"Welcome Aboard"

First of all, forget you’re using a simulation. It’s important that you believe that every strategic move you make may have real life implications—for your country, your crew, and your own life.

Many of the battle situations herein are those you will likely face during your own command. You’re using the battle precedents of WWII to practice your critical decision making skills—the kinds of active decisions you will be forced to make hundreds of miles out at sea in the face of enemy deck guns, depth charges, and air assaults. And the tactical decisions you’ll quietly face underwater and under pressure.

Remember, you should know your enemy. Study him. Study his ship—what kinds of munitions it carries and its capabilities. And, of course, study your own subs and weapons. You’ll find all the information you need at the back of this manual.

Getting Started

Commodore 64®/128™

• Set up your Commodore 64/128 as shown in the owner’s manual. (Note: If using a Commodore 128, set system to C64 mode.)

• You will be using the keyboard to play the game, refer to the COMMAND CARD and Appendix B for keyboard commands. You can also use the joystick for changing the direction of your view, plug the joystick into Port #2.

• Turn the computer and disk drive ON.

• Insert your SUB BATTLE SIMULATOR™ disk into the drive, label side facing up, cutout pointing towards the back.

• Type LOAD “x”, 8, 1 and press the RETURN key.

• Your WWII submarine simulation will automatically load and default to the Target Practice mode.

• You will be prompted to turn over the disk at the appropriate time.

With the Epyx FAST LOAD CARTRIDGE:

• After turning on the computer and disk drive, you just have to press the Ⓡ (Commodore) key and the RUN/STOP key to load the program.
Apple

- Set up your Apple home computer as shown in the owner’s manual.
- You will be using the keyboard; refer to the COMMAND CARD and Appendix B for keyboard commands. If you are using a joystick, plug the joystick in as shown in the owner’s manual. (Joystick is used to change the direction of your view only and is not required for play.)
- Insert your SUB BATTLE SIMULATOR™ disk into the drive, label side up, cutout pointing towards the back.
- Turn ON the computer.
- Your WWII submarine simulation will automatically load and default to the Target Practice mode. You will be prompted to turn over the disk to the other side at the appropriate time.

IBM PC® and 100% Compatibles

- Set up your IBM PC (or compatible) as shown in the owner’s manual.
- Insert your DOS disk and turn ON the computer.
- When DOS is loaded, insert your SUB BATTLE SIMULATOR diskette, label side up, cutout facing toward the back.
- LOG ON to the drive containing the program disk by typing A: or B: and pressing RETURN.
- Type SUB and press RETURN. Your WWII submarine simulation will load and automatically default to Target Practice mode.

Note: The Epyx 500XJ is the only joystick that actually fits your hand. The fire button(s) are angled for your trigger finger for incredibly accurate, high speed action—and the highest game scores ever!

Objective

Your objective is to command a WWII submarine, complete a mission and survive.

Your action can take place in one of three modes:
- Target Practice against an enemy convoy
- **Single Mission** in a real combat setting
- **Wartime Command** over the course of the entire war

There are 60 different missions (24 American, 36 German) in addition to the target practice mode. American missions are very close to historical occurrences, while German missions are not as exact, since actual patrol records for the Germans were mostly destroyed at the end of the war. Missions fall into 4 general categories: Seek and Destroy, Rendezvous (pick up people/supplies, drop off coast watchers), Lifeguarding (picking up downed fliers), and Patrol.

**Note:** See STARTING SIMULATION and MISSION SIMULATIONS for further explanation of these modes.

**Starting Simulation**

**Note:** All controls shown in color are explained in the HELP REFERENCES section in Appendix B.

When you first boot SUB BATTLE SIMULATOR™ you will be in Target Practice mode. In this mode you can become proficient with the controls of your submarine, and gain experience in the tactics of submarine warfare.

Later when you feel confident of your abilities, you can embark on a combat mission. First press CTRL and N to select a new game. Then type Y (Use the Cursor arrow keys on the Apple and IBM) to end your current game and type the highlighted keys to make your selections. Select Single Mission (S), Wartime Command (W), or Target Practice (T), and your Level of Play (1 is easiest, 4 is most advanced). Next choose your nationality (German or American), and the year of your mission. Your game starts in 1942 if you choose an American Wartime Command, and 1939 if you choose a German Wartime Command. When all your choices have been made, press the ← key (RETURN for IBM and SPACE BAR for Apple) to start your Single Mission or Wartime Command. (See Level of Play chart on the back of the COMMAND CARD).

**Note:** All keyboard commands listed refer to all formats of SUB BATTLE SIMULATOR™ unless otherwise noted. If keys differ, Commodore 64/128 is listed first with Apple and IBM in parentheses following it.

**Target Practice**

At zero hour your heading is preset in the direction of the convoy. You will be warned (Battle Stations! Battle Stations!) that the enemy convoy is close, but it is not yet within range of your weapons. Take the following action:
• Press the **right arrow (CRSR →)** key, (1 key for IBM) press repeatedly until the speed gauge reaches 21 knots. This will get you to the scene of the battle (within target range of the enemy). (See Time Compression on page 8 to reduce even more time.)

• Then, using the **Map View** to follow your progress, stay on the surface to catch up to the enemy convoy (**Zoom In** to the 7 Mile View by pressing the **Z** key). Use the navigation time to check the position of the enemy and to devise an overall strategy and angle of assault.

• When you are within range of the convoy you might want to slow your speed (and Time Compression if used), and make adjustments to your heading to strategically position yourself for attack. You can change your heading by using the , and . keys.

• Once an enemy ship comes into view, you can center it in your view from the **Tower, Binocular or Periscope Views**, by using the Keyboard Commands ; and : (H and K on Apple and IBM) or by moving the joystick left or right to move your view. When you are pointed directly at the target and the enemy is centered in your view, the **Target Data Computer** will automatically be activated. The **TDC** will give you an informational readout on the enemy ship. At this point you may want to match your heading to your view by pressing the **J** key. When a ship is in range (see listing of torpedo capabilities and ranges in Appendix D), press on the torpedo fire keys (depending on which way you’re heading this could be the FWD or AFT torpedo key T or Y). Once you’re closer you can fire a deck gun (press **G**) to inflict heavy damage. When the **Target Data Computer** displays “Planes in Range!”, use the **F** key to fire your anti-aircraft guns on them (you need not be pointing directly at them to hit them). You can also use your anti-aircraft guns against ships at close range. Remember you only have so many torpedoes and rounds of ammunition (see Transfer Torpedo on p. 26)

**Hint:** Position yourself in front of the enemy convoy and **Crash Dive** (press **RETURN** or **SPACE BAR** on Apple) to wait for them. Use your **Periscope** and **Sonar** to keep your eye on them as they advance. When the enemy is close enough, destroy as many of them as you can with your torpedoes. After the enemy convoy has scattered, **Surface** (press **RETURN** or **SPACE BAR** on Apple again) and destroy any remaining ships.

*Refer to APPENDICES for specifics on all VIEW DISPLAYS, GAUGES, CONTROLS, and INDICATORS.*

**Mission Simulations**

After you have practiced different strategies and tactics in the **Target Practice** mode you can try your hand at actually commanding specific
missions. You might want to start out with **Single Mission** to test the waters and then graduate to **Wartime Command** (multiple missions throughout an entire war) when you feel ready for the responsibility.

A new feature is introduced along with your new responsibilities: if you choose level one or two, you may use the **Navigator** which is accessed by pressing **CTRL-G**. Use this to get to the battle site more quickly. If you choose a higher **Level of Play** you must use the heading keys and **Map View** to navigate, and the **Time Compression Keys** (see page 27) to get to the battle site more quickly.

**Single Mission**

To play a **Single Mission**, first press **CTRL- N** to select a new game. Type **Y** to end your current game (use the **cursor arrow keys** on Apple and IBM) and type the highlighted keys to make your selections. Choose **S** to play a **Single Mission** and **1, 2, 3, or 4** for your **Level of Play**. After you make your selections, take the following actions:

- Use the **N** key (**cursor arrow keys** on Apple and IBM) to choose either German or American as your captain's nationality (and the type of sub you will be commanding).
- Use the **Y** key (**cursor arrow keys** on Apple and IBM) to choose the year of your mission.
- Press the **←** key (**RETURN** on IBM and **SPACE BAR** on Apple) to start your **Single Mission**.

Next you will receive top secret orders for your single combat mission. They will contain the specifics of that mission, along with the navigational coordinates necessary to reach your objective(s). At any time during the simulation you can refer to these orders by typing **CTRL-M** (**ALT-M** on IBM). Press **RETURN** (**SPACE BAR** on Apple) to begin the game.

*Refer to **APPENDICES** for specifics on all **VIEW DISPLAYS, GAUGES, CONTROLS, and INDICATORS**.*

**Wartime Command**

You can play a full **Wartime Command** and progress mission-by-mission over the entire course of a war until you are either lost in action or the war ends in your theater.

First press **CTRL-N** to select a new game. Type **Y** (use the **cursor arrow keys** on Apple and IBM) to end your current game and type the highlighted keys to make your selections. Choose **W** to play a **Wartime Command** and **1, 2, 3, or 4** to choose your **Level of Play**. After you make your selections, take the following actions:
• Use the **N** key (**cursor arrow keys** on Apple and IBM) to choose either German or American as your captain's nationality (and the type of sub you will be commanding).

• Enter your captain's name from the keyboard.

• Press the →**key** (**RETURN** on IBM and **SPACE BAR** on Apple) to start your Wartime Command.

Your wartime service begins in 1939 if you selected **German** (Germany vs. America/Great Britain, Atlantic Theater). It begins in 1942 if you selected **American** (America vs. Japan, Pacific Theater).

You will next receive top secret orders for your first combat mission. They will contain the specifics of that first mission, along with the Navigational Coordinates necessary to reach your objective(s). You can refer to these orders anytime by typing **CTRL-M (ALT-M** on IBM). After you complete your first mission you will receive a **Performance Review** and further orders. And if you successfully complete at least one mission of a **Wartime Command** you will be recorded in the **Hall of Fame**.

*Refer to **APPENDICES** for specifics on all **VIEW DISPLAYS, GAUGES, CONTROLS** and **INDICATORS**.

**General Operations**

**Navigation**

Since the **Navigator** is only available in lower levels of play, it's important that we refresh your memory with regards to navigation.

You can navigate your submarine by using the **View**, **Heading**, and **Speed Gauges**. For long distances, the **Time Compression** mode can be used. Remember to check your **Coordinates** frequently and keep an eye on your position using the **Map Displays**. (See **COMMAND CARD** and Appendix B for Keyboard Commands.)

A vessel's position on earth can be expressed in terms of two angles called **latitude** and **longitude**. The north and south angle is called **latitude**. The line of 0 latitude is the equator, 90 degrees north latitude is the north pole, and 90 degrees south latitude is the south pole. The lines of **longitude** run from the north pole to the south pole, dividing the earth into a series of "orange slices."

The Atlantic theater of operations is shown below. A German boat could, for example, head out from Wilhelmshaven, 54°N, 8°E. The boat would head west, for the Greenwich Meridian, crossing into hostile waters about the time the longitude changed from E to W. The patrol area would be in the
north Atlantic, all in the western longitudes, after which the sub would head for 0 longitude and home to France or Germany. This boat would see eastern longitudes only as it approached bases in Germany or Italy, and would never see the southern latitudes at all. (See diagram below.)

The American, on the other hand, wanders all over both sides of the international dateline and must know which hemisphere he is operating in at all times. For example, the position of Pearl Harbor, in the Hawaiian Islands, is at 21°N, 158°W, as can be seen below. If a sub commander were to make a little navigational error and find himself at 21°N, 158°E, he would find himself about 3000 miles from base and within easy aircraft range of Marcus Island, which for most of the war was occupied by the Japanese. A similar error placing the boat at 21°S, 158°W would leave the sub in the Tokelau Island group, also Japanese held. Either of the latter two positions would be good patrol areas for sinking Japanese shipping, but a disaster to a boat looking for fuel, food and shore leave. (See diagram on next page.)
**Time Compression**

We want you to get as much training in actual battle as possible so we have included a time compression feature so that you can reach the scene of battle more quickly. This allows you to set either a 1 second = 1 second, 1 second = 5 seconds or 1 second = 30 seconds time compression during tactical operations, and a 1 second = 10 minutes or 1 second = 4 hours time compression for sailing to your assigned patrol area (see **Navigator** on page 25) or waiting on station. The 1 second = 10 minutes and 1 second = 4 hours time compressions can be activated only when you are surfaced, and far away from enemy ships or planes. If you run across the enemy your time compression will automatically decrease so that you have time to devise a plan of attack. Press W to increase **Time Compression** and Q to decrease it.

**Saving/Loading A Simulation**

**Saving a Simulation**

You can save your **Single Mission** or **Wartime Command** to another diskette. Press CANCEL S (CTRL-D for Apple; ALT-S for IBM). You must replace
the SUB BATTLE SIMULATOR diskette and replace with a formatted diskette on which to save your current simulation. You will be prompted to type a file name for your simulation.

**Note:** This feature is not available in **Target Practice** mode.

### Loading a Saved Simulation

At any time you can load a previously saved simulation. Press **Ct L** (**CTRL-D** for Apple; **ALT-L** for IBM). You must replace your SUB BATTLE SIMULATOR diskette with the diskette on which the previously saved game was stored. Your **Single Mission** or **Wartime Command** will resume from the point it was saved.

### Quitting

You may quit at any time by pressing **CTRL-Q** (**ALT-Q** for IBM). If you wish to later return to the same **Single Mission** or **Wartime Command**, you must save the simulation before quitting.

### Historical Perspective

#### THE GERMAN U-BOATS

Unlike the Americans, the Germans had conducted a very successful submarine campaign in WWI. In WWII Admiral Doenitz, the supreme commander of the German Navy, intended to strangle England out of existence, and he nearly did. However, German aggressiveness was not sufficient to defeat superior Allied technology. The German high command wouldn't produce enough U-Boats, or develop enough new technology, while the Allies mass-produced merchantmen and escorts utilizing the latest technology. The mighty Type XXI submarine was, "Too little, too late" to stem the onslaught of Allied science and production capabilities. German missions were characterized by short, single object missions against superior enemy forces.

#### German Operations

**Overview:** The convoy battles of the Atlantic are characterized by large convoys being attacked by wolfpacks of submarines.

**Strategy:** The German U-Boat campaign was to cut off supplies to an island nation, England. The materials came from both the West (the Americas) and the South (Americas, Africa, Middle East, and Far East). Finished goods went North (to Russia) and South. Convoys mostly followed standard routes, as there were no islands.
**Operations:** Because of this the Germans would send their boats out to an area known to be near a shipping lane, and have the boats wait. In the evenings (when it was supposedly safe to surface), the boats would radio back to base in order to report what had happened during the day, and receive any new orders. However, when the boats radioed back to headquarters, Allied direction finders could triangulate their position and alert convoys in the vicinity.

**Tactical:** U-Boats would surface at night when they could avoid airplanes and look for the convoy that one of their sister boats had been tracking, or a Luftwaffe (German Air Force) search plane had spotted. When the convoy was sighted, the boat would approach the convoy on the surface and attempt to get off of the forward quarter (on either side). This was the most advantageous position to get a shot in at a convoy.

When within several thousand meters, the boat might submerge in order to reduce the possibility of being spotted. Normally, one to three ships would be attacked depending on their size, range, and perceived value.

When the sub was spotted by lookouts, radar, or sonar, diving was the only way out. The best a boat could do was go deep and stay silent, hoping the escorts gave up or ran out of depth charges.

**German U-Boat Specifications**

**Type IID:** was actually a European Coastal/Training boat, obsolete at the outbreak of the war. They saw action in the Baltic, Mediterranean, English Channel/North Sea, and Arctic regions.

**Built:** 50 units of all types (A, B, C, and D).

**Size:** 459.2’ length, 52.5’ wide, and 42.6’ “tall”.

**Displacement:** Amounted to 300 tons surfaced, 350 tons submerged.

**Speed:** Surface (diesel) was 13kts, and submerged (electric only) of 7kts.

**Range:** Reported as 5600nm at 8kts cruise. Submerged radius of 56nm at 4kts.

**Misc. measurements:** Crash dive of 25–35 seconds.

**Weapons:** 3 tubes forward, 5 torpedoes carried (total of 8), some 20mm.

**Type VIIc:** was the most common type of the war.

**Built:** Around 705 were built.

**Size:** 220’ length, 20.3’ beam, and 15.8’ draught.
Displacement: of 781 tons surfaced, 871 tons submerged.

Speed: 17kts surfaced, 8kts submerged.

Range: (surfaced) of 5600nm, 18 hours on battery.

Misc. measurements: Crush depth of 590.4'.

Weapons: Consisted of a variety of 20mm and 37mm anti-aircraft guns, possibly a 88mm surface gun. Torpedoes were carried in four forward tubes and one aft. Twelve torpedoes were carried or 14 mines.

Type XXI: could have won the war if the production and design problems were worked out earlier, and resources committed to its exclusive production when it was early enough to make a difference! Introduced late in 1944 these were the accumulation of all lessons learned in the six years of submarine warfare. Streamlined hulls, more batteries, snorkel, and silent electric motors.

Built: Reported as 129 units.

Size: 252.6' long, 21.7' wide, and 20.3' draught.

Displacement: 1650 tons surfaced, 1820 tons submerged.

Speed: 15.5kts surfaced, 17.5kts submerged, 5kts on creep motors.

Range: 15,500nm surfaced, 365nm submerged (silent).

Misc. measurements: Dive depth assumed to be over 984'.

Weapons: Six 21" tubes forward, 2 twin 20mm gun turrets, 23 torpedoes carried, 17 torpedoes and 12 mines could also be carried.

THE AMERICAN SILENT SERVICE

American submarines were active during the entire war. Besides just attacking enemy merchant and naval shipping, American submarines flanked carrier task forces, provided lifeguard functions for pilots, did reconnaissance and provided taxi service to refugees and spies. These submarines were initially thwarted in their effectiveness by the defective Mk 14 torpedo. However, the aggressiveness of American senior fleet officers, prior knowledge of Japanese ship movements, improved torpedoes and the excellent quality of the boats themselves turned the tide in the Pacific. American missions were characterized by relatively long times at sea with more than one patrol area being assigned during the course of a mission.
American Operations

Overview: The character of submarine warfare in the Pacific theater was completely different than in the Atlantic. Here, individual submarines attacked smaller convoys that hugged coastlines, or fast moving naval units. There was a definite gap in the technology available to each side. The Japanese had very few radar sets, ineffective depth charges, but adequate sonar. They considered escort duty to be less honorable than serving on surface fleet units. Thus, the quality of the escort crewmen available was less than the average of the Japanese Navy.

Strategy: Since the U.S. Navy was reading the codes of the Japanese Navy, they almost always had the jump on them. Submarines would surface at night and wait for their coded radio instructions. The boats were concentrated in known shipping lanes, and vectored to their targets by the decoded Japanese transmissions. Generally, boats would spend about a month on station.

Operations: A boat would be given a geographic area to patrol, so they would not be attacked by friendly units. If a specific target would become known to Naval intelligence (from the deciphered Japanese communications) then this target would be assigned to various boats along the path of the target.

Tactical: When a target was spotted by a lookout or radar, the sub would try to get off of the port or starboard beam (just like the Germans), and wait until range was down below 3280', if possible. In the case of multiple targets, a captain would not normally attack more than three. Since the Gato and Tench classes had rear torpedo tubes, there was a tactic which called for getting inside the convoy’s perimeter and setting up four or so targets with both sets of tubes!

When detected, the American boats could go deeper than the Japanese normally set their depth charges to explode. Therefore, a battered American sub would make good its escape after the Japanese thought they had dropped enough depth charges to “do the job.”

Other tactics included the “end run” attack, where the submarine commander would position the submarine in the path of the convoy, submerge as soon as they were sighted and wait quietly for them to approach. Timing of the convoy zigzags was critical, since the convoy could do a zig or zag at the last moment and throw off a torpedo shot.

American Sub Specifications

Gato/Tench Class: Was the mainstay of the fleet. These were in service the entire war.
Built: 73 of the Gato, and 31 of the Tench.

Size: 312’ length, 27’ wide, 15’ draught.

Displacement: 1526 tons surfaced, 2424 tons submerged.

Speed: 19.5 to 20.5kts surfaced, 9kts submerged.

Range: 10,000nm to 13,000nm at 14kts.

Misc. measurement: Carried 378 to 464 tons of fuel. Dive depth of 300 to 1000 ft.

Weapons: 6 torpedo tubes forward, 4 aft, with 24 torpedoes carried. Guns ranged from 3”/50 cal in 1941 to 5”/25 in 1944–1945. Also carried various combinations of 50 cal machine guns, 20mm and 40mm cannons.

S-Boats: Combat action was limited to the first year of the war.

Size: 211’ long, 21’ wide, 16’ draught.

Displacement: 854 tons surfaced, 1062 tons submerged.

Speed: 14.5kts surfaced, 11kts submerged.

Range: 5000 miles at 11kts.

Misc. measurements: Dive depth of 200’.

Weapons: Four 21” tubes forward, some had 1 tube aft. Some had a 4” gun, with a random number of machine guns of 50 and 30 cal.

Appendix C

Glossary

Terms and Definitions

AFT: The rear portion of a seagoing craft.

ANTI-AIR GUNS: Any gun or cannon primarily used for defense against enemy aircraft. Typical examples were 30 and 50 caliber machine guns and 20mm cannons.

BALLAST TANKS: On a submarine, ballast tanks were used to hold various levels of seawater, causing the submarine to dive or climb in depth. Water was removed from the tanks by using compressed air and/or electric pumps.

BATHY THERMOGRAPH: An instrument used to identify layers in water temperature as a function of depth.

BOW: The forward portion of a seagoing craft.

CONNING TOWER: A low observation tower on top of the submarine which also served as the primary entrance to the interior of the submarine.

CONTROL ROOM: The control center of the submarine. The Captain, Executive Officer, and engineer were all normally stationed in this part of the submarine. All primary control/detection systems (i.e., periscope, dive controls, steering, radar, sonar, etc.) were controlled from this area of the submarine. Typically located under the conning tower.

CONVOY: A group of ships travelling together.

DECK GUN: The primary surface weapon on a submarine. Typically this gun was a cannon of a 2" to 4" bore size.

DEPTH CHARGE: An explosive charge specifically designed to damage submarines. These weapons were dropped or thrown off the side of ships attacking submerged submarines. A typical charge contained 300 lbs. of high explosive and could have its depth set in 10 foot increments.
DIVE PLANES: These were moveable “fins” on the side of the submarine which were used to aid diving and climbing while moving in the water. Similar to flaps on aircraft, they would force the front of the submarine up or down while under power.

DUD: Either torpedoes or deck gun rounds could fail to explode on contact. When this happened, it was labeled a “dud” round or “dud” torpedo.

ESCORT: A class of ships designed to escort merchant and other unarmed shipping. Used to screen and defend these ships against submarines and other attacks.

FATHOMETER: An instrument used to determine the depth of water below the keel of the submarine.

KRIEGSMARINE: The German Navy.

LATITUDE: The lines on a map which measure your relative distance from the equator. These lines run left and right on maps oriented with North at the top and South at the bottom.

LONGITUDE: The lines on a map which measure your distance either East or West of Greenwich, England (the prime Meridian). These lines would be vertical on a map oriented with North at the top.

LUFTWAFFE: The German Air Force.

MINE: A stationary explosive designed to retard access to the area it is placed. Mines could either be contact or magnetically fused and were used to either “box in” or “fence out” enemy shipping.

PERISCOPE: An optical instrument that allows a submerged submarine to scan the surface. In 1944 the Night Scope with a built in radar antenna was introduced. The Night Scope made a major difference in night observations.

PRESSURE HULL: The outer part of the submarine which keeps the craft from being crushed by water pressure when submerged.

RADAR: A device used to identify the direction and distance of metal vessels which are out of visual range.

RADAR DETECTORS: A defense device used to detect radar usage by enemies. With prior knowledge, a submarine could dive before an attack could be made.

RAM: The process of striking another craft with your own.

SNORKEL: A device used to intake air while the majority of the submarine is submerged. Only used in a very limited way by the Germans during WWII.
SONAR: There are actually two types of sonar devices. The first is called "passive" sonar, which uses hydrophones to collect sounds, and which are then interpreted by a human operator to determine the distance, speed, and type of ship heard. The second type of sonar is a kind of underwater radar which uses high frequency sound waves and interprets the reflections. In the game these two are combined and treated as a passive type sonar.

SQUADRON: A group of warships assigned to a particular duty.

SUBMARINE: Any warship that can operate underwater.

TDC: An acronym for Target Data Computer, a mechanical device which was used to assist setting torpedo angle off bow direction on a moving target for maximum accuracy.

TIME COMPRESSION RATIO: The ratio that time is compressed for game play. (i.e., "1 second–5 seconds" means that for each real second that passes, 5 seconds have elapsed in the game.)

TORPEDO: A large self-propelled underwater projectile containing explosives. Used against shipping from submarines, destroyers, or patrol boats.

TUBE: The area of the submarine which held torpedoes ready to fire.

U-BOAT: A German submarine. German submarines were individually numbered instead of named, with a preceding "U" (i.e., U43, U89, etc.) A similar practice was used by the United States with the PT boats (i.e., PT-109).

Appendix D

Weapon Information

SHIP WEAPONS:

Note: These are the weapons your enemy ships will be carrying. Ship weapons have a much larger range due to longer barrels and sturdier gun/cannon mounts than similar weapons on submarines.

<td>Tench Class—USA</td>
<td>5&quot; cannon. Max range: 14,000 ft.</td>
<td>(2) 20mm + (1) 40mm light cannon. Max range: 4500 ft.</td>
</tr>
</tbody>
</table>

Small cannons (50 cal, 20mm, and 40mm) were found in the deck and conning tower mounts. They were generally used against aircraft and small boats. Larger guns could do much more damage. The 5" gun, for example, was capable of hitting 500-750 ton ships so hard that the ships were regularly destroyed by them.

Destroyer™
Life, Liberty, And The
Happiness Of Pursuit.

ONLY FROM Epyx!

The first game of its kind, a highly graphic, action-simulation, where you actually take control of a U.S. Naval Fletcher class Destroyer. Man any one of 13 different battle stations: Starboard Torpedoes, Navigation, Aft 5" Guns, Anti-Aircraft Guns and more. Start with a simple strategy: search and destroy the enemy sub! Or take on the complex challenge of being a scout, blockade runner, or rescuer of a downed pilot. When the battle gets really fierce, let loose with your weapons, but be sure to check your damage control center, and send out repair crews where needed. DESTROYER, it's warfare on the high seas at its best!

LIMITED WARRANTY

EPYX, Inc. warrants to the original purchaser of this Epyx software product that the medium on which this computer program is recorded is free from defects in materials and workmanship for a period of ninety (90) days from the date of purchase. This Epyx software program is sold "as is," without express or implied warranty of any kind, and Epyx is not liable for any losses or damages of any kind resulting from use of this program. Epyx agrees for a period of ninety (90) days to either repair or replace, at its option, free of charge, any Epyx software product, postage paid, with proof of date of purchase, at its Factory Service Center.

This warranty is not applicable to normal wear and tear. This warranty shall not be applicable and shall be void if the defect in the Epyx software product has arisen through abuse, unreasonable use, mistreatment or neglect. THIS WARRANTY IS IN LIEU OF ALL OTHER EXPRESS WARRANTIES AND NO OTHER REPRESENTATION OR CLAIMS OF ANY NATURE SHALL BE BINDING ON OR OBLIGATE EPYX. ANY IMPLIED WARRANTIES APPLICABLE TO THIS SOFTWARE PRODUCT, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED TO THE NINETY (90) DAY PERIOD DESCRIBED ABOVE. IN NO EVENT WILL Epyx BE LIABLE FOR ANY SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGE RESULTING FROM POSSESSION, USE OR MALFUNCTION OF THIS Epyx SOFTWARE PRODUCT.

Some states do not allow limitations as to how long an implied warranty lasts and/or the exclusion or limitation of incidental or consequential damages so the above limitations and/or exclusions or limitations of liability may not apply to you. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Part # 1480A-60
rev. 1
Loading Instructions

- Turn on your Color Computer 3.
- Insert the SUB BATTLE SIMULATOR disk into the disk drive, and close the drive door.
- Type DOS and press the ENTER key.
- The message OS9 BOOT will appear on the screen.
- At the prompt, type EX SUB and press the ENTER key.

Note: If you do not have a Color Computer with BASIC version 2.1 or later or if you do not have the OS-9 System, you can type the following program and use it to start SUB BATTLE SIMULATOR. Enter this program from Disk Extended BASIC:

```
10 REM ***************
20 REM * BOOT OS:9 FROM BASIC
30 REM ***************
40 FOR I=0 TO 70
50 READ A$
60 POKE &H5000+i, VAL("&H"+A$)
70 NEXT I
80 CLS:PRINT "INSERT OS9 DISKETTE"
90 PRINT "INTO DRIVE 0 AND PRESS A KEY"
100 A$:INKEY$:IF A$="" THEN 100
110 EXEC &H5000
```

With a formatted Disk BASIC diskette in drive 0, type the following instruction at the OK prompt to save the above program: SAVE"**" [ENTER].

Type the following command to use this program to start SUB BATTLE SIMULATOR:

```
RUN "**" [ENTER]
```

When prompted to do so, insert the SUB BATTLE SIMULATOR diskette and press ENTER. SUB BATTLE SIMULATOR will load as stated in the manual.

- Always use the number keys 1-8 on the Color Computer instead of function keys.
- The speed controls on the Color Computer are the up and down arrows ↑↓, not the left and right brackets [ ].
- The periscope height is changed only with the P (lower) and O (higher) keys.
SUB BATTLE [SIMULATOR]
(For Tandy Color Computer 3)

Keyboard Commands (a quick reference)

Screen Controls:
- Window:
  1. Periscope View
  2. Binocular View
  3. Tower View
  4. Sonar Screen
  5. Radar Screen

- View Controls:
  H: Scroll Left
  J: Match View to Heading
  I: View Aft
  U: Match Heading to View
  K: Scroll Right
  R: Radar Toggle

- Time Compression Controls:
  Q (Slower)
  W (Faster)

- Periscope Controls:
  ESC: Escape from Break Any Menu
  P: (Lower)
  O: (Raise)

Depth Controls:
- Depth Controls:
  9: Periscope Depth
  G: Trim Depth
  =: Depth Up
  *: Depth Down

Zoom Controls:
- Zoom In
- Zoom Out

Telegram Controls:
- Enter
- Crash Dive

Weapon Controls:
- T: Fire Forward Torpedo
- Y: Fire Aft Torpedo
- F: Fire Anti-Aircraft Gun
- G: Fire Deck Gun

Control Keys:
- Ctrl A: Abandon Ship
- Ctrl B: Display Target Book
- Ctrl D: Display Ships Log

- Ctrl G: Activate Navigator
- Ctrl K: Send SOS
- Ctrl N: Start a New Game
- Ctrl O: Display Current Mission
- Ctrl P: Shore Party
- Ctrl Q: End the Game
- Ctrl R: Load Previously Saved Game
- Ctrl S: Save Current Game
- Ctrl T: Transfer Torpedo
- Ctrl V: Radio Your Position
- Ctrl W: Continue the Game
- Ctrl X: Suspend the Game
# Level of Play

*(degree of difficulty)*

There are four levels available to allow for an increasing degree of difficulty.

You'll note that these are in ascending order of difficulty where certain advantages are removed in higher levels, while certain disadvantages are added.
