decided to try them．They are as follows：

A：Cancel all changes，list the line and continue editing．

Q：Cancel all changes，stop editing．
E：Keep changes and stopediting．（same as ENTER）

The A and Q can be very useful if you make a goof and don＇t want to try and piece together a line or retype it．

## To Hex With Decimal

To convert Hex to decimal，enter ？\＆HXXXXX．To convert decimal to Hex，enter ？HEX $\$$（YYYY）．（This is where the four Xs equal the Hex number，while the four Ys equal the decimal number．）

## Single Disk COPY

Here＇s a feature that can be invaluable for users with a single disk drive．The Radio Shack Disk Manual mentions that use of the COPY command requires two or more drives．This is not necessarily true．A single drive copy can be made by doing the following：

1）Insert disk with file to be copied into Drive 0 ．

2）Type COPY＂FILENAME／ext：0＂and press ENTER．

3）After one short beep a notice appears on the screen instructing the user to insert the destination disk．

4）Insert the destination disk and press ENTER．

Once completed，there are two copies of the program：one original and one on the destination disk．

This method works for all types of disk files，including machine language programs．

## Automatic Lowercase

To move automatically into lowercase， type POKE282．0．To return to uppercase， use POKE 282，1．

## No－List POKE

If you would like to keep your program from listing，use POKE 383．158．To return to normal listing，type POKE 383.0 ．

## Slow Scrolling Through Orange

Here＇s a powerful little POKE for the CoCo 1 or 2 that slows your scrolling by creating a horizontal LIST．Type POKE 359,60 and you＇ll see what we mean．Add a colon （：）and SCREEN 0,1 and you＇ll be slow－ scrolling across an orange screen．To return to the green screen at full tilt，just type POKE

359．126．These pokes do not work with the CoCo 3.

## Computer Fatigue

One evening after a long period of use， my computer no longer recognized when a key was struck．A call to a local Radio Shack set me at ease．It seems that if one leaves the joysticks plugged in and condi－ tions are right（or wrong，depending on your point of view），the joysticks some－ times block the keyboard signal．I unplugged them and had no more problem with my keyboard locking up．

## Speed Up Your CoCo

You can double the speed at which CoCo 1 or 2 operates with a simple POKE state－ ment entered either directly from the key－ board or within a program．The statement is POKE 65495．0．This will speed up your CPU．You can return the computer to nor－ mal speed again with POKE 65494，0．Use POKE 65497．0 and POKE 65496．0 for the CoCo 3.

Note that you cannot perform any Input／ Output operations，such as saving the pro－ gram to cassette，when the speedup is in effect．You may also lose temporary key－ board control．If this happens，simply press the Reset button to brings things back to normal．

## Saving In ASCII

When you save programs，CoCo can perform this function in two ways：by using binary codes or actual letters and numbers （called ASCII）．

Although it takes longer，ASCII some－ times is a more accurate way to save a program，especially when you may be trans－ ferring programs between systems．

To save in ASCII，simply add a comma and an A to the end of your SAVE instruc－ tion，like this：CSAVE＂PROGRAM＂，A and the ASCII save is done by the CoCo．

## Achieving a New Effect

Here is a method for achieving a PCLEAR 0 effect for Disk Extended Color BASIC．It is as follows：

1．On power－up，POKE 25.14 and then POXE 26.0 ．

2．Type NEW．

## Listen Up

So you＇ve got an I／O Error on the first save of your favorite program，and you can＇t remember how far along in the tape the second save is．What to do？Just keep typing CLOAD until the second save finally comes up？Steve Lipps，of Circle City Software，has a better idea．If you put a little space between your saves，as many of us do，then you can listen for the second save： Use AUDIO ON and MOTOR ON and listen for the silent space．Then you can use MOTOR OFF．A method even faster than MOTOR OFF is to press any key and then press ENTER， creating a Syntax Error that stops the re－ corder．Then CLOAD the second save，

Print Out Disk Directory
If you have a long disk directory and want to see all of it or if you simply want to have a hard－copy printout of your direc－ tory，just POKE 111，254：DIR and the entire disk directory is printed on your printer－ even if it is too long to be fully displayed on the screen．

## Handy Label Printer

I simply got tired of seeing the hand－ written labels on my disks．Some were very sloppy，and some were in different colors of ink．The following is a short program that prints out a nice－looking disk label． You can use gummed labels that feed through your printer or simply print them out on regular paper and then cut them out， using a glue stick to stick them on your disks．

Edit the following lines：
50 enter your name
60 enter the date
70 enter the software manufacturer＇s name if the label is for a copyrighted third－ party program．

Format is for the Epson printer，and all CHR commands should be changed to your printer＇s needs．

## Finding ML Addresses

You can find the address of a machine language，loaded－from－cassene program by peeking several addresses in memory．

To find the start address，use the command PEEK（487）＊256＋PEEK（488）．

To find the end address，use the command PEEK（126）＊256＋PEEK（127）－1．

To find the execute address，use PEEK （157）＊256＋PEEK（158）．

## 03 New Calligrapher Graphics Clipix! E

 Introducing 8 disks of graphics pictures I call Clipix. Each disk has over 60 pictures. The introductory price of just $\$ 49.95$ (save $\$ 30$ ) for the complete set is available through Dec. 31st, 1989. Specify RS-DOS, OS9 or MS-D OS format.
## CALLIGRAPHER

CoCo Calligrapher - Turn your CoCo and dot-matrix printer into a calligrapher's quill. Make beautiful invitations, flyers, certificates, labels and more. Includes three $1 / 2$ inch high fonts. Works with many printers such as Epson, Gemini and Radio Shack. Over 135 additional fonts are available (see below). Tape/Disk (RS-DOS); \$24.95.
Calligrapher V2.0 - Prints all the same fonts as the CoCo Calligrapher. It reads a standard text file which contains text and formatting codes. You specify the fonts, centering, left, right or full justify, line fill, margin line width, page size, page break, page numbers, indentation, multiple columns, macros, headers, footers and more. Includes the same 3 fonts with additional fonts available below. Disk only; Specify OS9 or MS-DOS; $\$ 24.95$.
Calligrapher Fonta - Requires Calligrapher above. Each set on tape or disk with 8 to 10 fonts; Specify RS-DOS, OS9 or MS-DOS format; $\$ 14.95$ each:
Set \#1 Reduced and reversed originals;
Set \#z Old Style and Broadway;
Set \#3 Antique and Business;
Set \#4 Wild West and Checkers;
Set \#5 Stars, Hebrew and Victorian;
Set \#0 Block and Computer;
Set \#7 Small: Roman, Italics, Cubes, ete; Set \#8 Novelty fonts;
Set \#o Gallant and Spartan;
Set \#10 Several Roman fonts;
Set \#11 Gothic and Script:
Set \#12 More Roman and Italic;
Set \#13 Several Courier fonts;
Set \#14 Modern and Screen;
Set \#15 Tektron and Prestige.
Economy Font Packages available on disk only, with 25 to 30 fonts; Specify RS-DOS, OS9 or MS-DOS format; 29.95 for any one or save by buying two or more at $\$ 19.95$ each:
Pkg \#1 - Above font sets 1, 2 and 3;
Pkg \#2 - A bove font sets 4, 5 and 6;
Pkg \#3 - Above font sets 7, 8 and 9;
Pkg \#4 - Above font sets 10, 11 and 12;
Pkg \#5 - A bove font sets 13, 14 and 15 .

Calligrapher Combo Package - Includes the Calligrapher and any two Economy Font Packages (your choice) for only $\$ 59.95$. Specify RS-DOS, OS9 or MS-D OS.

## New! Calligrapher Graphics Clipix

The Calligrapher may now include graphics pictures, known as Clipix, along with the text it prints. There are currently 8 different Clipix disks available, each one has over 60 different graphic symbols. While the OS9/MS-DOS Calligrapher (especially V2.0) may easily combine both text and Clipix, the RS-DOS Calligrapher may also print out the Clipix. Clipix \#1) Sports, \#2, Miscellaneous, \#3) Occupations, \#4) Occasions, \#5) Vehicles, \#6) KidStuff, \#7) Astrology/Mythology, \#8) Animals. Each Clipix disk is $\$ 9.85$ See special offer above.

The Font Massager - This program allows you to do many things to Calligrapher font and Clipix files: Create new fonts, modify existing fonts, invert and compress fonts, double the height and/or width, halve the height and/or width and convert between RS-DOS and OS9/MS-DOS formats. Specify OS9 or MS-D OS; \$19.95.

This is a sample of the dot-atrix printer output fron the 059 MS-DOS Calligrapher set to full-justify the text vithin a 2.2 inch vide colunn. The font used is the 12-point Courier font fron the font set 115 (or package 15 $^{5}$ ).

For a complete catalog of Sugar Software products and fonts, send a stamp and a label.

VISA
*TRS-80 is a trademark of Tandy Corp.

## SUGAR SOFTWARE

P.O. Box 7446

Hollywood, Florida 33081
(305) 981 -1241

[^2]With all these commands, you must ask CoCo to print the addresses as well as work out the formula. You can use the commands either in a program or in direct mode from the keyboard.

## RS-232 Baud Rates

These poke values for the CoCo create the 16 most commonly-used baud rates. They are as follows:

| Baud Rate | POKE 149 | POKE 150 |
| :---: | :---: | :---: |
| 50 | 4 | 88 |
| 75 | 2 | 227 |
| 110 | 1 | 246 |
| 134.5 | 1 | 153 |
| 150 | 1 | 110 |
| 300 | 0 | 180 |
| 600 | 0 | 87 |
| 1200 | 0 | 40 |
| 1800 | 0 | 25 |
| 2000 | 0 | 23 |
| 2400 | 0 | 18 |
| 3600 | 0 | 10 |
| 4800 | 0 | 7 |
| 7200 | 0 | 3 |
| 9600 | 0 | 1 |

To achieve 19,200 baud, you must use the pokes for 9600 baud and then use the high-speed poke to double the CoCo's speed.

## Finding Those Bad Sectors

I have seen dozens of programs that find bad sectors and then isolate them from bASIC. Yet all use DSKIs and thus you always get I/O errors and have to manually continue the program to find other bad sectors. Below is a short program to find all bad sectors with no interruptions. Just enter it and type RUN. When the program finds a bad sector, it says so and then continues. Then you can use one of the dozens of programs already published to isolate that area.

```
10 DEFUSRO-PEEK(&HCOO4)*256+PEEK
(&HCOO5)
20 FOR T=0 T0 34:FOR Sm1 TO 18
30 POKE 234.2:. SET TO READ
40 POKE 235,0:* DRIVE NUMBER
50 POKE 236,T:' TRACK
60 POKE 237.S:* SECTOR
70 POKE 238.14:' DUHP TO THE
80 POKE 239,00:* GRAPHICS AREA
90 Y-USRO(0):P=PEEK(240)
100 IF P<>O THEN PRINT "ERROR IN
    TRACK";T:* - SECTOR**;S
110 NEXT S:NEXT T
```

## Polling the Keyboard

If you need to wait for a key to be pressed before continuing on with a program, insert EXEC 44539 at the desired point in the program. The computer will go on hold until any key is pressed.

## Painting Must Be Accurate

When you issue a PAINT command, be sure that you set the point at which the
painting is to begin within the area that is to be painted. If you set the position on a line that encloses the area, PAINT will not work.

Also when using PAINT, be sure your area is fully enclosed or the PAINT will leak out and cover the entire screen.

## Does the Trick

After many failures by both Radio Shack in Texas and me to place -upc in the startup file (for OS-9), I received a call from the people there that did the trick. Add this to the startup file: tmode . 1 -upc. So far, no problems have occurred.

## Rest Your Weary Head

Before shutting down your disk system, use this command to move the drive head to Track 0:

```
OSK1S 0,0,1,AS.BS
```

If you do this, the computer won't have to reposition the head to Track 0 the next time you use the system. This stops the noise of the drive moving the head back and forth.

## One-Liners

[s] This one-liner shows how the notorious PMODE 4 color artifacts create a color picture on your TV set or composite monitor using a black and white video signal. The display is also very nice to look at.

 BOW fest has something for everyone in the family!
If you missed the fun at our last RAINBOWfest in Somerset, New Jersey, why don't you make plans now to join us in Chicago? For members of the family who don't share your affinity with the CoCo , there are many other attractions in the Chicago area. The Hyatt Regency Woodfield-Schaumburg, Illinois, offers special rates for RAINBOWfest. The show opens Friday evening with a session from 7 p.m. to 10 p.m. It's a daytime show Saturday - The CoCo Community Breakfast (separate ticket required) is at $8 \mathrm{a} . \mathrm{m}$., then the exhibit hall opens promptly at $10 \mathrm{a} . \mathrm{m}$. and runs until 6 p.m. On Sunday, the exhibit hall opens at 11 a.m. and closes at 3 p.m.

Tickets for RAINBOWfest may be obtained directly from THE RAINBOW. We'll also send you a reservation form so you can get the special room rate.

The POSH way to go. You can have your travel arrangements and hotel reservations handled through RAINBOW affiliate, POSH Travel Assistance, Inc., of Louisville. For the same POSH treatment many of our exhibitors enjoy, call POSH at (502) 893-3311. All POSH services are available at no charge to RAINBOWfest attendees.
RAINBOWfest - Chicago, Illinois

## Stay on top of your finances <br> With Coco-Accountant 3

If you're like most of us, keeping track of your finances is a hassle. Messy checkbooks, boxes full of old receipts, and panic at income tax time. But your Color Computer 3 can turn you into a financial wizard if you have Coco-Accountant 3 .

This full-featured, home and small business accounting program answers the three big questions we all have about our money: Where did it come from? Where did it go? And what can I deduct from my income taxes?

CoCo-Accountant is easy to use and menu-driven. Just set up a list of accounts and start entering your transactions. Checks, credit cards, cash, paycheck information, interest. In any order. Just toss it in and CoCo-Accountant sorts it out. Here's what Coco-Accountant will do:

- List and total transactions by account, for any month or the whole year.

List and total transactions by payee or income source, for any month or whole year.

- List and total transactions by month, with income, expense and cash flow summaries.
- Quick year to date account and month summaries.
- Printed spreadsheet showing activity by account and month for the whole year!
- List and total tax-deductible expenditures and taxable income by account.

Toll Free Orders 1-800-628-2828 Ext. 850

Quick, easy checkbook reconciliation.
Coco-Accountant 3 will run on any CoCo 3 with a disk drive. And it's only $\$ 39.95$. (We also have CocoAccountant 2, with most of these features, for 64 K Color Computers at $\$ 34.95$ ). Send check, money order or credit card information to Federal Hill Software at the address below or call our Toll-Free Order Line at 1-800-628-2828 Ext. 850. Order now and bring your finances into the Computer Age!

Federal Hill Software 8134 Scotts Level Rd., Baltimore, Md. 21208 Info. 301-521-4886

## Multi-Tasks

Window Writer is the first Color Computer word processor which takes full advantage of OS/9. The result is a word processor which is fully as modern and professional in action as those previously available only for the IBM and Mac. The operating system allows true multi-tasking with other programs or itself. Not limited to just printing one file and editing another. You can print one file in one window while you edit files in other windows. At the same time you can be running a small program in another window. You can cut and paste between sections of files in different windows.

## Hi-Res Display

Window Writer uses an 80 -column monitor display screen for clarity. As shown in the above screen drawing, you can quickly see how to access the menus and help screens. You can determine the current position by page, line number, and column. The mouse can use this section to quickly change to a specific page or line in the file. The text insert and word wrap toggles also are indicated and changeable with the mouse button.

## Ram Disk

A RAM disk is set up in Window Writer to make full use of all or a user specified portion of the memory on the 512 K CoCo 3. On the 128 K CoCo a smaller RAM disk is set up to still allow use of all available memory for file editing. For use of all features, a 512 K machine is required.

The RAM disk is used for storage of the file(s) being edited, for the clipboard for cut and paste, and as a print spooler for the file being printed. Window Writer's clipboard can be saved to disk or pasted into any file being edited because files use the same clipboard memory. The RAM disk also can be used with other OS/9 programs.

## Mail-Merge

With Window Writer you can create form letters and send them out to a list of addresses in an address file. First names or other information can be added to "personalize" these letters.
(or joystick) or can be accessed by control keys.

Editing is a snap with OWL's Efficient Mouse Usage!

## Editing

Like most modern word processors, with Window Writer there is always more than one way to access any editing feature. You can access editing by menus using mouse, "keyboard mouse", or through control keys. Full help screens are quickly available for all editing features. A help screen can be left visible while needed and then quickly removed to get back to full screen editing.

One nice feature is the price: only \$59.
For the DynaSpell Spelling Checker by Dale Puckett including the 102 K Word Dictionary: only $\mathbf{\$ 2 0}$. additional!

French Version:
An abridged French translation of the Window translation of the Window
Writer manual is now available. This manual is written by a Canadian CoCo user and will aid French speaking users. Only $\$ 7.50$ additional.

## Pull Down Menus and Help Screens

A full selection of pull down menus and detailed help screens make learning easy and are only a key stroke (or mouse click) away. All menus and help screens can be user configured for everything including menu colors and contents. You don't like the color of a menu? You think one help item should be listed differently? Change them!

The menus and help screens can be reached by
cursor keys or the mouse

# The Hard Drive's New Frontier: 

# The Most Advanced Color Computer Hard Drive System Ever Offered! 

Fast No-Halt SCSI Floppies Using Optional SCSI Controller
Proven Performance for Demanding Home or Business Users

OWL-WARE has now been supplying Color Computer hard drive systems for over 4 years. We have reached our position in the hard drive market by providing our customers with a high quality product that they can be proud to own and use. Our first concern has always been quality and sound design.

We are now announcing our most advanced hard drive system ever. Using the optional OMTI 5200 SCSI controller with our Hard Drive Interface, our new system will support no-halt floppy drives. You need not wait while typing or worry about clock time losses. Why be limited to 3 floppy drives? A complete system could now consist of 1-3 standard CoCo floppy drives, $1-2$ (or more) hard drives, and 1-2 no-halt floppies using standard (not just CoCo) OS/9 format. You can use single or double-sided 40 or 80 track drives with the SCSI no-halt controller.

There are several new features with this improved interface. These include:

- Full SASI/SCSI compatible (this allows many add-ons to the versatile SCSI buss)
- No-Halt Floppies with optional SCSI controller allows full type-ahead during access
- Low factory-direct prices
- Fast Delivery from factory stock
- Optional Real Time Clock with built in battery (3-10 year lifetime)
- With the Clock you have $\mathbf{2 4 0}$ Bytes of battery backed up RAM for password protection or data storage!
- Same super stable LRTech quality

Our quality is obvious when compared to any other Hard Drive system or interface. Even the box is special. Our systems have always had a fan. Has our competition just heard about them?

Interface Price only: \$85.
Real Time Clock-RAM: \$25.

## 20 Meg. <br> 40 Meg . <br> 80 Meg.

(2X 40 Meg .)
System Prices: (Includes Hard Drive, case, \& fan, SASI Controller*, LR/OWL Interface, Software. Fuily assembled and tested.)

$$
\text { \$519. } \$ 629 . \quad \$ 929 .
$$

Super System Prices: (LR/OWL System as above but OMTI 5200 SCSI Controlier AND 3.5" 80 Track Floppy Drive in same case)

$$
\text { \$649. } \quad \$ 759 . \quad \$ 1099 .(2 \text { cases ) }
$$

*SASI controller is unused surplus. Add $\$ 75$ for OMTI SCSI

Now Available with High Density 5.25" drives as well as 720 K !
Disk Capacity of more than 1 Meg Formatted!
Same low price as our 720 K super systems listed below.

## OWL Hard Drive BASIC 3

There have been several ads in this magazine about BASIC for Color Computer hard drive systems. These ads sometimes only tell a part of the story. Our BASIC system price includes assembly, testing, and 3-day burn-in period. We do not require a Multi-pak to operate.
Our hard drive systems are fast, reliable, and reasonable in price. This has been proven by hundreds of users over the past 4 years. We do not have to turn off error checking for speed. We achieve high speed BASIC from a unique indexing method.
OWL HD BASIC 3 is very fast due to our index method. Almost all BASIC commands work normally including DSKINI, DSKI\$, and DSKO\$.

BASIC for Hard Drives Prices: With/Without Hard Drive
\$35./\$79.

## Technology the Color Computer Frontier

## Special for 0/1 Combos (Drives $\mathbf{0 , 1 , 2 , 3 )} \$ 295$.

## HALF- HEIGHT DRIVE UPGRADES FOR RS HORIZONTAL CASES

Why only double the capacity of your system when you can triple in the same case? Kit includes: double-sided to fit your case, chip to run both sides of new drive, hardware, and detailed instructions. Easy! Takes only 5 minutes!
Model \$119. Model \$129.
$500 \quad 501$ or 502

All drives are new and fully assembled. We ship only FULLY TESTED and CERTIFIED at these low prices. We use Fuji, YE Data, and other fine brands. No drives are used or surplus unless otherwise stated to you when you order. We appear to be the one of the few advertisers in Rainbow who can truly make this claim. We have 5 years experience in the CoCo disk drive market! We are able to provide support when you have a problem.

## Drives 1 Year Warranty

## OWL Phones

OWL WARE Software Bundle Disk Tutorial/Utilities/Games DISK TUTOR Ver 1.1
Learn how to use your disk drive from this multi-lesson, machine language program. This tutor takes you through your lessons and corrects your mistakes for a quick, painless disk drive introduction. (This professionally written tutor is easily worth the bundle's total price.)

## 3 UTILITIES

A copy verify, copy, and DOS utility.

## 2 GAMES

We will select 2 games from our stock. These are sold for more than $\$ 20$ each.
Do not mistake this sof tware with cheap "Public Domain" software which others offer. All of this software is copyrighted and professional in quality. The tutor is unique with us and has helped thousands of new users learn their disk drive.
only \$27.95 (or even better) only $\$ 6.95$ with any Disk Drive Purchase!!

## 512K Upgrade

Again at a popular price. Fully assembled and tested before shipping. Easy to install. Uses fast 120 ns . chips.

## Only \$99.

Now includes memory test, Ram Disk Lighting, Printer Lighting, and Backup Lighting, All with an upgraded manual exclusive with OWL!

Our prices include a discount for cash but do not include shipping.
OWL-WARE has a liberal warranty policy. Duting the warranty period, all defective items will be repaired or replaced at our option al no cost to the buyer except for shipping cosis. Cail our tech number for return. Return of non-delec
authorized returns are subject to a senvice charge.

## Feature

## Running against the clock and away from deadly skulls

# One Tile at a Time 

by Nick Bradbury

Ihe Frustrator is a game for the CoCo 3 that combines the strategy of thinking games with the fast action and graphics of arcade games. The game is played on a seven-by-seven grid, and your task is to fill the grid with tiles before your time runs out.

On the first few levels of the game, this is a relatively simple task to complete. However, more and more obstacles will hinder you as the game progresses. You see, the computer tends to cheat a little by removing some of the tiles every now and then. Also, the computer attempts to block you by placing skulls in your path. If you hit one of these skulls, the game is immediately ended.

## Game Play

When the game begins, you are asked to select the level of difficulty. First-time players should begin at Level 1 to get used to the joystick control and game play, but experienced players can begin at Level 4 or higher for a greater challenge. Although you may only begin at levels 1 through 9 , there are many levels beyond these. It is unlikely that many players will get beyond

[^4]Level 14 or 15. [Editor's Note: This sounds like a direct challenge if you ask us.]

The right joystick controls the gray $x$ and $y$ markers on the screen. This takes some getting used to, so you may want to play a few practice games first. Pressing the red button on the right joystick places a tile in the square corresponding to your markers. You must place a tile in every open square on the grid to advance to the next level of play. The first three levels are relatively simple because you are only required to place one (red) tile in each square, but every level beyond three requires two tiles (first a purple, then a red) in each square, which makes the game much more challenging.

Your opponent in The Frustrator is none other than your once friendly CoCo , which attempts to stop you from completing the grid. The first and most frustrating way it does this is by occasionally removing tiles you have placed. Another way the computer tries to hinder you is by placing skulls in your path. If you try to place a tile on a skull, your game is finished. Any skull placed on the grid remains until the end of the level. Points are awarded forevery skull remaining on the grid when you have completed the level.

Plus and minus signs are also randomly placed on the grid. Plus signs add points to your score while minus signs take points away. Your timer can be increased by picking up a square occupied by a large $T$ that also appears at random.

Flashing question marks are best avoided; when selected, these question marks alter
the way your joystick controls tile placement. There are three variations in joystick control:
(1) Single touch
(2) Release and press
(3) Continuous

When you are asked to choose your starting level at the beginning of the game, you can press V to select a different joystick variance to begin the game. After every third level you enter a bonus round during which you can earn extra points. Strange "eyeball" creatures appear and disappear in the grid. To earn bonus points,

## Tuble 1: Important Variables

```
sc - score
TM- timer
8wr - level#
2% - #tiles placed
zz - # tiles possible
x,\mathbf{y}}x\textrm{x}\mathrm{ and }y\mathrm{ positions of player's
        markers
71 - counter for timer
vx - joystick variation (1-3)
8o-0=regular level, 1=bonus leve!
x1,צ2 - x and y positions to place objects
9x - # skulls on screen
sE - # eyeball creatures hit on
    bonus level
CO(I) - palette colors (I=Palette
        Register#1)
C1 (I) and C2 (I) - tile and background
        colors (I=level #)
```

you must act as though you are placing a tile on a square occupied by one of these creatures. All points are awarded at the end of the bonus round, at which time your timer is reset.

The Frustrator becomes progressively harder after each level. The computer starts to remove tiles and place skulls at a much faster pace, and during the bonus levels the creatures disappear much quicker. Also, the timer ticks away faster as each level progresses.

Scoring is as follows:
Plus sign $-+5 \times$ level of play Minus sign - $-5 \times$ level of play Skulls - 2 points at end of level T- 10 timer units (start with 50) Eyeball creatures - 5 points each Completing level - $10 \times$ level of play

## Running the Game

Note that a pore 65497,0 is executed in Line 0 to put the computer into the highspeed mode. Make sure the computer is in the normal-speed mode before accessing the disk or cassette in any way. To do this, type pore 65496,0 and press ENTER. The listing is rather lengthy, so save several copies while entering it.

Table 1 is a list of the most important variables used in the program. I have provided this so people who like to experiment will have an easier time doing so.

The graphics in The Frustrator are relatively simple to create. All objects, including the tiles themselves, were saved using hget commands so they can quickly and easily be placed on the screen (using hput). Table 2 contains a list of the various objects and their corresponding hGET/HPOT buffer numbers. For further information on the use of these commands, please refer to the CoCo 3 Extended BASIC manual.

A simple technique was used to create the flashing effect of the skulls. The background color behind the skulls is the color contained in Palette Register 6. By simply placing a random number into Palette 6 every few seconds, the program makes the background appear to flash. For a simple demonstration of this effect, enter this short listing:

5 CNP : ON BRK GOTO 50
10 HSCREEN: HCLS B:HCOLOR 6
20 HLINE $(10,10)-(90,90)$, PSET, BF
30 PALETTE 6, RND (63)
40 COTO 30
50 CMP: HSCREENO:WIDTH32:END

## Table 2: HGET/HPUT buffer

 numbers1. Blank \#1
2. Plus sign
3. Minus sign
4. Blank H2
5. Player's $X$ marker
6. Blank \#3
7. Y marker
8. Skull
9. Big T
10. Blank \#4
11. Blank 45
12. Eyehal creature
13. Unused
14. Red tile
15. Violet tile
16. Big "?"
17. Blank tile

Note to RGB users: The listing presented here is for CoCo owners who are using a television set or composite monitor as a display. If you are using an RGB monitor, enter the listing as it appears and make the following changes:

# The Mandelbrot Bug and the CoCo 3 Microscope 

by Jeremy and Marty Spiller

You and your CoCo 3 can become explorers in a new and largely uncharted landscape discovered in 1979 by Benoit Mandelbrot, an American mathematician. The Mandelbrot set has become the symbol of a new science - a science of chaos that has cut across all the scientific subdisciplines and revolutionized them. This program, The Mandelbrot Bug and the CoCo 3 Microscope, lets your computer loose in Mandelbrot's world.

Before I explain the how and why of the program, let me say that this is not a program for anyone looking for instant results. A screen can take from 12 hours to four days to complete, depending on the area you want to enlarge and the number of iterations you specify. You may, however, break construction whenever you need the machine for other purposes. The program provides an easy method for saving and reloading unfinished screens so they may be completed at a later time. Of course you can save completed screens as well. You can also build a screen on three or four successive nights while using the computer for other projects during the day. This program works only on the CoCo 3 .

## Tape Versus Disk

The program was originally written for

[^5]use with a disk drive. While the screens can be saved to tape, the sheer length of a screen save makes a disk drive more practical. Tape users need to make the following modifications while keying in the program: Delete lines 200, 250 and 260 ; change the $>4$ in Line 210 to $>3$; change the SAVEM in lines 1280 through 1310 to CSAYEM; and change the LOADM in lines 1370 through 1400 to Cloadm.

## The Mandelbrot Bug

The Mandelbrot bug is a mathematical monster that lives in a land called the complex plane. It exists in a two-dimensional world where it can comprehend only two directions of movement. It can go up and down or to the right or left. If it goes up or down, it is traveling in the direction of imaginary numbers. If it goes right or left, it is traveling in the direction of real numbers. Since you and Ilive in a three-dimensional world, we are privileged to look at it from a vantage point that it could never imagine from outside the TV screen.

While its world is very different from ours, at least one thing is the same: We can view our world from far away or from close up. The Mandlebrot bug can do the same with its world. If I look at my computer from far away, I can see the whole keyboard, but I may be too far away to read the letters on it. If I move closer, say one foot away, I can see the keys clearly. If I get out a magnifying glass, I can see flaws and scratches in the plastic. I can use a microscope to see that the letters on the keys actually have irregular borders, and an electron microscope would show an irregular universe of molecular mountains and valleys. Each time we get closer, we are seeing the object on a different scale. The

Mandelbrot bug's world is infinite in both area and scale. We can examine to infinity in both real and imaginary directions, or we can zero in on one tiny area, magnifying areas within it again and again down to scales smaller than an electron. We can do this because the bug lives in a mathematical world, and we have our CoCo 3's. which can be programmed to act like microscopes. When we use CoCo 3 Microscope, we find infinitesimal Mandelbrot bugs, fingers of fire, oceans of color, microscopic seahorse tails, intricate filigree and geometric designs. You can spend all of eternity exploring a tiny area of Mandelbrot's complex plane and never see exactly the same thing twice!

## How to Run It

The program allows you to explore a box that measures four inches square, centered on zero in both real and imaginary axes. At first glance this may sound limiting, considering that the complex plane is infinite in area. However, since any part of the box can be examined in microscopic detail, even a lifetime would not be enough to completely explore it. For those intrepid enough to explore beyond these ranges, you can modify Line 510 to create another 4 -by-4 box some place in the complex plane. The main menu allows several options, including running a directory for the disk in Drive 0, without breaking the program. Tape users should delete all references to Disk BaSIC as described above. The main menu also allows you to load a previously saved picture or begin a new picture from scratch. Press 2 at the startup menu and you are prompted for coordinates and number of iterations. I recommend starting with the following numbers as this
is the most interesting part of the 4-by-4 box the program was built to explore.

Real axis low range -2 (minus 2)
Real axis high range -+0.6
Imaginary axis low range - -1 (minus 1) Imaginary axis high range -+1
Iterations - 60
When prompted for a filename, choose one with seven or fewer letters. The program saves a screen as four separate files. A number is added to the filename on each of the four files so the program can load them back into the computer in correct order. Each screen save takes up 16 granules of disk space.

There are many bugs scattered throughout other parts of the complex plane. However, this one is probably the biggest, and it happens to be conveniently close to zero in both axes. This saves on significant figures (you'll find out why this is important later). While everyone should start with these coordinates for his or her first picture, the program makes it easy to choose the numbers to use for all succeeding enlargements. The program is self-prompting; simply enter all five numbers when the program asks for them. After you enter the number of iterations, the screen should clear, and you will begin to see pixels being set in the lower left comer. It should take about twelve hours to complete the first screen and then you will meet your first Mandelbrot bug.

## Colors and the Number of Iterations

For all enlargements that follow your first screen, as well as for screens in which you expect no very large areas of black, you should use at least 100 iterations (preferably 300). The computer must test each pixel on the screen to see if it is a member of the set. This test must be carried out several times. The more times (iterations) you test the point, the more confidence you have that the point is, or is not, a member of the set. It should be noted here that all points that prove to be members of the set appear on the screen in black. The colored points are not actually members. The colors chosen for points that are not members of the set depend on how close they are to being included in the set. It tums out that the most interesting parts of the Mandlebrot set lie close to the boundaries, just outside of it.

The main disadvantage of using a lot of iterations is the amount of time it takes to complete a screen. As you enlarge closer and closer to a boundary, the program must spend more and more time iterating the testing loop before it breaks out and sets a point. This is especially true if your new
enlargement contains large areas that were set in black on the preceding enlargement. Some enlargements may take three or four days to complete. On the other hand, if the number of iterations is set too low, areas that should be in color will be black: areas that should be black will not show their true shape.

## Choosing Your Next Enlargement

Once a screen is complete, a flashing cursor appears at the bottom left. The cursor may be moved to any point on the screen using the arrow keys. Shifted arrow keys produce faster movement. Place the cursor directly over the area you want to enlarge and press a number key ( 1 through 6). A box appears on the screen around the spot where the cursor was located. While the program is in the box mode, the cursor disappears. Higher-number keys produce larger boxes.

If you chose the wrong size box, try a different number key. This erases the original box and replaces it with another. Pressing any key other than the appropriate number keys erases the box and returns the cursor. When you have boxed the exact area you want to enlarge, press ENTER. Note: Don't enlarge areas that are all black (inside a bug) because you will get nothing but a totally black screen. It is OK to include some areas that you know will be black, but be aware that large areas of black slow down construction considerably. The areas you should be most interested in enlarging are located in the confetti surrounding the bug.

## The Secondary Menu

Pressing ENTER from the graphics screen or BREAK from any point in the program brings you to the secondary menu. Here you see the exact coordinates for enlarging the area within the box you chose. You should copy these numbers down for future reference in case you ever need to reconstruct the same screen from scratch. (Note that the box has already been removed from the screen at this point so the screen has not been damaged.) You may begin construction of the new enlargement using these coordinates by choosing Option 1. It is best, however, to save the screen in memory first since using Option I clears the graphics in memory.

## Saving a Screen

You may save the screen you have just completed to disk (or tape, for those with very good tape recorders and brand-new tapes) by choosing Option 3. Saving a screen does not affect the parameters you found using the box function. The screen is saved as four files using the filename you
entered when you first ran the program. When you save a screen, the program encodes seven variables into the data (real and imaginary ranges, the number of iterations and two variables to make it possible to complete a screen saved in a partially completed state). When you reload, the program automatically knows the original parameters used to draw the picture and returns accurate enlargement parameters using the box function. Make multiple saves and save a screen several times during construction to avoid having to rebuild the entire thing from scratch in case of a power failure.

## Running Your Next Enlargement

Before running your next enlargement, give it a new filename (seven letters or less), and possibly change the number of iterations. These options are automatic whenever you choose I from the secondary menu. Answer the prompts and the computer begins your next enlargement using the parameters that you found earlier with the box routine.

## Saving and Restarting an Incomplete Picture

If you need the computer for other purposes while it is working on a screen, just press the BREAK key. This returns you to the secondary menu. Simply save the incomplete screen using Option 3 as you would for a completed picture. You may shut the computer down or use it for anything else by typing NEW. When you want to restart the picture, load and run the main program and reload the screen using Option 2 from the main menu. Once reloaded, go to the secondary menu by pressing ENTER and choose Option 5. This restarts construction. It's that simple!

## The Mandelbrot Set

The Mandelbrot set represents a very important event in the study of natural phenomena - the birth of the science of chaos. Why would anyone want to study chaos? The answer is that we live in a chaotic world, and this chaos frequently produces the most complex and interesting phenomena in nature. How can a relatively few genes produce the infinite complexity of the neuronal connections in the human brain? How do these connections produce thought and behavior? How does a huge mass of quarks and leptons with weird properties produce matter with familiar properties? Why are the very best computer models unable to predict the weather for more than three days in advance? Until the birth of the science of chaos, scientists had gone about as far as they could go in answering these questions. Phenomena of
this nature is difficult to break down into pieces small enough for analytical science to digest. Experiments designed to investigate questions like these tended to be very dependent on tiny variations in starting conditions, and the data they produced tended to be chaotic and impossible to interpret.

Benoit Mandelbrot, however, had a head for shapes. Whenever he was confronted by a problem, he looked for pattems he could relate to geometric forms. He discovered he could analyze data that made absolutely no sense to anyone else by looking for obscure pattems and then finding ways of making these pattems apparent to other people. The trick was to find a way of making the patterns apparent.

In the mid ' 60 s the age of the computer was just dawning, and Mandelbrot had access to the computers at the IBM research laboratory. He discovered that by choosing unusual coordinates, he could often make his computer use chaotic data to draw out the shapes in his mind. To his own amazement when he looked closely at the computer patterns, he discovered there was a lot of detail he had not noticed before. There were smaller pattems within the larger patterns, and there were even smaller pattems within these.

## Fractals

Mandlebrot coined the term fractal to describe this pattern-within-a-pattem solution to chaotic mathematical and physical systems. In general his first solutions tended to be pictures that looked the same at any scale. Picture a branch with little branches shooting out of it. Now picture the smaller branches with twigs coming from them. Then look at each twig and picture smaller twigs shooting off. Look at these tiny twigs and you see even tinier twigs . . . and so on to infinitely tiny branches. Fractal structure occurs freely in nature in the form of trees, blood vessels, snowflakes and mineral crystals, to name only a few.

## Cartesian Coordinates and the Complex Plane

Most readers are familiar with Cartesian coordinate mapping. To set a pixel on your graphics screen, you must specify an $x$ and $y$ coordinate. The $x$ coordinate tells the computer how many bits or bytes to go to the right, and the $y$ coordinate tells how many to go down the screen before plotting the pixel. Each axis can be assigned to represent a particular variable, quantity or quality. Thus, you can use data to chart the price of gold against an array of dates or wind resistance against velocity. Or you can use a mathematical formula to plot values of $x$ against the calculated values of
$y$. You end up with a curve or a shape defined by the coordinates. Once you have defined the coordinates, the screen itself becomes what mathematicians call a phase space. One of the most interesting phase spaces (coordinate systems) in abstract mathematics involves plotting real numbers against imaginary numbers. The phase space created when you plot real numbers against imaginary numbers is called the complex plane.

Real numbers are what we deal with every day - positive numbers, negative numbers, integers and fractions. These are plotted on the horizontal axis - negative numbers on the left, positive numbers on the right, and of course zero in the middle. Imaginary numbers also come in positive, negative, integer and fraction. The difference is that imaginary numbers represent the square root of negative numbers. What number multiplied by itself gives you -4 ? Nothing! No number multiplied by itself can retum a negative number. That's how imaginary numbers got the name. They may be imaginary, but they fulfill several purposes in abstract mathematics.

Any imaginary number can be represented by a real number multiplied by the square root of -1 (which is, of course, an imaginary number). The square root of -1 is generally represented by an italicized lowercase $i$. The vertical axis therefore looks much like the horizontal axis. Positive imaginary numbers go from zero up the $y$ axis, and negative ones go from zero down. Each number on the imaginary axis is simply a real number followed by $i$.

One additional complication to standard Cartesian mapping paves the way for the Mandelbrot set. Standard geometry takes an equation and graphs the set of points that satisfies it. Once plotted in its phase space, the set usually takes on the shape of a line, a curve or the outline of a shape. Equations that produce more or less simple curves and shapes are called linear functions. Scientists like to find linear
functions to describe nature because of their simplicity, and in general many natural phenomena can be described in this fashion.

An altemative method of drawing a linear curve is to have your computer examine each point in the phase space, plugging the $x$ and $y$ values of the point into the equation to see if it balances (totals zero). If it does, that point is a member of the set. If you do it this way, you end up with the same curve you would get if you simply used the equation to calculate the value of $y$ against values of $x$. At first glance this may seem a silly waste of time. Why bother checking out points on a trial-and-error basis if you can use the equation to calculate all the points that are members of the set? The reason is that most of the functions that describe chaotic behavior in the real world do not have linear solutions. In other words, these functions may produce thousands, even millions of values of $y$ for any given value of $x$ instead of the one or two you would expect from a linear function.

An excellent example of a solution to a non-linear problem is BASIC's PAINT command. You specify a point to begin painting and a border color to tell the computer where to stop painting, and an entire area of the phase space (defined by $x$ and $y$ coordi-

## *EXTENDED * ADOS-3

* Built-in RAMdisk * Polnt-and-pick file select menu *

Not a new version of ADOS-3, but a new product that shares space with ADOS-3 in a 16 K EPROM. Arrow-key selection of files to execute, LOAD, COPY, KILL or SCAN. The BACKUP command is doubled in speed for full disks, proportionately faster for partly full disks. (BACKUPs to or from the RAMdisk typically take 5 to 20 sec.) • BACKUP-with-format • Wild-card COPY and KILL, with optional prompting for individual fites - Date (or date/time with hardware clock) displayed for files in the directory, printed on LLISTings - DATE\$ function * Key repeat - Block move/copy of BASIC program lines * Text screen printer dump • Auto-reboot of a BASIC program or the DOS command * Parallel printing * Read/write/format 35/40 tracks on 80 -track drives - Supports 3 double-sided drives plus 2 RAMdrives * Allows different numbers of tracks on different drives - Shares the original's excellent compatibility with commercial software. For 128K CoCo 3 with ADOS-3 (RAMdisk use requires 512 K ). Includes information on having an EPROM burned (cost is $\$ 15)$ after configuring Extended ADOS-3. Disk. $\$ 39.95$. Extended ADOS-3 plus ADOS-3, $\mathbf{\$ 6 4 . 9 5}$. Driver for Disto real-time clock. \$5. Adapter for controllers lacking 28 -pin socket, $\mathbf{\$ 1 0}$. SmartWatch real-time clock (Tandy 25 -1033 equiv.), $\mathbf{\$ 3 5}$ (Drivers for Ext. ADOS-3 and OS-9 included: usable in 28 -pin socketed controllers or in Rompack, S10).
"...will blow your soeke off...imponsible to give Intended ADOS-3 mnything other than a rave review." -Relnbow, Oetober 198.
"Flewiess, competibie operaflon with Just abbout everything under the sun...by far the most UBEFUL product ever devised for the Color Computer."

ADOS-3 (reviewed July 1987)
Customize default startup message, colors, screen width, baud rate, step rates. processor speed, number of tracks ( 35,40 , or 60 ). Disk V/O and printing are reliable at double CPU speed. Extra commands such as FAST, SLOW, AUTO, RUNM, SCAN, CAT, PRT ON/OFF. Keystroke macros, arrow-key scroll through BASIC programs, ediVrepeat of last command, auto-edit of error line, ML. monitor, lots more. Usable as a disk utility or in EPROM. 128K Coco 3. EPROM-burning (cost is $515-20$ ) information provided. Disk, \$34.05. ADOS for CoCo 1 and 2 Disk, $\$ 27.95$.
FOR OS-9: SmartWatch real-time clock with driver, $\mathbf{\$ 3 0 . 0 0}$; in Rompack, $\$ 40.00$.

PLEASE ADD $\$ 2$ SHIPPING - NO DELAY ON PERSONAL CHECKS WE CANNOT ACCEPT CREDIT CARDS
nates) becomes a solid color. BASIC does this by checking to the right and left of the start pixel and painting until it reaches a pixel set in the border color. Then it looks up and down and repeats the process over and over again until the area is painted. Instead of using a mathematical formula todecide which points to set, the computer uses an iterated process (repeated over and over again). The result is not a line or the outline of a shape, but an entire irregularly shaped area of set points.

## The CoCo Microscope

The Mandelbrot set uses a simple formula to test each point in the complex plane. We are using the HSCREEN 2 graphics screen to show the results. The horizontal screen coordinates can specify any range of real numbers, and the vertical coordinates can specify any range of imaginary numbers. Real numbers might range from zero to 319 with 320 steps. The step rate here would be one whole number for each screen pixel. This would specify a very large scale, as though you were looking down upon a large landscape from an airplane. In order to keep distortion to a minimum, you would choose the same step rate (one pixel per whole number) for the vertical (imaginary) axis that would range from zero to 191. (Note: In order to avoid distortion, this program uses predefined boxes to determine enlargement parameters.)

You could, however, use a much smaller scale, say from zero to one. Now instead of looking down from an airplane onto a huge piece of phase space, you are standing on the ground looking at a much smaller area. Each pixel on the $x$ axis now represents only $1 / 320$ of a whole number. You can magnify a part of this screen as well. If you set the left side of the screen to represent 0.2 and the right side of the screen to represent 0.2005 , then each of the 320 steps across the screen would represent a step rate of only .00000156 per pixel. You can think of such a scale as looking at this part of the complex plane with a microscope. BASIC allows you to carry out this process to a limit of 12 significant figures. In the above example, the second pixel would be numbered 0.20000156 , eight significant figures. BASIC cannot magnify any area with a step rate of less than . 000000000001 . (It is true that BASIC can manage numbers smaller than this value using scientific notation, and scientific notation is essential to the correct production of the figures found in the Mandelbrot set. However, BASIC cannot add mantissas unless their magnitudes coincide.) In effect, your CoCobecomes a sort of mathematical microscope with a resolution of $1 \times 10^{-12}$.

## The Mandelbrot Set

Mandelbrot invented the term fractal before he discovered the set that bears his
name. The Mandelbrot set is a fractal in the sense that it contains detail at succeedingly smaller scales, but it is not a fractal in the sense that the pictures it produces at different scales are self-similar. Even though many of the structures you see seem to be repeated over and over again, none of them are actually identical. This fact is what makes the set so interesting to examine.

The formula that decides whether a point in phase space is a part of the set or not is a feedback loop that squares the real and imaginary coordinates, adds the original coordinates to the result, squares this new result, adds the original coordinates again, squares the result and so on for as many iterations (repetitions) as it takes to discover if the cumulative result remains within a finite range or heads off to infinity. If, after the specified number of iterations has taken place, the real and imaginary components of the result remain within an arbitrary range, (in our case, within the 4-by-4 box), then the point is considered part of the set. While 1000 iterations is considered fairly safe, in theory one can never be absolutely sure a point is really a member of the set, no matter how many iterations of the loop you run. It may remain within bounds through a billion iterations, but who knows what it would do on the billion-and-first? There is no shortcut method of predicting.

Splitting and building fresh, no-sweat icons

## Improving the Scheme of Screens

Would you love to make games with moving icons but think it would be too difficult? If so, you will like this program. Icon Designer lets you create sets of 39 icons using all 16 colors, customize the palettes, and create custom sets from already existing ones. All you have to do is use the utility (Listing 3) to load them into a buffer and separate them into 39 icons. After typing the three programs, make sure you save them on several disks in case one of your disks crashes.

When you are finished, run Listing 1 , DESIGNER. The screen clears to black and creates a grid to show you an enlarged version of your current icon. At the bottom are 16 boxes filled with color, and to the right is a list of options. To create an icon, select your color by pressing it with the arrow (use your joystick to move around). The computer beeps and displays your color next to the Current Color message. Then move the arrow to the grid and press the button corresponding to where you want to draw. While drawing, you can see the small box next to Actual Size start to fill with the color you are using. This shows what your final icon will look like.

To invert the label, press I. The icon is inverted to its opposite colors. You are again able to see it invert by the Actual Size message. If you decide you do not want to use this icon, you can clear it by pressing $C$. The icon is cleared to the current color you are using, so make sure you have the right color selected.

When you are finished with the icon and if you want to keep it, press P. A box appears to make sure you want this option. Tocontinue, press Y. A box at the top of the screen appears, showing all the icons you have in your set so far. Move the arrow around until you come to the area where you want to place your icon, then press the button. The icon is put there and the program returns you to the Edit mode.

Shane Messer is fourteen years old and has workedon the CoCo for two years. He lives in Ft. Pierce, Florida, where he attends Lincoln Park Academy, and enjoys studying math, science and playing soccer. He may be contacted at 3625 Orange Ave., Ft. Pierce, FL 34947.

If you want to edit an icon, press $G$. Press Y at the prompt and again see the box of icons. Select the one you want; by pressing the button you can see the icon placed in the icon area. Next the grid adjusts to fit the icon. You can then continue editing.

Pressing A lets you alter the palette slot of a desired color. Press Y to verify your option. There is a color flickering at the bottom; move the joystick around to select the color, then press the button. After noticing the color change, adjust it by moving the joystick side to side slowly. When you come to a desired color, press the button and it changes. When you later load your saved icons, the program adjusts to the palette slots you have chosen.

Using Load and Save should be selfexplanatory. One thing to note is that you need to have at least five granules left on the disk. The icon set takes four, and the data file for colors takes one. The Search and Replace option lets you replace your source color with the destination color. This option is also self-explanatory.

Listing 2, CREATSET, is a custom set creator. It loads one to three sets of icons and allows you to make a new set with them. Running this program prompts you to enter the filenames of the sets. When you are done, press ENTER. If you only want two sets, for example, press ENTER when you are asked for the third.

The program loads your icons and adjusts to the palette slots of the first set you selected. When the screen pops up, there is a flashing box. Use the arrow keys to move it around. When you find an icon you want in your set, press ENTER and the box moves to the lower part of the screen. This is your new set. Move the box to where you want it and press ENTER. The box goes back to the top, and you can continue until you are finished with your new set. To save the set, press $S$ and the program prompts you for a filename. If you do not want to save it, press ENTER and you return to the program. To exit the program, type E .

The third listing, ICONGRAB, is a loader for your icons. It loads the desired set and separates them into 39 buffer areas. You can then use these icons in your own creations. Make sure to put the name of your icon set into Line 50 of the program.

I hope you get a lot of use from these programs. Animation should now be a little easier after putting your icons in selected areas one at a time.

## Label Designer

Everything you'd want a label program to do and more! No other program lets you make great labels so easily.

- Print Labels With Text And Graphics: Use Label Dasigner's tonts and pictures or any of Zebra's opional Picture \& Font Disks.
- Zebra Systems' Graphics User Interface: Pull down menus, scrolling-window file selectors, dialog boxes, radio Buttons, the work!
- Standard Features: Click and drag picture placement, up to 4 pictures per label, 3 different picture sizes, powerful lext editing with variely of type lonls and sizes, prints 1 -999 copies, templates for standard \& large address, file folder, disk, and cassette label sizes.
- Mail Merge Option merges name and address or other text flie data lor printout onto your custom label templates with graphics and other lext. Great for club mailings, Christmas card lists, membership name lags, etc.

- Disk Directory Option pastes the names of your disk fles onto the label lext editior screen for inclusion on your labels.
- Serial Numbering Option tor making sequentially numbered admission tickels, producl numbering, inventory labels, etc.
- Hardware Requirements:

CoCo 1164 K , or CoCo 3, disk ditive, mouse or joystick, comparible printer (compazbile wilt same prinhers as CGDP exceep DMP-130 and DMP-130AA iserral mode).

- Includes disk, laser typeset user's manual and sample quanitites ol different size labels. Price: $\$ 34.95$ We stock white and colored labels in a variety of address, disk, and cassette sizes at compeltive prices.

## Label Designer \& CGDP

Optional Picture, Font, and Border disks. $\$ 14.95$ each.
Pleture Disk 24 sets of 30 pictures ea., Sports, America, Party, Ollice, Total 120 pidures.
Picture Disk *3 4 sets of 30 pictures ea. Animals, Nature, Religion, Travel, Total 120 pictures.
Picture Disk 4120 Holiday Pictures: Christmas, Chanukah, Thanksgiving, New Years, Easter, Halloween, elc.
Font Disk A 10 Fonts: Western, Stencil, Banner, Shadow, Variety, Type, Stripes, Digital, Bold3, Object Font Disk B 10 Fons: Arcade, Circle, Alien, Cube, Baroque, Deco, Block, Gray, Computer, Script Border Disk 11 Contains 176 High resolution borders, greal variety from simple to ornate. (The border disk is for use with the CGDP, but not with the Label Designer).

These are a few samples from the 120 Holiday Pictures on Picture Disk\#4 for the CoCo Graphics Designer Plus and Label Designer. Merry Christmas!

# The Unfolding Block 

by Joseph Kolar<br>Contributing Editor

Composing a graphics design is dynamic because there is constant evolution in the presentation of the theme. No idea is a set piece. This ensures excitement when we produce elements of an unfolding block design. The keyboard never knows what will happen next. Somehow time inexorably slips by because the graphics programmer is in absolute communion with the CoCo.

Let's dispense with our utility. Although utilities are helpful, we budding artists do not demand a crutch. When we go on a creative binge, watch out! We don't know where we are headed. We can improvise a hundred times as we go along. That is the difference between a creative innovator and a hack.

We use graph paper and scratch sheets to block out ideas and plan segments of the nebulous grand design - after all, Leonardo de Vinci and Michaelangelo made sketches.

In this, as in other tutorials, we let it all hang out - warts and all. We make mistakes, use poor judgement, and abandon half-baked ideas. This is a real-life programming effort.

The idea is to make a few shapes other than the 8 -by-12 graphics characters used as raw materiad to whip up a graphics confection. In so doing we get plenty of practice. We are not choosy, just lazy. We chose the first DRAH statement from a previous tutorial, being very democratic and using what is near at hand to start somewhere - and away we go!

Type in lines 2, 10, 200 and 1000 from

Florida-based Joseph Kolar is a veteran writer and programmer who specializes in introducing beginners to the powers of the Color Computer.

Listing 1. At the end of Line 10 add :SCREEN1.0 and run the program. Trace Line 200 on graph paper. These chores are easier to do and are fun. You feel as an artist does when mixing colors on his palette in anticipation of creating the masterpiece.

Type in Line 400 to start smearing it on the canvas. We make a 4 -by- 8 rectangle and take our first tentative brushstrokes. Type in lines 610 through 640 ending them with Variable A - all four PSEE. Then run the program and press BREAK. Change the last two to PRESET and run the program not very inspiring! We abandon the idea and decide to paint, in that same area, a four-unit square consisting of CHR $\$(134)$ and CHR (137).

Type in lines 210 through 220 and rough them out on graph paper. Type in lines 410 , 420 and 600 . Edit lines 610 through 640 to end with D, C, D and C, respectively - all PSET and run the program. On your graph paper, block out the four-unit design near the center and add elements as you develop your work of art.

Let's put the four curlicues around this design, without regard to the standard locating points with which we worked. We locate the coordinates free-hand, using educated guesses or sneak peeks at our sketches. Then we jockey them into positions that don't jar our artistic sensibility.

Next, carefully type in lines 690 through 720 and run the program. Note that the curlicue units do not fit snugly like jigsaw puzzle pieces. They are further out and tucked closer in on the horizontal. This satisfies my whim. Had they been set symmetrically, it is almost certain the program would have evolved differently because a different perspective would have been kicking around in my mind.

Now list lines 690 through 720. Copy the PUT info into lines 770 through 800 with the variables unchanged - all NOT. Then run the program. There is a little movement
to add gusto to the limp design. Run through it a few times. Did you notice that NOT caused the reverse image to be drawn? Change these lines to end in AND, then run the program. If you also try PSET and PRESET, you will find that PSET, AND and OR give the first image. PRESET and NOT give the reverse image.

Change Line 690 toend PRESET. Change Line 770 to end, in order, PSET, PRESET, NOT, OR and AND, one at a time. As you can see, AND wipes out the image and OR substitutes an 8 -by- 12 block.

Study the changes that occur. They are grist for your knowledge mill. If the previous setting in that particular location is PRESET, then AND gives you the wipe-out and OR gives you the mating full block. The operators ( $N O T, A N D$ and $O R$ ) act differently on an area, depending on what state it is set.

You may want to experiment by running all five through their paces and making a list of the results in various combinations. These operators are tricky, but they are a joy to smear on the canvas to make fancy brush strokes.

Retum Line 690 to PSET and Line 770 to NOT. At this point the flowering design can stand a little accent in the middle to blink on and off. Key in the line:

## 810 DRAM"BM100,10004

and run the program. Change Line 810 to end in $98.08^{\prime \prime}$. After running the program, change it to 99.06 " and run it again. Pick a winner! All the coordinating locations are found by trial and error. This is excellent practice and is highly recommended. Once you get the feel of guiding a design element to its birth, you feel like a tugboat captain pushing here, nudging there, moving your creation ever so skillfully to where you want it anchored.

This is an important distinction: If you plot it out exactly, your design is located in
a preordained location. If you jockey it into position, you can change your mind many times and are never quite sure where it will end up. That's the uncertainty principle of creativity. (To my depraved mind it looks like a tick-tocking cuckoo clock.)

A short pause might be in order to make it more dramatic. Type in Line 820, the pause routine, and Line 830 to loop back and see our work in glorious action.

Note: To get the maximum use out of an animation sequence, keep a weather eye out for short, quickly executed program lines. They enhance the speed of the sequence because the CoCo doesn't have to read long program lines or search out long GOSUB routines.

How would the design look if we put a small block between each moving ticker? Type in lines 230 through 260. On graph paper copy them and shade in the colored area. It is important to visualize the shape of the raw material. The area enclosed in lines 230 and 250 is 4-by- 12 , while the area in lines 240 and 260 is 8 -by- 6 .

The newly sized shapes give you the feel of working out new batches or coordinates. Without looking at the listing and using the hot scoop in lines 230 through 260, create four GET lines using variables $0, R, S$ and $T$, respectively. They were dimensioned at the beginning to save the bother now.

When you are finished, compare your work with Listing 1. Line 440 should show a discrepancy. Guess who made a mistake? You have ( 110,0 )-(118,6). Why didn't I spot it? I picked up the wrong block due to the error, and using the empirical method I located it in an area that did not conflict with any other design element. Therefore it never showed up. If something appears funny, spot-check the GET as a matter of course.

I suspect we could make one design element to serve the set of four individual ones. Copy this line on graph paper to see what it looks like:

DRAW"BMO, 0BD6BR4BU6BR4BD6BR4BD6B L4B06BL4BU6R4U6L406BL4BU6": PAINT $(5,7), 4,4$

Later on you might want to see what you can come up with using this line. Do you see how we always manage to profit from mistakes? Ordinarily you may not think of things suggested while in hot pursuit of boo-boos.

Now let's use my trial-and-error coordinates and type in lines 650 through 680 exactly, then run the program. If only we could make the four boxes move in unison, from the center, in, out, in, etc. Our design
blocks are made to order - $R$ and $T$ on the horizontal plane, and 0 and 5 along the vertical axis.

Type in lines 730 through 760 exactly. Look over the coordinates, which are set to correspond in reverse with the ones in lines 650 through 690 . Compare the mating lines to see what offset is made in which direction, then run the program. This should make you good and googly-eyed,

For the heck of it type in Line 685:

## DRAW"BM100,10004"

Never lose an opportunity to add variety and simulate motion. For a little variation type in Line 765 unmasked, then run the program, using CSAVE.

Turn your attention to Listing 2. We have to attend to a few housekeeping chores. In PMODE 3 , a four-color set, 4,4 is the default mode. Why don't we remove them from lines 210 and 220, in two places each? We discarded the a block in Line 200. Delete Line 200 and its associated GET, then delete Line 400. If you are using my Line 440, Line 240 is inoperative. Next, delete Line 240 and run the program.

To jazz up the pulsating boxes, change 4,4 in lines 230,250 and 260 to 2,4 . Then run the program.

Sooner or later we have to face up to centering our design. We can attack this problem two ways. First we can go through the PUTS and add to each pair of starting and ending coordinates $+28,-6$. The other, more interesting way is to use the $x, y$ ploy, then type in the line $605 \mathrm{X}-128: Y-96$. Line 640 begins with the starting coordinates at the point of origin of both the graphics element and the entire design. You may want to use it as a point of reference. All PUT statements using $C$ and $D$ are 8 -by- 12 ; all PUT statements using $Q$ and 5 are 4-by-12; all PUT statements using $R$ and $T$ are 8-by-6. Work them out without looking at Listing 2. Reorient DRAM lines 685 and 810 . You'll find it to be a routine task and a pleasant challenge. Then run the program to make sure all is well.

Mask Line 600. Type in Line 601 unmasked, then run the program. I'll bet you never anticipated this design!

Mask Line 601. Type in Line 602 unmasked, then run the program. Next mask Line 602, type in Line 603 unmasked, then run the program. I like it! Unmask Line 765 for a variant, then run the program.

The SCREEEN7, 1 is CoCo's attempt to drive you nuts. It is harmless but necessary.

Now go back and unmask lines 600 through 602. Mask 765 and run the program after masking lines 601 through 603.

It's time to CSAVE you-know-what.
It is also time to inspect the pulsating design. Should we add more routines? Should we enlarge it by adding more elements? This is a matter of judgment.

I see it as a complete entity that makes a statement. More elements can be added, but we are on the threshold of either an artistic statement or a mass of writhing junk. In other words, there is a time to stop and say, "This is it!"

This is not to say that we dare not continue experimenting. Change lines 650 through 690 to end in $O R$, then run the program. This variation gives a deliberate push outward from the center. Unmask Line 765 , then run the program. The dots are added for accent. Practically any judicious alteration you make gives you some new variation. Change lines 650 through 680 to end in NOT, then run the program. For a bit more animation, mask Line 765 , then run the program.

To see what happens, list lines 610 through 640, copy into lines 725 through 728 (except to end in PRESET), then run the program. It is a little too much. It slides across the threshold, changing from elegant to rococo. Do you see the subtle shift? Impressive but visually too omate and confusing. Type in the line 724 GOT0730 to bypass this option.

Type in the line $200 \mathrm{DRAK}^{\prime} \mathrm{C} 1^{\prime \prime}$, then run the program. Why do we always get neat designs no matter what we do? The secret is a well-balanced design. Next, delete Line 200.

How is your imagination? For a tour de force, key in the line:

## 604 SCREEN6: PMODE3:PCLS6: PMODE2

then run the program. I call it Pair of Turtles in a Big Rush. Retype the line:

604 SCREEN2: PCLSO: PMODEO
and run the program again. This one is called Three-Eyed Martial Yak-Yakking.

Mask lines 685 and 810, changing y to 45 in Line 605. Retype the line:

604 PMODE2: PCLS1: PMODE3: SCREEN4
and run the program. It is entitled Opposing Armies Mancuvering.

Change $Y$ to 182 in Line 605, retype the line:

604 SCREEN8: PCLS2: PMODE1: PCLS3
and run the program. I call it Martian Voyeur Behind Wall.

Finally change Line 605 back to $Y-96$ and retype the line：

## 604SCREEN2：PMOOE1：PCLS3：PMO0E3

then run the program．You guessed it！I made a mistake and typed in PCLSC3 instead of PCLS3．Now you make the mistake and run the program．CoCo is driving me up the wall，but it is fun．If you have a yen，you can CSAVE any of the pictures（sic）for posterity．

Delete Line 604．Is Line 600 unmasked？ Run the program．Do you have the pulsat－ ing design with the center elements and accent removed？If not，remove them on your own．Here is a project．Reposition four mating elements as close as possible， to the point of origin at $x, y$ ．Then bring the other four in as close as is feasible．Depend－ ing on which four mating units you pull in first，the resultant design is apt to be differ－ ent．Take it from there and create a goodie， then CSAVE a copy，which is Listing 3.

Do you wonder about all those oddball screens（SCREEN7，for example）？CoCo is trying to impress you．They all translate to SCREEN1．0．

When you are using GET／PUT to explore or create some design，use the $x, y$ system rather than numbered pairs of coordinates．

Inevitahly you move them about the screen． By changing $x$ or $y$ ，you move the entire design in one fell swoop．Line 685 and 810 should have been converied to $x, y$ coordi－ nates，but we cover that later on．Use numerical offsets for now．

I call this in－place animation．We have given it the appearance of motion．All we did was quickly substitute images in eight or 12 locations．The accent ticks in the center alternate because it is separated physically in the program by lines 610 through 640，a part of each one of the four creating the blank area．

Here is one bonus variation：Use Listing 3．Mask lines 724,765 and 810 ，then end lines 725 through 728 in NOT．Type in the line：

604 SCREEN6：PMODE3：PCLS6：PMODE2
then run the program．The turtle is double－ timing．

There is just no end to the number of variations you can develop．It seems one variation begets another．You must agree that working with graphics is both gratify－ ing and habit－forming．

## Eagle Keyboard and Interface Touch the Eagle

When asked to review the Eagle keyboard and interface, I was very excited. I have wanted to drive one around the block for quite some time now, and this was my opportunity to try one out. That aftemoon I rushed home with the package, anxious to get it installed. (Of course the fact that it was a Friday could have had something to do with it as well.)

A shon while later at my apartment building, I quickly zipped in the door, threw on the lights, and dropped everything on the kitchen table. Clearing out a path through the yet-unpacked boxes, I finally reached my destination, disconnected the CoCo and gently carried it to the kitchen table, clearing off a work area. Unpacking the

Eagle keyboard and interface, I noticed that it was packaged very well and should withstand the nommal pressures of shipping across the country.

The documentation, however, leaves a little to be desired. It was originally printed on a dot-matrix printer, and the photocopy supplied is a little difficult to read. The documentation does not specify which of the three wires is ground and which is positive. However, 1 didn't have much trouble figuring it out. The ground wire has a large uninsulated alligator clip, and the positive wire has an alligator clip with red insulation.

A few days later I received an updated version of the documentation that is much
better than the original. It is much easier to read and provides a very simple twelvestep installation guide. The new documentation explains how to install the interface using the alligator clips to verify that the keyboard works properly. When you are certain the keyboard works, you are told to remove the alligator clips and solder the three wires to the motherboard.

The guys at Arizona Small Computers also threw in a little humor in the documentation. Instead of saying, "You may damage the CoCo," they say, "We all know it is smoke that makes these circuits work. We know this because when we let the smoke out of an electronic device, it no longer works."

Installation is straightforward and should be easy for the novice. However, I did have two minor problems. Getting the mylar cable connected into the keyboard socket requires a steady hand to ensure the pins are centered in the connector. I suggest that you examine it twice before powering up,
just to make sure none of the pins are touching other pins. Also, you will notice that the plastic post in the center is in the way and doesn't allow the interface board to lay flat. If you are installing the keyboard interface permanently, you may want to remove that post with a pair of snips. This way you can install the old keyboard to fill the large hole in your CoCo .

Table 1: Enhanced Key Definitions for BASIC

Ah , now on to the fun. Putting the CoCo back together, I gently carried it back to the computer desk and powered it up. The following menu was on the screen:

```
(1.) OS9 L1
(2.) OS9 L2
(3.) EXIT TO BASIC
(4.) OSS RUN "BOOT"
(5.) BASIC RUN "BOOT"
```

The first option configures the keyboard for OS-9 Level 1, and the second option configures the keyboard for OS-9 Level 2. Both automatically issue a DOS command to boot OS-9. The third option configures the keyboard for BASIC and exits to BASIC. For those without the DOS command, Option 4 configures the keyboard for OS-9 Level 1 and then issues the RUN ${ }^{* * *}$ command to boot OS-9 Level 1. Option 5 configures the keyboard for BASIC and then issues the RUN "BOOT" command so you may automatically load any disk utility. If you don't press a key for five seconds, Option 2 is automatically selected.

According to the documentation, you can press the space bar upon power-up to bypass this menu. This is especially useful if you are using an auto-boot EPROM with such products as Disk Master, Burke \&

Burke, Eliminator, etc. Out of curiosity I installed the Eliminator, and the system immediately booted into OS-9 Level 2 with the keyboard configured for OS-9.

The keyboard offers a very useful shorthand method of entering commands by pressing and releasing the ENHANCE key followed by an alphanumeric key. Under BASIC the enhanced keys are defined as shown in Table 1.

Also, the (SCROLL LOCK) key emulates SHIFT-@ to pause the screen any time it is pressed. Unfortunately, it doesn't function the same under OS-9. As a handy addition for BASIC users, you can press ENHANCE-4 and have automatic key repeat.

The enhanced key definitions for OS-9 are shown in Table 2.

You can define the function keys F17 through F24 to contain anything you desire. The only limitation is that the total number of characters in F17 through F24 cannot exceed 60 characters. If you have Kevin Darling's SCF patches to allow line editing, the INS and DEL keys function the same as CTRL-right arrow and CTRL-left arrow. The $F 1$ and $F 2$ keys on the keyboard function the same as the F1 and F2 keys on the CoCo keyboard, and F3 through F24 are the same as ALT-A through ALT-V unless you redefine them.

Table 2: Enhanced Key Definitions for OS-9

If there is a single option to the keyboard that really stands out above any other, it is the CTRL-ALT-DEL key combination. When these three keys are pressed simultaneously, the system performs a complete reset exactly as if you had pressed the Reset button.

Overall I like the keyboard, but it does have a few quirks. Its approximately 124 keys, which are scrunched into the same
space as an enhanced 101-key keyboard, will take a little time to get used to. I really like the two distinct "feels" of the keys. For touch typists, the stroke is so light that you can almost breathe on the keys to press them - which I can really get into. If you don't care for a light stroke, you can press a key down approximately one-eighth inch to get a firmer stroke, which I think is a nice touch.

Being used to a Chicony enhanced 101key keyboard, I find the layout of the Eagle keyboard a little cramped, but it does have some nice features. Even so, I have become quite accustomed to the layout of the Eagle keyboard. Best of all, it has allowed me to move my CoCo out of the way.
(Arizona Small Computer Peripherals, 930 W. 23rd St., Tempe, AZ 85282, 602-829. 8028; \$125 plus $\$ 8$ S/H)

- Greg Law

Software

## Data Form IIICoCo 3 Database Management

If you have a lot of information to manipulate, give Data Form III a look. Data Form III is a database manager that allows a maximum of 17 fields per file and up to 249 spaces for each field. It creates new database programs from the information you supply, i.e., the names of the fields and their lengths. This new program is then stored on a blank disk, along with the information you later enter into it. You can enter up to 1000 characters for each record in the file.

The program comes on a non-protected disk and the user is encouraged to make a backup copy for his/her use. Because it is written in BASIC, it runs more slowly than would a machine language equivalent. However, because it is in BASIC, it is easily modified. The disk comes with an informative manual/tutorial that describes not only how to use the program, but also discusses databases in general. The program is very "E.Z." and user-friendly.

The program is set up to work only with blank, formatted 35 -track disks for data. You'll need a blank, formatted floppy disk for each database you create. Data Form III
works best with two or more drives, so you don't have to swap disks; however, one floppy drive will work too.

Data Form III works fine with a RAM disk installed, which greatly speeds up sorting and searching. However, if you use a RAM disk, you must be certain that you back up the file before quitting. When you choose the Quit option, the computer does a cold stant.

Data Form II/ works with $A D O S$ as well as with Disk BASIC, and it features automatic upper- and lowercase letters for text entry into your file. The user can make backups of data while in the program.

The Organize (sorting) command manipulates the information on the disk using only your original file, rather than creating another indexed file. This way, more information can be stored on the disk. As you can imagine, there is a lot of disk access during sorts. A large database can take a while to sort. Hopefully you won't need to do it often! The results display onscreen as the sorting takes place. One of my pet peeves has always been that computers don't sort numbers "correctly." Data Form III does! For instance, 3 comes before 14 .

Searches must be performed for exact matches. For example, if you know the word Computer is in your file, you must search for Computer, not computer. However, you could search for Com and find Computer. Searches can be on a particular field or the entire database.

The screen is an attractive blue, with light-colored text. You can choose either a 40 - or 80 -column display.

If you decide to print all your files, the printout includes the names of the fields as well as your input data. There is a menu choice to change your printer's baud rate. DataForm $/ / /$ also prints labels-standard five-line labels or non-standard labels. However, you can't input the quantity of a particular label you want to print.

A short, sample database, which the user can type in, is included in the manual. There is room for 471 files on the disk using this tutorial as an example. It includes nine fields with 308 characters.

I set up a name and address file consisting of Last Name (with a maximum of 15 characters), First Name ( 10 characters), Street ( 20 characters), City ( 15 letters), State ( 15 letters), ZIP Code ( 10 characters), Telephone Number ( 15 characters), Birthday ( 17 characters), and Anniversary ( 17 characters) for a total of 134 characters. The program informed me there was room on my disk for 1305 files.

There is no warning when you reach the maximum number of characters allowed in a field. The program just cuts off any extra letters or numbers.

Data Form III is a good choice for the Color Computer 3 user who has a lot of information to store. It devotes an entire disk for each database the user creates.
(E.Z. Friendly Software, 118 Corlies Ave., Poughkeepsie, NY 12601, 914-485-8150; $\$ 19.95$ pius $\$ 1.50 \mathrm{~S} / \mathrm{H}$ )

CoCo $1,2 \& 3$

## Studio WorksA Sound Studio in 512 K

Inside a soundproof studio you listen to the din of a rush-hour crowd emanating from Cerwin Vega speakers. Sidewalk vendors hawk their wares at passing pedestrians. You wince as tires screech to an abrupt halt. Then suddenly you are transported to a place where water laps onto the shore and gulls circle overhead. In the distance, barely audible, the fading echoes of police sirens are drowned out by a crashing wave.

These sounds and more can all be saved to disk using Oblique Triad's astonishing program Studio Works - a digital sound editing system for the CoCo 3. Requirements include a $\operatorname{CoCo} 3(512 \mathrm{~K}$ is recommended to fully explore the capabilities of this package), disk drive, standard joystick or mouse, and a sound source adapter cable. The cable can be ordered with the package, or you can choose to build one using the schematic in the manual. A Maxsound cable works, also.

A digital sound editing system allows you to sample (record) audio signals and rearrange them by cutting, pasting, dubbing, overlaying, reversing and changing the sampling rates (speed) originally set when capturing the sounds.

I got Studio Works up and running with a couple of samples captured in a few minutes' time. The cable to record sound connects to the left joystick port and to any
sound source with a 1/8-inch phone jack output. With the purchase of a connection adapter available at most electronics parts stores, the $1 / 8$-inch end can be adapted to receive output from other sources or stereos with RCA jacks.

Capturing a sample is easy and can be accomplished on the main screen where sample waveforms are displayed and editing is performed. Use your joystick or mouse to select a sound source, recorded or live. Next make proper volume adjustments on the displayed VU meter and click to select one of two recording functions. If you do not reclick or release the recording function, the sample continues recording until available memory is consumed.

Once you have a sample in memory, the fun begins. I had friends laughing when I sampled their voices - then sped up the sampling rate until they sounded like frenzied chipmunks. If you're looking for hidden messages on records, stop wearing out your stylus: Sample the measures in question, reverse the sample and then sit back and realize how much time you've been wasting.

Torecreate my opening scenario, take a portable cassette recorder to a busy street, tape five or 10 minutes' worth of action, then repeat the same process at the beach. Bring the tape home and sample the best sections of tape. Two samples can be viewed for simultaneous editing. Load your beach sample into the upper editing block, then block the desired section of sample and copy it to clipboard A or B. Next load your city sample into the lowerediting block and set the lower editing block markers where you want to paste the beach sample, which still rests in the clipboard. Select the clipboard where your beach block is located and click the Paste option.

The act of pasting erases or records over underlying sections of sample. The cursor changes from an arrow to the letterP. Using a joystick or mouse, move this P inside your blocked section of city sample and click. Your beach sample has now been edited into the city sample. You have finished with the upper editing block containing the beach sample.

Next, block and copy a distinct sound from the city sample into the vacant clipboard. Block the latter beach sample section and choose the Overlay option to retrieve the city sample in the clipboard. The cursor changes to an O . Move this cursor inside the blocked beach sample and click. Repeat these overlay steps, moving the cursor a little to the right each time. The result is an echo of city sounds over beach sounds. Voila, your new sound creation is complete.

The possibilities are vast. Programmers

Jeff Noyle and Dave Triggerson have developed a very user-friendly program. With the exception of typing in sample names, all functions are executed via clicking and dragging. Saving samples todisk or storing them in memory using the sample archives is a cinch. The disk drive is not accessed when using the archives, which keeps sample swapping to a minimum. Samples can be quite large, sometimes requiring over 68 granules of disk storage space. Sample files have managed to nudge their way past $\mathrm{Hi}-$ Res graphics in the memory hog trough. Fifty-six 8K blocks are available for memory storage when using a 512 K CoCo.

When at the sample archive screen, each file can be played by pressing the designated key. If you want to hear all samples played consecutively, a sequencer option is supplied.

Two of the most useful features in this package are the options to save samples for use with BASIC or machine language programs. Programming directions are in the manual, explaining how to incorporate your samples into other programs. An example of this feature is in the opening segment in Oblique Triad's new graphics adventure game, The Seventh Link.

1 found Studio Works a delight and commend its development. Musician friends
have gazed over my shoulder, envious of a 30 -second sample. Oblique Triad is establishing itself as an innovative company in the CoCo Community. Give this program serious consideration as an addition to your CoCo library.

## Software

## File System RepackDisk Defragmenter

After setting up a hard drive, your first inclination is to load it up with everything but the kitchen sink. However, managing a hard drive is quite different from using floppy disks. One of the major problems with any disk - hard or floppy - is what is known as disk fragmentation, or, in other words, inefficiencies that develop in the way files are stored on the disk, such that the disk drive has to work harder (and
longer) to retrieve a file.
As an example, suppose I start up my favorite word processor (DynaStar) and begin typing this review. Let's say I complete half of it tonight. When saved to disk the file takes up 10 sectors of space; OS-9 finds 10 sectors and saves the file. The next night I write another 10 sectors of review, and when it is saved OS-9 must look for 10 additional sectors somewhere on the disk - and these are probably not contiguous with the first 10 sectors. A file stored in this manner is called a fragmented file.

So what, you say? Well, one result is that the disk head must move around the disk to read these groups of sectors, obviously causing more wear and tear on the drive and lengthening the time it takes to load the file. Magnify this many times along with file deletions, and before you know it there are parts of files all over the disk. Now, I know this is an oversimplified view of fragmentation (I can hear the purists rolling on the floor with laughter); but you can read about the technical details in a number of articles, some of which are noted in File System Repack's manual.

File System Repack is a collection of disk utilities from Burke \& Burke that heip you maintain a healthy disk system. Although they work on both floppies and hard

## Programs for Home or Classroom

## Educational Programs for Students Grade K-12 and Adult Self Studies

More than 500 programs on cassette for any Color Computer! At every level from kindergarten through adult. All have full-time narration!

Send for our FREE catalog of over 1,000 Dorsett educational programs for Atari, TRS 80, Apple, IBM PC Jr., Commodore, Tandy 1000, etc.

## 16 Programs in each of the following

Children's Tales - Reading - Arithmetic
Fractions - Algebra - Geometry
Accounting - Psychology - MUCH MORE!
New courses in Spanish and geography.
CASSETTES: $\$ 59.50$ tor an album containing a 16 program course ( 8 cassettes with 2 programs aach); $\$ 9.95$ for a 2-program cassette.
DISKS: $\mathbf{\$ 1 4 . 9 5}$ for a one-program disk: $\mathbf{\$ 2 8 . 9 5}$ for two disks; $\$ 48.95$ for four disks. All disks come in a vinyl album.

drives, File System Repack's utilities are meant primarily for hard drives. The utilities contained in the package provide the user with the tools needed to reduce or eliminate fragmentation:

HDB and HDR - hard disk backup and restore, respectively.

CCheck - scans a disk for defective sectors and identifies any files stored in defective areas of the disk.

Stash - marks files or directories that should not be repacked. STASH can also be used as a security tool to hide files.

Zap - erases a file's directory entry without deallocating sectors.

Repack - optimizes a hard disk by merging file segments and reorganizing disk storage.

BA - sets allocation bit map bits for a specified Logical Sector Number (LSN) or for a range of LSNs.

BD - clears allocation bit map bits for a specified LSN or for a range of LSNs.

In addition to the above utilities you need DCheck from the OS-9 system disk.

To repack a disk there are three basic steps to follow as outlined in File System Repack's documentation:

```
dcheck -bp /h0
ccheck -ap /ho
repack /ho
```

With such a simple procedure, I figured even I could follow this. Having never used oCheck, I didn't know what to expect and redirected output to the printer so that 1 would have a record.

After a bit of whirring and grinding of the disk drive, the printer came alive and printed about a page of messages followed by a final message that said, "File structure not intact!" There I sat multering to myself (everyone else in the family thought I was crazy) - how can this be? There hadn't been any problems with the disk drive. Furhernore, the documentation says not to proceed if the above message is obtained - but it doesn't tell you what to do!

Then I looked over the messages and noticed that DCheck was complaining about two commands that are in both /ho/CMDS and /ho/APPL. It hit me - I had linked the two commands using a disk Link command. Anticipating this would cause a problem with CCheck and Repack, I removed the links before continuing. Rerunning ocheck resulted in the "File System Intact" message.

Continuing to the second step, the documentation warns that CCheck takes several hours to run on a $20-\mathrm{Meg}$ hard drive. This is because the program "non-destructively
reads and writes every sector of the hard disk, marking off bad sectors and reporting the names of files stored in bad sectors." If there are any bad files, they must be removed using the Zap command. On my 20Meg hard drive CCheck took about $41 / 2$ hours to accomplish its task. When finished it reported "Integrity check of /h0 passed processed 688 files, 41 directories."

OK! - two-thirds of the way finished. Now for the big step - Repack. According tothe manual, a half-full, badly fragmented 20-Meg hard drive can take 10 or more hours to repack. Apparently my quarterfull disk was not badly fragmented because it took only two hours to repack. It is important to note here that the limiting factor in this process is the 2 MHz 6809 and numerous reads and writes which must take place. It is not a problem with the software.

That's it! Although time-consuming, it is a simple process to repack a hard disk. The manual provided with the software is clearly written and easy to follow. Each of the commands have additional options for specific needs - or to satisfy the true hackers. For us mere mortals the above procedure gets the job done just fine. In addition, an appendix provides additional detail about the OS-9 disk file structure and fragmentation.

At about the time I received File System Repack for review, I had an opportunity to see a demo of a similar package for the MSDOS operating system called PC Tools. One of the things that impresses me about this MS-DOS package is the graphical interface that shows the disk fragmentation and how the repacking progresses. Unfortunately, this graphics feature is not provided with Repack. However, I have a public domain program, Dam (author unknown), that graphically shows the fragmentation of the disk. I ran this program before and after using Repack and was pleased to see all of the disk files nicely packed on the disk after Repack did its work. I encourage Burke \& Burke to come up with a similar utility - a picture is worth a thousand words!

Burke and Burke's File System Repack is an excellent package and a must for all hard drive users. Sufficient flexibility is incorporated in the utilities to meet a wide range of needs. As I noted above, the process is simpleenough that novice OS-9 users should have no trouble performing disk housecleaning, even if they don't fully understand all the technical details of disk fragmentation.
(Burke \& Burke, P.O. Box 58342, Renton, WA 98058, 800-237-2409; \$29.95)

## Treasury Packs \#1 and \#2The Making of a Closet Gamist

I had the devil's own time doing the reviews for Treasury Packs \#1 and \#2. Every time I loaded a game, I'd hear a chorus of "Let me play, let me play!" It got so bad, I was tuming into a closet game player. (Are the kids outside? Or in school, maybe? Good! Then I can play without anybody taking my joystick from me!)

I'm not a seasoned arcade gamist. I hate to waste quarters dying in the first screen of a game I don't know how to play. These Treasury Packs suited me just fine. The Packs are sold separately, at a price of $\$ 29.95$ for each disk. Each disk is packed with favorite games (\#l has eight games, \#2 has seven), all of which were originally marketed by Spectral Associates and sold separately for $\$ 24.95$ to $\$ 28.95$ at that time. Most all of these games are recognizable as arcade classics, and Microcom Software bought the rights and now distributes them in these collections. The instructions are all the original docs printed out by Spectral, and I don't really think the fact that one set is printed on pink paper and one set on blue has anything to do with who can play what games.

About the only thing I think could have been done differently is the docs for Treasury Pack \# 1 . While they are all there, I feel they could have been arranged in a more organized manner. I was a bit confused on the order of the instructions and called Microcom. The people there assisted me in putting the docs in order, and I found them quite patient and willing to help. Microcom guarantees its disks to load, and if something happens to a disk while en route to you, Microcom will replace it.

I (and my children) tested all of the games on these Treasury Packs on a CoCo

# A New High In Printer Performance! 

## MULTI-FONT PRINTER

The NX-1000ll gives you plenty of print options for attractive printing. Four typestyles. Four pitch sizes, in standard and italics for a total of 32
NLQ modes. The NX1000 Rainbow gives you all these features plus online access to 7 color printing and graphics. Black, blue, red, yellow, green, violet, and orange. Both models have a 1 year warranty and a 30 day online trial.

2, then I took them (the packs, not the kids) to our users group meeting and tested them all on a CoCo 3 . Joysticks are required for most of these games but optional for some. 32 K is required, except for Roller Controller, which is the only game programmed exclusively for a 128 K or higher CoCo 3 .

Now, let me break down the Treasury Packs and tell you a little bit about the games on each.

## Treasury Pack \#I

Keys of the Wizard - This is a text adventure game (there's one in each of the packs) with three different skill levels. The higher the skill level, the more treasures are hidden and the more traps are active. As you go through the mazes and wind your way among the paths, you encounter eight creatures that either try to kill you or help you. There are 32 treasures, which you must find and take to the sanctuary (hidden within one of the mazes) to win the game.

Unlike some games where you can carry everything at once, this game seems to go by weight - so the heavier the objects, the less you can carry. All the objects and creatures are randomized so a game doesn't play the same way twice.

Definitely make a map for this one, as forest floors can collapse on you, plunging you into underground caverns. You'll use commands like READY and UNREADY to prepare your weapon, REST to build up strength points (which diminish as the game goes On), and QUIET, which acts to pause the game. Oh, and don't try to quit or save a game. You have to UNCLE and then the game will save only to tape, even if you are using the disk version.

Lunar Lander Rover - This game is known in arcades as Moon Patrol. Your mission is to maneuver a lunar rover, exploring the 26 sectors mapped on the moon. Since you're on the moon, you see the earth up in the sky, and of course there are craters and boulders. There is also an alien force (the men in the moon?), trying to prevent you from completing your mission. They've planted mines in some of the sectors and shoot at you from the sky. You have to blast them, jump the craters, jump or blast the boulders, and make your way through. The graphics in this game are the full, filled-in type, not just drawn-in outlines, and it takes practice to even make it halfway through.

Cubix - This, of course, is Q-Bert the little guy that jumps from block to block on the pyramid, avoiding snakes and such and definitely trying not to fall off the pyramid. An added bonus with this game is the sound capability if you have a Speech/ Sound cartridge installed.

Module Man - The Speech/Sound package is optional in this one. As Module

Man, you have to find the magic sword and return it to the king. There are 25 objects scattered throughout 15 screens, including a secret screen. The monsters (of course!) are trying to kill you as you touch or pick up these objects, and you can't get to the next screen until you've gotten all the objects and killed all the monsters in that screen. You really have to do some searching to find the secret doors, and some fancy running, jumping and climbing to get through this game.

> Decathlon isn't a game you want to play to relieve your tension. Just as in the Olympics you participate in 10 different track and field events, not advancing to the next event until you've qualified in the previous one. The keyboard controls the player in this one.

Qiks - If you have the Speech/Sound pack, you can also use it in this game. Qiks is more a game of strategy than luck. You claim territory by drawing in lines with the joystick, which controls the cursor. On the screen, moving around, are sparks and a set of lines. If the sparks run into you, you die. If the set of lines runs into the line you're drawing, you die. The object is to get as much space on the screen filled in as possible. When you have 75 percent or more filled in, you move on to the next screen, with points being awarded for the amount of filled-in space.

Roller Controller - This is the only game out of the two Treasury Packs made exclusively for the CoCo 3 , and it works with either an RGB or composite monitor (or TV set). The object is to guide the rolling marbles into the bins of the corresponding color at the bottom of the screen. To get the marbles where they are supposed to go, you have to open and close trap doors. If the marbles fall out of playing range, fans located in the bottom comers blow them back to the top of the screen. The best way to describe this game is as a cross between a pinball game and a maze.

Pengon - a.k.a. Pengo in the arcades. You're a little penguin playing around in the middle of a stack of ice cubes. Using the joystick, you push the ice cubes around. crushing them, or push them on top of the
beasts (apparently penguin-haters) to crush them. It's simple enough, and more fun if you pretend the beasts are people you don't like very much!

Decathlon - This isn't a game you want to play to relieve your tension. Just as in the Olympics you participate in 10 different track and field events, not advancing to the next event until you've qualified in the previous one. The keyboard controls the player in this one, and you get three attempts to qualify for each. I must admit, I never made it past the shotput (Event \#3). This challenging game can be played by up to four players at once. It saves only to cassette, even with the disk version.

## Treasury Pack \#2

Galagon - This is an arcade shoot-'em-up game that works with the Speech/ Sound pack also. A joystick is required to control your spaceship. The object is to shoot all the aliens that are diving toward you, shooting as they go. The aliens start out in formation but then break out for individual attacks.

Lancer - Also known as Joust, this game can be played by one or two players. You are a little knight on a horse, trying to destroy the enemy with your lance. A twist to this game is that once you kill an enemy, it can resurrect into a new rider. There are lava pits to avoid, disappearing islands and, of course. a dragon to slay. It's all in a day's work for your little knight, though.

Froggie - Even a preschooler will recognize the popular Frogger game. Choose your weapon (joystick or keyboard) and guide your frog across the busy street and then across the pond to his home. A lady frog floats on one of the logs and she really appreciates it when you rescue her. Crocodiles, snakes and otters make your trek toward home more dangerous, and the diving turtles always want to take you underwater with them. One or two players can play this, taking turns jumping their frogs to safety. Oh, and there is a pause feature in Froggie allowing you to take a break.

Ms. Gobbler - Why, it's Ms. Pac-Man in disguise! This maze game (for one or two players) has you gobbling all the little food dots in your path. Eating one of the four energizer dots gives you the strength to kill the ghosts who are relentless in pursuing you as you eat. In case the ghosts gang up on you, or you've eaten everything at the bottom of the maze and need a few from the top, you can use the teleportation spot, which transports you back to the top of the screen. For those who think this game is too simple, try the "inviso-maze" option . . you have no walls to guide you.

Ice Castles - Another one- or two-
player game. Bently Bear runs through the different castles, collecting gems (they look like dots to me! and avoiding his enemies. Moving trees, swarms of bees and the wicked witch try to stop him. Color Computer 3 players should use a composite monitor or a TV set, not an RGB monitor.

Devious - In Devious, you just kill everything in sight. This shoot-em-up game is for one or two players and gives you the option of playing with the joystick only or a joystick/keyboard combination. There are ships in the air that shoot at you and resistor shields that cannot be destroyed but will destroy you. The enemy ground bases and mother ship are (where else?) on the ground. It keeps a person busy trying to shoot in two directions at once, especially if a higher skill level is chosen - where there are more air ships and all the ships fire more often with faster shots.

Madness and the Minotaur - As promised, this is the text adventure included with Treasury Pack \#2. There's a large castle to wander around in and deadly gas that seems to folliow you everywhere. General advice: Avoid the gas and the traps, collect all the treasures, and take them to the forest to win.

Considering the cost of the original games
in these Treasury Packs, and considering their popularity, I have to recommend these two packages. Whether you're a "classic" collector or just an avid arcadist, these packages will make an excellent addition to your software library. It's like buying one and getting six or seven more for free - and you can't beat a deal like that!
(Microcom Software, 2900 Monroe Ave., Rochester, NY 14618, 800-654-5244; \$29.95 each, $\$ 3 \mathrm{~S} / \mathrm{H}$ )
-Gail Allore

## Software

CoCo 3

## Phonics FunSounding It Out for Preschoolers

As the co-director of a small private school, I was pleased to receive Phonics Fun for review. As its advertising points out, this educational game is intended for preschool to first-grade children - a very difficult age group to write software for
because children this age haven't yet developed the skills necessary to read prompts on the screen.

Phonics Fun is for the CoCo 3 with at least one disk drive; RGB or composite monitors are selectable from within the program. Although early primary children are the target users, it takes an adult to guide the child through the program at first. (This is not a criticism, just a fact.) Although I've found that the 5 - and 6 -year-olds at our school can be taught to turn on the equipment and load and run programs, I have yet to encounter a program for this age group that the child can operate without help the first time out.

The program is supplied on a single, nonprotected disk, which must be left in the drive during program operation. After loading and running, the user is asked to indicate monitor type and to specify whether or not instructions are necessary. After that, the title screen appears. The next screen is a menu that allows the user to select one of the four categories: fanm, circus, magician or park. This menu has large numerals next to excellent pictures representing the choices. The choices are also spelled out for adults, but the child can make his or her selection without reading - hurrah! The selected background for the exercise is

## METRIC INDUSTRIES, INC.

## Model 101

## Serial to Parallel Printer Interface

* Works with any COCO
* Compatible with "Centronics" Paraliel Input Printers
* Just tum the knob to select any one of 6 baud rates 300-9600
* Comes complete with cables to connect to your printer and computer
* Can be powered by most printers

Model 104 Deluxe Interface with "Modem Switch"

- Same Features as 101 Plus
- Built in Serial Port for your Modem or other serial device
* Switch between Serial Output and Parallel Output
- Comes with cables to connect to your computer and printer
* Can be powered by most printers

## Model 105 Serial Switch

* Connects lo your COCO to give you 2 switch selectable Serial Ports
- Comes with a 3 fpot cable to connect to your computer
* Now you can connect your Printer (or printer interface) and your Modem (or other serial device) to your COCO and flip the switch to use either device
* Does not require power

## Cassette Label Printing Program

* Now Vorsion 2.1 prints 7 lines of information on Cassette labels
* Comes on Tape with instructions to transfer to disk
- Menu driven, very easy to use
* Save and Load Labels from Tape and Disk
* Uses the features of your printer to print standard, expanded, and condensed characters
* Automatically Centers Each Line of Text
* Allows editing of label before printing
- Program comes with 24 labels to get you started * 16 K ECB required

## Some of the Printers

That Can -
Supply power for the 101 and
104 are Radio Shack, Star, Owidata, Brother, Juki, and Smith Corona.

## Some of the Printers

That Cannot -
Supply power for the interfaces are Epson, Seikosha, Panasonic, Silver Reed and NEC. If your printer cannot supply power to the interface you can order your interface with the "P" option or you can supply your own AC adapter. We recommend the Radio Shack 273-1431 AC adapter with a 274-328 connector adapler.

drawn and a tune is played appropriate to that choice.

The graphics are drawn on HSCREEN2 so that 16 colors are used and the tunes chosen for each area are clever and well-executed. Windows are then overlaid on the background in which the exercise takes place. A picture is drawn of an object one might expect to find in the chosen location in the left window, and four words appear in the right window with their initial letters highlighted. The child needs only to match the initial sound with the picture and press the appropriate letter key. If an incorrect choice is made, that word is erased and the program waits for another response. If the correct choice is made, the computer plays a short tune, and another object appears for identification.

At each point in the program where the child can make a choice, only choices shown onscreen are accepted, other keys are ignored. Each "locale" in the program has 10 objects for identification; when each has been identified the child receives a written "pat on the back" and is asked whether or not to go on to another category or end the program. Unfortunately, for a moment the program slips out of its target market and assumes the child can read the prompts. However, with adult guidance the first time or two, the child learns to answer correctly at this point.

The program is written in BASIC in six modules: one for the title and initialization, one for the menu, and one for each of the menu choices. None of these stand alone, and the program loads and reloads each module as needed. It might have been more elegant to place the pictures and choices in a data file so they would come up in a

random order each time, and so the number of pictures could be added to at a later date by purchasing another picture disk. But the system works, and conceivably more pictures could be made available with another complete disk of six modules for the additional pictures.

Although the very effort of trying to add to the specialized needs of this level of educational software is to be applauded, the program does have its drawbacks. It would be a good idea for the authors of educational software to consult a teacher familiar with the target group or at least proofread their work.

Since we are concemed only with the initial sounds of the words. it is not necessary to include the whole word in the choice box - large initial letters would be easier to read. The child does see the word spelled out under the object after making a correct choice.

Since this program is basically an interactive $A B C s$ book, it would have been nice if it had included an object beginning with every letter in the alphabet. There are 40 pictures available, and some letters are duplicated from section to section. Also, some words do not begin with a clearly individual letter sound but with a digraph such as sh, ch and $a i$, so there was plenty of room for all 26 letter sounds.

Some of the choices are words I would not commonly expect a child this age to be familiar with. Pail is one example. In this part of the country we more commonly call the item in question a bucket, but this may be a regional peculiarity. More serious is the expectation of the child to identify a skateboard as a skate and a ferris wheel as a ferris. Admittedly the initial letter is the deciding factor, but when the word appears under the object, it seems desirable to have the whole compound word appear.

Some misspellings were noted, an undesirable flaw in educational programs; and a few pictures were not readily identifiable by children who tested the game, but a phone call to the author brought reassurance that future copies of the program would have these corrected.

In spite of the drawbacks mentioned, and in light of the shortage of educational programs of any kind for the preschool to first-grade level, I feel that at the asking price of \$15 this would be a valuable addition to the software library of anyone who has or works with children in this age group. A child of this age will play it again and again for a chance to look at the pictures and hear the tunes.

-Richard Gordley

## SupersoundDigitized Sounds for BASIC Programs

Did you know that a computer can act as a "digital" tape recorder - converting natural sounds you hear into digitized data the computer can understand? Digitized sounds can be stored in memory, played back and manipulated just like any other kind of numerical data. Supersound is a software sound digitizer that turns a CoCo 3 into just such a digital recorder.

You'll leam what Supersound is all about by running the demo program that comes with the package: First there is a CoCoMax III picture of a chugging steam engine (with animated puffs of smoke and rolling wheels and rails); accompanying the picfure we hear the realistic digitized sound of a moving train. Next we see another CoCo Max III picture of an animated reel-to-reel tape recorder and hear a selection from a perky Sousa marching tune. Suddenly the tape recorder switches to fast forward and so does the music! Then we hear the music played backward, then forward again but very slowly this time, and so on.

Supersound allows sounds lasting from a few seconds to several minutes to be recorded (digitized) into a CoCo 3, played back and saved to disk. There are special effects that can be applied to the digitized sounds that mimic features found on professional tape recorders. If you program in Disk Extended BASIC, Supersound offers a method for adding your digitized sounds to BASIC programs, and you can also add sounds to CoCo Max III pictures with sound and animation occurring simultancously.

Supersound comes on a single, unprotected disk, operates under Disk BASIC and includes a seven-page, photocopied manual. The manual states that the program should also work with most other CoCo DOS products. System requirements include a CoCo 3 with a minimum of 128 K of RAM and a disk drive. Sound is entered into the CoCo with an included cable that connects between a standard earphone jack and the right joystick port, so you'll need a sound source that has a $1 / 8$-inch earphone output, such as a cassette tape recorder, radio or TV. If you want to digitize your own sounds (your voice, for example), you need a tape recorder. Supersound can take advantage of extra memory - up to 512 K for digitizing and storing longer sound sequences.

Supersound operates in the 32-column screen with buff letters on a black background. The program is written partly in machine language and partly in BASIC. Like a BASIC program, Supersound can be halted (except when playing a sound) by apress of the BREAK key, and can be restarted by typing RUN. If you're familiar with programming, you can edit the screen width and colors to your liking (in fact, the manual encourages you toedit the BASIC drivers to your liking).

To digitize your first sound, you need to have either a prerecorded sound ready to go, or have a tape recorder that allows you to monitor live input through the microphone (in record-pause mode, for example). Single-key commands from the main menu initiate the real-time recording/digitizing process. You first enter a "monitor" mode where you can actually hear the digitized sound through the monitor speaker or audio jack of the CoCo 3 . Here you can adjust the input volume of your sound source and preview the digitized sound. When you're ready to record, press the space bar. The recording process begins and continues until either the space bar is pressed again or the allotted memory is used up.

Once recorded, the digitized sound can be played back immediately. You hear it
just as it sounded during the recording/ digitizing process. You can now take advantage of some of Supersound's special effects features. You can speed up the playback rate, making your own voice sound like a chipmunk's, or slow it down to sound like Darth Vader's. You can play it backward with obvious results, and you can add varying levels of reverb to your sound. When you've set playback rate, reverb and other effects to your liking, you can save the sound to disk with all settings intact.

Once saved to disk, a sound can be loaded and played back at any time with Supersound (be advised that if you recorded a sound to the full capacity of a 512 K CoCo, several disks would be required to store all the sound data). Super-
sound files can also be accessed directly, in conjunction with the machine language utilities provided, for use with your own BASIC programs or CoCo Max pictures.

As you become more experienced with Supersound you can make use of some of its more advanced features. The "sampling" rate (that is, the resolution/fidelity of the digitized sample) can be set to any of 255 settings, where 0 represents the fastest sampling rate. The faster the sampling rate, the higher the fidelity of the sound and consequently the less recording time available per unit of memory. Six seconds of sound at highest fidelity consumes 40 K of memory, while the same six seconds at a more modest sampling rate uses only 20 K .

One limitation is that if you record a sound at the fastest sampling rate, it cannot be played back at a speed faster than the one at which it was recorded. I found a rate of 12 to be acceptable for most applications. A 128 K CoCocan store about nine seconds of sound at highest fidelity, while a 512 K CoCo can store over a minute of the same.

If you're willing to trade a little more fidelity for some extra versatility, Supersound can act as a two-track recorder, al lowing you to record a sound first to one track and then record a new sound to the second track while monitoring the first.

## Nine-Times

The first magazine devoted exclusively to OS-9!
Every other month you will receive a disk Jam-packed with programs and articles all for 0s-9.

Each iseue contafns: 10 helpful and useful programa to help build your 05-9 Ifbrary * Instructions, examples, and samples of Bastc09 procedures and subroutines to help with your own programs and your underntandtng of Basic09 - C programs and programming examples * Program revews, Hints, Help columns, and informative artucles to advance your knowledge of OS-9. Supplied totally of $5.25^{\prime \prime}$ disk * Bound manual sent to each new subacriber for help in getting Nine-Tines up and ruming, as well as tips on using it with a ram disk or hard disk * All graphic/Joystick Interface for ease of use.

Math Invaders
First Games (Ages 3-6)
Arrow Games (Ages 3-6)
Cocowheel of Fortune (for Coco 2)
Cocowheel of Fortune (Coco3/RGB)
Spanish Baseball
French Baseball

Both tracks can then be played back together and effects such as volume and reverb can be adjusted individually for each track. This makes for neat effects!

Supersound also gives you control over just where and how much memory is to be allocated to your recording. Sound is stored in 8 K blocks, and the starting and ending blocks of memory to be used can be defined prior to digitizing. If you're like me, your knowledge of the CoCo probably does not extend into the realm of how memory is actually managed, so the Supersound manual includes an easy-to-understand table of various starting and ending block number locations for storing sounds. For example, memory blocks 48 through 51 are indicated as being used by the CoCo 3 to store Hi -Res graphics screens, so if you want to use a digitized sound with a CoCo Max picture, you would not want to use these blocks for storing sound (though as I discovered by mistake, loading a sound into these locations while displaying an animating CoCo Max III picture makes for an interesting display of video noise). If you have an internal 512 K upgrade, a total of 488 K blocks of memory are available.

Some Disk Extended BASIC programming knowledge is required if you want to use Supersound files with your own CoCo Max III pictures or BASIC programs. The manual has a listing of USR calls and poke addresses (in Hex) that allows access to all of Supersound's features from Basic. While USR calls and poke functions are a little beyond my own technical knowledge, I found it easy enough to use the CoCo's built-in BASIC editor to review and edit Supersound's BASIC driver and demo programs for use with my own programs. Supersound's BASIC programs are short and clearly annotated. I also found generous help just a phone call away by calling the technical support number listed in the manual.

Overall, I rate the quality of the digitized sound as only fair, and I was unimpressed with the effectiveness of the reverb effect feature. I haven't had the benefit of reviewing other sound digitizers for the CoCo so I don't know how Supersound compares with the others, but I'm sure the greatest limitation on sound quality for any digitizing software for the CoCois imposed by the inherent slowness of the CoCo's operating speed (Supersound does use the high-speed mode for better sound quality). If you want the high-quality digital sounds associated with CD and DAT players, you won't find them here, but if you are looking for the tools to create customized sounds that go far beyond the beeps and buzzes normally available to CoCousers, this is the program to have.

Supersound is a basic nuts ' $n$ bolts kind of program that does all it promises to do. Supersound does have a bit of a "homemade" look and is not as slick a production as some other software available for the CoCo 3 (the manual, for example, is full of typographical errors), but on the other hand the program has a positive and friendly feel to it. What comes across is a program that works and is open to whatever level of expertise the user wants to bring to it. While I would not recommend Supersound to a raw beginner, I think this program would be of interest to the moderately experienced CoCo user who's done some BASIC programming and is interested in exploring another capability of this remarkable machine.

CoCo 1, 2 \& 3

## Space PacBlast Off and Blast the Enemy

Space Pac from Microcom is a collection of 10 machine language programs that show off the CoCo's power, featuring old favorites and games with new twists.

The collection is available on tape or disk and runs on all models of the CoCo having at least 16 K of memory (except for one version of Android Attack, which requires 32 K ). The collection is not copyprotected, and it is highly recommended that the owner make backups (more on that later). Most games require one joystick, a few require both, and several can be played from the keyboard.

The documentation consists of five $81 / 2-$ by- $51 / 2$-inch photocopied sheets. The print is extremely small and hard to read. System requirements and loading instructions for both tape and disk are provided along with
the filename, starting, ending and execution addresses for tape systems. The remainder of the documentation consists of
> $W_{\text {ith no extra }}$ hardware required, the 32 K version speaks through the TV speaker. I often thought the sound generator had the capability to vocalize, but I didn't have the machine language expertise to prove it.

game-specific instructions for the individual games. The information on game play is precise and adequate.

I have consulted with my 9 -year-old daughter, Shari, and 7 -year-old son, Brian, for some of the following remarks on the individual games:

Color Zap - You are in the center of the screen. With the right joystick you fire on invaders at the four points of the compass. Rapid-fire is available so the challenge is not so much to shoot all the invaders as to prevent your laser from overheating and melting down. Brian likes the sound effects, but Shari doesn't like her laser melting all the time. The game is challenging but it becomes monotonous after a while.

Color Space Invaders - This is a familiar computer game in which waves of invaders march back and forth across the screen, dropping bombs and firing lasers at you. You're at the bottom of the screen with left and right movement. You fire back at the invaders and have a shield to protect you. The game can be played with joysticks or keyboard, but the kids recommend joysticks. The game was a bit too challenging for the children because you can have only one shot on the screen at a time, and there are very many invaders.

Planet Invasion - In this game you defend your planet's surface (the bottom of the screen) and precious crystals from attack. Control is by means of one joystick and the keyboard. This is best played with two players, one to fly the ship and man the guns while the other controls the smart bombs and the "panic button," hyperspace

# Fill out your CoCo library with these selections 

## The Complete Rainbow Guide to OS-9

Authors Dale Puckett and Peter Dibble show how to take advantage of OS-9's multitasking and multiuser features. An easy-to-read, step-by-step guide packed with hints, tips, tutorials and free software in the form of program listings.
Book $\$ 19.95$, Disk Package $\$ 31$ (2 disks, book not included)

## The Complete Rainbow Guide to OS-9 Level II Vol. I: A Beginners Guide to Windows

Puckett and Dibble have done it again! They uncover the mysteries of the new windowing environment and demonstrate clever new applications. More hints, tips and plenty of program listings. Book \$19.95, Disk $\$ 19.95$

## The Rainbow Introductory Guide to Statistics

Dr. Michael Plog and Dr. Norman Stenzel give a solid introduction to the realm of statistical processes and thinking for both the beginner and the professional. ( 80 -column printer required.) Book $\$ 6.95$, Tape or Disk $\$ 5.95$, Package $\$ 11.95$

## The First Rainbow Book of Adventures

Contains 14 winning programs from our first Adventure contest. Includes Sir Randolph of the Moors, Horror House, One Room, Dr. Avaloe and more. Plus hints, tips on solving Adventures.
Book \$3.50, Tape \$3.50

## The Second Rainbow Book of Adventures

Featuring 24 of the most challenging Adventure games ever compiled. Meet the Beatles and battle the Blue Meanies, find a hidden fortune, or win the heart of a mysterious princess. Ring Quest, Secret Agent Man, Dark Castle, Curse of Karos and more! Book \$13.95, Tape \$13.95

## The Third Rainbow Book of Adventures

The excitement continues with 19 new Adventures. Discover backstage intrigue at the London Theatre, attempt a daring space rescue, or defeat evil in the year 2091 as a genetic android. Evil Crypt, Spymaster, Time Machine, The Amulet, and that's only the beginning! Book $\$ 11.95$, Tape $\$ 9.95$, Two-Disk Set $\$ 14.95$

## The Fourth Rainbow Book of Adventures

Fourteen lascinating new Adventures from the winners of our fourth Adventure competition. Rely on your wits to escape a hostile military installation, try to stop the Nazi plan to invade Great Britain. manage to reinstate our defense system before the enemy launches a massive missile attack, and more!
Book \$10.95, Tape \$9.95, Two-Disk Set \$14.95

## The Rainbow Book of Simulations

20 award-winning entries from THE RAINBOW's first Simulations contest. You are a Civil War Commander, an air traffic controller, a civil defense coordinator, or a scientist on Mars . . . your wits are on the line.
Book $\$ 9.95$, Tape $\$ 9.95$

## The Second Rainbow Book of Simulations

The 16 winners from our second Simulations contest. Fly through dense African jungle, bull your way down Wall Straet, lead a bomb squad, or try your hand at Olympic events. Test your skills and talents. Book $\$ 9.95$, Tape $\$ 9.95$, Disk $\$ 10.95$

drive. The ship moves too fast for Brian he can't keep track of it! Shari can't watch the radar screen and the ship too. I like the challenge of the immediate battle with the overall scene provided by the radar.

Space War - This is a very tough one with a lot of action. Surprisingly the kids did quite well and therefore liked this game. Both joysticks are used in game play, but you don't need the functions on the left stick to do well. You fire on the Death Star while avoiding the black hole, an enemy ship and fire from the Death Star. The action is fast and the controls are touchy, but it's a lot of fun trying to master them.

Space Race - You fly around a fourcomered race track in space. firing at aliens and dodging their missiles. Brian has this game down pat. He spent hours with the firebutton held down, bouncing off the walls in a headlong rush around the track and scored higher than anyone else!

Galax Attack - Galactic Attack on the CoCo , a good rewrite of a classic. The children didn't like this one too well, but they don't like it on any other machine either!

Android Attack - The CoCo speaks! With no extra hardware required, the 32 K version speaks through the TV speaker. I often thought the sound generator had the capability to vocalize, but I didn't have the machine language expertise to prove it. The voice is not top quality and is difficult to understand, but the feat itself is impressive enough that I hope other programmers take the seed and expand on it. In the game, you walk through a maze of rooms fighting androids and collecting treasure. This is relaxing after the high-pitched action of some of the other games, but it isn't wimpy. There is a 16 K version of the game that plays just the same, yet lacks speech.

Whirlybird Run-I hope you have your pilot's wings for this one! You fly a chopper over hilly terrain, hunting for enemy bases and fuel depots, while firing machine guns and dropping bombs. Ground-based missiles are hunting you. The second screen features airborne hazards in addition to the ground-based ones. I don't know for sure what awaits after that, because we never made it past the second screen. This was the family favorite.

Space Sentry - In deep space your radar screens are your eyes. In this game there are three radar screens to watch: one tuned to react to space mines, one tuned to your refueling station's beacon, and one scanning for alien craft. The radar is hard to see, and it's difficult to distinguish echoes. Your craft is highly maneuverable and fast. You have your hands full with this one.

Storm Arrows - I've never seen one like this. You maneuver through a grid,
dodging storm arrows while looking for refueling stations. You must avoid mines and keep an eye on the timer. The quicker you clear the screen, the higher the bonus points.

Space Pac presents an interesting variety of games. I am impressed with the programming. Not only is the speech a surprise, but the programmers have done some strange things with the screen (flashing colors without borders, for instance). The resolution and animation are really impressive.

My major gripe is that there is no exit from the programs. For instance, I had a disk crash after a reset before I writeprotected the disk. (I recommend backing up the program.) A cold start eliminated the problem, but it's hard on the hardware to cold start after each game. If you hold the reset button for about five seconds, you get a fairly reliable restart with only an occasional conflict. Space Pac's price is reasonable for the quality of the programs. It's an enjoyable break from "computing"!
(Microcom Software, 2900 Monroe Ave., Rochester, NY 14618, 800-654-5244; \$29.95)
-William Baird

## Software

CoCo 3

## CycleJumpBreezy Rider

Today, sports fans, we will talk about a new motorcycle jumping game called $C y$ clefump. In this game, the player jumps a motorcycle off a ramp over barrels. And if he is good enough, the player gets the opportunity to jump the famous El Gato River Canyon in a special jet cycle. Best of all-no bones are broken should you miss a jump. You can get right back on your saddle and try again (Evel Knievel should love this).

CycleJump comes on an unprotected disk with a sheet that explains the object of the game. It is written for the CoCo 3 with a disk drive and a joystick.

There are three levels to the game. The object of the first level is to jump off a ramp and land on a target center, which varies randomly for each jump. The speed of the cycle is controlled by the position of the right joystick, from full left for stop to full right for top speed. The distance traveled through the air is determined by the speed of the cycle as it leaves the ramp.

The cycle makes two passes across the bottom of the screen before it comes to the ramp, which gives the player time to gauge
his speed. The rider receives 250 points for landing on the target, or 0 points if he misses. After 3000 points are amassed or 12 jumps made, the rider goes to Level 2.

The second level is like the first, except that on this level, instead of trying to land on a target, the rider must jump over barrels. To add to the difficulty in scoring points the cycle must land within the width of one barrel from the last barrel, otherwise points are lost. After 5800 points are reached, it is time to go to Level 3.

In Level 3 the screen changes to a river canyon and the rider trades in his cycle for the SuperRocketCycle to jump the EI Gato River Canyon. Here the joystick is used to set the thrust. Should a jump be attempted with the thrust set incorrectly, the rocket cycle disintegrates in midair, and the rider loses 1000 points.

Every successful jump scores between 5000 and 10,000 points; scoring 50,000 points puts the rider in the Hall of Fame and wins the game. But keep in mind there is a time limit. (Bonus time is awarded for good jumps, though.) If the rider's score goes under 100 points, the game ends.

CycleJump is written with Hi-Res graphics so the game looks pretty impressive on my RGB monitor, and it is an enjoyable game to play. With a deluxe joystick CycleJump is fairly easy to play (I joined the Hall of Fame in three tries), but a little more difficult with a joystick that doesn't selfcenter.

CycleJump is the first commercial work of Thomas Rawlinson, and I was impressed. (Soap box time.) I feel any computer is only as good as the people who write programs for it, and with new writers like Mr. Rawlinson coming up, we know the CoCo is alive and well.

Cyclefump is a good-looking game that isn't too difficult for anyone, and the younger arcade gamers will especially like it. The price makes it a good deal. So, hop aboard your bike and we'll see you in the air.
(J.T. Rawlinson Software, \#361 St. Germain Ave., Toronto, ON M5M IW6, Canada, 416 -782-5718; \$14.95 plus \$2 for $\mathbf{S} / \mathrm{H}$ )
-Steve Griffith

The following products have recently been received by THE RAINBOW, examined by our magazine staff and issued the Rainbow Seal of Certification, your assurance that we have seen the product and have ascertained that it is what it purports to be.

Action Arcade Pack: Volume 2, a set of two arcade games for the CoCo 3. Pengy in Polartand, similar to the arcade game Pengo, is written in BASIC; the goal is to avoid the evil Munchers and return safely to Peng City. Pyramid Pete, written in machine language, is similar to the arcade game $Q$ bert. Christopher Eng/ish Communications, 40-25 College Point Blvd., \#8G, Flushing, NY 11354, (718) 445-6589; \$9.95.

Big RAMDisk, a set of eight RAM disk programs for eight combinations of Disk BASIC/drive setups and also two utilities: Copydisk, a program that copies files between physical disks and RAM disks; and Relocate, a program that changes Big RAMDisk's memory location should another machine language program cause a conflict. Requires a 512 K CoCo 3 and "any version of Disk Basic." Danosoft, P.O. Box 124, Station A, Mississauga, ON L5A 2Z7, Canada, (416) 897-0121; \$12.95 U.S., $\$ 14.95$ Cdn., $\$ 2.50$ for $S / H$.

CGP*Max, a utility for printing color pictures on Radio Shack's CGP-220 inkjet color printer. Features support of "the full range of colors the CoCo 3 can produce on an RGB monitor." It prints hscreenz pictures and works with VuMaster and the CoCo Max III's translar utility. For the CoCo 3 and a disk drive, Supersofi, Inc., 363 Oakwood Ave., Jackson, MI 49203, (517) 787-3610; $\$ 14.95$ plus $\$ 2.50 \mathrm{~S} / \mathrm{H}$.

Comics+, a graphics editor designed to help users create comic strips. Features a point-and-click icon-oriented interface with pull-down menus. Options include Draw, Paint, Lines, Magnify, Undo, etc. It also includes a clip art library of 42 predrawn faces, eyes, noses, mouths and hands. Requires a disk drive, a self-centering joy-
stick, a DMP 105 or 106 printer, and a CoCo 1,2 or 3 having at least 64 K. E.Z. Friendly, 118 Corlies Ave.. Poughkeepsie, NY 12601. (914) 485-8150; $\$ 21.95$ plus $\$ 1.50 \mathrm{~S} / \mathrm{H}$.

KJV on Disk \#4, Exodus chapters 22 through 40 of the King James version of the Bible on disk in ASCII files for CoCos 1,2 and 3. BDS Software, P.O. Box 485, Glenview. IL 60025. (312) 998-1656; $\$ 3$.

- Lottery Made Easy, a menu-driven Lotto game that helps players choose their numbers. Supports Pick 7, Pick 8, Pick 12 and Pick 20. Requires a CoCo 3, one disk drive and an RGB monitor. RRA \& Company. P.O. Box 17087. Des Moines, IA 50317. (515) 262-3858; \$15.

Pt - File Manager, a machine-language utility designed to simplify file and directory management. Programs can be executed in a point-and-shoot environment. " $P t$ will work with any program that takes its parameters from the standard OS-9 shell command line." Designed to work as a stand-alone or in tandem with $\mathrm{r}^{3 \text { 3 }} \mathrm{s} M$ Menuing System. $r^{3}$ Systems, 4072 E. 22nd St., Suite 178, Tucson, AZ 85711, (602) 745-2327; $\$ 19.95$ plus $\$ 3$ S/H.

Star*Max 2.0, a set of utilities used to print color pictures on the Star NX1000 Rainbow color printer. Supports the range of colors the CoCo 3 can produce on an RGB monitor; TV/composite monitors can also be used. Features printing of hscreen2 pictures and CoCo Max III double-screen pictures. Supersoft, Inc., 363 Oakwood Ave., Jackson, M1 49203, (5/7) 787-3610; \$19.95 plus $\$ 2.50 \mathrm{~S} / \mathrm{H}$.

UltraEd+, a program to move the ROM pack EDTASM + code to disk, add disk I/O and utilize the hardware of the CoCo 3. Features 80 -column screen, dual buffers. key repeat and double speed. Supersoft, Inc., 363 Oakwood Ave., Jackson, MI 49203, (5I7) 787-3610; $\$ 22.50$ plus $\$ 2.50 \mathrm{~S} / \mathrm{H}$.

Vocab, a one- to six-player word game (the computer can play all six hands) modeled after the Parker Brothers game of Scrabble. Players try to outscore each other by creating words and placing them on the board. Requires a disk drive and a $\operatorname{CoCo} 3$ with at least 128K. SPORTSware, 1251 S. Reynolds Road, Suite 414. Toledo, OH 43615. (419) 389 -1515: $\$ 19$.

First product received from this company

The Seal of Certification is open to all manufacturers of products for the Tandy Color Computer, regardless of whether they advertise in THE RAINBOW.
By awarding a Seal, the magazine certifies the program doesexist - that we have examined it and have a sample copy - but this does not constitute any guarantee of satisfaction. As soon as possible, these hardware or software items will be forwarded to THE RAINBOW reviewers for evaluation.
-Lauren Willoughby

# Innovation Along the Border 

by Scott Thomas

Afew months ago I received a letter from a friend. The letter was typed on a word processor and the top of the page was decorated with a row of pigs. I was jealous of the fancy letterhead at first, but then I decided my CoCo could accomplish the same feat. That's when I began working on Stationery Station.

Stationery Station is a simple program that creates personalized stationery on a DMP-105 printer. The program gives you a choice of six different pictures with

Scott Thomas has owned a color computer for about five years and has enjoyed THE RAINBOW for four years. He's a junior at Western Michigan University majoring in computer information systems. He can be contacted at 1205 Red Pole Drive. DeWitt, MI 48820.
which to decorate paper. The pictures can be printed on the top of the page or both top and bottom. Under the top row of pictures your name, address and phone number are printed, resulting in your very own personalized stationery.

The program was written using a Color Computer 3 and a DMP-105 printer. The program should, however, run on a 32 K computer. The only modification needed for non-CoCo 3 users is to delete the speed-up poke in Line 4100 and the slowdown poke in Line 4120. This slows the program down by a few seconds, but it should still run well. Also, the POKE in Line 4500 sets the printer rate to 2400 baud. If you want to operate at 600 baud, delete the POKE. For other printers you must refer to the manual for any needed printer conversions.

The graphics for the program are located in the data statements at the end of the program. Each data line represents a
printed line, and the data is separated into blocks for each different picture. The first line of each block contains the first letter of the picture it prints. This is a flag used to position the pointer to the beginning of the data set to be printed. The actual positioning of the pointer is accomplished in lines 4100 through 4120 . The first two numbers in each data line are the start and end point of the print head. The other numbers represent the dot pattern to be printed. Two zeroes signal the end of each data block. The DMP-105 manual explains on pages 33 through 38 how to print graphics.

To use the program, type in the listing, save the program, and enter RUN. A simple menu appears and asks you to press the first letter of the graphics character you want to use. A tone sounds when you press a key. If you press an invalid key. another tone sounds and the program waits for you to enter a correct response. After

## Expanding Horizons

Take your CoCo beyond the limits of floppy diskettes connect to DELPHI, your complete online business and personal resource. With your modem and a local phone call, select from tens of thousands of downloadable programs, meet friends from across the globe, or tap into the world's most comprehensive databases to expand the horizons of your CoCo.

Your Resource for Color Computers DELPHI's special group for owners of Candy Color Computers is supported by the people who bring you RAINBOW Access extensive databases where you can upload your favorite files and download programs written by other personal computer enthusiasts. Chat with other members and resident experts in Conference, use electronic mail, and post or respond to messages in Forum.

## OS-9 Online

In OS-9 Online, DELPHI's interest group for fans of the OS-9 operating system, you'll meet other members, download files, and get tips to help you make the most of your CoCo.

## What

 your CoCo was really
## meant for.

## RAINBOW Online

DELPHI is your online connection to RAINBOW. You can renew your subscription, meet other Color Computer owners, order software or hardware, or inquire about products. You can even download programs publashed in RAINBOW.

## Wallet-Friendly

You can access DELPHI with a local phone call from almost anywhere in the United States. There is NO extra charge for using Tymnet or Telenet, NO monthly minimum, NO premium for 1200 or 2400 bps , and connect rates are a low $\$ 7.20$ /hour.

FREE Lifetime Membership As a RAINBOW subscriber, you get a FREE lifetime DELPHI membership ( $\$ 29.95$ value) which includes a credit worth one evening hour of usage (\$7.20).
If you don't already subscribe to RAINBOW, just request a subscripdion when you sign-up to DELPHI, and, for the $\$ 31$ subscription fee, you'll get the same great deal!

Sign up now - Online! With your CoCo and modem:

1. Dial 1-617-576-2981.*
2. Once connected, press RETURN once or twice.
3. At Usemame:, type JOINDELPHI
4. At Password:, type RAINBOW, if
 you already subscribe to RAINBOW.
Type SENDRAINBOW, if you do not yet subscribe and wish to do so.
5. Have credit information ready.

* Or call DELPHI Member Services by voice at (800)544-4005 to obtain a local access phone number.

## No Risk

With DELPHI there is no risk. You can cancel your membership within 30 days and pay only for your usage beyond the initial one-hour credit.

# DELPHI 

The World's Premier Online Information Service

a few seconds you are asked if you need to enter your name．When the program is started，the information is blank；if you want your name information printed，press Y．You are then asked for your name， address，etc．Just press ENTER to leave out any information．As long as the program is
running，the information you type is pre－ served．If you need to change it，type Y when asked if you need to enter your name．Next you are asked if you want graphics printed on the bottom of the page as well；answer Y（yes）or N （no）．After the printing is completed，you are asked if you
want another copy of the same thing．If you answer $\mathbf{N}$ ，you will retum to the menu for a new selection．

Stationery Station is intended for those who want a unique letterhead and want to exercise their CoCos＇capabilities．

## A utility that lets you print labels one at a time

# One Label or Two? 

by Kevin Deneen

Why write another label maker program? There are lots of label programs available for the CoCo, and most are packed with features and reasonably priced. But this little gem has something the others don'tsimplicity.

Except at Christmas, I don't need to print a large number of labels at one time. However, I do quite frequently correspond with other computer hobbyists, authors and advertisers. What I need is a simple utility to print a label or two, then remain available like any OS-9 command.

The program Label is short and sweet. Its only function is to print a three-line label. Once it's compiled, you can place it in your CMOS directory. If you have Level II, you can merge it with Shell. Then when you boot your system, Label is in memory. working lightning fast every time you need it. If you have Multi-Vue, you can use the mouse to select Label from any directory, then select Open from the Files menu torun it. In any case Label works on any CoCo with OS-9 Level I or Level II.

To use Label, simply type the program
Kevin Deneen holds an associate's degree in tool engineering and works for a large aerospace company as a mumerical control machine tool programmer. Besides the CoCo, his other hobbies include flyfishing and mountain trail hiking. He may be contacted at 65766 E. Sandy River Lane, Rhododendron, OR 97049.
name at the OS-9 prompt (e.g., 0S9: 1 abe ), then press ENTER. You should have your printer online and paper or gummed labels ready. The program loads into memory and executes like any other OS 9 command. After loading, the program responds by
prompting you to enter the name and address for the label. As soon as you've entered the ZIP code, your printer goes into action, typing out your label. The program then prompts you to press ENTER if you want another label or ESC if you want to quit

```
The Listing: label.c
i* PROGRAM NAME: label.c % % /
/* Copyright 1989. Falsoft Inc. */
f* Keyboard enter and print single labels */
f* Defining a variable outside of a function allows it to be global */
#|nclude <stdio.h> t* Header flle for Input/output functions */
Hdefine LEN 41 / Maxinum length of string for name & addres5 */
#define LC 21 /* String length for city */
#
#define STOP EOF % EOF = \langleCTRL\rangle + \langleBREAK\rangle */
struct Idata f char *name[LEN]. l* ldata is a template for %/
    char *name[LEN].
            *cfty[LC].
            *state[LS].
            *21p[LZ];
        J:
f* 'main()' calls all the other functions */
matn()
|
    struct ldata label. *point2label; /* Define structures *f
    int ch: /* Variable for reading keypress */
    point2iabel - dlabel: f* Get address of label structure */
    while (ch l-STOP) /* While <CTRL> & <BREAK> is not pressed */
        I
        enterit(point2label): /* Send the address of 'Tabel' to enterit */
        printit(point2label): /* Send the address of "label* to printit */
        printf("\nH1t <ENTER> if you want another label,");
        printf("\nH1t <ESC> if you want to quit. In"):
        ch - getchar();
        }
}
```

the program. It should be noted that ESC on a CoCo 3 is accomplished by pressing the BREAK key while holding down the CTRL key. If you have a CoCo 1 or 2 , use the CLEAR key in place of CTRL.

When typing in your label data, be aware that as is, the name and address string length is set to 40 characters. The city string is set to 20, the state is set to 2 , and the ZIP code to 9 characters. If you want, you can change these values by adjusting the define statements at the beginning of the program before compiling. Be sure to add 1 to the desired value for a null character. If you type in a string longer than the amount of space reserved, the system will not have room for the null character. Should this happen, the next string stored in memory will most likely be concatenated to the string that is too long, creating an oddlooking label.

Although I have made no attempt to explain the program line by line, Label is commented for those who are unfamiliar with the C programming language. Feel free to add to or modify the program.

```
l* End of main */
f* function to enter label data from the keyboard */
enterit(data)
struct ldata *data: /* Define a polnter to the structure */
{
    printf("Enter requested data after each prompt. In\n");
    printf("NAME: "):
    gets(data->name): /* Get keyboard entry and store at */
    printf("\nADDRESS; "); % address 'pointed to'*/
    gets(data->address);
    printf("\ncITY: "):
    gets(data>>city);
    printf("\nSTATE: ");
    gets(data->state):
    printf("In2IP CODE; *);
    gets(data->z1p):
}
* End of enterit() */
/* Function to print label */
printit(print)
struct ldata mrint: /* Define a pointer to label structure */
{
    FILE *ptr: /* 059 treats the printer as a file #/
    ptr - fopen("/p","m"): /**/p" - name of path to printer */
    fprintf(ptr,"%sln".print->address): /* is pointed to */
    fprintf(ptr, "%s, %s %s", print>>city, print->state, print>>z|p):
    fprintf(\betatr."\n\n\n\n"); /* 4 carralge returns */
    fclose(ptr): close path to printer */
]
f* End of printit() */
```

## Overlord <br> Newl

Peace through superior firepower is the catch phrase in this sophisticated wargame simulator. Victory shall not fall to be who is the mightiest, oh no, but to he who can plan ahead and develop the better strategy. You must ensure that all your troops are brought into battle at the right moment, and for that you must set your moat induatrialized cities to producing troop transporters. Other cities will build Aircraft carriers, ighter jets, paratroop regiments, submarines,
spy planes, battleships, destroyers, and cruisers Up to three people spy planes, batueships, desiroyers, and cruisers op to hiree peopic
can play the game simultaneously, each starting out at his own base can play the gome simulaneously, each starting out at his own base city, each knowing nothing about the strenghis and locas gons of his enemier torces. The player a engaiging the enemy face to face. You can set any or all of the three players to be operated by the sinister silicon brain of your CoCo 3 , and battie against them or let them battle each other.
Price: \$29 US / \$34 Cdn.
Overlord requires: 128 K CoCo 3, 1 drive and a mouse or joystick.

## Defendroid

A classic returns! Arcade realism for the Coco 3 is brought one step closer with this outstanding action game. Sinister aliens are appearing in the skies over Zabburtuth, and you and your Turbo-Flier are all that stand in their way! Use lasers and smart-bombs, fuel depots and your astronaut-tractor to save the hapless inhabitants
 from certain stir-frying as hideous alien cuisine! This program contains a graphics manipulation routine so advanced, we registered a copyright for it aione. See what a threefold increase in software speed and memory efficiency can do for your CoCo 3 !
Price \$29 US / \$34 Cdn
Defendroid requires: 128 k CoCo 3.1 drive, 1 joystick.

## New! Those Darn Marbles

Dedicate a program to 512 k machines only, and all sorts of new
things are possible. Those darn Marbles is the first CoCo game to use the built-in hardware screen scrolling features of the CoCo 3 . This means that all the computer's time on be dedieated to controling the game itself (sound effects, moving objects around,
etcetera) rather than the time-intensive chore of scrolling an entir etcetera) rather than the time-intensive chore of scrolling an entir
32 k screen around. You will be amazed to see how smooinly a ZK screen around. You will be amazed to see how smoothly a HARDWARE-scrolled screen can move. Compare Those Darn
Marbles with any other 30 marble fype game on any computer, and
 you will be corninced that your CoCo 3 really can stand with the
beat of them. (One of our playtesters remarked, upon seeing the pre-release veraion of TDM: "My Amigs isn't that smooth!")
Not convinced? TDM is so chock-full of graphics that it comes on (count 'em) six discs! It's been said many times but this time it's true: Your CoCo 3 gatne library is not complete
without a copy of Foose Darn Marbles.
Price $\$ 32$ US / $\$ 38$ Cdn. Requires: $512 k$ CoCo $\mathbf{3 , 1}$ drive,joystick.
 has ever seen, bor none. A fuil 3 discs are filled with worlds, towns
asties, and dungeons. The dungeons are spectacular 3D creations, filled with full colour, hi-res monsters, ladders, doors and pits, chests, pools, lava and flooded rooms. You would not believe that a CoCo 3 could produce such high-speed detailed graphics. The dungeons are only part of the story, however. In the wild lands above, you'll lind monsters, towns and castles. The towns will reveal merchants, learned locals, even a friend or two who will join your quest. Msybe you will find band of pirates as you tread the windswept shores. Could you and your companions defeat them? Test your mettie during the bundreds of hours of play time The Seventh Link will bring you.
\$38 US/ \$48 Cdn. Req: CoCo3, 40 track drive (RS drive is OK if it's white)
 sophisticated command interpreter lend realism and enjoyment to one of the most extensive adventures to be found on a CoCo . Package includes 2 discs, an $11 \times 17^{7}$ map, a velvet pouch of powerstones and a 20 page booklet. Price: $\$ 32$ US/ $\$ 38 \mathrm{Cdn}$ Price: $\$ 32 \mathrm{C} / 58 \mathrm{Cdn}$
Requires: 128 CoCo 31 drive Hint Books!
Finally, belp is here! Calduril 1 and 2 books are 15 pages and $\$ 3.50$ each. The Seventh Link books are 40 pages (lots of maps) and $\$ 5.50$.

## Oblique $\mathbb{C r i a ̀ d}$

32 Church St., Georgetown, Ontario, CANADA, L7G 2A7 (416) $877-8149$

# One of the few ways to really enjoy Newtonian physics 

## What Goes Up

by Hector F. Cuadra

Gravity is an Extended Color BASIC educational game that provides practice and simulation in one of the most fundamental concepts of Newtonian physics - gravity. It simulates the parabolic motion of any object under the influence of an initial arbitrary force and the force of gravity. The game's objective is to try to hit the target by predicting the path that a projectile will take. You do this by specifying the initial velocity and elevation angle. From then on, there is no influence on the object except the acceleration due to gravity (a constant). The trick for solving the problem is to separate the motion of the projectile into vertical and horizontal components.

After you type RUN, the program draws a PMODE 4 picture while displaying the title. After this two instruction screens appear. After the last instruction screen the data input screen gives the position of the target and allows you to view the picture. Typing Hat the Want a View prompt sends you to the Help/Solution screen. When viewing the picture, press any key to bring back the

Hector is a graduate student in education whose main interest is using computers as alternatives to traditional methods of learning. He has degrees in science and art and finds the computer perfect for combining the two subjects. He may be contacted at I336 E. Mifflin, \#3. Madison, WI 53703, (608) 255-0814.

Data Input screen and proceed with the velocity and angle data. Using the horizontal distance and height where the target is located, you calculate or try different combinations of velocities and angles for the launch of the projectile. In this mode you have the option of making the entire path of the projectile visible or just plotting it momentarily. This is helpful when your paths tend to lie on top of one another, making it hard to see the recent path. If you commit an error entering the data, don't worry because you have an opportunity to change it. Once you have entered the correct data, the PMODE 4 picture is displayed. The stone or bullet (you name it) is at the mercy of the gravity force and the initial velocity. A ground-to-ground path is plotted according to your data. Whatever the consequences of the initial data entered, a Results screen is displayed at the end of the trajectory.

You are allowed three shots per target. Hitting the right target gives you 100 points. If by chance you hit the wrong target, the big building, you are penalized by losing 100 points. If you score by hitting the tiny box, a new position for the target is givento you, plus an extra shot. If you miss three consecutive shots, you are sent to the menu screen.

In the menu section you have the option of finding the solution to the motion problem for the last target you missed. Also, you can review the results or instructions or view the plot of past attempts. Since you

missed three consecutive shots，the menu offers you the option of selecting a new target．With this option you can choose an easy or a hard target．To try again，press 2 and the sequence starts over．Option 3 is for rebuilding the picture and erasing the accu－ mulation of trajectories．If you have a prob－ lem with cluttering paths in the screen， choose Option 3．Options 1，3，4， 5 and 6 always retum you to the menu．

## Program Structure

The three important concepts employed in this program are the PCOPY and PPOINT commands and the use of screen areas simulating real areas．The PCOPY command allows you to duplicate the initial graphics， drawn on pages 1 through 4，to pages 5 through 8．With this I am able to erase the paths and repair the picture by just copying back the original picture located at pages 5 through 8 in memory to the pages used by PMODE 4．1．The PPOINT command tests whether the location of the projectile is white．If the pixel is white，it is tested to see what type of obstacle it is．Further testing is done by finding the numerical value of the area where the point or target is located．

The program variables are divided into two categories．The game status category includes those that decide the sequence of the program execution according to points or number of attempts．

| Game Status Variables： |  |
| :--- | :--- |
| J－1 | by－passes instructions <br> initially |
| $2 Z-1$ | time for new target \＆ |
|  | 100 points |
| TR－1 | new target，but loses |
|  | 100 points |
| N\＄ | menu＇s subroutines |
| TL | number of tries |
| TT | score |

The mathematical variables are those used in the simulation to calculate the position for the projectile and target．These are as follows：

| P1 | circle＇s constant |
| :---: | :---: |
| 6 | acceleration of gravity． constant |
| 1 | time interval |
| A $5, A 1, A, B$ | angles |
| TH | time at peak of path， 1／2 time |
| Vs．$V$ | initial velocity |
| X，Y | physical position or projectile |
| $\mathrm{X} 1, \mathrm{Y} 1$ | screen mapping corrections of X，Y |
| XT，YT | position of target |

EXEC 44539 on Line 1540 waits for a key－ board input（it functions just the same as AS－INKEYS．POKE 13,0 in Line 90 is used to reset the last INKEYs value to null（the same as INKEY $\$$－＂＂$^{\prime \prime}$ ）．Line 450 contains the high－speed poke POKE 65495．0． This poke is used to double the speed of all functions during the plotting of the trajec－ tory．If you have a CoCo 3，change this to POKE
 65497，0．Also，during the initial drawing of the picture and succe－ sive target positioning，the high－and nor－ mal－speed pokes are used to speed up those sections in the program that tend to be slow in processing．Meanwhile，during data input and observation，the normal－speed poke at
lines 820 and 1408 ，POKE 65494,0 ，is used to avoid an impatient or too－sensitive key－ board，as well as to to cool the computer chips．To slow the CoCo 3 down to normal speed，use POKE65496．0．

# Are Your Programs Headed for a Breakdown? 

by Dale L.Puckett<br>Contributing Editior

You should plan on it. What I'm talking about is modularity. You hear the word a lot when OS-9 hackers get together these days. It's basic survival. As we enter the new decade and our application programs get bigger and better, we're learning how easy it is to run out of memory with a $512 \mathrm{~K} \operatorname{CoCo} 3$. Since the January issue of THE RAINBOW is traditionally the beginner's issue, this is an excellent time to review an important and timely concept.

I've always encouraged you to break your programs down into smaller, more manageable tasks - to make your programs modular. When you do this, you avoid common problems such as running out of memory.

There can be an analogy drawn between writing and programming. For example, novels are organized collections of wellwritten chapters, chapters are a collection of well-written paragraphs, and paragraphs are groups of carefully constructed sentences, etc. A writer begins by outlining ideas, then organizing sentences one word at a time.

A programmer's first step is often to define a problem in terms of smaller problems. These small problems can then be broken down into even smaller problems. Eventually you reach a point where you can translate these small problems into statements the computer can understand. When

[^6]you've leamed these techniques, you've leamed structured programming.

The payoff comes next. After you've used a structured approach for a while, you find that many of the small problems are very similar and keep popping up again and again. If you write proper solutions to these small problems, you can use them over and over again in all sorts of programs. Each solution is written as a BASIC09 procedure. These saved procedures become modules, or building blocks, that you can use to solve larger problems. Eventually you own a library containing scores of modules.

To use these modules, simply run them from within your new BASIC09 programs. Parameters (another big word for beginners) make it practical for you to break your programs into smaller pieces. With BASIC09 you're able to define parameters that describe the data you need to process and pass them back and forth between your BASIC09 programs or procedures.

Without the ability to pass these parameters, you would still need to write a unique procedure for each task. With parameters a single procedure can solve many different problems. Let's use a specific example to explain this concept.

The easy way to solve the problem of multiplying $2 \times 2$ is to write a simple procedure that does just that. It would be a very simple procedure, unable to do anything except multiply $2 \times 2$. The proper solution is to write a single procedure that can multiply any two numbers. You can pass it a new set of numbers each time you need an answer. Essentially the numbers you are passing are known as parameters, which can be any numbers, characters or strings that BASIC09 understands - even pieces of data you have defined using

BASIC09's TYPE statement. Let's look at some actual code.

The quick way to solve the problem of multiplying $2 \times 2$ can be accomplished in one line:

```
PROCEDURE print
PRINT 2*2
```

A proper, but useless, BASIC09 procedure looks like this:

PROCEDURE mult2by2
DIM first2, second2:INTEGER
DIM answer: INTEGER
first2:-2
second2:-2
answer:-first2*second2
PRINT answer
END
Both of the procedures above print 4 on your Color Computer screen. The only difference between the examples is that the second procedure is easier to read. It uses words that make sense in English and carefully defines its variables - a habit you should get into. It saves memory and it makes your programs easier to understand.

Here's the problem: What do you do when you need to multiply $3 \times 4$, or $4 \times 12$ ? If you use the techniques above, you must write more procedures, which is not too productive.

The answer is to write a generic multiplication program that can handle any number. For example:

PROCEDURE usefulmult
PARAM firstnum, secondnum: INTEGER
DIM answer: INTEGER
answer:-firstnum*secondnum

To use the procedure usefulmult, you must pack it and run it from the OS-9 command line. You can also run it from within another BASIC09 program. If you're using Shell+, the command line looks like this:

0S9: usefulmult (10.20)
When you type these examples, RunB, BASIC09's runtime package, sets firstnum equal to 10 and secondnumequal to 20 , then does the multiplication. Shortly after you
type the OS-9 command line, 200 appears on your screen.

You don't always need to type a command line to run one of your BASIC09 procedures. Another procedure can also run them. The procedure below can print any part of the multiplication table. It accepts the beginning and end value of the table from you, then uses another procedure called from within a FOR/NEXT loop to print the table.

PROCEDURE runit
PARAM first.second:INTEGER
DIM Count1. Count2:INTEGER
DIM answer:INTEGER

FOR Countl:-f1rst To second FOR Count2:-first TO second answer:-count1*count2
RUM printit(answer)
NEXT count2
PRINT
NEXT countl
ENO
PROCEDURE printit
PARAM answer:INTEGER
PRINT USING - $18>^{*}$; answer
answer:-answer*2
END

## OS-9 Spotlight

A professional Mulfi-Vue-based paint program has finally arrived. MVCanvas, written by Mike Haaland, was a big hit at the Game Point Software booth during RAINBOWfest Somerset. It is the first program featured in the OS-9 Spotlight.

Visitors al RAINBOWfest stopped in their tracks when Haaland told them MVC anvas was running under OS-9. Everyone had said it couldn't be done. MVCanvas is a VEF fommat graphics editor fashioned after CoCo Max. It has a Cipboard function. lets you switch palettes, and supports multiple fonts and digitized pictures. You can work on a $320-$ by-200pixel, 16 -color screen, or you can use a $640-$ by -200 screen that delivers four colors. Print drivers are supplied for most popular printers. AIF and icon files are also supplied.

MVCanvas supports a wide variety of common and powerful commands as well as such features as Spray Can, Fill, Brush and Stamps.

MVCanvas is an excellent graphics editor. If Mike makes a few subile changes to his user interface, it will be outstanding. My first suggestion concems the location of several menuitems. Generally similar functions should he grouped together. For example. Clear appears under the File menus. It seems to me that when you clear the screen, you are editing. I would put this command under the Edit menu. Likewise, the Load Font option belongs under the Font menu, not the Resolution menu.

Another subtle change to the Edit menu would clear up Mike's metaphor and present a more universal man/machine interface. Cut, Copy and Paste, as implemented in MVCanvas, are somewhat confusing or at least nonstandard. Most vistal interfaces let you copy an object from a document into a clipboard and then paste it somewhere eise in the document or in another document. When you copy an object, the original object remains. A cut is similar to a copy except when you cut in object, you remove it from the original document. Paste is almost always used to place an object in a document. I would like to see Haaland adopt this universal metaphor in MVCanvas.

Clipboards are genetally remporary in nature. After you copy an object to a clipboard, it stays there until you copy or cut something else. The new copy or cut replaces the entire clipboard. I also believe Mike could use the metaphor of a scrapbook forliis Cut-to-Disk function. The disk files created by this function, like a scrapbook, are permanent files.

In many paint programs, the toolbox takes up valuable space on the sereen. Not so with MVCanvas. With Haaland's program you open the toofbox only when you need it by clicking on the word Tools in the menu bar. Yet a small change here could really enhance the operation of the toolbox.

Haaland has implemented a modal toolbok. Simply stated, once you open the toolbox, you ean't do anything else. You can work in the toolbox only until you close
it by clicking on the OK butron. A nonmodal toolbox, which is almost impossible to deliver using the current wind int manager, might be an impossible goal. However, a quick escape route just might make it bearable.

Two methods could be used. You can use a hot key on the keyboard to close the toolbox as soon as you click on your selection - actually, it would also be nice to be able to call up the toolbox by striking a hot key. Better yet. why not be able to exit the toolbox with the tool as soon as you click on the tool you need? A single click would work great for all drawing tools. However, you may need a double click to let OS-9 know that you want to go back to the drawing board and not stay in the foolbox to change the color or pattern, etc. Here's another nice trick that could be used in the toolbox: As soon as you click on a fool, the mouse pointer could turn into that tool, whether a brush, pen or spray can.

It is easy to open or save a fite with MVCanas. The prograrn displays a list of files. You click on the one you want, then push a Load button at the bottom of the sereen. It would be nice to be able to just double-click on the file you want.

Since Haaland uses a pipe to print your MVC anvas images, his prtdmp commands can also be used from the OS-9 command line. When printing VEF pictures from the command line, you can tell OS-9 to perform this time-consuming task in the background while you continue to paint with MVC anvas in another window.

Haaland is already talking about adding rotation and sizing and several other nice features. When Mike makes the metaphorical changes we highlighted above, MVCanvas will not only sing - it will shout. CoCo Mar III, look out!

Run the procedure runit, using the BA. SIC09 command line:

```
run runit(1,9)
```

It looks a lot like the multiplication tables you leamed in school, doesn't it? But if you want to run the multiplication tables between 20 and 30 , you can do it by typing run runit $(20,30)$. You used the same format or syntax but different numbers. This example shows how parameters can make your life easier.

The next thing you need to know about parameters is that they can be passed in both directions. To prove this to yourself. add the line:

## PRINT USING " $15>$ "; answer:

to the procedure runit between the run printit statement and the NEXT count2 statement. When you run runit the next time, you'll see it prints two columns. The second column prints the value of the answer after it returns from printit.

How is the answer doubled each time it comes back from printit? Take a closer look. It's right there in the code -answer:-answer*2. But you printed it within
the procedure runit. This proves that the parameter answer was passed both ways to and from the procedure printit.

Before you start relying on parameters to do your dirty work, know that there are two types of parameters you can pass. A parameter can be an actual value, or it can be a name. If you type run runit (20.30), you are passing a value to runit. Conversely, if a program running runit contains the line run runit(first, second), it is passing by name.

If you pass a parameter to another procedure by name, that procedure can retum a new value to you. Essentially the called procedure associates the memory location of the parameter you passed with a name in a local PARAM statement. The procedure can change the value stored there and retum that value to you.

However, if you pass a parameter to that same procedure by value, it is not able to retum a new value to you. In this case the parameter you pass is stored only temporarily. When control is retumed to the calling procedure, the system forgets it ever knew about the value you passed. There is a hidden benefit, however. If you want to ensure that a called procedure doesn't change the value of the calling procedure, just pass
your parameters to it by value. You can even do this, when you are passing a variable, by multiplying the variable by a constant, as in:

## RUN printit(answer*1)

When you stan to use parameters heavily, you must concentrate on one additional piece of housekeeping. You must make sure that the parameters passed to a called procedure are exactly the same type as the parameters in the calling procedure. One way to ensure this is to copy the DIM, PARAM and data type statements into both procedures with your editor. That way, you'll know they are all the same.

After you study the procedures in this month's column and feel comfortable with the concept of parameters, look back through one of the issues when we were pursuing the KISSDraw series. You'll see that even though we were passing some complex data types, we were using the same techniques you learned this month. You can also pass parameters from BASIC09 to an assembly language or Clanguage program. But that's a subject for another tutorial.

## TAZMAN

A PRESCHOOL TO GRADE 1 EDUCATION PROGRAM THAT WILL PRESENT YOUR CHILD WITH HOURS OF LEARNING FUH.
This progran gives practice in 2s5ociating the initial sounds of wonds with the letters that nake thase sounds. Give us your best: Join the ranks of these courageous CoCoists in showing the Color Computer world your high score at your favorite microdiversion. We want to put your best effort on record in THE RAINBOW's bimonthly "Scoreboard" column. All entries must be received 60 days prior to publication Entries should be printed - legibly - and must include your full name, address, game title, company name and, of course, your high score. Each individual is limited to three score entries per month. Send your entries to Scoreboard, c/o THE RAINBOW.
For greater convenience, your high scores may also be sent to us through the MAlL. section of our Delphi CoCo SIG. From the CoCo SIG>prompt. pick MAIL, then type SEND and address to: EDITORS.

In response to questions from:

- Andy Schmidt: In the Interbank Incident, give money to the waiter at the bar in Germany. Then give the wine he gave you to Angel, the ticket lady, at the station in Seattle. Talk to her and she will usually give you a clue. Also, give the invitation to the bartender in the train and talk to him.

In Enchanter, how can I get the Oanoo Spell?

Joan Malenfant Lewiston, Maine

- Thelma J. Saffold: In Night of the Living Dead. kill the caretaker with the shovel and search him for the keys. Unlock the gate with the key, enter the cemetery, then lock the gate quickly to avoid the choirboy.

## Tony Olive <br> Ralinbow Magazine

- Chuck Carpinello: To get the wizard in Dungeons of Daggorath, go down into the holes of the dungeon. How do you summon the book?

Ryan Middleton
Winter Springs, Florida
Scoreboard:
I'mlooking for any hints on Pyramid 2000 . How do you get through the maze?

Tanya Pelley
Rothesay, New Brunswick

## Scoreboard:

In Dallas Quest, when I am ready to go to the airport and fly to South America, I discover I must always leave something behind since the game tells me I can't carry any more items. Is there a way I can carry all these items?

In Interbank Incident, how do you enter the apartments, the room in the Eifel Tower, and the other locked rooms? Also, where do you find the computer
carridge? What do you put in the slot on the yacht when you are in Rio?

Jeremy Gross
Bridgewater, New Jersey
Scoreboard:
In Castle of Tharoggad. I can get to the blue level, but I' ve tried every where and I still can't get out. The passwords, in order, are: F102051K1. C812422VU. 2VVV0008R, and 0004E200G. This places you above the door to the level below, right at the start of the blue level. Can anyone give me the password that will let me under the door on the blue level that leads up to the next one?

Normand Gibson Ay/mer, Quebec

## Scoreboard:

In Caladuril-F lame of Light, how do you tie the rope to the bucket? What is the proper sentence? Also, how do you unlock the chest?

In Caladuril 2- Weatherstones End, how do you connect the nail, string, sticky tape and balloon? I know what these objects are supposed to do, but I can't tie them iogether.

In the Power Stones of Ard, how do you get past the green door? Also, how do you use the gems?

Tony Durst
Branfford, Ontario
Scoreboard:
In Zaxxon, to avoid the space conflict where you often are killed, pause the game for about one minute. When you unpause it, the ships will whiz by, making you stay alive a little longer. This works on all space sequences.

Now that I have given you this clue, someone help me. In Castle of Tharoggad, how do you get to the third level? I can't find the ladder to the next level. What do you do with the magic match? These seem to be the only things bar-
ring my way to get further in the game. Please help, someone!

In the Seventh Link. go east of the bakery in the beginning city. Open the door and climb down every ladder. In one dungeon under the city you will find Hogramil, a thief. Also, far to the southeast in the city you will find Tharon, the clerec. Use the non-key command Join plus a direction to get them to join.

Andrew Yarrows
East Hampton. Massachusetts
Scoreboard:
A hint for the role-playing adventure, Pool of Radiance: Use the magic spell "Detect Magic" whenever you discover weapons or items given to you or conquered. A star beside an item indicates that it is magical and is worth taking to be identified. This will allow you to pick and choose only the best equipment for your characters.

Don't try to destroy every section of Phlan without searching the wilderness outside of the city. Much experience and knowledge can be gained there to help you inside of Phlan.

John Hoffman
Steelton. Pennsylvania

To respond to other readers' inquiries and requests for assistance, reply to "Scoreboard Pointers" c/o THE rainbow, P.O. Box 385, Prospect, KY 40059. We will share your reply with all "Scoreboard" readers in an upcoming issue. For greater convenience, "Scoreboard Pointers" and requests for assistance may also be sent to us through the Mail section of our Delphi CocoSIG. From the CoCo SIG $>$ prompt, pick Mail, then type SENO and address to: EDITORS. Be sure to include your complete name and address.

## Pyramix

This is a fascinating CoCo 3 game of skill and coordination. Pyemix is $100 \%$ machine language written exclusively to take advantage of all the power in your 128 K CoCo 3. The Colors are brilliant, the graphis sharp, the action fast. Written by Jordan Tsyetkoff and a product of
 ColorVenture. Disk: \$19.95 The Freedom series N Vocal Freedom your computer into a digital voice recorder. The optional Hacker's Pac lets you incorporate voices or sounds that you record into your own BASIC or ML programs. This is not a synthesizer. Sounds are digitized directly into computer memory so that voices or sound effects sound very natural. One "off-the-shelf" application for Vocal Freedom is an automatic message minder. Record a message for your family into memory. Set Vocal Freedom on automatic. When Vocal Freedom "hears" any noise in the room, it plays the prerecorded message directly from its Random Access Memory with amazing fidelity! You may also SAVE or LOAD sounds to and from DISK. VF also tests memory
to take advantage of from 64 K up to a full 512 K . Requires low cost amplifier (RS cat. \#277-1008) and any microphone. Will run on a CoCo 1, 2, or 3. Vocal Freedom Disk: \$34.95. Optional Hacker's Pac Disk: \$19.95. Disk for both: \$49.95

## Mental Freedom

Would your friends be impressed if your compouter could read their minds? Mental Freedom uses the techniques of Biofeedback to control video game action on the screen. Telekinesis? You control the action with your thoughts and emotons. Your goal is to materialize and levitate objects with the power of your mind while avoiding the insidious cobra. Mental Freedom teaches peace of mind in the face of adversity. Mental Freedom even talks in a perfectly natural voice without using a speech synthesizer! Requires Radio Shack's low cost Biofeedback monitor, Cat. \#63675. Will run on a CoCo 2 or 3 but not CoCo 1. Disk: $\$ 24.95$

## Lightning Series

These three utilities give real power to your CoCo 3.

## - Aamdisk Lightning

This is the best Ramdisk available. It lets you have up to 4 mechanical disk drives and 2 Ram drives on-line and is fully compatible with our Printer Lightning. Disk: $\$ 19.95$

## Printer Lightning

Load it and forget it--except for the versatility it gives you. Never wait for your printer again! Printer runs at high speed while you continue to work at the keyboard! Disk: \$19.95

## Backup Lightning

Reads your master disk once and then makes super fast multiple disk backups on all your drives! No need to format blank disks first! Supports 35,40 or 80 track drives. This utility requires 512K. Disk: $\$ 19.95$

Produce standard grade 2 Braille on a Brother daisy wheel printer. Easy to use for sighted or blind user. No knowledge of Braille is necessary. Call for free sample. Will run on CoCo 1, 2, or 3. Disk: $\$ 69.95$

## VDOS the Undisk

VDOS, The Undisk, ramdisk for the CoCo 1 or 2 only. Available only on tape: $\$ 24.95$
VDUMP, backup Undisk files to single tape file. Requires VDOS. Tape: \$14.95
VPRINT, Print Undisk directory. Requires VDOS. Tape: $\$ 9.95$

Add $\$ 2.50$ shipping/ handling in USA or CANADA
Add $\$ 5.00$ to ship to other countries

# From Reader to Writer 

Ifind the greatest challenge in writing is choosing a subject. Perhaps this is stopping you from writing an article for THE RAINBOW. Once I have surmounted this challenge and clarified my thoughts a bit, the words usually fall into place.

Our readers range from the devout programmer interested in learning every aspect of the CoCo to the uninitiated game player who just wants to beat John Doe's score at Thexder. So just about anything that has to do with the CoCo can be the basis for a winning article.

Just look at how you use the CoCo. Perhaps you use it for running your business, and you've written software for just this purpose. Or maybe your CoCo is set up to monitor the weather via homemade hardware mounted on your roof. Whatever the case, if you are interested in it, chances are someone else is too. A suggestion at the recent RAINBOWfest in Somerset, New Jersey, was to publish templates for spreadsheets. Do you use a spreadsheet template that others might be able to use? We are looking for general-interest articles (humor, pitfalls, etc.), tutorials, hardware projects, BASIC and OS-9 applications, entertainment programs, and articles explaining various aspects of computer use.

If you feel unsure about your level of knowledge, remember that while experience and knowledge about your subject is impontant when writing, you don't have to be an expert.

There are a few things to consider when choosing a subject on which to write. Pick a topic that is interesting to as many readers as possible. Readers love hands-on articles (listings, hardware projects, etc.). For that reason we love them too. Don't assume anything about the reader; make sure every point is clear, On the other hand, be as brief as possible because article length is a very important consideration in our evaluation process.

To give you a basis with which to work, a threecolumn magazine page holds just about 1000 words. To determine the length in inches of a BASIC listing.
cold-start the CoCo and load the program. Now enter $\operatorname{PRINT}(22824-\mathrm{MEM}) / 4 / 32$. We can place 28.5 inches of text or listing on one magazine page.

Once you have completed your work, all necessary listings should be saved to tape or disk in tokenized (regular) and ASCII form. Include your text in ASCII form on the disk too. If your program is in assembly language or C , include the source as well as the object file. Provide text in double-spaced hard copy, and send a hard copy of the listings. Include any figures or photos that clarify your work. If we don't have a part of your submission, we cannot evaluate it properly. We will not make a decision to publish a series or multi-part submission until we have all parts in complete form. Similarly, we can't tell you over the phone if we'll publish your work. We must see it first.

When we receive your submission, it will be logged into our database and assigned to an evaluator. This person will ascertain whether or not the package is complete. Then he will review the submission for content and clarity and also measure all listings and text. The evaluator makes recommendations to us based on the above criteria as well as on the usefulness of the proposed article and its interest to RAINBOW readers.

We will then make a decision to buy the submission right away, hold it for a future issue, or reject it. Keep in mind that monthly themes and our desire to provide a mixture of topics in each issue can mean we must hold your submission for some time.

If your submission is rejected, you will be told why. Try not to take this rejection personally; we judge your article, not you. Perhaps the listing is too long to justify what the program does. Maybe your topic is too general or doesn't appeal to a reasonable number of readers. Refine your work and try again.

This should be enough to get you started. If you need more information, please call or write; we'll be glad to send you submission information.

- Cray Augsburg

# Ultif <br> The Ultimate Music Editor for the CoCo 3 

## "What if... all CoCo music programs were this good?"

UltiMusE III is a MIDI 'Notation Sequencer'. It lets you write and edit sheet music on a $640 \times 192$ graphics screen using the mouse, play it on ANY MIDI-equipped synthestzer(s), and print out the score... Written by an experienced computer professional who is also a serious amateur musicianand composer. With UliMusEIII, there is nomore 'faking' to play what you want to hear! Perfect for the trained musiclan, UtiMusE III's natural notation also helps a beginner to copy a favorite plece of sheet music just as it looks. Why should your music sound like a machine? UltiMusE III has a wide pitch range, from 4 octaves below Middle C to over 3 above. Each staff has a 4 -octave range centered on one of four clefs - Treble, Guitar, Bass, and Double Bass. Staff placement, clefs, and part and MIDI channel assignments can ALL be edited... Professional software should use a professional Operating System. UlimusE III uses the advanced features of OS-9 Level II and does not interiere with its windowing and ing in any way. SYSTEM REQUIREMENTS: COCO 3 with at least 256 K memory, OS-9 Level 2, Mouse or Joystick (Hi-Res Joystick Adapter recommended), Synthesizer (s) with MIDIn jack, plus a Serial to MIDI cable. Tandy's DMP printer, a MIDI Interiace Pak, and a Multi-Pak are optionaleguipment.

## SLOT-PACK II <br> MP - II

Too new for a picture, this freshly designed interface is the same size as the DISTO DC-3 Disk Controller. It fits directly into the CoCo expansion port and teatures three slots that allow packs like the DC-3, the Burke \& Burke Hard Drive interface or the RS-232 pack. The MP-II draws it's power from the CoCohowever, the B \& B requires an optional AC power adapter. Designed by Chris Hawks.

[^7]:    APBBS Ver: 3.00 .00
    SPECIAL INTRODUCTORY PRICE OF $\$ 39.95$ QUESTION: Have you ever wondered how someone can sell and support two different BBS programs while claiming both to be the BEST? Good question you ask...we think so too!!! With the exclusive SCS commercial release of Mike Guzzi's APB8S program we end a years quest for a POWERFUL, HIGH QUALITY, and AFFORDABLE BBS program. Besides these three requirements, we also demanded full author assistance to help answer your questions and lend technical support. Mike Guzzi has not only written such a program in APBBSbut has alsooffered his expertise and knowledge as the programmer and a SYSOP. Giving you FULL SUPPORT AFTERTHE SALE! APBBS requires a CoCo3w/512k memory, at least two double sided floppy drives (a hard drive is strongly recommended), OS-9 Level2, and RS-232 pak. APBBS is not for everyone. It is designed and intended for the SYSOP who demands performance and support.
