## Buyer Beware

## Editor:

On Thursday, October S, I spoke with Jim Blanden at Arizona Small Computer Peripherals. I told him of the problem I had with my Color Computer 3, and he agreed to fix it. He instructed me to send my computer and a check for $\$ 21$ to a Scottsdale, Arizona, address he had given me over the phone. Toward the end of the month I started calling the phone number seen in the ad. I must have called at least 20 times, only to be told that no one at the answering service had heard from him. By the middle of November the telephone number had been disconnected.

Toward the end of October and again in November, I sent letters to the new address asking for the whereabouts or return of my computer. As of today I have received no correspondence. I would appreciate any help that you could give me. During this time I have bought new software and hardware from other advertisers in your magazine and would like to be able to use it.

Robert M. Helmick
Wimer Haven. Florida
We have recently received a number of complaints regarding Arizona Small Computer Peripherals. Unfortunately, despite repeated attempts, we have been unable to reach Mr. Blanden for comment. Also, Arizona Small Computer Peripherals* advertising in THE RAINBOW has currently been suspended. Until such time as a representative of that company can clear the air, readers may want to take this information into consideration. We apologize for any inconvenience our recent editorial coverage of Arizona Small Computer Peripherals may have caused. Any complaints about this mail-order company should be directed to: The Postmaster General. Tempe, AZ 85282.

## Big BASIC Under ADOS3

## Editor:

A number of your readers have contacted both Art Flexser at Spectro Systems and me, wondering if they can run Danosoft's Big BASIC under ADOS3. If you use the following procedures, the answer is yes.

Even though it is possible to run Big $B A S I C$ with standard $A D O S 3$, there is still a hard-to-overcome stack conflict between

Big BASIC and the new Extended ADOS3 that runs from an EPROM. Therefore, if a user has the new 16 K EPROM, these commands should be used:

## DISABLE: DLOAD <br> RUN"ADOS3" (the disk version)

It is not necessary to run a disk version of $A D O S 3$ or use DISABLE if the EPROM contains only standard $A D O S 3$.

Pokes required after loading Big BASIC depend on which $A D O S 3$ version is in use. So first, we must enter this:

A-\$ $\mathrm{H} 7000:$ POKEA. PEEK (360): POKEA
+1. PEEK(361): POKEA +2, PEEK (\&HA
D1A): POKEA+3. PEEK(\&HAD1B)
Now enter this:

## LOADM "BB 512/1-0" (or "BB 128/1-0")

Since $A D O S$ copies a version of RSDOS 1.0 into memory, only the 1.0 version of Big BASIC found on the production disk can be used.

After you load Big BASIC, make the following pokes together from one line to avoid a crash:

## A-8H7000: POKE360.PEEX(A):POKE 36 1. PEEK ( $A+1$ )

The two systems will be compatible after these pokes:

B-\&HA4EB: POKE B,189: POKEB+1, P
EEK (A+2): POKEB+2. PEEK $(A+3): \operatorname{PO}$
$\mathrm{KEB}+3,18$
To make it easier, the above code can be run in a short program that also uses Big BASIC's autorun feature. Big BASIC now comes with just such a program tossed in. Bill Daniels Danosoft
Mississauga. Ontario

## Supporting the CoCo <br> <br> Editor:

 <br> <br> Editor:}Many of us in the CoCo Community are outraged at the lack of support for the Color Computer. True, some companies support the CoCo, but many of them are sticking with Disk BASIC programs rather than going with OS-9. Therefore, many of us refuse to
buy a program from a company unless it offers an OS-9 version. For the CoCo to survive, we need to see more OS-9 programs. Those writing programs in Disk BASIC should write them in OS-9 and try selling them to Tandy or a third-party vendor.

As for major third-party companies, they do not seem to be porting their programs over to the CoCo anymore. While we have not heard anything from Epyx about this, we have heard from Sierra. It has decided to stop making CoCo conversions because of the lack of speed and sound. I did not buy King's Quest III and Leisure Suit Larry for the sound, but for the graphics quality and the game itself.

Many persons are writing letters such as this one to companies like Tandy and Si erra. Some of us are even meeting on a national level to discuss the CoCo's future (there has been a lot of talk about a CoCo 4 and an OS-9 Level II update). While the same discussions are occurring on Delphi and CompuServe, those services cost money. This board offers toll-free access for messages and a toll line to allow access to file transfers as well. This board is supported by Hayes and offers a CoCo SIG. Online With Hayes can be reached at 1 -800-US-HAYES, and the number can be reached from all over Canada and the United States.

We hope all the CoCo users with modems will give it a call and take a look around. We are also forming a users group on this board - the ICCO (International Color Computer Organization). Two of our major objectives are to eliminate piracy in the CoCo community (a real tough undertaking, but we are going to try) and to convince companies like Sierra and Tandy to bring out more programs for us.

Ken Flanagan
Prince George, British Columbia

## BASIC09 on CoCo 3

## Editor:

I have been playing with BASIC09 on my OS-9 Level II CoCo3. There are two things I can't seem to work out: how to take a picture I have drawn on the screen (and can access with Get/Put buffers) and save it to disk, and how to save some of my icons for use in my BASICOA applications.

Also, how can I direct ouput from one process to another? I want a program running in the foreground to send data to a

background program. The only way $I$ have been able to do this kind of thing is to establish a common data structure (say, in RAM disk) that both programs can access. Is this the only way to do this?

Tom Hickey
Kingston, New York

## Back on Track

Editor:
Congratulations! I just finished leafing through the latest issue of THE Rainbow (December '89), and felt I had to write. I've been reading your magazine since January 1983, and I haven't missed an issue - but this issue caught my attention.

For a while, I've been wondering where the magazine is heading - I've had less interest in the articles but keep buying it for the sake of keeping my collection going. Sure, there were a few things that helped me, and I know that creating a magazine for everyone is a tough job, but I was beginning to worry that it was becoming too slick, too watered-down. This last issue changed all that! I'm thrilled to see the magazine retuming to a more technical format. The articles on MIDI, OS-9 and Multi-Vue were perfect.

While beginners are important, it's good to see something for the old-timers looking for new tricks as well. In some respect we're all beginners, and it's nice to sce you're still helping us grow along the way. Mike E. Fahy
Havelock, North Carolina

## Good Consumer Relationships

 Editor:I am retired and have time to fully enjoy my CoCo 3. Your publication, in no small way, has been responsible for the success of my system. Beyond that I find the suppliers of hardware and software more dedicated and supportive than any I have found in comparative consumer relationships.

Ihave to give credit to Tandy formaking the basics available and continuing to support them with improvements over the years. However, it is the aftermarket developers and surveyors of hardware and software (your advertisers) that really make the CoCo sing.

Two such companies are RGB Computer Systems and Microcom Software. Both have helped me immeasurably with after-purchase support, including hints and advice to make the system operate beyond my level and expectations.

Blaine G. Tempest<br>Lyons, Colorado

## Digitizing With the CoCo 2 <br> Editor:

I would like to get into video digitizing.

However, in all of the ads I have seen, only the Color Computer 3 is mentioned. Is there a video digitizer for the Color Computer 2? If so, please send me all of the information needed to digitize. These are the components I already have: a Color Computer 2, Multi-Pak Interface, disk drive, and black-and-white video camera.

Christopher Zaborsky
Milwaukee
See the Howard Medical advertisement for information on the DS-69B Digisector.

## Baud Rates and the Multi-Pak

 Editor:My CoCoand Tandy printer won't work with programs that have the high baud rates included, so I usually look up the codes and change the baud rate to 600 . How can I use the higher rates?

What happened to the Multi-Pak, or has something else taken its place?

I have enclosed a REM statement at the beginning of each program I type in. I can list the first few lines and find out which issue and page number of THE RAINBOW to go to for reference.

## Don Helle

Monticello, Florida
Most Tandy printers can be set to 2400 baud via internal DIP switches. To go higher than this, you need to use a serial-to-parallel converter and hook into the printer's parallel port. The Mutti-Pak has beendiscontinued byTandy, butOrion'sad indicates they are offering a work-alike.

## Keeping Up With School

## Editor:

I own a Color Computer 2 with a disk drive, mouse and printer. I'm a ninth-grader and have been having trouble in Spanish class. I wonder if anyone knows of a Spanish disk or cartridge for my computer.

I also wonder if there is a program I can use to record all of my test grades in school, and at the end of each quarter have the grades averaged on my printer and saved to disk.

Todd Reaves
420 Dixwell Ave., \#16 New Haven, CT 0651I

We leave it to other readers to help you with your first question. As for the second. look at the spreadsheet program in this issue (Page 26) to do some serious grade averaging.

## Sequencers and Samplers

## Editor:

I was very pleased to see Jeffrey S. Parker's article on MIDI (December '89).

However, Mr. Parker seems confused as to the difference between a sequencer and a sampler.

A sequencer is a device that tells a synthesizer what notes to play and in what order to play them. Lyra, UltiMusE III and CoCo MIDI 3 are programs that allow a CoCo to function as a sequencer. A sequencer does not record sounds; it records digital data. A sequencer functions much like a word processor (which really doesn't process words but records the order that you pressed letter and space keys).

A sampler, on the other hand, does record and play back sounds by converting the analog sounds into digital data and then back again. With a sampler you can record your voice, a dog barking, or any other sound. A sequencer cannot do this. Studio Works is a program that lets a CoCo function as a sampler.

I hope that this will clarify things.
John E. Mueller Colton. Oregon

## Here's the Way I See It

## Editor:

I have a few words to say about your program listings. Just when I soive a problem I've had with getting them into a computer, you blow me out of the water. My eyes are 63 years old and I have enough trouble typing from nice clear copy on a white background.

OK, so most of your readers have eyes like eagles because they are only 12 years old. They can handle the smaller type and the colored backgrounds, but why inflict them on us far-sighted old relics?

> Billy R. Pogue

Lake Havasu City, Arizona
We understand your aggravation and we are always open to change. Still, the fundamental trade-off between listing size and the amount of information we can provide exists. How bout it, folks?

THE RAINBOW welcomes letters to the editor. Mail should beaddressed to: Letters to Rainbow, The Falsoft Building, P.O. Box 385, Prospect. KY 40059. Letters should include the writer's full name and address. Letters may be edited for purposes of clarity or to conserve space.

Letters to the editor may also be sent tous through our Delphi CoCo SIG. From the CoCo SIG> prompt, type RAI to take you into the Raintow Magazine Services area of the SIG. At the RAINBOW $>$ prompt, type LET to reach the LETTERS $>$ prompt and then select Letters for Publication. Be sure to include your complete name and address.

## 3.3 Proc. Comparison-April 1989 Rainbow: Pg 26

## The Best Just Got Better!

- friendly...amazing exceution speed..much casier to use than vir software \& 2 other sysuems Ive tried. very user friendy highest amongs word-processors"-Rainbow Oct 88 Rev .

460 K on a 512 K CoCo. More memory than any other word processor. Period.

## MEMORY

Word Power 3.3 allows 72K or workspace on a 128 K CoCo and

EDITING
Powerful full-screen editor w word-wrap. 4-way cursor,scrolling; Line Positioning; Block Commands; Search, Replace; OOPs recall during delete, adjustable keyrepeat, key-click, typeahead, Tabs, Word-Count and much more! . Built-in extensive HELP screen can be accessed anytime during edit.

DISPLAY
Choice of $\mathbf{4 0}$ or $\mathbf{8 0}$ columns with your choice of colors. Can be used with RGB / Composite/Monochrome Monitors and TV. Pull down menus, plain english prompts, on-screen underlining and page break display make it a breeze to use!

## x <br> CALCULATOR

Built-in 4 function calculator!

PMOws you to impor PMODE 3/4, HSCREEN and CoCo Max II/III pictures!

## SAVING / LOADING

Creates ASCII files that are compatible with other word-processors, terminal programs, etc. Allows directory point \& select for easy loading/saving, Automatic Backup, file erase, free space display. ARE YOU SURE? prompts prevent accidental deletes. The Auto-Save feature automatically saves text to disk during user-defined intervals for peace of mind. Supports double-sided drives.

Works with all printers that work with the CoCo. Allows options such as baud rates, spacing, page/print pause, partial print, page numbering/ placement, linefeeds, multi-line headers/footers, right justification and number of copies. The values of these options can be changed in the text by embedding Printer Option Codes. The WHAT YOU SEE IS WHAT YOU GET feature allows you to preview the text on the screen as it will appear on the printer. You can view margins, page breaks, justification and more.

Type a letter, follow it with a list of names \& addresses and have Word Power print out personalized letters. Its that easy!

## SPELLING CHECKER

 Word Power 3.3 include a $\mathbf{8 0 , 0 0 0}$ word spelling checker which finds and corrects mistakes in your text.

This checker will proofread your text for punctuation errors such as capitalization, doublewords, a/an usage, spaces and more. Its the perfect addition to any word-proccessor.

Upgrade Policy: Word Power 3.2 owners can get Word Power 3.3 by sending original Word Power disk and $\$ 15$ to the address listed below.

# The Show Must Go On 

While working at the most recent RAINBOWfest in Somerset, New Jersey, I began to consider why people are willing to travel such distances to attend it. Obviously, the many bargains are a big attraction, and seeing what's new adds to the excitement. Then I asked myself: Why do $l$ attend (aside from my work with THE Rainbow)?

In an otherwise fast-paced and disposable society, it is comforting to know there are others out there like me - people who share my longheld interest in computers. I read and edit articles by many users in the CoCo Community, and it is nice to meet them in person. I can express my concerns and frustrations to them as well as discuss new ideas.

What impresses me most about RAINBOWfests is the carnival-like atmosphere. A RAINBOWfest is certainly not as mobile as a carnival, but it stimulates the same warm feeling among its attendees. There is camaraderie in the CoCo Community, just as with the members of a camival who must work together to make the show go on. Friendships are established and members solve the problems we all face - they make the most of what they have.

In support of this spirit, the rainbow has introduced a new department called "The Intercom"- a meeting place of sorss for Color Computer users worldwide. On a bimonthly basis, "The Intercom" provides you with pen pals and club and BBS listings - keys to communication, the comerstone of any thriving community.

Still, certain concerns require more than a software rewrite or soldering-iron hack. They require a change in our point of view. Unlike the camival where people work to get the most from what they have, the CoCoCommunity has fallen prey to negative talk.

It appears many of us are starting to believe our friends (who happen to own other computers) when
they say, "The CoCo is a game machine." Of course. the fact that Tandy recently added several games to its line of products for the CoCo seems to back this up. Personally, I don't care how Tandy markets the Color Computer. It exists, and THE RAINBOW and the CoCo Community will support it as always - that is, unless we choose to continue a negative cycle.

I see two forms of griping: constructive criticism. which the visionary sees as an indicator that the market continues to be ripe; and pointless grumbling that breeds negative feelings in users.

It is up to us in the CoCo Community to take advantage of what we have and create what we don't have. Or we can whine about what others don't give us. We at the rainbow choose to be a part of the solution, not the problem. And we think you'll see this sentiment reflected in our pages.

Let's get down to business now, before our camival becomes a circus.

Because of an editorial oversight, Lonnie's column in the January 1990 issue (Page 10) incorrectly implies a discount of $\$ 13.50$ on the softcover version of the upcoming book, CoCo: An Affectionate History of the Tandy Color Computer. The advancebasis discounted price of the book is $\$ 13.50$. We apologize for any inconvenience this error may have caused.

> — Cray Augsburg

> Because of conflicts between editorial deadlines and COMDEX dates, Lonnie's column does not appear this month. "PRINT\#-2" will return in March.

## Programming Secrets Galore

Pokes, Peeks and Exees are your guides into the jungle of computer programming. These commands give you the power of Machine Language without leaving the security of BASIC. Each book is a collection of "inside" information, with explanations and examples to help you immediately put it to use. Everyone from the novice to the professional will find these handy books a wealth of information.

## UNRAVELLED SERIES

# From Fractures to Fractions 

by Dr. Bruce Wulfsberg

After a day's work dealing with everything from checking for scoliosis to setting bone fractures, I enjoy sitting down with my CoCo and unwinding. Often my mind just keeps right on working, though, and during one of those times I came up with an idea for a program to help calculate fractions. It's great for checking your kids' math homework.

Fraction Math reduces fractions to their lowest forms and adds, subtracts, multiplies or divides any two fractions, then prints the result as a fraction and in decimal form. It should work on any CoCo and can be used on 32-, 40- or 80 -column screens.

Upon running the program, you are asked for a numerator and denominator. The program then reduces the fraction to its lowest form. At the prompt you can end, ask for another, or chose an operator (,+- , *,/). If you select an operator, you are asked to enter a second fraction, which is also reduced to its lowest form. Again the answer is printed in fraction and decimal form. You can enter mixed fractions in their improper form ( $11 / 2$ as $3 / 2$ ); decimals and negative numbers can also be used.

Because it may take some time for numbers with large denominators, the speedup poke can be used - the heart of the program is a DEF FN statement located in Line 100 and used in Line 330 to reduce the

Bruce Wulfsberg is an orthopedic surgeon practicing in New Jersey. His interests include computers, magic and kite flying.
fractions to their lowest forms. The math routines are located in lines 180 through 220. Some interesting print and selection
routines are used as well as corrections so negative fractions are printed properly.

## Remember this proverb: <br> Knowledge comes on the wings of the manual!

# The Price of Wisdom 

By Stepfien Murphy

ver the past eight years I have managed to accumulate three printers because I was simply trapped by the lure of new technology and subtle marketing techniques that keep the com-

[^0]puter business on its feet. My pride and joy is my Tandy DMP-2100, which I use at home for fast word processing and processing account reports for my church. It's aging, but it's lightning-fast and gives a good quality print. At least it did until last summer when it died in agony.

I had been asked to run off mailing labels for the church congregation (some 250 people). I had loaded up Old Reliable with the labels when I heard a bone-jarring crunch. The DMP 2100 jumped to life, shook, and made a horrible grinding noise that made my hair stand on end and sent my two cats scurrying from the room. Instinctively my left foot reached for the clutch. The clutch? Yes, the grinding sounded like

DISTO PRODUCTS
All Disto Products now carry a 1-Year Warranty and are shipped 2nd Day Air (at no extra charge!) within Continental US. All Disto Add-Ons (\& Super Controller II) include OS9 Drivers, unless otherwise specified.

## Studio Works

$\overline{\text { Superb Digital Audio Sampler. }}$ Great for special effects. Only 539.95. w/Cable: $\mathbf{\$ 5 4 . 9 5}$

my first encounter with Mom's Buick back in high school.

There was a pitiful peeping as the red lights came on, first on the printer, then on the buffer. The poor computer, deceived into believing the buffer was the printer, kept on printing merrily away.

After ritually chanting several choice pagan exclamations that were completely inconsistent with church business yet nonetheless appropriate, I began to consider my options. The only reasonable one was to lug the machine to work in the trunk of my car, drop it off at the Radio Shack Computer Center, wait a few days, then pick it up again. After all, I had been using it for four years without any mishap. "That's life," I told myself.

My engineering co-workers consoled me at the office, and we discussed various facets of reliability and maintainability that seemed to apply. My associates concluded I was fortunate to experience such a long interval without any down-time. We then discussed the advantages of taking our equipment into a "depot" for repair, versus "field maintenance" repair, which required stock repair parts, associated technical skills, test equipment, facilities, etc.

All of this was little comfort to me during the next week as I waited for the printer to be repaired. During the interim I used my old, venerable LP-IV printer to get the labels out. I hooked it up and loaded the labels with difficulty in its awkward and outmoded tractor-feed mechanism. The ancient, faded ribbon took nearly an hour to produce a set of barely legible mailing labels, but the job was done.

Finally it was time to pick up the DMP2100. The repair center was unable to find anything wrong, but the man cleaned and tuned the printer for a hefty $\$ 50$. So I lugged it home, reconnected it and packed up the LP-IV.

The story might have ended here had I not done so much word processing in the next few weeks. I was involved in writing an article for PCM and trying to beat my self-imposed deadline of submitting it by the end of the month. But when I tried to get a final, smooth copy . . . you guessed it!

Once again I took the massive contraption in for repair - on the last day of the effective warranty. It was retumed a few days later, and although the warranty covered the service, I had to pay for the new part that had not been a problem the first time.

Was it time to consider a new printer, or
should I somehow make do with the LP-IV and the DMP-130? My colleagues and I discussed this with no consensus. I continued to use the "repaired" DMP-2100, but

> 3
> After ritually chanting several choice pagan exclamations that were completely inconsistent with church business yet nonetheless appropriate, I began to consider my options. The only reasonable one was to lug the machine to work in the trunk of my car and drop it off at the Radio Shack Computer Center.

each printout was a source of anxiety. I minimized my printing needs by producing a hard copy only when absolutely necessary. I walked on eggshells, waiting for the inevitable and cursing Radio Shack's products, technicians, and their ancestors.

Finally one day it happened - the same awful crunch, the same experience of my hair standing up on my nape. I uttered a few different but no less (or more) effective epithets leamed in the Navy. I turned off the computer system, sat back, and wondered what I was going to do. One option I quickly ruled out was lugging the thing back for repair again.

A few days later after experiencing the symptoms of computer withdrawal denial, anger, remorse, grief and finally
acceptance, I went into the bathroom to trim my moustache. The little electric trimmer went to work, then suddenly made a familiar crunching noise, albeit on a smaller scale. This time, however, I hardly noticed the hairs on my neck standing up because the trimmer was pulling the hairs out of my moustache without even having the decency to stop altogether as the printer had. I excoriated the gadget in familiar nautical terminology while rubbing my sore upper lip. Reaching into the drawer, I grabbed the little vial of oil that came with the clipper, put a drop neatly on the blade head, and was off to the races once again.

It actually took several minutes for the synapses of my dinosaur brain to make the connection between my electric trimmer and the accursed computer. Enlightened at last, I went in and lifted the cover of the DMP-2100.

I had not really noticed before what an intricate machine this printer is. Unlike my LP-IV, the DMP-2 100 print headtravels on two metal guide rails for increased speed. control and accurate head positioning. Marveling at the obvious, I tried something new - or actually something very, very old. I pulled out the printer manual, which I confess I rarely use except to look up printer control codes and other essential information. But this time I looked at the appendix titled, Care and Maintenance, where I read: "After cleaning with a soft cloth, lightly oil the two carriage guides with a high-grade lubrication oil or with high-grade sewing machine oil. (This should be done every six month.)"

Now I really did consider taking the printer back to the computer center, since this helped cover the painful truth. But I bravely plodded out to the bathroom, got the vial of oil and returned to the computer room. I placed a few drops on the guide rails and wiped them with a clean handkerchief. Muttering a prayer to the patron saint of dot matrices, I powered up the printer and pressed the self-test button. Lo and behold the printer sprang to life, gracefully printing out the test pattem. I felt like Moses after parting the Red Sea. It was truly beautiful.

I returned to work the following day, a humbled but wiser man. I paid a price for my wisdom - some 50 bucks, a few moustache hairs and great inconvenience, but I rediscovered one of the fundamental maintenance strategies of modem technology and weaponry: Read the instructions!

Now keep this secret from the enemy.

## BIG BASIC

Full Power for your CoCo 3!
(From Danosoft)
Gives up to 92 K User Memory in 128 K CoCo and 476 K in 512 K CoCofrom BASIC with any mix of program/variables. You can have one BIG program or 58 Separate ones running at once from computer memory in multiple windows! Big Basic also allows you to Disk Chain any size program. Step up to the full potential of your CoCo 3 with Big Basic. Only $\$ 39.95$

## 512K Upgrades

Fully assembled, tested and ready to be shipped NOW! Our design allows mounting chips on top to prevent any heating problems. No soldering; Easy instructions for 2 minute installation! Comes with following software (value $\$ 100$ ):

- 512K Ramtest
- 512K Backup Lightning
-512K Print Spooler
- 512K Ramdisk
- OS9 Level II Ramdisk
(4998
The absolute best 512 K Upgrade Package Available! 90 day warranty! New Low Price \$ios
OK Upgrade Board (with 512K Ramtest/Ramdisk/Spooler): $\mathbf{\$ 3 9 . 9 5}$ Upgrades for CoCo 2
64K Upgrade (8 chip) for CoCo I, CoCo Il's with Cat \# 26 3026/3027/3134/3136: \$29.95
64K Upgrade (2 chip) for $26-3134 \mathrm{~A} / \mathrm{B}$ CoCo II: $\$ 39.95$
(Free 64 K Software included with 64 K Upgrades)

## COMMUNICATIONS EXTRAVAGANZA 2400

(1) ZOOM $\mathbf{2 4 0 0}$ Modem: Fully Hayes Compatible 300/1200 /2400 w speaker, Auto Dial/Answer \& Seven Year Warranty!
(2) MODEM CABLE (4pin to DB25; Reg $\$ 19.95$ )
(3) Autoterm Software (Reg \$39.95)
(4) Free Compuserve Offer \& Access Time
(5) UPS 2nd Day Air Shipping

Only $\$ 189.95$
Zoom 2400 Modem: \$149
 Avatex 1200e Modem Only: \$85
Communications Extravaganza 1200: Includes Avatex 1200e modem w/ 2 Year Warr., cable, Compuserve Offer, soltware \& 2nd Day Air Shipping. Only \$129.95

## KEYBOARDS, ETC...

6 Feet Keyboard Extension Cable. Only $\$ 39.95$

CoCo 3 Keyboard: \$39.95 w/ Extension Cable: \$69.95
CoCo 2 Keyboard: $\$ 19.95$ w/ Extension Cable: $\$ 49.95$
(CoCo 3 Keyboard includes free Function Keys Software)

## XPort (From Orion Technologiese)

The extended multi-port interface for CoCo 1,2 or 3. -3 Cartridge Slots - 12 Volts powers anything - Use for disk, RS232 Pak much more - Buffered I/O • Perfect replacement for discontinued multi-pak. Intro Special. Only $\$ 74.95$

## EPROM ...

INTRONICS EPROM PROGRAMMER: Programs 2516 to 27010 \& more! Includes software \& complete documentation. Latest version. Lowest Price Anywhere. CoCo 1,2,3. Only $\$ 137.95$
DATARASE Eprom Eraser: For $24 / 28$ pin Eproms. Erases up to 4 EPROMs at a time. Only $\$ 49.95$
Both Eprom Programmer \& Eraser: $\$ 179.95$ amareser
2764 Eprom: \$8
27128 Eprom: \$9.
ROMPAK (w/ Blank PC Board, 27xx Series): \$12.95
BLANK CARTRIDGE (Disk Controller Size): $\mathbf{\$ 1 0 . 9 5}$

## CABLES, Etc.

Magnavox 8505/8515/8CM643 Analog RGB Cable: $\$ 24.95$ Serial-to-Parallel Interface: Use your parallel printer at high speed ( $300-9600$ baud) with the CoCo. Comes with all cables. No software compatibility problems. Only $\$ 44.95$
15" Shielded Multipak Extension Cable: $\mathbf{\$ 3 6 . 9 5}$
Y Cable: Use your disk system with Speech/RS232 Pack, DS69 Digitizer, etc. Only $\$ 27.95$
RGB Analog Extender Cable: $\mathbf{\$ 1 9 . 9 5}$
SONY Monitor Cable: \$29.95
MODEM Cable: 4 pin to DB25. Only $\$ 19.95$
2 Position Switcher: Hook 2 devices to serial port. \$29.95 HI-RES Joystick Interface: $\$ 11.99$

## CHIPS, Etc. $1 \geqslant$

Genuine RS Disk Rom 1.1 (Needed for CoCo 3): \$29.95
ECB Rom 1.1: \$29.95
68B09E Chip: $\$ 14.95 \quad$ 68B21 Chip: $\$ 5.95$
GIME Chip for CoCo 3:\$39.95
Genuine RS Multipak PAL Chip (specify 26-3024 / 26-3124): \$19.95
PAL Switcher: Allows you to switch between CoCo $2 \& 3$ modes when using the Multipak. You need the OLDER \& NEW PAL Chip for the 26-3024 Multipak. Only $\$ 39.95$. With NEW PAL Chip Only $\$ 49.95$
> 11. MICROCOM SOFTWARE 2900 Monroe Ave, Rochester,NY 14618 VIA

> To Order: All Orders $\$ 75$ and above (except Printers, Monitors, Drives, Computers) shipped by UPS 2nd Day Air at no extra charge in Continental US, All orders $\$ 150$ or above and Word 'Power 3.3 orders will receive a free T-Shirt till Jan 31, 1990! We accept Visa, MC, Amex, Discover, Check, MO \& School PO's. Please add $\$ 3.00$ \$\&H ( $\$ 10$ for Drives) in Continental US: all others add $10 \%$ S\&H (Min \$5). NYS Residents please add sales tax. Our Australian Agent: Australian Peripheral Development. Ph; 07-341-9061.

# A Digital Lesson 

by Tony Distefono<br>Contributing Ediltor

While the experts are still slaving over their RAM disks, I am turning my attention to the beginners once more. This month I start with the basic concepts of digital electronics - discussing the definitions for bit, digital, analog and logic gates.

The dictionary defines analog as proportionate. An analog signal is one in which the level changes smoothly. A digital signal, on the other hand, is made up of specific, discrete levels. With this in mind it is easy to see how a dimmer-controlled light represents an analog system, while a three-way light demonstrates principles of a digital system.

For our discussion we are interested in the binary digital system. This system involves only two steps or states: on and off. There is no in between or shading. This is the core of computing. Everything you see your computer doing is using one of these two states.

The first state, on, is also known as high (or HI), plus, one (or 1), mark and voltage. The two terms I use throughout this article are HI and 1. In most computers the operating voltage for the hardware is 5 volts. Given this, a high would be about 5 volts, but 4.5 volts is also considered high. There are limits to how low the voltage can be before it is considered off. (This will be covered in another article.)

The second state, off, is called low (or LO), mimus, zero (or 0 ), space and ground. To be consistent, I use LO and O to mean off throughout this article. A low state is considered to have 0 volts, although under certain conditions a small voltage level is present.

Tony DiStefano is a well-known early specialist in computer hardware projects. He lives in Laval Ouest, Quebec.Tony's username on Delphi is DISTO.

## The Numbers Game

Now we know about the highs and lows of digital operation. The next item for discussion is a bit (binary digit), which is one piece of digital information and will be in one of two states - low or high.

A bit can be also considered as one digital bit. If you had two bits, you could show four separate combinations:

State $0=00$
State $1=01$
State $2=10$
State $3=11$
If you had three bits, you would have eight different combinations:

State $0=000$
State $1=001$
State $2=010$
State $3=011$
State $4=100$
State $5=101$
State $6=110$
State $7=111$
Can you see the pattern as it develops? Every time you add one more bit, you double the amount of different combinations possible. This is Base 2 or the binary numbering system. Most of us are more familiar with Base 10 or the decimal numbering system. In short, Base 10 numbers, unlike Base 2 numbers, have 10 different states per digit:

State $0=0$
State $1=1$
State $2=2$
State $3=3$
State $4=4$
State $5=5$
State $6=6$
State $7=7$
State $8=8$
State $9=9$

I'm sure you recognize these numbers; we use them every day. Once you reach the top of the number ladder, you add another digit - a carry over. Each number added raises the value of the digit in that number by a factor of 10 .

$$
\begin{aligned}
3215= & 3000+200+10+5 \\
= & 3 \times 10^{3}+2 \times 10^{i}+1 \times 10^{t}+ \\
& 5 \times 10^{0}
\end{aligned}
$$

When big numbers are to be represented. there are more digits. Each new digit added means adding another power of 10 . Numbers ranging in the millions require only seven digits in Base 10 numbers, but require many digits in Base 2 since every added digit is only to the power of 2 :

```
22-16+0+4+2+0
    =1\times24+0\times2 2 +1\times2 2 +
    1}\times\mp@subsup{2}{}{1}+0\times\mp@subsup{2}{}{0
```

You can see that a Base 2 number adds up to a lot less than Base 10. There is yet a better numbering system, but first let's look at a bit more.

The CoCo has an 8 -bit CPU. This means all data, programs and characters are stored in 8-bit groups, better known as bytes. A byte can hold any value from 00000000 to 11111111 , or in decimal from 0 to 255 . If you convert 1111111 to decimal, it works out to 255 . Each byte in the CoCo is one memory location and can hold one ASCII character or one machine language code (more on memory later).

In the computer environment one numbering system is used more than any other. It is called the hexadecimal numbering system, or Hex for short. The Hex system, as the name implies, is a Base 16 system. That means there must be 16 symbols before the carry over to the next digit. In Hex the symbols are $0,1,2,3,4,5,6,7,8,9$, A. B, C, D, E and F. Just as the next digit after 3 is $4(3+1)$, the next digit after $9(9+1)$ is A.

PLAY BALL!
It's baseball season! Time to make flyers for your local team, write a newsletter, graph your stats, or write nasty letters to the ump. Step up to bat with the foremost CoCo Desktop Publishing Software? CoCo
 Max III frees you from the drudgery of graphics. Point! Start your diagram. Click! Add an object. Oops! Recover from mistakes. Its many features, incredible speed, and amazing ease of use will make you score big. The Max 10 word processor will take your graphic masterpieces and mix them in with your story. letter or instructions. Turn a bland document into a showpiece. We know you'll love it. Even when the season is over.

## Special Home Run Bonus! Get

 any one of the following "add-ons" free with Max-10 or CoCo Max III. Select one of: Max-10 Fonts, Max Edit, the Color Drivers, the Spellchecker, Max Font Set A. Max Font Set B, or the Hi-Res joystick interface.Grand Slam! Get both Max-10 and CoCo Max III for the low price of $\$ 79.95$ and select any two of the "Home Run" add-ons above.

 FA-154: 12 -bit 8 -channel A/D, $10 \mu$ s....................................... $\$ 179$ MC-108: Metal cover for Motherboard . $\$ 45$ AC-109: Acrylic cover for Motherboard. $\$ 49$
Call for new catalog: (203) 656-1806 Mon-Fri 9-5 Eastern time (or Fax 203 656-0756)
"Innovation through Application" 242-W West Avenue. Darien, CT 06820

Remember that A, B, C, D, E and F are digits, not letters, in the hexadecimal system. The following table shows the different numbering systems described in this month's main topic.

| Decimal | Hex | Binary |
| :---: | :---: | :--- |
| 0 | 0 | 0000 |
| 1 | 1 | 0001 |
| 2 | 2 | 0010 |
| 3 | 3 | 0011 |
| 4 | 4 | 0100 |
| 5 | 5 | 0101 |
| 6 | 6 | 0110 |
| 7 | 7 | 0111 |
| 8 | 8 | 1000 |
| 9 | 9 | 1001 |
| 10 | A | 1010 |
| 11 | B | 1011 |
| 12 | C | 1100 |
| 13 | D | 1101 |
| 14 | E | 1110 |
| 15 | F | 1111 |

As you can see from the above table, the Hex numbering system is the most efficient. This is because of its higher base number. The decimal system takes two characters to the one character needed by Hex. Binary takes four characters. Since the CoCo has an 8 -bit data bus, you can represent a data value with eight bits
(11111111), or three decimal digits (255), or a two-digit Hex number (SFF). From this point on I use all three numbering systems. When using Hex, I begin with the \$ character, although some like to put the letter H at the end of the number.

Understanding Hex and binary numbering systems and what they stand for in a computer is the basis from which your knowledge of the CoCo grows. I have not covered adding and subtracting or conversion from one base to another in this article. but if you want tolearn more on numbering systems, go to your local library and look up numbering systems in the math section.

## Bits and Chips

So far there doesn't seem to be any relation between this and computers. All we've done is express numbers in a different form. But we are a little closer to computers than you think. We know that the computer is made up of a lot of chips that use bits of 0's and I's. In order to help you understand these chips, I will go into detail on how they use 0 's and 1 's.

The heart of all digital computers is the logic circuit element. It performs binary arithmetic operations, makes logical decisions, and performs operations such as counting and temporary storage. The basic type of logic element is called a gate. Gates
are circuits that look at two or more binary inputs and produce a binary output that depends upon the conditions of those inputs. In order to understand this better, look at Figure la, an equivalent circuit.

This circuit contains three components: a battery, a switch and a bulb. The switch is considered an input. When the switch is on, representing a logical 1 state, the bulb (the output) is lit. When the switch is off, representing a 0 state, the bulb is off. In logical terms we say that the input is the switch and the output is the bulb. The symbol used to represent this type of logic circuit is shown in Figure 1b. This gate is called a buffer. The input is exactly the same as the output. It's not very useful in the logical sense, but needed under certain circumstances.

The next diagram, Figure 2a, is a little different. It has two switches. The two switches are in series, that is to say, one after the other. Therefore they must both be on before the bulb will tum on. This circuit or logical element is known as an ANO gate. An AND gate is a logical element with two or more inputs and a single output. Both (or all) inputs must be Binary 1 to produce an output of Binary I.

The symbol for an AND gate is shown in Figure 2b. The main value of the AND gate is its ability to detect when all inputs are Binary 1. A quick way to remember this

Figure 3

Figure 2
Figure 4
gate is: when $A$ and $B$ are 1 , then $Y$ is 1 hence the term AND.

The next gate we will study is the $O R$ gate. Again we have two switches in Figure 3a. The difference is that now they are wired in parallel - that is, one on top of the other. If either switch is on, the bulb will be on. If both are on, the light is still on. This circuit or gate is known as an OR gate. The OR gate is a logical element with two or more inputs and a single output. If any one input is a Binary 1 , the output is Binary 1 .

The symbol for an OR gate is shown in Figure 3b. The main value of this gate is its ability to detect when all inputs are Binary 0 . A quick way to remember this gate is, when A or B is 1 , then Y is I - hence, the term OR.

Looking back to our first gate, the buffer, notice the input matches the output. It is commonly called a noninverting output. This gate and most other gates can also come in an inverting output form. In the case of our buffer, it becomes an inverter, better known as a NOT gate. Figure 4 shows the symbol of an inverter, which is defined as a logic element with an output that is always the complement (the opposite) of its input.

Notice the difference between a buffer

Figure 5
symbol and an inverter symbol: The inverter has a small circle on the output side; any inverting output gate will have a small circle on the output. This is true for the AND and the OR gate too. If you took the output of an AND gate and tied it to the input of a NOT gate, the result (the output of the NOT gate) would be an inverted AND gate. (see Figure 5 ). This requires two gates and some wiring. It is so often used that the IC designers decided to put it all in one chip called a NAND gate. The principle applies for an OR gate; it becomes a NOR gate.

The gates described so far are simple in structure, with one or two inputs and one output. They are the fundamental elements for creating more complex chips and even the basis of complete computer CPUs. In the case of the simple 2 -input AND gate, there are four discrete combinations of inputs - 00.01, 10 and 11. The output for each given condition is $0,0,0$ and 1 , respectively. In other chips, where there might be five or six inputs and eight or ten outputs, it can be too much to remember.

## Dedicated to computers and music -

- A full range of well supported music programs that are compatible with with each other. Most run on CoCo's 1,2 , or 3 with 64 K of memory.
- Good programs that have consistently been given high praises in Rainbow Magazine reviews
- Knowledgeable and friendly sales personnel who can give you help before and after the sale.

Lyra, the full featured music editing program. Enter and hear music you never thought you could play! Super easy to use. Put notes on a music score with a mouse. Play 8 voices on your TV or connect to your MIDI synthesizer (comes with a MIDI cable). Print program included. See Nov, 1989 revicw. Only $\$ 59.95$
Lyra Lybrary, a full featured collection of music for Lyra. 18 disks (over 375 titles) for $\$ 125$ or $\$ 14.95$ per disk, or $\$ 20.00$ per disk, your cboice of titles. Send SASE for list of titles. See Rainbow review.
The Lyra Companion, a 100 page book filled with everything you wanted to know about Lyra. See November 1989 Rainbow review. Just \$9.95

CoCo MIDI 3, the pro quality MIDI sequencer that lets you record from your MIDI synth and edit the music. See the October 1989 Rainbow review. Works with any CoCo with 64 K memory. $\$ 150.00$ complete (program and MIDI interface pak). Requires MPI or Y-cable.

Hot CoCo, a 45 minute professionally recorded audio tape of

## A special niche in amateur radio

# Plug <br>  

by Steven Ford

Iwrote an article in November ' 89 's issue that presented a number of ways in which your CoCo can become a versatile tool in the fascinating hobby of amateur (ham) radio. One of the most unique aspects of this $\mathrm{CoCo} / \mathrm{amateur}$ radio partnership is found in packet radio.

To refresh your memory, packet is a form of computer-to-computer communication that takes place via radio rather than over wires. The computers send their information back and forth in quick bursts of data known as packets. Packet operation requires an amateur radio license and minimal equipment. My own packet station, for example, consists of the following:

Steve Ford is an amateur radio operator and has his advanced-class license. He holds a bachelor's degree in English and also an associate's degree in electronic engineering. He may be contacted at 12 Foxbridge Village Road, Branford, CT 06405.

- A 128 K CoCo 3 (although any CoCo will do)
- Autoterm terminal software
- A terminal node controller (known as a TNC)
- A VHF-FM amateur radio transceiver

Packet TNCs are somewhat analogous to smart modems in that they contain their own microprocessors and sophisticated software. While some TNCs are computerspecific (designed to work exclusively with Commodore or IBM computers), many are universally compatible. In the case of the Color Computer, all that is required is a standard serial I/O connection - the same type you would use for a telephone modem. As with a telephone modem, part of the function of a TNC is to translate the outgoing data packets into tones that can be transmitted by radio. By the same token, incoming packet tones are also translated back into data for display on your CoCo.

Through your CoCo's terminal software you can communicate with the TNC and configure its features and operating parameters to suit your needs. I can, for ex-
ample, issue a command that instructs the TNC to display only those messages that come from a preprogrammed list of my friend's call signs. Everything else on the frequency is ignored. This substantially reduces screen clutter on active evenings.

Prices of TNCs have been dropping steadily with some now as low as $\$ 120$. A VHF-FM transceiver can cost several hundred dollars if purchased new, but many are available for under $\$ 200$ on the used market. In fact, even a simple hand-held unit, or handi-talkie, can serve the purpose. Many of these are available used for $\$ 130$ or less.

But what about antennas? As I mentioned in the November article, my antenna is basically a thin aluminum tube mounted in my backyard. You can do quite well in packet with much less. The only requirement is that your radio be able to communicate clearly with the nearest digipeater. Digi-what? The word digipeater is packet slang for digital repeater.

As you can probably guess, VHF signals are usually only good for local communications. Of course, hams have man-

TAPE DISK
aged to communicate over distances of thousands of miles on VHF, but this requires high power levels and special antennas. Even then, the signals tend to be somewhat noisy.

Noise or interference is the bane of packet signals since each packet not received 100 percent error-free must be retransmitted again. Even a momentary burst of static can wipe out several bits of data, making the packet unusable at the receiving end. This is why hams use frequency modulated (FM) transmissions at VHF frequencies for local area networks. VHFFM is much less prone to noise and other forms of interference. Also, to prevent an endless series of retries under hopeless signal conditions, the TNCs incorporate a counter that measures the number of retries taking place. Most hams set this counter to 10. That is, if a packet cannot get through after 10 transmission attempts, the TNC breaks off communication.

But many hams do not have the large antennas and high power levels needed to assure efficient packet communication over wide areas. Some are even limited to simple indoor antennas. This is where the digipeater comes into play.

A basic digipeater consists of a powerful transmitter, a sensitive receiver and a TNC. Its antennas are usually mounted on tall towers, buildings or hilltops. A digipeater listens on a designated frequency for any packets directed to it. When it hears such a packet, it resends the received data through its superior transmission system, usually covering a radius of 50 miles or more. In this manner a tiny packet station with an indoor antenna can link up with another packet station miles away.

Communicating through a digipeater is simple. For example, I can establish a link with a friend across town like this:

## CONNECT WAIXYZ VIA NIDCS

This command sends a connect request packet to my friend, WAIXYZ, through the N1DCS digipeater. If my friend's station is active, my request is acknowledged and a temporary link is established. On my CoCo screen I see:

## CONNECTED TO WA1XYZ

Now he and I can exchange files or just chat as we please. The NIDCS digipeater serves as our go-between, relaying my packets to his station and vice versa. All of this is accomplished at 1200 baud without the use of telephone lines.

In most areas of the country, digipeaters form the anchor points for local area packet networks that usually include one or more
packet bulletin boards. These packet bulletin boards are very similar to telephone BBSs. They serve as clearing houses for the comucopia of information that flows throughout the worldwide amateur radio packet network. Public messages cover all topics from the environment to technical problems. In addition, if a ham friend is thousands of miles away, I can post a message on my local board that will arrive at his nearest bulletin board within a day or

> But ham radio isn't all just fun and games. In times of public need, hams get down to the business of providing emergency communications. Packet has demonstrated its strength in this area

so. A special system of long-distance message routing takes care of everything automatically.

## Growth and Future Potential

Within the last year there have been many exciting advances in packet radio. In keeping with the ham radio spirit of ongoing experimentation, some new innovations have been tested and put into action.

One promising area concerns special high-speed UHF and microwave radio links that make it possible for local area packet networks to communicate with each other more efficiently. These links already exist in many areas of the country. While most of the high-speed links (known as backbones) operate at a maximum of 9600 baud, you can be certain that hams will be pushing the speed throttle to new heights by the time you read this article.

But does a 9600 -baud system suddenly render your 1200 -baud equipment obsolete? Not at all. The backbone links are intended to be transparent to the average packet user. You can still communicate with your friends and bulletin boards as before. However, your message traffic travels much faster to other local area networks. In the New Haven, Connecticut, area where I live, backbone systems already exist on 220 MHz and 440 MHz . Even so, I still communicate with my compatriots via my VHF equipment and my 1200 -baud TNC.

One of the ongoing goals of amateur radio packet operation is to increase the
speed and efficiency of long-distance links as well. This has been a special problem since long-distance packet links take place on shortwave frequencies. If you've ever listened to a shortwave broadcast, you know that the signals tend to be erratic, fading in and out as atmospheric conditions change. Since packet communication uses errorchecking protocols, this causes numerous retries as the stations attempt to transfer their packets back and forth during the changing signal conditions. Just imagine what it would be like to use Delphi or CompuServe while your phone lines kept switching on and off!

Hams are focusing their attention on trying to find ways to improve packet communication on shortwave frequencies since greater efficiency is critical to improving the flow of packet traffic nationally and intemationally. On the horizon, however, is a development that may further revolutionize amateur packet communication: packet satellites.

Amateur radio satellites have been in existence since the early days of the space program. Several are in orbit right now. Using these satellites requires special equipment and techniques. As the state of the art progresses, however, more powerful satellites are being developed that will be much easier for the average ham to use. One goal calls for the launch of an amateur radio packet satellite, or PACSAT, before the end of the century. With PACSAT, local networks and backbones can form reliable high-speed links that don't depend on the fickle nature of the ionosphere. This will greatly enchance the speed with which data flows around the country and the world.

## Serious Business

With your CoCo, an amateur radio license, and a modest investment in equipment, you can enter a whole new world of computer and communication erjoyment. But ham radio isn't all just fun and games. In times of public need, hams get down to the business of providing emergency communications. Packet has demonstrated its strength in this area already.

During the onslaught of Hurricane Hugo, thousands of packet messages traveled back and forth as families in the U.S. used amateur radio to inquire about the safety of their loved ones. Packet was also used to relay lists of badly needed supplies for the hardhit areas. Network news commentators frequently mentioned the fact that amateur radio was the only link to the outside world for many of the devastated islands. Although CoCo users are somewhat in the minority among packet stations, you can be sure that several were involved in this operation.

## Listening In

If you have access to a programmable VHF police scanner, there is an easy way to determine the level of packet activity in your area. Just program the receiver to scan the following frequencies:

$$
\begin{aligned}
& 145.01 \mathrm{MHz} \\
& 145.03 \mathrm{MHz} \\
& 145.05 \mathrm{MHz} \\
& 145.07 \mathrm{MHz} \\
& 145.09 \mathrm{MHz}
\end{aligned}
$$

Listen between the hours of 6 p.m. and 9 p.m., the prime time for most packet activity. If you hear a high-pitched buzzing noise, you've probably picked up an amateur radio packet station or digipeater. These transmissions are usually very brief, lasting only a couple of seconds.

If you're lucky enough to own a shortwave receiver, try tuning it to 14.110 MHz during daylight hours to eavesdrop on longdistance packet links. Packet traffic on shortwave frequencies sounds a bit like chirping crickets or cats with high-pitched purts.

Listening to buzzes and chirps gets boring very quickly. The next thing to do is seek out a ham club in your area, or a nearby ham radio operator who uses packet. This gives
you an opportunity to actually see what you've been hearing. A thoughtful ham operator may even be willing to loan you a TNC and help you interface it to your CoCo. By using your scanner as a packet receiver, you'll be able to read all the packet activity in your area with your own CoCo.

To find out if an amateur radio club exists in your town, check the meeting notices in your local newspaper or check with your local Red Cross or police department. Chances are, someone knows the whereabouts of the nearest ham club. For those with scanners, try listening between 145 and 148 MHz . You'll probably hear local hams chatting back and forth to each other. And if you listen carefully, you may be able to gather information on when they meet and where. Don't be shy about dropping in on a club meeting without an invitation - or a ham license. Newcomers are always welcomed.

## Sources of Information

One of the best sources of information about amateur radio in general and packet in particular is the American Radio Relay League, 225 Main Street, Newington, CT 06111 . The ARRL can supply you with an avalanche of information about the hobby and may even be able to provide informa-
tion about the clubs in your area. It publishes a number of excellent reference books including Gateway To Packet Radio - a superb beginner's manual. It also has Morse Code training tapes and study manuals for the license tests.

An association of CoCo packet enthusiasts is being formed by Dave DeMott. WA6PIC, in Atwater, California. Dave recently informed me of a ham in Ohio (KA8NPY) who has a sophisticated multitasking CoCo packet system running under OS-9. Hams in the area who do not have their own packet stations can link with KA8NPY via a telephone modem and operate his station through the CoCo - all of this while KA8NPY uses his word processor on the same CoCo .

I have also compiled a brief summary sheet that provides details on numerous sources for more information about amateur radio and packet. Just send a selfaddressed, stamped envelope and I will be happy to forward it to you.

If you're looking for new uses for your CoCo, consider packet radio. Not only is it fun and informative, it provides the starting point for your introduction to the exciting world of amateur radio communications.

# The Total Figure 

 by John StewartHave you been scared off by the complexity of spreadsheets? If so, CoCoCalc can simplify things. CoCoCalc is a menu-driven spreadsheet with most of the features of more complex spreadsheets. In addition to being easy to use, the program is written entirely in machine language for smooth operation. It uses the upper 32 K of memory for over 40K of work space. The program supports cassette and disk-based systems and requires 64 K to operate. CoCoCalc uses a 51 -character Hi Res display. To make this readable on a composite monitor or color TV, turn all color off on your monitor.

To use CoCoCalc, type in the Basic program COCOCALC and save a few copies before running it because the program deletes some of its own lines. When you run the program, it saves a binary copy of Co-

JohnStewart is pursuing a master's degree in electrical engineering at the University of Kentucky. He enjoys working on both hardware and software projects for the CoCo. He may be contacted at RR I, Box 13-F, West Liberty, KY 41472. Please enclose an SASE when requesting a reply.

CoCalc todisk. To save the program to tape instead of disk, change the SAVEM in Line 16 to CSAVEM. Now type in and save a copy of the BASIC program LOADER. This program clears some memory and loads CoCoCalc from disk. If you are using tape, change the LDADM in Line 20 to CLOADM. You also need to save a binary copy of CoCoCalc after the LOAOER program. To run from disk, type LOAD"LOADER": RUN, then press ENTER. To run the program from tape, type CLOAD"LOADER": RUN and press ENTER.

## Labels and Formulas

A spreadsheet is a matrix of cells into which you can place a label (alphabetic characters), number or formula. A cell is designated by its row and column numbers. The row numbers appear on the left side of the screen, and the column numbers appear across the top of the screen. With CoCoCalc you have 255 rows and 255 columns. You can move from cell to cell within the spreadsheet by using the arrow keys. Your current position is indicated by the black cursor bar and is also displayed on the bottom line of the screen. The available memory is constantly displayed at the bottom of the screen and is updated whenever a new entry is made. Be careful not to exceed the available memory or you may
lose some of your information. With over 40 K available, however, you should have plenty of work space.

To put a label into a cell. place the cursor on top of the cell and type in the label. What you type is displayed near the bottom of the screen. When you press ENTER, the data appears in the cell. If the data starts with an alphabetic character, it appears in the cell justified to the left: numeric data appears justified to the right. If the label is too long to fit into the cell, the remaining letters are placed into the cell to the right of the current cell.

To place a formula into a cell, move the cursor over the cell and press +. Then type in your formula, which can contain anything supported by Color BASIC or Extended Color BASIC. Look in the Extended Color BASIC manual for a list of functions and their uses. To use the value of a cell in a formula, substitute the cell's row and column numbers in place of the cell's value. For example, if the cell at Row 10, Column 5 contains the value 100 , you can find the square root of 100 by using either the formula $\operatorname{SQR}(100)$ or $\operatorname{SQR}(10,5)$. CoCoCalc also allows you to use IF THEN statements in your formulas. A sample formula might look like this:
+IF $32.50<100$ THEN 999 ELSEIF 32. 50) -100 THEN 0

This formula assigns the value of 999 to the cell if the value of the cell at Row 32 , Column 50 is less than 100. It assigns the value of 0 to the cell if the cell at Row 32, Column 50 is greater than or equal to 100 .

Besides the functions of Color BASIC and Extended Color BaSIC, there are two additional functions, SUM and AVG. These commands can be used to find the sum or average of a block of cells within the spreadsheet. To specify a block of cells, use the cells at its upper left and lower right corners. For example, to find the sum of all cells between Row 1, Column 2 and Row 10 , Column 5 , use SUM $(1,2,10,5)$. To find the average of this block, use AVG (1.2,10,5).

## Features

CoCoCalc has a variety of useful features that can be called up by pressing the slash (/) key at the $>$ prompt. After you press the slash, a menu appears on the screen. Choose the command you want by pressing the number or letter next to the command name. The commands are as follows:

Goro lets you move to another area of a
large spreadsheet without using the arrow keys. Enter the row and column number you want to appear at the upper left comer of the screen.

BLANK erases any data or formula from the cell under the cursor.

CLEAR clears the entire spreadsheet of data and formulas. Be careful because cleared data cannot be recovered.

WIDTH allows you to adjust the width of the column in which the cursor is located. At start-up all columns have a width of 8 . Be sure a column has enough room to display the answer of a formula in the column. If there is not enough room, the answer on the screen may not be correct. For example, if a cell contains the formula +10000 but the cell only has a width of 3 . the cell displays 100 instead of 10000 .

SEARCH lets you search for a string in the spreadsheet. You can use this command to find the location of a cell within a large spreadsheet.

REPLICATE copies a formula over a range of cells within a column. Any references to the row in which the formula is located are adjusted to its new row. For example, if the formula $+\cos (12,2)$ is located in Row 12 and replicated to Row 20, the formula in Row 20 reads $+\operatorname{Cos}(20.2$ ).

OPTIONS lets you adjust your working environment. The first option is Fast Speed, which uses the speed-up poke (POKE 65495,0 only). If your CoCo won't accept the speedup poke, always answer No. Your second choice is Autocalculation. If you choose Yes, all the formulas are recalculated any time you enter data into the spreadsheet. This can slow you down if your spreadsheet becomes very large. If you choose No, you can force a recalculation by pressing ENTER at the > prompt. The next choice is Screen Size. You have a choice of 51 characters per line or 64 characters per line. Your last option is Formula Display. If you choose Yes, the formula is displayed at the bottom of the screen when the cursor is moved to a cell that contains a formula. This is convenient but it slows down cursor movement.

INSERT and DELETE allow you to insert or delete whole columns or rows at a time. Formula references are adjusted so they reference the same cell as before the IN. SERT or DELETE command. INSERT inserts a blank row or column immediately after the cursor, and DELETE deletes the row or column the cursor is on.

RETURN returns you to the spreadsheer Data Entry mode.

QUIT performs a warm start and returns to BASIC.

SAVE, LOAD, CSAVE and CLOAD save and
load a spreadsheet to disk or tape.
PRINT prints a block of the spreadsheet to the printer. The printout looks just like the screen. Any blank cells are treated as if they contain spaces.

DASCII works just like the PRINT command except that instead of sending output to the printer, the output is sent to an ASCII disk file that can then be read by a word processor. This allows you to incorporate your spreadsheets into reports or text files.

CASCII works like the DASC I command except output is sent to the cassette.

BLOCK lets you perform several operations on a block of cells. The COPY command copies a block of cells to a new location. All cell references are adjusted to the new location. For example, Cell 10,10 contains the formula $+\operatorname{SIN}(9.9)$, which takes the sin of the cell up 1 and to the left 1 . If this formula is copied to Cell 20,20, the formula reads $+\operatorname{SiN}(19,19)$, which also takes the sin of the cell up 1 and to the left 1 . To use the COPY command, first place the cursor over the cell where you want the upper left corner of the copied block to start.

MOVE works just like the COPY command except the original block is cleared.

CLEAR FORMULA clears all formulas from a block but leaves the labels and numbers intact.

SORT lets you sort a block in ascending or descending order. You are asked for a block of cells specified by its upper left and lower right comers. Next you are asked for the column to be sorted. When a cell is moved in the sort column, not only is the cell moved, but the entire row within the block is moved along with the cell. Formulas referencing their own row are adjusted just as in the REPLICATE command. Formulas outside the specified block are not adjusted in the process.

BASIC opens a window to BASIC where you can load and run a program or do anything you would normally do in BASIC. When you are finished, you can return to the spreadsheet and continue working by pressing the sBift key. This window is very convenient for changing baud rates or displaying the disk directory, etc.

## Summary

A spreadsheet can be a very powerful tool. CoCoCalc is a bare-bones spreadsheet that has all the necessary commands to make the spreadsheet useful. For more information on spreadsheets, look for articles in magazines or books on the subject. You may have to fiddle with the examples given, but you should be able to get most of them to work with CoCoCalc. <<< GIMMESOFT >>>

## Pyramix

This is a fascinating CoCo 3 game of skill and coordination. Pyxmix is 100\% machine language written exclusively to take advantage of all the power in your 128 K CoCo 3. The Colors are brilliant, the graphics sharp, the action fast. Written by Jordon Tsvetkoff and a product of
 ColorVenture. Disk: $\$ 19.95$

The Freedom Series

your computer into a digital voice recorder. The optional Hacker's Pac lets you incorporate voices or sounds that you record into your own BASIC or ML programs. This is not a synthesizer. Sounds are digitized directly into computer memory so that voices or sound effects sound very natural. One "off-the-shelf" application for Vocal Freedom is an automatic message minder. Record a message for your family into memory, Set Vocal Freedom on automatic. When Vocal Freedom "hears" any noise in the room, it plays the prerecorded message directly from its Random Access Memory with amazing fidelity! You may also SAVE or LOAD sounds to and from DISK. VF also tests memory
to take advantage of from 64 K up to a full 512 K . Requires low cost amplifier (RS cat. ${ }^{\text {\% }} 277-1008$ ) and any microphone. Will run on a CoCo 1, 2, or 3. Vocal Freedom Disk: $\$ 34.95$. Optional Hacker's Pac Disk: \$19.95. Disk for both: $\$ 49.95$

## Mental Freedom

Would your friends be impressed if your computter could read their minds? Mental Freedom
 uses the techniques of Biofeedback to control video game action on the screen. Telekinesis? You control the action with your thoughts and emotins. Your goal is to materialize and levitate objects with the power of your mind while avoiding the insidious cobra. Mental Freedom teaches peace of mind in the face of adversity. Mental Freedom even talks in a perfectly natural voice without using a speech synthesizer! Requires Radio Shack's low cost Biofeedback monitor, Cat. *63675, Will run on a CoCo 2 or 3 but not CoCo 1. Disk: $\$ 24.95$

## Lightning series

These three utilities give real power to your CoCo 3.

## - Damdisk Lightning

This is the best Ramdisk available. It lets you have up to 4 mechanical disk drives and 2 Ram drives on-line and is fully compatible with our Printer Lightning. Disk: $\$ 19.95$

## Printer Lighting

Load it and forget it--except for the versatility it gives you. Never wait for your printer again! Printer runs at high speed while you continue to work at the keyboard! Disk: $\$ 19.95$

## Backup Lightning

Reads your master disk once and then makes super fast multiple disk backups on all your drives! No need to format blank disks first! Supports 35,40 or 80 track drives. This utility requires 512K. Disk: $\$ 19.95$

Produce standard grade 2 Braille on a Brother daisy wheel printer. Easy to use for sighted or blind user. No knowledge of Braille is necessary. Call for free sample, Will run on CoCo 1, 2, or 3. Disk: $\$ 69.95$

## VDOS the Undiuk

VDOS, The Undisk, ramdisk for the CoCo 1 or 2 only. Available only on tape: $\$ 24.95$
VDUMP, backup Undisk files to single tape file. Requires VDOS. Tape: \$14.95
VPRINT, Print Undisk directory. Requires VDOS. Tape: $\$ 9.95$

Add $\$ 2.50$ shipping/ handling in USA or CANADA Add $\$ 5.00$ to ship to other countries

## Novices

THE RAINBOW is a teaching environment and we realize that the majority of our readers will always be beginners. In our continuing effort to always keep the new user in mind, and in addition to the many beginner feature articles and programs published in every issue, "Novices Niche" contains shorter BASIC program listings that entertain as well as help the new user gain expertise in all aspects of the Color Computer: graphics, music, games, utilities, education, programming, etc.

## Graphics

## This Is Your Big Debut by Bill Bernico

The old movie theaters used to have a marquee out front with flashing lights around the title of the movie playing that day. That was what I had in mind when I wrote Marquee 3 for the CoCo 3.

It displays a title screen with moving lights around it . I use an on/off sequence of palette switching that gives the illusion of motion.

Lines 7 through 23 draw and paint the square around the title page. Line 28 switches Palette 3, which is normally red (36), to black (0). Then it changes Palette 12 from black to red. Line 29 reverses this procedure. When run in a loop, the colors alternate and give the appearance of motion. They remain in motion until a key is pressed. Line 31 branches off to the rest of your own program.

The Listing: marquee3

## Utilities

# Running BASIC Programs Can Be a Breeze by Hinh Phansavath 

After you turn on your computer, what is the first thing you type? Is it a DIR and/or LOAD? These two commands are very useful, but they can cause a little agony. Consider this situation: You hastily boot up your CoCo , and, impatient to call up a program, type in LOAD. Just then you discover you have forgotten the program name, so you press ENTER and get an error message. Then you type in DIR, but the screen scrolls so fast that you miss the name. Isn't that frustrating? To solve this problem I came up with MCP.

MCP allows you to load and run BASIC programs by entering their assigned numbers. You'll see a listing of all the program names as they appear during a DIR command. Preceding each name is a number. You'll see a prompt asking for a file number. Enter the number that precedes your desired file, and that file is loaded and run.

Many times your disk contains more files than the screen can display at once. In such a case, simply enter 0 for the file number and another set of files is displayed on the screen.

If you enter the number of a machine
language file, you get a message stating you can't load M/L files. Entering the number 99 for the file causes the program to end and the cursor to appear at the bottom of the screen. This lets you LOADM a program while its name is still on the screen.

The next time you boot up your computer, instead of typing DIR or LOAD, try RUN"MCP.

## Game

Escape by Chris Driscoll

Escape is an interesting game of skill and challenge. You must escape from a castle that is about to collapse. Sound easy enough? There is a catch. You're on the 20th floor and each floor is a labyrinth. Using the right joystick, move to the blue exit that transports you one level closer to freedom. The walls of the maze appear to close in as you hastily beat a retreat. Diagonal movement is required to escape certain floors. Good handeye coordination is also useful if you plan to scurry across the drawbridge before the walls come tumbling down. Make haste!

## Nine-Times

## The first magazine devoted exclusively to OS-9!

Every other month you will receive a disk Jarm-packed with programs and articles all for O8-8.
Each issue contatis: 10 helpful and useful programs to help bufld your OS-9 library * Instructions, examples, and samples of Basic09 procedures and subroutines to help with your own programs and your understanding of Bastc09 *C programs and programmtng examples * Program reviews, Hints, Help columns, and informative articles to advance your knowledge of OS-9* Supplied totally of $5.25^{\prime \prime}$ disk * Bound manual sent to each new subscriber for heip in totally of 5.25 dink * Bound manual sent to cach new subscriber for heip in
getting Nine Times up and running, as well as tips on ustrg ti wth a ram disk or hard disk * All graphic/joystick tnterface for ease of use.

1-Year Subs, $\$ 34.95$ Canadian postage, add $\$ 1.00$
Foreign postage, add $\$ 7.00$

Back Iscues: Back inues are avallable for the May 1989 and July 1899 issues. Mease write for tinformation on Dack tsaue contenta.
Back Issue, ea. $\$ 7.00$ Foreign postage, add $\$ 1.50 \mathrm{ea}$.

Magazine Source: Due to many inquirles, the source code for the magazine graphic shell is being provided ns an informational tool. inchuded is the actual Basic09 source code and compled modules on disk, as well as documentation and a printed copy of the source code.

## Home Help

## Let's Make a List by David E. Jacob

Cursed are the readers who fail to keep track of the books they read. Sound familiar? Well, I know the feeling. I love to read. I can't pass by a bookstore or flea market without snapping up a book or two, or three, or . . . you get the idea. The pile of used books in $m y$ room has become solarge and disorganized, I can't remember just what I have anymore - can you remember the title of a book you bought three years ago? Well, that was my problem.

My solution to this problem is a shont program called Lister. Option 1 creates a direct-access ASCII file called BOOKLIST, with the name of the book, the author's name, the genre (science-fiction, horror, etc.), whether it is a hardbound edition or paperback, and its price.

When you run out of titles to enter, just press ENTER and you are back at the menu.

Option 2 lets you scroll through the file you have created at any time. When you are ready to obtain a hard copy of your list, select Option 3. Option 4 ends the program.

If you have such a large library that you find you can't list all the books in one sitting - not surprising, since an empty disk can hold a couple of thousand entries - the procedure for getting back to the end of the BOOKLIST file after you have rested your fingers and turned on the computer is simple. Select Option 2 and the scrolling list is placed back in memory. Then get back into Option 1 and start typing. Remember, when first booted up, Lister al-
ways begins at the beginning - unless you tell it otherwise. If you forget to do so, Lister simply overwrites previous data.

# Balancing the Budget by Kathy Rumpel 

Here＇s a program that prints out a jour－ nal page for your accounting needs．You will never have to get out the ruler and draw lines again．

Journal was written for a DMP－105／106 printer．If your printer requires a baud rate other than 2400 ，Line 5 must be adjusted． The following printer controls are used：

CHR（15）－underline on
CHR $\$(14)$－underline off CHR\＄（27）；CHR\＄（19）－normal print CHR\＄（27）；CHRS（20）－condensed print CHRS（27）：©HRS（14）－elongated on CHRS（27）；CHRS（15）－elongated off CHRS（12）－form feed CHRS（124）－print divider

When you run the program，you are asked to input the number of forms you want printed．The forms are then printed and you can stant your bookkeeping．

# High Hopes for the Hi-Res 

by William Barden, Jr.<br>Contributing Ediltor

路
covered ways of converting realworld inputs, such as temperature and light intensity, to a form the Color Computer can measure, in the May '89 issue of THE RAINBOW. The scheme is fairly simple: Unplug one of your CoCo joysticks and substitute a device such as a thermistor for the joystick.

Thermistors and other devices look like joysticks to the CoCo . The CoCo doesn't know whether it's reading an input representing an $x, y$ position from a joystick or mouse or input for temperature or light intensity. Unfortunately the standard joystick software driver in CoCo ROM has one big drawback - it can only differentiate between 64 different voltage levels.

Bill Barden has written 35 books and hundreds of magazine articles about small computers. His newest Color Computer book is "Connecting the CoCo to the Real World", a book of CoCo interfacing projects. He has over 20 years experience in the industry on systems ranging from mainframes to micros.

This means that if you are using the joystick input to measure temperature, for example, you cannot have a range of more than 64 degrees if you want to measure in steps of one degree. It would be a lot more convenient to be able to measure over a range of -30 to +110 degrees Fahrenheit in 140 onedegree steps. Given the joystick limitations, how can this be done?

In this installment we'll take a look at the problem and investigate a ready-made $\$ 9.95$ solution that requires no assembly or soldering. In the best case on the CoCo 3 , you'll be able to measure about 700 increments, which is 10 times the resolution of the standard joystick port. In the worst case on a CoCo 1, you'll be able to measure about 300 increments. The solution is at your comer Radio Shack store, and (in case you haven't guessed) it's known as the High-Resolution Joystick Interface (Hi-Res Interface for short).

Basic Joystick
Whether you're

Figure 1

using a joystick or color mouse, the operation on the CoCo is the same. Moving the joystick or mouse changes two electrical devices called potentiometers, or variable resistors. One potentiometer ( $p o t$ ) is linked to movement in the $x$ direction, and the second potentiometer is linked to movement in the $y$ direction, as shown in Figure 1. Each potentiometer is a 100 K -ohm pot. The resistance of the pot changes from 0 to 100 K ohms as the joystick is moved.

An ohm is a unit of resistance just as a volt is a unit of electrical force, and an ampere (or amp) is a unit of electrical current. Think of a volt as water pressure in a hose and an amp as the water current flowing in the hose. Electrical resistance is similar to the resistance of a small diameter hose versus a larger diameter hose. A gar-

Figure 2
den hose has more resistance to water flow than a fire hose, for example. With the same water pressure (voltage), more water (current) flows through the fire hose within a given time than in the garden hose. Some materials (conductors) such as copper offer very little resistance to the flow of electrical current. Other materials such as carbon offer more resistance to the flow of current. Still other materials (insulators) such as glass allow almost no current to flow.

The pot in a joystick has a wiper that slides across the carbon or wire of the pot. The wiper forms a voltage divider to form two resistors. When voltage is put across the pot, the total voltage is divided into two parts, as shown in Figure 2. It's this voltage that the joystick circuitry in the CoCo measures, not really resistance. The voltage varies from about 0 to 5 volts, depending upon the position of the wiper.

A thermistor's resistance changes with changes in temperature. A cadmium sulfide photocell's resistance changes with light intensity. If you substitute a thermistor or photocell in place of one side of the pot and a fixed resistor for the other side, you have a circuit equivalent to the joystick pot, as shown in Figure 9. The voltage at the junction point changes as the resistance of the thermistor or photocell changes, and this voltage can be measured by the CoCo. Actually, any device that provides a variable voltage can be used with the joystick imput. Up to 7,000 samples per second can be taken with a special joystick software driver, and it's even possible to measure and digitize voice or sound inputs from an amplifier, which is really just a series of rapid voltage changes.

The joystick circuitry of the CoCo contains a programmable device known as a digital-to-analog converter or DAC. If you feed in a digital value, out comes an analog voltage. There are six bits that make up the digital value, with 64 values from 000000 through 111111. The joystick position is actually read with a device called a comparator that compares one input voltage (from the joystick $x$ or $y$ pot) with a reference voltage from the DAC. This is shown in Figure 3. The DAC is rapidly programmed through a series of steps until a voltage is found that matches the joystick input. However, since the DAC allows only 64 voltage values, the resolution of the joystick circuitry is only one part in 64. This is

fine for coarse resolution on a 128-by-192 screen of the CoCol or 2, but not that great for the 640-by-192 screen resolution of the CoCo 3.

## Enter the Hi-Res

 Joystick InterfaceIt was probably the CoCo 3's 640-by-192 screen that prompted Radio Shack to have the High-Resolution Joystick Interface developed. It's impossible to pinpoint more than 30 pixels ( 10 pixels by three pixels) on the Hi-Res screen at one time with the old joystick circuitry.

The joystick interface allows much finer resolution than the old joystick circuitry. With it you can pinpoint at least any two pixels on the $640-$ by-192 screen (two pixels by one pixel) and, if you have a precision joystick, even down to one pixel. At $\$ 9.95$, it's a Color Computer bargain. Although designed

## William Barden Jr. Color Computer Books

You know me from Barden's Buffer in Rainbow and from Radio Shack's Color Computer Assembly Language Programming, Color Computer Grapbics, and Color Computer and MC-10 Programs books. I love the CoCo so much that I have two new books I think you'll enjoy.

Connecting the CoCo to the Real World
Connect your $\operatorname{CoCo} 1,2$, or 3 to the real word! This book shows you how to dial a phone, measure windspeed with as anemometer, sense temperature, measure barometric pressure, measure rotation of fan blades, detect liquid levels, read burglar alarm switches, capture and play back up to 70 seconds worth of sound and voice, and do much, much more. In most cases, only a few simple parts are needed, with typical costs under $\mathbf{\$ 1 0}$ ! All program listings are provided, together with diagrams and listings that even novices can follow. 192 pages. $\$ 19.95$ plus $6 \%$ for CA residents.

CoCo Assembly Language Programming
Ive received the rights back to this fabled Radio Shack book and can now offer an upgraded version for the CoCo 1, 2, and 3, cassette or Disk BASIC. A best seller! Covers the basic 6809 instruction set and use of EDTASM + editor/assembler/debugger, cassette and disk versions. It does not cover OS-9 operation, but much of it is applicable to OS-9 as well. Includes information on EDTASM + sources and patches (EDTASM + is readily obtainable). Aa easy introduction to an altra high-speed language. A full 304 pages. $\$ 24.95$ plus $6 \%$ for CA residents.

[^1]How the Hi-Res Joystick Interface Works
I have two High-Resolution Joystick Interfaces but really hadn't investigated how they worked before this column. Unscrewing the black box of the joystick interface uncovers a small printed circuit board containing one integrated circuit and several other parts (see Figure 4). Using some of my integrated circuit reference manuals, I did some reverse engineering and came up with the circuit diagram shown in Figure 5.

Figure 4

## Circuit Diagram

The main IC here is a quad op-amp called the LM3900. The quad designation simply means there are four identical circuits in one chip. Op-amps are devices used for a variety of things. One use is as a com-
parator while another is as a waveform generator. Both applications are used here.

The joystick interface has two cables. One cable plugs into the right joystick port of the CoCo while the other cable plugs into the cassette port. A joystick plugs into the High-Resolution Joystick Interface rather than the CoCo.

Two lines from the joystick are button switches. (Some joysticks have only one button switch, and the CoCo 1 and 2 have only one button switch input.) These lines are fed straight through from the Hi -Res interface joystick input to the CoCo joystick port. Two of the other lines are +5 volts and ground from the CoCa joystick port. The +5 volts is used to power the circuitry of the Hi-Res interface. The other two lines are the $x$ and $y$ inputs from the joystick. The two voltages are converted by

Figure 5

Figure 6
the interface to a timing signal by the $\mathrm{Hi}-$ Res circuitry and fed back to the CoCo.

There are two lines from the CoCo cassette port that go to the Hi -Res circuitry, ground and CASSOUT. CASSOUT is normally used to send a sine wave to an extemal cassette recorder to record data. Here, though, CASSOUT has a much simpler function. It starts a timing count and is simply an on and off signal like a switch.

## How the Interface Works

In essence here's how the Hi-Res interface works: Assume you've moved the joystick to a certain position. The $x$ and $y$ inputs are voltages between 0 and +5 volts. For example, the $x$ input could be one volt (one-fifth of the distance to the right from the extreme left position), and the $y$ input could be four volts (four-fifths of the distance from the extreme top position). Let's consider only the $x$ voltage to make things easier. The $x$ voltage from the joystick goes into one of the inputs of an op-amp comparator. The other input to the comparator is from ramp circuitry in the interface, described in a moment.

A special high-resolution joystick driver program starts the read of the input by turning on the CASSOUT signal from the cassette port. This signal acts like a switch to the Hi -Res interface. It starts a ramp voltage as shown in Figure 6. The ramp voltage increases as shown, building from 0 volts to +5 volts.

This ramp voltage is compared to the $x$ input voltage by the op-amp comparator. As soon as the ramp voltage builds to $I$ volt, the comparator output switches on. The comparator output goes to the $x$ input of the right joystick port on the CoCo where it can be detected. The driver program counts the time, from the moment it turned on the CASSOUT signal to start the ramp, to the time the $x$ comparator signals that the ramp voltage equals the $x$ input voltage. This timing count varies from about 1 to 700 and is a measure of the joystick $x$ position.

The same procedure is followed for the $y$ input. Either $x$ or $y$ can be measured with

## XTEAM \& OS-9

## XWORD

## OS-9 word processing system

## XTERM

05-9 Communications program

- Definable macro keys
- Menu oriented
- Uplond/downlond Ascil or XMODEM protocol
- Execute OS-9 commands from within XTERM $\$ 49.95$
- Works with atandard serial port, RS232 Pak, or PBJ 2SP Pack, Includex ali drivers Woriks with stiandard screen, Xscreen WORDPAK or DISTO 80 column board

## AND FOR RS DOS ...

## SMALL BUSINESS ACCOUTING

This asies-based accounting package is designed for the non-accountant oriented businessman. It also containg the flexiblity for the accounting oriented user to set up a double the accounting oriented user to set up a double
entry Journal with an almost unlimited chart entry Journal with an almost unilmited chart of accounts. Includes Sales Entry, transaction
driven Accounts Recelvable and Accounts Paydriven Accounts Recelvable and Accounts Pay-
ible, Journal Entry, Payroll Disbursement, able, Journal Entry, Payroll Disbursement,
and Record Maintenance programs. System and Record Maintenance prograrns. System
outputs Include Balance Sheet, Income Stateoutputs Include Batance Sheet, Income State-
ment, Customer and Vender status Reports, Accounts Recelivable and Payable Aging Reports, Check Register, Sales Reports, Account Status Lists, and a Journal Posting List.

$$
\$ 79.95
$$

INVENTORY CONTROL/SALES ANALYSIS
This module is designed to handle Inventory control, with aser deflined product codes, and produce a detalled malysia of the business' sales and the sales force. One may enter/update Inventory data, eater sales, run five sales inalysir reports, run five inventory reports, set up product codes, enter/update saleaman records, and update the SBAP inventory.

## PAYROLL

Designed for maintaining personnel and payrall dats for up to 200 hourly and aselarled employees with s deductions ench. Calculates payroll and tan amounts, prints checks and maintains year-to-date totals which can be automatically transferred to the SBA package. Computes each piy perithe SBA package. Computes each piy periad's totals for straight Itme, overtime and bonus pay and determines Lases to be withheld. Aditional outputs include mailing list, Iisting of employees, year-to-dste federal and/or state tax listing, and a listing of current misc. deductions. Sulted for use In all states except Oklahoma and Delaware
$\$ 59.95$

PERSONAL BOOKKEEPING 2000 Handes 45 accounts. Enters cash expenses as easily is checks. Ilandles 26 expense categoriesk. Menu driven and user friendly.
$\$ 39.95$

## ACCOUNTS RECEIVABLE

Includes detalied sudit trails and history reports for each customer, perpares Invoices and monthly statementi, maliing labels, aging lists, and an alphabettzed cus. tomer Ilsting. The user can define net terms for commerclal accounts or finance terms for commercial accounts or finance charges for revolving accounts. This packIntegrates with the Small Busineas Acciling integrate
$\$ 59.95$

## ACCOUNTS PAYABLE

Designed for the maintenance of vendor and $A / P$ Involes nies. The system prints checko, volds checks, cancels checki, dechecks, voids checks, cancels checkr, deletes cancelited chectis, and deletes pild APP involces. The user can run a Vendor List, Vendor Status report, Vendor Aged report, and an A/P Check Reglster. This package can be used eilther as in atandalone $A / P$ yyi. tem or can be Integrated with the Small Business Accounting Package.
$\$ 59.95$

each pass through the program; hence it takes two ramps and compares to measure both $x$ and $y$.

## Hi-Res Software Drivers

The circuit components in the Hi -Res interface have been chosen by the design engineer at Radio Shack to create a ramp that takes about five milliseconds $(1 / 200$ second) to go from 0 volts to +5 volts. (I dusted off my trusty oscilloscope to actually see the ramp to verify this.) This means that any software driver must be in assembly language - Basic is just too slow to detect an event that occurs every $1 / 200$ th of a second or less.

How does the software driver work? This took some digging. First, I scoped out the ramp voltage used in the Color Computer Artist, a graphics program by Steve Bjork that uses the Hi-Res interface. This program does two ramp comparisons, terminating the first directly after the $x$ input has been found as shown in Figure 7.

However, the joystick driver code for the Color Computer Artist isn't as easily accessible for reverse engineering as the hardware. Besides, everyone knows that it's against federal law to find out how things work in software . . . .

In the course of a conversation with Cray Augsburg, however. I found out that an article on the Hi -Res interface already existed. "Programming the Hi-Res Joystick Interface," by Duane M. Perkins was in the February ' 88 issue of The rainbow. My slimmed-down, modified result is the assembly language program in Listing 1. Listing 2 shows a BASIC version.

## How the Assembly Program Works

My assembly language program is all relocatable code. Although specified at $\$ 7 \mathrm{~F} 00$ (midway into the 64 K bytes available on a CoCo 1 or 2 , or into the 64 K segment used by BASIC in the CoCo 3 ), it can be moved anywhere in memory and still work. The program is called by a USR0( $n$ ) call where $n$ is 0 for the $x$ input or

Figure 8

8 for the $y$ input. The program retums a count of 1 to about 700 when used with a CoCo in high-speed mode and a count of about 1 to 300 when used in normal speed. The count represents a voltage input (normally this is a joystick $x$ or $y$ position, but in this case we're not using it for a joystick function).

The code first calls a ROM routine at SB3ED. This routine converts the floatingpoint number in the USRO parameter ( 0 or 8 ) to an integer value in the D register. Since this will be either 0 or 8 and can be held in eight bits, there will be a 0 in $A$ and $a 0$ or 8 in B . This 0 or 8 value is stored in PARAM and used to select either the $x$ or $y$ input for the CoCojoystick port (by STA instructions to \$FF01 and \$FF03).

The BSR RAMP calls the RAMP subroutine in the code, which retums a value in the $\mathbf{X}$ register of 1 to about 700. After a retum the TFR X, D transfers the count to the D register ( $A$ and $B$ combined), and a $J S R$ SB4F4 returns the count value as a BASIC parame-
ter (such as X in X -USRO(0)).
The RAMP subroutine first turns off the CASSOUT (by STA \$FF20). It then loops for 256 counts, an arbitrary time, while the circuitry stabilizes. A second output to \$FF20 tums on CASSOUT and starts the ramp. After a delay of 148 counts, the comparator output is continually read. (The 148 counts represents an initial voltage offset that must be ignored.) For each read, a count in X is incremented by one. When the ramp voltage reaches the input voltage ( $x$ or $y$ ), the count is returned in X .

## The BASIC Program

The assembly language listing is for reference only. The machine code from this listing is also contained within the BASIC program and is moved from data statements to memory before execution. The BASIC program is simple. It calls the assembly language READHI routine repeatedly, returning an $x$ and $y$ value displayed on the screen center.

Figure 7

Figure 9

What Do You Do With It?
One thing this program is not designed for is to read the Hi-Res joysticks! You can use it for this if you want, but I recommend the Perkins program because it returns only values of 0 to 639 for $x$ and 0 to 191 for $y$. My version returns values of 1 through about 700 for both $x$ and $y$, increasing the resolution for real-world inputs. My version has no checks for false readings, as does Perkins' program. Potentiometer inputs may have problems with the wiper bouncing up and down on the pot, causing false readings. Real world inputs, however, are usually not electro-mechanical and should experience fewer false input values.

A few cautions about using the software: Use POKE \&HFFD9. 0 on the CoCo 3 to speed up the MPU clock and get the full count range. Use USRO ( 0 ) or USRO (8) with no arguments other than 0 and 8 ; other arguments will not select $x$ or $y$ inputs. Interrupts are disabled by the routine; this should pose no problem formost programs. Do not exceed 3.75 volts for either the $x$ or $y$ inputs. Input voltages over this limit cause the program to seemingly lock up (actually the program is looping, waiting for a ramp comparison that can never occur; the same problem is present in Perkins' code).

| Temp ( ${ }^{\circ} \mathrm{C}$ ) | Temp( ${ }^{\circ} \mathbf{E}$ | Resistance |

Table 1: Temperature vs. Resistance

To test the linearity of the interface and program, I carefully input 17 different voltages on both $x$ and $y$. If the interface is linear, the plot of input voltage versus output count is a straight line. The plot I obtained for the CoCo 3 in high-speed mode is shown in Figure 8, fairly close to a straight line. Note that the counts for $x$ and $y$ do not match exactly, differing by about two percent in some cases. This is probably due to tolerances of the components used in the interface.

For many applications, you can simply read the count and use a simple equation to obtain the real-world value. Suppose you are using the Hi-Res interface on the CoCo 3 to monitor a power supply that outputs voltages of 1 to 3.5 volts. The rate of change would be:

$$
\begin{aligned}
& ((3.58-.66) /(660-26)) \\
& \quad=.0046057 \text { volts per count }
\end{aligned}
$$

The actual voltage measured would be:

$$
\text { COUNT * } .0046057+.57
$$

(The .57 value is the voltage at which the

Table 2: Count Values for CoCo 3

## A Temperature Application

For other applications you may need to do a table lookup of count values versus their real-world analogs. Here's an example: Radio Shack carries a thermistor, a simple $\$ 1.99$ device that changes resistance value with temperature (Part No. 271-110). This thermistor is about the size of the tip of a pencil and can be used to measure inside or outside temperature. The specs for this part are printed on the back of the package and are reproduced in Table 1.

Suppose we want to measure temperatures inside a house, which can range from freezing to 112 degrees Fahrenheit. The range of resistances is from about 27 K ohms to 5 K ohms. (By the way, in electronies nomenclature K is 1000 and not 1024). The circuit is shown in Figure 9. It consists of a single fixed 10 K -ohm resistor (Radio Shack Part No. 271-1335) and the thermistor connected between ground and the +5 volts from the Hi -Res interface connector. A wire from the junction of the two parts
goes to the $x$ (or $y$ ) input of the connector. The voltage input depends only upon the resistance of the thermistor as the 10 K resistance is fixed. The count values for a CoCo 3 in high-speed mode at different temperatures are shown in Table 2.

Unfortunately the plot of temperature versus count, shown in Figure 10, is not linear for the thermistor circuit. This means you'll have to compare each count with a corresponding temperature. You can do this with only the 10 values above by interpolation with some loss of accuracy. For example, if the count is 400 , the temperature estimate is 19/(419-369) $=19 / 50$ ths of the temperature difference between 85 and 76. This works out to $.38^{*} 9=3.42$, so the temperature for a count of 400 would be $76+3.42=79.42$ degrees. From the plot in Figure 10, the actual temperature is very close to that value - much less than one degree of error. Contrast that value with an error of about three degrees with the lowresolution joystick scheme.

This thermistor application is just one example of the use of the Hi-Res joystick interface. Any CoCo hacker worth his salt can find several dozen more. Don't forget that each Hi-Res interface provides two inputs. A clever experimenter can even gang two Hi-Res interfaces together with parallel input from the cassette port and output going to the right and left joystick inputs of the CoCo to obtain four highresolution inputs.

## A New Book Along These Lines

If you are interested in real-world applications, I have a new book about

how to use the CoCo 1, 2 or 3 for measuring real-world events. Connecting the CoCo to the Real World is a 192 -page book available from me for \$19.95. Among the several topics covered are:

- Speech and sound capture (up to 70 seconds worth)
- Sound and voice playback
- Telephone dialing
- A complete anemometer for measuring windspeed
- Temperature sensing
- Barometric pressure sensing
- High-speed tachometer
- Reading switches
- Measuring light intensity
- Detecting liquid levels
- A general-purpose CoCo interface board

All these things can be done inexpensively, usually for only a few dollars and a minimum of parts. For each of the two dozen or so applications, I've included complete hardware specifications and software drivers. Even CoCo users with no hardware experience should find many of the applications easy going.

See you next month with more CoCo topics.

## Feature

Why not another maze game?

## by Steve Ostrom

What? Not another maze game! Mazes are as old as anyone can remember. What else can be done with mazes that hasn't been tried before? Sure, there are the regular old mazes where you need to go from start to finish. There are invisible mazes where you need to feel your way through. There are 3-D mazes that give you the impression you are walking down corridors and passing through doorways. Even the ever-popular Adventure games have mazes at the core of their programs. So what is left to try?

Mazeway goes back to the simple maze idea but adds a special twist. When the program is run, you see a simple-looking maze form on the screen. There is an $S$ for start and an $F$ for finish. But you also see some numbers placed at seemingly random locations throughout the maze. These

Steve Ostrom has been programming for 22 years. He has written and published utilities, games and tutorials for the Color Computer. He may be contacted at 12612 Cedar Lake Road, Minnetonka, MN 55343. Please enclose an SASE when requesting a reply.
numbers, innocent-looking as they are, should cause you some concern.

You move the colored square through the maze by pressing the appropriate arrow keys. Your object is to go from start to finish in the least number of moves. The catch is that you must pass over the numbers in proper order: 1 to 2 to 3 to 4 and back to 1 again.

The program does not allow you to back up or move off the path. It also does not allow you to move across a number that is not in the right sequence. You do not need to pass over all the numbers, If you trap yourself with no allowable way to go, just press BREAK and run again.

Don't become too frustrated - there is a solution. (The solution is printed on Page 98 of this issue of THE RAINBOW for those who cannot find it themselves by playing the game.) It might help you to solve this maze by mentally working backward from the finish a few steps.

The program as written allows you only so many moves and displays each move you make on the screen. By deleting Line 46, you are given an unlimited number of moves to play with the maze, but your moves are not displayed. Either way you decide to play the game, it is an exciting challenge.

## Make Some Handy Tandy Connections.

The largest group of Tandy* users in the world shares its problems and solutions online every day in CompuServe's Tandy Forums. And you can join them.

You'll find users of every kind of Tandy computer, who have worked the bugs out of any application you're likely to encounter - from CoCo games and the OS-9 operating system to the most advanced programming problems for MS-DOS ${ }^{*}$ desktops and laptops.

Tandy Forums are the first place youll hear about new products, sometimes even as they're being developed. Find out which software is best for your
applications. And keep up with the latest information on upgrades as soon as they're available. There's no better way to get more out of your Tandy.

To join CompuServe, see your computer dealer To order direct or for more information, call 800 848-8199. If you're already a member, type CO TANDYNET at any ! prompt.

# Working in Quadrants 

by Joseph Kolar Contributing Editor

0ne of the most interesting aspects of the DRAW statement is the A option. The graphics programmer can get a lot of mileage from the A option (so-called mode) because it allows a design element to be rotated around a point of origin in a 90 -degree angular, clockwise rotation. The A option is particularily useful when it is used to set a design element in all four quadrants.

You will enjoy this tutorial so smack your lips, rub your hands in anticipation, and get out your graph paper and pencil.

Look at Listing 1, type in lines 10 and 15 unmasked (without a REM marker), and run the program. The screen is divided into four quadrants: In a clockwise direction, the one in the upper right-hand region is Quadrant 1 and the one in the lower right-hand region is Quadrant 2, etc.

We are going to create $a$ box as a string variable As that can be observed as it is put through its paces using the A option. To facilitate viewing the square and to keep it oriented properly, the opposite end from the point of origin has a small arrow that points to the point of origin.

The point of origin is of prime importance because each drawn element should end at this point. This is usually done by drawing one continuous line that ends where it begins in a closed circle.

Next type in Line 30. The A0, or default option, should be entered in the DRAW statement when the A option is to be used extensively. We plan to use $\$ 16$, a size large enough to be seen clearly yet not overwhelming. Mask and unmask Line 15 whenever you deem it wise. Use your graph paper to draw the shapes and plot the locations where the elements will fall. Concate-

Florida-based Joseph Kolar is a veteran writer and programmer who specializes in introducing beginners to the powers of the Color Computer.
nation is used to display As so add +As to Line 30, then run the program. Notice that this element falls into the second quadrant. Depending on the direction taken from the point of origin, an element ean fall in any quadrant or even straddle two adjoining quadrants as you will discover.

Moving in the direction CoCo dictates, the next element falls in Quadrant 3. Type in Line 31 and add +As, then run the program. Using graph paper, do the same to lines 32 and 33. After you have placed AO, $A 1, A 2$ and $A 3$, notice that they are placed 90 degrees to the left of their predecessor so that a design of sorts is created.

Type EDIT 20, then press ENTER. Press the space bar until the cursor is under the 3 . Type 8 D to zap the arrow, then press ENTER and run the program again.

For an odd tid-bit, in Line 30 delete 0 from A0 and in Line 32 delete 2 from $A 2$; then run the program. Restore lines 30 and 32 to the previous state. Add another + As to Line 30, then run the program. Nothing? This is not quite true. The design element ended at the point of origin. thus the next element was superimposed on top of the first As.

To verify going around a point, remove the redundant + As from Line 30. In lines 31 , 32 and 33 , respectively, after A1 insert S12; after $A 2$ insent $S 8$; and after $A 3$ insert $\$ 4$. Then run the program. As they are placed around the point, the elements become succesively smaller.

To go around the point counterclockwise, change Lines 30 through 33 , respectively: $A 0$ to $A 3, A 1$ to $A 2, A 2$ to $A 1, A 3$ to $A O$. Then run the program. The first element is in Quadrant 1. (It is not the small one in Quadrant 2.)

Restore lines 30 through 33 so the A options are $A 0, A 1, A 2$ and $A 3$, respectively, leaving the sizes undisturbed. Now type in Line 21, noting that a continuous line is drawn that returns to the point of origin of the 6 -by- 4 rectangle. The comer furthest
from the point of origin is marked. Change As to $B \$$ in lines 30 through 33 . Then run the program after each change to see the progression of the oblong as it is rotated around the point. They become successively smaller as they are added clockwise.

Remove the Size option in lines 31 through 33, then run the program. What would happen if we added +As to four lines? To find out, add +As to lines 30 through 33 and run the program. Again, since the ending point of $B \$$ was at 128,96 , As begins there and we see the interesting effect.

Remove all concantenated variables from lines 30 through 33 , then type in Line 22. At the end of Line 30 , add +C 5 and run the program again. The element is in Quadrant I that we drew up from the point of origin. Add + C $\$$ one at a time to lines 31 through 33 to see the four shape locations unfold, clockwise as expected.

At this point we have drawn elements to the right and up from the point. If you care to reflect, suppose an element is drawn down or left from the point. In what quadrant would it fall? You have graph paper, so use it up!

In lines 30 through 33 concatenate 8 at the end of As and run the program. Effortlessly we create a simple but powerful design. You can also reverse Bs with cs in Line 30, then run the program. It makes no difference because even though the two units have a common side, they cover two different areas.

Remove the concatenated variables from lines 30 through 33 and type in Line 24. Check it out on graph paper. The point of origin is at the middle of a side instead of in a comer. Add +Ds to Line 30 and run the program. The comer marker is not relocated because it is impractical. (Imagine it pushed to the middle of the far side.) Now you can complete the design and check it.

Beginning with Line 30, add $+B \$$ at the end, through Line 33. Then add $+\mathrm{C} \$$ to Line

30 and proceed through Line 33 to watch a design evolve as you stop to check after each addition.

Here is a challenge: Fill in the missing small marker boxes to make the design more coherent. As it stands, it looks like a grinning mouth with missing teeth. Remove all concatenated elements from lines 30 through 33. Type in Line 24 and add + Es to Line 30 , then run the program. This element begins at 128,96 but runs off on a diagonal. Note the quadrant in which it is located, then take a few moments to design an element on graph paper that locates in the opposite quadrant. Add +Es to Line 31 and run the program. After completing the design, run the program again.

Now you are ready to clear the deck for action! Remove all $+E s$ variables and type in Line 25. One at a time, display +F \$ until all four are displayed. When finished, you have a floor-tile design. Note that the diagonals in the Quadrant 2 element run in the opposite direction from the one in

Quadrant 3. The object is to superimpose the Fs design in Quadrant 3 on top of the one in Quadrant 2. Remove +F s from lines 32 and 33.

From the looks of it, it seems as if we must move the third quadrant design three units right (or BR3) because we want an invisible jump toa new location. After Al in Line 31 , inserl BR3. Then run the program. As you can see, it doesn't do the trick because we moved in the wrong direction. Jumping right dropped us down on the screen. Rather than throw up our hands in despair, we must go up three spaces, try $B \cup 3$, and run the program.

What direction do you have to move to superimpose A2 in Line 32 over A3 in Line 33 in the first quadrant? Add $+F$ s to lines 32 and 33 and insert BU3 after A3 in Line 33. Then run the program.

Here is a fun puzzle. Cross-hatch all four elements created with the ordinary $+F$ \$ added to each cleared Line 30 through 33. Hint: One solution is given at the end.

Restore lines 30 through 33 to the original state as in Listing 1. To move the element in the first quadrant on top of the one in the second quadrant (in a counterclockwise direction to Line 30) add +Fs . After A3 in Line 33, add BU3BL3BD3" + Fs. If you add the fourth direction, BR3, in the bargain, you will go full cycle. Try it!

I think you can figure out on graph paper that to superimpose Fs in Quadrant 1, moving in a clockwise direction, Line 33 would read 33 DRAW"A3BL.3"+Fs. Run the program and see.

From these two examples, can you figure out how to program the lines to superimpose F\$ in Quadrant 4 upon F\$ in Quadrant 2 in a clockwise direction? Clear lines 30 through 33 to appear as in Listing 1. It is interesting because quadrants 2 and 4 have the same design. To find out if you succeeded, insert CO in the appropriate line to blank out the over-printed element in Quadrant 2.

Clear lines 30 through 33 of debris so it

Overlord Newl
Peace through superior firepower is the catch phrase in this sophisticated wargame simulator. Victory shall not fall to he who is betler strategy. You must ensure that al your troops are brought into battic at the right moment, and for that you must set your most industrialized cities to producing troop transporters. Other cities will industriaized citiea to producing troop transporters. Other cities will buld Aircraft carriers, fighter jets, paratroop repiments, submarines
spy planes, battleships, destroyers, and cruisers. Up to three people can play the game simultaneously, each starting out at his own base city, each knowing nothing about the strenghts and locations of his enemies' forces. The player's own combat troops will bead out, exploring the world as they go, capturing towns that lie waiting, or engaiging the enemy face to face. You can set any or afl of the three players to be operated by the sinater silicon brain of your CoCo 3 , and battle against them or let them battle each other.
Price: $\$ 29$ US / \$34 Cdn.

## Defendroid

A classic returns! Arcade realism for the Coco 3 is brought one step closer with this outstanding action game. Sinister aliens are appearing in the skies over Zabburtuth, and you and your
Turbo-Flier are all that stand in their way! Use lasers and smart-bombs, fuel depots and your astronaut-tractor to save the hapless inhabitants from certain stir-frying as hideous alien cuisine!
This program contains a graphics manipulation routine so advanced, we registered a copyright for it alone. See what a threefold increase in software speed and memory efficiency can do for your CoCo 3 !
Price \$29 US / \$34 Cdn
Defendroid requires: 128 k CoCo 3, 1 drive, 1 joystick.
New! Those Darn Marbles
Dedicate a program to 512 k machines only, and all sorts of new
thines are posaible. Those darn Marbles is the first CoCo game to use the built-in hardware screen serolling features of the CoCo 3 . This means that all the computer's time on be dedicated to controlling the game itself (sound effects, moving objects around, etcelera) rather than the time-intensive chore of scrolling an entire 32 screen around. You will be amazed to see how smooibly a HARDWARE-scrolled screen can move. Compare Those Darn Marbles with any other 3D marble type game on any computer, and you will be comvinced that your CoCo 3 resily can stand with the best of them. (One of our playtesters remarked, upon seeing the pre-releaseverion of TDM: Amiga isn't that smooth!'
Not convinced? TDM is

Not convinced? TDM is so chock-full of graphics that it comes on (count 'em) six discs! It's been said many times, but this time it's true: Your CoCo 3 game library is not complet
without a copy of Those Darn Marbles. without a copy of those Darn Marbles.
Price $\$ 32$ US / $\$ 38$ Cdn. Requires: $512 \mathrm{k} \operatorname{CoCo~3,1}$ drive,joystick.

## 人 Suctiveth

Weve said it before and we'll say it agsin: This is the best fantasy has ever seen, bar none. A full 3
 discs are filied with worlds, towns
castles, and dungeons. The dungeons are spectacular 3D creations, filled with full colour, hi-res moosters, ladders, doors and pits, chests, pools, liva and flooded rooms. You would not believe that a CoCo 3 could produce such high-speed detaited graphics. The dungeons are only part of the story, however. In the wild lands above, you'll find monsters, towns and castles. The towns will reveal merchants, learned locals, even a friend or two who will join your quest. Maybe you will find band of pirates as you tread the windswept shores. Could you and your companions defcat them? Test your mettle during the hundreds of hours of play time The Seventh Link will bring you.
\$38 US/ S48 Cdn. Req; CoCo3, 40 track drive (RS drive is OK if it's white)
 sophisticated command interpreter lend realism and enjoyment to one of the most extensive adventures to be found on a CoCo. Package includes 2 discs, an $11 \times 17$ map, a velvet pouch of powerstones and a 30 page booklet. Price: $\$ 32$ US/ \$38 Cdn Requires: 128s CoCo 3. 1 drive

Hint Books!
Finally, help is herel Calduril 1 and 2 books are 15 pages and $\$ 3.50$ each. The Seventh Link books are 40 pages (lots of maps) and $\$ 5.50$

audio signal is captured (digitized) with the supplied cable, (or make your own, or use a MaxSound cable), and recordied in CoCo's memory, You may then manipulate the sounds with the audio clipooards, reverse, combine. etc. You may also include the sounds in your own BASIC programs. $\$ 54$ US/564 Cdn with cable $\$ 39 / \$ 49$ wo Requires: 128 k Coco3,drive, mouse/joystick Sound Effects Packs Load these sound effects into Studio Works:
FX1: General ( 4 discs, 12 smpls) $\$ 14512 \mathrm{k}$ FX1: General ( 4 discs, 12 smpls) $\$ 14$ FX2: Animals ( 3 discs, 11 smpls) $\$ 14$ rec'd

is the same as Listing 1. Next type in Line 26 , add $+6 \$$ to Line 30 and run the program. Where would you expect Line 31, +6\$, to display its element? Try it and see! Now complete Line 32 through 33 and run the program. Let's mask Line 15 . This design jumped two units in H direction before drawing a box. Unmasking Line 15 brings this design back to dead center ( 128,96 ). It needs to be recentered only along the vertical axis in down or + direction. Two spaces multiplied by the size offset, (16/4) $=+8$. Add $96+8=104$. Change 96 to 104 in Line 30 and run the program. With the cross hairs to guide, it is no big deal to ease it into the proper location using the trial-and-error method.

Restore lines 30 through 33 to their original state as in Listing 1, remembering to change 104 back to 96 in Line 30. Type in Line 27 and make sure Line 15 is operational. Add +H s to Line 30 and run the program. This element begins the box one unit in H direction from the point of origin. One by one, add Hs to lines 31 through 33 and run the program. Mask Line 15 to get an unobstructed view - this pattem has an interwoven motif. Can you pick out the point of origin? If you peer carefully, you can distinguish four oblong shapes and the point is where they intersect. Change $S 16$ to \$32 in Line 30 and you won't have any trouble seeing it.

To get another interesting shape, add an extra + As to the four lines, then run the program. The point has not moved. To see where the pairs were plotted, you need your trusty graph paper. As the design builds up, it gets quite confusing. If you want to center it vertically, $(128,112)$ will do it.

Clear lines 30 through 33 as in Listing 1. change $\$ 32$ back to $\$ 16$, then unmask Line 15. Type in Line 28 and add $+1 \$$ to Line 30 , and run the program. Although the point is still at ( 128,96 ), a four-space jump or invisible line preceeds the box, which starts at the middle of the side and straddles quadrants 1 and 2 . Add +15 to lines 31 through 33 , then run the program. The squares do not end at the point of origin but at the left side of the square.

Without disturbing lines 30 through 33 , type in Line 29 . This is substantially the same as I $\$$ except that it ends at the point of origin, $(128,96)$. Add $+\mathrm{J} \$$ to all four option lines and run the program, then delete all the $+3 \$$ variables and run the program.

Beginning with Line 30, change all is to 35, one at a time and run the program. Watch the blocks get pushed around until they make an orderly design. Restore lines 30 through 33 to their original state. Edit Line 20, then type in 290 and press ENTER.

This is the same as $3 \$$, except that the box ends with a jump four spaces to the right from the center of the right side. Plot this on graph paper. One at a time, add +As to lines 30 through 33 , then run the program. What could it be? Add a second +As to Line 30 and run the program. One at a time, add the double + As variables to lines 31 through 33 and run the program. Using trial and error, center the resultant rough circle of squares. A $(-48,-48)$ movement gives you BM80,48 in Line 30. Now run the program.

What would happen if we added another round of + As variables? A bigger circle? Add the four +As additions and run the program. If everything is equal, $(-24,-24)$ should enterit. Add BM56, 24 in Line 30 and run the program. Now change $\$ 16$ to $\$ 4$ in Line 30 and run the program. It fits fairly well in the fourth quadrant but it looks odd. Dare we add another round of +Ass ? Add one more + As to lines 30 through 33 and run the program.

Add to the end of Line 20 $: 7 \$-A \$+A s+A s+A s+A \$+A s$. Clear lines 30 through 33 to be as in Listing 1. Add +2 s to each and run the program. If we tried to recenter and changed BM56, 24 to BM128,96 in Line 30, we overshoot the landing field. We must find the difference between the two pairs of coordinates, split the difference, and add it to BM56, 24 to find the true center, or BM92,60. The formula is:
$(128-56,96-24)=(72 / 2,72 / 2)=(+36,+36)$
$(56+36,24+36)=(92,60)$
To change the numbered coordinates, BM92.60, to variables so we can use various values, Line 30 must be retyped to read:

```
30 DRAW"AOS4BH-X; .-Y;"+2
```

Now we can use the DRAW statement and change the $x, y$ values. CoCo will allow this only if the coordinate variables are preceded by an equal sign, followed by a semicolon, and separated by a comma.

Insert at the beginning of Line 30:
FOR $\mathrm{X}=56$ TO 128 STEP 36: FOR Y-2 4 TO 96 STEP 24:

These figures were gleaned from our centering calculations. Add Line 34 NEXTY, X to make a loop, mask Line 15 , and run the program. I don't know what we got because one thing led to another. We did find out how to change coordinates inside a DRAW statement. It looks more colorful if Line 10 is changed to SCREEN. 1.

You have just seen an example of how to create a great big nonstarter out of a little
nothing. Unfortunately, some graphics are useless. But consider it as a vehicle to teach you just a bit more about graphics and to keep your interest at fever pitch. CSAVE a copy.

Type in NEW and then CLOAD" LISTING1". Edit Line 20, type in 290, then press ENTER. Add to the end of Line 29:
$: K \$-A \$+B \$+C \$+D \$+E \$+F \$+G \$+H \$+1 s+J s$
Add $+\mathrm{K} \$$ to lines 30 through 33 , then run the program.

Recenter with the trial-and-error method. Change BM128.96 to BM94.76 in Line 30, mask Line 15 , then run the program. Change Line 10 to read:

## PMOOE1:PCLS2: PMODE 4 : SCREEN4

## Then run the program.

I call this Condos Under Consiruction as Seen From Above. Use the Reset button to toggle between color sets. Sometimes you get a bluish color; other times it's reddish.

Now you have been introduced to some potential uses of the potent A option. You must admit it is fun fooling with graphics.

A trial-and-error solution (by no means the only one) for the cross-hatching floortile problem is as follows:

$$
\begin{aligned}
& 30 \text { DRAW"A0S168M128,96"+F\$+"A1"+Fs } \\
& 31 \text { DRAW"A2BU3"+F\$+"A3"+Fs } \\
& 32 \text { DRAW"AOBR68H6"+F\$+"A1"+F\$ } \\
& 33 \text { DRAW"A2BU3"+F\$+"A3"+F\$ }
\end{aligned}
$$

# "BIG BASIC" - COCO 3'S MISSING LINK: BASIC USERS GET FULL POWER OF MEMORY MANAGEMENT IN WINDOWS! 

"Danosoft has a winner in Big Basic, and I would recommend it to anyone wanting to get the most out of a Color Computer 3." - Rainbow, Oct./89.
Now you can access up to 472 K of memory in a 512 K CoCo or up to 92 K in a 128 K machine with any mix of programs and/or data. At last, you can do sizable basic programming with a CoCo 3. (Also offers simplified memory management for M.L. programmers.)

Magically fast, executes one big program or database in basic; or up to 58 separate basic programs running at once from computer memory. Saves programs or variables with their currently running parameters and loads back that way as if you never left the program.

Chain in unlimited sized programs or data from disk(s) without erasing existing programming or variables. Also works with the RGB-DOS Hard Disk system; and is usable with ADOS3.

- 3 new simple basic words create the power.
- Provides for variable exchange between program windows.
- Programs can be saved over multiple disks or use our BIG DISK Utility. (See below)
- Modifies your basic operating system in some 70 locations but does not occupy user memory.
- Includes 7 Demo Programs and Manual.
- Disk use only; any version RS-DOS.
- ONLY \$39.95 U.S. or \$46.35 CDN. + \$2.50 S \& H Onuminesconatsadaex PST.
"BIG RAMDISK" ( $512 \mathrm{k} \mathrm{CoCo3}$ V.2.0 or V.2.1)
- Copy or backup your programs or data to "BIG RAMDISK and get the speed of program/data saving or loading to mn "in memory" device. ("COPYDISK" Utility included.)
- Great for use with all other programs on this page and most commercial software.
- You can install, re-install, format and reformal from direct mode or from a program without erasing programming or variables. It's in machine language, does not occupy user memory, but can be user located elsewhere if needed.
- Your choice of one big 158 granule ramdisk ( 80 tracks- 360 k ) or two 68 or 78 granule ramdisks ( $35-40$ tracks to 360 k total), depending on your DOS. (i.e. RS-DOS, "BIG DISK", "DOUBLE40", etc.)
- Ramdisk files and directory do not erase with a reset coldstart (ALT/CTRL), and are preserved if a program crashes. This lets you use some programs that need a Coldstart to exit.
- "BIG RAMDISK" with "BIG DISK" or "DOUBLEA0" (see below) \& two doubie-sided drives $\Rightarrow 1$ MEG, on line. ONLY $\$ 12.95$ US or $\$ 14.95 \mathrm{CDN}+\$ 2.50 \mathrm{~S} \& \mathrm{H}$. Ont Recidenur add $5 \%$ PST

For any CoCo (at least 64 K ) with 1.1 or 2.1 Disk Extended Basic:
"UTILITIES PACKAGE"
6 HANDY M.L. RESIDENT UTILITIES FOR BASIC
"Must - have software for the disk user" - Rainbow, Nov. $/ 89$.
"BIG DISK" - Makes computer see double-sided drives as one 360 K ( 80 tk ) drive; 158 granules.
"DOUBLE40" - Sets drives for 40 tracks each side.
"CONVERT/DISK" - Formats 40 tracks on each side of a disk without disturbing the first 35 . Doubles all your present storage.
"QUIKDRIV/6MS" * Sets fast drive stepping rate.
"QUIKDRIV/30M • Fast drive shut off.
"SET FEED" * Sets line spacing for printouts.
Only $\$ 17.95$ U.S. or $\$ 20.80 \mathrm{CDN} .+\$ 2.50 \mathrm{~S} \& \mathrm{H}$.
Ont Recidents add 8\% PST.

## "MEMORY MASTER" OUR FAVORITE PROGRAMMING TOOL

"Memory Master is a unique hacker's program offering about all you could ask for in a disk and memory utility." - Rainbow, Sept./89.

Scan, Edit, Copy, Printout any memory in your computer or on disk. Fix disks.
Fast entry of M.L. Listings.
Dual Windows! Runs 2 Basic Programs at once!
Disk chains unlimited amounts of program sections or data.
Includes Demo Program and Manual.
$\$ 24.95$ U.S. or $\$ 28.95 \mathrm{CDN},+\$ 2.50 \mathrm{~S} \& \mathrm{H}$. Ont. Readenua add $8 \%$ PST

Mississauga, Ontario L5A 2 Z7

## Feature

## Your disks can fly with Verify

## by Stephen B. Goldherg

$N$ow you can make your OS-9 floppy drives work much faster. In fact, you can almost double the speed programs write to disk by turning off the disk write verification. OS-9 comes with verification enabled for all disk write operations. Each time you write to the disk, OS-9 goes back and reads the sector just written to verify the sector is not defective and wasting time. If your drives are in good working order and you use good-quality disks, this is not necessary. If you have a way to tum off the verification, your floppies will fly. This is where Verify comes into the picture.

Steve Goldberg is a dentist who enjoys programming onhis son's CoCo.Steve can be contacted at 695 Plainview Rd., Bethpage, NY 11714. Please include an SASE when requesting a reply.

```

OS-9 gets much of the information on how to operate from its device descriptors. You have a device descriptor in memory for each floppy drive. Level II also has an additional descriptor, named OD , for the default drive. In an all-floppy system, Drive /00 and Drive /00 are the same drive.

The device driver (CC3D1sk in Level II and CCDisk in Level 1) reads the device descriptor before each disk operation is performed. The byte at Hex Offset \$1A or Decimal 26 (it.vfy) in each floppy descriptor comes from Tandy set to zero. This tells the driver to use verification.

Verify is a utility that changes the Verify byte in all your floppy drive descriptors with one command. Todisable the verification and speed disk operation use 0S9: vfy of $f$ then press ENTER.

Any time you need verification (mar-ginal-quality disks, very important data, etc.), type in 059: vfy on and press ENTER.

You can include the vfy of $f$ command in your startup file if you want to run at top speed from the time you boot up. A better way is to issue the vfy of $f$ command and then use cobbler to resave your OS-9 boot

file with the patched descriptors. Verify includes a routine that corrects the CRC bytes of all the descriptor modules so these load correctly in either mode (On or Off).

Verify has one more feature. If you want to know the current verification mode, use 0S-9:vfy, press ENTER, and Verify lets you know.

You can use the source code for Verify exactly as listed, or you can omit those device descriptors not being used by your system. The program Verify operates correctly either way. If your CoCo uses the /D0 device for something other than a floppy drive (hard disk or RAM disk), you must omit / DD from the program. If you omit / DD or any of the other descriptors, you must change the COUNT definition at the beginning of the listing to reflect the actual number of descriptors.

```
    addr = modlink(name, 0. B): /* Link to descriptor */
    printf("\nVerify: "); /* Display the mode */
    if(*(addr + VFY))
    printf("OFF\n"):
else
    printf("ON\n"):
    munllnk(addr): /* Restore link count */
}
setmode(mode, name)
char mode:

## Stay on top of your finances

If you're like most of us, keeping track of your finances is a hassle. Messy checkbooks, boxes full of old receipts, and panic at income tax time. But your Color Computer 3 can turn you into a financial wizard if you have Coco-Accountant 3.

This full-featured, home and small business accounting program answers the three big questions we all have about our money: Where did it come from? Where did it go? And what can I deduct from my income taxes?

CoCo-Accountant is easy to use and menu-driven. Just set up a list of accounts and start entering your transactions. Checks, credit cards, cash, paycheck information, interest. In any order. Just toss it in and CoCo-Accountant sorts it out. Here's what Coco-Accountant will do:

List and total transactions by account, for any month or the whole year.

- List and total transactions by payee or income source, for any month or whole year.

List and total transactions by month, with income, expense and cash flow summaries.
Quick year to date account and month summaries.

- Printed spreadsheet showing activity by account and month for the whole year!
- List and total tax-deductible expenditures and taxable income by account.

Toll Free Orders
1-800-628-2828 Ext. 850

Quick, easy checkbook reconciliation.
Coco-Accountant 3 will run on any CoCo 3 with a disk drive. And it's only $\$ 39.95$. (We also have CocoAccountant 2, with most of these features, for 64 K Color Computers at \$34.95). Send check, money order or credit card information to Federal Hill Software at the address below or call our Toll-Free Order Line at 1-800-628-2828 Ext. 850. Order now and bring your finances into the Computer Age!

Federal Hill Software 8134 Scotts Level Rd., Baltimore, Md. 21208 Info. 301-521-4886

# Disconnecting Call Waiting 

by Marty Goodman<br>Contributing Editor

How can I disable Call Waiting before logging on to Delphi with my modem?

Edward G. Stroh
Thornton, Illinois
Many areas that offer Call Waiting service allow you to disable it by dialing *70 on your touch-tone phone, or 1170 on a rotary dial (pulse) phone. When you do this, you will hear a dual bleep, then a dial tone. You then dial your number. Call Waiting is disabled for that one phone call and is reinstated on your next call. Check with your operator or business office if you are uncertain about using this method in your area.

CM-8 for IBM CGA<br>Can I connect a CM-8 to an IBM CGA card?<br>Jim Prichard St, Louis

Yes and no. If you hook the R to R, G to G, B to B, H sync to $H$ sync, $V$ sync to $V$ sync, and ground to ground lines of a CGA card and a CM-8 monitor, you will likely get a creditable image. But the CM-8 has no provision for the intensity line of a CGA video output, and as a result you get only

[^2]six possible colors plus black and white, as opposed to the 14 colors plus black and white that a true CGA monitor can display. Furthermore the CM-8's inputs were designed not for the 0 - to 5 -volt TTL signal levels that a CGA card produces, but for 0 to .9 -volt analog signals. In theory, prolonged exposure to such CGA signal levels might damage the input chip on the CM-8. Unfortunately the resolution of a CM-8 is marginal for 80 -column display, to the extent that I personally consider it unsuitable for prolonged text viewing. Of course it does a fine job of displaying 320-by-200 resolution graphics images.

What Has THOR Got in Store?
I've recently heard of a new type of erasable compact disc from Tandy called THOR. I've heard this drive can store 550 megabytes of data. Can it be hooked to a CoCo under OS-9? It seems to be better than a hard disk drive.

Brian Kuschak
Riegelsville, Pennsylvania
The THOR disc system is not yet ready for release. When it is released, you can in theory hook it (and nearly anything else) to a CoCo under OS-9, but you have to write drivers for it and probably use a SCSI interface card. The system is said to be slow when writing to the disc compared to a hard drive, and initially it will probably be very expensive compared to hard drives. For these reasons I believe read/write compact disc drives are not practical for the majority of CoCo users.

[^3]double-sided disks. How do I access the other side of the disk?

Sabine Foulds<br>British Columbia

Radio Shack's Disk Extended Color BASIC was not written for using double-sided disk drives, but the FD-502 is a doublesided disk drive. Under OS-9 you can use both sides of the disk or, if you buy $A D O S$ for your CoCo 2 (see ads from SpectroSystems in THE RAINBOW), have it bumed into an EPROM and substitute it for your disk ROM.

## Hard Drives and the Multi-Pak

Is it possible to add a hard drive to a CoCo system without using a Multi-Pak Interface?

Walt Jones
Georgetown, Delaware
Yes, you need to be using a Disto/CRC Super Disk Controller and one of Disto's mini expansion cards that supports a hard drive or the Eliminator. You may need to replace your present disk controller. Check out my article on hard drives for the CoCo in the March 1989 issue (Page 44) of THE RAINBOW for more details.

## Drive 0 and 1 Differences

What is the difference between Drive 0 and Drive 1 from Radio Shack?

Doug Fischer
Hempstead, Maryland
Older full-height Radio Shack Drive 0s differ from Drive 1s in that the Drive 0 case drive has a terminator resistor plugged into it; Drive I does not. Both the old full-height

Drive 0s and Drive is are jumpered (via traces on the PC board of the drive) to "think" they are simultaneously Drives 0 , 1,2 and 3. Drive selection is performed by pulling teeth from the 34 -pin edge connector used to hook to the drive. Some of the later half-height Radio Shack drives use this approach to drive selection while others use the normal method of jumpering only one set of drive select jumpers on the drive.

## Interchanging Joysticks

What do I need to do to modify an IBM joystick for use on a Color Computer? How about modifying a CoCo joystick for use with an IBM PC-type computer?

Dennis McMillian Pittsburg, California

The conversions can be made fairly easily if you are a competent and patient hacker. You need to understand the differences and similarities between IBM joysticks and CoCo joysticks. IBM-type joysticks use a 15 -pin DB-type connector. The pin-out on that connector is as follows:

| Pin \# | Function |
| :--- | :--- |
| 1 | +5 VDC |
| 2 | Button 1 |
| 3 | $x$-axis wiper |
| 4 | Ground |
| 5 | Not connected |
| 6 | $y$-axis wiper |
| 7 | Button 2 |

The remaining pins are unused.
The CoCo joystick connector is a 6-pin DIN connector and is wired as follows:

| 1 | $x$-axis |
| :--- | :--- |
| 2 | $y$-axis |
| 3 | Ground |
| 4 | Button 1 |
| 5 | +5 volts |
| 6 | Button 2 |

You cannot rewire the connectors or make up a simple adaptor to convert an IBM joystick to a CoCo joystick or vice versa. Youneed to open up the joystick and rewire inside the joystick in addition to changing the connector. Here's why: The potentiometers on it are wired differently from those of the CoCo joystick. On the CoCo joystick one side of each potentiometer is hooked to +5 volts and the other side to ground, with the wiper of the $x$ and $y$ axis potentiometers used to sense $x$ and $y$ position. On the IBM joystick the potentiometers are (technically speaking) actually used as rheostats, not as potentiometers.

What this means is that the IBM joystick uses only the wiper and one side of the potentiometer. One contact of the pot goes to +5 volts, the other to the axis pin of the connector. Neither side of the pot hooks to ground. Worse, sometimes the maker of the IBM joystick wires the wiper of one or both pots to +5 volts and the other side to the $x$ or $y$ axis pin.

On the positive side the values for CoCo and IBM joystick pots are the same $(50,000$ to 100,000 ohms), and the buttons on both CoCo and IBM joysticks are wired similarly (one side to ground and the other side of each button to the appropriate button contact pin on the connector).

With the above information in mind, a competent hacker should be able to easily convert CoCo joysticks to IBM joysticks and vice versa, using a change of connectors and a half-hour or so to make minor revisions of the internal wiring in the joystick itself. I've successfully converted numerous IBM PC joysticks for use with my CoCo.

## Using the Touch Pad

How can I use my TRS-80 Touch Pad and High-Resolution Joystick Interface on my CoCo 2 and 3? Can I modify my Touch Pad for use with my IBM PC compatible? Billy R. Pogue
Lake Havasu, Arizona
It might be a little tricky using the touch pad with the IBM PC because some touch pads have circuitry inside. If yours does, forget about using it with an IBM PC. If it is wired directly to the CoCo 6 -pin connector, you can modify it for use with an IBM PC, as I showed Dennis McMillian above. Open it up and check it out.

As for the Tandy Hi-Res adapter, it is best used only with custom software designed for it such as CoCoMax 3 and Color Max Dchuxe. Several years ago rainbow ran a series of articles by Steve Bjork (July through September, '86) describing how the Hi-Res adapter works and presenting some assembly language and BASIC code designed to help programmers use it.

## Interchangeable Chips

There have been occasional reports of odd occurrences after replacing the $68 B 09 E$ with the CMOS Hitachi 6309E, a chip supposedly compatible with the 68B09E. My experience has uncovered an obscure difference between the $68 B 09 E$ and $6309 E$ : On the 68B09E when an invalid op-code is encountered, the processor ignores the invalid operation and goes on to look at the
very next byte of the program as code. But when the $6309 E$ sees an invalid op-code, it often ignores not only the invalid code but the next byte or two as well. This probably relates to the prefetch stack in the 6309E. This difference between the no processors causes problems only when the computer is asked to read defective code that contains invalid op codes, of course. Under allother conditions, the two can be considered imerchangeable, as far as 1 know.

Kevin Darling
Raleigh. North Carolina
Thanks for sharing that information, Kevin.

## Do I Need More Memory?

How do I upgrade the memory of my CoCo 2 , and of what use is it to me to do so?

Todd Reaves
New Haven, Connecticut
All CoCo is and 2 s should be upgraded to the full 64 K memory capacity they can support. Very little commercial software for those machines runs on machines with less memory. For more information on upgrades, see the March ' 89 issue, Page 44.

## Need Service Manual

How do I get hold of a service manual for my CoCo 2 ?

Jorge de la Pena Queretaro, Mexico

Service manuals for almost all Tandy computer equipment are available directly from Tandy National Parts in Fort Worth, Texas. You must specify the catalog number of your Color Computer and then ask for the service manual. To contact Tandy National Parts and order pans for your RadioShack equipment, call toll-free in the United States (800)442-2425 or (817)8705600 from other areas. There is a $\$ 5$ minimum for all orders.

## Building My System

I have an FD- 502 double-sided drive syssem, to which $I$ added a second doublesided disk drive. How dol go about adding two more single-sided full-height drives to this system?

Charles R. Beam
Opelousas, Louisiana
My advice to you is to not try to add single-sided drives at all but to use both sides of those two double-sided drives. Under OS-9 do this by installing proper drivers, under RS-DOS, by purchasing $A D O S$ and buming that into an EPROM,
which you install in your disk controller.
Single-sided and double-sided drives can be mixed on the same system. If you are using both sides of the double-sided drives, you can add only one extra physical drive; not two extra drives. The reason for this is that Pin 32 of the CoCo disk controller, used as a side select line with double-sided drives, is alsoused to select the fourth drive (Drive 3 ) in four-drive, single-sided drive systems.

To add a third physical drive to a twodrive system involves the usual considerations: Make sure the added drive does not contain a terminator resistor; add a connectortothe drive cable or make up a new cable with the additional connector; and make sure the added drive is jumpered so that it thinks it is the given drive number (probably Drive 2 in this case) you want.

On older Tandy full-height drives, this becomes a bit more complex because Tandy used to select drives by pulling teeth from the 34 -pin connector going to a given drive.

Tandy pulled the three teeth for all drive selects other than the drive it wanted the connector to select, and then wired the drives so that the drives computed themselves, simultaneously, as all four drives. Thus Tandy used connectors with missing
teeth instead of jumpers on the drive to select which drive was which.

To integrate one of those drives to an existing, more modern system, you need to either modify the drive logic board itself to allow it to be appropriately jumpered or make up a custom cable that has properly prepared connectors with the appropriate missing teeth.

## Onscreen Letter Jumble

I removed a program pack from my CoCo and now when I turn it on, all I get is a jumble of letters. How can If fix this?

James M. Haynes Dallas

If you remove a program pack, disk controller or Multi-Pak from a CoCo with the power to the CoCo still on, you risk seriously damaging one or more chips in the Color Computer, as you have apparently done. The chip most likely to be damaged on all models of the CoCo, in this case, is the 6809 E chip. On older CoCos this chip is socketted and easily replaced. It costs about $\$ 6$ from electronic supply houses. On the CoCo 1 and 2 you can also damage the 6883 chip (also called the 74LS783 or 74LS785, depending on the model of the

CoCo ). This chip can be ordered from Radio Shack National Parts or from several CoCo advertisers.

On the CoCo 3 the 68B09E is most likely to be damaged in that situation. It needs to be carefully and completely desoldered, a socket put in its place, and a new 68 B 09 E installed. This is a job for an experienced hardware tinkerer; novices run a risk of damaging the delicate traces on the circuit board during a first attempt to desolder a 40 -pin chip.

Your technical questions are welcomed. Please address them to CoCo Consultations, THE RAINBOW, P. O. Box 385. Prospect. KY 40059.

We reserve the right to publish onty questions of general interest and to edit for brevity and clarity. Due to the large volume of mail we receive, we are unable to answer letters individually.

Questions can also be sent to Marty through the Delphi CoCo SIG. From the CoCo SIG> prompt, pick Rainbow Magazine Services. Then at the RAIN. BOW> prompt, type ASk (for Ask the Experts) to arrive at the EXPERTSs prompt, where you can select the "CoCo Consultations" online form, which has complete instructions.

## KILLER A's <br> by William Cotton

New for the CoCo III
Vanquish your fear of the unknown. Rid your base and its ships of the deadly aliens. Just like the arcade version, this game is sure to be a winner.

Joystick required. $\$ 24.95$

## BURIED BUXX II

This sequel to Buried Buxx is for the CoCo 3 and has better graphics, more color and lots of nonstop action. Game configuration screen, high score save and more! Joystick required. \$24.95

## Wishing Well

# Music Class 101 

by Fred B. Scerbo Contributing Editor

#### Abstract

If you have an idea for the "Wishing Well," submit it ta Fred clo the rainBow. Remember, keep your ideas specific, and don't forget this is Basic. All programs resulting from your wishes are for your use, but remain the property of the author.

was recently struck by a strange virus that has left me flat on my back for over a week. But amid the aches and pains I have put the finishing touches on this month's "Wishing Well." It is about a music instruction program called Music IOI.

## The Program

Many months ago I received a letter from a mother who furnished me several articles' worth of ideas. The first was for the already published upper- and lowercase letters program called Letters.

Her next suggestion involved a musical education program. Music 101 is the first such program to come from this suggestion. (Music 102 will follow.)

What Music 101 does is to let the user review some of the major musical terms and signs needed to correctly read music. All the information needed to draw the graphics is contained in the data statements at the end of the listing.

## Using the Program

The program runs like all of my recent educational programs. As usual, the shell

Fred Scerbo is a special needs instructor for the North Adams Public Schools in North Adams. Massachusetts. He holds a master's in education and has published some of the first software available for the Color Computer through his software firm. Illustrated Memory Banks.
of the program remains relatively the same, but the information presented is new. You have three choices:
A) Review Signs
B) Quiz Signs
C) Reverse Signs

Review Signs lets you press EnTER to advance through all the musical signs. Both B and C are the same quiz, but C reverses the choices.

Quiz Signs shows a sign in the upper left comer, and three choices are in the remaining boxes. The space bar lets you advance through the choices. Press ENTER to select one. press@ for the scorecard, and press C to continue where you stopped.

Anyone familiar with any of my recent programs will have no difficulty running this one. Remember, the program is just another educational tool and is not meant to take the place of regular instruction.

Music 102 should follow in next issue's column. It will deal with a different aspect of musical education for the beginner.

## Errors, Errors, Errors

Every month I receive several letters from individuals who tell me they keep getting an ?FC Error somewhere in the listing. Once again, in most cases this means you have made a mistake while typing in the data statements. It may be as simple as having left out a comma so double-check all your statements.

## MLBASIC 2.0 - BASIC Compiler <br> If you want your BASIC programs to run up to 50 times faster, or want mor

 programming features without learning another ianguage, MLBASIC is for you MLBASIC is the most compatible BASIC compiler svailsble for the Color Com puter WHY? Because MI.BASIC fully supportsLow and high resolution graphics
All types of 1/O (disk, sareen, printer, RS232
All avallable commands offered with BASIC
Floating point functions and expressions
Integer, flosting point and string type variables and arrays
Use of all available 512K RAM in the COCO 3 80,40 or 32 column text displays
MLBASIC not onfy contains everything that you would expect a BASIC programming language should contain, MLBASIC has features that offer flexibility of other languages like C, Pascal, FORTRAN and even sssembly language. These features will allow programmers to directly access the CPU registers on the coco, produce modular program code with SUBROUTRNES, manjpulate memory in blocks, and even call ROM routines in other aroes of memory.

MLBASIC revision 2.0 has incorporated all enhancements that were suggested by MLBASIC 1.0 users and more. Revision 2.0 did awsy with all the in oompatibility problems that existed with revision 10

MLBASIC allows for the first time user to quickly compile a program using default compiler settings. The advanced user has the capability of controlling over a dozen settings which control where the program is compiled, whioh medium to complle to (memory or disk), stiving space, compler listinga and more.

With all this going for MLBASIC, your might expect the cost to be a little out of your buddet Arar looking at prieos of othor BASIC compliens for the COCO 3 you might be correct But look again at this ad; for only $\$ 59.95$, you can have a progremming language that will spark your interast once again in the COCO

Before you buy snother BASIC comptler for the COCO, find out if it supports everything MI.BASIC supports. Then took at the price tas. We feel that it won't be long bafore you place an ordor for MIBASIC
"MLBASIC is a fne program for any serious programmer,"
said Devid Gerald in the Deoember 1997 RAINBOW

# Telewriter-128 <br> the Color Computer 3 Word Processor 

## TELEWRITER: UNDISPUTED \#1

If you've read the other word processor ads, you've probably had your fill of cold lists of features, and claims of ultimate speed, power, and ease of use. So let's try to get past the overblown claims and empty buzz words-with 2 simple facts:
Fact I: Telewriter is undisputedly the \#1 most popular word processor on the Tandy Color Computers.
Fact 2: Telewriter's exemplary ease of use and power have been acclaimed in numerous magazine reviews and in thousands of letters and calls from end users.

## THE OTHERS DON'T UNDERSTAND

So why has Telewriter gained such a large and loyal following, while other Color Computer word processors have come and gone? Ironically, our competitors' ads tell you exactly why.
For them, word processing is nothing more than features and numbers. The longer the list of features, and the bigger the numbers, the better the word processor. Or so they think.
They just don't understand that power and case of use are not gained by tacking on random features or throwing in freebie utilities or forcing you to use a cumbersome mouse.
Real Power, true Ease of Use, and genuine Speed can only be attained through thoughtful, logical, intelligent design, attention to detail, and a commitment to the act and the art of writing. That's the Telewriter tradition, and that's the reason for Telewriter's phenomenal success.

## TELEWRITER-128: INTELIIGENT DESIGN PERFECTED

And now, Telewriter-128, the latest Telewriter, uses the added hardware power of the Color Computer 3 to bring this intelligent design to its logical perfection.
Telewriter-128 adds unsurpassed speed and important new features to the already impressive arsenal of Telewriter-64. Not just speed for speed's sake, or reatures for the sake of advertising-bot speed where it counts and features that make you a more efficient, more effective writer.
Rainbow magazine put it this way: "Tele-writer-128 will set the word processing standard for the Color Computer 3 because it is so simple and user friendly. . . . The 81-page tutorial/user's manual is nicely done. It is written in easy to understand language but the program itself is so easy. . . . Most people will be able to use the software right out of the package."

## TELEWRITER-128 OR DESKTOP PUBUSHING

Desktop publishing is nice for adding pictures and fancy fonts to newsletters or business presentations-but its graphics orientation sacrifices some important capabilities when it comes to working with words.
If your main concern is expressing ideas through words (notes, letters, reports, papers, novels, etc.), the dedicated word processing power of Telewriter-128 still provides the most efficient tool for the job. Each tool has its place-desktop publishing for striking visuals, Telewriter-128, for effective writing.

## TELEWRITER-128 OR TELEWRITER-64

You can no longer afford to be without the ease, power, and efficiency, that Telewriter brings to everything you write.

Telewriter-128 for the Color Computer 3 costs $\$ 79.95$ on disk, $\$ 69.95$ on cassette.
For the Color Computer 1\&2, Tdewriter-64 costs $\$ 59.95$ on disk, $\$ 49.95$ on cassette.
To order by MasterCard or Visa, call (619) 755-1258 anytime, or send check to:

COGNITEC
341-A 14th Street
Del Mar, CA 92014
(Add 32 S\&H. Californians add $6 \%$ tax. To upgrade from TW-64 to $T W-128$ send original $T W$-64 disk and \$41.95.)
\$2 $\begin{aligned} & \text { Send us the } \\ & \text { disk label, } \\ & \text { disk jacket, }\end{aligned}$
manual cover, or receipt from any CoCo word processor and take $\$ 30$ off the price of Telewriter-128 disk ( $\$ 20$ off the price of Telewriter-128 cassette).

FEATURES THAT MATTER: Telewriter's outstanding design and its complete set of features, put it in a class by itself, for smooth, efficient writing and letter perfect printed documents. Telewriter-128 includes:
Unbeatable SCREEN PERFORMANCE: lightning fast paging and scrolling, on-screen text that never lags behind your typing, and a response that is always instantaneous, no matter how much text is in the buffer, or where you are in the document.
26 User definable MACRO KEYS type your often used phrases and tities with a single keypress-saving you time and freeing your concentration for writing. User settable DUAL SPEED CURSOR moves you anywhere on the line, on the page, or in the document, fast or slow-you decide, with the touch of a finger. Fast PRINT PREVIEW MODE shows you text as it will print: headers, footers, margins, page breaks, page numbers, justification-saves time and paper and guarantees perfect looking documents everytime.
Instant, ON-LINE HELP summarizes all Tele-writer- 128 commands and special symbols. The On line OPTIONS MENU lets you instantly customize the writing environment at any time to suit your precise needs (Screen/character color, Monochrome on/off, Key repeat/delay rate, 2 Cursor repeat/delay rates, Case-sensitivity of search, Auto file backup on/off, and more). A SINGLE FUNCTION KEY takes you instantly to any menu, so you never have to stop and think.
The 24,25 or 28 LINE SCREEN DISPLAY option lets you see $16 \%$ more on-screen text (28), or wider line spacing (25). The auto-loading OPTIONS FILE stores all your Macros, Print Format settings, and Options Menu settings, so they are always there everytime you run Telewriter-128.3 pop-up STATUS WINDOWS tell you cursor position, word count,

## free space, etc.

The QUICK SAVE feature lets you instantly save your current document with just 2 keysirokes and without leaving the editor. CURSOR THROUGH DIRECTORY to Load, Append, Rename and Kill files-so you'll never type a filename after the first time. HANGING INDENTS help you organize ideas on the page more effectively. Also: Footers, Multiple Print, Print to Disk, Key Click, Key Repeat, 40/80 Column Option, Overstrike, Word Delete, Nested Macros, Definable Foreign and Math Symbols and more. . .
And, of course, Telewriter-128 incorporates all the Features of TELEWRITER-64, like: Works with absolutely any printer that works with your Color Computer (1, 2, or 3). Uses simple Eimbedded Control Codes so all intelligent features of your printer are easily accessed, including: Underiining. Boldface, variable Fonts, Sub-script, Super-script, ltalies etc.
Format commands allow dynamically changing Margins, Headers, Spacing, Centering, etc., anywhere in the document. Format menu sets Margins, Spacing, Page numbering, Baud rate, Lines per page, Justification. Chain Printing means the size of your pristed document is unlimited. Also Single paye and Partial Print.
Fast full-screen editor with wordwrap, text alignment, block copy/move/delete, global search and replace, wild card search, fast 4 -way auto-repeat cursor, fast scrolling, forward and backward paging, settable tabs, word and line counter, full error protection. Insert or delete anywhere on screen. Simple, easy to remember, "mnemonic" Editor Commands, Load, Save, Append, Partial Save files to disk or cassette. Kill, rename and list disk files. ASCII file compatibility.

An important link in the CoCo community is communication among fellow users. If questions arise, a fresh source of information can be invaluable. The Intercom is offered as an information exchange point for pen pals, CoCo clubs and BBSs.

If you would like a pen pal or are running a CoCo club or BBS, send a letter including all pertinent information to: THE RAINBOW, P.O. Box 385, Prospect, KY 40059. Mark it Attn: The Intercom.

You will be asked to sign a non-piracy agreement - only information from those who have signed our non-piracy agreement form will appear in The Intercom. Also, please notify us of any changes in the status of your club or BBS.

## Pen Pals

- I would enjoy having some pen pals. I have a CoCo 3 , dual disk drive and modem. I like Adventures very much.

Patrick Benny
69 2nd Chaloupe, RRI
Joliette, PQ J6E 7Y8
Canada

- I have a CoCo 2 and 3, two DSDD disk drives, a DMP-200, Multi-Pak, Speech Pak, Musica II and a stereo pak. I am 15 years old.

Desmond Rae
P.O. Box 2076

Mt. Isa. Queensland 4825 Australia

- I am looking for a pen pal of any age. I'm 14 years old and own a CoCo 3 ( 512 K ). CoCo 2, CM-8 monitor, Multi-Pak Interface, two DSDD 40-track drives, and a Maestro 2400 -baud modem. I will reply to all who write me.

> Damien Sugden
> 10 Drinkwater Crescent
> Sunshine, Victoria 3020 Australia

- I am a 14-year-old student from Melboume, Australia. I have a $\mathrm{CoCo} 3, \mathrm{CoCo}$ 2, 80-track disk drives, modem, DMP-105 and a lot of other stuff. I am into everything - mostly databases, communications and
games. I would like pen pals from all over the world, especially America, and I will reply to every letter received.

Hamish J. Purdey
31 Fullwood Parade
Doncaster East. Victoria 3109
Australia

- I am 14 years old and would like a pen pal from anywhere in the worid. I have a CoCo 3, CoCo 2, DMP-105, FD-501 drive and CCR-81 cassette recorder. I enjoy games, Adventures and utility software. My hobbies are computing and skateboarding. I will answer all letters.

> P.O. Box 2659
> Lima-1, Peru

- I'm 11 years old. I own a CoCo 3 and am looking for a pen pal in the United States. I'll answer all letters.

> Chuck Carpinello
> 1/ Riverside Ave.
> Rensselare, NY 12144

- I am 12 years old and have a 512 K CoCo 3, two TRS-80 disk drives, a DCM-3 modem, Multi-Pak Interface and an RGB monitor. I'm hoping to get a printer soon. I have three OS-9 programs. I would like for somebody to give me some tips on Wild

West. Some of my hobbies are sports, writing to pen pals, drawing and caring for animals. I would prefer boys and girls 11 to 16 years old. I will try to respond to all letters.

> Naomi West
> 944 Mosby Rd.
> Memphis, TN 38116

- I am 13 years old and would like pen pals from all over the world between the ages of 10 and 17. I have a $\mathrm{CoCo} 2, \mathrm{CoCo} 3$, an FD500 disk drive and a DMP-105. I enjoy playing games and writing on the CoCo. I'm also interested in reading mysteries, showing dogs and some sports.

## Jessica Diehm

## RD\#3, Box 461-A

Lewishurg, PA 17837

- I am 18 years old and would like pen pals from any where in the world. I have a CoCo 3, FD-501 drive, DMP-105, CCR-81 recorder and DCM-7 modem. I love video games, graphics, music, utilities, telecommunications and just about anything that has to do with computers. I am also interested in reading and writing science fiction and listening to all types of music (with the exception of most pop/top 40 ).

## More Versatile and Powerful. OS/9 Allows you Freedom and Power. The mouse and pull-down menus give you speed and ease of use.

## Multi-Tasks

Window Writer is the first Color Computer word processor which takes full advantage of $\mathrm{OS} / 9$. The result is a word processor which is fully as modern and professional in action as those previously available only for the IBM and Mac. The operating system allows true multi-tasking with other programs or itself. Not limited to just printing one file and editing another. You can print one file in one window while you edit liles in other windows. At the same time you can be running a small program in another window. You can cut and paste between sections of files in different windows.

## Hi-Res Display

Window Writer uses an 80 -column monitor display screen for clarity. As shown in the above screen drawing, you can quickly see how to access the menus and help screens. You can determine the current position by page, line number, and column. The mouse can use this section to quickly change to a specific page or line in the file. The text insert and word wrap toggles also are indicated and changeable with the mouse button.

## Ram Disk

A RAM disk is set up in Window Writer to make full use of all or a user specified portion of the memory on the 512 K CoCo 3. On the 128 K CoCo a smaller RAM disk is set up to still allow use of all available memory for file editing. For use of all features, a 512 K machine is required.

The RAM disk is used for storage of the file(s) being edited, for the clipboard for cut and paste, and as a print spooler for the file being printed. Window Writer's clipboard can be saved to disk or pasted into any file being edited because files use the same clipboard memory. The RAM disk also can be used with other OS/9 programs.

## Mail-Merge

With Window Writer you can create form letters and send them out to a list of addresses in an address file. First names or other information can be added to "personalize" these letters.
cursor keys or the mouse

French Version:
An abridged French translation of the Window Writer manual is now available. This manual is written by a Canadian CoCo user and will aid French speaking users. Only $\$ 7.50$ additional.

Editing is a snap with OWL's Efficient Mouse Usage!

## Editing

Like most modern word processors, with Window Writer there is always more than one way to access any editing feature. You can access editing by menus using mouse, "keyboard mouse", or through control keys. Full help screens are quickly available for all editing features. A help screen can be left visible while needed and then quickly removed toget back to full screen editing.
One nice feature is the price: only $\$ 59$.
For the DynaSpell Spelling Checker by Dale Puckett including the 102 K Word Dictionary: only $\mathbf{\$ 2 0}$. additional!

# The Hard Drive's New Frontier: 

# The Most Advanced Color Computer Hard Drive System Ever Offered! 

## Fast No-Halt SCSI Floppies Using Optional SCSI Controller <br> Proven Performance for Demanding Home or Business Users

OWL-WARE has now been supplying Color Computer hard drive systems for over 4 years. We have reached our position in the hard drive market by providing our customers with a high quality product that they can be proud to own and use. Our first concern has always been quality and sound design.
We are now announcing our most advanced hard drive system ever. Using the optional OMTI 5200 SCSI controller with our Hard Drive Interface, our new system will support no-halt floppy drives. You need not wait while typing or worry about clock time losses. Why be limited to 3 floppy drives? A complete system could now consist of 1-3 standard CoCo floppy drives, 1-2 (or more) hard drives, and 1-2 no-halt floppies using standard (not just CoCo) OS/9 format. You can use single or double-sided 40 or 80 track drives with the SCSI no-halt controller.

There are several new features with this improved interface. These include:

- Full SASI/SCSI compatible (this allows many add-ons to the versatile SCSI buss)
- No-Halt Floppies with optional SCSI controller allows full type-ahead during access
- Low factory-direct prices
- Fast Delivery from factory stock
- Optional Real Time Clock with built in battery ( $3-10$ year lifetime)
- With the Clock you have $\mathbf{2 4 0}$ Bytes of battery backed up RAM for password protection or data storage!
- Same super stable LRTech quality

Our quality is obvious when compared to any other Hard Drive system or interface. Even the box is special. Our systems have always had a fan. Has our competition just heard about them?

## Interface Price only: \$85.

Real Time Clock-RAM: \$25.
$20 \mathrm{Meg} . \quad 40 \mathrm{Meg} . \quad 80 \mathrm{Meg}$.
(2X40Meg.)
System Prices: (Includes Hard Drive, case, \& fan, SASI Controller*, LR/OWL Interface, Software. Fully assembled and tested.)
$\$ 519$.
$\$ 629$.
$\$ 929$.

Super System Prices: (LR/OWL System as above but OMTI 5200 SCSI Controller AND 3.5" 80 Track Floppy Drive in same case)
$\$ 649 . \quad \$ 759$. $\$ 1099 .(2$ cases)
*SASI controller is unused surplus. Add $\$ 75$ for OMTI SCSI

Now Available with High Density $5.25^{\prime \prime}$ drives as well as 720 K !
Disk Capacity of more than 1 Meg Formatted!

Same low price as our 720 K super systems listed below.

## OWL Hard Drive BASIC 3

There have been several ads in this magazine about BASIC for Color Computer hard drive systems. These ads sometimes only tell a part of the story. Our BASIC system price includes assembly, testing, and 3-day burn-in period. We do not require a Multi-pak to operate.
Our hard drive systems are fast, reliable, and reasonable in price. This has been proven by hundreds of users over the past 4 years. We do not have to turn off error checking for speed. We achieve high speed BASIC from a unique indexing method.
OWL HD BASIC 3 is very fast due to our index method. Almost all BASIC commands work normally including DSKINI, DSKIS, and DSKO\$.

## BASIC for Hard Drives Prices: With/Without Hard Drive

\$35./\$79.

## Technology <br> the Color Computer Frontier

## Floppy Drive Systems

The Highest Quality for Years of Service Drive 0 Systems (Half Height, Double Sided,

## Direct Drives) $\mathbf{\$ 1 9 9}$

Drive 0 systems complete with drive, controller, legal DOS, cable, case, power supply, and manual
Drive 1 Systems (Half Height, Double Sided,

## Direct Drives) $\$ 129$.

## New 3.5", 720K Drives for OS-9 with case

## \& Power Supply $\$ 169$.

Drive 1 Systems have drive, case, power supply. (You may require optional cable and/or DOS chip to use)

## Special for 0/1 Combos (Drives $\mathbf{0 , 1 , 2 , 3 )} \$ 295$.

> HALF- HEIGHT DRIVE UPGRADES FOR RS HORIZONTAL CASES
> Why only double the capacity of your system when you can triple in the same case? Kit includes: double-sided to fit your case, chip to run both sides of new drive, hardware, and detailed instructions. Easy! Takes only 5 minutes!
> Model \$119. Model \$129.
> 500
> 501 or 502

All drives are new and fully assembled. We ship only FULLY TESTED and CERTIFIED at these low prices. We use Fuji, YE Data, and other fine brands. No drives are used or surplus unless otherwise stated to you when you order. We appear to be the one of the few advertisers in Rainbow who can truly make this claim. We have 5 years experience in the CoCo disk drive market! We are able to provide support when you have a problem.

Drives 1 Year Warranty
only \$27.95
(or even better)
only \$6.95 with any Disk Drive Purchase!!

## 512K Upgrade

Again at a popular price. Fully assembled and tested before shipping. Easy to install. Uses fast 120 ns . chips.
Only \$99.

Now includes memory test, Ram Disk Lighting, Printer Lighting, and Backup Lighting. All with an upgraded manual exclusive with OWL!

Our prices include a discount for cash but do not include shipping.
OWL-WARE has a liberal warranty policy. During the warranty period, all delective items will be repaired or replaced at our option at no cost to the buyer except for anipping costs. Call our tech number for return. Return of non defective or unauthorized returns are subjeci to a senvice charge.

## OWL-WARE

Mertztown, PA 19539

## How To Read Rainbow

When we use the term CoCO ，we refer to an affection－ ate name that was first given to the Tandy Color Computer by its many fans，users and owners．
The BASIC program listings printed in THE RAIN－ BOW are formatted for a 32－character screen－so they show up just as they do on your CoCo screen．One easy way to check on the accuracy of your typing is to com－ pare what character＂goes under＂what．If the charac－ ters match－and your line endings come out the same －you have a pretty good way of knowing that your typing is accurate．
We also have＂key boxes＂to show you the minimum system a program needs But，do read the lext before you start typing．
Finally，the little disk and／or cassette symbols on the table of contents and at the beginning of articles indicate that the program is available through our RAINBOW ON DISK OI RAINBOW ON TAPE Service，

## Using Machine Language

The easiest way to＂put＂a machine language program into memory is to use an editor／assembler，a program you can purchase from a number of sources．All you have to do，essentially，is copy the relevant instructions from the rainbow＇s listing into COCO ．
Another method of putting an ML listing into CoCo is called＂hand assembly＂－assembly by hand，which sometimes causes problems with ORIGIN or EQUATE statements．You ought to know something about assembly to try this．
Use the following program if you want to hand－ assemble ML listings：

10 CLEAR200， 8 H3F00：$I=$ gH3F 00
20 PRINT＂RODRESS：＊HEXS（I）；
30 INPUT＂BYTE＂；日
40 POKE I，VAL（＂ $\left.8 \mathrm{H}^{-+85}\right)$
50 I＝I＋1：GOTO 20
This program assumes you have a 16 K CoCo ．If you have 32K，change the \＆ H 3 F 00 in Line 10 to SH HF 00 and change the value of I to sH 7 FB ．

## OS－9 and RAINBOW ON DISK

The OS－9 side of RAINBOW ON DISK contains two directories：CMDS and SOURCE．It also contains a file， read．me．first，which explains the division of the two directories．The CMDS directory contains execula－ ble programs and the SOURCE directory contains the ASCII source code for these programs．BASIC09 programs will only be offered in source form so they will only be found in the SOURCE directory．
OS－9 is a very powerful operating system．Because of this，it is not easy to learn at first．However，while we can give specific instructions for using the OS－9
programs，you will find that the OS－9 programs will be of little use uniess you are familiar with the operating system．For this reason，if you haven＇t＂learned＂OS－9 or are not comfortable with it，we suggest you read The Complete Rainbow Guide to OS－9 by Dale Pucketl and Peter Dibble．
The following is not intended as a course in OS－9．It merely slates how to get the OS－9 programs from RAINBOW ON DISK to your OS－9 system disk．Use the procedures appropriate for your system．Before doing so，however，boot the OS－9 operating system according to the documentation from Radio Shack．

1）Type Ioad dir 11st copy and press ENTER．
2）If you have only one disk drive，remove the OS－9 system disk from Drive 0 and replace it with the OS－ 9 side of RAINBOW ON DISK．Then type chd／de and press ENTER．If you have two disk drives，leave the sytem master in Drive 0 and put the RAINBOW ON DISK in Drive 1．Then type chd $/ d 1$ and press ENTER．
3）List the read．me．Fi rst file to the screen by typing 11 st read．me．First and pressing ENTER．
4）Entering dir will give you a directory of the OS－9 side of RAINBOW ON DISK．To see what programs are in the CMDS directory，enter dir cmds．Follow a similar method to see what source files are in the SOURCE directory，
5）When you find a program you want to use，copy it to the CMDS directory on your system disk with one of the following commands：

One－drive system：copy／do／cmds／lilename／da／ cmos filename－s
The system will prompt you to alternately place the source disk（RAINBOW ON DISK）or the destination disk（system disk）in Drive 0 ．
Two－drive system：copy／d1／cmds／iliename／do／ cmas／fitename
Once you have copied the program，you execule it from your system master by placing that disk in Drive 0 and entering the name of the file．

## The Rainbow Seal

The Rainbow Certification Seal is our way of helping you，the consumer．The purpose of the Seal is to certify to you that any product that carries the Seal has actually been seen by us，that it does，indeed，exist and that we have a sample copy here at THE RAINBOW．
Manufacturers of products－hardware，software and firmware－are encouraged by us to submit their prod－ ucts to THE RAINBOW for certification，
The Seal is not a＂guarantee of satisfaction．＂The certification process is different from the review process．You are encouraged to read our reviews to determine whether the product is right for your needs．
There is absolutely no relationship between advertis－ ing in THE RAINBOW and the certification process． Certification is open and available to any product per－
taining to CoCo ．A Seal will be awarded to any com－ mercial product，regardless of whether the firm adver－ tises or not．

We will appreciate knowing of instances ol violation of Seal use．

Rainbow Check Plus

The small box accompanying a program listing in THE RAINBOW is a＂check sum＂system，which is designed to help you type in programs accurately
Rainbow Check PLUS counts the number and values of characters you type in．You can then compare the number you get to those printed in THE RAINBOW． On longer programs，some benchmark lines are given． When you reach the end of one of those lines with your typing，simply check to see if the numbers match．
To use Rainbow Check PLUS，lype in the program and save it for later use，then type in the command RUN and press ENTER．Once the program has run，type NEW and press ENTER to remove it from the area where the program you＇re typing in will go．

Now，while keying in a listing from THE RAINBOW， whenever you press the down arrow key，your CoCo gives the check sum based on the length and content of the program in memory．This is to check against the numbers printed in THE RAINBOW．If your number is different，check the listing carefully to be sure you typed in the correct BASIC program code．For more details on this helpful utility，refer to H ，Allen Curtis＇article on Page 21 of the February 1984 RAINBOW．

Since Rainbow Check PLUS counts spaces and punctuation，be sure to type in the listing exactly the way it＇s given in the magazine．

## SHOWCASE YOUR BEST!

You are invited to nominate original work for inclusion in upcoming showings of "CoCo Gallery." Share your creations with the CoCo Communityl Be sure to send a cover letter with your name, address and phone number, detailing how you created your picture (what programs you used, etc.) and how to display It. Also please include a few facts about yourself.

Don't send us anything owned by someone else; this means no game screens, digitized images from TV programs or material that's already been submitted elsewhere. A digitized copy of a picture that appears in a book or magazine is not an original work.

We will award one first prize of $\$ 25$, one second prize of \$15 and one third prize of \$10.

Please send your entry on either tape or disk to the CoCo Gallery. THE RAINBOW, P.O. Box 385 , Prospect, KY 40059. Remember, this is a contest and your entry will not be returned.

> - Tony Olive, Curator

## Reflect

James J. Gibbons
James, a professional artist and art teacher in Montgomery, Pennsylvania, uses a variety of graphics programs, including The Rat. Micro-lllustrator, Sketch, The Color Computer Artist, CoCo Max II and CoCo Max III, which was used for this picture. He plans to continue working in this field until his pictures look like paintings. James resides in Watsontown, Pennsylvania.

## 2nd Place

Lake
Wally Mayes

Wally, of Hamilton, Ohio, is a frequent contributor to CoCaGallery. This entry was produced with CoCo Max III. He is married and has four children and three grandchildren. His hobbies include motorcycle drag racing, golf and photography.

## 3rd Place

## Chicago Skyline <br> Mike Strean

A self-taught programmer who enjoys programming in BASIC as well as OS-9, Mike, from Zion, Illinois, enjoys creating art on computers in his spare time. This skyline was reconstructed with CoCo Max III. Mike, a die-hard Flight Simulator II fan, plans to get a private pilot's license as soon as he turns 16.

## The Great Balancing Act

## by Jerry Shaulis

1his program is designed to help you maintain your checkbook. At the month's end, it helps verify the checkbook balance with the bank statement balance. It can also be used to manage your budget. Checks uses a basic accounting procedure. Each record (entry or transaction) is like an entry in a general joumal and is assigned to a specific account.

The program is written in Disk Extended Color BASIC and runs on any CoCo with at least 32 K RAM and one disk drive. A printer is useful but not necessary. The program was written to use a DMP-400 printer so other printers may require the

[^4]printer control codes in the program to be changed.

To use the program, enter and save the first listing on a disk with the name CHECK1.BAS. Then enter and save the second listing on the same disk with the name CHECK2. BAS. To start the program, type RUN "CHECK1" and press ENTER.

Checks is easy to use, with menus and prompts that lead the way through the program. There are only a few things to remember. When Checks is run for the first time, a list of accounts must be established and each record entered is assigned to an account. The program does allow a record to be assigned to an account that has not been established.

An account is like a box into which similar things are put to keep them grouped together. For example, items you would put into an account include payments for car insurance, house insurance, "fe insurance and medical insurance. They may be assigned to an account named Insurance.

To establish an account, press F at the start-up menu and a menu for Account Routines appears on the screen. From this
menu accounts are established, viewed, deleted or sorted. A hard copy of accounts can also be made; this is useful to have because the account to which the record is assigned must be entered exactly as established in the Account Routines. If it is not, the program voids the record entry and asks for it to be entered again.

Return to the start-up menu by pressing $F$ at the Account Routines menu. To enter a record, press A. Each record must have a check or deposit number that starts with a number, not a letter, and can be no longer than nine characters. All records where money is taken out (debit) should have a check number. If the record has a check number, the amount of the record is subtracted to get a balance. All records where money is added (credit) should have a deposit number. If the record has a deposit number, the amount is added to obtain a balance.

Each check and deposit number should be unique. For checks, use the number on the check. For other transactions such as deposits, automatic deposits, cash withdrawal, automatic withdrawal, service
charges，etc．，use the formula MMDDYIIN． MM stands for the month，$O D$ for the day of the month，and $Y$ for the last number of the year．II stands for initials for the type of transaction； N for the number of times that type of transaction was made that day． Here＇s an example：On September 25，1986， two cash withdrawals were made．The number for the second withdrawal would be 09256 CW 2 （ $M 4-09,00-25, Y-6,11-\mathrm{CW}$ ． $\mathrm{N}=2$ ）．The reasoning behind this formula becomes clearer later．

The first prompt asks for the check number．If the amount of the transaction is a debit，type a check number and press ENTER，If the amount of the transaction is a credit，do not type a number，but press ENTER．The second prompt asks for a de－ posit number．If the amount of the transac－ tion is a debit，type a deposit number and press ENTER．There must be either a check or deposit number，but not both．

The prompts for the deposit number and check number accept nine characters；the Date prompt accepts eight characters；the Paid To prompt，50；the For prompt， 50 ；the Account prompt，11；and the Amount prompt，nine．If more characters are en－ tered than allowed，an alarm sounds and the same prompt reappears．

If nothing is to be entered at a prompt， press Enter to go to the next prompt．After all prompts have been answered，the message STATUS NOT VERIFIED and the balance appear on the screen．

In the Edit routine records can be edited in any order and the status can be changed． The Status prompt accepts one character－ either Y or N．Y（Verified）means the record has been compared with the bank statement and is correct． N （Not Verified） means the record has not been compared with the bank statement．

There are two special edit features in the recordentry and Edit routines．If a single up arrow is entered at a prompt，the Record Entry process begins again．If two up ar－ rows are entered at a prompt，the star－up menu appears on the screen．When up ar－ rows are used，no data is entered or changed in the file．

In the Delete routine more than one record can be deleted，but they must be deleted in numerical order．For example，if you have Record 10 and then Record 15 ，do not delete Record 15 and then record 10. When a record is edited or deleted，the program corrects the balance from that record to the end of the file．

The Insert Record routine allows a blank record to be inserted anywhere in the file after Record 1．Only one record can be inserted at a time．The blank record can then be edited with the proper data．

The Other Routines menu selection loads

CHECK2．BAS into the computer and a differ－ ent menu appears on the screen．The State－ ment Verification routine checks the check－ book balance with the statement balance．

All transactions must be entered before the checkbook and bank statement bal－ ances can be compared．If they have not， press N ，return to the first menu and enter them．Otherwise，press Y to start the veri－ fying process．All transactions listed on the bank statement are then compared with the records in the file．A prompt appears on the screen and asks for a check or deposit number．Enter the check or deposit number for the first transaction listed on the bank statement．If it was a check that was writ－ ten，use the number on the check．What if it was not a check？The bank statement should list the date and type of each transaction． Use this information in the formula MMDDYIIN to get the check or deposit number．

After the check or deposit number has been entered，the program displays the record．If the bank statement and the record agree，press Y．This changes the record status to VERIFIED．If they do not agree， press N ；the status of the record remains the same．

If the check or deposit number is not found or the record does not agree with the bank statement，there are two choices： Continue the verifying process or stop the verifying process and correct the problem． If the process is continued，make a note of the transaction where there is a problem．

Tocorrect a problem，go back to the first menu．Use View Records to find the record for the proper check or deposit number． Take note of the proper number and return to the verifying process．If the record has wrong information，edit the record and retum to the verifying process．If the bank statement is wrong，see the bank．

When all transactions on the bank state－ ment have been verified，press V．The verified balance appears on the screen． This balance should agree with the balance on the bank statement．If there are outstand－ ing transactions，it is not the present check－ book balance．The present checkbook bal－ ance can be seen in the last record．

For the rest of the routines on the second menu，follow the prompts．The Other Routines prompt loads CHECK1．BAS and retums you to the first menu．Here are some suggestions on how to start keeping your checkbook with this program：

Pick a beginning point in your check－ book．It should be a point where there are no outstanding transactions．The balance at this point should be known to be correct．

Enter the checkbook balance in the first record．The first record does not have a check number but a deposit number．Use the formula MMDDYI IN．Enter the date of this

balance at the Date prompt．The Paid To and For prompts can be left blank or a note can be entered．The Account prompt must be answered with an established account， which might be something such as Cash or Start．Answer the Amount prompt with the checkbook balance at the starting point． The status shows NOT VERIFIED and the
balance is the same as what you entered for the amount．

Press Y toenter the first transaction after the starting point，then answer the prompts． The balance should be the same as the checkbook balance after the transaction． Next，enter all the other transactions from the starting point to present．

Some of these transactions may have already been verified by previous bank statements．Edit these records and change the status to Verified by entering Y at the Status prompt．Your computer checkbook should now be ready to use．

## MORE BAUD LESS BUCKS

Save Time and Monoy with a Surprisingly Affordable 2400/1200/300 BPS Hayes Compatible Modem for any Computer.

Don't be fooled by the low cost of these 2400 baud modorns. These are high quality moderns made in the USA, with performance features unrmatched by competiors cosing three times as much.

This is full--eatured Hayes compatible modem that works with any computer. Hl leatures superior Hayes compatibility, advanced digital signal processing, and adaptive equalization for great performance and reFability. All of this in a compact, attractive 00 anywhere package thats not not much larger than a paperback book.

Convenience features like call progress tone detection auto-dial and auto-answer, a call progress spoaker with volume control, a sucond jack lor a local phone, on board diagnostics.

Monsy saving premiums for sign-up and connect time for Dolphi, The Source, CompuSery, alc. Soltware available: ProcCorm (PC) + 5; QuiciLink (Mac) + 5 WizPro is froo (sharowaro).

Backed by kwo year mifg warrantea, so you can buy with confidence that comes with 11 years of lelecommunication experience.

2400/1200/300 EPS modern \$125.00
(Plonse add 2.50 shipping and handling)
Dealer inquiries wolcome.
GCS FILE TRANSFER UTILITIES
Sea: Review - Decsmber Rainbow Dale Puchott - November Raínbow

The GCS File Traneiar Luilliee provide a simpio and auick method to transler text and binary files from and to a variely of lloppy dish formats.

Just place the PC (MSDOS), RSOOS, FLEX or MINI-FLEX disk into your disk drive - enter a simple command and the file is copied into a OS-9 file. File transler back is just as simple. Under Mult-Vue version, just select command from one of throe menus. Commende Dir of PC, AS or FLEX disk Dump disk sector of PC. PS or FLEX Read tio from PC, RS or FLEX disk Write file to PC, RS or FLEX disk Rename file on PC disk Delete tho from PC disk Format PC dish
Extensive Single, Double sidad disks.
Opilone
Single doutio density disks. 35,40 or 80 track floppy drives. 8 or 9 sectors (PC).
First level sub-directories (PC). Binary files. Use pipes for diroct and multiple transfers.
Requiree OS-9. 2 drives (one can be hard or ramdisk - one lioppy 40 T DO DS) Multi-Vue for Multi-Vue version SDISK (SDISK3 for COCO IIf).

GCS File Transfer Utilitles for CoCo $\begin{array}{lll}\text { Multi-Vue version } & \$ 54.95 \\ \text { Stienderd varalon } & \$ 44.95 \\ \text { SDISK or SDISK3 } & \$ 29.95\end{array}$

Standard diskettes are OS-9 format (5.25*) add $\$ 2.50$ for $3.5^{\circ}$ Orders must be prepaid or COD. VISAMC. Add $\$ 1.75$ S8H. COD is additional
GRANITE COMPUTER SYSTEMS
Route 2 Box 445 Nillsboro, NH 03244 (803) 484-3850

OS-9 is a trademark of Microware Sysiers Corporation and Motorola Inc. MS-DOS is a tradernurk of Microsefl Cop. FLEX is a tradernark of TSC, Inc.

## Submitting Material To Rainbow

Contributions to the rainbow are wel－ come from everyone．We like to run a variety of programs that are useful，help－ ful and fun for other CoCo owners．

WHAT TO WRITE：We are inter－ ested in what you want to tell our read－ ers．We accept for consideration any－ thing that is well－written and has a prac－ tical application for the Tandy Color Computer．If it interests you，it will proba－ bly interest lots of others．However，we vastly prefer articles with accompany－ ing programs that can be entered and run．The more unique the idea，the more the appeal．We have a continuing need for shor articles with short listings．These are especially appealing to our many beginners．

FORMAT：Program submissions must be on tape or disk，and it is best to make several saves，at least one of them in ASCII format．We＇re sorry，but we do not have time to key in programs and debug our typing errors．All programs should be supported by some editorial commentary explaining how the pro－ gram works．We also prefer that editorial copy be included in ASCII format on the tape or disk，using any of the word proc－ essors currently available for the Color Computer．Also，please include a double－ spaced printout of your editorial mate－ rial and program listing．Do not send text in all capital letters；use upper－and lowercase．

COMPENSATION：We do pay for submissions，based on a number of crite－ ria．Those wishing remuneration should so state when making submissions．

For the benefit of those wanting more detailed information on making submis－ sions．please send a self－addressed， stamped envelope（SASE）to：Submis－ sion Guidelines，the rainbow，The Fal－ soft Building，P，O．Box 385，Prospect． KY 40059．We will send you compre－ hensive guidelines．

Please do not submit material cur－ rently submitted to another publication．

R
A/NBOWfest is the only computer show dedicated exclusively to your Tandy Color Computer.

Nowhere else will you see as many CoCorelated products or be able to attend free seminars conducted by the top Color Computer experts. It's like receiving the latest issue of THE RAINBOW in your mailbox!

RAINBOW fest is a great opportunity for commercial programmers to show off new and innovative products for the first time. Chicago, Illinois is the show to get information on capabilities for the CoCo, along with a terrific selection of the latest CoCo software. In exhibit after exhibit, there will be demonstrations, opportunities to experiment with software and hardware, and special RAINBOWfest prices.

Set your own pace between visiting exhibits and attending the valuable, free seminars on all aspects of your CoCo - from improving BASIC skills to working with the sophisticated OS-9 operating system.

Many people who write for THE RAINBOW - as well as those who are written aboul - are there to meet you and answer questions. You'll also meet lots of other people who share your interest in the Color Computer. It's a person-to-person event and a tremendous leaming experience in a fun and relaxed atmosphere.

As an additional treal for CoCo Kids of all ages, we've invited
frisky feline CoCo Cat to join us for the show, RAIN-
BOWfest has something for everyone in the family! If you missed the fun at our last RAINBOWfest in Somerset, New Jersey, why don't you make plans now to join us in Chicago? For members of the family who don't share your affinity with the CoCo, there are many other attractions in the Chicago area.
The Hyatt Regency Woodfield-Schaumburg,

## Illinois, offers special rates for RAINBOWfest.

The show opens Friday evening with a session from
7 p.m. to 10 p.m. It's a daytime show Saturday - The CoCo Community Breakfast (separate ticket required) is at $8 \mathrm{a} . \mathrm{m}$., then the exhibit hall opens promptly at $10 \mathrm{a} . \mathrm{m}$. and runs until 6 p.m. On Sunday, the exhibit hall opens at 11 a.m. and closes at $3 \mathrm{p} . \mathrm{m}$.

Tickets for RAINBOWfest may be obtained directly from THE RAINBOW. We'll also send you a reservation form so you can get the special room rate.

The POSH way to go. You can have your travel arrangements and hotel reservations handled through RAINBOW affiliate, POSH Travel Assistance, Inc., of Louisville. For the same POSH treatment many of our exhibitors enjoy, call POSH at (502) 893-3311. All POSH services are available at no charge to RAINBOWfest attendees.
RAINBOWfest - Chicago, Hlinois
Dates - April 6-8, 1990
Hotel - Hyatt Regency Woodfield
Rooms - $\$ 69$ per night, Single or Double

YES, I'm coming to Chicago! I want to save by buying tickets now at the special advance sale price. Breakfast tickets require advance reservations.
$\qquad$ Three-day ticket(s) at $\$ 9$ each One-day ticket(s) at \$7 each Circle one: Friday-Saturday-Sunday
$\qquad$ Saturday CoCo Breakfast at $\$ 12$ each RAINBOWfest T-shirt(s) at \$6 each
Specify size:
$\qquad$
(T-shirts must be picked up at the door)

## Feature

# From Screen to Printed 

## by J. A. Ottum

Many computers provide the option of a hard copy of your monitor or TV screen. This comes in handy when you are printing a disk directory on the screen, for example, and you would like to save a copy of it. This utility prints the 32-, 40-or 80 -column text screen.

## How to Use

To use Screen Print, load and run Listing 1. The utility is written in po-sition-independent code and built at the top of free RAM. This area of memory becomes unusable by BASIC.

Joe Otrum is the commanding officer of the Naval Reserve Center in Springfield, Missouri. He has degrees in mathematics and systems management. He has pursued computer systems as a hobby since 1968 and has used a Color Computer since 1981. He can be contacted at 5858 S. Roanoke St., Springfield, MI 65807. Please enclose an SASE when requesting a reply.

## Choice of Key

You are asked to enter the desired PRINT SCREEN key. I use the F2 function key to execute this utility. On a CoCo 1 or 2 you might try the @ key or perhaps an up or down arrow. The screen can be printed by either pressing a key or executing the utility from the command line.

After building the program, you are offered the choice of saving, installing or quitting. You must save the program before it is installed. Parts of the utility are overwritten and the execution address is changed after installing. The program is installed the first time you enter an EXEC. Subsequent EXECs cause the screen to be sent to the printer. Cassette users should change SAVEM to CSAVEM in lines 335 and 340.

This utility relies on an input hook, which is referenced during each input and allows user-provided input routines. This hook resides at $\$ 016 \mathrm{~A}$ through \$016C and contains the opcode for a JMP instruction. After the installation of Screen Print , this
jump is redirected to the Screen Print utility. After the utility has a chance to print the screen, computer control is vectored back to the address originally stored at the input hook.

The keyboard rollover table is used to determine if the PRINT SCREEN key has been pressed. To watch this table in action, run the following short program:

## 10 PRINT @0:FOR $X-338$ TO 345 :PRI

 NT X,PEEK(X):NEXT:GOTO 10Press various keys and see the results. The problem with using these unreferenced hooks and tables is that they may be altered by future versions of the CoCo. These have worked for me on my 1981-vintage gray CoCo 1 and also my CoCo 3 .

## Program Memory

If you are using a CoCo 3 , make sure the program is not installed between $\$ 0000$ and $\$ 5 F F F$. When printing a 40 - or $80-$

column text screen, the utility alters the memory map. The high-resolution text screen resides in this area of memory. After printing, the memory map is restored. For information on how to do this, refer to the Color Computer Service Manual.

## Screen Width

To determine what size screen you are using, Address \$00E7 is referenced. On the CoCo 1 this address is used for the input timeout constant. However, on the CoCo 3 it contains a 0 for 32 columns, a 1 for 40 columns, or a 2 for 80 columns. The utility tests for a 1 or 2 to determine screen width. If any other number is stored here, a 32 column text screen is assumed. If you use this utility on a CoCo 1 or 2 and have trouble, try POKE \&HE7. 5.

Editor's Note: Since the source code in Listing 2, PRTASM, is presented for reference purposes, no object file is on this month's RAINBOW ONTAPEIDISK. Also, this source code is provided only on the RAINBOW ON DISK.

BARBARIAN QUEST - THE 512 K ARCADE GAME IS HERE!

See what REAL animation is! Join Hector the Hero in his quest to save his bride to be from the horrors of Luthor's domain. Experience the joy of true animation, unparalleled graphics and digitized sound in what promises to be 1990's BEST animated arcade game. lt's got it all, horror, humor, action and sound, even a continue feature (no going back to square one). BARBARIAN QUEST megabytes of fun for JUST 534

## THE SUPER DISK

POWER! That's what the SUPER DISK is all about. Never before have so many powerful disk utilities been assembled on one disk. The manual contains NEVER BEFORE PUBLISHED information about the fascinating SECRET world of COPY PROTECTION. The disk is loaded with modules to help you reach into hidden tracks and sectors to study copy protection techniques. AND modules so you can design your own protection schemes

Protection schemes are the most intriguing puzzles ever devised." PLO,

## Author

Look at some of the things you can do with the SUPER DISK modules:
THE SNOOPER This dynamic module works a lot like MSDOS DEBUG. It's a full featured disk editor with a BIG difference. You can access areas of the disk that the normal operating system can't! Access disk data stored before, between and after sectors. Read HIDDEN tracks \& sectors too. Read, write, change, search. repair damaged disks, includes sereen dump utility too!
READTRAK Read entire tracks into mernory including ALL of the data between sectors. (That's where the SECRET stuff is often hidden) READRITE Read entire tracks from one disk and write them to another! NOCOPY Create disks that DOS cannot copy!
BASSAVE \& BASLOAD The perfect copy protection tool for BASIC programmers.
FORMAT \& DSKIMODI Create or duplicate secret track and sector formats just like the pros. Devise unlimited variations of protection schemes!
AND THERE'S MORE. More modules and more delails than you could imagine about disk management and protection schemes. Some module require 2 drives and an 80 column display. Works with RS DOS \& OS9 disks
This power packed disk and informative manual SUPER SALE priced at $\$ 39$

## WARGAME DESIGNER II

SPORTSware's BEST SELLER! The WGD II system has everything you need to create your own HIRES confict simulations. PLUS 4 ready to play scenarios. We get FAN MAIL from this one, no kidding!
Use the ICON DESIGN module to create unit \& terrain icons, or modify the ones in the 4 free scenarios, 16 colors to choose from. Use the MAF DESIGN module to create your battlefield with 44 different icons (from those included or ones you designed)
Use the UNIT ATTRIBUTES module to assign 9 atributes to each unit. Icon. Strength, Firing range, Movement factor, Unit type, Name, Starting location, Turn of entry and Aggression fac tor. Each unit can be different! Then select PLAY GAME for hours of satisfying entertainment
The complete WGD SYSTEM II is ONLY $\$ 292$ flippy disks \& manual inct.

## WARGAME DESIGNER ICON DISK \#1

8 complete sels of unit \& terrain icons ready to use with WGD It and the original WGD. All the artwork is done for you but you can modify them if you like. Easy transfer to WGD game disks. COCO3 disk STILL JUST \$15

## WEEKLY WINNER 2.0

Compster users are winning lotteries. Just read the paper, it's true. We've tried our luck with \& without WW2.0 and WEEKLY WINNER consistently does better (including a $\$ 1000$ winner). For your COCO3 INVEST JUST \$15

## COCO3 FLAGS

This critically acelaimed RISK play alike is dangerous. One recent purchased complained. "I love it! I wasted the whole weekend playing it: It's great fun for 1 to 6 players. Conquer the world! On disk $\$ 21$

More SUPER fun for 1 to 6 players. If you like WHEEL OF FORTUNE. you need COCO3 WHEEL. You can even add your own puzzies. 200 included with game. This product has been recently revised and updated. Full instructions included. COCO3 disk SALE PRICED AT JUST \$21
We have many more fine entertainment, utility and productivity soffware products for the COCO3. Write for a free catalog or order our NEW CATALOG ON DISK for only $\$ 3$. If you place an order from the disk catalog. deduct $\$ 3$ from your order. COCO3 only

ORDER by phone or mail. We accept VISA. MASTERCARD, Money Orders and Checks. COD's add \$3. All orders shipped FIRST CLASS FREE anywhere, SPORTSWarc

1251 South Reynolds Road, Suite 414

ᄂ—————————————————————」
stant use by millions of us for a decade now，its story is both an interesting and fascinating one．And now you can relive it all－all the fun，the people，the frustrations－in $\mathrm{CoCo}: \mathrm{An}$ Affectionate History of the Tandy Color Computer．

This anecdotal history of the CoCo，by well－known au－ thors Dale and Esther Puckett，tells the stories of those people at Tandy who brought us the Color Computer；the program－ mers who＇ve put the 6809 through its paces；the hardware gurus with their electronic marvels；and the many vendors who have made these innovations available to us．You＇ll also read about people like you who have supported the Color Computer with countless hours at the keyboard and by attend－ ing CoCo functions．You never know－you might even read about yourself．And this says nothing of the many pictures you＇ll see．

CoCo：An Affectionate History is scheduled for release early in the fall of 1990．It will be available in an attractive limited－edition hardcover version for only $\$ 45$ ．A softcover version will also be available for $\$ 15.95$ ．But if you order now，you can reserve copies of the softcover version for a pre－ publication price of just $\$ 13.50$ apiece．Reserve a copy of CoCo：An Affectionate History for yourself．Or order several for those you care about－and take a walk down Memory Lane together．

RGE-DOS Hard Disk Operating Sywtem
$\$ 29.95$
Supports up to 16 Hard Drives. Runs Double Sided Floppy drives.
Adds many new commands. Best compalibility with Basic and M/L
Works on any COCO FREE Ramdisk for 512 K COCO-3 included!
OS-9 Hard Disk Drimars PUS Mard Disk Boot $\$ 19.95$
Run your Hard Disk under OS-9 Level 2. Boot up OS-9 directly from Hard Disk. Supports up to 16 Hard Drives. FREE utilities.

Ulitra Basic 3
$\$ 19.95$
Adds many new commands and functions to the Color Computer 3 including support of Real Time Clocks such as the KEN-TON, DISTO and TANOY SmartWatch, RS Catalog " 25-1033
20 Meg Hard Disk myatem, complete
$\$ 629.95$
Fast, Reliable SCSi hard disk system. Complete, ready to run. No setup is required. Just plug and go. Completely Brand New components. No refurbs or scrap. Full manufacturers warranty. Supports your choice of Disk Basic, OS-9 or BOTH1

30 Meg Hard Disk syatem, complete
$\$ 669.95$
40 Meg Hard Disk system, complete $\mathbf{\$ 6 9 9 . 9 5}$
Ken-Ton SCSI Hard Disk Interface
The only TRUE SCSI interface available for the Color Computer
The only TRUE SCSI interface available for the Color Compuler.
Low power draw, very high speed. Compatible with Basic and OS-9. No multi-pack required. Jumper selectable options.
Ken-Ton SCSI interface PUS RTC
$\$ 119.95$
Same as above, with battery backed Real Time Clock, perfect for OS-9, Basic or a Bulletin Board System.

Men-Ton RS-232 Pack
$\$ 74.95$
Direct replacement for Tandy AS-232 pack. No multi-pack or soltware patches required. Very low power draw. Supports the TANDY SmartWatch Real Time Clock. Add Real Time to your BBS!
Ken-Ton RS-232 pack, DUAL Channel
$\$ 89.95$
Same as above, with two RS-232 ports. Perfect for OS-9, remote terminals or multi-line Bulletin Board Systems.

Please add \$4 shipping per item. (Hard Drive Syslems, add \$20)

## RGB COMPUTER SYSTEMS

## 294 Stillwell Avenue

Kenmore, N.Y. 14217
Phone (716) 876-7538

oncentrate! is a twoplayer, Color Computer 3 game that runs on an RGB or composite monitor. Joysticks are supported but not required for program operation.

## Operating Instructions

Enter CCTRATE as listed and save it to tape or disk. Now type RUN and press ENTER to start the program. The title screen then appears. If the bars at the top and bottom of the screen are not yellow and blue, you are using a composite monitor. The program is configured for an RGB monitor so you must alter the program for a composite

Eric has been a free-lance programmer for three years. He is 16 years old and attends LaSalle High School. He is the author of several commercial computer programs, including the Newspaper Plus desktop publishing system. He may be contacted at 1630 N. Johnson St., South Bend, IN 46628. Please enclose an SASE when requesting a reply.
monitor. Press Shift-break to stop the program's execution, and refer to the Monitor Selection part of this article for instructions on this modification.

Once the title screen is displayed, you can press any key to advance. Both players need toenter their names into the computer. Names may be a maximum of 10 letters (including spaces) long.

After both names are entered, each player tells the computer how he or she will play the game. They can play by using the right joystick, left joystick, or keyboard. Pressing number key 1,2 or 3 enters a valid selection.

The two joystick selections allow a player to select a card by using the left or right joystick and then pressing the button to select a card to view. The keyboard lets the player use the keyboard's up. down, left and right arrow keys to move the cursor. Pressing the space bar selects a card to view.

It is important to note that both players can use the same input device. For example, if you do not have a joystick, both players can still play by taking turns at the keyboard.

## Label Designer

Everything you'd want a label program to do and more! No other program lets you make great labels so easily.

- Print Labels With Text And Graphics: Use Label Designers Ionts and pictures or any of Zebra's optional Picture \& Font Disks.
- Zebra Systems' Graphics User Interface: Pull down menus, scrolling-window file selectors, dialog boxes, radio Buttons, the works!
- Standard Features: Click and drag picture placement, up 104 pictures per label, 3 diflerent picture sizes, powerful text editing with variety of type fonts and sizes, prints $1-999$ copies, templates lor standard \& large address, file folder, disk, and cassette label sizes.

- Mail Merge Option merges name and address or other text file data for printout onto your custom label templates with graphics and other lext. Greal lor club mailings, Christmas card lists, membership name lags, etc.

- Disk Directory Option pastes the names of your disk files onto the label text editor screen tor indusion on your labels.
- Serial Numbering Option for making sequentially numbered admission tickels, product numbering, inventory labels, elc.

## - Hardware Requirements:

CoCo Il 64 K , or CoCo 3 , disk dive, mouse or joysick, compaible printer (connaaible ewt s.smep pinters as CGOP exepp IOMP-130 and OMP-130A inseral mode)

- Includes disk, laser typeset user's manual
and sample quantities of dififerent size labels. Price: $\$ 34.95$ and sample quantities of ditilerent size labels. Price: $\mathbf{\$ 3}$, as
We stock white and colored labels in a variety of address, disk, and cassette sizes at compelitive prices.

## Banners, Signs \& Greeting Cards

The CoCo Graphics Designer Plus, produces beautiful greeting cards, banners, and signs for holidays, birthdays and other occasions.
The CGDP features an easy-10-use point and click graphical interflace with windows, scroll bars, radio buttons, and joystick or mouse control. Text can be used in up to 4 sizes and 16 fonts per page. Picture, Font, and Border collecions are included. Signs and cards can be previewed on screen.
Read the review in May 89 Rainbow. CGDP Disk \& 64 page typsel manual.

Requirements: CoCO II 64 K or COCO III, disk dive, RSDOS, joystick or mouse. Printers supported include: Ep son $\mathrm{RXF} F \mathrm{XL}$ X, Gemini 10 X , SG10, NX10, NX1000, DMP105/106/110/120/ 130/132/200/400, Panasonic KXP 1080 I 90 19192, Prowriter, C.ltoh 8510, Okidata 92/93/182/183 \& more.

[^5]
## Game Play

The game board appears, signifying that the game has begun. Each player takes turns moving a cursor and selecting a card, which then turns over and shows a picture. The object of the game is to find another

> A
> Iways remember to be careful when accessing memory outside BASIC. If not handled properly, memory modifications can end up crashing the computer and destroying any program you have entered into it.

card with the same picture as the first one you turned over.

If you are successful in finding a match, those two cards are removed from the screen, your score goes up, and you get an additional turn. If you are not successful in
finding a match, both cards are tumed face down again and the other player has a tum.

The game continues until all the cards have been removed. At that time a scoreboard appears showing the number of pairs of cards each player collected and the winner. From the title screen you are asked if you want to play another game. If you want to play again, press Y. If you do not, press N and you are returned to BASIC. If you get an error running the program a second time, type RUN again.

## Monitor Selection

You need to tell the program what type of monitor you are using by altering Line 70 of the program. Setting Variable M0 to equal 1 signifies that you are using an RGB monitor. A value of 0 specifies that you are either using a color TV or a composite monitor.

## Note to Advanced Programmers

Advanced programmers may want to look at the program to investigate how I managed to achieve two HGET/HPUT buffer areas. As you may already know, BASIC allocates a single 8 K block of memory to be used with HGET/HPUT graphics storage and
retrieval. My program, however, tricks BASIC and takes advantage of using 16 K for graphics storage. If you are interested in finding out how to do this for yourself (and possibly exceeding my 16 K area), investigate the graphics initialization part of the program (lines 235 through 295) and the card flipping/card display routines (lines 600 through 605).

If you need more help, here are a couple of hints: Each 8 K storage buffer must first be initialized by placing two \$FF (255) bytes at the beginning of the buffer even before an HBUFF is executed on it. Also, Location SEOD4 tells Super Extended Color BASIC which 8 K block holds the HGET/HPUT buffer. Changing this allows you to access multiple 8 K areas.

Always remember to be careful when accessing memory outside BASIC. If not handled properly, memory modifications can end up crashing the computer and destroying any program you have entered into it. These advanced procedures are recommended only for those programmers who are familiar with the Memory Management Unit (MMU) and the GIME and have a good understanding of programming in BASIC.

# Still pounding away at that keyboard? 

Save Time and Money with a Combination Subscription!

## SAVE up to 19\%

when you buy a joint subscription to the magazine and either RAINBOW ON TAPE or RAINBOW ON DISK! A one-year subscription to THE RAINBOW and RAINBOW ON TAPE is only $\$ 91$ in the U.S., $\$ 108$ in Canada, $\$ 153$ foreign surface rate and $\$ 188$ foreign airmail. A one-year subscription to THE RAINBOW and RAINBOW ON DISK is only $\$ 115$ in the U.S., \$138 in Canada, \$183 foreign surface rate and $\$ 218$ foreign airmail.*

Every month, these convenient services bring you as many as 24 ready-to-run programs. Using the current issue of THE RAINBOW as documentation, all you have to do is load and run them. A one-year combination subscription to THE RAIN-

BOW and RAINBOW ON TAPE OF RAINBOW ON DISK give you more than 230 new programs! The typing time you save can be spent enjoying your CoCo!

## RAINBOW ON TAPE For No-Fuss Fun

Back issues of RAINBOW ON TAPE are available beginning with the April 1982 issue. A single copy of RAINBOW ON TAPE is $\$ 10$ within the United States; U.S. $\$ 12$ in all other countries. The annual subscription rate for RAINBOW ON TAPE is $\$ 80$ within the U.S.; U.S. $\$ 90$ in Canada; and U.S. \$105 for all other countries.

## RAINBOW ON DISK

 Offers OS-9 ProgramsIn addition to all the programs offered on tape, part of one side of RAINBOW ON DISK is formatted for the OS-9 operating system. That means you can now get all the OS-9 programs from the magazine - programs that cannot be put on tape. Back issues of RAINBOW ON DISK are available beginning with October 1986. Subscriptions to RAINBOW ON DISK are $\$ 99$ a year in the U.S. Canadian rate is U.S. $\$ 115$. All other countries, U.S. $\$ 130$. Single copy rate is $\$ 12$ in the U.S.; U.S. $\$ 14$ in Canada; and U.S. $\$ 16$ in all other countries."

To order by phone (credit card orders only), call (800) 847 0309, 8 a.m. to 5 p.m. EST. All other inquiries call (502) 2284492.

Look for our envelope located between pages 66 and 67 for ordering individual subscriptions to THE RAINBOW, RAINBOW ON tape and rainbow on disk.

YES! Sign me up for a joint 1-year subscription (12 issues) to:

"Peg Me"(December 1989, Page 27): An incorrect address for George Quellhorst was printed. His new address is 63 South State St., Apt. 10, Painesville, OH 44077: (216) 354-5733.
"High Capacity Screen Dumps for the

Shoestring Desktop Publisher"(August 1989, Page 38): The line shown at the top of the second paragraph on Page 39 has a parenthesis missing. The line should read:

THENCLS:PRINT4-2.CHR\$(27);CHR\$(2 0 ): : EXEC\&H132A
"Pixel Pictures"(January 1989, Page 28): Lines 260 and 280 were incorrectly printed, and the author has recently moved. His new address is Bill Bemico, 16721 Lakeshore Road, Cleveland, W1 53015. The two incorrect lines should read:

260 IF 1S-"R"THENXS-1NKEYS:IFXS-"Y"THENROELSEIFXS-"N"THENHCOLORB : $\operatorname{HPRINT}(23,23)$, "RESTART?? (Y/N)" :G0SUB490:G0T080ELSE260

"Y"THEN33OELSEIFXS-"N"THENHCOLOR 8: $\operatorname{HPRINT}(23,21)$, "QUIT?? (Y/N)":G OSUB490: GOTOBOELSE280
"CycleJump - Breezy Rider"(Review, January 1990, Page 104): J.T. Rawlinson Software's telephone number is listed incorrectly. The correct number is (416) 782-2217. Also, the price should be listed as $\$ 12.95$ plus $\$ 2 \mathrm{~S} / \mathrm{H}$.
"PRINT\#-2"(January 1990, Page 10): Because of an editorial oversight, Lonnie's column incorrectly implies a discount of $\$ 13.50$ off the price of our upcoming book, CoCo. An Affectionate History. The correct discount is $\$ 2,45$. This makes the pre-publication price of the book $\$ 13.50$. We apologize for any inconvenience this may have caused.

# One-On-One Math Drills 

by Steve Blyn<br>Contributing Editor

This month's article presents a blueprint for an educational basketball drill. I have chosen to use this game for math practice, although almost any subject that requires drill and practice is suitable for use with this blueprint program.

The object of the game is to answer a question correctly and score points for your team. The opening screen gives a math problem, and the player enters the answer. If correct, the player's team gets the points; if incorrect, the opposing team gets the points, and the correct answer is shown to the left of the problem. The player presses ENTER for the next problem. There is no limit to the length of play.

I tried to create an interesting way to present the math drills I used with this program. Math drills are especially conducive to computer programs because the computer can generate a seemingly endless number of questions with only a few lines of program code.

Line 180 sets up the numbers for each example. The random number limits of variables $A A$ and $B B$ determine the limits of the example's numbers. This particular program involves multiplication. I set it up for a two-place number up to a value of fifteen times a one-place number. I thought that limiting the larger number to fifteen gave many middle- and upper-grade students the opportunity to do the problems mentally.

You can easily alter the limits on Line 180 to change the level of program difficulty. For example, if you change the line to read:

Steve Blyn teaches both exceptional and gified children, holds two master's degrees, and has won awards for the design of programs to aid the handicapped. He owns Computer Island and lives in Staten Island, New York.
$180 \mathrm{AA}-10+\mathrm{RND}(89): B 6-10+\mathrm{RND}+(89$ ): $C C-A A^{*} C C$
you get a program that tests only two-place numbers by two-place multipliers.

> Math arills are especially conducive to computer programs because the computer can generate a seemingly endless number of questions with only a few lines of program code.

You can just as easily create an addition program for three single-digit numbers by adding a new variable (EE) and changing the line to read:

```
180 AA=RND(9):BB-RNO(10):EE-RND(
10):CC-AA+BB+EE
```

Of course in this case you need to change Line 190 to reflect the change from times to plus and the addition of a third variable. Similarly, you can change the program to drill almost any kind of math problem.

Topics other than mathematics can also be used by this program. If you insert DATA statements that include questions and their answers, almost any subject area can be quizzed in this basketball game format.

This program draws two low-resolution basketball players, as well as posts and goals. Lines 30 through 170 perform the drawings. Most of the points are poked into memory locations on the screen, which is
the most compact way of setting individual points. The two large areas of the backboard, however, use SET and are located on lines 70 and 80 . SET gives us an easy method for coloring larger areas of the screen. It might be interesting for you to experiment with these two methods of drawing points to compare their relative usefulness.

If the child gives a correct answer, the player's team scores and two points are added to the total. If the question is missed, the opponent (the computer) scores the two points; the ball, which is originally drawn on Line 190, is moved to score a basket. POKE 1199,148 draws the dot represented by CHR (148) at screen memory Position 1199. Line 210 checks the child's answer and directs the computer to either of the routines, which start at Line 220 or 250 , respectively.

The routine at Line 220 shoots the ball into the opponent's basket and adds two points to the opposition while the routine at 250 scores two points for the player's team. With several minor additions in these areas, this program can be fumed into a twoplayer or two-team game. I leave it for some brave reader to attempt this.

Also, some readers might prefer to insert a time limit on answering each question. The answer is looked for by the program at Line 200. I did not include a timer because I preferred to use the program for mental arithmetic and felt a timer would be inappropriate.

Next month I will expand the basketball program to include a timer, the high score needed to end the game, and DATA statements to demonstrate that this format can be used successfully with subjects other than math, such as foreign language and social studies.

Feel free to alter and use this program in any way to help your children and students.

## Gibralter Software Presents <br> A BASIC UTILTIES DISK FOR YOUR COCO3

FILE EDITNG utility with 36 search/replace patterns quickily edins BASIC files. insert/delete mode too! Block loading handies files larger than memory. Auto-backup of original file.
DESKTOP environment for your BASIC program disks. Run programs frem an on-screen directory. Point and click to copy, rename, kill files. Disk memos remind you of file contents. Supports 1.4 drives under standard Fadio Shack DOS. A must-have utility.

INTERACTIVE GRAPHICS with Rubber band lines, rays, boxes, circles, ovals, arcs, polygons, starbursts, connect-the-dots, freehand drawing, variable text sizes, horizontai/ventical lips, more! USERFRIENDLY. Self-centering joystick required (Pmode4).
SUPER-CALCULATOR has inverse trig functions, pi, int, $+/-1 / x$, square, cube, roots, 10 memories and more! Plus bonus calculator subroutine ( 9 functions) uses onty 4 screen lines.
NOTEPAD allows simple text editing from within your BASIC program. Insert, overwite, delete, word-wrap, print and disk functions.

HIRES UTILITY subroutines display input in HSCREEN graphic modes and transfer numeric/string variables to your program. Time your routines with our on-screen countdown timer. Demo included. BEST for adventure and arcade-fype games where leaving the hires screen is inconvenient.

## A new development in the darkroom

## Exposing the CoCo to Photography

by David Bodnar

My interest in photography and darkroom work was recently rekindled when my daughter, Jill. was chosen to be a photographer for her high school yearbook. After pulling my equipment out of storage and setting it up. we discovered that everything worked except the timer that automatically turned the enlarger on and off. It had not survived eight years in the attic!

Rather than buying a replagement, I decided to put an extra Color Computer to use and see how it would do as a dark room timer. The program, Darkroom, and the project presented here are the results.

Dave Bodnar has been involved with edtcational uses of computers for the last six years. He has written many educational programs for Tom Mix Software, including Teacher's Database. He can be contacted at 26 Ralston Place. Pittshurgh. PA 15216.

The first problem we faced was connecting the computer to the enlarger. There is a relay in the computer that is used to turn the cassette motor on and off, but it is not safe to run 120 volts for the enlarger directly through this relay. The solution is to use this relay to drive another larger relay that can safely control the enlarger.

I used a solid-state relay because I had several in my junk box. A solid-state relay is ideal for computer control because it has only four pins on it. Two of the pins receive a DC voltage from the computer, and the other two pins are connected to a break in the AC circuit that is to be controlled. The DC turn-on voltage can be between three and 30 volts, and the controlled AC voltage can be up to 280 volts. A source for these relays and other parts is listed in Figure 1.

To have the computer control the relay, I simply connected the two DC pins of the relay to a voltage source on the computer that can be turned on or off by software.

The first thing I tried was to use the RS-232 port. When you poke a zero into Location \&HFF20, one pin on the RS- 232 will have +5 volts appear on it. Poking a 2 into $\& H F F 20$ turns the voltage off. If all you want to do is fum the relay on and off, this is fine; unfortunately the memory location that controls the RS-232 also has responsibility for other things. I find that any time I use a SOUND or PLAY command in the program, the enlarger tums off. Since I want to use sounds as signals, an alternate method of keying the relay is needed.

The simplest and most reliable way to control the relay is by using the cassette relay. Unfortunately MOTOR ON and MOTOR OFF do not control a voltage but only close two contacts. I need to add a voltage to stimulate the relay, so I tap +5 volts from Pin 5 of the joystick port. A 3- to 9 -volt battery can be used instead, but then you run the risk of having the battery fail in the middle of a session in the darkroom. The schematic for the computer/enlarger interface is in Figure 2.

The easiest way to connect to the computer is to purchase an extra connector for the cassette port from Radio Shack. It should be wired according to Figure 2. The +5 volts can be accessed by disassembling the joystick connector you are using to control

Figure 1: Parts List

| Solid-state relay | ITTP1 | Hosfelt |
| :--- | :--- | :--- |
| Fuse holder | FH66 | Hosfelt |
|  | $270-364$ | Radio Shack |
| Grounded outlet | EO4 | Hosfelt |
| Power cord | BLD-6 | Hosfelt |
| Cassette plug | DP5-180 | Hosfelt |
|  | 274-003 | Radio Shack |
| Joystick plug | DP5-270 | Hosfelt |
|  | $274-020$ | Radio Shack |

Misc.: Fuse appropriate for enlarger bulb, enclosure, wire grommets, wire, solder and tools.

> You can contact Hosfelt at: Hosfelt Electronics 2610 Sunset Blvd. Steubenville, OH 43952 (800) $524-6464$
the program and soldering a wire to $\operatorname{Pin} 5$. Altemately you can carefully push a small paper clip or finishing nail into the hole for Pin 5 in the unused joystick jack on the back of the computer. Be forewamed that this is a temporary connection at best, and it can easily be pushed out of place. The
cleanest solution is to buy another joystick connector and solder a wire to Pin 5. A source for these connectors is also listed at the end of this article.

Once you get the four wires (two from the relay for +5 volts and ground) from the back of the computer, you are ready to

## Supar Controller II

NOW AVAILABLE AT YOUR RADIO SHACK STORE PART \# 90-2009
UNDER OS-9: Buffered read/write sector achieved without halting the CPU means no loss of time or keyboard strokes. Mini Expansion Bus for 1 Super Add-On. One DOS included. \$130

Hard Dlsk Adapter
SCSI or SASI. No Multi-Pak needed if used with SC-I or SC-II. RGB DOS and Hyper I/O supported. $\$ 40$
HDISK \& RS-232
Same as above but with
RS-232 Serial Port. $\$ 70$
RS-232 Adapter A true Serial Port. $\$ 40$

## SR-3•512K Upgrade \$90

Upgrades a COCO 3 to 512 K memory. Ramdisk, printer spooler and memory test software included! Zero K $\$ 25$

Figure 2
build the rest of the interface. The solidstate relay easily fits into a small construction box. Because you are working with potentially hazardous house current, you must be sure to use a fuse in the hot (black) line from the wall plug. You should also use a three-wire plug and socket so you can ground whatever case you wind up using. Most of the parts are available at Radio Shack, and suggested part numbers are given.

The second decision was one involving the human interface - in other words, how the user controls the program. On our first attempt, Jill entered exposure times using the number keys, which presented several problems. First, the keys are hard to see in a darkroom unless you have a safelight directly over the keyboard. Second, I was not anxious to have fingers that might be coated with fixer, stop bath or developer on the keyboard. The solution is to use a single joystick to control all functions of the program. With a little practice Jill was able to enter exposure times very quickly.

Before using the program in the darkroom, give some thought to where the computer, TV and joystick will be placed.

## U=UP ARROW $\mathrm{D}=\mathrm{DOWN}$ ARROW <br> R=RIGHT ARROW L=LEFT ARROW

The TV must be close enough to the enlarger for you to see the screen but far enough away to prevent the picture from fogging the paper. I find that if you turn the contrast and brightness controls on a black-and-white TV almost to the point where the picture disappears in normal room light, it is perfectly readable in the darkroom under safelights. It is also best to place the screen pointing away from the enlarger. A darkroom normally has a dry and a wet area. It goes without saying that the computer and TV belong in the dry area.

To use the program, first connect the cassette and joystick to the computer and the enlarger to the solid-state relay. Place the joystick in the center position. (Autocentering joysticks seem to work best with this program although it has been tested with regular joysticks and a mouse.) In the center of the screen you will see an asterisk (*), which can be moved by moving the joystick from side to side.

In its current form the program performs three different functions. First it allows you to turn the enlarger on or off for framing a negative. This is done by using the joystick to place the asterisk in the center position and pushing the stick up for on or down for off.

The second function is to set the exposure time for the enlarger. This is done by moving the joystick to the right so the asterisk is above ENLARGER TIME. Once the asterisk is to the right, press the joystick button and, while keeping the stick to the right, push it up to increase the exposure time or down todecrease the time. Once the time is set to your satisfaction, release the button and return to the center position. Pressing the button from the center position starts the timing sequence. Pressing the button while the enlarger is counting down aborts the exposure.

The third function of Darkroom is designed to give the darkroom worker an idea of how much time the photographic paper has been in a particular solution. This is called setting the beep time. If the beep time is set to 10 seconds, for example, a
single tone sounds after 10 seconds; two tones sound after 20 seconds; three after 30 , and so on. After six tones sound, it resets to 1 and starts over again. This is done because it is very hard to keep track of the number of tones beyond six. Six 10 -second periods are one minute, a common development time for most papers. All you have to do is listen for the correct number of beeps and switch the paper from developer to stop bath to fixer. Note that the beep counter is reset to 1 anytime the enlarger is switched on or off. The beep time can be changed in the same manner as the enlarger exposure time is set. If the beep time is set to 0 , the tones are disabled.

Many modifications to the program can be made. For example, the beeps are controlled by lines 900 through 940 . You could have the number of beeps reset after three rather than six beeps by changing Line 900 . With a bit of work you could even have the computer announce the time with the speech pack. That modification is on my list, but I haven't decided if it is worth the trouble.

Other timers could be added to advise you to remove paper from a wash bath. Just about any timing chore you need to do can be handled by the computer.

To me the most interesting modification is to use the other joystick input as an $A / D$ converter. This allows you to use a Cds photosensor or phototransisitor to measure the light coming through a negative and falling onto the photographic paper. Ultimately such a system could help you to compute exposure times.

## LOTTERY <br> MADE EASY

Most people spend $\$ 5.00$ to $\$ 25.00$ dollars or more on their favorite lottery. Most of this money is spent on purchasing easy picks. The reason for this is that most people don't have the time or they have a hard time thinking up all the different combinations of numbers.

If you have a Color Computer 3, one Disk drive, and a CM8 or RGB monitor this program can help you. (Printer optional)

This program offers several ways to play the lottery. There is a Pick 7, Pick 7/6, Pick 8, Pick 12, and a Pick 20. The program is menu driven and has a Special feature that will identify winning numbers at a glance. Why not take the lottery challenge \& play with your own numbers?

This program is made available by the RRA \& CO, at the cost of $\$ 15.00$, this includes postage \& handling.

Send check or money order to. . RRA \& CO.

## Software

## CIII Pages- <br> The Latest in CoCo Desktop Publishing

Despite considerable attention by the computer world for the last few years, desktop publishing remains a term frequently in need of definition. Perhaps the easiest description would be to say that desktop publishing combines elements of word processing, graphics editing and typesetting into an interactive environment for a single user.

CIII Pages, from Microcom Software, is a desktop publishing program for the Color Computer 3. It provides an extensive array of features, a simple menu-driven interface and a generous helping of supporting files and programs. All of this works together as an electronic paste-up board, on which you can compose fliers, imaginative
signs, newsletter pages, or virtually anything you might want to convey via printed page.

CIII Pages comes on three disks that are not copy-protected. Making a working copy of the disks from the masters is the first order of business, and detailed instructions for this are provided in the accompanying 68 -page manual. The System disk contains the main program and its supporting files and subroutines. The Utility disk offers sample text and graphics files, an extensive collection of clip art, and a utility program for converting and manipulating PMODE4 and HSCREEN3 pictures. Finally, the Font disk gives you access to 14 banner fonts, in addition to the eight type fonts and two
graphics fonts available on the system disk.
To use this package your system must include the following items:

- CoCo 3 with 128 K or 512 K
- RGB or composite monitor (it will not work with a TV)
- at least one disk drive
- either Disk BASIC or OWLDOS
- Tandy Hi-Res Joystick interface
- joystick or mouse
- an Epson or Gemini printer, or a

Panasonic 1090/1091i

- DMP-105 or NX1000

Other configurations, such as other printers or different operating systems, are not necessarily supported and may not work.

When the main program boots, the title screen dissolves into the basic working screen, which is a blank workspace surrounded by a "frame." The frame gives access to the program's myriad tools and functions through a combination of point-
and-click commands and pull-down menus. The top part of the frame is a menu bar. Using either a mouse or a joystick, you can click on any of the menu titles, revealing the available functions in that category. Menu titles include File, Edit, Special, Fonts, Text, Fill and 512 K . Once you have clicked on a menu title, the pull-down menu stays onscreen until you either click on a specific function or move the cursor off the right edge of the screen.

The File menu contains commands to load or save a formatted page, load a picture, examine the disk directory, delete a file from disk, or print. There are also commands for clearing the workspace, quitting the program and saving the workspace in a Max-10 format for subsequent importing into Colorware's software.

On the Edit menu are the functions Cut, Copy and Paste, for duplicating and moving portions of the workspace. A Stamp function gives the added capability of repeatedly pasting the last cut or copied image into the workspace by simply moving the mouse (or joystick) and clicking. Two other features on the Edit menu are Lock and Undo. The Lock command is only applicable to the most recently pasted image, but enables you to paste something onto the screen and then designate it as a permanent image. The Undo command is similarly limited, enabling only an undo of the last paste.

The Special menu is used to manipulate selected areas of the workspace in a variety of ways. You can flip an image horizontally or vertically, rotate it 45 or 90 degrees, enlarge it four or eight times, or stretch it.

The Fonts menu provides access to all 24 available fonts. (A font is simply a particular style of forming characters.) Ten of these (eight type fonts and two graphics
fonts) are accessible on the system disk and are listed individually on the Fonts menu. The other 14 are banner fonts used to print large characters. They are stored on the separate font disk. Access to these fonts is gained by selecting the command Bannerfonts from the Fonts menu.

In order to import ASCII files into CIII Pages, the Text menu is used. Files can be read in in a number of ways, including boxed regular, boxed formatted, formatted, and frame/form. The differences between these options have to do with the way the incoming file was fommatted by the word processor that created it. Since most of my text files are either unformatted or only marginally formatted, I stick with the boxed regular command.

When used in conjunction with CIII Pages' graphics editing capabilities, the Fill menu enables you to fill in existing shapes on the workspace with any of a variety of patterns, or to draw new boxes on the screen and have them automatically filled with the selected pattem. You can also select from an even wider variety of patterns for subsequent use with the Brush tool in order to cover any area of the screen with that pattern.

The final menu is the 512 K menu. When using CIII pages with a 128 K CoCo, you can work on a one-page document only. If you have more than one page, each must be created individually and saved as a separate file on the disk. With a 512 K machine you can work on up to three pages at once. The 512 K menu provides tools for moving between the pages, and for copying portions of the workspace from one page to another. It also includes a command for reading a long text file into the three available pages of your workspace.

The menu bar, of course, occupies just
one side of the frame surrounding the workspace. Along the left side of the screen is a palette of tools for creating and manipulating both graphics and text. By moving the mouse onto this palette and clicking, any of a number of tools can be selected. Four arrows are available for scrolling up or down either a screen at a time or a line at a time. (It takes two screens worth of lines to display a one-page document, but by scrolling you can display any contiguous half page you want.)

A magnifier tool enables you to zoom in on a selected area of the screen and even redraw individual pixels if you like. Other tools can be selected to draw, create circles, boxes, lines or polygons, or to paint pattems on the screen. There is also thank goodness!) an eraser for those times when things just don't quite tum out the way you planned! You can choose from various line widths on this palette as well to specify the thickness of the lines you draw with any of the tools. Another unique capability is the Shapes tool with which you can select from diamonds, squares, rectangles, trapezoids or a combination of two of them, and then use the Stamp function to repeatedly place the selected shape(s) on the workspace. Finally, there is a Text tool for entering or editing text.

On the right side of the frame is yet another palette, giving access to more tools. From this palette you can specify whether incoming text files will overwrite any existing images on the workspace or be superimposed on them. You can copy and paste panels, half-screen (quarter-page) images. You can also pull up a temporary panel onto which you can paste items from the workspace as you rearrange them to your satisfaction. The temporary panel (or clipboard) can then be pasted back onto the

page. A Page Preview function can be selected from this palette to give you a WYSIWYG (What You See Is What You Get) preview of the printed page. Also on this palette are commands for saving and loading. These are similar to the Save and Load functions on the menu bar, but they do not go through a subsequent dialog box asking for a drive number and filename. Instead, they do a quick save or load to a predetermined file. This feature encourages frequent saves of a document during the editing process.

The bottom of the frame is a ruler for assistance in lining up images too big to fit on one screen.

There are a lot of positive things to be said for CIII Pages. As you can see from the above discussion, there are a lot of tools and capabilities built into this program. I used a mouse, rather than a joystick, and it worked very smoothly. The frame provides ready access to the majority of the program's features in a compact space; and once you select a function, the frame often disappears, giving you more room to work on the page image. The fonts provided with the program are excellent, and the screen image on my monochrome monitor was sharp and clear.

Despite the restriction of having only one page to work with on my 128 K CoCo , many of the tools, such as the temporary panel and the Page Preview function, made it easy to manipulate and view the page in large pieces. I was able to set up a page, stare at it a bit, then totally redo it without difficulty. With the accompanying Utility disk you can import graphics from other programs and place them wherever you want on your page and even write out a page to be imported into Max-10.

All of these functions combine to provide an extensive desktop publishing capability not previously available for the Color Computer. The most delightful aspect of the package, though, was speaking to Walter Bayer, the man responsible for designing and programming CIII Pages. He was extremely friendly and helpful, and was more than willing to answer my questions both before and after I admitted I was writing a review of his product.

There are, however, a number of things I find quite annoying about this program. Although it combines features of both a graphics editor and a word processor, it is not nearly as strong as either in doing those specific functions. The Undo function is so limited as to be nearly useless. The Text Entry function does not support typing ahead, and I was constantly having to back up and force myself to slow down. Many of the graphics routines are written in BASIC and are unbearably slow. I tried out the Flip

Horizontal function four times before I realized it really was working. On the first three tries I thought it had died and I cancelled it. Finally, on the fourth try, I waited longer, and was just about to cancel it again when I noticed a few pixels moving on the screen. The manual warned that these functions are slow, but I was still appalled at having to wait over 10 minutes for the software to do a single horizontal flip.

Another major drawback for me was the lack of support for my DMP-130 printer. Although the program did print fine with the Epson printer I borrowed from work, it is nonetheless disconcerting to have my old philosophy shot down. I used to always buy Tandy equipment whenever possible so I wouldn't have to worry so much about compatibility. Also in the area of printing, in order to configure the program for a different printer or a different baud rate you have to load, edit and resave the BASIC driver program. While I am entirely familiar with BASIC, I still find it irritating to have to diddle with code when a configuration function is so easy to provide.

Most of the problems mentioned above are documented in the manual. However, the biggest problem of them all is the manual itself. Length is not an indication of quality. Throughout its 68 pages, the CIII Pages manual is riddled with incorrect grammar, along with reference sections not found in the table of contents or the index.

Some software packages are so simple and easy to use that you can extract all possible functionality without ever opening the manual. Others are so complex and user-hostile that you can't do a solitary thing without reading for an hour. An ideal software package strikes a balance. I like to first fiddle with the program a bit and get a feel for it. Then I browse the manual for a while and find the "hidden gems" that I wouldn't find onscreen. CIII Pages utilizes what scems to be an increasingly standard interface. Pull-down menus are more and more common and usually function in the same way. However, this package has the appearance but not the substance of being standardized. I tried in vain for nearly an hour to load an ASCII file from the File menu. (That's what File menus are for, right?) It never occurred to me that loading a text file was done in the Text menu.

Similarly, in every WIMP (Windows, Icons, Menus and Pull-downs) interface I've used, you select something first, and then specify an action to take. For instance, you highlight an image, then say "copy." In CIII Pages, though, you first specify the action, then select the affected area of the workspace. I was convinced that half the features in the program didn't work, until I re-read the section on different types of
cursors, where this is pointed out. It is also in this section that instructions are given for exiting various functions like the Pencil drawing tool. I initially tried drawing with the pencil and had to force an error condition (which I shouldn't be able to do) to get the frame back on the screen. I kept rereading the section in the manual about the pencil tool, but it simply does not say how to get out. It took a phone call to Mr . Bayer to straighten me out on that one, and on the text file problem above.

There is also an enormous number of keyboard commands that modify the way basic functions work. For example, during text entry, pressing the ESC key toggles between overstriking the background and superimposing on it. Pressing the ESC key followed by the F2 key lets you type in reverse video. While there is definite value in having all this capability, the meaning of the keys varies depending on which function you use them with, and the explanations in the manual are often extremely hard to decipher.

My overall reaction to this program is mixed. It does a great deal, if you can back through the manual and discover the quirks. Some parts are painfully slow, but I'm told a new version is forthcoming that will be much faster. If you don't have more than one page to construct (three with a 512 K machine), you can do a reasonably good job of pasting together something to suit your needs, combining graphics and text. For the price, it clearly fills a gap in existing CoCo software. But you have to really want to fill that gap.

[^7]Augsburg introduced the original version of Simply Better in his comprehensive review, which appeared in the April 1989 issue, Page 134. Instead of repeating information you probably know, I will instead focus on the new features of Version 2.0. Please refer back to Mr. Augsburg's review for more information on this product.

Most of the changes made in 2.0 are cosmetic. Some of the command keystroke combinations have been changed to make them easier to remember, more mnemonic and ergonomic: Things are where they should be. However, it may take you a while to come to that conclusion if you are familiar with the original version.

At first I was sorely aggravated by the change. After all, my fingers had become accustomed to certain command combinations, and here the author was changing things around! Users who are upgrading from the original version may find the new layout a headache at first, but new users of Simply Better should rejoice because this command-driven structure is easy to remember. For example, the old command for mail merging was CTRL-A. The new command is ALT-CTRL-M. To "find" text now, you press CTRL-F instead of CTRL-L. More logical, oui?

Which leads to the next improvement in Simply Better - something entirely new, which has been sorely needed in the CoCo word processing realm - an easy, logical way to deal with French characters for our French-Canadian neighbors to the north (and also for the CoCoists taking French 101). A 35 -page French supplement is available that not only shows how to type the French characters, but also tells how to use the whole program - it's a distillation of the entire Simply Better manual, written in French.

The author proposes an analogy that makes it very easy to remember how to deal with accented letters. You think of the accent as a letter v , whose vertex can be up, right or left. For example, a circumflected o (ô) would have its "verlex" at the topit would be an upside-down $V$. To type a circumflected o you press FI, the up arrow (remember, the vertex is up) and then the o. Simple. To get an e with an accent aigu (e) you press F1, the left arrow (the vertex would be to the left) and then e. The cedilla (Ç) defies the vanalogy, but it too is easy to add: Press F1, the up arrow and then c. 1 wanted to be impertinent with this French feature, but the program wouldn't let me add grave and aigu accents to letters that shouldn't have them (such ask ands). C'est la vie! French Canadians constitute a substantial part of the CoCo Community, and it is nice that Simply Better is making an effor to support them.

In addition to the old commands that have been revamped, Version 2.0 offers several new commands. The new word count command (CTRL-W) comes in very handy. Another new command that should please those who have experience with MS-DOS keyboards is a true backspace key (which the manual persists in calling a "true Delete key" - there is a difference). There's a "Repeat Last" command, which saves fingers from repetitive keystroke combinations. But about the most exciting of the new commands is the Cray-O-Lator. (Evidently, in his correspondence with Dale Rickert, author of Simply Better. Mr. Augsburg wanted a pop-up calculator for Simply Better.) The four-function, pop-up Cray-O-Lator calculator is a boon to programmers (it can display numbers in binary and Hex along with decimal) and others who need to perform calculations as they write. A memory function is even included.

Those who spend a lot of time writing at the keyboard will appreciate Version 2.0's automatic indentation feature, which tabs over to start a new paragraph (dependent on the left margin) when the ENTER key is pressed. Also, there is an upper-/lowercase text converter, which Disk BASIC programmers who program in CoCo's 32 -column screen may find to be of use. An "underline space" parameter (US) is provided; I really can't see how this would be very useful, except when you are designing forms.

Simply Better is an easy-to-use word processor for those who are disabled or have difficulty typing combination keystrokes. The command keystrokes are set up so that CTRL and ALT should be pressed and released; some programs require everything to be pressed at once, which brings to mind the Twister game of the sixties. In fact, if you try to be fancy and do your ALTS and CTRLS simultaneously, you could get a string of repeating, garbled characters. Most Simply Better functions can be performed with one-finger keystrokes. By this keystroke command structure, along with the Eyes feature for the hearing impaired (a flashing border supplements the program's beeps and audible cues), the author shows sensitivity, thoughtfulness and responsibility in letting everyone be able to use his product.

Along with revamping the program, the author revamped his manual, which is a classy, spiral-bound 156 -page guide. When you buy Version 2.0 of Simply Better, you get a complete manual for 2.0 - not the original manual plus a supplement of addenda and new information. The beginning tutorial section gets users going fast! The index is comprehensive, logical and thorough. I cannot praise the manual enough. The only complaint I can make about it is
one of personal taste: It is not typeset with proportionally spaced type, but rather with a monospaced font.

Simply Better continues to live up to its name, and the price keeps staying down. Simply Better was a good deal before the new version was released. Now it's a steal!
(Simply Better Software, P.O. Box 20726, Portland, OR 97220, 800-248-8420; $\$ 34.95$, \$7 extra for French supplement)

## Wizard's CastleTricks, Traps \& Treasures

Forces that mysteriously carry you away, collapsing bridges, a cave with bars and a creature that won't let you into the church . . . sounds like something from behind the old Iron Curtain, doesn't it? Gold coins, a power ring. ums to be rubbed, unicorns, gnomes, a castle and a princess - now it sounds like something from the Arabian Nights. A king and a crossbow, a wizard and a dragon, experience points to be bought, kill or be killed . . . it's either medieval times or modem wresting!

Well, Wizard's Castle is all of these and more, rolled into one! It's a fast, machinelanguage game, completely randomized and with plenty of action. It combines the thinking necessary for an Adventure game with the speed (during the attack sequences) needed to play an arcade game.

While you are trying to find, free and take home a princess, you encounter several creatures, including a powerful wizard, who try to kill you. As you travel the countryside, you find an abundance of items - in the village, around the waterfall and river, and in the fields. Take these objects to the $k$ ing, and he will be your friend forever. But, of course, what he really wants is to have his princess home again.

The number of objects you can carry at one time depends on how strong you are, and your strength diminishes every time you fight a creature; lingering and loitering at any place tends to draw them there. Don't try to fight creatures without a weapon (and don't try to use the crossbow unless you've found the arrow too). As far as the objects go, if you plan on finding them in the same place, save your game. The random feature places them differently each time you play.

The graphics in Wizard's Castle are very well done, in perspective, and animated. The different graphics screens load very quickly as you move from scene to scene, so you aren't waiting for what seems like forever to continue play. It has three skill levels: At the novice level, the author claims the game takes one to four hours to complete. The middle level is supposed to take four to 10 hours, and the expert level over eight hours. I don't believe him. Speaking from personal experience, it will probably take an hour for you just to make an accurate map. While you are trying to draw your map, creatures can appear and start killing you before you're ready. And every once in a while "a strong force carries you away" and drops you someplace else in the game. Then you have to figure out where you are in relation to where you were before you were carried away. I strongly recommend frequent use of the pause feature (called FREEZE) while you are drawing your map for this garne.

Wizard's Castle is a high-resolution, animated, graphics Adventure game originally marketed by Spectral Associates. It has been resurrected and is being distributed by Microcom Software. There's such a similarity between this game and the

Spectral text Adventure game, Keys of the Wizard, that I suspect Wizard's Castle was meant as a sequel, with graphics added to improve it. Most of the verbs are the same, as are most of the creatures. The unique READY and UNREADY commands, the dead creatures resurrecting, and your strenglh and skill all seem to be holdovers from Keys of the Wizard.

> The graphics in Wizard's Castle are very well done, in perspective, and animated.

A complete list of verbs understood by the game, a thorough explanation of the two different types of points you can score and buy, and complete instructions on attacking/killing the creatures are all included in the original Spectral docs, which are well-written.

The only requirements for this game are any Color Computer with 64 K . Disk Extended BASIC and a single disk drive. Speech capability is provided if you have the optional Speech/Sound cartridge installed. Working backups are easily made - but with the BACKUP command, not the COPY command because the only file that shows up in the directory is the Basic loader.

I had fun with this game, but I wish the original author had put in a "repeat last command" single-keystroke capability. It would be useful in the attack sequences to just be able to press a single key instead of typing entire commands over and over when it is necessary to strike a creature more than once. With a price tag of $\$ 19.95$, Wizard's Castle is comparable to games selling for twice the price, but is reasonable considering this game has been on the market for a while. About the only people I can't recommend it to are pre-teens and those with a low tolerance for frustration.

## Rorke's DriftYou Against the Zulus

In the fluid heat of Africa a faint rhythmic war chant rises from the hills and flows toward Rorke's Drift where, among a small band of wounded British soldiers, even the weakest hears it and lifts himself to prepare for the oncoming Zulu warriors.

A brave and dutiful remnant of limping soldiers forget their throbbing flesh wounds and begin carrying mealy bags to the north side of the depot where the wall was demolished during the previous day's defeat. They only partially comprehend the intent of the dark Zulu warriors beginning to crawl like a great army of ants from behind the darkening hills ready to devour the soldiers with their stinging spears.

Now that you know the situation, it's time to take action because without you, the tattered men in red will fail to last until the rest of their troop returns from searching the nearby hills.

The Zulu fighters attack in endless succession with their jabbing spears, and you must make efficient use of your troop's only advantage - rifles, which need to be reloaded. Using the arrow keys and specific letter keys, each of your men is allowed three moves during which he can reload his gun, take position and shoot or jab with his bayonet, but without the guarantee of killing a warrior on the first assault. Each member of the opposing force receives four moves if not wounded - or two if wounded - and every time a warrior stabs a soldier it reduces the soldier's ability to move. A soldier is killed on the third stab.

Rorke's Drift by SPORTSware can be played on any Color Computer 3 with at least 128 K of memory and one disk drive. An RGB monitor is recommended. The graphics clearly show the supply depot constructed of mealy bag and concrete walls housing red British soldiers, while black

Zulu fighters pervade from the surrounding area. You can contemplate your men's moves till the cows come home, but after all of them are moved, the opposition closes in on you like a pack of wolves, which is frustrating because you can't mull over your opponent's strategy like you can the moves in a chess game. However, after being defeated numerous times, you figure out where the safest areas are in the depot and get a general idea of how to distribute the British soldiers in those areas.

The instructions give hints conceming how to successfully hold off the Zulus, which I have yet to validate. After more than two dozen games I have been victorious only twice, and that was because I had my last surviving soldier run out of the depot toward a few scattered trees to hide. I think they call it desertion. I didn't care that, according to history, the actual battle was won on the loyal bravery of the individual British soldiers. But after my wimpy victory, I decided to play again and do it the heroic way. I lost again and again, but that's what makes you keep going back to battle.

The documentation is well-written, which makes Rorke's Drift easy to use. It even includes an interesting recapitulation of the true historical event upon which the program is based.
(SPORTSware, 1251 S. Reynolds Road, Suite 414, Toledo, $\mathrm{OH} 43615,419-389-1515$; \$16)
-Kelly Goff

## Software

CoCo 1, 2 \& 3

## Comics+-

## A Tool for CoCo Cartoonists

If you read Logan Ward's article in the July 1987 Rainbow (Page 50), you know it is possible to draw and print cartoon strips with graphics programs such as CoCo Max III. Up to now there has not been a dedicated CoCo program for drawing comic strips until Comics + appeared, an icon- and menu-driven comics-generation program from E.Z. Friendly Software.

Requirements to run Comics + are minimal: just 64 K , a disk drive, a self-centering joystick (or a mouse) and a DMP 105 or 106 printer, (I really recommend a selfcentering joystick - placing art elements is very difficult with the old black-and-red sticks.) The files required to run this "hybrid" BASIC/machine language program are small:

48 granules of free space are left on the disk. Because the program leaves so much free space, you can save your completed files to the same disk (a backup of the program disk, please, not the original), eliminating disk swaps. Users are encouraged to make backups of the nonprotected software, but the company wams that traceable ID codes are embedded throughout the software.

The quality of the printouts generated are by no means comparable to what you see in the Sunday moming funnies. And it may be possible that you can do better drawings a little faster and easier with more feature-packed graphics packages, but at $\$ 21.45$, Comics + is a bargain.

The possibilities for this program are endless. You could draw a family funny and stick it on the refrigerator. You could create funnies to roast your friends, and use the program to create comics for church. school and work.

In case you are not an artist, as most of us are not, Comics+ comes with a really neat feature - a clip art library. This is a collection of noses, cyes, mouths, "hairpieces," dingbats (hearts, stars, question marks), etc., that you may select to incorporate into your panel. With the larger graphics programs such as CoCo Max and Color Max, it is possible to build a library of body parts, but of course you have to have a little talent and the time todoit. With Comics+, most of the parts are already in the "body shop," and all you have to do is assemble them and type in appropriate text. It is an easy process to assemble a comic. Children and adults who can't keep their hands off Mr. Potatohead should like this clip art feature.

Of course, everything can't be drawn and ready for you; you'll need to do some creative work, too. When you boot the program by entering RUN"C+", you first see a blank screen with a row of 15 icons, or tools, along the top. These icons include: a pencil (for freehand drawing); a paint can (for paint fills - black only); a line; a box; a filled box; a circle; a magnifying glass (for pixel editing); a hand (for moving a selected area to another part of the screen); an eraser; a text tool (for typing words); a clear icon for clearing the screen; an undo icon to undo mistakes; a disk icon to save or load frames; a printer icon; and the clip art icon.

It is easy to select an icon; you just point and click. Certain icons, when selected, yield a menu from which you make further selections.

The cursor takes the form of a blinking dot. To use the pencil, line or box tool after selecting the appropriate icon, you press the firebutton to set a beginning point and

move the joystick until you reach your endpoint. While in the freestyle drawing and erasure modes, you can determine cursor size by pressing the up and down arrow keys: This is a neat feature. The cursor size can incrementally be increased up to five-by-five pixels. Another nice feature is the "rubber stamp" function: A selected area of the screen (or an image plucked from the clip art library) can be "stamped" repeatedly across the screen - just the thing you need when creating a flock of geese or a stand of trees.

You create a comic strip by drawing and saving a collection of panels, each of which is a separate file. At printing time, load in the first panel of the strip - this will automatically print when you select the printing option. You are prompted for the number of panels in your strip. If there is only one, the printing process begins. If you reply that there are more than one, the program prompts you for the filenames of the other panels (a directory-reading option is provided), and it also asks you for your name for the byline. The program expects to print at 2400 baud.

The manual is short but adequate, explaining every icon and how to use the features. Near the end of the manual comes a list of hints. One hint advises users to put backup copies of Comics+ on picture disks to avoid disk swapping. Another hint suggests that captions should be entered before
graphics. This is a good suggestion because text cannot be edited: You must type it right the first time. If you do goof, though, you can use the eraser tool to get rid of it.

Comics + is not a perfect program but is a good deal for the price. If I could make a wish list, I would ask that the ESC/BREAK key be used to let you back out of options, and not just dump you out of the program. Accustomed to interfaces of other programs, I sometimes press ESC in Comics + and am rudely greeted by the CoCo's green Disk BASIC screen. However, typing CONT or RUN usually gets me back in the program at the scene of the crime. It would be nice if more printers were supported than just the DMPs 105 and 106; there are a lot of Epson owners out there. Also, it would be nice if you could add to the clip art library.

All in all, I think Comics + is an excellent program for young and old alike, especially for those with a twitchy funnybone and a bent toward graphics. It is not an allencompassing program, but for Tandy DMP 105 and 106 owners, it will be a sure source of amusement. It's just plain fun to use.
(E.Z. Friendly, 118 Corlies Ave., Poughkeepsie, NY 12601, 914-485-8150; $\$ 21.45$ plus $\$ 1.50 \mathrm{~S} / \mathrm{H}$ )

## Software

CoCo 3

## CoCoRun-12When One Equals Twelve

I like programs that do something, CoCoRun- 12 really fills the bill! It lets up to 12 Color Computer 2 programs run at the same time in a CoCo 3. To use this "multi-
tasking" program, you need a CoCo 3 with 512 K and a disk drive.

After entering RUN"COCORUN", you are presented with an attractive title screen that describes the program's operation. You are instructed to initialize each bank of memory - there are 12 - which the manual explains how to do, before you can use them. An easy way to do this is to copy the contents of one bank to another. Four function keys are used: F1, F2, ALT and CTRL. ALT and CTRL are for copying information between banks, and F1 and F2 are for memory banking.

If you are running under $A D O S-3$, you must enter DISABLE, then press the Reset button, before booting CoCoRun-12.

If one bank is in the high-speed mode (POKE 65497.0), the other banks are as well. This affects disk drive, cassette and printer operation. It may be best to load each program, then go back and run them. Also. if you have a printer, the baud rate needs to be changed in each bank.

You can't run CoCo 3 programs or enter CoCo 3-specific commands while CocoRun12 is in the computer. Only CoCo 2 programs that don't require 64 K , or that don't modify the BASIC ROMs, can be run. The memory banking is done in 32 K banks, not 64 K , so programs performing ROM/RAM switching probably won't be usable in CoCoRun-12. There is nothing on the screen to notify the user of which bank he or she is in; you must remember what is in each bank. [Editor's Note: We recently received Version 2.0 in which the author claims many of these areas have been enhanced.] Programs do not run concurrently. When the banks are switched, the program in the current bank stops executing and the new bank continues execution where it was interrupted.

The author wams users not to switch memory banks or make saves while the disk drive is running. And you are also cautioned not to attempt a read and a write

*This copy is $3 / 3$ size of original:"COMICS+* options include: draw, shade, paint, lines, boxes, circles, magnify, move, erase, text, undo, save, load, dir, print, clipart. E.Z. Friendly (9/4) 485-8150.

# The Fourth Rainbow Book of Adventures 

Fourteen fascinating new Adventures from the winners of our fourth Adventure competition. Rely on your wits to escape a hostile military installation, try to stop the Nazi plan to invade Great Britain, or manage to reinstate our defense system before the enemy launches a massive missile attack - and that's only the beginning!

The Park of Mystery - You overhear a gang of robbers discussing where they've hidden their loot. Can you find it - and battle greed and confusion at the same time? Superspy - You awaken from a horrifying nightmare of chases, inexplicable scenery changes and sickening freefalls into space. Or was it a dream? You be the judge - and determine your own fate!

Term Paper - A real nightmare: Someone's stolen your freshman midterm paper and hidden its pages all over CoCo State's campus. Are you smart enough to find them before you miss the due date and flunk the course?

House Adventure - Try to find your way out of a mysterious abandoned house that keeps sprouting new rooms just as you think you've found an exit.
Life: An Everyday Adventure - Just getting up in the morning in time to do last-minute chores before catching a plane to a family reunion proves you don't have to leave home to find adventure.
The Earth's Foundations - A mysterious maze inside a deep crevice near your village is having a devastating effect on the entire area. You've been chosen to investigate, and promised great riches - if you survive!

Experience other traditional and contemporary challenges from these winning authors: Mike Anderson, Tio Babich, David Bartmess, Stephen Berry, Eugene Carver, Charles Farris, Jeft Hillison, Jeff Johnson, Richard Kottke, Ken Lie, Andre Needham, Fred Provoncha, Paul Ruby Jr. and Eric Santanen.

## The Complete Rainbow Guide to OS-9

Authors Dale Puckett and Peter Dibble show how to take advantage of OS-9's multitasking and multiuser features. An easy-to-read, step-by-step guide packed with hints, tips, tutorials and free software in the form of program listings.
Book \$19.95, Disk Package \$31 (2 disks, book not included)

## The Complete Rainbow Guide to OS-9 Level II Vol. I: A Beginners Guide to Windows

Puckett and Dibble have done it again! They uncover the mysteries of the new windowing environment and demonstrate clever new applications. More hints, tips end plenty of program listings. Book \$19.95, Disk $\$ 19.95$

## The Rainbow Introductory Guide to Statistics

Dr. Michael Plog and Dr. Norman Stenzel give a solid introduction to the realm of statistical processes and thinking for both the beginner end the professional. ( 80 -column printer required.)
Book $\$ 6.95$, Tape or Disk $\$ 5.95$, Package $\$ 11.95$

## The First Rainbow Book of Adventures

Contains 14 winning programs from our first Adventure contest. Includes Sir Randolph of the Moors, Horror House, One Room, Dr. Avaloe and more. Plus hints, tips on solving Adventures.
Book $\$ 3.50$, Tape $\$ 3.50$

## The Second Rainbow Book of Adventures

Featuring 24 of the most challenging Adventure games ever compiled. Meet the Beaties and battle the Blue Meanies, find a hidden fortune, or win the heart of a mysterious princess. Ring Quest, Secret Agent Man, Dark Castle, Curse of Karos and morel Book $\$ 13.95$, Tape $\$ 13.95$

## The Third Rainbow Book of Adventures

The excitement continues with 19 new Adventures. Discover backstage intrigue at the London Theatre, attempt a daring space rescue, or defeat evil in the year 2091 as a genetic android. Evil Crypt, Spymaster, Time Machine, The Amulet, and that's only the beginning! Book $\$ 11.95$, Tape $\$ 9.95$, Two-Disk Set $\$ 14.95$

## The Fourth Rainbow Book of Adventures

Software

## UltiMusE III OS-9 Sings

Mike Knudsen has been slaving away at UltiMusE III (the Ultimate Music Editor) in one incamation or another for several years. It shows. The latest version, available from Second City Software, is very powerful and well-planned, presenting a sophisticated point-and-shoot interface that makes writing and playing music easy.

Some of the software power comes from the environment: UliMusE III runs under OS-9. The idea of a music/MIDI editor under CoCo OS-9 might stun CoCo users. People who thought CoCo OS-9 wasn't good for graphics or time-critical applications can think again.

Not only is the software high-quality, the documentation is pretty dam good, too. Aside from a few typographic and syntactic slips, the instructions are methodical and well-done. A novice can get up and running within 10 minutes or so.

UltiMusE III runs on a 512 K Color Computer 3 with OS-9 Level II. Only one drive is required, and the included instructions clearly outline the way to use UltiMusE III on a single-drive system.

I used UhtiMusE III on a hard-drive system with a Tandy 1000 mouse (twobutton), IBM keyboard adapter, and custom MIDI cable (provided for the review by Ed Hathaway of Second City Software - they are made and sold by Howard Medical Computers). I have three main keyboards I used for the review: a Roland S-50 multitimbral sampler, and Korg DW6000 and DW-8000 digital waveform synths.

Once I installed UltiMusE III on my hard drive, I loaded in VDGINT . I0 from my

BasIC09/Config disk. You must do this if you customarily run a windows-only Level II system. UltiMusE III uses the VDG screen, so you need to load the proper driver into memory.

After loading VOGINT. IO, I used Xmode to change the "type" of an uninitialized window to Type 0 . This makes the window descriptor a VDG screen. Then I initialized the window and started an immortal shell.

```
0S9: xmode /w7 typem0
0S9: iniz w7
OS9: shell i-w7%
```

I hot-keyed over to the new green VDG screen and started up UliMusE III at the OS9 prompt.

After choosing the Hi-Res mouse adapter at the pop-up window prompt, I saw the main menu. The main menu lets you climb around a directory tree and permits loading old scores and "instrument" files (files that specify MIDI channels and patches).

Starting from scratch is easy. Once you lay out a score (which looks like a real score page), UltiMusE III fills each staff with rests. Your goal is to convert these rests into notes. Using a mouse and a "note palette," you choose the kind of note you need (quarter note, half note, etc.) and replace a rest with that note.

UltiMusE III "chips" away at a rest when the note you want to add is shorter in duration than the rest. If the note is longer than a rest, you are "bombing" the rest. You can also chip and bomb existing notes. UltiMusE III adjusts the music to fill in the gaps - existing rests and notes adjust themselves to the presence of the new note.

Mousing in accidentals (flats and sharps not present in the key signature) is surprisingly intuitive. Once you correctly place a note on the score, drag your mouse left (or right) and all possible accidentals cycle right next to the note - sharps, double sharps, flats, double flats and natural signs.

I used to be a professional music copyist, and Knudsen's interface works almost as fast as I do, without the ink mess!

Once you mouse in the notes, you can use the Instruments menu to provide voices with instrument numbers. You use only instrument numbers on the score, which are mapped by UltiMusE III to appropriate MIDI channels and patch numbers. Numbering schemes include decimal and octal numbering, handy for musicians like me who have Korg synths that number patches from 11 to 88 (eight banks of eight patches each).

You can load in MIDI drivers for Speech Systems' and Intercomp Sound's MIDI
packs - or you can use an optional MIDI cable designed for the serial port of the CoCo 3.

If you want to hear some music right away, just set up any MIDI keyboard with your CoCo and load in one of several supplied scores. Some are written by Mike Knudsen himself and are delightful. Others are classics or TV themes. Dozens more are available on information services such as Delphi and CompuServe.

Now that we have covered the basics of mousing in notes, you should know that Mr. Knudsen has bent over backwards to make this program as "human sounding" as possible. You can really make good music with UltiMusE III! Having heard UltiMusE III at three RAINBOWfests, I find its scores natural-sounding and sophisticated.

You can easily transpose octaves for each part (the transposition can be notated or "implied" by fiddling with the Instruments table), alter the dynamics of each note and the total dynamic range for the entire piece, and establish energy-saving repeats, dal Segno's and multiple endings.

You can compact the display, alter the tempo of playback on the fly, jump around the score using a powerful "Goto" menu, and copy, move, play or delete blocks of music.

Assorted other options are collected under a Random menu. You can choose to play all the score from this menu, or just play the portion of the score you see onscreen. One of the most useful commands here is Redraw, which allows you to clean up the screen after successive bombing, chipping and deleting. You can fork OS-9 commands here, too. (With multiple windows, I don't see why you need this, but if Mr. Knudsen had omitted this feature, someone would have noticed!)

There are so many features to UltiMusE III that it is difficult to summarize them in a review. The weight of the documentation is testimony to its power.

UltiMusE III is written in C and uses a variety of clever techniques to take advantage of the VDG graphics. I suspect that when an OS-9/68000 computer sweeps across CoCo-land, Mike Knudsen will get one, pull out the OS-9/68000 C compiler, and go to work. In the meantime, UltiMusE III is well worth the price. Get it, the special MIDI cable, and a MIDI synth (the more timbres, the better), and expect musical miracles.
(Second City Software, P.O. Box 72956, Roselle, IL 60172, 708-653-5610; \$54.95 plus $\$ 2.50 \mathrm{~S} / \mathrm{H}$ )
-Paul K. Ward

The following products have recently been received by THE RAINBOW, examined by our magazine staff and issued the Rainbow Seal of Certification, your assurance that we have seen the product and have ascertained that it is what it purports to be.

KJV on Disk \#5, the book of Leviticus from the King James version of the Bible on disk in ASCII files for $\operatorname{CoCos} 1,2$ and 3 . Users need a word processor to view the files. BDS Software, P.O. Box 485, Glenview, IL 60025, (312) 998-1656; \$3.

Label Designer, a program that prints various size labels on a dot-matrix printer, featuring Zebra's graphics user interface of drop-down menus and pop-up windows. Other features include serial numbering, mail merging and disk directory printouts. Includes a set of fonts and a graphics li brary. Requires a 64 K CoCo 2 or a CoCo 3 , disk drive, mouse or joystick, and compatible printer. (More than 20 specific printers are supported, including Epsons FX/RX/ LX, Star NX1000, Panasonic KXP1080, C. Itoh 8510, and DMPs 105/106/120/130/ 132/200/400/2100.) Zebra Systems, Inc., 121 S. Burrowes St., State College, PA 16801, (814) 237-2652; \$34.95.

Riddle of the Ring, a text Adventure that runs in 32 columns. Based on Greek, Roman and Norse mythology, it features 280 different rooms to explore. For a CoCo 2 or 3 with a disk drive. Eversoft, P.O. Box 3354 , Arlington. WA 98223, (206) 653-5263; \$10 plus $\$ 2$ S/H.

Super Backup Utilities, a set of three backup utilities that have been upgraded to allow multiple-drive backups and to make use of the extra memory in 512 K CoCo 3s. There is a utility for $64 \mathrm{~K} \operatorname{CoCos} 1$ and 2 (backs up 10 tracks at a time, requiring four swaps), a utility for a 128 K CoCo 3 (copies 19 tracks at a time, requiring two swaps), and one for the CoCo 3 that has been upgraded to 512 K (copies 80 tracks at a time, requiring one pass). Support is provided for 35 -, 40 - and 80 -track disks. Carl England, 128 Shepherd Drive N.E., Calhoun. GA 30701. (404) 629-7197; \$15.

Super Boot, a utility that allows users to boot the Disk Extended Color BASIC sys-
tem by entering the command DOS. It configures the system to the correct baud rate, sets drive step rates and sets the number of tracks and sides for drives. A file (either BASIC or machine language) can be selected to auto-start when the DOS command is typed. Requires CoCo 3 and a disk drive. Carl England, 128 Shepherd Drive N.E., Calhoun, GA 30701, (404)629-7197; \$15.

Super Disk 1.0, an upgraded CoCo 3 disk utilities package, for the novice to the experienced BASIC and assembly language programmer. It lets users examine copyprotected disks and create copy protection schemes for their own use. Sectors and data can be changed. Includes a 34 -page manual that discusses the history of copy protection along with specific Color Computer copy protection techniques. SPORTSware, 1251 S. Reynolds Road, Suite 414, Toledo, OH 43615, (419) 389-1515; \$49.

T\&D's Disk \#88 October 1989, the October edition of T\&D Subscription Software. Ten programs are included: Sales Prospecting, a sales prospecting and tracking program for salesmen; Virus 3, a CoCo 3 game "played on advanced circuit boards"; Will Maker, a program that helps users fill-in-the-blanks to create their own will; General Journal, an accounting program; Police Cadet \#5, a CoCo 3 Adventure game; Red Dog, a computerized card game; Mad Libbs, a game in which users complete humorous stories by supplying the
names of friends; Macintosh Picture Saver, a utility that lets Mac graphics files be saved and viewed as PMODE pictures; Frog, an arcade game; and P51 Flight Simulator, an aerial dogfight and flight simulator for one or two players - two players can play each other over modem. T\&D disks are released monthly, with 10 programs on each disk ranging from utilities to games to productivity programs. T\&D Subscription Software, 2490 Miles Standish Drive, Holland, MI 49424, (616) 399-9648; \$8 per issue.

Tazman, a graphics and text Adventure that runs under OS-9 Level II. The player becomes a "Tazman," a galactic trader who must reestablish trade routes that collapsed in the War for Freedom. The player must buy a ship and locate planets for trade, but starships and good information come at a price - players must make money by buying and selling commodities. For the CoCo 3. Eversoft, P.O. Box 3354, Arlington, WA 98223, (206) 653-5263; \$24.95 plus \$2 S/H.

A World at War, an updated machine language strategy wargame that pits the "Black" army against the "White"; the computer can control one, both or neither armies. Players can edit icons and determine terrain and battle particulars. For the CoCo 3 and a disk drive. GSW Software, 8345 Glerwood, Overland Park, KS 66212 , (913) 341 -3411; $\$ 25$.

First product received from this company

The Seal of Certification is open to all manufacturers of products for the Tandy Color Computer, regardless of whether they advertise in THE RAINBOW.

By awarding a Seal, the magazine certifies the program does exist - that we have examined it and have a sample copy - but this does not constitute any guarantee of satisfaction. As soon as possible, these hardware or software items are forwarded to THE RAINBOW reviewers for evaluation.
—Lauren Willoughby

Make your strummin' bum

by Bill Bernico

This program has become quite handy in my basement hideaway - as handy as my guitar chord book used to be. It displays quite a few guitar chords on the CoCo 3 graphics screen. All you have to do is use the arrow keys to place the box around the desired chord and press ENTER. That chord is then displayed on the sample guitar neck at the left of the screen.

There are 36 possibilities from which to choose. So go ahead, get out your guitar, sit down at the CoCo , and strum away. Just think, if you were an alien with three arms, not only could you strum away at the guitar, you could also pound away at the CoCo, making selections as you strummed. Hmmmmm!

Bill Bernico is the author of more than 300 Color Computer programs. A frequent RAIN. BOW contributor, Bill is also a humor columnist for his local newspaper. He started Bill Bernico Software in 1987 and enjoys writing programs and recording his own music. He can be contacted at 16721 Lakeshore Rd., Cleveland, WI 53015. Please enclose an SASE when requesting a reply.

Window Master V2.2
The hottest new program available for the Color Computer IIII Now you can have Windows, Icons, Buttons, Pull-Down Menus, Edit Fields and Mouse Functions built into your Basic or Machine Language Programs easily and quickly, without the need for OSS.
It supports up to 31 Windows on the display, multiple fonts in 54 possible sizes and styles, Enhanced Basic Editing and much more. It adds over 50 Commands and Functions to Basic to fully support the Point \& Click Window System. In fact it has so many features it would take severa! pages to to describe them all.
It is completely compatible with existing Basic programs and cakes absolutely no memory away from Basic. It contains a built in Ram Disk which is completely transparent to Basic (512k version) for enhanced operation.

It requires 1 Disk Drive, R.S. Hi-Res Interface \& Joystick or Mouse. Includes both the 128k \& 512 k versions for only $\$ 69.95$

## Window-Ware

Window Writer - A Point \& Click Word Processor, features both Mouse \& Keyboard type editing, proportional printer support, powerful formatting capsbility, works with any printer. On screen Italic, bold elc. WYSIWYG Requires Window Master \& 512k- $\$ 59.95$ Window Writer/W - for non Window Master users includes all features as described above. Requires 512 K \& Disk $\$ 79.95$
Window Basic Compiler - A Basic Compiler similar to CBASIC only it compiles all the Window Basic statements to creste super fast M.L. programs \& Desk Accessory prograns for Window Master $\$ 99.00$
Window EDT/ASM. A full featured Editor/Assembler and Debugger for the Window Master System \$49.95
Foni/ficon Editers - A utility disk with the Font \& Icon Editors so you can edit or areate your own, includes Basic \& M.L. versions $\$ 19.95$ Adyanced Programmers Guide - A Guide for Basic \& M.L. Programmers on interfacing to Window Masters complete system including Syatem Calls, Memory Map, Interrupt handling \& Exiended Memory access. \$24.95
The Memory Game - A Concentration like game, lots of fun for everyone. $\$ 19.95$

## 512K RAM UPGRADE

Give your COCO 3 all the power it deserves with this essy to install (no soldering/plug in) 100\% Tandy compatible 512 K memory upgrade. Completely assembled and tested. Includes Ramdisk \& Memory Test software described below. $\$ 159.95,512 \mathrm{~K}$ + Window Master $\$ 199$

## 512K RAMDISK \& TESTER

RAMDISK is an ALL. Machine Language program that will give you 2 ULTRA High Speed Ram Disks in you CoCo-3. Plus it allows your $\mathrm{CoCo}-3$ to run at double speed all the time even for disk access!!! It will not disappear when you press resel like some other ramdisk programs. The MEMORY tester is a fast ML program to test the 512 K ram . It performs several bit tests as well as an address test.

Requires 512 K \& Disk $\$ 19.95$

## CBASIC Editor/Compiler The ULTIMate Color Computer BASIC COMPILER!!!

## If you want to write fast efficient machine

 language programs and you don't want to spend the next few years trying to learn how to write them in Assembly language or with a cheap compiler, then CBASIC is the answerl!!CBASIC is the only fully integrated Basic
Compiler and Program Editing System ayailable for the Color Computer. It will allow you to take full advantage of all the capabilities available in your CoCo without having to spend years trying to learn assembly language
programming. CBASIC allows you to create, edit and convert programs from a language you are already tarniliar with Enhanced Disk Color Basic, into fast efficient machine language programs easily and quickly.

CBASIC supports all the enhanced hardware available in the $\mathrm{CoCo} 2 \& 3$, including Hi-Res Graphics, \& Screen displays, Extended Memory and Interrupts. We even added advanced commands not available in Basic to give you. level of control only available to very advanced Machine Language Programmers. Plus we made it exceptionally easy to use, not like some other compilers. CBASIC is the friendliest and easiest compiler available for the Color Computer.
CBASIC is a powerful tool for the Beginner as well as the Advanced Basic or Machine Language programmer. CBASIC features well over 150 Compiled Basic Commands and Functions that fully support Disk Sequential and Direct access files, Tape, Printer and Screen I/O. It supports ALL the High and Low Resolution Graphics, Sound, Play and String Operations available in Einhanced Color Basic, including Graphics H/GET, H/Put, H/Play and H/DRAW, all with $99.9 \%$ syntax compatibility.
CBASIC makes full use of the powerful and flexible GIMI chip in the Color Computer 3. It will fully utilize the 128 K of RAM available and instail 2 Ultra Fast Ramdisks if 512 K is available, for program Creation, Editing and Compilation. You can easily access all 512 K of memory in a Compiled progran thru several extended memory commands that can access it in 32 K or 8 K blocks and single or double bytes.

CBASIC has its own completely integrated Basic Program Editor which allows you to load, edit or create programs for the compiler. It is a full featured editor designed specifically for writing Basic programs. It has block move and copy, program renumbering, automatic line number generation, screen editing, printer control and much more.

## Coco 1,2 or 3 Disk $\$ 149.00$

\section*{DataPack III Plus VI.I \\ super smart terminal program}
aUtopilotend aUto-LoG Command Procesiors X-MODEM DIKECT DISK FILE TRANSFEK yt-100 \& yt-s2 terminal emulation
- No lost data evea at 2400 Brud on the Serial port.
- 8 Seleciable Display Formais, 32/40/64/80 columns
- asci e binary disk file cransfer via XMODEM.
- Disectly record receive data (Dasa Loaging).
- YT- 100 emulation for VAX, UNXX and oher sysiems.
- VT-100/52 cursor keys ,position, PF \& Alt. Kbd. keya.
- Programuable Word Length, Parity, Stop Bits .
- Complecte Fall and Half Duplex operation,
- Send full 128 character sel from Keyboud
- Complete Editor, Insen, Delese, Change or Add.
- 9 Variable length, Programaubie Macro Key buffers.
- Programmble Printer rales from 110 to 9600 Baud.
- Send Files from the Buffer, Macro Keys or Disk.
- Display or Prian the contents of the 50 k Buffer.
- Freere Display \& Review information On line.
- Builh in Command Menu (Help) Display.
- Buill in 2 Dive RAMDISK for 512 K RAM.

Supports: R. S. Modem-Pak \& Deluxe RS-232 Palk.
Caco 1, 2 or 3 Disk - \(\$ 59.95\)

\section*{"The SOURCE"}

DISASSEMBLER \& SOURCE CODE GENERATOR
The SOURCE will allow you to easily \& quickly Disassemble Color Computer machine language programs Directly from Disk and generate beautiful, Assembler Source code.
- Automatic label gencration.
- Allows specifying FCB, FDB and FCC areas.
- Disassemble programs Direculy from disk.
- Automatically locates address.
- Output listings to the Printer, Screen or both.
- Generates Assembler source directly to disk.
- Built in Hex/Ascii dump/display.
- 8 Selectable Display formats \(32 / 40 / 64 / 80\).
- Selectable Foreground \& Background colors.
- Build in Disk Directory an Kill file corrmands.
- Menu display with single key commands.
- Wriuen in Ultra Fast Machine Language. Coce 1, 2 or 3 Disk \(\$ 49.95\)

\section*{EDT/ASM III}

DISK EDITOR ASSEMBLER EDT/ASM III is a Disk based co-resident Text Editor \& Assembler. It is designed to take advantage of the new features available in the CoCo-3 with either 128 K or 512 K of memory. It has 8 display formats from 32/40/64/80 columns. There is also a free standing ML. Debug Monitor.
EDT/ASM ill has the most powerful, easy to use Text Editor available in andy Editor/Assembler package for the Color Computer.
- Local and Clobal string search and/or replace.
- Full Screen line editing .
- Easy to use Single key editing commands.
- Load \& Save standard ASCII formatied files.
- Block Move \& Copy, Insert, Delete, Overiype.
- Create and Edit files larger than memory.

The Assembler features include:
- Supports Conditional IF/THEN/ELSE assembly.
- Supports Disk Library file up to 9 levels deep.
- Supports standard Motorola directives.
- Allows multiple values in FCB \& FDH directives
- Allows assembly from the Buffer, Disk or both.

Coco 1, 2 or 3 Disk \(\$ 59.95\)

Keeping the financial side of your medical history in order

Don't let medical bills slow you down. Take charge with Medic 3, a program that lets you keep track of payments for treatment and prescriptions as well as insurance credits.

I originally wrote Medic 3 on a CoCo 1 , with a 51 -column screen driver called Bytescreen, and have been using it for over three years. It has been especially helpful during tax time. You can instantly print out a list of all your medical visits, prescriptions, amounts paid and insurance received. While my wife and I were caring for foster children, it was helpful to have a printout of their yearly medical visits and expenses. Recently I obtained an RGB monitor and rewrote the program to take full advantage of the 80 -column screen, colors and new features of the CoCo 3.

After running the program, choose Option 7 to begin a new record and follow

Ron Hinton is an operator at an electrical generating plant. He got his first CoCo in 1982 and learned BASIC programming from THE RAINBOW. He can be contacted at 50339 Stagecoach Rd., East Liverpool, OH 43920. Please enclose an SASE when requesting a reply.
the prompts, pressing ENTER after each entry. First you enter the current year. You have to do this only once when you set up your file for the year. Then enter the name of the patient. At the Service prompt enter what was performed, such as "Check-up -X-ray - Blood Pressure 98/120 - Dr. Jackson." You must limit the length of your input to 45 characters. If you exceed the limit, there is a beep and you have to reenter the service.

To keep track of prescriptions I just enter PRESC at the name prompt. For Service I enter the type of drug, what it's for and who it was for, such as "Amoxicillin 250 mg / antibiotic/Jeremy." Then you can simply type PRESC when using Option 2, List By Name, and get an immediate list of all the prescriptions your family used during the year and how much you spent.

Enter the date in MM/DD format. For Amount enter the amount you just paid. The Insurance field can be left blank and updated later when you receive a statement from your insurance company.

Medic 3 automatically sets the computer for all uppercase in the Name field and lowercase in the Service field. If a different combination is used for the name, the program would treat them as different files when retrieving them. You still have to be
sure to spell the names the same each time.
When you have finished with the current entries, press N for "Any More Entries?" This takes you back to the main menu where you can select Save, List All Records, List By Name, Print, etc. Option 1, List All Records, lists all the items in your file to the screen. You can print all entries or only one person's file to the printer just as you can with the screen. Make sure the printer is ready and follow the prompts.

\section*{Modifications}

The print routine uses POKE150,7. This sets you to 9600 baud at double speed so you don't have to slow the computer down to print. If your printer doesn't run at 9600 baud, edit Line 4005 to POKE150.40 for 2400 or POKE150, 180 for 600 baud. The printer codes are for an NX-10. Change tines 5015, 5040, 6030 and 6060 to your printer codes for double-high or expanded print.

\section*{Operating Hints}

When using Option 3, Edit, you are asked for the file number to edit. This can be found by listing all records and noting the number of the one you want to edit. After the program finds the file, you are

asked which field you want to change．Just press the number and enter the new data， after which time you can choose a new field or return to the menu．

Be sure to save your file with Option 6 after all updates．Your file is saved with the current year as its name．This allows sev－ eral years to be filed on the same disk．The next time you use Medic3，pick Option 5 and enter the year you want to see．You need only to enter the last two digits of the
year（90 for 1990）．It doesn＇t matter if you forget because the program automatically chops off and uses the last two digits of the number．You then return to the main menu again to View，Print，Edit，etc．I like to keep a backup of my file data on a separate disk． This way if something happens while I am updating，I don＇t lose all my work．

Any time you want to leave an option， just press BREAK and you are retumed to the main menu．But don＇t do this during disk
access or you might lose your file．There is extensive error trapping，thanks to the new commands on the CoCo 3，such as ON BRK GOTO and ON ERR GOTO that make this program a lot easier to use．If the disk is full when saving，you are prompted to insent a new formatted disk．Remember，format－ ting erases everything in your memory，so it is a good idea to always have a newly formatted disk handy．

\section*{CoCo 3 Disk}

\title{
Dissecting the Command Line
}

\author{
by Greg Law \\ Technical Editor
}

This month we are going to change the pace a little and examine one of the techniques for parsing (accepting and processing) command line parameters in C. This is usually easy but can be frustrating, especially when you are attempting to obtain several arguments along with options and modifiers. With a little effort, however, it can be relatively painless. To demonstrate this, I have written a small utility similar to dir. The difference is that dir lists all files in the directory, and udir lists only the filenames you specify on the command line. Also, any options must be given on the command line prior to the list of filenames. Options you can specify are: -e to get an extended directory (the default) or \(-u\) to get a directory listing with only one filename per line. Also, you can specify -s to append a slash to all directory names.

By accepting a list of filenames on the command line, you can use it with wildcards provided by Shell + . For example, if you want an extended directory listing of all files in the directory with directory names slashed, you type:
udir -e -s * or udir -es *
Allowing the options to be specified as a single argument, as in -es, provides for greater flexibility but also adds a little complication to the command line parsing.

Parsing the Command Line
The C compiler passes command line
In addition to being OS-9 Online SIGop, Greg Law enjoys programming onall types of computers and has worked on systems ranging from the CoCo to the Burroughs B6700 super mainframe. He lives in Louisville, Kentucky.
arguments as an array of strings to argv in main() and puts the count of total arguments in argc. For example, if you execute:
```

udir -es /dd/cmds/shell /dd/cmd
s/echo

```
the argv array looks like:
```

argv[0] = *udir\0"
argy[1] = "-es\0"
argv[2] = "/dd/cmds/shel1\0"
argv[3] = "/dd/cmds/echo\0"
argv[4] = "\0"

```
argc contains the value 4 , meaning there are four elements in the array. Keep in mind that 10 is the null character used by \(C\) to terminate strings. The first element in the array is the name of the program, which is usually not needed although there are exceptions to every rule.

The easiest method to parse the command line is to use a simple loop, counting
from one to argc-1 and examining each element in the array. This is easy if we want only a list of filenames but impractical for deciphering any requested options. Take a look at the listing while we step through it.

The function ma in accepts two parameters: the argument counter, argc, and the argument vector, argv (an array of pointers). Once inside the function, a character pointer is declared and the printing routines for long integers are included with the statement pflinit(). The actual parsing routine is in the next few lines of code and I'll describe how it works.

The argument counter is decremented and compared with zero. If no arguments are given on the command line, the loop terminates. The next step, + argv, increments the argument vector to point to the next command line argument. This works in such a way that argv initially points to the beginning of the array (argv[0]). An increment causes it to point to the next array item (argv[1]) and causes that item
\[
\begin{aligned}
& \text { argy-> argv[日]-> "udirtan } \\
& \operatorname{argv}[1]->\quad \text { "estan } \\
& \text { argy[2]-> "/dd/cmds/shell\0" } \\
& \text { argy[3]-> "/dd/cmds/echol0" } \\
& \text { argv[4]-) " } 1 \text { " }
\end{aligned}
\]

Figure 1: Initial Argument Vector

\section*{OS－9}

to be accessed as argv［0］．For a little more detail，the argument vector is initially set up as in Figure 1．When argy is incre－ mented，it points to the next element as shown in Figure 2.

An array of string pointers can also be thought of as a two－dimensional array where argv contains the address of the first item in the array．By the same token，argv［0］con－ tains the address of the string while both argv［0］［0］and＊argv［0］contain the value of the first character in the first item of the array．（Yes，indeed，pointers are a source of a lot of confusion．Perhaps we＇ll take a closer look at them in a future installment．） Finally if the first character in the current command line argument（＊argv［0］）is a hyphen，the loop is executed．

The variable s points to the second char－ acter in the current command line argument （argv［0］＋1），and the loop continues until the null character is encountered in the string．After each iteration through the loop，

（206） \(235-0917\)
\(s\) is incremented to point to the next character in the string. Finally the switch statement takes control and compares the character converted to lowercase with each of the case statements.

At this point our parsing routine has terminated; the argument vector is currently pointing to the third element in the array, which should be our first filename. To finish it off, the function loops through each of the remaining command line arguments, printing a directory listing for each filename.

The GetDir function attempts to open the filename passed to it as a file. If this fails, it tries to open it as a directory. If the second open call fails, an error message is printed along with the error code. Next the file descriptor sector for the file is read into the f11des structure through the use of the SS.FD get-status system call. (Many thanks to Kevin Darling for bringing this undocumented system call to my attention.) The entry conditions are the path number in Register A, \$0F in Register B, the address of the buffer in Register X, and the number of bytes requested in Register Y. To obtain the entire file descriptor sector, use 256 bytes.

You may want to play around with the code to make a powerful altemate to the dir command. Some ideas that spring to mind are to add a wide directory listing, perhaps five columns for an 80 -column screen, and use Carl Kreider's pattemmatching and directory functions. You might also list the number of entries in the segment list to get a rough idea of the fragmentation of each file.

## The Calligrapher

25Turn your CoCo or IDM PC into a calliqrapher's quill. Make beautiful invitations, diplonas, certificates, love letters and labels. The Calligrapher can also be used for desktop publishing to print newsletters, flyers and ads, All this is possible with the Calligrapher which is nov available for both 059 or MS-DOS systens.
The Calligrapher is a text formatting progral. It reads a text file which contains text and forvatting codes and prints the text in graphics mode on a dot-matrix printer in parious fonts.
The forsatting codes tell the Calligrapher which font to use, when to change fonts, and all about centering, left, right or full justification, line fill, uargin, line vidth, page size, page break and indentation. The Calligrapher Persion? has support for nultiple coluons (like this ad), wacros, page nuebers, tewporary indents, beaders and footers, interactive proapting and nore!

## Calligrapher Fonts

The Calligrapher cones pith three half-inch fonts (quarter-inch shown bere);

## (0)r 显nglish  Gartoon

The Calligrapher uses many different fonts (type styles) in both balf-inch and sidler sizes. For exapple, this ad was formatted and printed vith the Calligrapher using the Courrier fonts. about 150 other fonts are arailable on 15 disks sets or 5 economy packayes.

## The CoCo Calligrapher

The CoCo Calligrapher prints the same fonts as the 059/45-005 Calligrapher. Though not as poverful, the CoCo

Calligrapher is an easy to use, aenu driven progran for those tolo omers that don't use 059. It can print lines left justified or centered and can print in condensed node on sone printers.

## Calligrapher Graphics

The popular Calligrapher prograas nov have oraphics pictures, called CliPix that way be printed. These are specified in your text files sinilar to fonts. These Clipix pictures cone about 60 to a disk. Fach CliPix cones in a fey different sizes and orientations. Clipix exauples are on this ad. CliPix pictures ang easily be integrated vith text using the OS9/KS-DOS Calligradher, but they may also be printed using the CoCo Calligrapher.

## Version 2

 ney varsion of the Calligrapher is now arailable for OSS. Version 2 of the Calligrapher adds over 15 nev directives over the Yersion 1.x. There is support for uultiple colums by just specifying the ridth and leugth of the colums and the space betreen them. also added are nacros, temporary indents (useful around CliPix pictures), page nubters, headers and footers, and vore. Upgrade old 059 versions for $\$ 12.50$.

## MS-DOS Calligrapher

Calligrapher (Yersion 2) now lets opners of the IBM PC (and compatibles) hare the sase capabilities that the 059ers have had for years. The MS-DOS font files are compatible vith 0S9, so if you have the 059 Calligropher and font files, you can buy the ner HS-DOS Calligrapher and then siaply copy your old 059 font files to your PC Ho other conversions are necessary. If you have CoCo Calligrapher font files, you vill need to convert the to $\operatorname{NS}$-DOS/O59 fornat using the Calligrapher Massager progras.

## Calligrapher Hassager

The Calligrapher Font Massager is a tool" that allovs pou to do vany things to Calligrapher font files. You a ay create ner fonts, oodify existing fonts, invert fonts, coupress fonts, double the beight and/or Fidth, halve the height and/or pidth and convert between CoCo PS -IOS and OS9/NS-MOS fornats. The Hassager was used to create nany of the Calligrapher fonts and CliPix pictures.

## Prices

Specify the forad desired: CoCo RS-DOS, OSS or MS-DOS. The Font Massager is not arailable is CoCo RS-DOS fornat.

# UltiflusE III 

The Ultimate Music Editor for the CoCo 3

## "What if...

all CoCo music programs were this good?"
UltiMusE III is a MIDI 'Notation Sequencer'. It lets you write and edit sheet music on a $640 \times 192$ graphics screen using the mouse, play it on ANY MIDI-equipped synthesizer(s), and print out the score... Written by an experienced computer professional who is also a serious amateur musician and composer. With UltiMusEIII, there is nomore 'faking' to play what you want to hear! Perfect for the trained musician, UntMusE III's natural notation also helps a beginner to copy a favorite plece of sheet music just as it looks. Why should your music sound like a machine? UltiMusE III has a wide plich range, from 4 octaves below Middle C to over 3 above. Each staff has a 4 -octave range centered on one of four clefs - Treble, Guitar, Bass, and Double Bass. Staff placement, clefs, and part and MIDI channel assignments can ALL be edited... Professional software should use a professional Operating Systern. UlimusE III uses the advanced features of OS-9 Level II and does not interfere with its windowing and SYSTEM REQUIREMENTS: COCO 3 with at least 256K memory, OS-9 Level 2 , Mouse or Joystick (H-ReB Joystick Adapter recommended), Synthesizer (s) with MIDImineck, plus a Serial to MIDI cable. Tandy's DMP printer, a MIDI Interface Pak, and a Mutti-Pak are optionglaguipment.
IITIMUSE III

DeskTop Publishing for the CoCo3 just got better! With the ALL NEW NEWSPAPER PLUS - FINAL EDITION, you can create complete and sophisticated Banners, Headlines along with Text Columns and Graphics. Bring in different pictures, fonts, fill patterns, and text from disk and create a publication whth that pro-look to it. When ordering, please specity CoCo 1,2, or 3 vertion.
START OS-9
$\$ 32.95$
An Enjoyable, Hands-On Guide To OS-9 Level 2 On The Color Computer 3. Work from a step-by-step easy to follow tutorial book and program disk. Anaquires 2 drives, 512 K and an 80 -column monitor.START OS-9...NOW NO MORE EXCUSES.
 Nowspaper Plus \& Nowspaper Plus - Final Edition. $\$ 100.00$ for the complete set.

## AP88S Ver: 3.00 .00

SPECIAL INTRODUCTOFY PRICE OF $\$ 39.85$ QUESTION: Have you ever wondered how someone can sell and support two different BBS programs while claiming both to be the BEST? Good question you ask...we think so too!!! With the exclusive SCS commercial release of Mike Guzzi's APBES program we and a years quest for a POWERFUL, HIGH QUALITY, and AFFORDABLE BBS program. Besides these three requirements, we also demanded full author assistance to help answer your questions and lend technical support. Mike Guzzi has not onlywritten such a program in APBBSbuthasalso offered his expertise and knowledge as the programmer and a SYSOP. Giving you FULL SUPPORT AFTER THE SALEI APBBS requires a CoCo3 $w / 512 \mathrm{k}$ memory, at ieast two double sided floppy drives (a hard drive is strongly recommended), OS-9 Level2, and RS-232 pak. APBBS is not for everyone. It is designed and intended for the SYSOP who demands performance and support.

## SLOT-PACK II MP - II

Too new for a picture, this freshly designed interface is the same size as the DISTO DC-3 Disk Controller. It fits directly into the CoCo expansion port and features three slots that allow packs like the DC-3, the Burke \& Burke Hard Drive interface or the RS-232 pack. The MP-II draws it's power from the CoCo however, the B \& B requires an optional AC power adapter. Designed by Chris Hawks.
